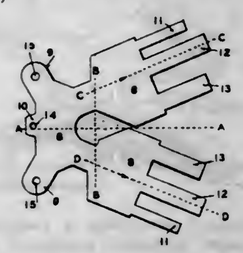
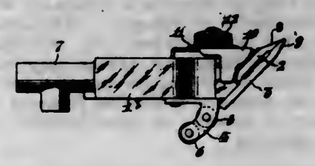
3. A machine for baking cakes, comprising in combination, a base member, a griddle mounted thereon, a batter-box, means for discharging batter onto the griddle in predetermined quantities, a carriage, a peel mounted on said carriage and having one edge normally engaged with the surface of said griddle, a cam mechanism for moving the carriage forwardly and backwardly over the griddle and means mounted on said carriage adapted to be actuated by movement of the carriage to partially rotate the peel at alternate forward movement thereof to cause the latter to invert the cakes upon the griddle.

1,809,005. AUTOMATIC DRAFT REGULATOR. RICHARD A. WALKER, St. Joseph, Mo., assignor to Walker Manufacturing Company, St. Joseph, Mo., a Corporation of Missouri. Filed Oct. 11, 1929. Serial No. 399,000. 7 Claims. (Cl. 236—45.)



1. An automatic draft regulator comprising a pivotally mounted damper, interconnected link members pivotally connected to the inner side of said damper, a counterweight carried by said interconnected links, and means on the outer side of said damper for moving one of said pivotal connections relative to the other to adjust said interconnected links and counterweight.

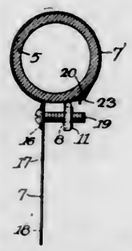
1,809,006. METHOD OF BOTTOMING PAPER CONTAINERS. WILBUR L. WRIGHT, Fulton, and JOSEPH T. BOND, Phoenix, N. Y., assignors to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Feb. 15, 1927, Serial No. 168,334. Renewed July 9, 1928. 6 Claims. (Cl. 93—55.)



1. In the method of bottoming tapered body paper containers, those steps which comprise radially compressing inwardly an annular portion of the end portion of the body and simultaneously radially expanding the remaining end portion of the body to thereby form an intervening annular ledge, then inserting an oversize bottom disk in said expanded portion and against the internal annular ledge at the junction between the compressed and expanded portions, and then compressing and curling the end of the body inwardly and upwardly against the bottom face of the disk.

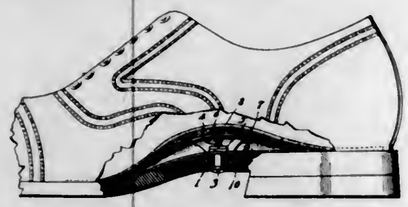
1,809,007. SHEET METAL GOVERNOR WEIGHT. OTTO WULFERT, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 28, 1930. Serial No. 447,883. 3 Claims. (Cl. 264—1.)

1. A governor element formed from a punched sheet metal blank having integral strips, said element having a weight member produced by folding said strips against the blank and folding the blank to enclose the strips within the weight members.



1,809,008. BARBER'S HAIR-CUTTING MACHINE. ALEXANDER ADAMS, Philadelphia, Pa. Filed June 21, 1928. Serial No. 287,098. 1 Claim. (Cl. 30—1.)

In a barber's hair cutting machine, a casing, upper and lower cutter plates at the head of said casing and inclined to the plane thereof, a curved projection extending downwardly and rearwardly from the casing adjacent said lower cutter plate, and a pair of rollers on said projection, said rollers being so disposed with respect to the

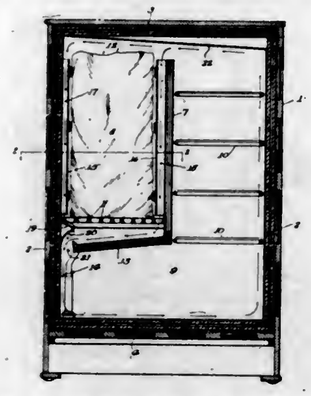


plane of the lower cutter plate wherein a relatively short cut may be obtained by using one of said rollers and said lower cutter plate as surfaces of contact, and whereby a relatively long cut may be obtained by using both rollers as surfaces of contact.

1,809,009. GROUND CONNECTER. GUSTAF E. ANDRE, Chicago, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1929. Serial No. 344,742. 9 Claims. (Cl. 173—273.1.)

1. In a connecter of the class described, the combination of a flexible metal member adapted to embrace a rod or the like, means for clamping said member on the rod, and means struck from said member for receiving an electric conductor and operative, as an incident to the clamping of said member on the rod, to grip said conductor to establish a good electrical connection therewith.

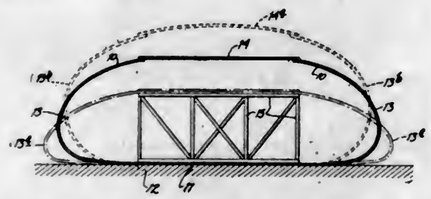
1,809,010. ADJUSTABLE ARCH SUPPORT. SAMUEL S. BAER, Atlantic City, N. J. Filed Dec. 9, 1926. Serial No. 153,567. 6 Claims. (Cl. 36—71.)



2. An arch-support comprising a vertically adjustable supporting member revolubly positioned at the shank portion of a shoe, and a conformable plate thereon of approximately equal length and width, each of these dimensions being less than the width of the aforesaid shank portion, so that the plate may be selectively placed in various positions with respect to the adjusting member in order to support various parts of the longitudinal or metatarsal arches.

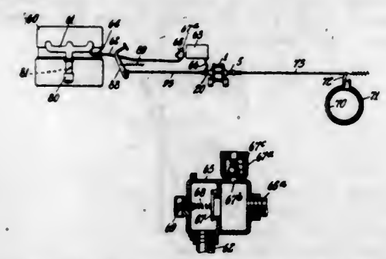
1,809,011. INSULATED ELECTRICAL CONDUCTOR. CHARLES A. BARKER, Highland Park, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 4, 1927. Serial No. 196,640. 3 Claims. (Cl. 173—264.)

1. An electrical conductor having upon the surface thereof a plastic, ozone- and corona-proof, non-inflammable, insulating coating of substantial thickness comprising nitrocellulose, a softener, an inert material and a fire retardant compound.



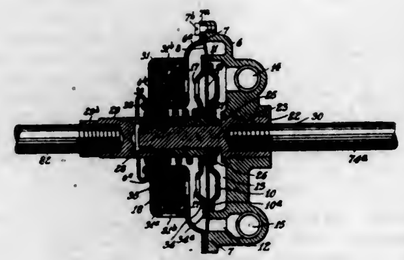
1,809,012. REFRIGERATOR. JOHN BECK, Ashland, Wis. Filed Mar. 2, 1928. Serial No. 258,494. 5 Claims. (Cl. 62—51.)

1. A refrigerator comprising a top and bottom, front and back, and two sides, a division wall intermediate said sides, skeleton frames spaced from said division wall and from one of said sides and forming air passages, a rack below said frames for supporting a cake of ice, an inclined drip pan fixed to said division wall and to said back and having an air-tight connection therewith, and spaced



from a side to form a passage communicating with the space below said drip pan, an inclined member arranged beneath said top, and a baffle fixed to one of said side walls between the rack and the normal plane of the drip pan.

1,809,013. CONTAINER. HARRY C. BOARDMAN, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a Corporation of Illinois. Filed Apr. 12, 1929. Serial No. 354,587. 4 Claims. (Cl. 220—85.)

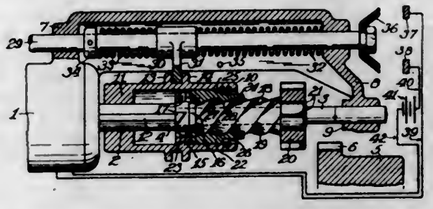


1. A closed container normally substantially rectangular in plan view with substantially straight sides and substantially elliptical in vertical central cross-section, the top of said container adapted to be flexed upwardly and domnwardly and the sides thereof adapted to be flexed outwardly and inwardly by changes in internal pressure.

1,809,014. VACUUM BRAKE MECHANISM. CALEB S. BRAGG and VICTOR W. KLIESRATH, Long Island City, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed June 10, 1926, Serial No. 114,934. Renewed Oct. 17, 1930. 1 Claim. (Cl. 121—38.)

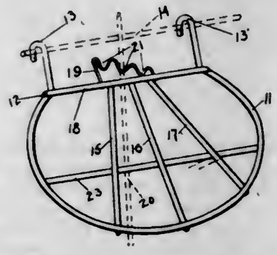
The combination with an automotive vehicle, and an internal combustion engine for propelling the same, of a power actuator comprising a cylinder, a piston therein, and controlling valve mechanism therefor, a part to be actuated operatively connected with the actuator piston, an operator operated part connected with the reversing valve mechanism, a suction connection from the suction passage of the engine to the actuator cylinder, a check valve in said connection, a spring constructed to hold said check valve closed when the engine is operated at lower revolutions than operative running speed, to prevent the introduction of air into the suction passage of the engine from the portions of the suction connection beyond said check valve while starting the engine, operative connections between the operator operated part and the piston and the part to be operated thereby, and a normally closed relief valve for the cylinder and that portion of the suction connection between the check valve and the cylinder provided with a retracting spring of less strength than the check valve spring, permitting the relief valve to open readily whenever pressure accumulates in the cylinder forward of the piston.

1,809,015. CONTROLLING VALVE MECHANISM FOR VACUUM BRAKE SYSTEMS. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Sept. 12, 1929. Serial No. 392,003. 7 Claims. (Cl. 121—41.)



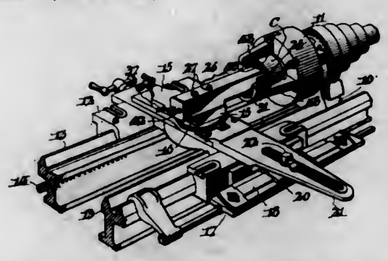
1. In valve mechanism of the kind described, the combination with a valve body provided with an annular seat, a diaphragm for engaging said seat provided with inlet apertures for higher fluid pressure and having marginal portions in sealing engagement with the valve body, a disc valve having a seat for engaging said diaphragm and closing communication through said apertures, a valve actuating part movable with respect to the valve body and connected with said diaphragm and disc valve, said valve actuating part and said valve body being provided with means for connecting them respectively with a physically operable part and with brake mechanism, said valve body being provided with means for connecting the portions thereof exterior to and within said annular seat respectively with a source of lower fluid pressure and with a power actuator, and means independent of the valve body for limiting the lost motion between said valve actuating part and the valve body, and connecting said physically operable part with said brake mechanism.

1,809,016. COMPOSITION FOR PRESERVATIVE TREATMENT OF FRESH FRUIT. ERNEST M. BROODEN, Santa Monica, and MILES L. TROWBRIDGE, Palms, Calif., assignors to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed Mar. 2, 1925. Serial No. 12,776. 6 Claims. (Cl. 99—1.)



5. As a new composition of matter, a mixture non-toxic to humans and comprising paraffin, a refined mineral oil and high coefficiency acid derived from coal tar distillation.

1,809,017. STARTER DEVICE. DALMAR T. BROWNLEE, Indianapolis, Ind. Filed Oct. 20, 1927. Serial No. 227,527. 22 Claims. (Cl. 74—7.)

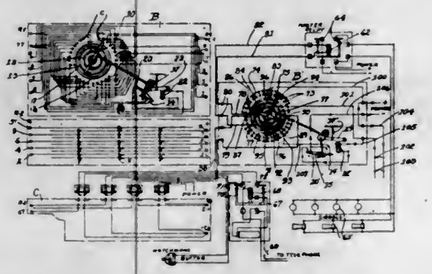


2. A starter device apparatus having a plurality of co-related elements comprising a housing having screw threads therein and a sleeve operating in the housing and having screw threads thereon in connection with the threads in the housing, each thread having a screw face widely separated from the screw faces of adjacent threads and a slightly inclined clutch face back having a width fully twice as great as the depth of the screw face, and a pinion fixed to the sleeve.

1,809,018. ADJUSTABLE BRACKET. CLARENCE A. BRUNING, Colfax, Wash. Filed Dec. 13, 1929. Serial No. 413,767. 4 Claims. (Cl. 211—181.)

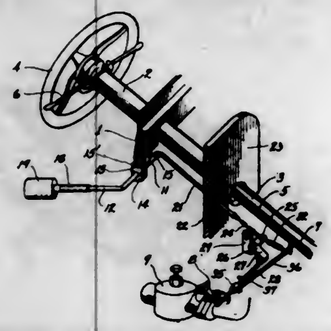
1. In an adjustable bracket of the character described, a frame, the ends of the frame bent at an angle and terminating in hooks, a cross tie, bracket supporting members secured to the cross tie and to the frame, and a stepped adjusting member on said cross tie for maintaining the bracket in a horizontal position.

1,809,019. ROTARY CUTTING OPERATIONS AND APPARATUS THEREFOR. JOHN J. BUCKLEY, Chester, Pa. Filed Feb. 18, 1925. Serial No. 9,929. 7 Claims. (Cl. 82—17.)



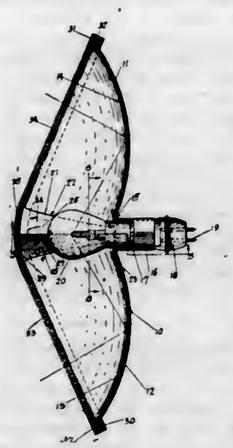
1. A method of concurrently cutting opposite tapers in a pipe coupling on a machine comprising lathe-ways, a revolving coupling-holder with axis of rotation parallel to said ways, carrier means movable along said ways, and means for feeding the same cross-wise of the ways in definite relation to its movement along them; which method comprises feeding through the two ends of the coupling, by and with the carrier means, oppositely pointing cutters

in such positions on the carrier means that their radial distances from the coupling-holder axis vary oppositely as the carrier means moves along and across the lathe-ways as aforesaid.



4. The combination with lathe-ways, a revolving coupling-holder with axis of rotation parallel to said ways, carrier means movable along said ways, and means for feeding the same cross-wise of the ways in definite relation to its movement along them, of cutters for the two coupling ends on said carrier means in such positions that their radial distances from the coupling-holder axis vary oppositely as the carrier means moves along and across the lathe-ways as aforesaid.

1,809,020. SIGNAL CODE SENDING DEVICE AND SYSTEM. HERBERT BURDICK, East Orange, N. J., assignor to Signal Engineering & Manufacturing Company, New York, N. Y., a Corporation of Massachusetts. Filed Jan. 3, 1927. Serial No. 158,665. 8 Claims. (Cl. 177—361.)



6. In a signalling system, an announcing circuit, code determining means and a commutator system conditioned thereby, means to render said commutator system effective sucessively to repeat a code signal into said announcing circuit, a second commutator system including means for applying a non-code signal to said announcing circuit, and switching means controlled in the operation of the second commutator system for suspending a code signal of the first mentioned commutator system during the interval only of the non-code signal.

1,809,021. ACCELERATOR ATTACHMENT. FABIUS M. BUTLER, Seattle, Wash. Filed Aug. 15, 1927. Serial No. 212,945. 9 Claims. (Cl. 74—81.)

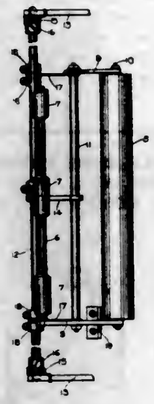
1. In a vehicle of the character described in combination with the throttle member, an accelerator means comprising a pivoted support, a control lever slidable therein and operatively connected with the throttle member and extended to a position suitable for actuation by lateral movement of the knee or leg of a person in the driver's seat.

1,809,022. MOTOR VEHICLE HEADLAMP. WILLIAM H. CHAPMAN, Oakland, Calif. Filed Sept. 30, 1929. Serial No. 396,023. 4 Claims. (Cl. 240—41.35.)

1. A device of the class described, comprising, in combination, duplex shell-like reflectors of substantially parabolic form in cross-section and having an intermediately positioned light deflecting element, an illuminant coactively associated with said light deflecting element, and a third reflector positioned in front of said illuminant and forming a continuation of said light deflecting element to receive and reflect the light rays as received from the front end of said illuminant rearwardly and angularly to be received and re-reflected by said shell-like reflectors

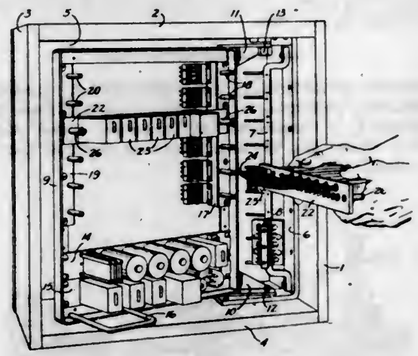
---

1,809,023. STRANDED BELT. EDWARD A. CONNER, Stratford, Conn., assignor to American Cable Company, Inc., a Corporation of Delaware. Filed Sept. 11, 1926. Serial No. 134,796. 8 Claims. (Cl. 74—67.)



3. A belt comprising a plurality of wire ropes disposed in mutually spaced relation, a plurality of transversely disposed clips clamped upon said ropes, each clip being formed of a body portion bearing against one side of the ropes and a pair of end portions folded over and bearing against the opposite side of the ropes, the ropes being flattened at their points of intersection with the clip and said body portion being bent in between said ropes.

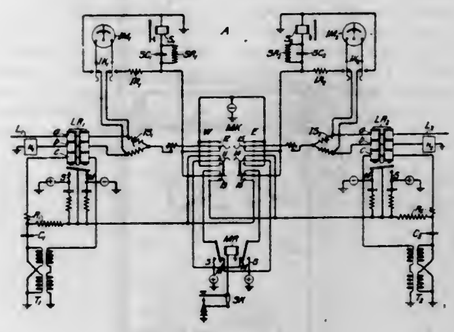
1,809,024. PAPER ROLLER MECHANISM. CHESTER W. CRUMRINE, Rochester, N. Y., assignor to Electromatic Typewriters, Inc., Rochester, N. Y., a Corporation of New York. Filed Dec. 9, 1926. Serial No. 153,588. 1 Claim. (Cl. 197—138.)



Paper-roller mechanism, for a typewriter or the like, comprising two parallel rollers, two end-levers each having loose pivotal connections with the corresponding ends of said rollers, a rod loosely connected, at its ends, with intermediate points of the respective end-levers, a rock-shaft parallel with said rollers and rod, an arm

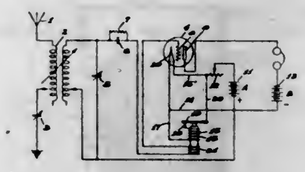
fixed to the rock-shaft and having a loose pivotal engagement with the middle of said rod, two links, each

loosely pivoted, at its ends, to the rod and the rock-shaft, respectively, and a spring for rotating the rock-shaft in the direction to press the rollers against the paper.



1,809,025. ELECTRICAL DEVICE. VICTOR I. CRUSAR, East Orange, N. J., assignor to Bell Telephone Laboratories Incorporated, New York, N. Y., a Corporation of New York. Filed July 29, 1929. Serial No. 381,996. 7 Claims. (Cl. 179—91.)

1. An electrical device comprising electrical apparatus secured to a mounting plate and interconnected in a circuit terminating in a plug, said plug having a small range of movement with respect to said mounting plate.

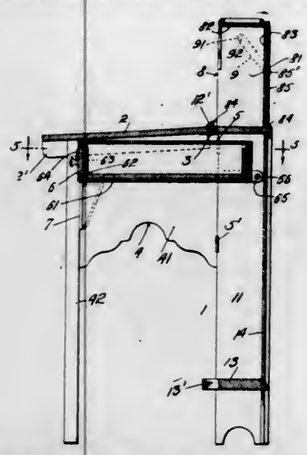


1,809,026. TELEGRAPH SYSTEM. GEORGE C. CUMMINGS, Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 8, 1928. Serial No. 298,158. 9 Claims. (Cl. 178—71.)

1. In a duplex telegraph repeater, a polar relay associated with one line section, another polar relay associated with the other line section, operating windings and armatures for said polar relays, a balancing network for each line section, circuit means interconnecting said windings, armatures, line sections and networks, a single circuit indicating device, a plurality of impedances included in said circuit means and switching means for

connecting said indicating device across any one of said impedances for observation of the current flow in said impedances.

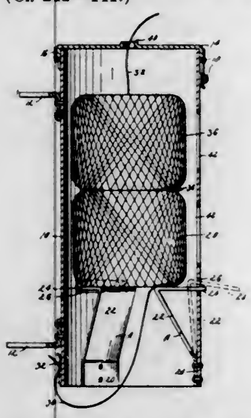
1,809,027. RADIO RECEIVING SYSTEM. ERNEST G. DANIELSON, San Francisco, Calif. Filed June 23, 1925. Serial No. 38,961. 9 Claims. (Cl. 177—311.)



1. A radio receiving set including a three electrode vacuum tube and a telephonic device for normally reproducing audible frequencies, means responsive to abnormally high voltage on the filament of said tube for interrupting the filament circuit at audible frequency to protect the filament and produce a signal of said frequency in the telephonic device.

9. In a system of the class described, an electron tube relay having a grid, plate and filament, a circuit for heating said filament, an input circuit connecting said grid and filament, an output circuit connecting said plate and filament, translating means in said output circuit, and means including an electro-magnetic vibrator for generating a pulsating current of audio frequency connected in parallel with the filament and coupled to the input circuit, said means being responsive to an increase in the potential drop across the filament above a safe value to modulate the input circuit with said generated current whereby an amplified current of audio frequency is produced in the output circuit to actuate said translating means.

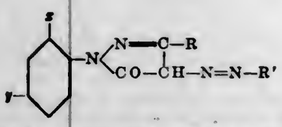
1,809,028. FOLDABLE DESK. JOHN FANARJIAN, Union City, N. J., assignor of one-half to Paul M. Hammalian, John M. Hammalian, and Jacob M. Hammalian, Hackensack, N. J. Filed Nov. 17, 1927. Serial No. 233,807. 5 Claims. (Cl. 45—46.)



1. A folding desk embodying, in combination, a box-like body portion, a folding leaf having a hinged connection at the front edge of said box-like portion and foldable downwardly, a drawer element having a hinged connection

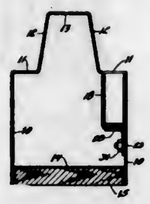
within said box-like body portion in a horizontal plane below said hinged connection of the leaf and in a vertical

plane adjacent to the rear wall of said body portion, means for supporting said writing leaf, and means for independently supporting said drawer.



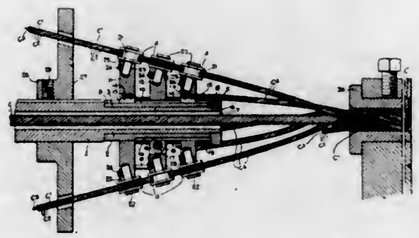
1,809,029. TWINE CONTAINER. CARLTON J. FULCHER, Early, Iowa. Filed Mar. 24, 1930. Serial No. 438,539. 7 Claims. (Cl. 242—141.)

1. In a twine container, a tubular receptacle and leaf spring members forming a bottom therefor, said members being capable of movement to a position allowing the insertion of a ball of twine through such bottom.



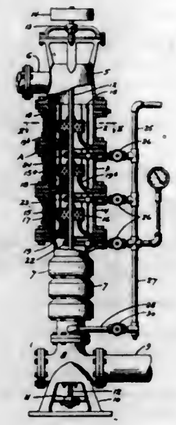
1,809,030. MONAZO DYES FROM p-CHLORPHENYL-PYRAZOLONES AND ANILINES. LEON W. GELLER, Hamburg, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 23, 1925. Serial No. 77,372. 38 Claims. (Cl. 260—87.)

1. As new products, the monazo compounds of the pyrazolone series which correspond with the probable formula



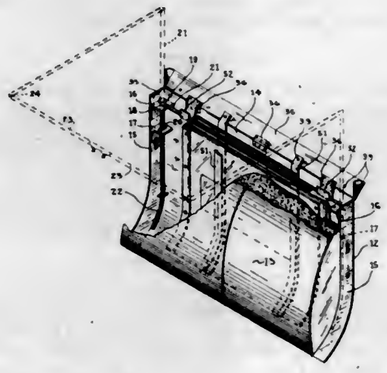
wherein x signifies a hydrogen atom which may be replaced by a sulfo or a carboxyl group, y a halogen atom, R a methyl or a carboxyl group, and R' an aryl radical of the benzene series which is free from a substituent containing a benzene nucleus but which may carry other substituents; said compounds being soluble in concentrated sulfuric acid to give yellow to red to brown colorations; and upon reduction yield a 1-(4'-halogen-phenol)-4-amino-5-pyrazolone which may contain a sulfo or a carboxyl group in the phenyl nucleus and an arylamino body of the benzene series which is free from a substituent containing a benzene nucleus.

1,809,031. VEHICLE BODY CONSTRUCTION. IRVING T. GILLIAN, Detroit, Mich. Filed Sept. 13, 1928. Serial No. 305,665. 4 Claims. (Cl. 16—86.)



1. In combination with a door pillar provided with a pair of connected sheet metal walls extending at an angle to each other, one of said walls being provided with a notch extending perpendicularly to the line of junction of said walls, the other of said walls being provided with an opening joining said notch and extending beyond either side thereof, a female member of a door dovetail including a metal casing and opposed blocks insertable through and removable from said opening positioned within said pillar, said casing being provided with a flange overlying an exterior face of said pillar, and removable means securing said flange to said face.

1,809,032. STRANDING MACHINE HEAD. GEORGE C. GRIGSON, Belleville, N. J., assignor to American Cable Company, a Corporation of Delaware. Filed Aug. 4, 1927, Serial No. 210,543. Renewed Sept. 3, 1930. 6 Claims. (Cl. 117—16.)



1. A stranding head for imparting to plural components of a stranded wire structure the form which each of said components is to occupy in the composite structure, said head comprising a support; a set of carriers mounted upon said support; means to retain said carriers in fixed position upon said support, said means being adapted to permit the axial spacing of said carriers relatively to each other to be varied; and radially adjustable forming devices arranged in groups around the peripheries of said carriers, with means to co-ordinate the radial position of said forming devices with the axial spacing of said carriers.

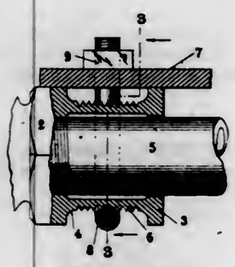
1,809,033. EMULSIFYING APPARATUS. ROBERT H. HARGREAVES, San Jose, Calif., assignor of one-third to Duncan Stewart and one-third to A. M. Riesen, San Jose, Calif. Filed Dec. 17, 1928. Serial No. 326,670. 5 Claims. (Cl. 261—93.)

1. In a device of the character described a housing, an inverted perforated cup-shaped rotor journalled within the housing said housing having an inlet opening formed in its lower end, and a discharge opening in its upper end, means for delivering a liquid through the inlet opening and for directing the liquid into the rotor, means for delivering a gaseous fluid and for directing it, together with the liquid into the rotor, means for rotating the rotor to centrifugally emulsify and discharge the liquid and the gas, and stationary agitating members vertically disposed within the housing exterior of the rotor and cooperating therewith to cause further agitation and emulsification of the fluids.

1,809,034. COLLAPSIBLE INCLOSURE FOR RUMBLE SEATS. FREDERICK E. HARTMAN, Milwaukee, Wis. Filed May 13, 1929. Serial No. 362,608. 2 Claims. (Cl. 296—99.)

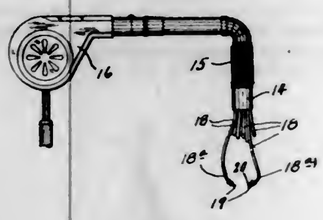
1. The combination with an automobile having a rumble seat with a closure member therefor, said closure member being formed with a compartment therein, of a collapsible inclosure for said rumble seat, comprising a pair of frame members, perforated brackets extending from said closure member within said compartment, said frame members being slidably and pivotally positioned in the perforations of said brackets said perforations in the brackets being of such shape as to provide for passage of the locking means therethrough when the upper portions of the frame members are parallel to the closure members and to prevent passage therethrough when the upper portions of the frame members are at right angles to the closure member, locking means on said frame members, for releasably holding the frame members in a raised pivoted position, and a removable covering for said frame members, said frame members being movable from said raised position to a lowered collapsed position within said compartment, and said compartment being adapted to accommodate said removable covering.

1,809,035. SOUND HORN. JESSE BARNUM HAWLEY, St. Charles, Ill. Filed July 8, 1927. Serial No. 204,402. 22 Claims. (Cl. 181—27.)



1. A sound horn having a hollow sound member, and solidified material in which said member is embedded.

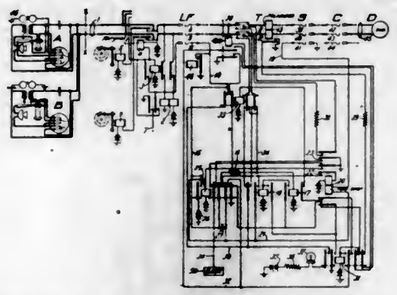
1,809,036. ELECTROSTATIC SOUND REPRODUCER. JESSE B. HAWLEY, St. Charles, Ill., assignor to United Reproducera Patents Corporation, St. Charles, Ill., a Corporation of Nevada. Filed Mar. 7, 1928. Serial No. 259,717. 4 Claims. (Cl. 179—111.)



1. An electrostatic sound producer comprising an electroconductive plate provided with a depression having its upper edge gradually merging into said plate, and having a central opening in its bottom portion, said depression gradually diminishing in diameter from the top to the bottom thereof, a flexible dielectric diaphragm engaging said plate and covering said opening, the depth of said depression being less than its greatest diameter, so that a substantial part of the contiguous portion of the diaphragm will flex inwardly into contact with the adjacent portion of the inner surface of said depression, and means providing a conducting surface on the outer face of said diaphragm.

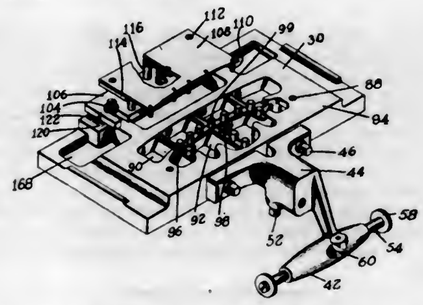
1,809,037. ANGLE COCK AND HOLDER THEREFOR. LOUIS A. HOBBS, St. Louis, Mo., assignor to Railway Devices Company, St. Louis, Mo., a Corporation of Missouri. Filed July 2, 1928. Serial No. 289,672. 1 Claim. (Cl. 248—31.)

In a device of the class described, the combination with a supporting plate, of an angle cock provided with an integral head having a pair of bearing faces for the plate and an intermediate clamping portion, and a U-bolt cooperating with said clamping portion to retain the angle cock in position, said clamping portion being provided with circumferentially extending corrugations, said U-bolt being provided on its concave face with corresponding corrugations cooperating with the first named corrugations.



1,809,038. APPARATUS FOR COOLING SCALP. FRANK A. HOGREBE, St. Louis, Mo. Filed Sept. 24, 1928. Serial No. 308,019. 6 Claims. (Cl. 132—36.)

1. A device for cooling scalp comprising in combination a hollow distributor having one end open and the other closed and provided with a plurality of nipples extending from said closed ends, a flexible tubular coupling connected to the open end of said distributor and adapted to be connected to a suitable source of air supply, a plurality of flexible tubular connections attached to said nipples and leading from said distributor, and a nozzle attached to the free end of each connection and adapted to be detachably secured to the edge of a protector pad forming a part of hair treating apparatus, whereby a current of air is discharged against the scalp and blows away steam generated by said hair treating apparatus.

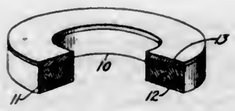


1,809,039. TELEPHONE EXCHANGE SYSTEM. HENRY HOVLAND, Williston Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 28, 1929. Serial No. 374,357. 9 Claims. (Cl. 179—9.)

1. In a telephone system, a line having a plurality of subscribers' stations, one of which is a calling station, a message register for each of said stations, a selector, means including a trunk for extending said line to said selector, means individual to said trunk for determining which of

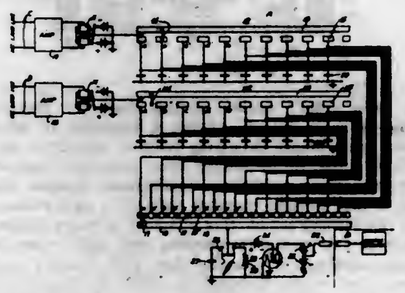
said stations is the calling station, and means individual to said line for connecting said message registers to said trunk.

1,809,040. CUTTING OR PUNCHING MACHINE. JOHN HUSLER, Saugus, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 31, 1929. Serial No. 367,587. 18 Claims. (Cl. 164—29.)



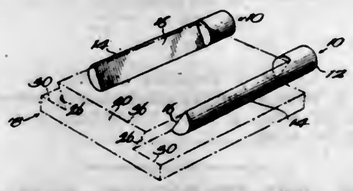
1. A die for use in a cutting or punching machine comprising a member provided with cutting edges and having apertures for the passage of chips of material, and a supporting plate for said member also having apertures for the passage of the chips of material and provided with a plurality of frangible projections having surfaces supporting said member between the apertures therein.

1,809,041. INHIBITOR. RUSSELL L. JENKINS, JOHN H. KARRH, and CAMPBELL R. MCCULLOUGH, Anniston, Ala., assignors to Swann Research, Inc., a Corporation of Alabama. Filed Feb. 3, 1930. Serial No. 425,712. 5 Claims. (Cl. 23—239.)



1. A composition for inhibiting the corrosive action of phosphoric acid on iron and steel, comprising an aldehyde and an ionizable compound of a high atomic weight halogen.

1,809,042. MAGNET CORE. GEORGE A. KELSALL, Belleville, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1926. Serial No. 151,625. 1 Claim. (Cl. 175—21.)

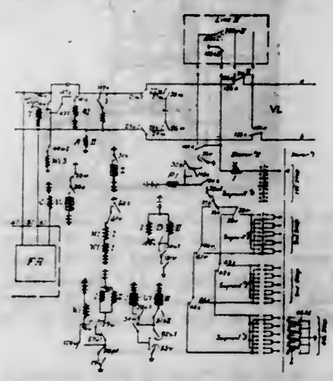


A magnetic core for use in circuits transmitting currents of super-audible frequencies, having the characteristics of low core loss coupled with high permeability at such frequencies, said core consisting of finely divided particles of a nickel-iron alloy annealed to remove strains and assembled loosely in core form in substantially the magnetic condition in which the material is left by the annealing treatment.

1,809,043. PRINTING TELEGRAPH SYSTEM. WILLIAM A. KNOOP, Hempstead, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 10, 1929. Serial No. 369,815. 12 Claims. (Cl. 178—70.)

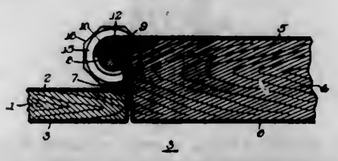
1. In a signaling system, a repeater comprising a transmitting distributor mechanism having a plurality of segments, said segments being adapted to receive successive code combinations of message impulses from a plurality of separate sources, and electrostatic means connected directly to said segments for simultaneously storing upon the respective segments, records of the impulses received from said plurality of sources, whereby to provide an overlap between the selections received from either source and the corresponding selections transmitted by the distributor mechanism.

1,809,044. DOVETAIL MEASURING DEVICE. CHARLES OTTO KNUUTI, Berwyn, Ill. Filed Feb. 4, 1929. Serial No. 337,311. 13 Claims. (Cl. 33—143.)



1. In a gaging device of the class described for use with angularly disposed surfaces, means including a substantially plane section having a surface for engaging a surface of the work to be measured, and a semi-cylindrical surface for receiving a work engaging portion of a calipering device, whereby the measurement between said work surface and another point may be accurately determined.

1,809,045. FINGER RING GUARD. MAX KRAFT, Brooklyn, and JACK BIRNBAUM, Bronx, N. Y. Filed Dec. 4, 1930. Serial No. 499,912. 4 Claims. (Cl. 63—17.)

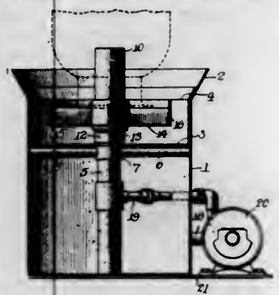


1. A finger ring guard comprising a resilient element of normally less curvature than a finger ring within which it is adapted to be mounted, said element having at least one lateral projection with a free end, said projection being of a length adapted to engage substantially entirely around the ring shank so that the free end of the projection will terminate at the finger engaging surface of the ring.

1,809,046. TELEPHONE SYSTEM. ROBERT KRUSE, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Apr. 30, 1930, Serial No. 448,486, and in Germany June 12, 1929. 8 Claims. (Cl. 179—17.)

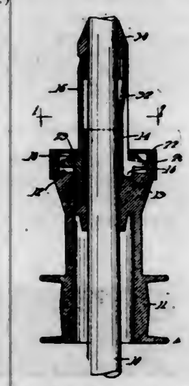
3. In a telephone system, a party line having a plurality of subscribers' stations, a switching device individual to said party line and capable of transmitting alternating current impulses over said line, a relay mechanism and a stepping switch individual to each of said subscribers' stations and all responding in synchronism to alternating current impulses from said switching device for selecting the wanted subscriber's station.

1,809,047. HINGE FOR VAT COVERS. OLAF LARSEN, Oak Park, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 13, 1929. Serial No. 377,964. 2 Claims. (Cl. 220—31.)



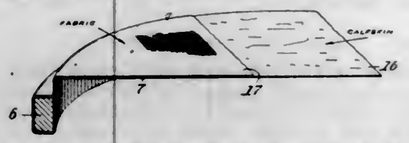
2. In combination with a stationary support and a swingable cover, said support and cover being outwardly constructed of sheet metal, a hinge connection between said support and said cover comprising, a cylinder formed in the sheet metal structure of said support adjacent said cover, an apron formed in the sheet metal structure of said cover adjacent said support, said apron overlying said cylinder in rotative relation thereto for the pivotal support of said swingable cover and having a wing extending endwardly of each end of said cylinder, a stud positioned in each end of said cylinder, a collar adjustably mounted on each of said studs and extending in overlying retaining relation to the adjacent one of said wings, and a cap mounted on each of said studs in adjustable abutting relation to said collar.

1,809,048. STERILIZER FOR MILK CANS. OLAF LARSEN, Oak Park, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1929. Serial No. 381,497. 2 Claims. (Cl. 167—3.)



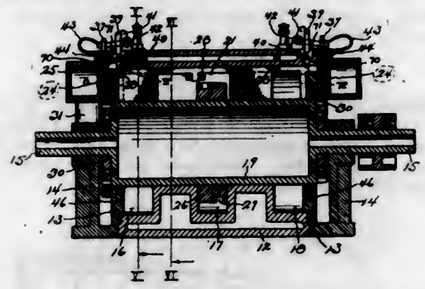
1. A device of the class described comprising a tank, an upright jet tube mounted therein having a plurality

of jet openings in its upper end, a valve sleeve operatively mounted on the upper portion of said jet tube and having its closed end overlying said jet openings, said sleeve having slots in its end portion operable into and out of register with said jet openings by rotation of said sleeve



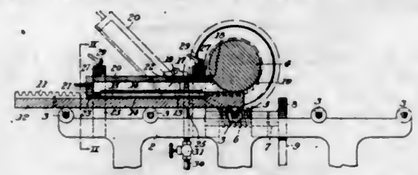
upon said tube, a can support mounted on said sleeve adapted to support a can in position to receive fluid discharged from said jet openings and to drain the same into said tank, said support and sleeve being rotatable by rotation of said can, and means for supplying fluid under pressure from said tank to said jet tube.

1,809,049. BOBBIN CLUTCH FOR SPINDLES. DAVID LEMOINE and GEORGE FOURNIER, Whitinsville, Mass. Filed Nov. 28, 1928. Serial No. 322,472. 2 Claims. (Cl. 242—46.7.)



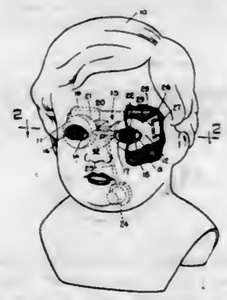
1. In a spindle, a blade, a whirl mounted thereon, centrifugal bobbin clutching members supported on said whirl with their upper ends free to move outward, means on said whirl engaging the lower portions of said clutch members to limit such outward movement of their upper ends, and a cap mounted on said blade and forming a projecting flange above and free from the upper ends of said clutch members, said cap having depending portions holding said clutch members in spaced relation and said depending portions being inclined downwardly and inwardly toward said spindle blade between said members.

1,809,050. HEAD FOR MUSICAL INSTRUMENTS. GEORGE H. LOGAN, Pittsburgh, Pa. Filed Feb. 23, 1929. Serial No. 341,900. 5 Claims. (Cl. 84—414.)



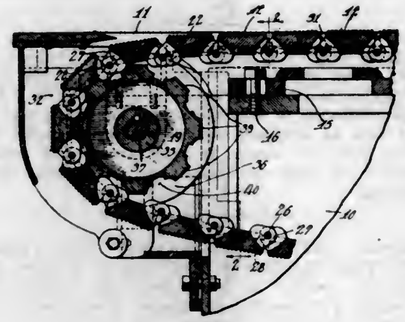
1. A head for a musical instrument comprising a layer of skin, a layer of fabric, and means for securing the skin and fabric to each other.

1,809,051. ROTARY ENGINE. GEORGE A. LUTHER, Kansas City, Kans. Filed Jan. 16, 1926. Serial No. 81,615. 3 Claims. (Cl. 123—14.)



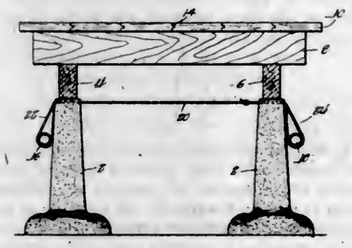
1. In a rotary engine of the character described, a casing, a rotor therein having a plurality of staggered spaced apart blades extending radially therefrom, an abutment adapted to be moved into successive cooperation with each blade to form a combustion chamber therebehind, a fuel storage chamber carried by said casing adjacent the formed combustion chamber, a valve joining said chambers and means for opening said valve when the adjoining combustion chamber has been formed including a series of levers disposed to co-act to impart opening and closing movement to said valve, said series of levers being directly actuated by said abutment member as it reaches a position behind each blade and to permit the passing thereof out of such position without moving said valve.

1,809,052. METHOD OF AND APPARATUS FOR PREPARING MATRICES FOR STEREOTYPE PLATES. BENJAMIN MACKLEY, Pittsburgh, Pa. Filed Mar. 27, 1929. Serial No. 350,154. 14 Claims. (Cl. 101—12.)



1. In a method of preparing matrices for stereotype plates, the steps comprising simultaneously subjecting dry flong to the action of a hot humidifying agent and impressing the flong.

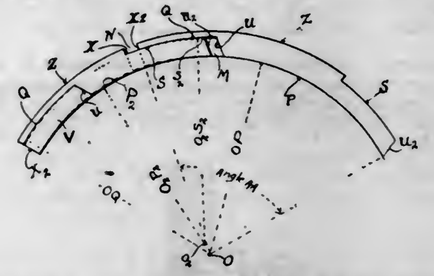
1,809,053. DOLL EYE MOUNTING. SAMUEL MARCUS, Brooklyn, and ALEXANDER KONOFF, New York, N. Y., assignors to Markon Manufacturing Co. Inc., New York, N. Y., a Corporation of New York. Filed July 10, 1928. Serial No. 291,635. 18 Claims. (Cl. 46—40.)



1. In combination, a doll's head having eye openings, eye socket members attached to said head at said openings, each of said socket members being adapted to receive and supportingly house an eye member, an eye set including a pair of eye members, and means for movably mounting said eye members in said socket members, said means comprising a resilient holder anchored to said socket members and active on said eye set to resiliently support the same with relation to said socket members.

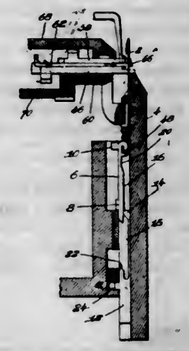
1,809,054. CHAIN FEED DRIVE. CARL LAWRENCE MATTISON, Rockford, Ill., assignor to Mattison Machine Works, Rockford, Ill., a Corporation of Illinois. Filed Mar. 23, 1925. Serial No. 17,545. 10 Claims. (Cl. 198—193.)

5. In a block for an endless chain the combination of a body, means on said body by which the block is adapted to be incorporated in the endless chain, said block having on the under face a plurality of grooves for guides which support and guide the chain.



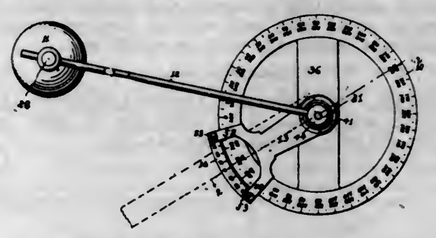
1,809,055. GREENHOUSE BENCH. PHILIP L. MCKEE, Chicago, Ill. Filed Oct. 17, 1927. Serial No. 226,549. 3 Claims. (Cl. 47—18.)

1. A greenhouse bench comprising in combination a plurality of spaced apart concrete legs, wooden cross supports extending across the tops of said legs forming a demountable superstructure, a wire extending across the top of a pair of such legs, said wire having looped portions depending downwardly on an exterior wall of each leg to form a sling, and heating pipes extending longitudinally of the bench structure and through said iron slings.



1,809,056. METALLIC PACKING. JOHN MELLOR, Bay Head, N. J. Filed Sept. 4, 1922. Serial No. 586,054. 7 Claims. (Cl. 288—3.)

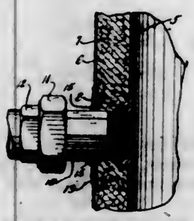
1. In a metallic packing, a segmental ring comprising a series of segments, each having a countersink at one end and a projection at the opposite end adapted to contact respectively with adjacent segments and the outer surface of each projection having a curvature varying



differentially from the surface on the adjacent segment with which it contacts, and resilient means for yieldingly retaining said segments in contact with each other.

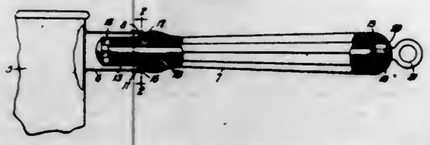
1,809,057. KNITTING MACHINE. MAX C. MILLER, Cumberland, R. I. Filed Apr. 10, 1923, Serial No. 631,071. Renewed Feb. 28, 1930. 17 Claims. (Cl. 66—37.)

1. In a knitting machine spring needles, a stitch cam for drawing the needles to the stitch level adjustable to vary the stitch level, a separate cam for drawing the needles to the pressing level, and means for pressing the needles.



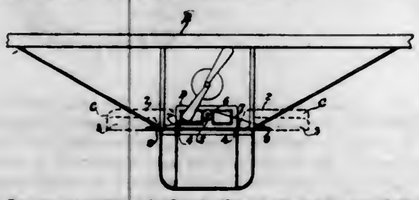
1,809,058. TOPOGRAPHIC MECHANISM. ERNEST L. MINER and CLARENCE M. LEATHERMAN, Coldwater, Mich., assignors to Coldwater Instrument Works, Coldwater, Mich. Filed May 21, 1928. Serial No. 279,281. 8 Claims. (Cl. 33—75.)

1. In a topographic mechanism, the combination of vertical standards one of which has a lower pointed end for engaging a drafting board, a connecting rod detachably spacing the upper ends of said standards, a protractor having an apertured cross member for receiving the pointed standard to be supported thereby, a vernier arc swinging about the periphery of said protractor, and means for pivotally supporting the vernier for movement



adjacent the edge of the protractor and in a horizontal plane about the pointed standard upon said board, so that swinging movement of the support means on the board will correspondingly move the vernier about the protractor.

1,809,059. ADJUSTABLE COLLAR. CLARENCE H. MORROW, Cleveland, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 26, 1928. Serial No. 322,074. 3 Claims. (Cl. 285—30.)

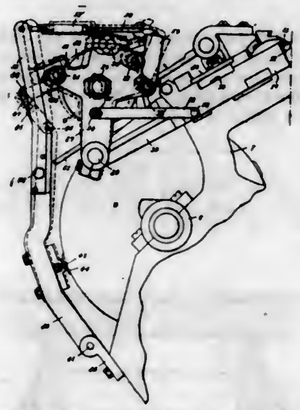


1. In a hot water heater, the combination of a water tank, a jacket surrounding the same and spaced therefrom and provided with an opening, a conduit member threaded into the tank and extending out through the jacket opening, said opening being larger than the conduit, and a closure for the gap between said conduit and the edges of said opening, comprising a washer-like member closely fitting and slidable upon the conduit and extending outwardly over the edges of the opening, and means for permanently securing the same to the jacket wall, whereby the conduit may be removed from or inserted into the tank without detaching the closure from the jacket.

1,809,060. HANDLE ATTACHMENT FOR COOKING UTENSILS. ANDREW W. NELSON and WILBUR TOPPING, Terre Haute, Ind., assignors to Columbian Enameling & Stamping Company, Terre Haute, Ind., a Corporation of Indiana. Filed Aug. 15, 1929. Serial No. 386,073. 3 Claims. (Cl. 53—8.)

1. A handle attachment for culinary vessels and the like comprising a tubular member fixed to the outer wall of the vessel, said member having its outer end provided with an inturned holding flange, a handle, a securing member projecting from said handle into the interior of said tubular member, a ferrule interposed between the end of said handle and said flange and encircling the adjacent portion of said tubular member, and means in said tubular member with which said securing member engages to clamp said handle and ferrule to said flange.

1,809,061. NONSINKABLE AEROPLANE BODY. LOUIS NYCZ, Binghamton, N. Y. Filed July 17, 1928. Serial No. 293,377. 3 Claims. (Cl. 244—2.)

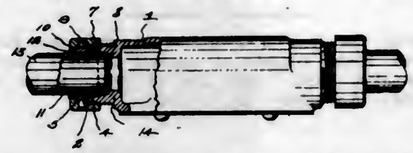


1. In an aeroplane body, hollow adjacent, parallel, pivotally mounted sections on top of the aeroplane body, filled with nonsinkable substance, pivotal spring operated supports beneath and at the ends of the same, means for contracting said spring mounting for drawing said sections into pivotal horizontal alinement, and means for releasing said springs and projecting said wings into parallel outward alinement at right angles to the side of the aeroplane body.

1,809,062. METHOD AND APPARATUS FOR MEASURING THE ACTIVE COMPONENTS OF ELECTRIC QUANTITIES. MENDEL OSNOS, Berlin, Germany. Filed Jan. 25, 1927, Serial No. 163,548, and in Germany Feb. 4, 1926. 10 Claims. (Cl. 171—95.)

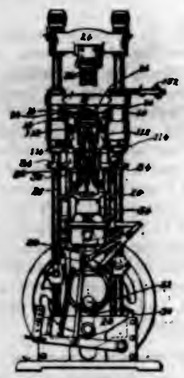
2. In a device for measuring the active voltage component of an alternating current system by the use of a voltmeter, means comprising the secondary of a transformer connected in said system for supplying said voltmeter with an auxiliary voltage bearing a known phase relation with the current in said system, said auxiliary voltage being equal and opposite to the inactive voltage component.

1,809,063. PATTERN MECHANISM FOR STRAIGHT KNITTING MACHINES. WILLIAM S. PARKER, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 17, 1929. Serial No. 355,691. 27 Claims. (Cl. 66—67.)



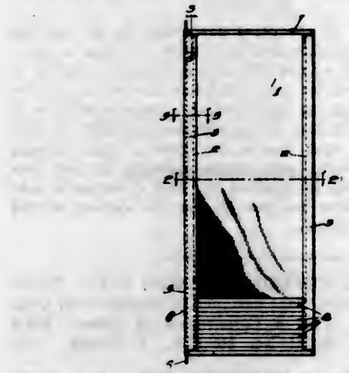
1. In a straight knitting machine, the combination with a bed of needles, of a main pattern cylinder arranged to be operated to determine the number of needles thrown into action in different stages in the knitting of an article, an auxiliary pattern cylinder arranged to be thrown into and out of operation to control the active needles, a carriage for said auxiliary cylinder, the auxiliary cylinder with its carriage tending normally to move freely in one direction to a certain position and arranged to assume such position when not otherwise operated, and means arranged to be operated at one or more intervals in the operation of the machine having connection with the carriage to move the same with the cylinder in the opposite direction to another position.

1,809,064. THREADLESS CONNECTER. JOHN T. PEARSON, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed May 10, 1929. Serial No. 362,008. 3 Claims. (Cl. 247—25.)



1. A conduit coupling comprising an externally threaded body having a tapered passage for receiving a conduit end, a conduit projecting into said passage and having its

end in engagement with the tapered sides of said passage, a contractile sleeve surrounding the conduit adjacent the end thereof and extending into said passage, the sleeve and passage having coacting surfaces to contract the sleeve

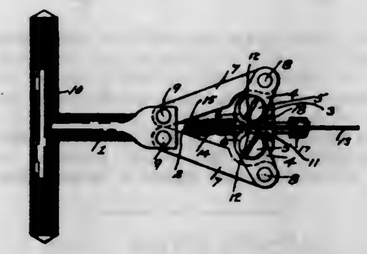


on the conduit end when the sleeve is forced into the passage, a nut threading on the body and having an internal flange thrusting against the sleeve to force it into the body during turning of the nut in one direction.

1,809,065. ART OF SHOEMAKING. JOSEPH H. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 23, 1923. Serial No. 676,649. 40 Claims. (Cl. 12—19.2.)

1. The method of operating upon the heel-seat of a shoe, which consists in molding said heel-seat to a form corresponding to the co-operating end of a heel to be attached and to produce a fastening-deflecting surface thereon, and attaching the elements of the heel-seat to one another while under the pressure applied for molding by a fastening positioned by said deflecting surface at the time of insertion.

1,809,066. VISIBLE INDEX OR RECORD SYSTEM. FRANK D. POWELL, Chicago, Ill., assignor to Acme Card System Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 5, 1930. Serial No. 426,021. 10 Claims. (Cl. 40—102.)

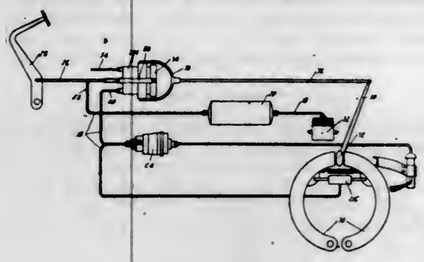


1. In combination, a flat web, a spacer strip comprising a sheet of bendable material folded over and enclosing one edge of the web and mounted on and secured to opposite faces of the web adjacent said edge, a second sheet of bendable material folded over and enclosing said spacer strip and the edge of the web, said second sheet of bendable material extending over a face of the web beyond the inside edge of said spacer strip to form a channel.

1,809,067. METHOD OF MAKING CATHODES. HOWARD T. RENYE, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Oct. 7, 1924, Serial No. 742,111. Divided and this application filed June 9, 1928. Serial No. 284,197. 2 Claims. (Cl. 250—27.5.)

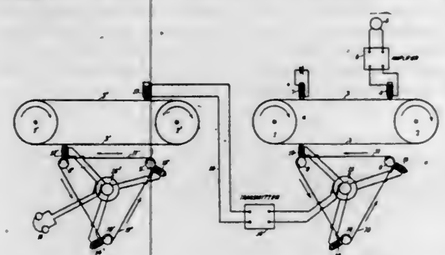
1. Method of making cathodes which comprises providing a vitrified vessel of vitrified inert material of high melting point with an inner lining of thermionically active material, placing cathode material in the vessel, subjecting the vessel and contents to heat sufficient to cause the reactive lining to combine with the melt to produce a thermionically active compound, and forming said compound into cathodes.

1,809,068. FISH TAPE PULLER. GEORGE J. ROTH, Los Angeles, Calif. Filed Feb. 11, 1930. Serial No. 427,498. 2 Claims. (Cl. 24—134.)



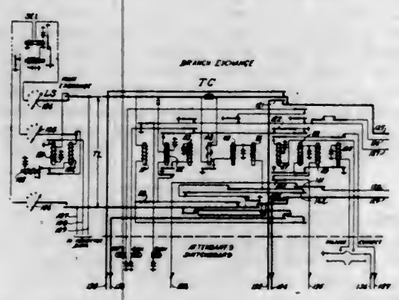
1. A puller comprising a pulling shank, a pair of links connected at one end to said shank, a pair of jaw levers connected at one end to the other end of said links respectively, jaws formed on the other ends respectively of said jaw levers for gripping a tape therebetween, and a cross head to which the jaw ends of said levers are pivoted to cause the jaw ends of said levers to swing rearwardly and said jaws to grip the tape when said shank is pulled forwardly, a guide rod on which said cross head is slidably mounted, and a head on the end of said rod for engaging and arresting the rearward movement of said cross head and said jaw levers with said jaws in maximum gripping position.

1,809,069. VEHICLE HAVING BRAKES. ROY S. SANROAD, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Jan. 8, 1926. Serial No. 79,952. 16 Claims. (Cl. 188—152.)



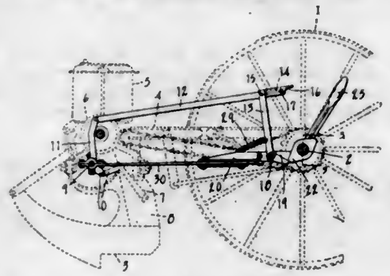
13. A vehicle having supporting springs, a chassis frame, and brakes and comprising, in combination there-

with, brake applying means, a pneumatic shock absorber unit and means including said shock absorber unit for



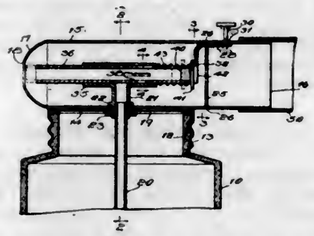
automatically and variably controlling the pressure applied to said brakes by said brake applying means according to the weight on the springs.

1,809,070. MEANS AND METHOD OF SECRET TRANSMISSION OF SIGNALS. CARL SCHAPIRA, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed July 1, 1927, Serial No. 202,835, and in Germany July 16, 1926. 12 Claims. (Cl. 179—1002.)



1. In an apparatus for transmitting a series of normally arranged signals, a recording medium, means for impressing the signals on said medium in normal order, a second recording medium, means coacting with each recording medium and arranged to transfer to the second the signal impressions on the first in inverted order, and means coacting with the second recording medium adapted to re-arrange said signals in normal order.

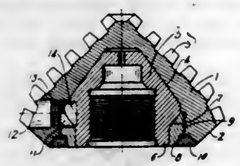
1,809,071. TELEPHONE SYSTEM. GEORGE E. SCHOMAKER, Sydney, New South Wales, Australia, and ROY F. GOULD, Chicago, Ill., assignors to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Apr. 28, 1928, Serial No. 273,469, and in Great Britain Aug. 26, 1927. 49 Claims. (Cl. 179—27.)



9. In combination, a plurality of telephone lines, an automatic connector switch having access thereto, a plurality of trunk lines each normally connected to said connector switch, and non-numerical switching means for connecting any calling one of the first-mentioned lines to any one of said trunk lines.

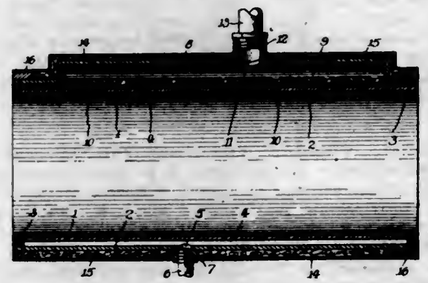
1,809,072. GRAIN PLANTER. MICHEL F. SCHOU, Kalamazoo, Mich., assignor of one-half to Mary Mazur, Kalamazoo, Mich. Filed Jan. 9, 1930. Serial No. 419,504. 5 Claims. (Cl. 111—16.)

1. The combination in a planter including a dropping mechanism and carrying and driving wheels provided with an axle, of a dropping mechanism actuating rockshaft operatively connected with the dropping mechanism, an arm on said rockshaft, a bell crank actuating lever, a link pivoted to said arm on said rockshaft and having a slot therein, said actuating lever being provided with a pin engaging said slot, a thrust member pivotally mounted on said link and adapted when swung to one position to hold the pin in engagement with the end of the slot whereby a movement of the actuating lever is imparted to the rockshaft and in another position to permit movement of the lever without actuating said rockshaft, a cam on said axle coacting with said actuating lever, a return spring for said lever, and a clutch for detachably connecting said cam to said axle.



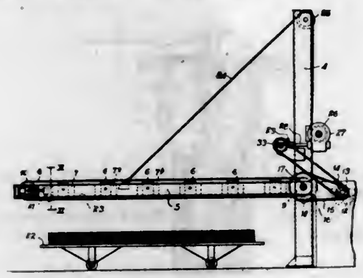
1,809,073. SPRAY. JOHN F. SCHYLANDER, Chicago, Ill. Filed Oct. 12, 1928. Serial No. 312,057. 10 Claims. (Cl. 299—89.)

1. In a device of the class described, an air conduit having an inlet opening and an outlet opening, a tubular member closed at one end and having an opening in registry with the outlet opening of said air conduit, means for slidably supporting said tubular member coaxially in said air conduit, means for conducting material to said tubular member, and means for moving said tubular member longitudinally and means operable by said longitudinal movement to regulate the flow of material into said tubular member and for placing its opening within that of said air conduit.



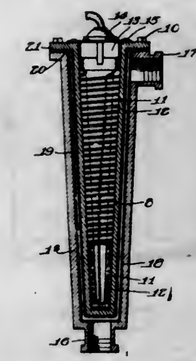
1,809,074. DRILL CUTTER RETAINING RING. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed May 4, 1929. Serial No. 360,371. 3 Claims. (Cl. 255—71.)

1. In a drill cutter, a frusto-conical bushing threaded internally to screw upon the end of a shaft, a threaded neck on said bushing, a cutter fitting over and enclosing one end of said bushing, a retaining ring shaped to fit about the neck of said bushing, and screw into a threaded seat in



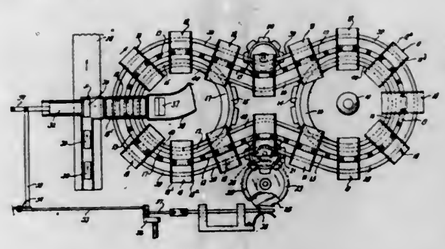
said cutter, there being an arcuate notch on the inner end of said ring to allow passage of a wrench pin to engage within a registering opening in said cutter and into a recess in said bushing.

1,809,075. REFRIGERATING APPARATUS. JOHN C. SCOVEL, Jr., Chicago, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1929. Serial No. 353,917. 3 Claims. (Cl. 62—95.)



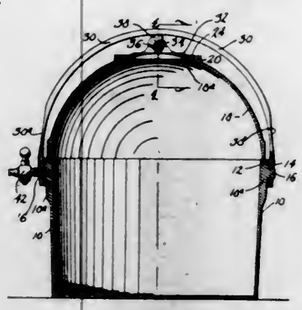
2. A pair of spaced cylinders endwardly joined to form a refrigerant expansion chamber therebetween, one of said cylinders having a refrigerant inlet opening in the bottom portion thereof and having a series of outlet openings spaced longitudinally in the top portion thereof, and a manifold sealed upon said cylinder in outward spaced enclosure of said series of outlet openings, said manifold having a suction outlet opening.

1,809,076. MATERIAL HANDLING APPARATUS. EDMUND W. SHINN, WILLIAM J. CROWLEY, and ROBERT H. SCOTT, Cumberland, Md. Filed Apr. 12, 1929. Serial No. 354,550. 4 Claims. (Cl. 198—41.)



1. Apparatus for conveying articles of magnetic material which comprises a plurality of magnets having a continuous pole piece of one polarity and a continuous pole piece of the opposite polarity, the pole pieces being disposed in parallel relation and spaced apart such distance that the said article will function to complete the magnetic circuit therebetween continuously throughout the forward movement of the article, and means for imparting traveling movement to the article.

1,809,077. ELECTRIC WATER HEATER. LEO SHUMAN, Spokane, Wash., assignor, by mesne assignments, to Continental Manufacturing Company, a Corporation of Washington. Filed Dec. 30, 1927. Serial No. 243,507. 7 Claims. (Cl. 219—39.)

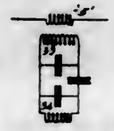


1. An electric water heater comprising an outer casing open at one end, a hollow inner casing open at one end and provided with a laterally extending flange which engages the end of the outer casing, removable fastening devices engaging said laterally extending flange and the end of the outer casing for connecting the inner casing with the outer casing to form a water-tight joint, a heating element inserted in the open end of the inner casing and supported on the interior of said hollow inner casing, the inner and outer casing being separated by a water space, the outer casing being provided with an inlet and an outlet communicating with said water space and an electrical connection by means of which said heating element may be connected in an electric circuit.

1,809,078. APPARATUS FOR TREATING ARTICLES WITH X-RAYS. FRANKLIN S. SMITH, Brooklyn, N. Y. Filed Aug. 2, 1928. Serial No. 296,981. 21 Claims. (Cl. 250—34.)

1. In apparatus of the character described, in combination, an X-ray tube mounted with its axis substantially vertical and having an anode whose active face extends transversely to said axis, a member having a plurality of carriers thereon and movable substantially about the vertical axis of said X-ray tube, said carriers extending in a direction toward the axis of said X-ray tube and each adapted to support a series of packages substantially alined so that successive packages of each series are at greater distances from the axis of said X-ray tube, means for intermittently advancing said member by a distance substantially equivalent to the effective spacing between adjacent carriers, and means operative at substantially each stoppage of said member for adding a package to the series of packages on one of said carriers and for correspondingly advancing said series of packages thereon to cause an end package thereof to be discharged from said carrier.

1,809,079. STEAM PRESSURE COOKER. JACOB A. SMITH, Ankeny, Iowa. Filed Sept. 30, 1929. Serial No. 396,133. 1 Claim. (Cl. 53—1.)

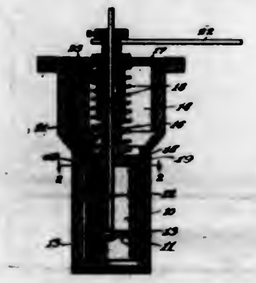


In a cooker, a container having a reinforced annular portion at its upper end formed with a groove in its upper surface, a dome top having an edge adapted to be received in said groove for thus cooperating with the container and having a flat upper central part with an upstanding annular rib, with opposite inwardly projecting lugs and a handle bail pivoted to said lugs, a curved resilient bail having end portions of substantially less thickness than its intermediate portion pivoted to opposite upper parts of the container, and an adjustable cam device interposed between the top and the central part of the bail for gripping the container and top together.

1,809,080. BRIDGING PLUG FOR OIL WELLS. CECIL H. SWEET, Brea, and EMMET F. COOPER, Long Beach, Calif. Filed May 21, 1929. Serial No. 364,806. 2 Claims. (Cl. 166—13.)

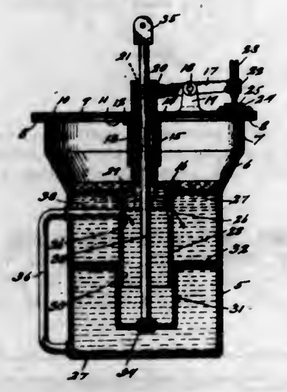
1. A bridging plug comprising a body member carrying an assembly of slips adapted to be engaged to a wall of a well casing into which the bridging plug has been inserted on a downward movement of the same, a second assembly of slips adapted to engage the wall of the casing on an upward movement of the body member, a compression spring engaging the mandrel and normally holding the first mentioned assembly of slips out of engagement with the wall of the casing while the plug is being lowered into position, means for expanding the first assembly of slips into engagement with the wall of the casing to plug the same, a packing member at the top of the body member for closing the casing above said body member, and means to lower said bridge plug into the well.

1,809,081. HIGH FREQUENCY TELEPHONY SYSTEM. PAUL TÄTZ, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches Ufer 12/13, Berlin, S. W. 11, Germany, a Corporation of Germany. Filed June 12, 1925, Serial No. 36,670, and in Germany June 13, 1924. 4 Claims. (Cl. 179—2.5.)



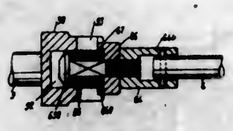
1. Means for insuring continuous service in wired radio frequency telephony on high tension lines regardless of conditions at ends of said lines comprising a source of high tension energy, a source of high frequency telephony energy adapted to generate a plurality of carrier frequencies, and means connected between said high tension source and said high frequency source for blocking the high frequency energy from said high tension source said blocking means comprising an inductance and a tuned circuit coupled thereto, said circuit being tuned to one separate carrier frequency and another tuned circuit coupled to said first mentioned tuned circuit and being tuned to another of said carrier frequencies whereby a path of high impedance to each high frequency and a path of low impedance to said high tension energy is provided.

1,809,082. PRODUCT FOR TREATING THE SKIN. JOSEPH URKOV and BENJAMIN R. HARRIS, Chicago, Ill.; said Urkov assignor to Epstein & Harris, Chicago, Ill., a Copartnership consisting of Albert K. Epstein and Benjamin R. Harris. Filed May 4, 1927. Serial No. 188,863. 8 Claims. (Cl. 167—85.)



1. A product for treating the skin including substantially proportionately 100 grammes of high-grade commercial gelatine, 350 grammes of water, 85 grammes of zinc oxide, 50 cc. of ethylene glycol and 50 cc. of castor oil, intermixed to produce a homogenous plastic mass and poured into suitable containers for dispensing.

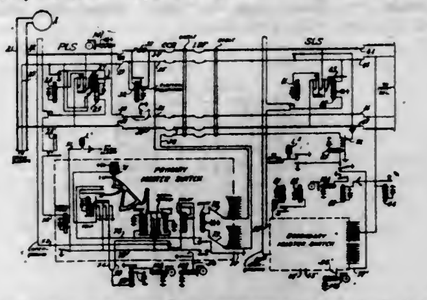
1,809,083. LIQUID BRAKE OR DASHPOT. ADRIANUS VAN DUYN, Rotterdam, Netherlands, assignor to Naamlooze Vennootschap Maatschappij tot Varvaardiging van Snijmachines Volgens van Berkel's Patent en van Andere Werktuigen, Rotterdam, Netherlands, a Limited Liability Company of The Netherlands. Filed July 11, 1927, Serial No. 204,744, and in Great Britain July 22, 1926. 8 Claims. (Cl. 188—97.)



1. A liquid brake comprising a housing member having a cylindrical opening at one end thereof, a piston arranged to reciprocate in said opening, said housing having a chamber adjacent one end of said cylindrical opening, the wall of said housing having passages therein extending longitudinally of said cylindrical opening and disposed circumferentially about said passage for shifting circulation of liquid between opposite ends of said cylindrical opening, a spring-held valve for regulating the amount of opening at the ends of said passages, a stem for said valve extending through the end of said chamber, and a bushing sleeve surrounding said stem and extending into said chamber to prevent escape of liquid in case said housing is inverted.

1,809,084. DASHPOT BRAKE FOR SCALES. CORNELIS F. M. VAN BERKEL, Wassenaar, and ADRIANUS VAN DUYN, Rotterdam, Netherlands, assignors to Naamlooze Vennootschap Maatschappij tot Veraardiging van Snijmachines Volgens van Berkel's Patent en van Andere Werktuigen, Rotterdam, Netherlands, a Limited Liability Company. Filed Jan. 12, 1928, Serial No. 246,334, and in Germany Jan. 31, 1927. 16 Claims. (Cl. 188—97.)

1. A brake for weighing scales comprising an outer cylinder, an inner cylinder of smaller diameter centrally disposed within the outer cylinder and having an open end terminating above the bottom of the outer cylinder, a stepped piston mounted for reciprocation in the outer cylinder while telescoping with the inner cylinder and closing the end thereof, a radial flange on the piston fitting the diameter of the outer cylinder, and a piston rod for the piston projecting through a closed top for the outer cylinder.

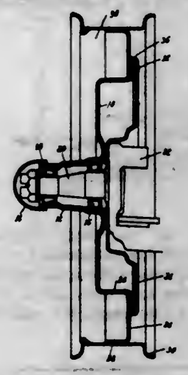


1,809,085. SHAFT COUPLING. HENRY H. VAUGHAN, Montreal, Quebec, and WILLIAM G. CUMMING, Westmount, Quebec, Canada. Filed Feb. 25, 1929. Serial No. 342,599. 9 Claims. (Cl. 64—96.)

1. In a shaft coupling, the combination of a drive shaft, a cupped end thereto, with a driven shaft, a resilient sleeve mounted at its end adapted to enter the cupped end, and means to compress the sleeve axially, in coupling.

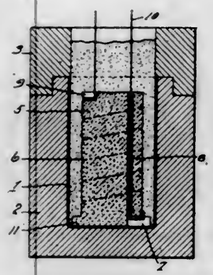
1,809,086. TELEPHONE SYSTEM. JOHN H. VOSS, Berwyn, and BERNARD D. WILLIS, Oak Park, Ill., assignors to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed June 29, 1928, Serial No. 289,137. Renewed Sept. 6, 1930. 31 Claims. (Cl. 179—18.)

1. In a telephone system, a plurality of non-numerical switches each having a line relay, a circuit for each switch closed by the associated line relay, and series contacts on all said line relays arranged in a chain so that when a plurality of line relays are operated only one can close



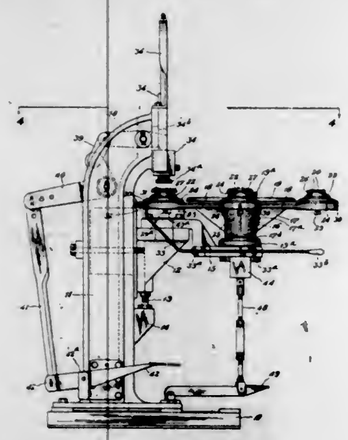
the circuit of the associated non-numerical switch, a signal, and means for operating said signal responsive to an open condition in the contact chain.

1,809,087. BRAKE TESTING LEVER. WILLIS H. WATROUS, Oakland, Calif. Filed Nov. 19, 1928. Serial No. 320,296. 1 Claim. (Cl. 74—54.)



In a brake testing device of the character described, a rigid lever, a pair of interspaced hook-shaped members on the lever and at one end thereof, a ratchet gear having a hub member on each side thereof with which the hook-shaped members are adapted to engage, a spring actuated pawl pivotally mounted on the lever and engageable with the teeth of the ratchet gear, an operating lever pivotally mounted on the rigid lever at a point intermediate the ends of the rigid lever, and springs interposed between the two levers and resisting movement of the operating lever with relation to the rigid lever when the operating lever is moved in one direction, said pivoted pawl being so formed as to ride over the teeth of the ratchet gear when the operating lever is moved in the opposite direction.

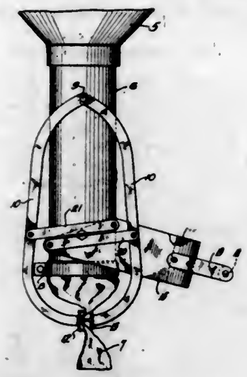
1,809,088. BRAKE DRUM AND WHEEL. D'ORMAY McCALL WHITE, Chicago, Ill. Filed Sept. 21, 1925 Serial No. 57,600. 4 Claims. (Cl. 188—218.)



1. A brake drum having an outwardly-projecting flange at its free edge, in combination with an annular member encircling said drum adjacent said flange, and extending radially outwardly and substantially parallel to said flange and a backing plate having a part encircling the brake-drum flange and arranged with the edge of said part immediately adjacent the rear face of the annular member.

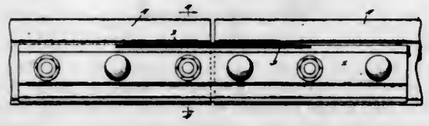
1,809,089. METHOD OF PRODUCING ELECTRICAL HEATING ELEMENTS. EDWIN L. WIEGAND, Pittsburgh, Pa. Filed Aug. 23, 1928. Serial No. 301,514. 12 Claims. (Cl. 201—64.)

11. The method of producing electrical heating elements of the character described which consists in winding a resistor on a self-sustaining friable resistor support, placing the resistor support with resistor thereon in a suitable casing, surrounding the same with a quantity of mobile insulating material, applying sufficient pressure axially of the support to collapse the support and integrate it with the insulating material so as to form a homogeneous mass with the resistor embedded therein and then closing the container.



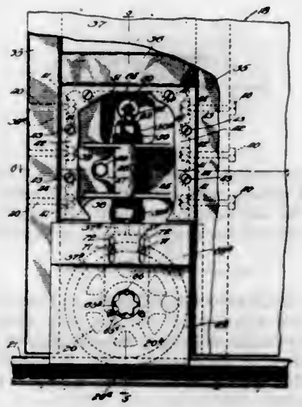
1,809,090. MACHINE FOR FORMING ELECTRICAL HEATING ELEMENTS. EDWIN L. WIEGAND, Pittsburgh, Pa. Filed Dec. 31, 1928. Serial No. 329,631. 24 Claims. (Cl. 18—1.)

1. In a machine of the kind described, a carrying member having means for positioning a resistor and receiving a mass of refractory material, in combination with means for compressing said mass about said resistor, and means for separating the compacted mass and the resistor positioning means.



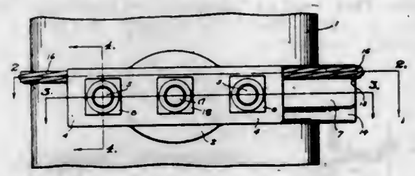
1,809,091. BAG FILLER. OLOF WIKEN, Milwaukee, Wis., assignor of one-half to Frederick C. Bogk, Milwaukee, Wis. Filed Apr. 5, 1928. Serial No. 267,673. 9 Claims. (Cl. 226—47.)

1. A bag filler comprising a hopper having a discharge opening, material discharging means having a portion constructed of compressible material connected to said opening, tongs in pivotal connection with said hopper



for gripping said compressible portion to check the flow of material therefrom, and a U-shaped lever in pivotal connection with said hopper for operating said tongs.

1,809,092. SPLICE BAR OR FISH PLATE. LAWRENCE S. WILBUR, Evanston, Ill., assignor to National Rail Joint Corporation, a Corporation of Illinois. Filed Apr. 15, 1929. Serial No. 355,097. 15 Claims. (Cl. 238—243.)

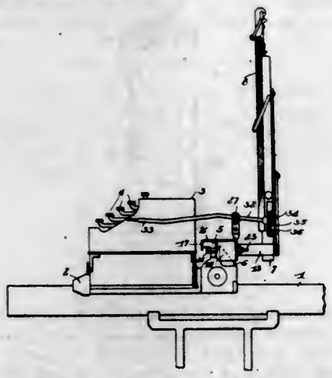


1. A rail joint comprising a splice bar or fish plate formed with a flanged foot and having its top reinforced by a separately formed and rigidly attached wearing strip of metal contacting with and bridging the joint between the ends of the rails, the fish plate and its said strip being solidly united, whereby the strip is a fixed part of the fish plate.

1,809,093. SUPPORTING MEANS FOR HANGAR DOORS. DONALD E. WILLARD, Danville, Ill. Filed Jan. 12, 1929. Serial No. 332,054. 6 Claims. (Cl. 16—100.)

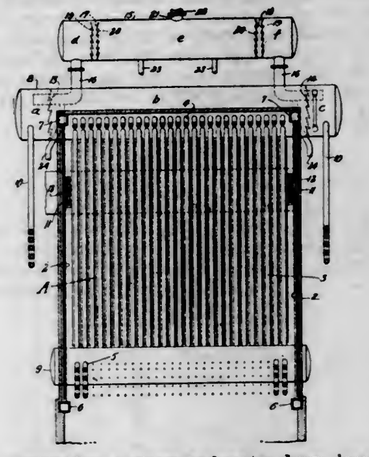
1. The combination with an airplane hangar door having a pair of upwardly extending frame members, of a supporting roller mounted between said frame members, a roller frame carried by said roller, a spindle extending upwardly from said roller frame, a bearing sleeve journaled on said spindle, a supporting frame secured to said door between said frame members and having a hub engaged by said bearing sleeve, and means for securing said bearing sleeve in adjusted position within said hub.

1,809,094. POLE ATTACHMENT FOR ELECTRIC CONDUCTORS. ROLLAND G. WILLIAMS, Branford, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed June 13, 1928. Serial No. 285,193. 1 Claim. (Cl. 248—31.)



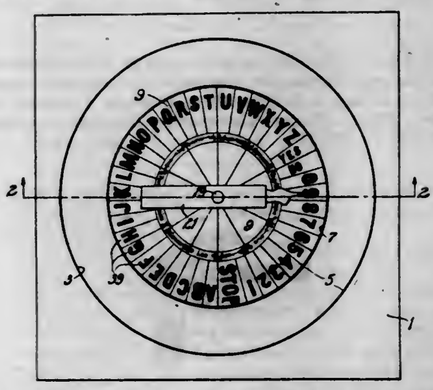
A clamp fixture for a pole, comprising a base portion and a clamping bar, the outer face of said portion and the inner face of said bar provided with horizontally extending and corresponding grooves that are spaced one above the other, a messenger cable housed within the upper pair of said grooves, a centrally located bolt and nut for clamping said base and bar together and securing them to said pole, said base having at one end a curved extension beyond the clamping bar and curved grooves therein which are continuations of the aforesaid spaced grooves, and clamping bolts extending through said base and bar at points near the ends of said bar, the bolt adjacent said extension being located at the point where the curve of said extension begins.

1,809,095. PROCESS OF COATING THERMIONIC CATHODES. JAMES R. WILSON, Mountain Lakes, and CHARLES M. BLACKBURN, East Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 30, 1927. Serial No. 236,875. 7 Claims. (Cl. 250—27.5.)



1. The process of manufacturing thermionically active cathodes, which comprises immersing a metal suitable for a cathode core in a molten alkaline earth nitrate.

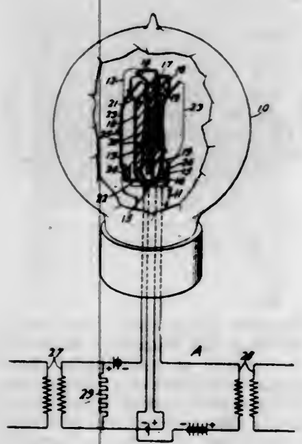
1,809,096. COPYHOLDER. WILLIAM ROY WOLF, Rochester, N. Y., assignor, by mesne assignments, to Remington Rand, Inc., Buffalo, N. Y., a Corporation of Delaware. Filed Sept. 7, 1926. Serial No. 133,931. 3 Claims. (Cl. 120—28.)



1. A support for mounting a copy holder on typewriters and billing machines of the type having a frame, comprising a member mounting said copy holder, arms extending forwardly from the member, and brackets carried by said arms, each bracket having a hooked tongue for hooking over the top of the frame to prevent movement thereon in one direction and also having side flanges engaging with other parts of the frame to prevent movement thereon in another direction.

1,809,097. STEAM GENERATOR. WILFRED R. WOOD, London, England, assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed July 24, 1928. Serial No. 294,976. 3 Claims. (Cl. 122—235.)

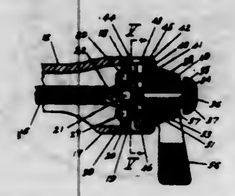
1. In combination a steam and water drum, louvre-like means for dividing said drum into communicating compartments, a plurality of substantially upright radiant heat evaporating tubes discharging into at least one compartment of said drum, a second drum, louvre-like means for dividing said second drum into communicating compartments, means for establishing communication between at least one compartment of the second drum and at least one compartment of the first drum which does not directly receive the discharge of said tubes, and a steam outlet for at least one compartment of the second drum which is not directly in communication with the first drum.



1,809,098. GAME. JOHN D. ZIELEY, Belmar, N. J., and HERMAN E. ROYS, New York, N. Y.; said Roys assignor to said John D. Zieley, Belmar, N. J. Filed Jan. 10, 1929. Serial No. 331,459. 3 Claims. (Cl. 273—161.)

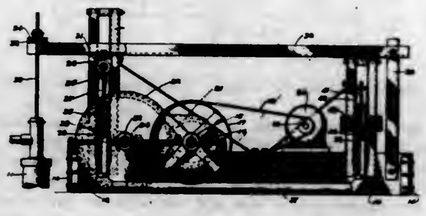
1. The game which comprises a base, a rotatable disc mounted in said base, a second disc mounted in said ro-

tatable disc, said second disc being stationary with respect to said base, an indicator rotatably mounted on said second disc, and means connecting said rotatable disc and said rotatable indicator whereby said rotatable disc actuates said indicator, said means comprising a shaft for said indicator, a pulley on said shaft and a string affixed at one end to said base, passing diametrically across said rotatable disc and engaging said pulley and resilient means attaching the other end of said string to said base, said string engaging said rotatable disc between said pulley and its end affixed to said base.



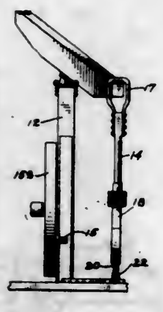
1,809,099. VACUUM TUBE. HAROLD D. ARNOLD, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Nov. 2, 1915, Serial No. 59,210. Divided and this application filed Feb. 3, 1919. Serial No. 274,751. 16 Claims. (Cl. 250—27.5.)

1. A vacuum tube device comprising an arbor, a cathode, anode surfaces on opposite sides of said cathode and a unitary double grid electrode having a plurality of substantially parallel grid surfaces, each of which lies between said cathode and one of said anode surfaces, a rigid metallic member connecting said anode surfaces, and supporting connections from said arbor to each of said electrodes.



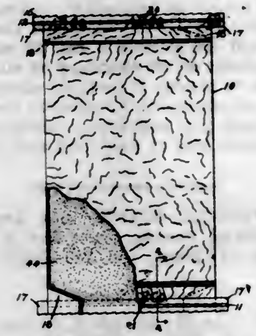
2. A grid electrode for vacuum tubes comprising two U-shaped frames and a plurality of members connected at spaced intervals therebetween.

1,809,100. ELECTRIC SWITCH FOR AUTOMOBILES. ARTHUR J. BAKER and EDWARD E. HUNTINGTON, Toledo, Ohio, assignors to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 14, 1924. Serial No. 699,226. 3 Claims. (Cl. 200—4.)



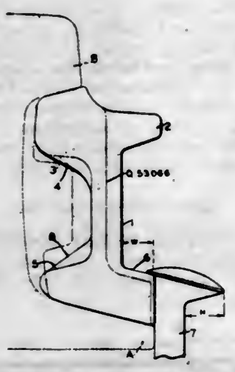
1. A switch comprising a base member and a movable member, said base member carrying terminals, one of said terminals being adapted to be connected to a source of electrical energy, and three other of said terminals being adapted to be connected to electrical units, said movable member including a contact plate adapted to co-operate with said terminals, said contact plate being capable of occupying but two operative positions, in one of which it engages said first mentioned terminal and one of said second mentioned terminals, and in the other of which positions it engages said first mentioned terminal and the remaining two of said second mentioned terminals.

1,809,101. WELL PUMPING UNIT. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Oil Tools, Inc., Huntington Park, Calif., a Corporation of California. Filed Sept. 21, 1927. Serial No. 220,996. 8 Claims. (Cl. 44—71.)



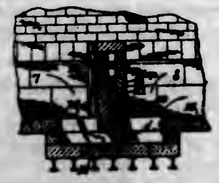
1. A pumping unit comprising an oscillatory walking beam pivoted at one end and adapted to be connected at the free end with the sucker rod of a pump to operate the same, a reciprocable crosshead operatively associated with the walking beam adjacent the free end to operate the same, a pair of communicating cylinders confining a body of fluid, a counterweight slidable on one of said cylinders and unconnected with the walking beam, a piston in each cylinder, said pistons being opposed, one piston being connected to the crosshead, the other piston being connected to the counterweight whereby a load imposed on the crosshead will be neutralized by the weight of the counterweight.

1,809,102. WELL PUMPING RIG. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Oil Tools, Inc., Huntington Park, Calif., a Corporation of California. Filed Jan. 21, 1930. Serial No. 422,354. 7 Claims. (Cl. 74—14.)



1. An apparatus of the character described including a walking beam, a revoluble crank, a pitman connecting the walking beam and crank, and means connected with the pitman and capable of sustaining the weight of the same relieving the weight thereof from the crank while the pitman is still connected with the crank.

1,809,103. SEALED PACKAGE AND METHOD OF MAKING THE SAME. ADELMER M. BATES, Chicago, Ill., assignor, by mesne assignments, to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Filed May 15, 1924. Serial No. 713,686. 13 Claims. (Cl. 229—62.)

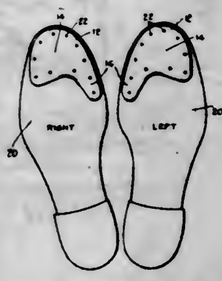


1. A seal for flexible walled packages, comprising a flat strip of reinforcing material, less flexible than the walls of the package, on each side of two adjacent edges of the package walls, and a sewed seam passing through the strips and the walls at a distance from either edge of the strips.

1,809,104. RAILWAY JOINT BAR. CHARLES W. BREED, Western Springs, and GEORGE R. BURKHARDT, Chicago, Ill. Filed Nov. 3, 1930. Serial No. 492,886. 18 Claims. (Cl. 238—243.)

1. A rail joint bar comprising inner and outer upper flanges united by a web to inner and outer lower flanges with integral bracing portions at intervals connecting the web to the inner upper flange and terminating downwardly in the web.

1,809,105. FURNACE. WILLIAM K. BROWNLEE and MICHAEL J. OWENS, Toledo, Ohio; said Owens assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 11, 1923. Serial No. 638,272. 9 Claims. (Cl. 49—54.)

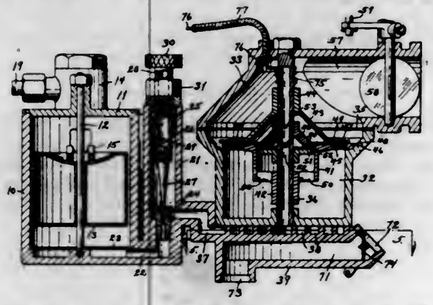


8. A glass furnace comprising a melting chamber and a refining chamber separated by adjacent walls spaced to provide a passageway for the circulation of air, said walls extending downward beneath the floor level of said chambers, a water tank between said walls and also extending downward below said floor level, means providing a channel extending downward through the floor of the melting chamber, transversely beneath said walls and tank and upwardly through the floor of the refining chamber, and refractory material interposed between the lower end of said water tank and the channel and forming the upper surface of the channel.

1,809,106. TIRE BEAD AND METHOD OF MAKING SAME. JAMES C. CARLIN, Gladwyne, Pa., assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa., a Corporation of New York. Filed Aug. 10, 1929. Serial No. 384,899. 6 Claims. (Cl. 154—14.)

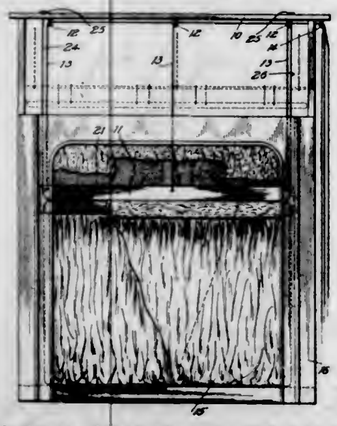
1. The method of making tire bead cores which comprises covering a flexible wire strip with plastic material and simultaneously applying an additional soft filler of said material to the edge of said strip.

1,809,107. TAP SOLE. SALVATORE CAPEZIO, East Paterson, N. J. Filed July 9, 1930. Serial No. 466,631. 8 Claims. (Cl. 36—1.)



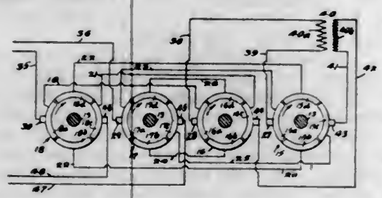
1. A tap sole for attachment to a dancing shoe comprising a rigid metal plate shaped to fit and cover the sole area at the toe portion of the shoe, the forward edge of said plate being curved to approximately follow the contour of the toe portion of the shoe, the rear edge of said plate extending generally transversely of the shoe, and the said edges defining an enclosed or solidly filled-in area of metal, one outside edge of said plate extending into the ball portion of the shoe, and extending toward the rear of the shoe, when attached thereto, a substantial distance further than the opposite outside edge of said plate, in order to permit bending of the shoe at the toe portion thereof, while permitting tapping with the edge of the foot.

1,809,108. CARBURETOR. JOHN LOUCIEN CHESNUTT, Long Beach, Calif. Filed Aug. 29, 1927. Serial No. 216,156. 9 Claims. (Cl. 261—63.)



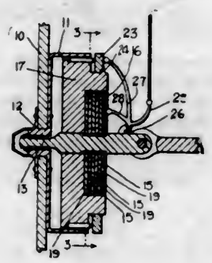
1. In a carburetor, a casing, an air pipe leading thereto, a throttle controlled exit from said casing to an engine, a fuel tube vertically arranged in said casing, means for admitting a liquid fuel to said tube, a hollow nozzle and spray device rigidly mounted on said tube and having a narrow peripheral exit to the interior of said casing, said tube having a fuel exit within said hollow nozzle and spray device, another hollow nozzle and spray device slidably mounted on said tube and inclosing the first nozzle and spray device, said casing being formed with means

for normally supporting the slidable nozzle and spray device, the slidable nozzle and spray device being formed with air openings at its lower end to permit a thin sheet of air to pass upwardly across the peripheral exit of the rigidly mounted nozzle and spray device, the slidable nozzle and spray device also being formed with a narrow



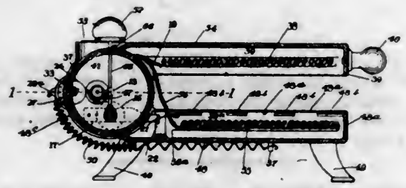
peripheral exit directed toward the wall of the casing, said slidable nozzle and spray device being designed to be lifted by the suction effect of the engine when traveling at higher speed to permit an additional quantity of air to pass in a thin stream across its peripheral exit to mingle with the mixture issuing therefrom.

1,809,109. TRACK. PETER CLARK, Great Neck, N. Y., and JERRY C. PINGLE, St. Louis, Mo. Filed Aug. 23, 1930. Serial No. 477,376. 8 Claims. (Cl. 156—27.)



1. A device as characterized comprising a track held horizontal and having means for raising and lowering the same, said track adapted to support a curtain and having means for moving said curtain longitudinally of the track as the track is displaced in a vertical direction.

1,809,110. CONVERTER FOR ELECTRIC CURRENTS. JOHN H. CRAGG and KENNETH B. CRAGG, Hopkins, Minn. Filed Aug. 14, 1929. Serial No. 385,836. 4 Claims. (Cl. 171—123.)

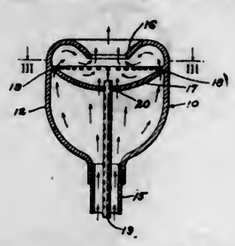


3. A conversion apparatus for electrical current having in combination, four rotatable commutators each having four commutator bars thereon, a pair of oppositely disposed brushes engaging each commutator, a pair of line conductors connected respectively to brushes engaging the first and second commutators, a second set of conductors connected to brushes respectively engaging the first and second commutators for delivering current, a transformer, conductors connected to brushes engaging said third and fourth commutators and connected to the primary of said transformer, a pair of conductors connected respectively to the secondary of said transformer and connected to brushes respectively engaging the third and fourth commutators, and conductors connecting opposite bars in said first and second commutator to corresponding opposite bars in said third and fourth commutators.

1,809,111. VEHICLE BRAKE. ROY ARTHUR CREBER, Toronto, Ontario, Canada. Filed Nov. 8, 1929. Serial No. 405,664. 3 Claims. (Cl. 188—140.)

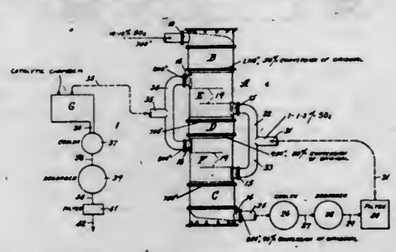
1. In a vehicle brake, a wheel having a hub and a brake drum rigidly secured to said hub, an axle engaging with said hub and forming a journal for a locking member within said brake drum, and means for stopping the rotation of said wheel by engagement of said locking member with said drum, and means in said locking member and spaced from said axle to form an adjustment for the speed of engagement between said brake drum and locking member, and means for controlling said locking and adjusting means.

1,809,112. ELECTRIC BREAD TOASTER. HARRY J. CRINER, Burlington, Iowa. Filed Apr. 2, 1927. Serial No. 180,555. 10 Claims. (Cl. 219—19.)



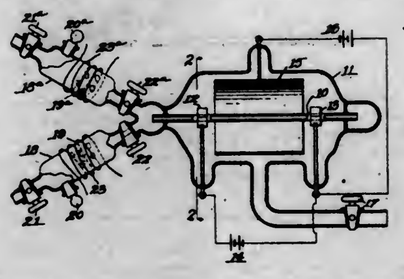
1. In an electric toaster, the combination with a pair of heating elements, of a support for holding a slice of bread between them, said heating elements and support being concentrically, pivotally united and spring-actuated means for automatically separating the heating elements from each other and from the bread support.

1,809,113. BURNER TIP FOR TORCHES. PERCY M. FORSTER, Berkeley, Calif. Filed Jan. 4, 1930. Serial No. 418,527. 1 Claim. (Cl. 158—109.)



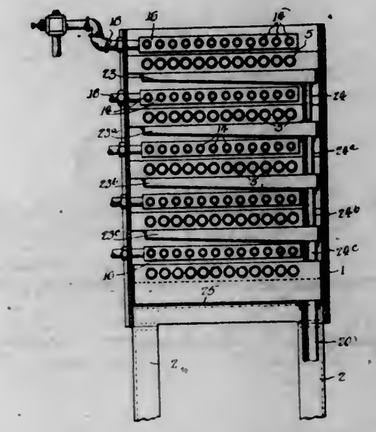
A burner tip of the character described including a hollow body having a substantially cylindrical end, a deflector at said end of the body portion, said deflector curling inwardly and being formed with an orifice at its center, a bowl arranged transversely within the body

portion and spaced from the deflector, a plurality of jets formed adjacent the peripheral edge of the bowl whereby gas passing through the jets will engage the deflector, a tube extending centrally through the bowl whereby to



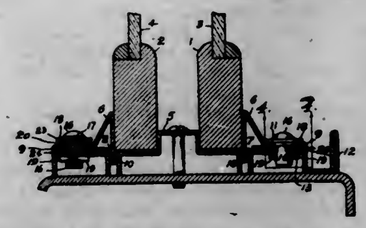
deliver air under pressure to the orifice, said bowl having a plurality of perforations surrounding the tube for delivering gas into the space intermediate the bowl and the deflector.

1,809,114. PROCESS AND APPARATUS FOR CATALYTIC REACTIONS. LOWRY GILLETT, Syosset, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1924. Serial No. 751,802. 6 Claims. (Cl. 23—176.)



1. The process of carrying out catalytic gas reactions, which consists in subjecting the gases under treatment to a catalytic reaction in successive stages with an amount of catalytic material increasing from one stage to the next, absorbing the gaseous product resulting from such reaction, and using the gases remaining after such absorption, as a cooling medium for the gases which have become heated by part of the said catalytic reaction.

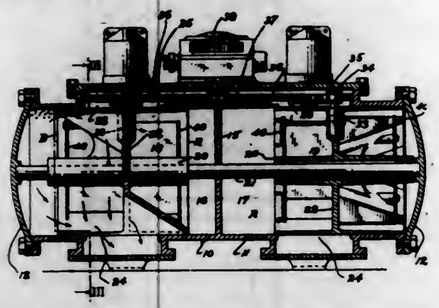
1,809,115. APPARATUS FOR PRODUCING IONS. ROBERT H. GODDARD, Worcester, Mass. Filed July 16, 1926. Serial No. 122,887. 6 Claims. (Cl. 250—225.)



1. Apparatus for continuously producing ions comprising a vacuum casing, a cathode in said casing, an electrode mounted in said casing and having a relatively thin wall portion, and means to continuously supply ionizable material at one side of said wall portion, the ions to be liberated at the opposite side of said wall portion after penetrating through the material thereof, and means for replenishing said ionizable material from time to time during the continued operation of the machine.

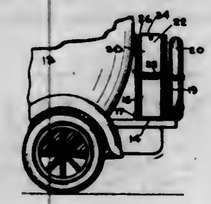
1,809,116. MILK HEATER. JOSEPH H. GODFREY, Chicago, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1927. Serial No. 222,758. 19 Claims. (Cl. 257—185.)

5. A heater comprising, in combination, a casing, a plurality of milk tubes extending longitudinally in said casing and arranged in vertically disposed tiers, means for supporting said tubes arranged to connect the tubes to form a continuous passageway through the heater, a plurality of drip pans positioned one below each tier of tubes, said drip pans having drain openings vertically above each other, the lower-most pan being of sufficient capacity to receive the discharge from the remainder of the pans, and means to spray a heating medium onto said tubes, said means comprising a common riser, intake pipes fed independently from said riser for each tier of tubes, and means embodying a plurality of spray devices positoned along said tubes connected with each of said intake pipes.



1,809,117. QUICK RELEASE STOP FOR RAILROAD CAR WINDOWS. ROBERT F. GOLDEN, South Orange, N. J., assignor to National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed July 10, 1930. Serial No. 466,935. 4 Claims. (Cl. 16—220.)

1. In a quick release stop for railroad car windows, the combination of the stop support, the stop having a base resting against said support, said base having concentric circular openings therethrough, while said support has an opening concentric with the opening in said base, diametrically opposite gates in said support leading into the opening thereof, a stud whose head is slotted like a screw and which has a flange below said head, lugs extending from diametrically opposed locations near the inner end of the stud, whereby said stud may be inserted through the base and then with its lugs inserted through the opening and gates in said support with the lugs beneath the inner wall of said support, and a



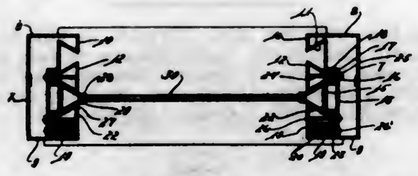
spring washer beneath said flange, whereby, when the stud is forced inwardly and given a quarter turn, the spring washer will be compressed and said lugs resiliently forced against the under surface of said support.

1,809,118. FLUID METER. ALBERT J. GRANBERG, Berkeley, Calif., assignor to Ralph N. Brodie Company, Oakland, Calif., a Corporation of California. Filed July 7, 1930. Serial No. 465,956. 5 Claims. (Cl. 73—30).

1. A meter including a horizontally disposed cylinder having an intake port adjacent the top thereof and an outlet port adjacent the bottom thereof, a reciprocable piston mounted in the cylinder and having ports adapted to cooperate with the ports in the cylinder, and means at the ends of the piston causing fluid to discharge simultaneously from the top and bottom of the space intermediate the end of the piston and the end of the cylinder.

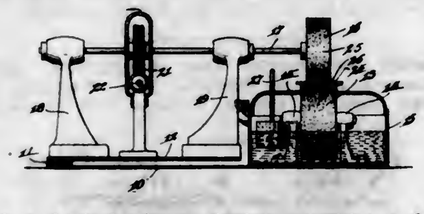
1,809,119. LUGGAGE CARRIER. CHARLES HAFFKE, Boise, Idaho. Filed July 24, 1929. Serial No. 380,717. 1 Claim. (Cl. 224—29.)

In a luggage carrier for a vehicle, a base support carried by the vehicle and provided with an upright stop plate, and a plurality of brackets, a rectangular receptacle adapted to be disposed on the base support in engagement with said stop plate, said receptacle being provided with grooves opening on its top and ends and having lugs disposed in said grooves, a tire holder hingedly mounted on the base support and removably secured to the receptacle, and latches pivotally mounted on the base support at each end thereof outwardly of said stop plate and arranged to removably engage the lugs of said receptacle, said tire holder being adapted to be swung upwardly for disposing the receptacle in a vertical position and to swing downwardly into contact with said brackets for disposing the receptacle in a horizontal position.



1,809,120. GOLF BAG. JOHN C. HALL, Whiting, Ind. Filed Apr. 21, 1928. Serial No. 271,791. 1 Claim. (Cl. 150—1.5.)

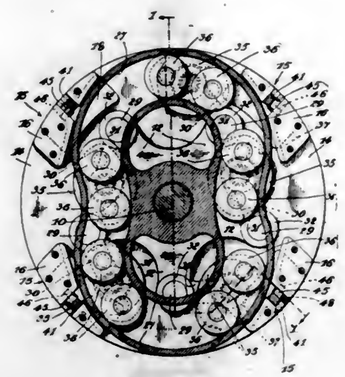
In a golf bag, a tubular casing closed at its lower end, a partition wall within the casing extending the length of the casing with its longitudinal edges disposed substantially diametrically opposite to divide the casing into two independent compartments, the wall having flat diametrical portions extending from its longitudinal edges being curved intermediate these flat portions with



the curved portion extending into one of the compartments to render said compartment substantially arc-shaped in cross-section, and means securing said wall in position.

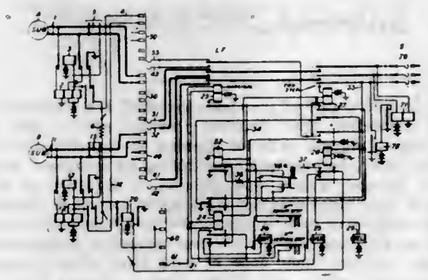
1,809,121. WINDOW SASH AND FRAME. EDGAR E. HART, Lincoln Park, Mich. Filed Oct. 5, 1929. Serial No. 397,481. 5 Claims. (Cl. 189—73.)

1. A window sash and frame of the class described comprising a sash having side walls inwardly offset at their inner face, said inwardly offset portion having an inclined side wall; and a movable wedge-shaped adjusting strip having its opposite side walls inclined, one of said side walls cooperating with the inclined side wall of said sash to provide a dovetailed groove; and a window frame having wedge-shaped side walls engageable in said dove-tailed groove and slidable therein.



1,809,122. FABRIC CLEANING MECHANISM. HUGO HEMMERICH, Wyomissing, Pa., assignor to Berkshire Knitting Mills, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Sept. 4, 1929. Serial No. 390,228. 2 Claims. (Cl. 15—97.)

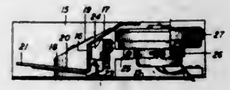
1. A fabric-cleaning mechanism comprising a fixedly mounted freely rotatable cleaning wheel, and a movable motor-carrying base plate upon which a coacting driven wheel is rotatively mounted so as to be yieldingly pressed by gravity into cooperation with said freely rotatable wheel.



1,809,123. VARIABLE SPEED TRANSMISSION. ALPHONSE A. HEINZELMANN, New York, N. Y., assignor to Bludalk, Inc., New York, N. Y., a Corporation of New York. Filed July 19, 1929, Serial No. 379,425. Renewed May 2, 1931. 26 Claims. (Cl. 74—14.)

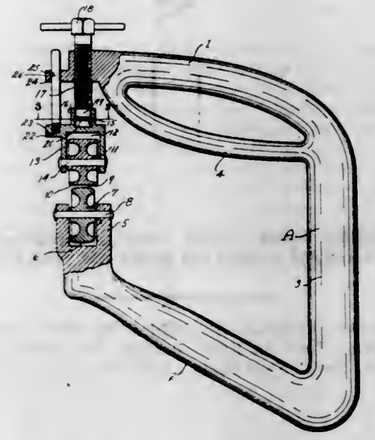
11. In a variable speed transmission, in combination, a revoluble driven member having a cam runway, a revoluble drive shaft, a spider having a plurality of legs fixedly attached to said shaft, a link pivotally attached to the end portion of each said leg, a roller-carrying member pivotally attached to the free end of each said link, a plurality of rollers pivotally attached to each said roller-carrying member positioned within said runway and capable of abutment upon the sides thereof whereby the revolution of said shaft will revolve said driven member

and means whereby the revolution of said driven member at a predetermined speed will automatically lock said driven member to said shaft.



1,809,124. TELEPHONE EXCHANGE SYSTEM. HENRY HOVLAND, Williston Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1930. Serial No. 471,957. 7 Claims. (Cl. 179—10.)

1. In combination, an automatic switch comprising a plurality of terminal banks, a set of brushes for each bank, groups of lines, each group comprising a plurality of sub-groups one for each of said banks, group relays one for each of said groups of lines, means effective upon the operation of one of said group relays for advancing said sets of brushes, in a primary movement to select the corresponding sub-groups, a circuit for stopping said primary movement and for selecting one of said brush sets, and means for advancing said brush sets in a secondary movement into engagement with the terminals of the selected sub-groups.



1,809,125. TELEPHONE SET MOUNTING. FREDERICK A. HOYT, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 21, 1930. Serial No. 454,313. 10 Claims. (Cl. 179—100.)

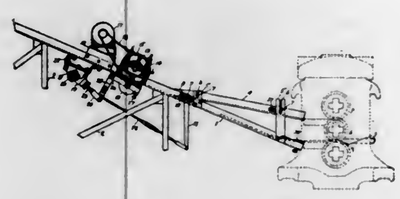
1. A telephone set mounting adapted to be inserted in a drawer of a desk or table comprising a casing having a separating wall, a flat member hinged to said wall adapted to receive a hand telephone, a reel carried by said

wall on the opposite side from said flat member, and a cord conductor extending from said reel to said handset through said wall.

1,809,126. METAL-WORKING TOOL. HERMAN W. JOHNSON, St. Louis, Mo., assignor to Stiles-Herman Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 20, 1928. Serial No. 300,800. 2 Claims. (Cl. 81—15.)

1. A fender rolling tool including, in combination, a rigid frame for manual manipulation of the tool and comprising spaced first and second arms, a piece joining said arms at an end thereof, an extension upon the second arm presented towards the first arm, and an arcuate brace re-enforcingly joined to the first arm, the arms and said extension being adapted to embrace the fender therebetween and said extension having a recess in its free end, a screw threaded for adjustment in the free end of the first arm in alining relation with said extension, a recessed bracket swiveled intermediate the arms upon the lower end of the screw, means for retaining the bracket against rotary movement relatively to the frame both during adjustments of said screw and working operations of the frame, a roller carried by and mounted for rotation in the recess of the bracket, and an opposed roller mounted for rotation in the recess of said extension, said rollers being adapted for engaging the opposite faces of the embraced fender.

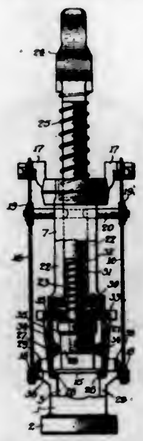
1,809,127. COUPLING AND VALVE. WAYNE R. JOHNSON, Southgate, Calif. Filed Apr. 1, 1930. Serial No. 440,741. 2 Claims. (Cl. 284—19.)



1. A valve coupling embodying two sections for forming a part of a fluid pressure line, one of said sections constituting a valve member and the other a contact member: said valve member having a valve cage chamber and a valve stem chamber with a main valve seat interposed between the chambers, an auxiliary sealing seat of limp material disposed over said main seat with a free edge adapted to clear the face thereof and depressible onto the face of said seat to form a liner therefor; a valve having a stem, means tending to seat said valve,

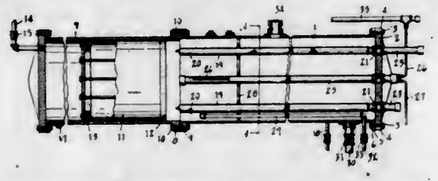
said auxiliary seat being engageable with and following said valve in partially unseated position to seal the latter;

said contact member having means to engage said stem when in coupled relation and unseat said valve from both seats.



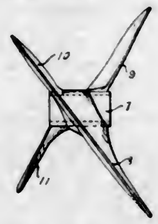
1,809,128. AUTOMATIC REPEATER FOR ROLLING MILLS. JOHN M. KOCH, Reading, Pa. Filed Apr. 12, 1930. Serial No. 443,741. 5 Claims. (Cl. 80—52.)

1. In an automatic repeater for rolling mills, the combination with a lower trough adapted to receive a rolled bar from a rolling mill, means to pull said bar away from said mill, controlling device for said means, said controlling device being adapted to be operated by said bar, an upper trough in a cooperative relation with said lower trough, and means to direct said bar into said upper trough, said upper trough being adapted to guide said bar into the return pass of said rolling mill.



1,809,129. MECHANISM FOR CAPPING BOTTLES. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1928. Serial No. 305,957. 2 Claims. (Cl. 226—92.)

1. In a bottle capping mechanism, a reciprocatory plunger having an operative support, a member mounted on said support and normally movable with said plunger, a pair of elements movably supported on said member and disposed laterally of said plunger, said elements normally being positioned to retain a cap endwardly of said plunger, a stop for limiting the advance movement of

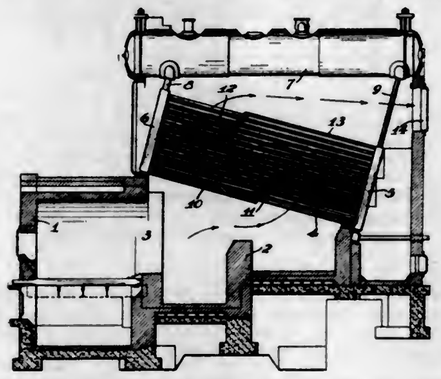


said member, and means normally in the path of said plunger and engageable thereby to cause the movement of said elements to release said cap.

1,809,130. APPARATUS FOR TREATING PARAFFIN. LEWIS H. MACOMBER, Kalamazoo, Mich. Filed May 13, 1929. Serial No. 362,569. 6 Claims. (Cl. 210—184.)

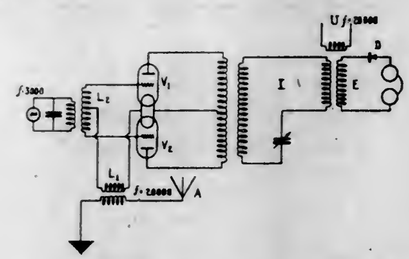
1. In a structure of the class described, the combination of a cylindrical filter chamber provided with a head at one end, a plunger cylinder opening to the opposite end of said filter chamber and constituting an extension therefor, a plunger within said cylinder, a plurality of perforated filter pipes provided with fabric coverings disposed longitudinally of said filter chamber and mounted on said head to discharge on the outside thereof, a foraminated support for the inner ends of said filter pipes disposed transversely within said filter chamber, closure bars removably insertable into said filter pipes at their open outer ends to constitute closures for the perforations of the filter pipes, said bars being threaded into the outer ends of said filter pipes.

1,809,131. PROPELLER. EDMUND R. MAISON, Mount Clemens, Mich. Filed June 3, 1929. Serial No. 367,849. 2 Claims. (Cl. 170—156.)



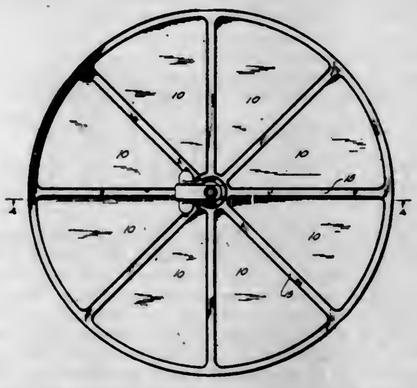
1. A propeller of the class described comprising: a hub determining the axis of rotation; a pair of propeller blades mounted on said hub at an inclination to the axis of rotation, said blades being extended across said axis in planes at substantially right angles to each other and crossing said axis at a line other than the transverse medial line of said blades, each of said blades being a planar body.

1,809,132. SIGNAL WINDOW FOR MOTOR VEHICLES. JAMES E. MARTIN, Pico, Calif., assignor of one-half to A. P. Schroder and one-half to W. L. Anderson, Pico, Calif. Filed Nov. 19, 1929. Serial No. 408,270. 1 Claim. (Cl. 296—44.)



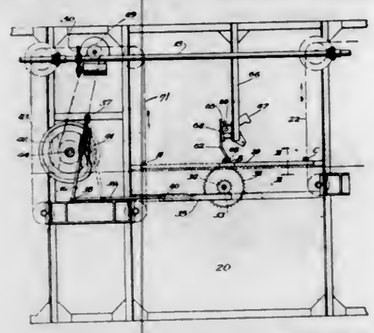
A disappearing sash for a motor vehicle including a frame carrying a divided, transparent window whose lower section is hung by horizontal pivots so that its lower edge may be tilted outward; the sections being co-planar and having mitered meeting edges.

1,809,133. WATER TUBE BOILER CONSTRUCTION. KINGSLEY L. MARTIN, Montclair, N. J. Filed Nov. 29, 1929. Serial No. 410,428. 1 Claim. (Cl. 122—291.)



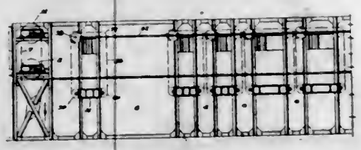
In a boiler of the water tube type having a furnace at the front end and comprising a bank of tubes inclined from front to rear, upright headers at the ends of the tubes and a steam and water drum above the headers with which they communicate, a combustion chamber below the forward end of the boiler with a bridge wall at its rear end, a baffle around the lower row of tubes extending rearward from the front header a part of the length of the tubes and terminating directly above the bridge wall, a cross baffle extending upward and to the rear from the end of the baffle at an obtuse angle to such baffle, a third baffle on one of the upper rows of tubes extending from the rear header forwardly a part of the length of the tubes, and a cross baffle extending downward from the end of said last baffle at an obtuse angle to such baffle.

1,809,134. METHOD FOR ELIMINATING DISTURBANCES IN RECEIVING WIRELESS TELEGRAPHY AND TELEPHONY. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Feb. 19, 1924, Serial No. 693,783, and in Germany Feb. 24, 1923. 4 Claims. (Cl. 250—20.)



1. In combination an input circuit tuned to a receiving frequency, a push-pull amplifier having an input and an output circuit, said input circuit being coupled to said first named input circuit, a local audio frequency generator circuit coupled to said push pull amplifier input, said arrangement being adapted to combine said receiving frequency and said locally generated frequency, a tuned circuit coupled to said output circuit and heterodyne detection means coupled to said last named tuned circuit and using a beating oscillation of the same frequency as the received frequency and adapted to produce a beat note equal to said locally generated frequency.

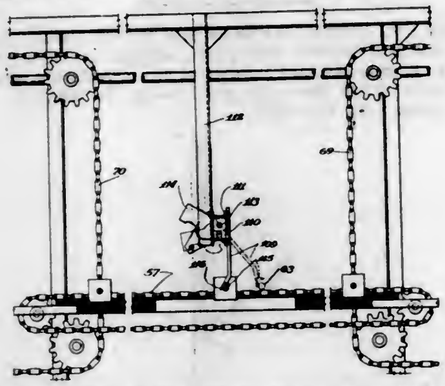
1,809,135. MILK TREATING APPARATUS. GEORGE J. MEYER, Milwaukee, Wis., assignor to Geo. J. Meyer Manufacturing Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 14, 1928. Serial No. 319,207. 17 Claims. (Cl. 187—21.)



1. Milk treating apparatus comprising a series of jacketed chambers in combination with a pipe system having infeeding and outfeeding pipe sections provided with supply and exhaust connections, each set of pipe sections including one member permitting swinging movement upon a horizontal axis, and another member permitting swinging movement upon a vertical axis, each such member being ported for milk flow therethrough; each set of pipe sections also having one member of a length substantially equal to the depth of the jacketed chambers and adapted to swing into and out of an associated chamber upon the axis of its horizontal pivot member, and means for actuating said pipe section to swing them into and out of said chambers successively.

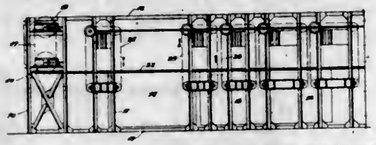
1,809,136. PLATING MACHINE AUTOMATIC WORK-SHIFT. CONSTANTINE G. MILLER, Chicago, Ill., assignor to The Meaker Company, a Corporation of Illinois. Filed June 30, 1928. Serial No. 289,591. 16 Claims. (Cl. 204—5.)

1. A work shift for plating machines comprising a plating tank, a trackway along said tank, said trackway comprising insulated end sections and a central bus bar section, means for delivering a work rod to the first insulated section of said trackway, a reciprocating rack for moving the rod onto the bus-bar section during one cycle of movement of the rack and away from said bus-bar in the same direction during the next cycle of movement of the rack, means for removing the rod from the tank after the same has been removed from the bus-bar, and means for reciprocating said rack intermittently whereby a time interval intervenes between the cycles of movement of said rack and during which interval the work rod remains at rest on the bus-bar.



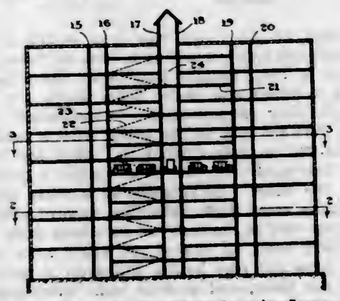
1,809,137. AUTOMATIC CONVEYER AND TRANSFER MECHANISM. CONSTANTINE G. MILLER, Chicago, Ill., assignor to The Meaker Company, a Corporation of Illinois. Filed June 30, 1928. Serial No. 289,587. 7 Claims. (Cl. 198—85.)

3. A conveying and transfer mechanism comprising a conveyer chain provided with fingers for moving a work rod in one direction along a trackway, said chain having an overhead return, means comprising endless chains for maintaining said rod in contact with said fingers during the vertical portions of said overhead return and a channel member for maintaining said rod in contact with said fingers during the horizontal portion of said return, transfer chains each having a pivoted cup thereon for lifting a rod from said trackway and depositing it on said trackway ahead of the position occupied by the rod when lifted, for further movement by said conveyer chain and means for driving said transfer chains in synchronism with said conveyer chain.



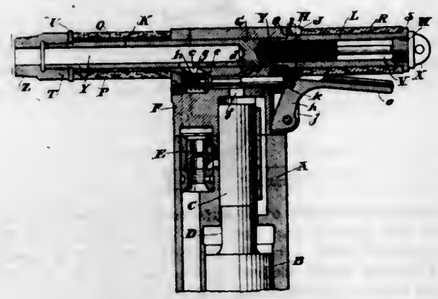
1,809,138. AUTOMATIC CHROMIUM PLATING MACHINE. CONSTANTINE G. MILLER, Chicago, Ill., assignor to The Meaker Co., a Corporation of Illinois. Filed June 30, 1928. Serial No. 289,588. 19 Claims. (Cl. 204—5.)

7. An automatic chromium plating machine comprising a plating tank, a trackway along said tank, said trackway having a bus-bar section and insulated sections outside of said bus-bar, a work rod having a conductor shoe sliding on said guideway, means for delivering the work rod to one of said insulated sections, an endless chain having pivoted fingers for moving said rod onto said bus-bar section, said rod coming to rest thereon, means for supplying



electric current to said bus-bar section while said rod and shoe are at rest thereon, means for cutting off said current, and means for moving said rod from said bus-bar section to another insulated section of the trackway, all of said parts being operated automatically and in timed relation.

1,809,139. AUTOMATIC WORK SHIFT FOR PLATING MACHINES. CONSTANTINE G. MILLER, Chicago, Ill., assignor to The Meaker Company, a Corporation of Illinois. Filed June 30, 1928, Serial No. 289,589. Renewed Sept. 4, 1929. 19 Claims. (Cl. 204—5.)

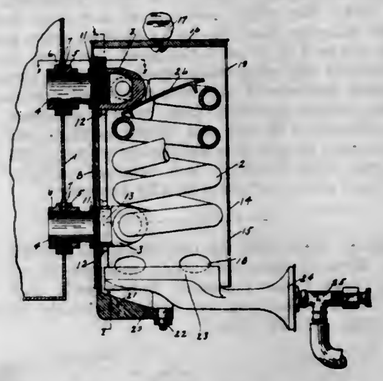


1. An automatic work shift for plating machines comprising means for delivering a work rod to a plating tank, a trackway along said tank for receiving said rod, a bus bar section in said trackway, a chain for moving said rod along the trackway to said bus-bar section, and another chain for moving said rod from said bus bar section, said chains being arranged to leave said bar on said bus-bar in rest position for a predetermined interval of time.

1,809,140. STORAGE BUILDING. CHARLES GORDON MITCHELL, Montreal, Quebec, Canada. Filed Oct. 15, 1928, Serial No. 312,671, and in Canada Aug. 31, 1928. Renewed Apr. 24, 1931. 3 Claims. (Cl. 20—1.13.)

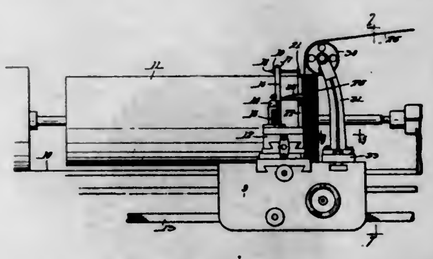
1. In a building, a plurality of main floors extending from end to end and from side to side of the building, a corridor encircling the building and spaced from the walls thereof, mezzanine floors intermediate the main floors, said mezzanine floors covering the area between the adjacent edges of the corridors, and ramps at each end of the building connecting the main floors with the mezzanine floors, said main floors having means formed therein between the ramps to allow for the passage of high vehicles between the ramps.

1,809,141. HANDLE FOR ROCK DRILLS. JOHN F. MOCK, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 21, 1927. Serial No. 241,535. 3 Claims. (Cl. 121—36.)



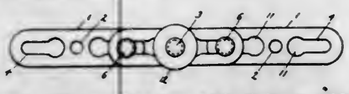
1. A handle for a fluid actuated rock drill, comprising a back head having a transverse bore, a tubular rod in the bore extending on opposite sides of the back head, said rod having a chamber for oil and a passageway for pressure fluid, means in the back head for controlling the admission of pressure fluid from the rod to the back head, tubular handle grips on the ends of the rod, means on the rod interlockingly engaging the back head for preventing rotation of the rod with respect to the back head, an integral flange on one end of the rod forming an abutment for one handle grip, and a hollow nut on the opposite end of the rod for maintaining the other handle grip on the rod.

1,809,142. COMBINATION PASTE TABLE AND CASE. WALTER E. MEYER, Kansas City, Kans. Filed Sept. 10, 1929. Serial No. 391,525. 1 Claim. (Cl. 190—12.)



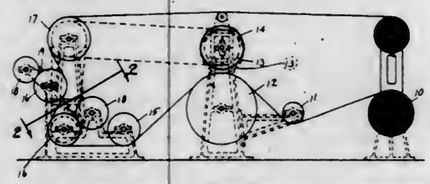
In an apparatus of the class described, a pair of case sections, a plate hingedly connected to the sections so that the sections may be extended in co-planar relationship or folded one above the other to provide a case, means for holding the sections in extended relationship, foldable leg structures associated with the case sections, each case section comprising a plate body having side walls and an end wall extending perpendicularly therefrom, each leg section comprising a leg frame pivotally engaging between the respective side walls of this respective case section, brace sections pivotally engaged with the frame, and other brace sections pivotally engaged with the respective side walls, means pivotally connecting the brace sections together including leaf springs having pins to pierce registering openings in the brace sections when in extended relationship, said means for holding the adjacent sections in extended relationship comprising brace sections pivoted to the side walls and pivoted together and having means including leaf springs and pins to pierce the openings in the last mentioned brace sections to hold them in extended relationship, cross rods having hooked ends to engage the last mentioned brace section.

1,809,143. HOT WATER HEATER. CLARENCE H. MORROW, Cleveland, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 27, 1929. Serial No. 366,377. 2 Claims. (Cl. 122—250.)



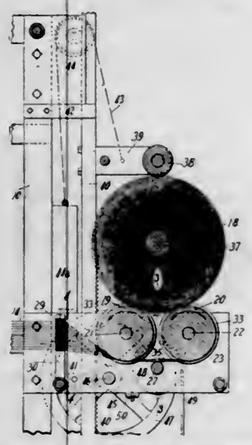
1. A water heater especially adapted for use with a water containing device having a relatively light sheet metal wall on which said heater is adapted to be mounted, comprising a water circulating member having one-piece terminal members secured on the two ends thereof, each of said terminal members having a threaded end portion adapted to extend through an opening in the supporting wall of said device and to receive a securing nut, whereby said circulating member can be mounted on said wall of said device, a relatively light sheet metal casing enclosing said circulating member and provided with a pair of openings through which said terminal members extend, and a relatively heavy bar-like member extending vertically along the inner surface of said casing and provided with a pair of openings registering with the openings of said casing and through which extend the terminal members of said water circulating member, said bar-like member providing a sturdy and rigid support for said terminal members in said casing.

1,809,144. APPARATUS FOR COVERING ROLLS WITH TOOTHED WIRE. JAMES A. NOONAN, Lowell, Mass., assignor to C. G. Sargent's Sons Corporation, Graniteville, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1930. Serial No. 419,171. 6 Claims. (Cl. 153—64.5.)



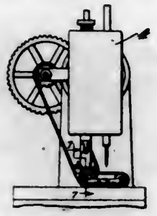
3. In a machine of the character described, the combination with a tool post and means for moving it along, of a bar carried by the tool post, a ring supported by said bar, springs carried by the ring, and a second ring spaced from the first for engaging the convolution of wire being wound and exerting a yielding pressure thereon.

1,809,145. CHAIN. NICOLAS K. PANZIREFF, Moscow, Union of Socialist Soviet Republics. Filed Aug. 24, 1929, Serial No. 388,120, and in Germany July 27, 1928. 1 Claim. (Cl. 74—49.)



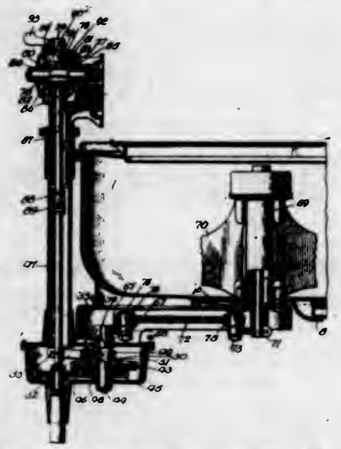
In a chain, the combination with links provided with elongated apertures at their ends, said apertures having enlarged portions at their inner ends, connecting pins for said links, the middle portions of said pins being of a larger diameter than the necks at their ends, said necks being adapted to fit said elongated apertures, the middle portions of said pins being adapted to pass through said enlarged portions of said elongated apertures, said links being further provided with central openings, locking pins adapted to fit into said middle openings, and washers at the ends of said pins adapted to prevent said connecting pins from reaching said enlarged portions of said apertures when said chain is fully assembled.

1,809,146. PROCESS OF DECORATING PAPER. HARRY M. ROSS, Indianapolis, Ind., assignor of one-half to Beveridge Paper Company, Indianapolis, Ind., a Corporation. Filed Aug. 11, 1928. Serial No. 298,927. 5 Claims. (Cl. 91—67.9.)



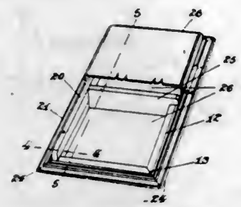
1. The process of decorating paper, consisting in passing the paper about a brushing roll having a tool marked surface, thinly applying a coloring material to said roll so as to cause said roll to apply said material to the surface of the paper, and operating said roll at a greater speed than the paper passing thereabout for causing the tool marked roll to streak the coloring material over the surface thereof.

1,809,147. REWINDING MECHANISM. CLEMENT J. ROWE, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 10, 1926. Serial No. 128,483. 4 Claims. (Cl. 242—76.)



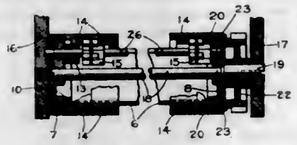
1. In a mechanism for rewinding a plurality of flexible webs in superimposed relation on a unit roll and including a roller having supporting engagement with the unit roll and about which the webs are led to said unit roll, a guide unit arranged in advance of and adjacent to said roller and comprising a plurality of superimposed bars rigidly secured one to the other and each having in one face thereof a longitudinal recess to receive one of said webs, the several recesses being arranged to properly position said webs with relation one to the other as they pass into engagement with said roller.

1,809,148. SEWING MACHINE. MORRIS M. SCHRAGO, Los Angeles, Calif. Filed Mar. 27, 1928. Serial No. 265,088. 3 Claims. (Cl. 112—212.)



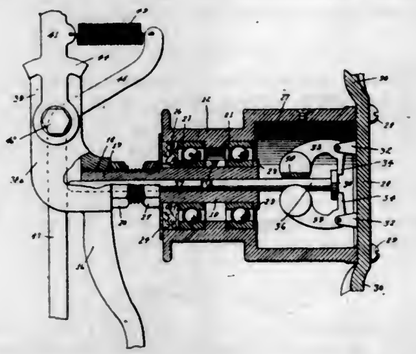
1. As a new article of manufacture, a presser foot having a foot portion and heel and toe portions, said foot being formed with a needle receiving opening, a presser bar receiving shank secured to the heel portion, sprocket wheels secured to the shank and toe portions, and a continuous chain extending between said sprocket wheels.

1,809,149. DRIVING MECHANISM FOR COMBINED WASHERS AND WRINGERS. OTTO E. SZEKELY, Holland, Mich. Filed May 2, 1927, Serial No. 188,145. Renewed Apr. 17, 1931. 1 Claim. (Cl. 74—7.)



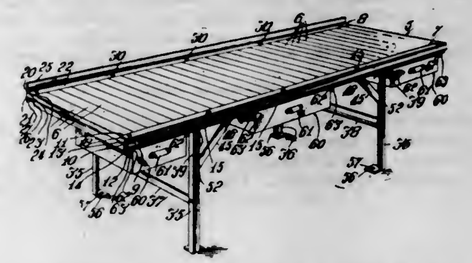
A driving mechanism for a combined washer and wringer including an impeller shaft, a vertical shaft, a crank on the impeller shaft and a crank on the vertical shaft, a link connecting said cranks for imparting an oscillating movement to the impeller shaft, a worm gear loosely mounted on the vertical shaft, a worm drive for operating said gear, a wringer drive gear secured to said worm gear and meshed with a gear on the wringer drive shaft, a clutch comprising a member rigid with said worm gear and a member movably mounted on the vertical shaft between the worm gear and the crank, a pivotally mounted operating arm having an end portion connected to the movable member of said clutch, and means connected to the other end of said pivotally mounted arm for imparting movement thereto for controlling operation of said vertical shaft and said impeller shaft from said worm gear.

1,809,150. REFRIGERATOR CLOSURE. ENOCH SWEDMAN, St. Paul, Minn., assignor to Seeger Refrigerator Company, St. Paul, Minn., a Corporation of Minnesota. Filed Dec. 16, 1927. Serial No. 240,375. 9 Claims. (Cl. 20—35.)



1. A refrigerator door including, a body portion, an outer and inner enameled surface, and means in said body portion adapted to arcuate the free edge of the door in a manner to cause the same to seal tight when locked.

1,809,151. ODOMETER. DEWITT TAPPAN, Rochester, N. Y., assignor, by mesne assignments, to North East Appliance Corporation, Rochester, N. Y., a Corporation of New York. Filed Jan. 12, 1928. Serial No. 246,344. 5 Claims. (Cl. 235—95.)



1. In an odometer provided with number rings and internal transfer pinions, a drum, on which the rings revolve, comprising a cylindrical, longitudinally slotted sheet-metal body ,two heads engaging the ends of said body and each provided with a circularly curved slot corresponding in diameter and extent with, and receiving, the corresponding end of the body so as to confine the latter in all directions against lateral movement or distortion, and means for drawing the heads tightly against the body.

1,809,152. COMBINED FAN AND GOVERNOR FOR INTERNAL COMBUSTION ENGINES. WILLIAM B. THIEMANN, Albert City, Iowa. Filed Apr. 23, 1929. Serial No. 357,505. 2 Claims. (Cl. 264—3.)

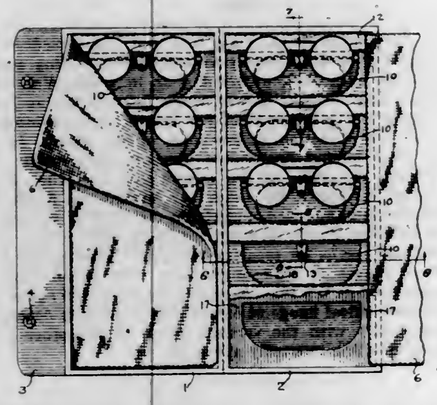
1. In a device of the class described, a supporting arm having an upwardly projecting member, a sleeve projecting laterally from said arm, a pulley rotatively mounted on said sleeve having a hollow hub open at its outer end, a cover plate carried by said hub for closing said opening, said cover plate having lugs projecting into the opening of said hub, the edge of said cover plate being provided with radially projecting fan blades, governor arms mounted within said hub and pivotally connected to said inwardly extending lugs, a slide rod mounted in the inner end of said sleeve and operatively connected to said governor arms, a second rod slidably mounted in the outer end of said sleeve, a ball mounted between the adjacent ends of said rods, a lever pivotally connected to the upwardly projecting member of said supporting arm, said lever being mounted in alinement with the outer one of said slide rods and designed to be engaged and operated thereby, one end of said lever being provided with a spring for yieldably supporting the lever in engagement with said rod, a second lever pivotally connected to the upwardly projecting member of said supporting arm, said second lever being connected to one end of said spring, the second lever and said upwardly projecting member being provided with serrated surfaces to yieldably lock said lever in various positions of its swinging movement.

1,809,153. SHOP BENCH. ARTHUR M. BARRETT, Winnetka, Ill., assignor to Barrett-Cravens Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 23, 1928. Serial No. 248,626. 6 Claims. (Cl. 45—31.)

1. In a bench of the class described, a top made up of a plurality of transversely arranged boards lying contiguous and with their adjacent ends in substantial longitudinal alignment, a pair of angle bars extending longitudinally along the ends of the boards and substantially normal the direction of extension of the boards, one of said bars having one flange disposed horizontally and overlying the ends of the boards and its other flange disposed vertically, the other bar having one flange disposed horizontally and underlying the ends of the boards and its other flange disposed vertically, said boards being solid, and means for securing the boards between the horizontal flanges of said angle bars, said board securing means forming the sole connection between said angle bars and the vertical flange of one of said angle bars depending downwardly with the vertical flange of the other angle bar upstanding upwardly above the top.

1,809,154. RIVETING. EMIL BECKER, Dessau, Germany, assignor to Hugo Junkers, Dessau, Germany. Filed June 30, 1928, Serial No. 289,481, and in Germany July 16, 1927. 3 Claims. (Cl. 218—29.)

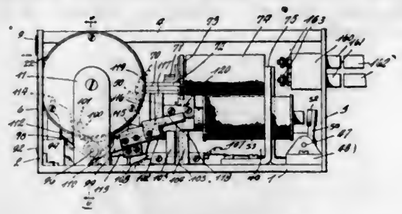
1. The method of making a joint by riveting comprising inserting in the rivet holes of the parts to be joined a



hollow pot-shaped body flanged at its open end and exerting pressure in radial direction on the inner wall of the projecting closed end of said body to increase its diameter beyond the diameter of said rivet holes.

1,809,155. DISPLAY CASE. JACOB P. BERTRAM and ABRAHAM BERLINER, Rochester, N. Y., assignors to Shuron Optical Company, Inc., Geneva, N. Y., a Corporation of New York. Filed Nov. 22, 1928. Serial No. 321,126. 1 Claim. (Cl. 206—44.)

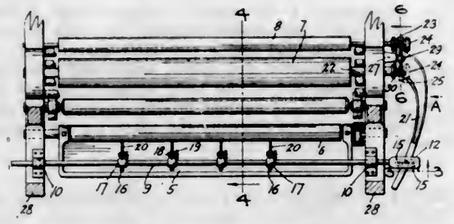
A display case for finger-piece eyeglasses having a pocket comprising side and end walls, a strip attached to one of the side walls and inclined upwardly away from said wall affording a springlike yieldable support on which the lenses are adapted to rest, a retaining wall arranged transversely of the pocket adjacent to said yieldable support, and an overhanging top portion on said retaining wall adapted to overlie the movable guards of an eyeglass when the latter are brought into yieldable engagement with the sides of said retaining wall and thereby to hold the lenses against said yieldable support.



1,809,156. DISPLAY CASE. JACOB P. BERTRAM and ABRAHAM BERLINER, Rochester, N. Y., assignors to Shuron Optical Company, Inc., Geneva, N. Y., a Corporation of New York. Filed Nov. 22, 1928. Serial No. 321,127. 1 Claim. (Cl. 206—44.)

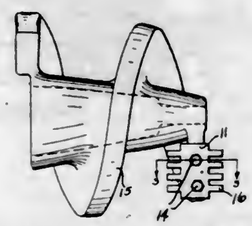
A spectacle case having a pocket comprising side and end walls, cushioned lens-supporting means at one side of the pocket on which the lenses are adapted to rest, a shoulder at the opposite side of the pocket affording means for engaging the ends of the temples to prevent their slipping upwardly, and a retaining device arranged below the lens-supporting means acting to overlie the body portions of the temples and to thereby retain the lenses against said supporting means.

1,809,157. REGISTERING DEVICE AND ANNUNCIATOR. HARRY RUSSELL BRAND, New York, N. Y. Filed Mar. 3, 1921. Serial No. 449,560. 13 Claims. (Cl. 235—92.)



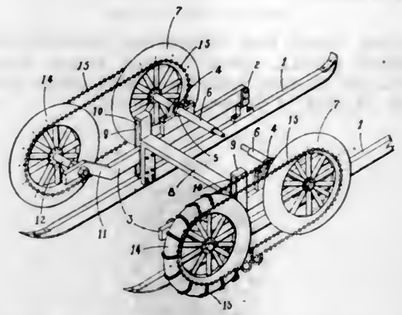
1. In a commodity sale registering machine operable by a controller, in combination, mechanism operated by said controller for registering within the machine a commodity sale and issuing a token, and means operated by the deposit of the token issued by said controller in registering the sale for deleting said registration within said sale registering machine.

1,809,158. ANHYDROUS METAL CHLORIDES AND HYDROGEN CHLORIDE. JOHANNES BRODE and CARL WUNSTER, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 23, 1927, Serial No. 177,835, and in Germany Mar. 23, 1926. 2 Claims. (Cl. 23—94.)



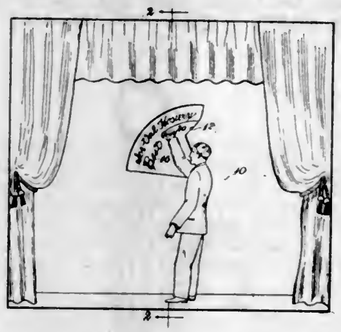
1. The process of producing anhydrous metal chlorides and hydrogen chloride, which comprises acting on material comprising metal oxide with a gas mixture containing carbon monoxide, at least 10 per cent by volume of hydrogen, and chlorine at a high temperature.

1,809,159. INK AGITATING APPLIANCE FOR PRINTING PRESSES. CARLYLE P. CORNELL and JOSEPH E. SLABY, Denver, Colo. Filed Oct. 15, 1928. Serial No. 312,609. 7 Claims. (Cl. 101—363.)



1. In inking mechanism for printing presses, an ink-fountain, a reciprocating inking roller, a stirring appliance for the fountain, and means for the operation of the appliance by the reciprocating movement of the roller.

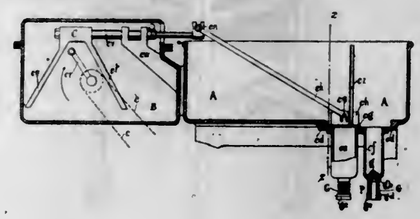
1,809,160. LAMINATION DISINTEGRATOR. COSTANTE DALLA COSTE, Clayton, Wash. Filed Jan. 20, 1930. Serial No. 422,019. 3 Claims. (Cl. 25—14.)



1. In a lamination disintegrator a base, a groove in the base, means for attachment to an auger, and outstanding fingers at right angles to the longitudinal line of the base for the purpose specified.

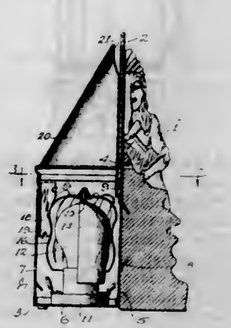
1,809,161. AUTO SLED ATTACHMENT. JOSEPH THOMAS DUNNIGAN, Detroit, Mich. Filed Nov. 12, 1928, Serial No. 318,816, and in Canada Mar. 28, 1928. 1 Claim. (Cl. 180—5.)

An auto sled for vehicles provided with a pair of runners; a suitable brace connecting said runners; each end of said brace being provided with a guide plate; vertical standards supported from said runners; connecting bars, having their forward ends pivotally connected to the upper ends of said standards; means for connecting the axle housing of a vehicle adjacent the forward ends of said connecting bars; the upward movement of said connecting bars being limited by said guide plates; auxiliary tracting wheels mounted from the rear end of said connecting bars and a traction tread chain extending beltwise around each respective auxiliary wheel and its coacting traction wheel.



1,809,162. ADVERTISING DISPLAY MECHANISM. PETER A. EGELAND, St. Paul, Minn. Filed May 26, 1930. Serial No. 455,764. 4 Claims. (Cl. 46—40.)

1. A display mechanism, comprising a panel having an opening therein, a background panel spaced rearwardly from said panel and having indicia thereon in registry with the opening in the forward panel, and a rotatable member mounted between the panels and having the periphery thereof in sections spaced at different distances from the center of said rotatable member to disclose successive portions of the indicia upon rotation of said rotatable member.

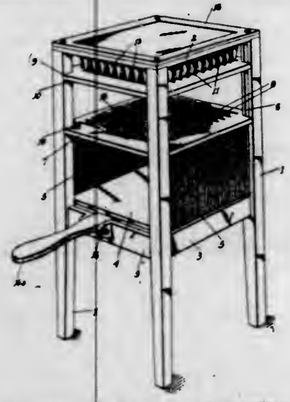


1,809,163. APPARATUS FOR AUTOMATICALLY MEASURING AND DELIVERING MILK OR OTHER LIQUIDS. ARTHUR GUY ENOCK, Wembley Park, England, assignor to Burlectas Limited, London, England. Filed Jan. 2, 1929, Serial No. 329,781, and in Great Britain Jan. 18, 1928. 2 Claims. (Cl. 226—108.)

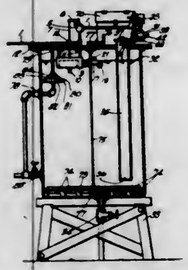
1. A machine for filling bottles with a measured quantity of liquid comprising a bulk container, a plurality of measures open at the top fitted to the bottom of and opening for their full area directly into the body of the container, a horizontally operating inlet slide valve adapted to slide to and fro over the tops of the measures, air escape pipes mounted on the slide valve, two connecting rods controlling the slide valve, a sliding bar coupled to the

connecting rods, a forked bracket on the sliding bar and a crank to reciprocate the sliding bar to and fro, and outlet valves at the lower end of the measures to operate on the rising of the bottles after the inlet valve has closed to rapidly discharge the liquid into the bottles and evacuate air from the bottles.

1,809,164. LAMP FOR PRODUCING ILLUMINATED MOTION EFFECTS. FRANK GRITT, Indianapolis, Ind., assignor to Gritt, Inc., Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 28, 1930. Serial No. 498,780. 5 Claims. (Cl. 40—40.)



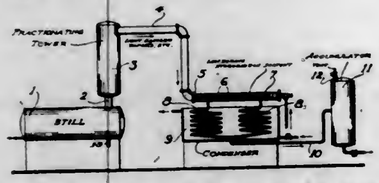
1. A device for producing illuminated motion effects comprising a housing, a sculptured representation of a stationary object adjacent said housing, a light permeable panel adjacent said sculpture, means in said housing for producing a fluctuating light, and a reflector in said housing adapted to reflect the light rays upon said panel to produce an illusory representation of a moving object in complementary visible relation to said sculpture.



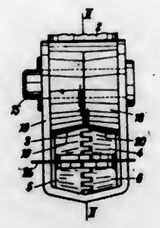
1,809,165. STEAK TENDERER. HARRY H. HART, Sacramento, Calif., assignor to Hart's Lunch, Inc., Sacramento, Calif. Filed Apr. 24, 1929. Serial No. 357,706. 5 Claims. (Cl. 17—25.)

1. A meat tenderer including a meat supporting table provided with a plurality of slots, a plurality of pointed knives alined with the slots at right angles to the table and normally spaced therefrom, a member permanently mounted with the knives arranged to normally guard and

cover the points of the knives and movable relative thereto in a direction parallel to the table, and means for moving the table toward the knives and guard to engage and move the latter to enable the knives to then project through the slots.

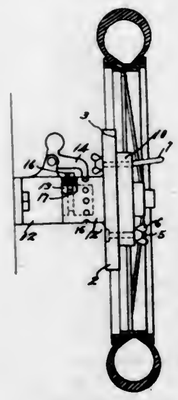


1,809,166. APPARATUS FOR AUTOMATIC WATER SOFTENERS AND CHEMICAL FEEDS THEREFOR. EARL S. HENRY, Medford, Okla. Filed Aug. 20, 1928. Serial No. 300,779. 2 Claims. (Cl. 210—21.)



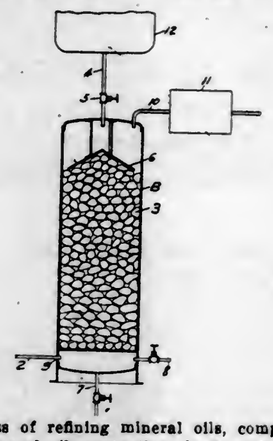
1. A device of the class described, in combination with a sedimentation tank, a float control in said tank for a water supply pipe, a water supply pipe, a coagulant tank and a water motor for measuring a definite amount of water at each stroke and for utilizing the hydraulic pressure of said water as a motive power, of a device of the class described including measuring means for measuring a definite amount of softening materials proportionate to the amount of water supplied with each stroke including a float means therefor, an over center oscillating weight means being adapted for regulating and delivering the proportionate amount of said softening materials and said water to said coagulant tank.

1,809,167. METHOD OF CONDENSING GASOLINE VAPORS. FREDERICK W. ISLES, Bayonne, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Jan. 25, 1927. Serial No. 163,329. 4 Claims. (Cl. 196—8.)



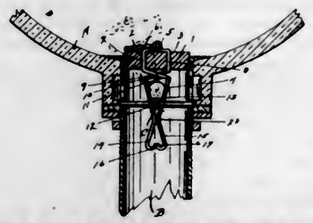
1. In a method of recovering low-boiling volatilized petroleum oils, of the type of light gasoline, the improvement that comprises bringing such oils into intimate contact with a solvent therefor having an average boiling temperature not materially different from that of benzol, cooling, and collecting condensed low-boiling petroleum oils and solvent.

1,809,168. TOOL FOR UPSETTING OR STRETCHING SHEET METAL. HUGO JUNKERS, Dessau, Germany. Filed Dec. 12, 1929, Serial No. 413,604, and in Germany Dec. 18, 1928. 5 Claims. (Cl. 78—61.)



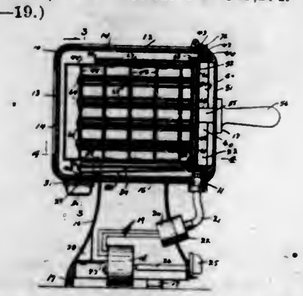
1. A tool for producing a change of form in sheet metal comprising two pairs of jaws, camming faces inclined in opposite directions on the jaws of each pair and camming means adapted to cooperate with said camming faces, said camming means comprising a pair of pivotally connected arms, means on one of said arms, about which said pairs of jaws are fitted to rock, said camming means being arranged on the other arm so as to cooperate with the camming faces of the adjacent pair of jaws, and faces on said first-mentioned arm on which the camming faces of the other pair of jaws are fitted to slide.

1,809,169. ADAPTABLE WHEEL HOLDER. HOMER R. KENNEDY, Los Angeles, Calif. Filed Nov. 5, 1930. Serial No. 493,583. 3 Claims. (Cl. 144—288.)



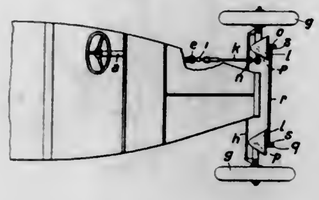
1. A wheel holder adaptable for holding various sizes and types of automotive vehicle wheels and which includes a flat faced rest provided with a rearward boss having a bracket base by which it may be butted against a convenient support and fastened; said rest having a radial row of holes from front to rear end a forwardly projecting hook securable in any of said holes to enter a bolt hole in the hub of the wheel to be hung on the rest and said rest having below the hook adjustable means to pass into a lock bolt hole of the hub and for clamping this to the face of the rest.

1,809,170. PROCESS OF REFINING HYDROCARBON OILS. ARTHUR LACHMAN, Berkeley, Calif., assignor to Richfield Oil Company of California, Los Angeles, Calif., a Corporation of Delaware. Filed May 8, 1929. Serial No. 361,513. 17 Claims. (Cl. 196—86.)



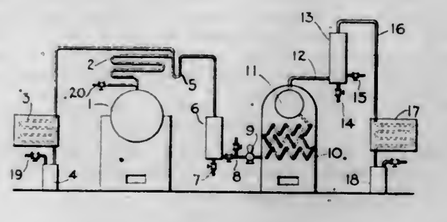
1. A process of refining mineral oils, comprising, vaporizing a mineral oil, contacting the vaporized oil with a water solution of a zinc salt maintained in solution and then condensing purified oil vapor separated from products of reaction and treating agent.

1,809,171. DRAIN PLUG. OLE ALONZO LARSEN, Salt Lake City, Utah. Filed Jan. 22, 1930. Serial No. 422,568. 1 Claim. (Cl. 4—295.)



In a closure plug for basins the combination of a solid closure plug having spaced apart holes therethrough; and having a wire bent into a ring and then having the legs thereof passed down through the said holes, and having the ends crossed over, then bent inwardly to near each other and bent outwardly a short distance and curved back inwardly and upwardly to meet at the lower end.

1,809,172. COOKING APPARATUS. GEORGE ROSS LE SAUVAGE, Buffalo, N. Y., assignor to Republic Metalware Company, Buffalo, N. Y., a Corporation of New York. Filed Nov. 13, 1928. Serial No. 319,104. 5 Claims. (Cl. 219—19.)

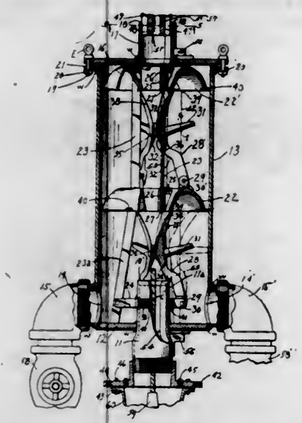


2. A cooking apparatus comprising a casing having a vertical slot in one end, heating means carried by the casing and arranged at each side of the slot, and a grid element having means for supporting the food being roasted, the grid element comprising a body for closing said slot when in one position, and a tray for closing said slot when in another position.

1,809,173. DIRIGIBLE HEADLIGHT. JOHANN LINK, Brachbach/Sieg, Germany. Filed Apr. 21, 1930, Serial No. 446,149, and in Germany Apr. 24, 1929. 3 Claims. (Cl. 240—62.)

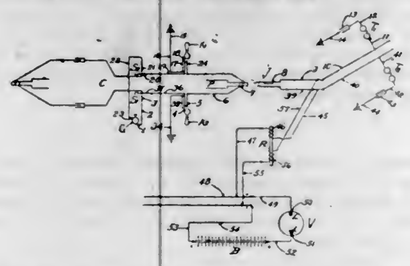
1. A mechanism for automatically turning the front head lamp of motor cars into the direction of travel so that when the car is running along in a curve of the road the head lamp on the inner side of the curve oscillates at a greater amplitude than the other head lamp, comprising in combination with the pivot axles of the head lamps, a two armed lever on the pivot axle of one of said head lamps, a one armed lever on the pivot axle of the other head lamp, a fork shaped extension on each of said pivot axle levers, a rigid tube loosely mounted between the free ends of said levers, and a guide element on each end of said rigid tube on which said fork shaped extensions of said pivot axle levers bear.

1,809,174. CONVERTING HYDROCARBONS. NATHANIEL E. LOOMIS, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed May 5, 1924. Serial No. 711,138. 2 Claims. (Cl. 196—106.)



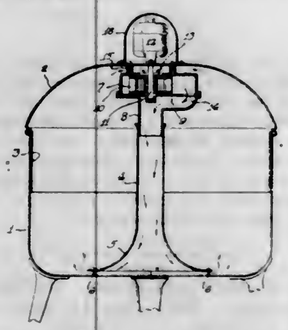
1. Apparatus of the character described, which comprises a still, a reflux condenser for receiving vapors therefrom, means for retaining pressure upon the vapors in the still and reflux condenser, a trap-out connection in the intermediate portion of said reflux condenser, a cracking coil for receiving trapped-out condensate and adapted to operate at higher pressure than the still, a vapor separator in connection with said cracking coil and a condenser in connection with said vapor separator.

1,809,175. SAFETY OIL SAVER. WALTER A. LOOMIS, Whittier, Calif. Filed July 14, 1927. Serial No. 205,757. 13 Claims. (Cl. 166—16.)



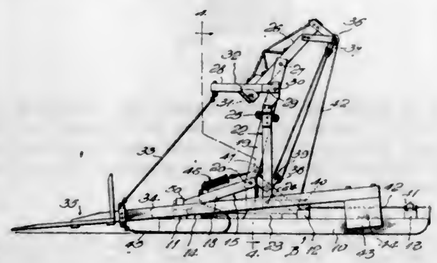
1. In an oil saver: a substantially tight housing provided with an oil outlet opening and with additional

openings through which a cable may pass; outwardly yieldable means, within said housing, for stripping oil



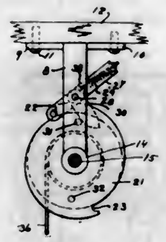
from said cable; and a plurality of downwardly concave annular deflectors spaced apart in said housing and each provided with a central opening.

1,809,176. MEANS FOR SELECTIVELY CONTROLLING RINGING CIRCUITS OF TELEPHONES. CHARLES M. MACGREGOR, Chicago, Ill. Filed Mar. 26, 1930. Serial No. 438,927. 6 Claims. (Cl. 179—84.)



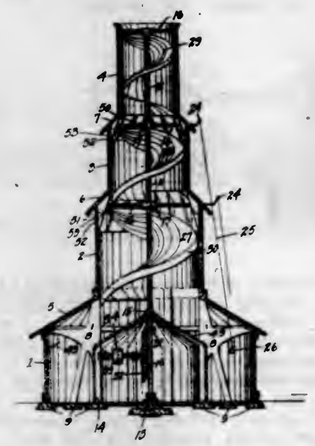
1. Means for selectively controlling the ringing circuits of telephones in a common battery switchboard equipment, said means embodying a relay bridged across the subscriber's line and in series with the battery, and an electrical valve unit between the battery and said relay and in series with the battery.

1,809,177. WASHING MACHINE. CHARLES L. MINER, Detroit, Mich. Filed May 9, 1928. Serial No. 276,240. 2 Claims. (Cl. 68—37.)



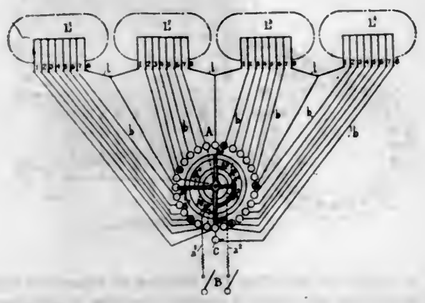
1. A washing machine comprising a cylindrical receptacle, a cover for tightly closing said receptacle, a vertical air tube arranged axially within the receptacle and secured to the bottom thereof, said lower end being flared outwardly toward the side walls of the receptacle with the edge thereof spaced therefrom and from the bottom of the receptacle for directing air passing down the tube laterally toward the outer vertical wall of the receptacle, a blower casing suspended within the cover with a space between the casing and top of the cover providing passageways leading to an air intake opening in the casing, a blower wheel within the casing, a tubular downwardly extending air discharge member on the casing adapted to engage within the upper end of the air tube in the receptacle, a motor mounted upon the cover with its shaft extending downwardly into the blower casing with the blower wheel secured thereto, and a casing for enclosing the motor.

1,809,178. HAY STACKER. JOSEPH F. CHLADEK, Niobrara, Nebr. Filed May 7, 1930. Serial No. 450,490. 3 Claims. (Cl. 214—143.)



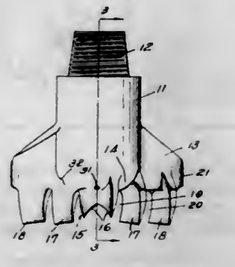
1. A stacker comprising a base, longitudinal arms pivoted to said base and having a stacking head, a standard pivoted to said base to swing longitudinally thereof, a second standard pivoted to said base to swing longitudinally thereof, a sliding connection between the two standards whereby swinging of one will swing the other, a longitudinal lever fulcrumed between its ends to the upper end of the first named standard, a second longitudinal lever fulcrumed at one of its ends to the upper end of said second standard and extending therefrom toward the receiving end of the stacker, lift connections between the other end of said second lever and the aforesaid arms, a sliding connection between one end of the first named lever and the intermediate portion of said second lever, and means connected with the other end of said first named lever for drawing said end toward the base.

1,809,179. LOCKING SHEAVE. TORGILS S. OPHEIM, Long Beach, Calif. Filed Oct. 19, 1928. Serial No. 313,624. 2 Claims. (Cl. 188—82.)



1. In a device of the character described, including a stationary support, a flanged drum rotatably mounted in said support, one of the flanges of the drum having peripheral notches therein, a locking dog pivotally mounted on said stationary support, a pin on the locking dog arranged to engage the notches to prevent rotation of the drum in one direction, a trigger pivotally mounted on the stationary support, a spring connecting said trigger and the locking dog, pins on the flange of the drum, said pins being arranged to engage the trigger and swing the locking dog out of the path of the notches when the drum is rotated in one direction, in the opposite direction of rotation of the drum, said pins engage the trigger to press the locking dog against the flange and means to rotate said drum.

1,809,180. FLUID CURRENT MOTOR. CONSTANT OTTEVAERE, Spokane, Wash. Filed Aug. 6, 1927. Serial No. 211,163. 1 Claim. (Cl. 170—40.)

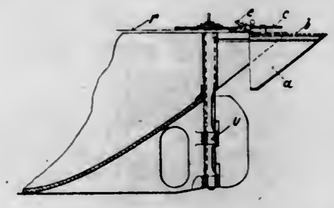


The combination in a motor comprising an air tower having a rotary base cylinder with openings therein and doors to regulate said openings, adjustable guide plates on said cylinder for directing air currents toward said openings, and a series of superimposed stationary cylinders of successively reduced diameters, of a sectional driving shaft journaled within the tower, clutch devices between the sections of said shaft, spiral vanes of successively reduced diameters on said shaft, and power transmitting mechanism operated from said shaft.

1,809,181. ELECTRICAL ILLUMINATING APPARATUS. LOUIS ALFRED RAMSDEN, Manchester, England. Filed Jan. 8, 1930, Serial No. 419,444, and in Great Britain Jan. 16, 1929. 6 Claims. (Cl. 240—3.1.)

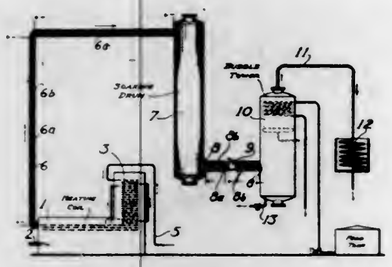
1. Electrical apparatus for obtaining clear and/or colored illuminating effects for stage, scenic advertising and other purposes comprising a plurality of multi-contact electric incandescent lamps, a plurality of section filaments connected in series within each lamp, a controller, a cylindrical rotor within the controller, a plurality of contact bars insulated from each other let into the surface of the rotor and a plurality of contact makers bearing on the surface of the rotor each connected to a contact terminal to vary the specific filaments in the circuit.

1,809,182. BIT HAVING TANGENTIAL BLADES. JESSE C. REESE, Montebello, Calif., assignor to Reese Engineering Company Ltd., a Corporation of Nevada. Filed Feb. 18, 1929. Serial No. 340,725. 5 Claims. (Cl. 255—61.)



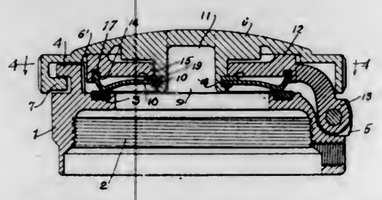
4. A bit of the character described, including: a body having inner and outer tangential blades projecting downwardly in a single diametral plane, said blades having the cumulative length of their cutting edges greater than the diameter of said bit and having the leading ends of their cutting edges a greater radial distance from the axis of rotation than the trailing ends of their cutting edges, said cutting edges being so disposed in a plane perpendicular to the axis of rotation that the paths traversed thereby overlap, and said outer blades having vertical leading edges adapted to cut with a reaming action.

1,809,183. HYDROCARBON OIL OF GOOD NONSMOKE RATING. CLARENCE I. ROBINSON, West New Brighton, N. Y., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Nov. 10, 1922. Serial No. 599,967. 3 Claims. (Cl. 196—150.)



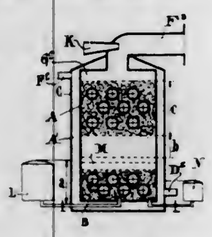
3. A hydrocarbon product having a distillation range between 300° and 575° F., and a non-smoke rating in excess of 125.

1,809,184. RUDDER ARRANGEMENTS FOR SHIPS. OSCAR SCHULTZ, Hamburg, Germany. Filed Mar. 3, 1930, Serial No. 432,876, and in Germany Aug. 3, 1929. 5 Claims. (Cl. 114—162.)



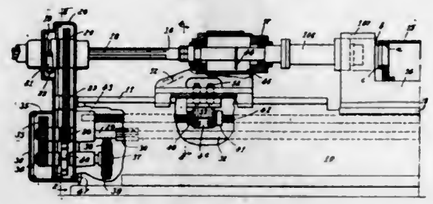
1. A rudder arrangement on ships in which the steering rudder can be exchanged while the vessel is floating, comprising in combination a stern wedge adapted to be pushed out towards the rear in forming a gap for the introduction of a fresh rudder, a locking device adapted to hold said stern wedge in the closing position, and a stern steering wheel mounted on the rudder tube having a slot adapted to register with the gap produced by the pushed out stern wedge when the rudder is in midship position.

1,809,185. PROCESS OF PYROGENETIC DECOMPOSITION OF OILS AND APPARATUS THEREFOR. HAROLD SYDNOR, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed July 6, 1927. Serial No. 203,856. 5 Claims. (Cl. 196—51.)



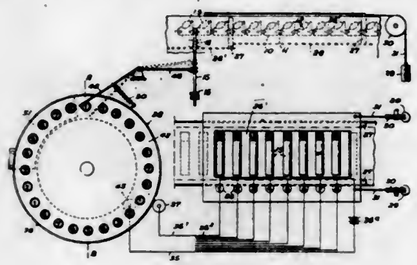
3. Cracking apparatus which comprises a digestion chamber, means for conducting cracked hydrocarbons from the digestion chamber to a point of condensation, means for applying heat to said conducting means.

1,809,186. RADIATOR CAP. KYLE E. STANT, Connersville, Ind., assignor to The Stant Machine Company, Connersville, Ind., a Corporation of Indiana. Filed Nov. 28, 1928. Serial No. 322,493. 9 Claims. (Cl. 220—24.)



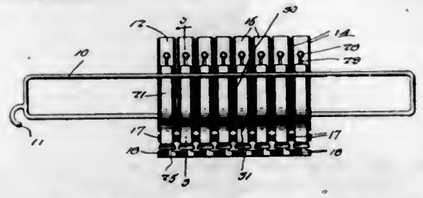
1. In a radiator cap, in combination with a collar, a hinge plate pivoted to said collar a cap having inwardly directed ears pivoted to said hinge plate, and ears extending up from the collar adapted to engage the cap ears to hold the cap in engagement with the collar.

1,809,187. OIL GAS APPARATUS. DMITRY BALACHOWSKY and PHILIPPE CAIRE, Paris, France, assignors to Societe des Brevets Catalex, Geneva, Switzerland. Filed June 29, 1925, Serial No. 40,389, and in France July 12, 1924. 2 Claims. (Cl. 48—95.)



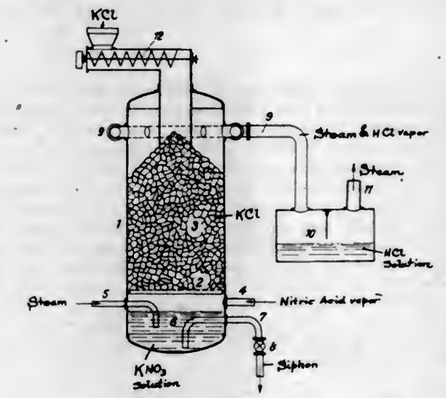
1. Oil gas apparatus, comprising inner and outer casings spaced from each other to provide circulation passage for hot gases at opposite sides of the inner casing, one side of such passage having an inlet for the hot gases, and the other side having an outlet therefor; a nest of tubes of catalytic metal extending through said inner casing and opening at their ends into said passage to conduct said fluids from the inlet side thereof to the outlet side; an oil gas delivery pipe leading from the upper part of the inner casing through the outer casing to the outside; means for supplying a mixture of finely pulverized hydrocarbon liquid and air to the lower part of said inner casing to be divided into fine streams by the tubes and decomposed catalytically to form oil gas by direct contact with the heated surfaces thereof during their passage to the delivery pipe; and means for supplying an aqueous liquid to the said lower part of the inner casing to facilitate the catalytic action.

1,809,188. HORIZONTAL BORING AND TAPPING MACHINE. JOHN S. BARNES, Rockford, Ill., assignor to W. F. and John Barnes Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 28, 1927. Serial No. 164,226. 29 Claims. (Cl. 10—130.)



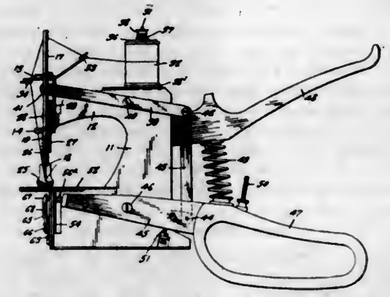
1. In a machine of the character described adapted for performing tapping operations, a bed providing ways thereon, a carriage movable on said ways, a feed screw rotatably mounted in said bed for feeding said carriage, a spindle arranged to carry a tap rotatably mounted in said carriage and arranged to be fed therewith, a driving element in said bed having connection with a source of power to be driven in either direction, transmission gears between said driving element and said feed screw for driving the latter, and other transmission gears between said feed screw and said spindle for driving the latter whereby the driven gear for the spindle is more remote from the driving element than the driven gear for the feed screw, for the purposes described.

1,809,189. APPARATUS FOR TURNING CIGARETTES RIGHT SIDE UP AS THEY ARE FED TO THE PACKING MACHINE. MARTIN BERGER, Freital-Deuben, near Dresden, Germany, assignor to United Cigarette Machine Company Aktiengesellschaft, Dresden, Germany. Original application filed July 1, 1929, Serial No. 375,264, and in Germany May 23, 1928. Divided and this application filed May 29, 1930. Serial No. 457,451. 5 Claims. (Cl. 226—5.)



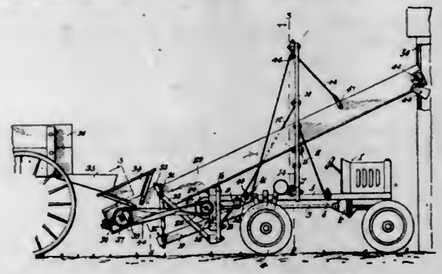
1. A device for enabling the turning of cigarettes right side up as they are fed to a packing machine comprising a frame having an aperture therein through which the cigarettes are observed; and an operating appliance in the frame for enabling the turning of any desired cigarette seen through the aperture, said frame being adapted to move with the cigarettes.

1,809,190. APPARATUS FOR HANDLING ARTICLES FOR COATING. ROBERT F. BRIMER, Washington, D. C. Filed Aug. 17, 1927. Serial No. 213,686. 6 Claims. (Cl. 91—60.)



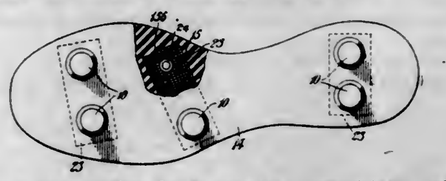
1. An article handling device comprising a frame, a plurality of gripping members slidably mounted on the frame and forming a bearing for partial rotation of the frame, said members being collectively releasable by relative movement between the frame and members.

1,809,191. PROCESS FOR MANUFACTURING NITRATES. JEGOR ISRAEL BRONN, Berlin-Charlottenburg, and GEORG FISCHER, Oberhausen, Germany; said Fischer assignor to said Bronn. Filed Jan. 26, 1928, Serial No. 249,713, and in Germany Jan. 24, 1927. 18 Claims. (Cl. 23—102.)



1. Process of manufacturing nitrates comprising treating chlorides of alkali-forming metals with oxides of nitrogen in the presence of copious quantities of steam.

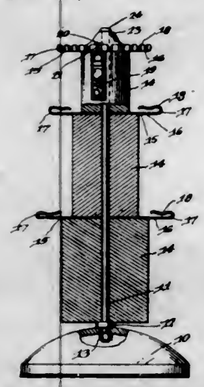
1,809,192. HAND SEWING MACHINE. ROBERT E. CAHILL and JOHN CATERINI, Cleveland, Ohio. Filed July 14, 1928. Serial No. 292,659. 3 Claims. (Cl. 112—169.)



1. In a sewing machine, a plate, an arm extending therefrom, a needle carrying rod mounted for longitudinal reciprocatory movement at the outer end of the arm, a spring influenced rod also mounted for longitudinal movement at the outer end of the arm, a presser foot carried by the spring influenced arm, means cooperating with the presser foot to feed the work, a lower stitch forming mechanism, an operating lever mounted for pivotal movement upon the plate, a rocker arm also pivotally mounted upon the plate and operatively connected to the carrying rod, a rod connecting the operating lever and rocker arm to actuate the latter and operate the needle, and means carried by said lever and engaging both the work feeding means and the lower stitch forming mechanism to operate the same.

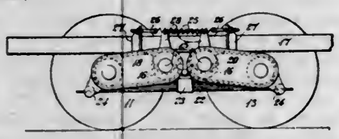
1,809,193. COMBINED ELEVATOR AND SAW. HENRY J. H. DUENSING, Odell, Nebr. Filed Mar. 31, 1930. Serial No. 440,469. 1 Claim. (Cl. 143—43.)

The combination with a twin shaft gear assembly, such as a rear-wheel driving mechanism for an automobile, including an elongated tubular axle housing, shafts journaled and enclosed in the housing and extended beyond the ends of the housing, and a differential located between the ends of the housing and connecting the said shafts: of means whereby such an assembly as a discarded rear-wheel driving mechanism, constructed as set forth, may be employed in the making of a portable power plant, said means comprising a main vehicle frame, ground wheels mounted on the main vehicle frame, a substantially vertical auxiliary frame fixed to the main frame to the rear of the ground wheels, an engine on the main vehicle frame, a driving shaft connected to the engine and to said differential, said differential constituting means whereby power is transmitted from the driving shaft to one of the enclosed shafts, and constituting means whereby the housing and the enclosed shafts may be turned in a substantially vertical plane transverse to the length of the vehicle frame, to cause the housing and the enclosed shafts to assume different angles, means for securing the housing fixedly to the auxiliary frame in at least two positions when the housing assumes any of said different angles, the auxiliary frame providing at least two spaced locations for means for holding the other of the enclosed shafts against rotation, when the housing assumes any of said different angles, thereby to render said differential effective to transmit power to the first-specified one of the enclosed shafts, and means on the first-specified one of the enclosed shafts or utilising the power transmitted to it.



1,809,194. BOOT AND SHOE. FREDERICK WILLIAM EAST, Petersfield, England, assignor to I. T. S. Rubber Company Limited, Petersfield, England. Filed Dec. 11, 1929. Serial No. 413,366. 3 Claims. (Cl. 36—59.)

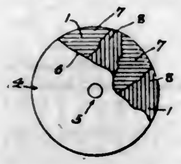
1. A boot or shoe for sports wear, comprising a sole formed of vulcanized rubber, a wire gauze reinforcement



embedded in the said sole, screw-threaded metal ferrules molded into the said sole, such ferrules projecting downwardly through holes in the gauze reinforcement and having flanges extending above the said reinforcement, the said flanges being formed with downwardly extending spikes for engaging with the wire gauze reinforcement, and studs provided with screwed shanks for engaging with the said ferrules.

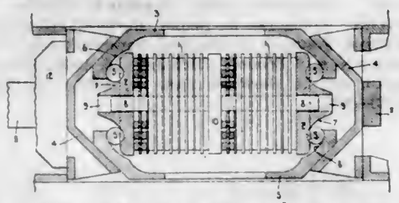
1,809,195. STAMP RACK. RICHARD EVANS, Highland Park, Ill. Filed Feb. 8, 1928. Serial No. 252,832. 2 Claims. (Cl. 211—39.)

1. A supporting member comprising a relatively flat plate having a plurality of inwardly extending recesses provided on the periphery thereof defining lugs, said lugs having portions bent upwardly and rearwardly so as to extend parallel but spaced from portions of said lugs between said recess whereby to provide resilient clips between which headed supporting members may be inserted whereby the members attached to said supporting members will be clamped against the lower side of said lugs by the upward action of the rearwardly bent portions of said lugs on the heads of said headed supporting members.



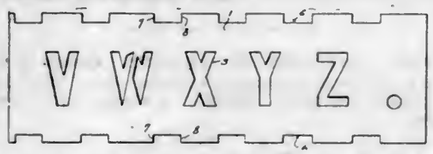
1,809,196. DRIVING AND SPRING SUSPENSION OF VEHICLES. FRANK SMEDLEY FARNSWORTH, Derby County, England. Filed Oct. 2, 1928, Serial No. 309,807, and in Great Britain Oct. 8, 1927. 9 Claims. (Cl. 180—22.)

1. A driving and spring suspension for vehicles having four driving road wheels, wheel carrying members mounted for pivotal movement with respect to the vehicle frame, a wheel carried by the free end of each member, a load carrying spring connected with the vehicle frame and cooperating with each pair of driving wheels below the mounting of such wheels in the wheel carrying members, and a reaction spring connected to the frame and to each of the wheel carrying members, said latter connections being in line with the pivotally supported members.



1,809,197. METHOD OF PRODUCTION OF GENERATOR ARMATURES. WILLIAM FENDRICH, Jr., Upper Montclair, N. J. Filed Aug. 6, 1929. Serial No. 383,841. 14 Claims. (Cl. 29—155.5.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. The method of producing an armature of substantially uniform permeability which consists of aligning a sheet of metal with the grain in a predetermined position relative to the bed of a punch press, aligning the die and punch with the keyway of said die and punch at an angle



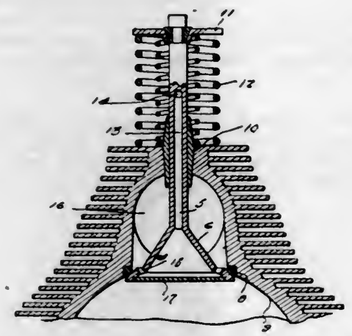
to the grain of the metal, punching a series of plates from said sheet metal, reversing alternate plates of said series and fixing said series upon a shaft.

1,809,198. CENTRAL BUFFING AND DRAWGEAR FOR RAILWAY VEHICLES. RICHARD THOMSON GLASCODINE, London, England. Filed Sept. 19, 1929, Serial No. 393,726, and in Great Britain July 19, 1929. 3 Claims. (Cl. 213—37.)

1. In central buffing and draw gear, a draw bar yoke, and friction draft gear embraced by said yoke comprising end pressure plates with inclined faces, friction wedge members located between said end pressure plates and having inclined ends that bear on the inclined faces of said end plates so that the said members are caused to move towards one another upon movement of the said end plates towards one another, an india-rubber spring arranged between said friction wedge members, bearing plates located one at each end of said india-rubber spring, means whereby the said bearing plates are moved towards one another upon the said friction members being moved towards one another, and an axial rod supported at its ends by said bearing plates and upon which said india-rubber spring is mounted.

1,809,199. STENCIL. ROBERT DAVID GOULD, Detroit, Mich. Filed May 24, 1930. Serial No. 455,406. 4 Claims. (Cl. 101—127.)

1. A stencil plate having openings defining characters and provided in its edge with notches alternating with the character-forming openings, each notch having oppositely disposed transverse right-hand and left-hand edges, the notches being of such length and being so disposed with respect to the character-forming openings that when the plate is shifted to bring one of the right-hand edges into the place frmerly occupied by one of the left-hand edges, the stenciled characters will be spaced properly from each other.



1,809,200. UNLOADING APPARATUS. ARTHUR L. GUILLE, Portsmouth, Va., assignor of one-half to H. R. Leonard, Norfolk, Va. Filed Nov. 29, 1927. Serial No. 236,510. 7 Claims. (Cl. 198—53.)

1. Apparatus of the character described comprising an endless conveyor having a substantially horizontal portion the upper and lower runs of which are adapted to be arranged respectively above and below a pair of vehicle rails, the upper run of the conveyor being adapted to receive material discharged from a hopper of a car arranged on the rails, said conveyor having detachable portions to permit it to be removed from above the rails, a pair of

spaced supports extending transversely of the rails and resting thereon, and a plurality of rollers journalled at their ends in said supports and adapted to support the upper run of the conveyor for movement across the rails, said rollers being arranged at least partially below the plane of the tops of the rails.

1,809,201. EXHAUST VALVE. JOHN HOWARD HIGGINS, Amarillo, Tex. Filed Mar. 23, 1929. Serial No. 349,412. 1 Claim. (Cl. 123—177.)

A valve for combustion engines comprising a hollow valve stem having an air intake port adjacent its outer end, a hollow conical head at the inner end of the stem providing an air chamber therein communicating with the hollow stem, the lower edge of said head being off-set outwardly providing a horizontal shoulder surrounding the head, said shoulder having a plurality of discharge ports at uniformly spaced intervals, said ports being inclined towards the walls of the exhaust manifold of the engine, whereby the air discharged from said ports is deflected by the walls of the manifold, causing a circulation of air within the manifold.

1,809,202. ELECTRIC TERMINAL CONNECTER. CHARLES E. HOOVER, Lancaster, Pa. Original application filed Feb. 27, 1928, Serial No. 257,354. Divided and this application filed June 28, 1929. Serial No. 374,355. 2 Claims. (Cl. 173—259.)

1. A cable-to-post connecter comprising a sleeve for attachment to the end of a cable, a clamp jaw fixed thereto, a separable jaw associated with said fixed jaw, said jaws having opposing post-gripping faces curved on a plurality of centers to adapt said faces to terminal posts of different diameters, said jaw having inter-engaging bearing means at the end remote from said gripping faces, and a bolt with nut passing loosely through apertures in said jaws at a place for securing the same together between the ends of said jaws, said inter-engaging bearing means

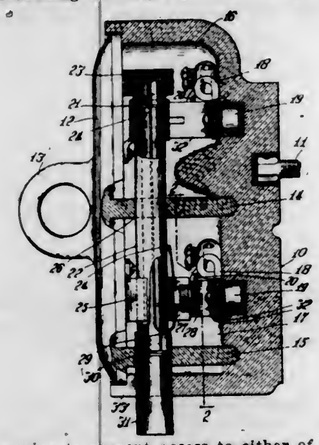
comprising a male and female bearing having a rocking and sliding adjustable movement whereby said separable jaw may slide longitudinally on said fixed jaw, and may

rock laterally and longitudinally to accommodate itself to battery posts of varying diameters and shapes, substantially as and for the purposes described.

1,809,203. PRIME MOVER. ALFRED A. HOVSEPIAN, Del Rey, Calif. Filed Sept. 29, 1930. Serial No. 485,253. 3 Claims. (Cl. 185—37.)

1. A prime mover comprising a spindle, an eccentric plate mounted on one end of the spindle, a drive shaft journaled on the forward end of said spindle and having a crank thereon journalled to the eccentric plate, and twistable means having one end supported on the spindle and the other end associated with the eccentric plate for causing rotation of the drive shaft.

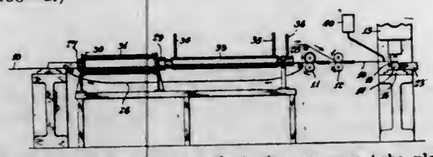
1,809,204. HYDROGENATED HYDROXY-DERIVATIVES OF THE DIPHENYL SERIES AND PROCESS FOR MAKING. ERNST KORTEN, Fechenheim, near Frankfort-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 9, 1928, Serial No. 268,810, and in Germany Apr. 12, 1927. 8 Claims. (Cl. 260—154.)



1. A process which comprises subjecting condensation products corresponding to the general formula

wherein the R's mean benzene nuclei and R_1 means a hydrogenated benzene nucleus, which nuclei all may contain further substituents, to a distillation in vacuo at temperatures of about 200° C.

1,809,205. EXPULSION FUSE. WILLIAM D. KYLE, Milwaukee, Wis., assignor, by mesne assignments, to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 18, 1929. Serial No. 347,887. 20 Claims. (Cl. 200—133.)

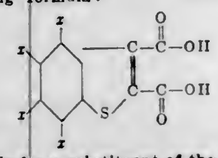


1. A device of the type described, comprising in combination a fuse box, means including a barrier plate providing a substantially tight closure for said box, a second barrier plate extending across said box providing a compartment separated from the remainder of the box, line terminals in said box at opposite sides of said second barrier

plate, a fuse electrically connecting said terminals, and means surrounding the major portion of the fuse within

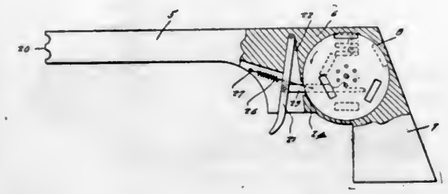
the box serving to prevent access to either of said terminals by the gases generated by the rupture of said major portion of the fuse.

1,809,206. APPARATUS AND PROCESS FOR THE MANUFACTURE OF VACUUM TUBE ELECTRODES. ALBERT LOPPACKER, Bloomfield, N. J., assignor, by direct and mesne assignments, to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,461. 9 Claims. (Cl. 153—2.)



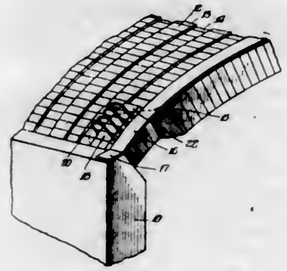
1. In apparatus for manufacturing vacuum tube plates, a press for punching the plates from a strip of material, a conveyor, means for automatically discharging the plates from the press onto the conveyor without manual intervention, and heating and cooling chambers surrounding the conveyor.

2. In the process of manufacturing vacuum tube plates, the steps of forming plates, feeding the formed plates onto a conveyor, and moving the conveyor through a heating chamber containing an atmosphere of hydrogen and thence through a cooling chamber containing an atmosphere of hydrogen.



1,809,207. CONDENSATION PRODUCTS AND DYESTUFFS FROM THIONAPHTHENE-2.3-DICARBOXYLIC ACIDS AND PROCESS FOR PREPARING THE SAME. FRITZ MAYER, Frankfort-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 5, 1926, Serial No. 146,574, and in Germany Nov. 10, 1925. 9 Claims. (Cl. 260—53.)

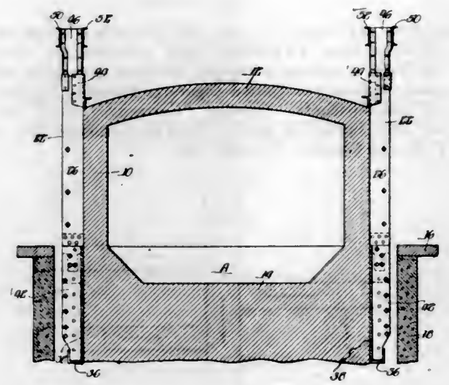
1. The process for preparing condensation products which comprises treating the anhydride of a compound of the following formula:



wherein x stands for a substituent of the group consisting of hydrogen, halogen, alkyl, and alkoxy, with an aromatic hydrocarbon in the present of aluminum chloride.

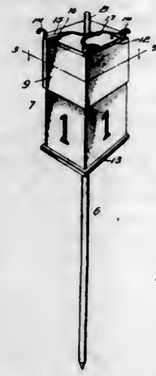
1,809,208. REPEATING GUN FOR SHOOTING ELASTIC BANDS. JESSE R. MCFARLAND, Oak Creek, Colo., assignor of one-half to Joseph W. McCune, Oak Creek, Colo. Filed Mar. 17, 1930. Serial No. 436,589. 5 Claims. (Cl. 124—14.)

2. In a repeating gun for shooting elastic bands, a gun comprising a barrel and a stock, a plurality of bell crank levers pivoted intermediate their ends through the stock on opposite sides of the stock, each of the bell crank levers including an arm for releasable engagement with the inner end of a rubber band, the other end of the band being adapted to engage the forward end of the barrel, a movable trigger mechanism cooperating with said bell crank lever for normally maintaining said arm against release, and a rotatable member engaging said bell crank lever and operating in conjunction with said trigger mechanism for positively preventing the release of more than one band with each movement of the trigger.



1,809,209. METHOD OF SUPPORTING, CONSTRUCTING, AND REPAIRING FURNACE ROOFS. JOHN P. MCLIMANS, Duluth, Minn. Filed June 25, 1927. Serial No. 201,487. 5 Claims. (Cl. 72—67.)

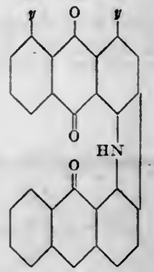
5. An apparatus for use in repairing furnace roofs comprising, in combination, a brace adapted to span the roof, said brace being of a shape conforming substantially to the roof to be repaired, and a plurality of loop shaped members having inwardly extending end portions arranged to engage within the side walls of bricks forming the repair course, said members being provided with shoulder portions for engaging the brace whereby the bricks are supported during the repair operation.



1,809,210. SECTIONAL BUCKSTAY. JOHN P. MCLIMANS, Duluth, Minn. Filed Jan. 30, 1929. Serial No. 336,252. 7 Claims. (Cl. 263—46.)

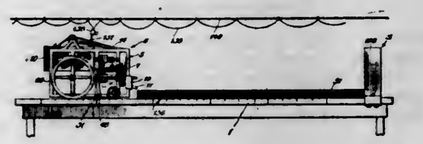
1. A furnace construction comprising, in combination, a plurality of side walls, and a plurality of vertically extending buckstays associated with the side walls and arranged to reenforce the same, the lower portions of the buckstays

being rigidly affixed in place and the upper portions thereof being separable from the lower portions to permit ready removal.



1,809,211. FOOTBALL DOWN SIGNAL. SAMUEL BUCHANAN MCMASTER, Columbia, S. C. Filed Feb. 27, 1931. Serial No. 518,820. 3 Claims. (Cl. 40—65.)

1. A football down signal or marker embodying a staff, a central body member mounted on the staff, this body member being rectangular in horizontal section, and having a flange at its lower end and a flange at its upper end, the four faces of this central body member being provided around its lower portion with a row of numerals 1 and its upper portion being provided with a row of numerals 4, three rectangular shields slidably mounted on this central body member, the outer shield having its four outer faces blank and the two inner shields being provided respectively upon their four faces with the numerals 2 and the numerals 3, and means for holding each of the three shields in their upper position to thus obscure all the numerals except the row of numerals 1 on the central member, whereby the shields may be dropped one by one as the game progresses.



1,809,212. NEW AMINO-1.1'-ANTHRIMIDCARBAZOLS. WALTER MIEG, Opladen, and FRITZ BAUMANN, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 15, 1928. Serial No. 262,040. 2 Claims. (Cl. 260—46.)

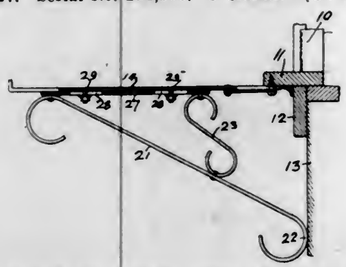
1. Compounds of the probable general formula:

wherein at least one y stands for an amino group, x stands for a hydrogen atom, which may be replaced by an amino group, said products being yellowish brown to dark grey powders soluble in strong sulfuric acid with brown to olive colorations; dyeing cotton from the hydrosulfite vat brown to corinth shades.

1,809,213. CLOTH HANDLING MACHINE. RUDOLPH A. OESMAN, Brooklyn, N. Y. Filed Sept. 18, 1926. Serial No. 136,366. 37 Claims. (Cl. 270—30.)

1. In a cloth handling machine, a table, a cloth end holding mechanism, and means having movement on said table for feeding cloth ends and operating said mechanism to grip said ends, adapted to automatically lay and cut predetermined independent length of cloth on said table.

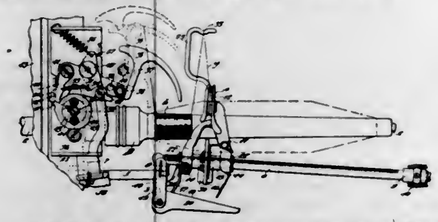
1,809,214. VITRIFIED ARGILLACEOUS PRODUCT. WILLIAM B. PINE, Okmulgee, Okla., and JOSEPH B. SHAW, State College, and MYRIL C. SHAW, Pittsburgh, Pa., assignors of twenty per cent to said Joseph B. Shaw, twenty per cent to said Myril C. Shaw, and sixty per cent to said Pine. Original application filed Nov. 4, 1929, Serial No. 404,863. Divided and this application filed July 16, 1930. Serial No. 468,452. 9 Claims. (Cl. 72—40.)



6. A vitrified argillaceous product in which the percentage of easily fusible constituents is too low to constitute a porcelain, and having about 10 to 30 per cent of binding material which has been fused and a percentage of pores less than the percentage of pores in any vitrified argillaceous product which could be produced from the same argillaceous material by wet molding and vitrifying by the standard method heretofore employed.

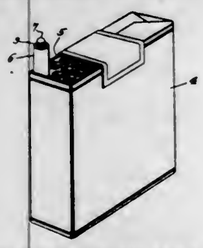
1,809,215. PROCESS OF MAKING VITRIFIED ARGILLACEOUS PRODUCTS. WILLIAM B. PINE, Okmulgee, Okla., and JOSEPH B. SHAW and MYRIL C. SHAW, State College, Pa., assignors of twenty per cent to said Joseph B. Shaw, twenty per cent to said Myril C. Shaw, and sixty per cent to said Pine. Filed Nov. 4, 1929, Serial No. 404,863. Renewed Mar. 21, 1931. 14 Claims. (Cl. 25—156.)

1. A process which comprises heating an argillaceous material selected from the herein described group con-



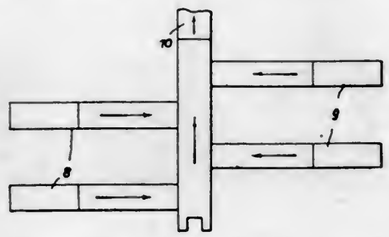
sisting of natural clays, shales and mixtures thereof, to a temperature which while below the P. C. E. value of the particular argillaceous material, is substantially above the temperature of incipient vitrification thereof, applying molding pressure to said material while at said temperature, to directly form a vitrified product.

1,809,216. ADJUSTABLE WINDOW BOX BRACKET. FELIX H. QUANDT, Rolling Prairie, Wis. Filed Oct. 5, 1927. Serial No. 224,108. 3 Claims. (Cl. 248—19.)



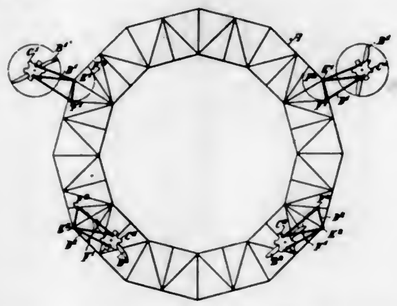
1. A window box bracket, constituted as a horizontal bar having its inner end bifurcated and widened to permit attachment to the underside of the plate of the ledge of a window at separated points to stabilize the structure, and a diagonal brace supporting the said bar at its outer end and provided with a heel, with means on the bar to permit adjustment of the heel in relation to the point of attachment of the bracket.

1,809,217. BUNCH-BUILDER FOR WINDING MACHINES. JOSEPH M. QUILL, Lowell, Mass., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed July 8, 1927. Serial No. 204,358. 20 Claims. (Cl. 242—27.)



1. In a winding machine, the combination of means for initially winding yarn on a bobbin with a restricted traverse to build a bunch, means for laying the yarn with a longer traverse to build the service winding, and mechanically-actuated means operated upon the completion of the bunch to shift the yarn from the bunch-winding means to the service-winding means.

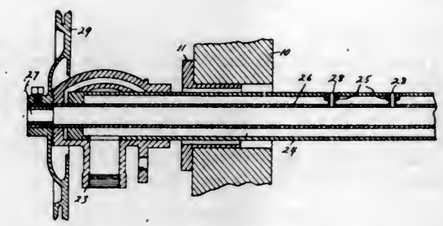
1,809,218. CIGARETTE GRASPER. CRAIG CLAYTON RIDDELL, Newton, Ontario, Canada. Filed Feb. 25, 1930. Serial No. 431,186. 1 Claim. (Cl. 131—52.)



A cigarette comprising a wrapper and a tobacco filler, a flexible tab on one end of the wrapper, adapted for folding over on the end of the filler, said flexible tab formed integral with the wrapper and being segmental in shape, and having perforations along the chorded edge in alinement with the edge at one end of the wrapper.

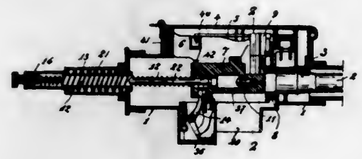
1,809,219. APPARATUS FOR USE WITH PACKING MACHINES FOR FEEDING AND ADJUSTING CIGARETTES. ARTHUR RITSCHER, Dresden-Laubegast, Germany, assignor to United Cigarette Machine Company, Aktiengesellschaft, Dresden, Germany. Filed Mar. 26, 1930, Serial No. 439,169, and in Germany Mar. 22, 1929. 11 Claims. (Cl. 226—5.)

1. Apparatus for adjustably feeding cigarettes from a cigarette-making machine to a packing machine comprising in combination with the conveyor running from the cigarette-making machine to the packing machine two conveying means arranged on opposite sides of said conveyor, and two adjusting apparatus, each one being connected and cooperating with one of said conveying means and including means adapted to engage the seam of the cigarettes lying with the seam upwards for tilting them.



1,809,220. DRIVING GEAR FOR AIRSHIPS OF THE RIGID TYPE. JOHANN SCHUETTE, Lichterfelde-Ost, near Berlin, Germany. Filed Nov. 2, 1929, Serial No. 404,318, and in Germany Nov. 19, 1928. 5 Claims. (Cl. 244—6.)

1. Driving gear for air-ships of the rigid type, comprising a supporting arm of the cantilever type pivotally mounted in the annular framework of the body of the air-ship and adapted to be swung out into an outside position, and returned into an inside position within the framework of the body of the air-ship, and a motor and propeller supported by the said arm.

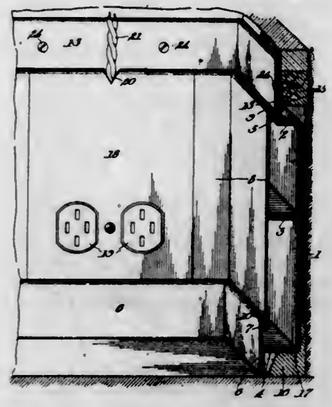


1,809,221. BOILER CLEANER. NORMAN L. SNOW and CLARENCE F. HIRSHFELD, Detroit, Mich., assignors to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed Sept. 22, 1924. Serial No. 739,128. 17 Claims. (Cl. 122—392.)

1. In a boiler cleaner, a cleaning fluid supply pipe, a blower pipe, means for entraining a second fluid with the cleaning fluid and conveying the mixture to the blower pipe, said means including an extension on said blower pipe having a portion surrounding said supply

pipe but spaced therefrom to provide a passage for the said second fluid around said supply pipe, and means for rotating said blower pipe and starting the flow of the cleaning fluid in timed relation.

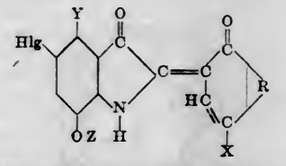
1,809,222. AUTOMATIC FIREARM HAVING A RECOILING BARREL AND AN AMPLIFYING PUSH LEVER. CESARE SONCINI, Brescia, Italy, assignor to Societá Italiana Ernesto Breda Per Costruzioni Meccaniche, Milan, Italy. Filed Feb. 24, 1928, Serial No 256,679, and in Italy Mar. 5, 1927. 12 Claims. (Cl. 42—4.)



1. In a machine gun, a breech casing; a recoiling barrel; a sliding bolt having a flat on its under face; a carriage fixed to the breech end of the barrel; and an accelerator lever embodying two angularly-arranged arms mounted at the apex of the angle to rock about a pivot fixed to said casing, one arm projecting upwardly into the path of the carriage for coacting therewith and with said flat, and the other arm projecting toward said carriage and having a constant sliding engagement with the same.

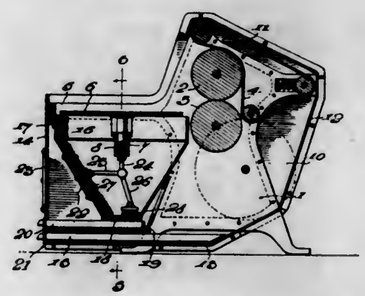
10. In a machine gun of the belt-feed type, a breech casing; a recoiling barrel; a sliding bolt having a cam groove in its upper face; a rocking, pivotally-mounted feed lever for moving the belt step by step and operated indirectly by the bolt during its reciprocating movement; and a transmission connection between the bolt and the feed lever for effecting such indirect operation of said lever; such connection embodying an oscillating wing, and a vertical pivot on the breech casing and about which the wing swings, said wing having a recess to receive the pivot of the feed lever and also having a pin that projects into the cam groove in the bolt.

1,809,223. COMBINED CONDUIT AND MOLDING. ARMEN H. TASHJIAN, Cleveland, Ohio. Filed May 15, 1928. Serial No. 277,991. 3 Claims. (Cl. 247—3.)



1. A combined conduit and molding, comprising a housing member forming a raceway for electric conductors, said raceway having a back, a bottom and a top, the lower portion of said housing member being bent upon itself to form said bottom and a finish molding, a face plate for said housing member, one edge of said plate provided with a reentrant bend, means carried at the top of said housing member for engagement with the bend of said face plate, and said finish molding provided with a reentrant bend forming a channel to receive the oppo-

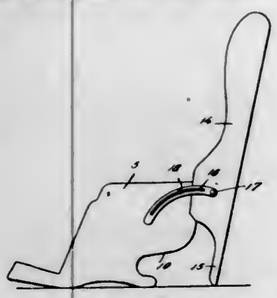
site edge of said face plate, whereby the face plate is held in predetermined separable relation to said housing member.



1,809,224. VAT DYESTUFFS. KARL THIESS and THEODOR MEISSNER, Frankfort-on-the-Main-Hochst, and WERNER ZERWECK, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 23, 1929, Serial No. 380,455, and in Germany Aug. 27, 1928. 5 Claims. (Cl. 260—49.)

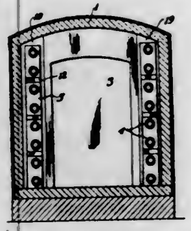
1. As new products, compounds of the following probable formula:

wherein R stands for a naphthylene or phenylene residue, X for hydrogen or halogen, Y and Z for alkyl and Hlg for halogen, being vat dyestuffs of very good fastness properties.



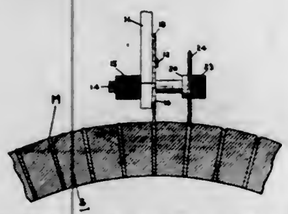
1,809,225. FLOUR SAVING MEANS FOR DOUGH BRAKES. CHARLES P. WAGNER and WILTZ W. WAGNER, New Orleans, La. Filed Jan. 6, 1931. Serial No. 506,987. 10 Claims. (Cl. 107—7.)

2. In a machine of the character described wherein is provided a dough receiving turntable, a waste dusting



flour hopper mounted beneath the turntable, said hopper having a screen bottom, a receiving box into which said hopper delivers through said screen, and a waste flour receiving and removing drawer mounted in and removable from the box.

1,809,226. COMBINATION CHAIR AND BED. ARTHUR WALTER, Liverpool, N. Y. Filed May 7, 1930. Serial No. 450,498. 4 Claims. (Cl. 155—45.)

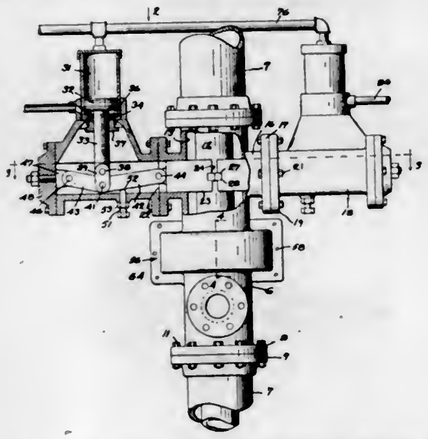


1. A device of the class described comprising a pair of side panels disposed in spaced parallel coextensive relationship to each other and adapted to rest on the floor or the like to rise vertically therefrom, a seat panel extending between the side panels, a back panel hinged to the rear edge of the seat panel, side panels on the back panel having extensions to engage the first mentioned panels to hold the back panel in coextension of the seat panel and for engagement with the floor to retain the back panel at an angle to said seat panel.

1,809,227. METALLIC RESISTOR ELEMENT. THADDEUS F. BAILY, Alliance, Ohio. Filed Mar. 11, 1926. Serial No. 93,893. 7 Claims. (Cl. 201—63.)

1. A resistor element comprising a plurality of straight, horizontally disposed portions, connections at alternate ends of the straight portions means connecting the straight portions with the connections, and means for supporting said connections upon each other and insulating the connections from each other.

1,809,228. COMMUTATOR MICA UNDERCUTTING TOOL. WALTER T. BALLOU, Los Angeles, Calif. Filed Oct. 30, 1929. Serial No. 403,557. 5 Claims. (Cl. 145—31.)

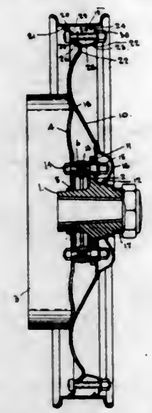


1. A mica undercutting tool comprising a shank, means providing a lip on the shank, a blade presenting saw teeth positioned on the shank having a notch adapted to receive the lip, and additional means for fastening the blade to the shank, said additional means providing guide means in spaced parallel relation to the blade.

1,809,229. ELECTRIC DISCHARGE TUBE. ALBERT CHARLES BARTLETT and JOHN WALTER RYDE, Wembley, England. Filed Nov. 17, 1927, Serial No. 234,030, and in Great Britain Nov. 25, 1926. 3 Claims. (Cl. 250—27.5.)

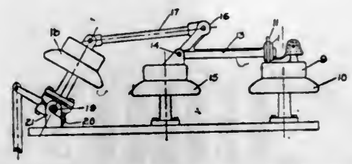
3. Cathodes for electric gas discharge tubes comprising a nickel cathode member coated with a reddish brown compound of barium, nickel and oxygen.

1,809,230. FIRE AND BLOW-OUT CONTROL. LOUIS M. BETTINGER, Downey, Calif., assignor of one-fourth to Rutland H. Baker, Downey, Calif. Filed Jan. 21, 1929. Serial No. 335,629. 8 Claims. (Cl. 137—139.)



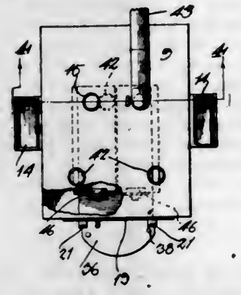
8. In a well control device, a housing, a gate slidable therein, a pair of pivotally joined links, one pivoted to said gate and the other to the housing, means for varying the angularity between said links to effect sliding of the gate, and a stop carried by said housing and adapted to limit further movement of said links with the gate at its extreme extended position and with the pivoted connection of said links to each other disposed beyond the plane including the pivotal connection of the links to the gate and to the housing.

1,809,231. VEHICLE WHEEL. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Aug. 21, 1922. Serial No. 583,339. 5 Claims. (Cl. 301—6.)



1. In a vehicle wheel, the combination with the hub, of a member upon and forming a unit with said hub, a disk having a portion spaced from said member and a second portion spaced radially outward from said first-mentioned portion and in contact with said member, means for detachably securing said first mentioned portion to said hub, and an end plate detachably secured to said hub independently of said securing means and contacting with said disk radially beyond said hub for reinforcing the inner portions of the disk.

5. In a vehicle wheel, the combination with a hub, of a member mounted upon said hub, a disk having a portion engageable with said hub and spaced from said member and a second portion spaced radially outward from said first mentioned portion and in contact with said member, means for detachably securing said first mentioned portion to said hub, an end plate having a portion sleeved upon said hub and abutting said first mentioned portion of said disk, said end plate having

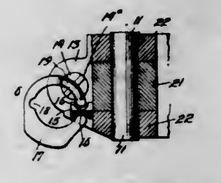


another portion contacting with said disk beyond said hub and concealing said securing means, and means other than the means aforesaid for detachably securing said plate to said hub.

1,809,232. ELECTRIC SWITCH. AUGUSTUS JESSE BOWIE, San Francisco, Calif. Filed Jan. 26, 1925. Serial No. 4,825. 6 Claims. (Cl. 200—48.)

1. In an electric switch a blade, a clip contacting with said blade for carrying current therefrom, in combination with means for allowing an initial motion of said blade and said clip without substantial change of contact surfaces, and means actuated by the initial motion of said blade and said clip for reducing the pressure between said blade and said clip, thereby effecting the ready release of said clip.

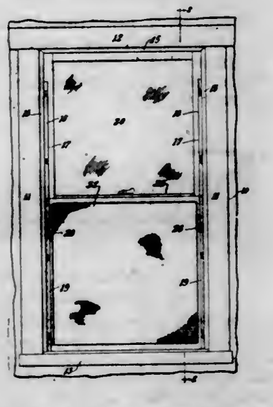
1,809,233. HOT AIR FURNACE. JOSEPH CAMIRÉ, Central Falls, R. I. Filed Sept. 12, 1929. Serial No. 392,161. 1 Claim. (Cl. 126—99.)



A hot air heater of the character described, comprising a sheet metal hot air casing constituting a portable unit having air inlets at the bottom thereof, and air outlets at the uppermost portion thereof, a fire box removably mounted in the hot air casing, means for feeding air to the fire box, including an opening in one wall thereof communicating with an opening in the hot air casing, a flue chamber mounted on the fire box, comprising an elongated box-like structure having an internal baffle plate extending centrally in respect thereto, and means for allowing the gases of the fire box to pass through the flue chamber to the exterior of the hot air casing.

1,809,234. CELLULOSE ESTER COMPOSITION. HANS T. CLARKE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 9, 1929. Serial No. 338,889. 17 Claims. (Cl. 106—40.)

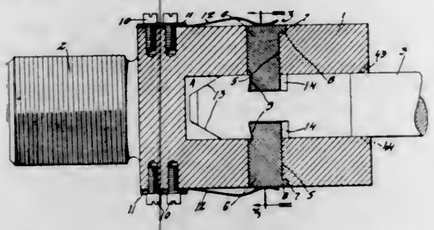
1. A composition of matter comprising a cellulose ester and a compound formed between chloral and a material selected from the group including an alkyl, alkoxy, and amino substituted carboxylic amides.



17. A composition of matter comprising cellulose acetate and a compound formed between chloral and urea.

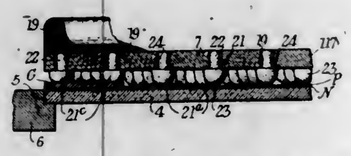
1,809,235. SEAL PRESS. EMIL DIETZE, Richmond Hill, N. Y., assignor to American Casting and Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 16, 1930. Serial No. 421,087. 1 Claim. (Cl. 81—9.1.)

In a seal press of the class described for impressing ring seals provided with a gap in their peripheries to expose two ends, the combination with the fixed and movable jaws, each having a die, and leverage for actuating the movable jaw, of means adjacent to the dies for positioning the seal accurately between the dies, consisting of a post having an inverted V-shaped upper portion and vertical side grooves, which receive the open portions and the two ends of the seal.



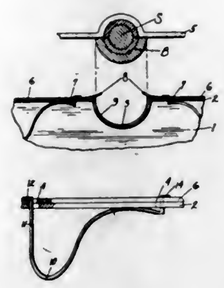
1,809,236. GUIDE FOR SLIDABLE WINDOW SCREENS. HARRY H. EVERHARD, Canton, Ohio. Filed June 28, 1930. Serial No. 464,576. 3 Claims. (Cl. 156—14.)

2. For use with a window having upper and lower sashes and a window screen for the lower sash, a guide



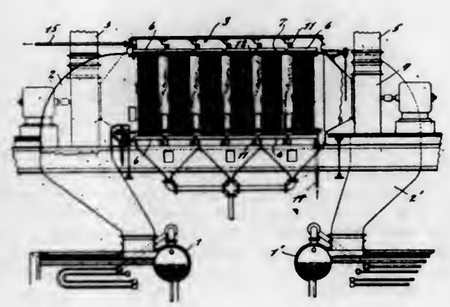
member for the screen adapted to extend substantially throughout the height of both sashes including upper and lower channel portions, an inside flange for the upper and lower channel portions, an outside flange for the lower channel portion located in parallel relation to the inside flange, an outside flange for the upper channel portion laterally offset from the inside flange having its lower end extending to a point adjacent the upper end of the outside flange of the lower channel portion and laterally offset from the inside flange a greater distance than the upper end of the outside flange of the lower channel portion to form an opening between the outside flanges for entering a screen into the guide member, and retaining means pivotally mounted on the guide member for closing the opening.

1,809,237. BROACH HOLDER OR ADAPTER. CARL J. HALBORG, Detroit, Mich., assignor to Colonial Tool Company, Detroit, Mich., a Corporation of Michigan. Filed June 24, 1926. Serial No. 118,377. 4 Claims. (Cl. 279—76.)



1. In combination, a broach having a shank tapered on opposite sides of its end and transverse slots in those sides of the shank corresponding with the tapers on the end thereof, said slots having their sides nearest the tapered end diagonally cut to form an acute angle with the bottoms of said slots, and a broach holder comprising a block having an axial recess in one end thereof adapted to fit said broach shank, and having transverse openings in opposite sides thereof leading into said recess, the outer edges of said transverse openings having notches therein, plugs movable in said openings having lateral extensions thereon adapted to engage and fit in said notches, and having the inner rear faces thereof diagonally cut to fittingly engage the diagonally cut sides of the slots in said broach shank, spring members secured to the outer surface of said block and adapted to retain said plugs in said transverse openings, and to urge said plugs into engagement with said slots in said broach shank.

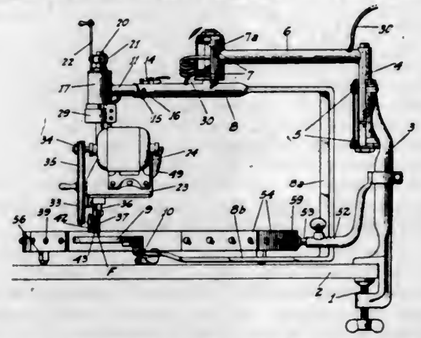
1,809,238. PLATEN FOR PHOTOGRAPHIC PRINTING MACHINES. ROY S. HOPKINS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 23, 1927. Serial No. 242,150. 11 Claims. (Cl. 95—73.)



1. In a printing device, the combination with a printing panel, of a platen mounted to move to and from the panel, and means including a substantially flat transparent platen surface having projections thereon, said projections being made of resilient material, and forming contacts adapted to engage printing material laid on the panel.

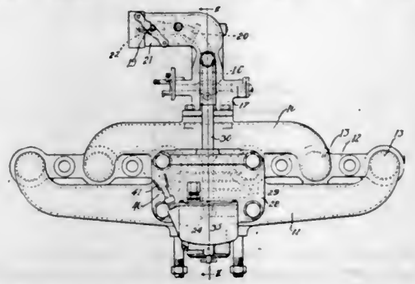
1,809,239. ASSEMBLY TOOL. HORACE D. HUME, Garfield, Wash. Filed May 18, 1929. Serial No. 364,097. 4 Claims. (Cl. 29—84.)

1. An assembly tool of resilient metal having a pair of spaced outwardly extending end hooks, and a bow and fulcrum spring intermediate the hooks.



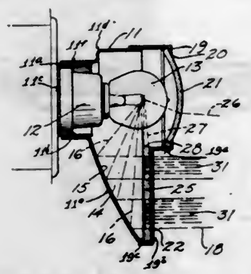
1,809,240. HEAT TRANSFER DEVICE. DAVID S. JACOBUS, Montclair, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Sept. 4, 1918, Serial No. 252,550. Divided and this application filed June 22, 1929. Serial No. 372,939. 9 Claims. (Cl. 257—251.)

1. In a heat transfer device, a plurality of sections arranged side by side, each section having a pair of headers with cylindrical walls provided with sets of holes each arranged in a circumferentially extending band, tubes secured in said holes and connecting the two headers of each pair, at least some of said tubes being bent at their ends to enter said holes, the headers of adjacent sections being spaced apart and the tubes of the sections forming a bank, the tubes in the bank being spaced substantially uniformly across the bank in a direction transverse to the length of the headers, a compartment common to a group of headers at each end of the sections, and pipes connecting the end portions of said headers to said compartment.



1,809,241. FANCY WORK MACHINE. NATHAN ALONZO JENNINGS, Stockton, Calif. Filed Aug. 11, 1927. Serial No. 212,293. 6 Claims. (Cl. 112—79.)

1. A fancy work machine including a vertical post, means for supporting said post in a fixed position, a horizontal arm turnably mounted on the post, a frame structure turnably mounted onto and under said arm, and a machine structure turnably supported by and depending



from the frame structure; said machine structure including a vertical needle disposed concentric with the axis of turning of the machine structure.

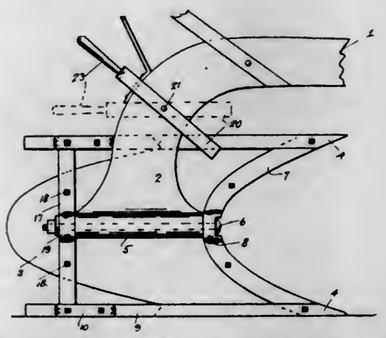
1,809,242. MANIFOLD. GEORGE KINGSTON, Kokomo, Ind., assignor to Kingston Products Corporation, Kokomo, Ind., a Corporation of Indiana. Filed Mar. 14, 1927. Serial No. 175,385. 4 Claims. (Cl. 261—13.)

1. A vaporizing manifold for internal combustion engines comprising associated intake and exhaust manifolds, carbureting means for supplying an over rich mixture of fuel and air to a main air inlet containing a venturi and leading to the intake manifold, said carbureting means comprising a primary air passage leading through the exhaust manifold, a carburetor having a fuel nozzle opening into said passage through the exhaust manifold, a tortuous passage formed alongside said exhaust manifold and adapted to receive the carbureted air from said primary air passage, a duct leading from said tortuous passage, to the venturi in said main air inlet, and a weighted valve in said main air inlet.

1,809,243. ILLUMINATED SIGN. MORRIS P. KIRK, Los Angeles, Calif. Filed May 25, 1927. Serial No. 193,981. 3 Claims. (40—132.)

1. A sign comprising: a rear housing member having a base wall and a flange normal to said wall; a main housing having a flange telescopically engaging the flange of said rear housing member; a lamp socket in said rear housing member; a light bulb in said socket and extending into said main housing, said main housing having a depending portion; and a light-pervious sign plate positioned in the front wall of said depending portion and having sign configurations thereon adapted to become luminous when rays from said source enter an edge of said sign plate, said depending portion receiving light rays from said light bulb and having a reflecting surface for projecting said light rays through said sign plate.

1,809,244. SPRING LEAF LUBRICATOR. FRANCIS X. LA CHALL, Los Angeles, Calif. Filed May 11, 1927. Serial No. 190,464. 4 Claims. (Cl. 184—1.)

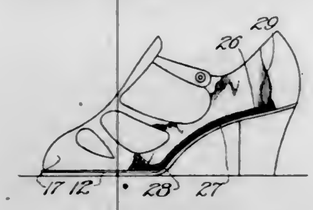


1. A spring lubricator, comprising in combination a receptacle, a pump barrel having ports leading therefrom into said receptacle, a pump plunger slidable in said barrel and adapted to be reciprocated therein by its own inertia when the barrel is vibrated, a distributor, means for attaching said distributor to a spring, oil ducts leading from the barrel to said distributor, a portion of said oil duct being disposed at as great an elevation as the highest oil level in said receptacle, said pump barrel being of cylindrical configuration and said plunger fitting therein, a weight on said plunger, said weight having an annular groove in which the pump barrel is disposed, and means for limiting the movement of said plunger.

1,809,245. BRIQUETTING FUEL MATERIAL. ARTHUR D. LITTLE, Brookline, Mass., assignor to Arthur D. Little, Incorporated, Cambridge, Mass., a Corporation of Massachusetts. Filed June 14, 1928. Serial No. 285,502. 10 Claims. (Cl. 44—15.)

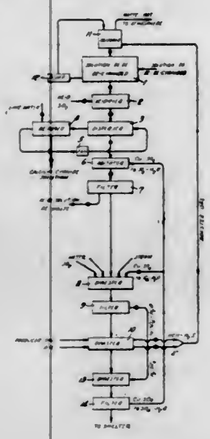
1. That method of briquetting coal fines which is characterized by making a plastic mass of coal fines with cellulose hydrate dispersed in an excess of water, forming briquettes of said mass, and evaporating the water to a content productive of irreversibility in the cellulose.

10. Briquette, comprising fuel fines adhesively bound by intermixture of a colloidal cellulose in substantially dry condition and non-dispersible in water.



1,809,246. REVERSIBLE PLOW. ANDY MAURER, Round Mountain, Calif. Filed June 18, 1930. Serial No. 462,082. 3 Claims. (Cl. 97—31.)

2. In a plow construction, the combination of a beam having a standard terminating in a sleeve, a bolt extending

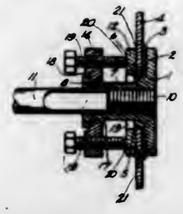


through the sleeve and projecting beyond the ends thereof, a double mold board, a supporting strap on the land side of the front edge portion of the mold board and having a bearing at the center thereof journalled about the forward end portion of the bolt, a share at each edge of the mold board and merging in rearwardly extending horizontal straps, a vertical supporting strap between the rear end portions of the horizontal straps and having an arcuate portion about the rear end portion of the bolt, a reinforcing strap fixed to the vertical supporting strap having an arcuate portion about the rear end portion of the bolt, a substantially U-shaped bracket having an intermediate portion fixed to the rear portion of the mold board and having its ends fixed to the horizontal straps.

1,809,247. TURN SHOE STRUCTURE. FRANK A. MELCHIONNA, Cincinnati, Ohio. Filed June 20, 1927. Serial No. 199,921. 4 Claims. (Cl. 36—18.)

1. In a turn shoe the combination of a sole channeled adjacent the edge, a reinforcing member on the sole and having its edge inserted in the channel, a false welt at the edge of the sole, an upper, stitching securing the upper, false welt, sole and reinforcing member together around the edge of the forward portion of the sole, whereby to leave free the rear end of the reinforcing member, and a shank leather and stiffener secured between the rear end of the sole and reinforcing member.

1,809,248. CYANIDE RECOVERY PROCESS. LOUIS D. MILLS and THOMAS B. CROWE, Palo Alto, Calif., assignors to The Merrill Company, San Francisco, Calif., a Corporation of California. Filed Aug. 14, 1928. Serial No. 299,554. 10 Claims. (Cl. 23—151.)



1. In a process for the recovery of cyanide from cyanide solution employed in the treatment of ore, the steps of roasting metallic cyanide compounds precipitated from a cyanide solution, introducing hydrogen cyanide recovered from said roasting operation into another cyanide solution, and recovering purified hydrogen cyanide from said last mentioned solution.

6. In a process for the recovery of cyanide from cyanide solution employed in the treatment of ore, the steps of roasting metallic cyanide compounds precipitated from a cyanide solution, introducing unpurified hydrogen cyanide in the form in which it is recovered from said roasting operation into an unacidified cyanide solution, effecting precipitation of metallic compounds from said last mentioned solutions by acidification and by the addition of a salt of a heavy metal, and removing purified hydrogen cyanide from said last mentioned solution.

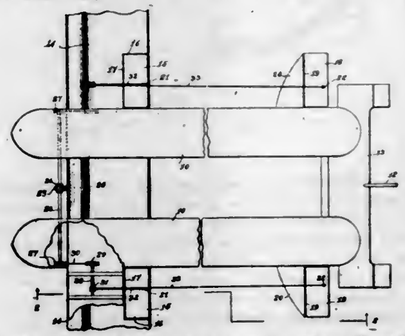
1,809,249. REFRACTORY. JOHN D. MORGAN, Maplewood, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 15, 1928. Serial No. 312,573. 3 Claims. (Cl. 106—9.)

1. An article composed largely of zirconia bonded by the reaction products of zircon and phosphoric acid.

1,809,250. TANK FLANGE. CHARLES L. PENDLETON, Wewoka, Okla. Filed Oct. 27, 1928. Serial No. 315,569. 3 Claims. (Cl. 285—25.)

1. A device of the class described, comprising a body having a base, one surface of said base being roughed for securely holding a gasket member against the wall of a receptacle, a hollow internally threaded cylindrical neck integral with said base, said neck having on one end integral therewith a square cornered portion extending outwardly from said base for fitting in a square opening in the wall of said receptacle, and having on its free end integral therewith a rectangularly shaped square cornered head, said neck having, a washer there around for setting against said wall, a clamping plate encircling said neck and tightly seating under said head, said plate having a plurality of screw bolts seating on said washer and for rigidly clamping said washer and said base against said wall.

1,809,251. DRAWING DEVICE FOR SPINNING FRAMES AND FOR PREPARING MACHINERY. JULES PFLIMLIN, Mulhouse, France. Filed Jan. 6, 1930. Serial No. 418,711. 8 Claims. (Cl. 19—143.)



1. A drawing roll for spinning frames and the like comprising an arbor having two spaced collars and a shaft of smaller diameter intermediate said collars, a sleeve of flexible skin extending from one collar to the other and secured to said collars at its ends, and a shorter flexible backing inside said sleeve and held thereby out of contact with said collars, said sleeve and its backing lying out of contact with said shaft and concentric to its axis.

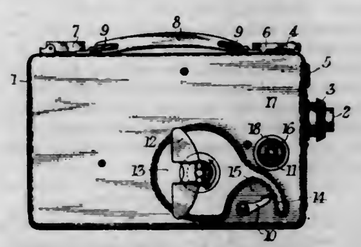
1,809,252. DRAWING DEVICE FOR SPINNING FRAMES AND FOR PREPARATORY MACHINERY. JULES PFLIMLIN, Mulhouse, France. Original application filed Nov. 10, 1928, Serial No. 318,558, and in Great Britain and France May 29, 1928. Divided and this application filed Jan. 6, 1930. Serial No. 418,712. 7 Claims. (Cl. 19—143.)

1. A drawing roll for spinning frames and preparatory machines comprising a resilient, hollow cylindrical sleeve member having provided integrally therewith at its ends lateral disks, constituting supple end walls partially closing the sleeve member and forming hubs to receive an arbor.

1,809,253. AIRCRAFT. MAX B. PUPP, Souderton, Pa., assignor of one-half to Clayton K. Gotwals, Souderton, Pa. Filed Apr. 17, 1930. Serial No. 444,938. 2 Claims. (Cl. 244—29.)

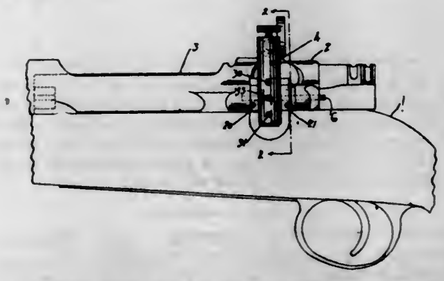
1. The combination with a semi-buoyant aircraft embodying a body and wings of sections of said wings at the after side and adjacent the body hinged to said wings and adapted to swing to an upwardly tilted position, means under the control of the pilot for tilting said sections and a similar device further astern tilting alike in synchronism.

1,809,254. HANDLE FOR FORKS AND LIKE IMPLEMENTS. BENJAMIN H. SMITH, Niles, Mich., assignor to Michigan Wire Goods Company, Niles, Mich. Filed May 20, 1929. Serial No. 364,512. 3 Claims. (Cl. 30—5.)



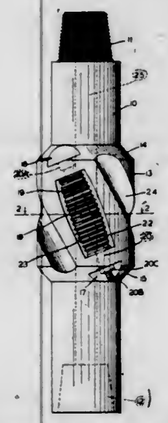
3. In an implement of the class described, the combination of a tubular handle of flattened cross section providing a socket of flattened cross section, and an implement provided with a loop-like shank of flattened cross section formed of wire folded upon itself with its members in spaced relation and secured together at their outer ends so that they are yieldingly supported in spaced relation, said shank being telescopingly arranged within said handle with its members under tension whereby it is frictionally held in its adjusted positions and is supported against rotative movement in the handle.

1,809,255. GERMICIDE AND INSECTICIDE. ROLAND P. SOULE, New York, N. Y., assignor to Combustion Utilities Corporation, New York, N. Y., a Corporation of Maine. Filed June 11, 1924. Serial No. 719,280. 11 Claims. (Cl. 167—29.)



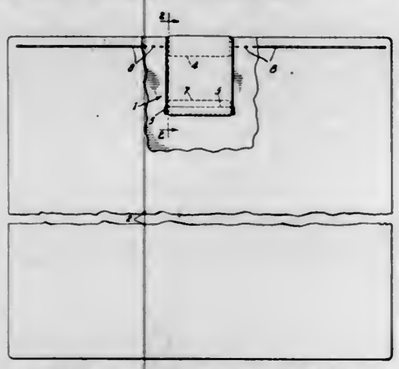
1. A germicide and insecticide containing a distillate of a primary or only partially decomposed primary tar, characterized by the presence of primary tar acids of which at least 50% distil above 220° C., together with a soap base.

1,809,256. MOTOR OPERATED MOTION PICTURE CAMERA. PAUL A. STEPHENSON, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 8, 1929. Serial No. 331,111. 10 Claims. (Cl. 88—18.4.)



1. In motion picture apparatus, the combination with a pulldown mechanism, of a power drive for the mechanism, a trigger for releasing the power drive, mechanism associated with the power drive adapted to be moved to an operative position for altering the normal speed of the pulldown mechanism, a push button control member for actuating said mechanism, and a casing for enclosing said parts, an embossing on the casing adjacent the trigger and forming a guard therefor.

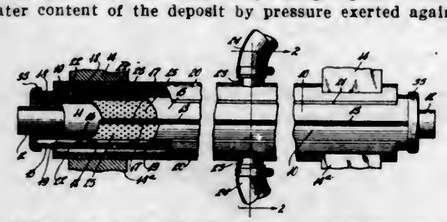
1,809,257. RECEIVER SIGHT FOR ARMY RIFLES. WALTER JOSEPH SUTTON, San Francisco, Calif. Filed May 7, 1928. Serial No. 275,720. 5 Claims. (Cl. 42—1.)



4. A sight for a gun of the character described, including a base adapted to be fixedly mounted in place of the magazine cut out on said gun and having a hole adapted to receive the pin originally holding said magazine cut out; and means for truing and holding said base rigidly in place.

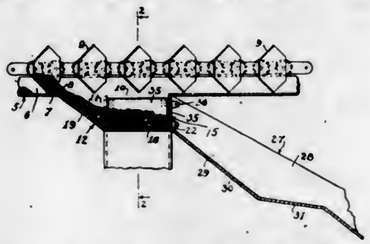
1,809,258. WELL REAMER. JOHN A. VERTSON, Brea, Calif., assignor to Security Investment Company of Whittier, Whittier, Calif., a Corporation of California. Filed Oct. 17, 1929. Serial No. 400,316. 5 Claims. (Cl. 255—73.)

1. A reamer comprising a body, and rotary cutters mounted thereon, said cutters being so mounted that during reaming operations they will be held by the body the desired distance from its center, each cutter having its ends arranged one higher than the other and in different radial planes of the body, the upper ends of the cutters being in advance of their lower ends toward the direction of rotation of the body, the general contour of each cutter being somewhat barrel-shaped in form designed to engage the walls of a hole throughout substantially the complete length of the cutter.



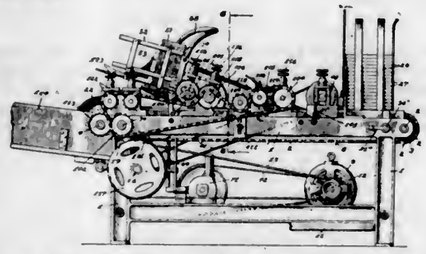
1,809,259. VALVE BAG CLOSURE. HARRISON R. WILLIAMS, New York, N. Y. Filed May 4, 1929. Serial No. 360,352. 5 Claims. (Cl. 150—9.)

1. In a valve bag, in combination, a body portion forming the bag structure, a valve sleeve extending into the bag, and a spring clip surrounding the inner end of said sleeve, normally maintaining said inner end closed but adapted to be distorted by a spreading element thrust into the sleeve to permit filling of the bag.



1,809,260. STRIPPING DEVICE AND METHOD. GEORGE F. WILSON, Akron, and WILLIAM H. SLABAUGH, Cuyahoga Falls, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 18, 1928. Serial No. 326,820. 4 Claims. (Cl. 18—58.)

3. The method which comprises forming a deposit of rubber on a form, from an aqueous rubber dispersion, sucking the wet deposit away from the form onto a foraminous supporting surface, and expressing a portion of the water content of the deposit by pressure exerted against

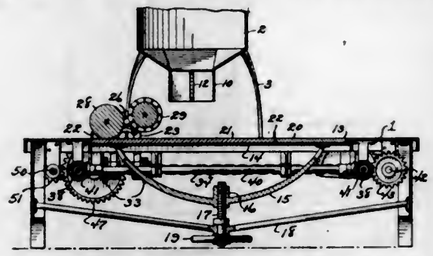


one side of the deposit by the foraminous supporting surface and against the other side of the deposit by the atmosphere.

1,809,261. COAL DISTRIBUTING MEANS. HENRY ADAMS, Plainfield, N. J. Filed Oct. 23, 1930. Serial No. 490,627. 8 Claims. (Cl. 198—68.)

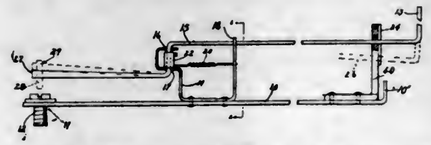
1. In combination, a conveyor having a substantially horizontal floor having an opening therein; a hopper beneath said opening comprising a hopper floor having a platform and an inclined portion from said conveyor floor at the rear of said opening to the rear edge of said platform; walls for said hopper provided with door openings; chutes extending outwardly from the door openings; and removable closures for said door openings.

1,809,262. SHOOK LABELING MACHINE. GUSTAV A. AICHER, deceased, San Francisco, Calif., by Olga J. Aicher, executrix, San Francisco, Calif. Filed Mar. 18, 1930. Serial No. 436,787. 30 Claims. (Cl. 216—55.)



1. A shook labelling machine comprising a carrier; means for feeding shooks onto the carrier; means for rendering desired portions of the shooks adherent; suction operated label feeding means operating in timed relation to the movement of shooks therepast by the carrier; means for moving labels from the feeding means onto the adherent portions of the shooks; and means preventing the feeding of a label in the absence of a shook upon the carrier to receive the same.

1,809,263. BISCUIT, CAKE AND PIE MACHINE. JULIÁN SÁNCHEZ ACOSTA, Arecibo, Porto Rico, assignor of one-third to Luis A. Watlington, Arecibo, Porto Rico. Filed Feb. 13, 1929, Serial No. 339,641. Renewed Nov. 8, 1930. 7 Claims. (Cl. 107—23.)



2. An apparatus of the class described comprising a table having an opening therein, a vertically movable

member arranged in the opening, manually operated means for moving said member, a dough board removably seated on said member, a roller carrying frame slidably arranged in the table, a pair of rollers carried thereby

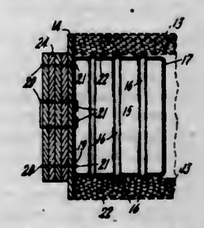
for engaging dough placed on the dough board, one roller being plain and the other having cutters thereon, means for holding either roller in lowered or operative position while the other roller is in raised or inoperative position and power means for reciprocating the roller frame.

1,809,264. ADJUSTABLE TRIP FOR POSTAL MACHINES. WILBUR C. ALLEN, Los Angeles, Calif., assignor, by mesne assignments, to Ralph C. Whitlock Patents, Inc., a Corporation of Nevada. Filed Jan. 21, 1929. Serial No. 333,904. 7 Claims. (Cl. 101—91.)

1. A trip device comprising a trip; a mount therefor providing substantially universal movement of the trip and a movable support for the mount providing variable positions for the functioning of the trip.

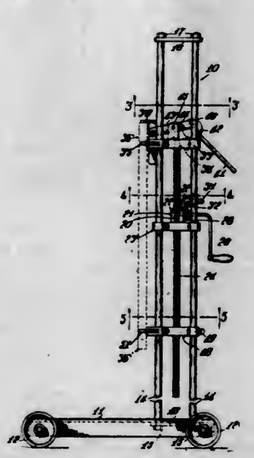
1,809,265. MERCURY VAPOR LAMP AND APPARATUS. LEROY J. BUTTOLPH, East Orange, N. J., assignor to General Electric Vapor Lamp Company, a Corporation of New Jersey. Filed Sept. 27, 1923. Serial No. 665,069. 1 Claim. (Cl. 176—42.)

A mercury vapor lamp comprising an arc tube having a cathode chamber connected to one end thereof, a plurality of anode chambers connected to the opposite end thereof, each of said chambers having a portion thereof extending alongside of said arc tube, and all of said chambers being on the same side of a plane passing through the center line of said arc tube, mercury in said lamp and electrode leads sealed into said chambers said lamp being operable with substantially the same current potential characteristic with said arc tube in either a vertical or a horizontal position.



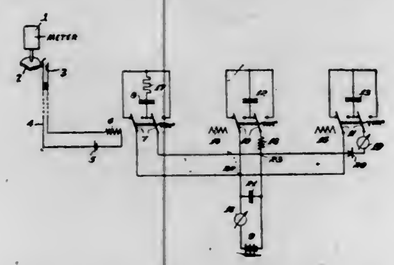
1,809,266. REEL. MANUEL CASTRO, Canton, Ohio. Original application filed Oct. 2, 1928, Serial No. 309,881. Divided and this application filed Nov. 3, 1928. Serial No. 317,060. 1 Claim. (Cl. 242—117.)

A reel for aircraft cargo handling apparatus and the like, including a reel barrel, a cargo handling cable for being wound about the reel barrel, a groove formed in the barrel, a lug extending from a side of the groove, a head on the reel end of the cable, a neck groove in the



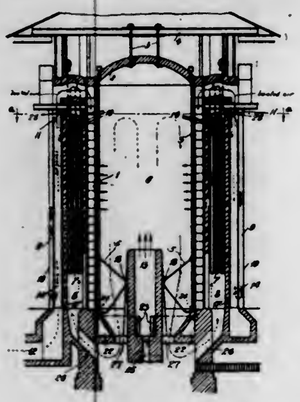
head, and the head normally lying in the barrel groove and releasably secured therein by the lug extending into the neck groove.

1,809,267. END CAP FOR TUBULAR PACKAGES. BENJAMIN CUSHING, Norwood, Mass. Filed Aug. 9, 1930. Serial No. 474,087. 3 Claims. (Cl. 206—59.)



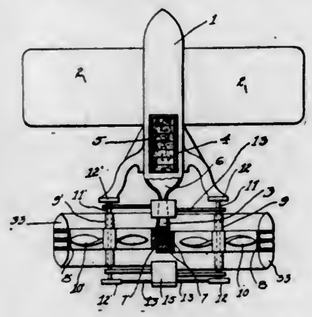
1. A protective end cap comprising a head formed to cover an end of a tubular package, and a tubular sheet metal plug formed to bear on an end portion of the internal surface of such package, and having annular outer and inner stiffening flanges, the outer flange being seated on the inner side of the head and the inner flange projecting inwardly from the periphery of the plug, and fastening means securing the outer flange to the head, the head including a flat sided inner portion of gerater diameter than the plug and bearing on the said outer flange, and an outer buffer portion bearing on the outer side of said inner portion and of smaller diameter than the latter, the outer margin of said buffer portion being arranged to sustain shocks or jars, transmit the same directly to the wall of the plug, and protect the margin of the inner portion.

1,809,268. EASEL. JEAN DUMAS, Chicago, Ill. Filed Sept. 18, 1929. Serial No. 393,535. 8 Claims. (Cl. 45—129.)



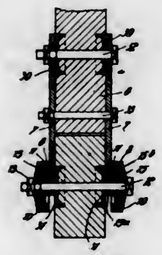
1. Easel construction comprising a base, a plurality of vertical rods mounted on said base, a pair of plates slidably mounted on said rods, the forward edges of said plates each forming a shelf, means operable to clamp one of said plates on said rods, and mechanism operable to selectively vary the spacing of said plates.

1,809,269. SUMMATION METER. WILHELM GAABZ, Berlin-Charlottenburg, and JOACHIM DALCHAU, Berlin-Tegel, Germany, assignors to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, a Corporation of Germany. Filed Dec. 11, 1929, Serial No. 413,393, and in Germany Dec. 19, 1928. 10 Claims. (Cl. 171—34.)



1. In a device for indicating the sum of several quantities, a source of current, several condensers, several switching devices which permit a temporary connection of the condensers with the source of current, a measuring instrument connected in a common part of the lines connecting the source of current with the switching devices and a rectifier in the individual line connecting the source of current with one of the condensers.

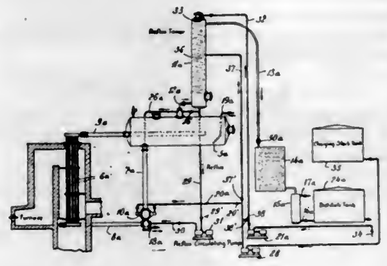
1,809,270. STEAM GENERATOR. HANS GLEICHMANN, Berlin-Siemensstadt, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschrankter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Sept. 8, 1926, Serial No. 134,206, and in Germany Sept. 19, 1925. 4 Claims. (Cl. 122—235.)



1. A steam generator having a nozzle furnace, heat absorbing tubes disposed in the furnace, a self-supporting furnace shaft and further heat absorbing elements disposed to absorb heat from the furnace gases after they have left the furnace, said shaft being hollow for conducting the combustion air to the furnace, said heat absorbing tubes being disposed in the furnace to shield the shaft walls against the hot gases, said shaft, said heat absorbing tubes, and said heat absorbing elements being disposed concentrically with each other, and a casing surrounding said heat absorbing elements and a plurality of partitions between said casing and said shaft, vertically supported independently of said shaft and dividing the space between the casing and the shaft into a plurality of chambers in which said absorbing elements are sectionally disposed, said partition walls having radially extending girders serving as a support for said heat absorbing elements.

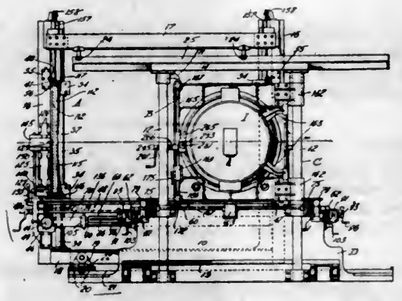
1,809,271. PROPULSION OF AIRCRAFT. ROBERT H. GODDARD, Worcester, Mass., assignor of one-half to George Crompton, Worcester, Mass. Filed June 28, 1929. Serial No. 374,439. 10 Claims. (Cl. 244—18.)

1. In an aircraft, the combination with a source of energy and means for creating a blast of gas traveling at high velocity from said source of energy, of turbine wheels rotatable on axes disposed on opposite sides of said gas blast with propelling vanes on both of said wheels disposed in the path of said gas and a series of air propeller blades disposed within the vanes of each wheel.



1,809,272. SUPPORTING STRUCTURE. WALTHER GREIM, Berlin, Germany, assignor to Siemens-Bauunion Gesellschaft mit beschränkter Haftung Kommanditgesellschaft, Berlin-Siemensstadt, Germany, a Corporation of Germany. Filed Oct. 15, 1928, Serial No. 312,570, and in Germany Oct. 19, 1927. 1 Claim. (Cl. 20—92.)

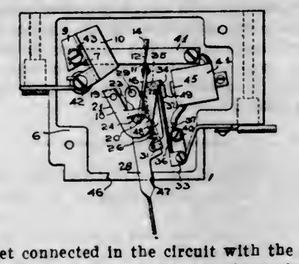
A supporting structure comprising in combination a plurality of bars converging towards a common assemblage point at a structural element, joint discs, arranged on opposite sides of this element, each bar having two suitably shaped lateral ends extending respectively to the two discs, each disc being undercut inwardly for slidingly engaging all bar ends of its pertaining side, and a transverse bolt in said element for joining said discs, whereby said bars are joined in a common plane, and whereby a joint is formed which resists tension and compression stresses and which permits said bars to adjust themselves relatively to each other, each of said discs having a bevelled recess at its outer face, and a mushroom-shaped washer disposed at each end of said bolt and having a bevelled rim to fit into the bevelled recess of the disc at the pertaining bolt end, so that when said washers are drawn by said bolt tightly against the structural element said discs are supported against eccentric streases set up by said bars.



1,809,273. OPERATION OF PRESSURE STILLS. EUGENE C. HERTHEL, Chicago, Ill., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 21, 1924. Serial No. 751,213. 1 Claim. (Cl. 196—48.)

An improved method of cracking hydrocarbon oils, which comprises heating a body of the oil to a cracking temperature under pressure in a pressure still, passing the vapors from the still upwardly through a reflux tower, passing uncondensed vapors from the reflux tower to a condenser to produce a distillate, introducing an oil heavier than said distillate and including a substantial quantity of

constituents corresponding in character to constituents of the distillate into direct contact with the vapors in the upper end of the reflux tower, introducing a heavier oil into direct contact with the vapors at an intermediate point in the reflux tower, and returning reflux without substantial cooling from the tower to the still.

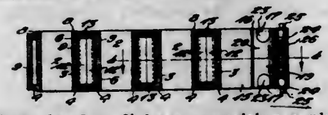


1,809,274. PHOTOGRAPHIC PRINTING APPARATUS. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Filed Nov. 23, 1927. Serial No. 235,379. 34 Claims. (Cl. 95—76.)

1. In a photographic printing apparatus, the combination with a holder adapted to carry a sensitized plate; of a support adapted to carry a printing plate, said support being movable to an operative position with respect to said holder; a member on which the printing plate is adapted to be detachably secured and held on said support, said member being movable relative to said support toward and from said holder to thereby place the printing plate into and out of contact with the sensitized plate; means for permitting such movement including resilient means for yieldingly moving said member towards said support for placing the printing and sensitized plates out of contact, and adjustable means for forcing said member towards said holder against the action of said resilient means for placing the plates into contact.

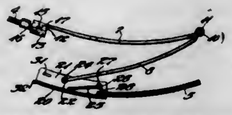
1,809,275. CIRCUIT BREAKER. OLIVER S. JENNINGS, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1925. Serial No. 69,030. 24 Claims. (Cl. 200—88.)

1. The combination with a switch and a current-carrying thermal responsive element having one end movable for controlling the switch and connected in series therewith and an armature on the movable end of the element, of an



electromagnet connected in the circuit with the switch for actuating the thermal element under predetermined current conditions.

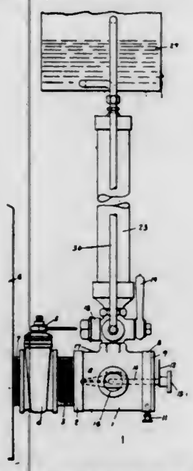
1,809,276. MANUFACTURE OF COMPOUND SHEETS OF GLASS AND CELLULOSE DERIVATIVE COMPOSITION. WILLIAM JOHNSTON, Ashford, England, assignor to Acetex Safety Glass Limited, London, England. Filed July 2, 1929, Serial No. 375,594, and in Great Britain Mar. 4, 1929. 8 Claims. (Cl. 49—81.5.)



1. A process for effecting the interadherence of two sheets of glass to an interposed sheet of cellulose derivative composition, consisting in moistening the surface of said cellulose derivative composition sheet solely with a plasticizer of high boiling point, initially freely exposing and pressing together said glass sheets with said moistened cellulose derivative composition sheet interposed in a gas under pressure inert to said cellulose derivative composition sheet, and finally freely exposing and pressing said sheets in steam under pressure and at a temperature lower than the boiling point of said plasticizer.

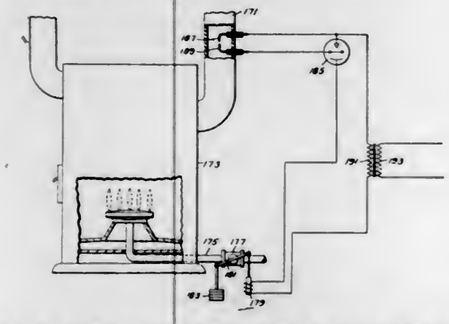
1,809,277. FLEXIBLE STRAP, BAND, OR LINKAGE. CHARLES H. KESTENMAN, Providence, R. I., assignor to Kestenman Bros. Mfg. Co., Providence, R. I., a Corporation of Rhode Island. Filed Oct. 23, 1928. Serial No. 314,487. 5 Claims. (Cl. 59—80.)

1. A strap, band or linkage comprising a plurality of main link-elements having centrally-disposed transversely extending solid portions with loops at their sides of less thickness than the central portions; and closed box-like connecting-links having portions projecting through the loops on two adjacent main links and bent therearound to hingedly connect the parts, said connecting-links having end portions overlying the ends of the loops on the main links to cover and conceal the joints therebetween and with the overlying portions of the connecting-links in the same plane as the top of the central solid portions of the main link-elements to provide a smooth unbroken upper surface on the linkage.



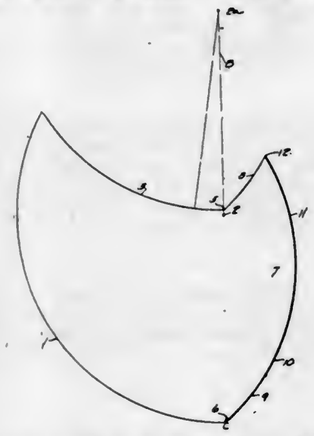
1,809,278. CLASPING DEVICE FOR WRIST WATCH STRAPS, BRACELETS AND THE LIKE. CHARLES H. KESTENMAN, Providence, R. I., assignor to Kestenman Bros. Mfg. Co., Providence, R. I., a Corporation of Rhode Island. Filed Dec. 20, 1929. Serial No. 415,585. 5 Claims. (Cl. 24—71.)

1. In a clasping-device for straps, bracelets or the like, the combination of extension-members, means for hingedly



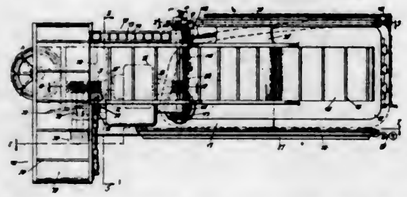
connecting said members to adapt them to be folded together in overlying relationship, means for attacning the ends of the strap to said members, detent-protuberances in the form of projections punched out from the metal of the sides of one member, and ears on the other member folded over upon themselves with their edges in position to snap over the detent-protuberances to secure the parts in closed position.

1,809,279. FUMIGATING APPARATUS. KENNETH A. KILBOURNE, Azusa, Calif., assignor to Owl Fumigating Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 3, 1924. Serial No. 741,517. 3 Claims. (Cl. 167—3.)



1. A fumigating apparatus comprising a measuring cylinder for volatile liquid fumigant carrying some water, a nozzle for receiving the fumigant from the cylinder, a needle valve in the nozzle, a chamber surrounding the nozzle, air ports in the chamber, a fumigating chamber to be evacuated connected with the chamber surrounding the nozzle, whereby when the fumigating chamber is evacuated, an inflow of air is induced through the ports and around the nozzle, and fumigant through the nozzle, the air being sufficient to volatilize the fumigant and prevent freezing of the water carried thereby on the needle valve and in the nozzle due to volatilization.

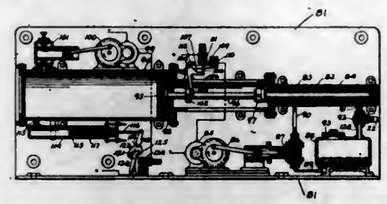
1,809,280. SAFETY SYSTEM. DEWEY D. KNOWLES, Forest Hills Borough, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 26, 1928. Serial No. 280,710. 8 Claims. (Cl. 158—117.1.)



1. In a fuel-supply system of the general type having means for burning mobile fuel, said means including a pilot burner, current-operated means for controlling the flow of said fuel, means including an electric-discharge device having main electrodes and a control electrode, a source of potential, an output circuit for the discharge device including said main electrodes, source of potential and fuel-flow-controlling means, a pair of conductors making contact with the flame of said pilot burner and connections between one of said conductors and one of said main electrodes and between the other of said conductors and said control electrode.

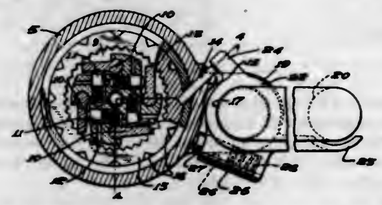
1,809,281. CONICAL DRINKING CUP. LAWRENCE W. LUELLEN, Mountain Lakes, N. J. Filed Jan. 31, 1927. Serial No. 164,705. 9 Claims. (Cl. 229—1.5.)

1. A quadrangular blank for the manufacture of a conical cup, having two opposite sides of complementary form, one said side having an outwardly convex portion for forming the edge of the conical cup.



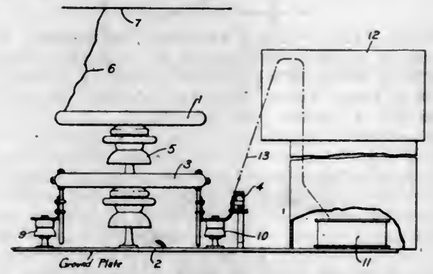
1,809,282. MINING AND LOADING MACHINE. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed May 19, 1921, Serial No. 470,854. Renewed Aug. 20, 1928. 71 Claims. (Cl. 262—9.)

1. In a mining machine, the combination with a plane kerf-cutter, of a flat breaker carried thereby in the plane thereof to enter the kerf cut by said kerf-cutter, and means for supporting said flat breaker for limited movement transversely of itself and bodily transversely of the plane of said kerf-cutter.



1,809,283. MEANS FOR CONTROLLING FLUID PRESSURE BREAKING MECHANISM FOR MINING MACHINES. EDMUND C. MORGAN, deceased, New York, N. Y., by Olive Eugenie Morgan, executrix, New York, N. Y. Original application filed June 25, 1920, Serial No. 391,844. Divided and this application filed Dec. 31, 1924, Serial No. 758,971. Renewed Mar. 7, 1929. 52 Claims. (Cl. 262—12.)

1. In apparatus for producing fluid pressure, the combination with a hydraulic cylinder, of a reservoir, a pump for supplying liquid to said cylinder from said reservoir, a conduit to convey liquid from said cylinder to a hydraulic breaker adapted to be used in a mine vein, and a valve in said conduit for controlling the flow of liquid



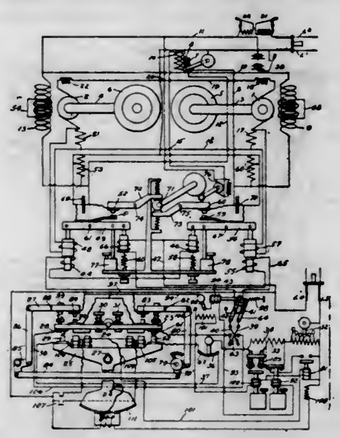
from said cylinder to said reservoir in one predetermined position of the valve and to direct the flow from said cylinder through said conduit to said breaker when said valve is in another predetermined position.

1,809,284. SLIP ROTATION FOR ROCK DRILLS. GUSTAV C. PEARSON, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed June 12, 1928. Serial No. 284,688. 7 Claims. (Cl. 121—7.)

1. In apparatus as set forth, the combination with a cylinder member, a reciprocatory piston therein capable of rotation, and means for effecting its rotation including a rifle bar with which the piston slidably engages, of ratchet mechanism for effecting the rotation of the rifle bar, including a ratchet ring, a pivotally mounted handle on the exterior of the cylinder member, means actuated by the handle for holding the ring against rotation, and means for urging the handle in a direction to cause said means to hold the ring.

1,809,285. ELECTROSTATIC TRANSFORMER. JOHN F. PETERS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 16, 1925. Serial No. 62,737. 4 Claims. (Cl. 175—41.)

1. An electrostatic transformer for deriving a reduced potential from a high-potential circuit, including a ground plate, a conducting element spaced therefrom in condensive relation therewith and electrically connected to said circuit, and means comprising a plurality of superposed high-potential pin-type insulators supported upon said ground plate for supporting said element in operative relation with respect to said ground plate.



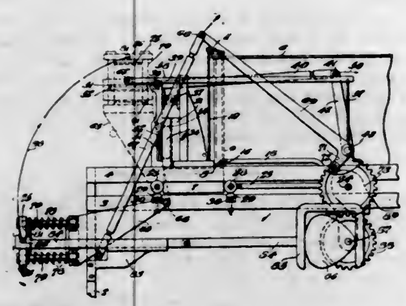
1,809,286. PULP OF HIGH WHITENESS AND STRENGTH AND PROCESS OF PRODUCING SAME. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed July 1, 1925. Serial No. 40,959. 18 Claims. (Cl. 92—11.)

1. In the treatment of kraft or "sulphate" pulp for the production of a pulp characterized by its whiteness and high strength, that step which comprises digesting said kraft pulp at an elevated temperature in an acid sulphite liquor containing free SO_2 in such amount but not exceeding combined SO_2 that the strength of the digested pulp remains substantially unchanged.

1,809,287. WHITE WOOD PULP FOR HIGH GRADE PAPER MANUFACTURE. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Nov. 18, 1930. Serial No. 496,566. 3 Claims. (Cl. 92—3.)

1. A pure-white wood pulp derived from alkaline-cooked pulp as a raw material, possessing the strength and tear resistance of its derivation material, but being of lower pentosan and much lower resin content than its derivation material.

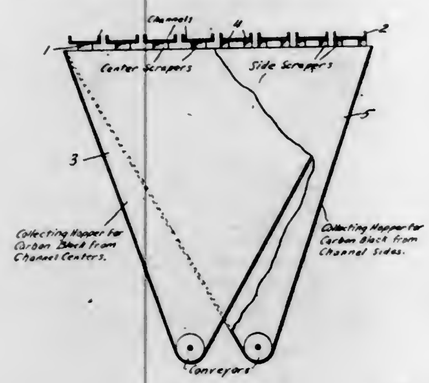
1,809,288. METHOD OF AND APPARATUS FOR CONTROLLING MECHANICAL OSCILLATIONS. PERRY B. SAMPLE, New York, N. Y., assignor of one-fourth to Ira J. Adams. Filed Nov. 12, 1929. Serial No. 406,703. 25 Claims. (Cl. 114—122.)



1. The method of stabilizing an oscillating object which consists in rotating two flywheels in opposite directions in planes that are parallel to the plane of oscillation, applying force to retard one flywheel and accelerate the other to produce reaction forces in opposition to the forces of oscillation and maintaining said applied forces substantially constant as the amplitude of oscillation increases.

24. The method of stabilizing an oscillating object which consists in connecting together the armatures of two dynamo electric machines rotating in opposite directions, causing one to operate as a generator and the other as a motor, and supplying current to said machine only to the extent necessary to make up the losses.

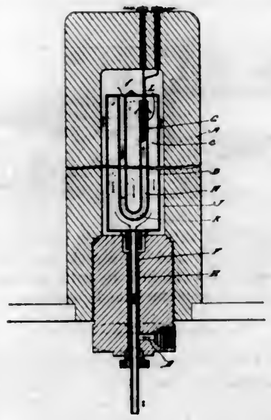
1,809,289. CASTING MACHINE. LOUIS G. STECKER, Philadelphia, Pa. Filed July 10, 1929. Serial No. 377,174. 5 Claims. (Cl. 29—2.)



1. In a device of the character stated, a support, a molten metal tank carried thereby, a vertical stationary, mould section above said tank, a movable mould section adapted to coact with said stationary mould section, means

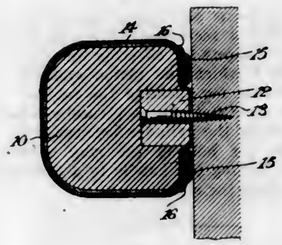
for injecting molten metal from said tank into said mould sections to form a grid, means for actuating said movable mould section away from said stationary mould section, the grid thus formed being carried by said movable mould

section, means for dislodging said grid from said movable mould section when the latter is in its upper horizontal position, means for receiving the dislodged grid, and means for trimming the edges of said grid, all of said means being automatically and synchronously operated.



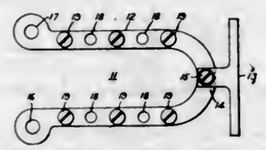
1,809,290. MANUFACTURE OF CARBON BLACK. WILLIAM BRYAN WIEGAND, Sound Beach, Conn. Filed Jan. 25, 1930. Serial No. 423,460. 3 Claims. (Cl. 134—60.)

1. In the manufacture of carbon black by the "channel process", the improvement which comprises selectively scraping the carbon black deposited on the channels therefrom to collect separately the carbon black deposited on the central longitudinal part of the face of the channels and the carbon black deposited on the adjacent outer longitudinal parts of the face of the channels thereby producing directly a carbon black of relatively low absorptive capacity collected from the central longitudinal part of the face of the channels and a carbon black of higher absorptive capacity collected from the outer longitudinal parts of the face of the channels.



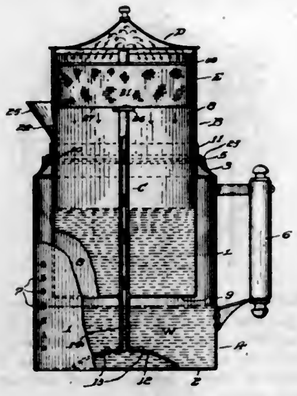
1,809,291. APPARATUS FOR EFFECTING SYNTHESIS. ROGER WILLIAMS, Wilmington, Del., assignor to Du Pont Ammonia Corporation, a Corporation of Delaware. Original application filed Feb. 2, 1926, Serial No. 85,497. Divided and this application filed Mar. 28, 1930. Serial No. 439,652. 3 Claims. (Cl. 23—289.)

1. An apparatus for effecting catalytic exothermic gaseous reactions, which comprises a receptacle for the main body of the catalyst and a U-shaped tube extending into the receptacle and permitting heat exchange between the



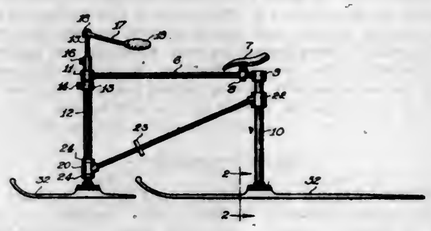
entering gaseous mixture and the main body, said tube enclosing another portion of the catalyst in the path of the gaseous mixture.

1,809,292. COVER FOR SEAT SIDE ARMS. WALTER L. FRY, Scarsdale, N. Y., assignor, by mesne assignments, to Wil-Fry Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 21, 1928. Serial No. 320,860. 4 Claims. (Cl. 155—182.)



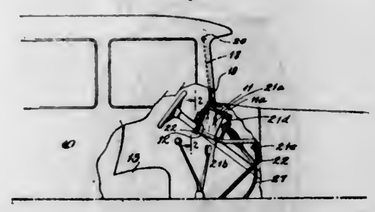
4. A cover for seat side arms in the form of a longitudinally slotted envelope shaped to pull on over and cover the aforesaid side arm, and a stiffening element associated with the slotted side of the said cover near the slot edges.

1,809,293. ADJUSTABLE THERMAL ELEMENT. EDWARD M. CLAYTOR, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 27, 1927. Serial No. 208,812. 4 Claims. (Cl. 200—113.)



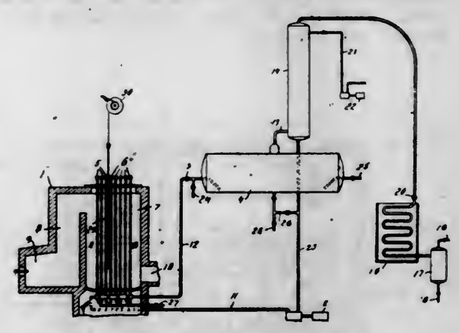
1. An adjustable thermal element for a thermal relay comprising a resistor element and means including an opening in the resistor element and a plug insertable therein for varying the current-conducting cross-sectional area of said resistor at a predetermined section thereof.

1,809,294. COFFEE PERCOLATOR. JOSEPH A. GUERIN, Sr., and JAMES M. GUERIN, Philadelphia, Pa. Filed Oct. 15, 1928. Serial No. 312,597. 2 Claims. (Cl. 53—3.)



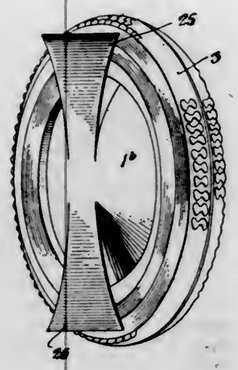
1. In a percolator for infusing pulverized coffee, the combination of a boiler, a pot depending downwardly from the top of said boiler into said boiler and having its side walls spaced from the walls of said boiler, a basket mounted within the upper part of said pot and having its bottom and side walls made of closely woven wire fabric, the spaces between the warp threads of which are substantially greater than the greatest diameter of a particle of pulverized coffee and the spaces between the weft threads of which are smaller than the smallest diametrical dimension of a particle of pulverized coffee, said warp threads extending vertically in the side walls of said basket, and means extending from the bottom of the boiler upwardly to discharge water from said boiler intermittently into said basket faster than the infusion of coffee formed in said basket can seep through said coffee and pass through the walls of said basket to said pot.

1,809,295. SKI-COASTER. CARL E. B. GUNDERSEN, Entwistle, Alberta, Canada. Filed Mar. 8, 1929. Serial No. 345,379. 1 Claim. (Cl. 280—16.)



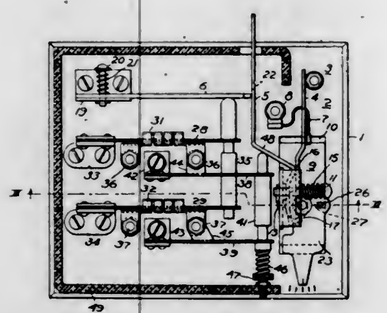
A ski-coaster including upstanding forward and rear frame members connected at their upper ends by an upper longitudinal frame member; said upstanding frame members also being connected by an incline frame bracing member attached to the upstanding rear frame member near the upper end of the latter and mounted on the upstanding forward frame member near the lower end thereof; each of said upstanding frame members having a rounded lower extremity with a central lug depending therefrom; a pivot bolt extended transversely through each of said lugs; forward and rearward ski runners having raised portions intermediate their ends; and bearing plates carried on said raised portions with pairs of upstanding bearing lugs; one of said pivot bolts being extended through the pair of upstanding bearing lugs of one of said bearing plates.

1,809,296. PORTABLE RADIO APPARATUS. WILLIAM M. HEINA, Long Island City, N. Y., assignor, by mesne assignments, to Transitone Automobile Radio Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 9, 1928. Serial No. 253,011. 1 Claim. (Cl. 250—14.)



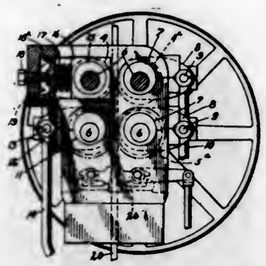
In combination with a dashboard of a vehicle, a radio apparatus comprising a radio set including a casing insertable in an opening formed through said dashboard; guide means, positioned in rear of said dashboard, for permitting inward and outward movements of said set through said dashboard opening; terminals permanently positioned at the back of the dashboard and connected to power sources, and other terminals mounted on said casing and respectively engaging said first terminals upon movement of said casing to its inner position within the dashboard, said first and second terminals contacting frictionally whereby connection therebetween is broken coincident to an outward movement of said set, and said guide means being inclined to insure said set and cooperating terminals against accidental release.

1,809,297. ART OF CRACKING HYDROCARBONS. EUGENE C. HERTHEL, Flossmoor, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Feb. 8, 1930. Serial No. 426,901. 2 Claims. (Cl. 196—116.)



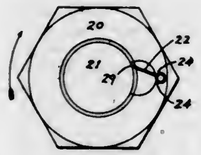
2. In apparatus for heating hydrocarbon oils to cracking temperatures, a vertical heating flue, means for admission of heating gases to one side near one end of said heating flue, two series connected batteries of series connected banks of series connected heating tubes arranged therein, said banks of heating tubes being arranged transversely to the general direction of travel of heating gases entering through said admission means, a vertical baffle separating said batteries of heating tubes arranged transversely to the general direction of travel of heating gases entering through said admission means and extending across said heating flue but arranged to leave passages across the upper and lower ends thereof, means for escape of heating gases from the opposite side near the other end of said heating flue, and means for supplying oil to the battery of heating tubes adjacent said admission means and for discharging hot oil products from the other battery of heating tubes.

1,809,298. DISPLAY DEVICE. ROBERT R. HEYWOOD, Jr., Orange, N. J. Filed Feb. 8, 1929. Serial No. 338,402. 5 Claims. (Cl. 40—125.)



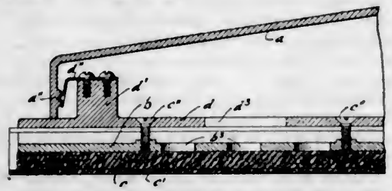
1. In a device of the kind described, in combination, a flexible sheet member having peripheral edges at least in part curved in form, a holder of lesser diameter than that of said member, said member having adjacent portions adapted to be brought into overlapping relation when it is being inserted in the holder, and having peripheral edges held in grooves in said holder, said member being of such diameter that when so inserted a substantially unbroken conical surface is presented for advertising display.

1,809,299. CONTROL DEVICE. CHARLES H. HODGKINS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1927. Serial No. 239,668. 7 Claims. (Cl. 200—122.)



1. In a thermal relay in combination, a circuit interrupter biased to an open position, a pair of oppositely deflecting bimetallic members, a resilient member, and means for thermally energizing said bimetallic members, one of said bimetallic members being responsive to an increase in temperature to permit the circuit interrupter to be actuated from an initial circuit closing position to its open position, and the other of said bimetallic members being effective upon a decrease in temperature to permit the resilient member to actuate the circuit interrupter to its initial circuit closing position.

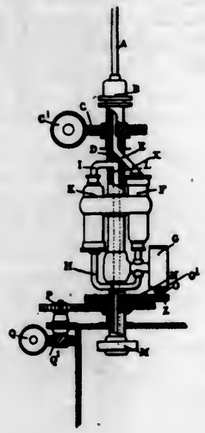
1,809,300. BOARD DROP HAMMER. HARRY G. KIMBALL, Bronxville, N. Y., assignor to The Billings & Spencer Company, Hartford, Conn., a Corporation of Connecticut. Filed July 15, 1926. Serial No. 122,570. 5 Claims. (Cl. 78—29.)



1. In a multiple roll-set, board drop-hammer, the combination of one roll of one of the pairs of rolls, a yielding mounting therefor, hammer-controlled means for moving said roll, relatively to said yielding mounting, toward and from the hammer board, and a roll of another pair also moved by said means.

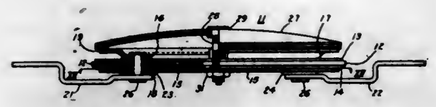
1,809,301. LOCKING COOPERATING THREADED ELEMENT. JAMES B. LADD, Ardmore, Pa. Filed Jan. 15, 1930. Serial No. 420,853. 2 Claims. (Cl. 151—11.)

2. A device for locking a nut to a bolt or the like comprising a pawl, one end of which is seated in a recess in a nut and confined therein, but free to turn therein around an axis approximately parallel with the axis of the nut, the pawl extending from its seat into the bore of the nut, means co-acting with a pawl to limit its free angular movement to a small augle either side of a radial position relative to the nut, said limiting means causing the free end of the pawl to lockingly engage the thread on the bolt when the pawl is flexed beyond either limit of its free angular motion, and means permitting the free end of the pawl to move toward its seat, when the nut is forcibly rotated in the reverse direction, to permit the pawl to be turned angularly past a radial position relative to the nut to engage the thread on the bolt on the opposite side to resist rotation of the nut in the reverse direction.



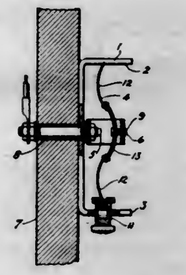
1,809,302. FLOOR POLISHING DEVICE. CHARLES B. LAWRENCE, Cleveland Heights, Ohio, assignor to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 24, 1928. Serial No. 256,604. 3 Claims. (Cl. 15—246.)

3. In a polishing attachment, the combination with a longitudinally slotted member of substantial weight having perforations formed therein communicating with said slot, of a compacted felt member disposed within said slot



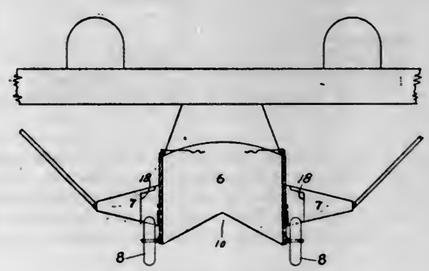
and extending beyond the face of the weighty member, a removable fabric covering disposed about said members and spaced away from the weighty member adjacent the felt member to afford an air space, and means for removably attaching the device for use with a suction member.

1,809,303. APPARATUS FOR SPINNING ARTIFICIAL THREADS FROM SOLUTIONS OF CELLULOSE ETHERS OR ESTERS. UGO MANCINI, Milan, Italy, assignor to Ruth-Aldo Company, Incorporated, New York, N. Y. Filed Mar. 27, 1928, Serial No. 265,161, and in France Dec. 26, 1927. 8 Claims. (Cl. 18—8.)



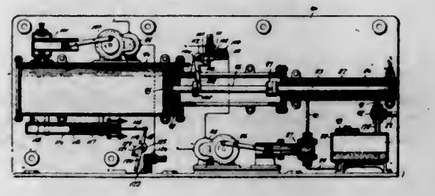
8. Apparatus for spinning artificial threads from solutions of cellulose ethers or esters, comprising a collodion supply pipe, a spinning nozzle rotatably mounted with respect to the supply pipe, and a feed pump fixed with relation to but rotatable with the nozzle for regulating the supply of collodion thereto.

1,809,304. THERMAL RELAY. HOWARD D. MATTHEWS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 6, 1929. Serial No. 344,734. 4 Claims. (Cl. 200—138.)



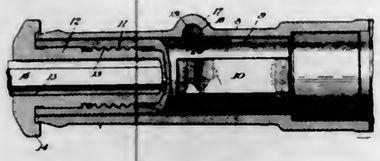
1. In a thermal switch, in combination, a substantially circular base, a supporting bar insulatedly mounted adjacent to one surface of the base, a pair of substantially semi-circular, dished, contact members insulatedly mounted against the other surface of the base, contact terminals extending through the base, supporting bar and one each of said contact members to securely clamp them in proper operative positions, and a thermally-actuable cupped disk supported on said bar and having rim portions only thereof engaging the semi-circular contact members at a predetermined temperature and maintaining an inwardly-moving line of engagement therebetween with change of temperature until a sudden separation thereof occurs.

1,809,305. THERMOSTAT. HOWARD D. MATTHEWS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 14, 1924. Serial No. 731,975. 18 Claims. (Cl. 297—15.)



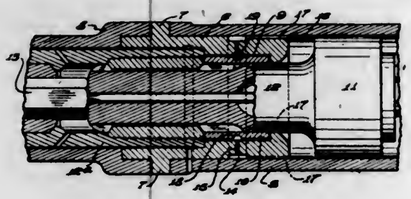
1. In a thermostat, a frame, a plurality of curved stressed members co-operating with the frame and a curved thermoresponsive member supported by the stressed members for controlling the radii of curvature of the stressed members.

1,809,306. HULL. JOHN MATTHEW MILLER, New Brunswick, N. J., assignor to Charles Shepard, Rochester, N. Y. Filed Nov. 7, 1924. Serial No. 748,392. 6 Claims. (Cl. 244—2.)



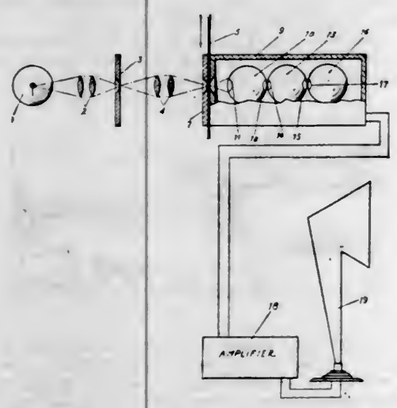
3. In a device of the character described, a hull, a lateral fin on said hull, and a guideway along the side of said hull and extending into said fin.

1,809,307. FLUID PRESSURE BREAKING MECHANISM FOR MINING MACHINES. EDMUND C. MORGAN, deceased, New York, N. Y., by Olive Eugenie Morgan, Executrix, New York, N. Y. Filed June 12, 1929. Serial No. 370,431. 21 Claims. (Cl. 262—12.)



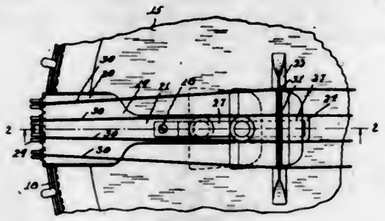
1. In a breaking device, the combination with a cylinder, of a spring adapted to be located within said cylinder, means for securing one end of said spring to the bottom of said cylinder, a plunger movable in said cylinder, and latch mechanism between the inner side of said plunger and the other end of said spring for detachably securing said plunger to said spring.

1,809,308. CHUCK STRUCTURE. WILLIAM G. MUELLER, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed Feb. 17, 1928. Serial No. 255,106. 3 Claims. (Cl. 279—97.)



1. In a drilling tool, the combination with a housing, of a driving sleeve rotatably mounted in the housing, a tool-receiving wear member detachably fitted to the sleeve and normally rotated therewith to rotate a tool detachably engaged therein, and means for temporarily securing the sleeve against rotation in the housing to permit the tool-receiving member being moved with respect to the sleeve to detach said member.

1,809,309. FLUID OPERATED TOOL. ROBERT O. OLANDER, Calumet, Mich. Filed Apr. 24, 1928. Serial No. 272,542. 7 Claims. (Cl. 121—31.)

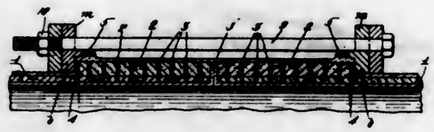


1. In a fluid operated tool, the combination with a cylinder member and a reciprocatory piston therein, of an element in which the piston has a reciprocatory bearing, said element having a limited lateral play to permit its lateral movement by reason of lateral pressure thereon of the piston.

1,809,310. METHOD AND MEANS FOR REPRODUCING PHOTOGRAPHIC SOUND RECORDS. FREEMAN H. OWENS, New York, N. Y., assignor to Owens Development Corporation, New York, N. Y. Filed Mar. 8, 1929. Serial No. 345,577. 3 Claims. (Cl. 179—1003.)

1. The method of reproducing a photographic sound record comprising the steps of modulating light rays by said record, passing said modulated light rays through a plurality of aligned photoelectric cells, modulating an electric current by the output of all of said cells and conducting said modulated current to an amplifier and loud speaker.

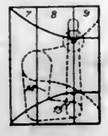
1,809,311. MUTE FOR STRINGED MUSICAL INSTRUMENTS. ROBERT R. PAGE, New York, N. Y. Filed June 14, 1929. Serial No. 370,987. 10 Claims. (Cl. 84—273.)



1. In a stringed musical instrument, having thereon a bridge, a tail piece having thereon an extension, a mute body having thereon a tapered part slidably mounted on said extension, a means for sliding said body on said extension with said part thereof into wedging engagement with said bridge and a means for normally holding said body on said extension in nonmuting position with said part thereon out of engagement with said bridge.

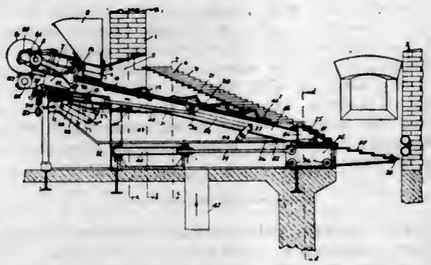
1,809,312. PROCESS OF PRODUCING WOOD PULP OF HIGH ALPHA CELLULOSE CONTENT. GEORGE A. RICHTER and MILTON O. SCHUR, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 19, 1927. Serial No. 185,019. 8 Claims. (Cl. 92—16.)

1. A process which comprises separating from raw pulp its long fiber portion, treating the separated portion of pulp with a lignin-reactive reagent and terminating the treatment slightly after a critical point is reached at which further consumption of the reagent is accompanied by a marked decrease in alpha cellulose and an increase in copper number, digesting the treated pulp in alkaline liquor, bleaching the alkaline-digested pulp, and classifying the bleached pulp into long fiber and short fiber portions.



1,809,313. METHOD OF AND MEANS FOR JOINING CONDUITS. BERTWELL C. ROOT, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed May 12, 1926. Serial No. 108,672. 9 Claims. (Cl. 285—138.)

1. A method of preparing fibrous conduit for end joining, which comprises pegging a fibrous collar externally thereto substantially flush with its end, and then impregnating the conduit with waterproofing material.

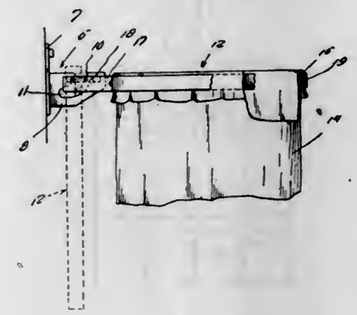


1,809,314. SOUND AMPLIFYING DEVICE. CARMEN E. ROSS, Vancouver, British Columbia, Canada, assignor to W. Wyllie Johnston, trustee, Vancouver, Canada. Filed May 21, 1928, Serial No. 279,476, and in Canada Mar. 28, 1923. 1 Claim. (Cl. 181—27.)

A sound amplifying device comprising a series of three corresponding and adjacent rectangular blocks, one surface of the middle block in said series and the adjacent surface of the outer block of said series being channeled in convolutionary form whereby a tubular cavity of circular cross section is formed by the combination of the two blocks, the extremities of said tubular cavity being connected with surface apertures in the said blocks and in planes which are right-angular to each other, central and correspondingly connected apertures transversely of said

convolutionary cavity in both said blocks, the other surface of the said middle block and that of the other outer block adjacent thereto being similarly channeled to connect the said central aperture and one of the said extremities, whereby a continuous tapered tubular cavity is produced within the said three blocks, the said cavity being so formed that a convolution around a straight portion is obtained.

1,809,315. MECHANICAL STOKER. GILBERT WAYNE RUGGLES, Youngstown, Ohio. Filed Jan. 7, 1922. Serial No. 527,604. 9 Claims. (Cl. 110—44.)



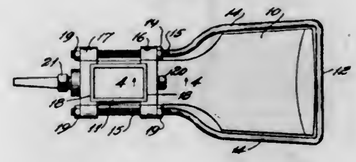
1. In mechanism of the character described, the combination of a retort, an inclined grate, a fuel supplying ram movably associated with said grate to form the intermediate inclined retort floor therebetween, said ram being open below and a shallow inclined air supply conduit disposed beneath said ram, said conduit being provided with openings in its upper wall allowing air to contact and cool said ram.

1,809,316. WATER RESISTANT FIBROUS ARTICLES AND THEIR MANUFACTURE. DILLON F. SMITH, Pensacola, Fla., and ERNEST J. PIEPER and CLARENCE C. VOOT, Lancaster, Pa., assignors to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Jan. 9, 1929. Serial No. 331,385. 11 Claims. (Cl. 92—21.)

1. The process of making fibrous articles, which comprises forming a water-containing pulp of resin bearing fibrous material, adding a siccative oleaginous material to the pulp and distributing it over the resin-containing fibers, forming the articles from such pulp, and drying and heating them so as to cause the resin and oil to combine and form a varnish in situ on the fibers.

1,809,317. ARTICLE SUPPORT. DANIEL O. SNYDER, Muncy, Pa. Filed Nov. 8, 1927. Serial No. 231,881. 2 Claims. (Cl. 248—20.)

1. In a structure of the class described, in combination, a hanger bracket embodying an attaching flange provided with an outstanding supporting arm, said arm being provided in its upper edge with a centralized entrance slot and being further provided below and at opposite ends of said slot with a pair of spaced notches opening in a direction toward each other, said notches communicating with said slot and functioning as keeper seats, and an article suspension device embodying means embracing said

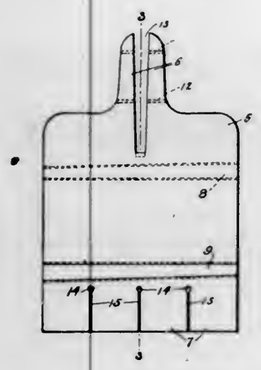


arm and equipped with a keeper insertable through said entrance slot and receivable in said keeper seats, whereby to cause said keeper to bridge said slot and to detachably connect said article suspension device with said arm.

1,809,318. MANUFACTURE OF SULPHUR CONTAINING DYES AND PRODUCT. OSKAR SPENGLER, Berlin-Neubabelsberg, and WERNER MÜLLER, Leipzig, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Filed Apr. 30, 1927, Serial No. 188,039, and in Germany Feb. 20, 1925. 11 Claims. (Cl. 260—17.)

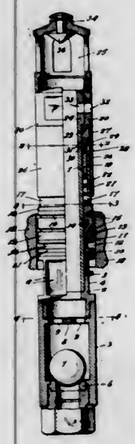
1. A process of making sulphur-containing dyestuffs which comprises treating an aromatic compound containing at least one of the groups, $-NH_2$ and $-OH$, with a solution containing the reaction product of a sulphuryl-halide and a sulphocyanate and treating the sulphocyanogen compound thus produced with an alkaline substance at a temperature not exceeding essentially 100° C.

1,809,319. GUARD FOR ADZES. HENRY O. SWANN, Hattiesburg, Miss. Filed Nov. 15, 1930. Serial No. 495,966. 11 Claims. (Cl. 145—2.)



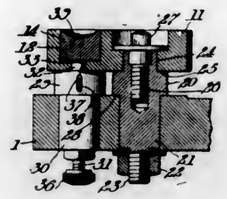
1. In combination with an adze, a guard laterally spaced from but positioned to parallel the cutting edge of the latter and prevent its penetration into the limb of the user.

1,809,320. PEEL-BLADE. OLE H. THORFINNSSON, Baltimore, Md. Filed Mar. 5, 1929. Serial No. 344,535. 1 Claim. (Cl. 107—67.)



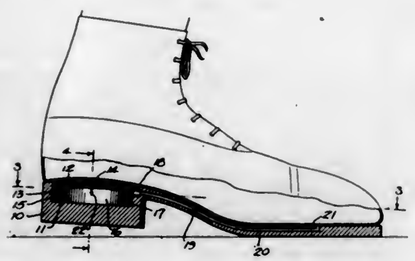
In a peel-blade, the combination of a wooden plate having a relatively sharp lifting edge and an opposite handle-engaging edge and being formed with a groove across the grain of the wood and having slots extending

from the lifting edge toward said groove, the said plate having circular bores therethrough at points between said



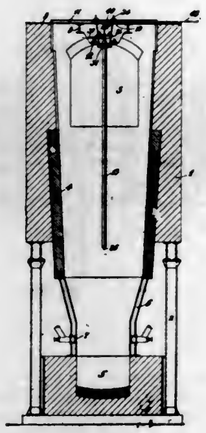
lifting edge and groove and in open communication with the said slots respectively, for the purpose specified, and a reenforcing strip fitted and secured in said groove.

1,809,321. DEEP WELL PUMP. JOHN C. VROMAN, Tulsa, Okla., assignor of one-half to C. P. Smith, Tulsa, Okla. Filed Oct. 9, 1929. Serial No. 398,470. 10 Claims. (Cl. 74—109.)



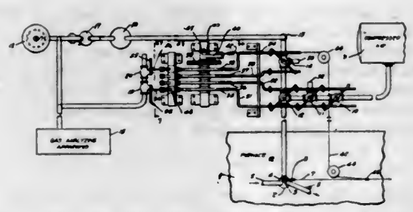
1. In a deep well pump, a tube having an external shoulder at its upper end and a small hole through the tube a short distance below the shoulder, packing supported on the tube, a follower having its lower end abutting the packing, the follower extending upwardly from the packing in spaced relation to the tube, a sleeve having an internal shoulder which fits underneath the shoulder on the tube, the sleeve extending downwardly within the follower, and a spring between the lower end of the follower and the lower end of the sleeve, said sleeve also having an interior groove and a hole in alinement with the small hole in the tube, and also having a depending flange which slidably fits and surrounds the follower whereby an enclosed chamber is formed.

1,809,322. SWINGING DIE HOLDER FOR FASTENER SETTING MACHINES. FRANK E. WARNER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 14, 1930. Serial No. 452,495. 5 Claims. (Cl. 218—1.)



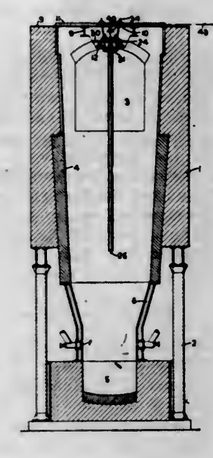
1. In a fastener setting machine, the combination with a relatively rigid base, of a die holder provided with means to receive a plurality of dies in spaced relation, a pivot member carried by and extending above said base and on which said holder is pivoted for swinging action out of contact with said base to bring any one of said dies into operative position, and a supporting member carried by said base and extending thereabove and cooperating with said holder beneath the same, said supporting member substantially aligning with the die which is swung into operative position, whereby said supporting member may receive the fastener setting thrust against said die and holder and with said pivot member provide a two-point support for said holder.

1,809,323. VENTILATING MEANS FOR FOOT COVERINGS. ORMSBY P. WILLIAMS, Sr., Southgate, Calif. Filed July 15, 1929. Serial No. 378,437. 10 Claims. (Cl. 36—3.)



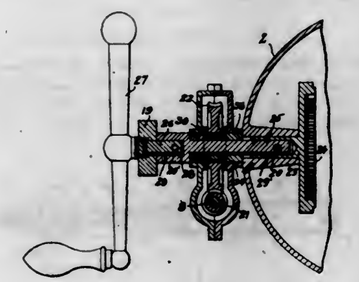
2. Ventilating means for foot coverings comprising a hollow resilient body adapted to be received in a heel cavity of the foot covering and to be deformed under the weight of the foot imposed on the body, in the act of walking, to alternately create positive and negative air pressures in the body, the body having a normally open slot positioned to be closed in response to the weight of the foot imposed on the body, and a normally closed slit positioned to be opened in response to the weight of the foot imposed on the body.

1,809,324. APPARATUS FOR BLAST FURNACE CONTROL. JOHN F. AUSTIN, Murray, and DONALD H. MCINTOSH, Salt Lake City, Utah, assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 30, 1927, Serial No. 216,352. Renewed Nov. 14, 1930. 6 Claims. (Cl. 266—25.)



4. In combination, a metallurgical blast furnace comprising side walls having a flue near the top thereof and tuyères near the bottom thereof, a roof having a feed opening, a crucible at the bottom of the furnace, a distributor under said feed opening for distributing the charge, and a sampling tube suspended from said roof and passing through said distributor into the furnace.

1,809,325. APPARATUS FOR AUTOMATICALLY WITHDRAWING GAS SAMPLES. JOHN F. AUSTIN, Murray, and DONALD H. MCINTOSH, Salt Lake City, Utah, assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 15, 1927. Serial No. 233,353. 8 Claims. (Cl. 23—257.)



5. In an automatic gas sampling system, a furnace, a sampling device within said furnace, gas sampling apparatus, a source of compressed air, and means for automatically periodically selectively connecting said sampling device to said air source or to said sampling apparatus.

1,809,326. METHOD OF CONTROLLING BLAST FURNACES. JOHN F. AUSTIN, Murray, and DONALD H. MCINTOSH, Salt Lake City, Utah, assignors to American Smelting & Refining Company, New York, N. Y. a Corporation of New Jersey. Original application filed Aug. 30, 1927, Serial No. 216,352. Divided and this application filed Dec. 20, 1928. Serial No. 327,237. 9 Claims. (Cl. 75—17.)

1. The method of controlling the operation of a metallurgical furnace which comprises withdrawing a sample of gas from a sensitive zone within the charge and then adjusting the materials fed to said furnace in accordance with said sample.

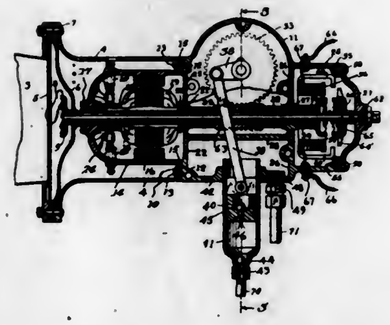
1,809,327. MOTION PICTURE PROJECTOR. GERALD J. BADGLEY, Brooklyn, N. Y., assignor to Duplex Motion Picture Industries, Inc., a Corporation of Delaware. Filed July 23, 1924. Serial No. 727,678. 5 Claims. (Cl. 74—7.)

1. In a picture projecting apparatus, the combination with driving gear therefor, and motor-operated driving means for said driving gear, of means for permitting manual operation of said driving gear to adjust the position of the film and to bring any desired portion thereof into position for projection, said manual operating means embodying a removable crank having a shaft provided with a runway adapted for coaction with a stop carried by a bushing surrounding said shaft to lock said shaft and bushing together to permit rotary movement in unison.

1,809,328. BRAKE MECHANISM FOR MOTOR VEHICLES. WILLIAM J. BESLER, Plainfield, N. J. Filed Oct. 4, 1927. Serial No. 223,967. 1 Claim. (Cl. 188—152.)

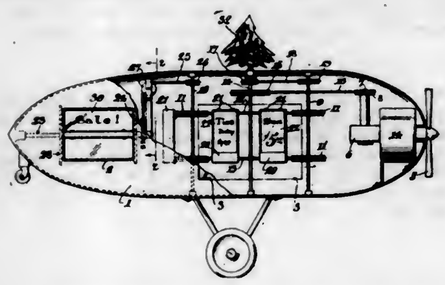
A motor vehicle comprising a chassis having a cross frame member and friction brake elements cooperating with the wheels thereof, a brake operating mechanism including a fluid pressure motor connected to the brake elements by a longitudinally extending transmission member through which the operating force is applied and means for flexibly suspending the motor from the chassis, said means comprising two flexible cable members secured to the motor at transversely spaced points and to more widely spaced points on the cross member of the chassis, the said flexible members by their divergence acting to stabilize the motor against movements transversely of the chassis.

1,809,329. ARTIFICIAL STONE AND METHOD OF PRODUCING THE SAME. JOHN B. BOSSI, Allston, and PAUL MAZZUCHELLI, Newton, Mass., assignors to Cambridge Cement Stone Company, Brighton, Mass., a Corporation of Massachusetts. Filed Sept. 11, 1929. Serial No. 391,728. 4 Claims. (Cl. 18—60.)



1. The method of casting artificial stone which consists in providing a mold, applying to one or more faces of the mold a water pervious paste consisting of a mixture of water and a fine powder-like material which will not permanently unite with the cement and which is adapted to prevent the cement from engaging the surface of the mold, then introducing into the mold a stone-producing compound containing hydraulic cement, and washing the paste from the face of the cast stone to reveal the texture of the stone.

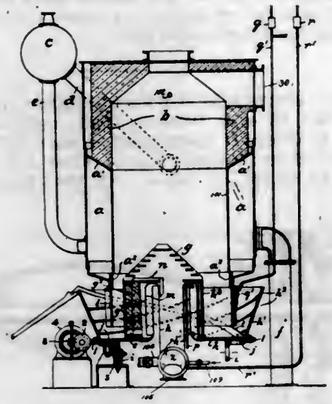
1,809,330. TOOTHBRUSH. ALMOS A. DORRANCE and ARSHAM G. AVAKIAN, Detroit, Mich, assignors of one-third to Joseph G. Williams, Detroit, Mich. Filed Apr. 18, 1929. Serial No. 356,011. 6 Claims. (Cl. 15—133.)



1. A tooth brush comprising a handle formed of two tubular compartments secured together in end to end relation, the adjacent ends of the compartments being closed and being each provided with an aperture, means for keeping the compartments in end to end relation, said means allowing the compartments to be manually rotated to permit or prevent communication between the compartments, a cap threaded onto the outer end of one compartment and provided with a filler plug, an internally threaded member connected to the outer end of the other compartment, a brush member having a plunger thereon movable longitudinally of the last named compartment, the brush member being adapted for threaded relation with the said threaded member, a duct extending longitudinally through the brush member and opening into the brush thereon, and a flexible rubber cap normally closing the end of the duct and provided with a discharge slot.

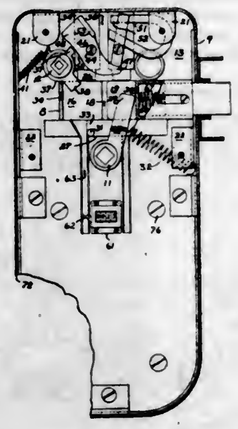
1,809,331. POWER UNIT FOR USE ON AUTOMOTIVE VEHICLES. CHARLES H. DUNCAN, Erie, Pa. Filed Sept. 22, 1925. Serial No. 57,981. 4 Claims. (Cl. 74—7.)

1. A power unit comprising a motor, a hollow drive shaft operable by the motor, a casing enclosing the motor and hollow shaft, said casing forming a liquid reservoir, a conduit communicating therewith, and means operable by the hollow shaft adapted to draw liquid through the conduit into the reservoir.



1,809,332. CHANGEABLE SIGN. JOSEPH GEORGE, Wilkes-Barre, Pa. Filed Sept. 29, 1930. Serial No. 485,174. 4 Claims. (Cl. 40—126.)

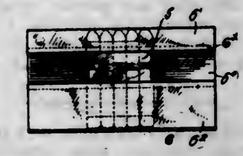
1. A changeable sign including a casing, an electric fan in one end portion thereof including a motor, a slow speed shaft, and a fan, there being a window in the casing, mechanism within the casing for bringing different signs successively into position for exposure through the window, down run water gas, said grate and said metal wall benism from the slow speed shaft.



1,809,333. WATER GAS GENERATOR. ARTHUR G. GLASGOW, London, England, assignor to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 18, 1925. Serial No. 9,926, and in Great Britain June 18, 1924. 4 Claims. (Cl. 48—78.)

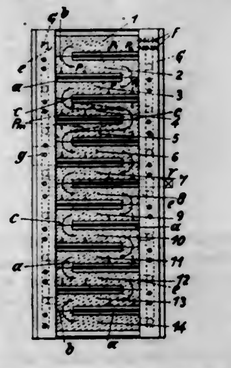
4. A water gas generator having a fuel chamber the inner wall of which comprises an upper portion of refractory material superimposed on a lower portion of metal, means for admitting down run steam and taking off uprun water gas and air blast gases in the upper portion of the chamber, a mechanical ash and clinker expelling grate having ports for the passage of down run water gas and air and steam, means for admitting

air and steam to the grate, and means for withdrawing down run water gas, said grate and said metal wall being so arranged that the wall extends downward at least to the level of the lowest ports of the grate.



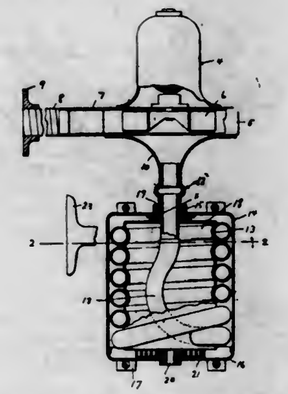
1,809,334. COIN-CONTROLLED LOCK. WALTER M. GLEASON, Oakland, Calif. Filed Nov. 30, 1926. Serial No. 151,696. 7 Claims. (Cl. 194—1.)

6. In a coin-controlled door-lock, means defining an inlet passage for a coin, a member mounted for movement to and between a pair of limiting positions and arranged when in each of said positions to have a different portion thereof interposed in said passage, one of said portions when disposed in said passage being displaceable by a coin to move said member to the other of said limiting positions to dispose the other of said portions in said passage whereby a closure is provided for the intake end of said passage to prevent the insertion of a second coin therein, and means independent of said coin operative to hold said member in position to provide a closure for the intake end of said passage.



1,809,335. VISIBLE CIGAR PACKAGE. AUGUSTUS J. GOLDEN, Baltimore, Md. Filed Dec. 18, 1928. Serial No. 326,725. 3 Claims. (Cl. 206—44.)

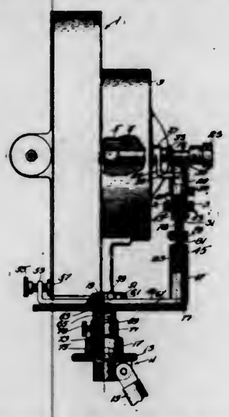
1. A package of cigars convenient to fit the pocket and of a nature to partly display the contents, consisting of cigars arranged side by side, a portion of transparent material covering the cigars in part, and an external wrapper underlying the cigars with its upper and lower margins folded down onto the transparent material with



their edges spaced to expose the transparent material, the side portions of the wrapper including the folded upper and lower margins being folded backwardly onto the rear or underlying portion of the wrapper.

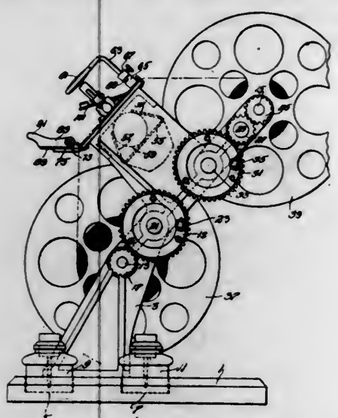
1,809,336. BRICK KILN FOR BURNING OF BRICKS AND SIMILAR ARTICLES. ALOIS HABLA, Rading-Theusing, near Karlsbad, Czechoslovakia. Filed July 30, 1928, Serial No. 296,368, and in Czechoslovakia July 29, 1927. 6 Claims. (Cl. 25—134.)

1. A brick kiln comprising long, spaced and substantially parallel walls, division walls of unburnt open brick work extending partly across the space alternately from the long walls to form a sinuous passage from end to end of the kiln, means to supply gases to the kiln, a portion of said gases passing through the sinuous passage and another portion passing directly through the division walls.



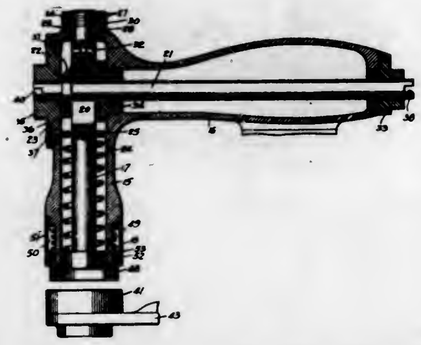
1,809,337. AUTOMOTIVE VACUUM CLEANER. HOLLIS B. HALL, Newton, Iowa. Filed May 18, 1929. Serial No. 362,629. 2 Claims. (Cl. 15—16.)

2. In a vacuum cleaner, a relatively fixed drum, a reel arranged within the drum and having spindles rotatably



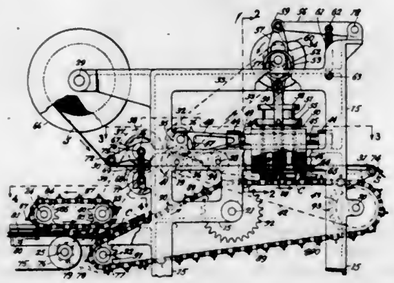
connected to the drum, a flexible hose trained about said reel and having one end portion arranged axially internally of the reel, a nipple engaged with said one end portion of the hose, said nipple extending through one of said spindles, the other end portion of said hose being movable through an opening provided therefor in the periphery of said drum, and a suction device operatively connected with said nipple exteriorly of said drum.

1,809,338. PANORAMIC CAMERA ATTACHMENT. ARTHUR C. HAYDEN, Brockton, Mass. Filed Mar. 14, 1927. Serial No. 175,116. 10 Claims. (Cl. 88—16.)



4. The combination of a motion picture camera having a film reel rotating main shaft and a spring for driving the same, said shaft having a socket adapted to receive a key for winding the spring; a supplemental shaft adapted for insertion into said socket and having a socket for receiving the key, that the latter may operate through the supplemental shaft and main shaft in winding the spring; a fixed gear, a pinion meshing with said gear, and a transmission between the supplemental shaft and the pinion for causing the latter to roll along the periphery of the gear and impart rotative movement to the camera.

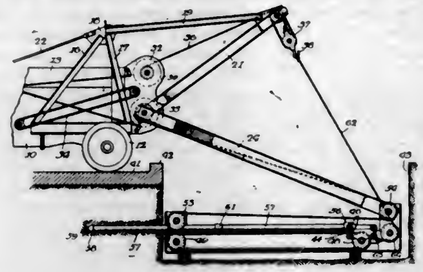
1,809,339. MACHINE FOR INSPECTING, SPLICING AND REWINDING MOTION PICTURE FILMS. ARTHUR C. HAYDEN, Brockton, Mass. Filed Apr. 6, 1928. Serial No. 268,029. 4 Claims. (Cl. 154—42.)



4. A machine of the character described comprising, in combination, a support, a table on the support having an aperture therein, a lamp beneath the table for illuminating the film over the aperture, pins on the table at opposite sides of the aperture for insertion into sprocket holes in end portions of the film to be spliced, and a slide on the table having a pair of fingers, one longer than the other for holding the film onto said pins.

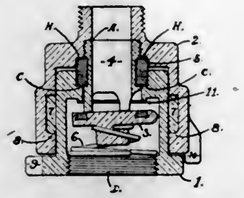
1,809,340. PORTABLE POWER OPERATED HAMMER. JOHN ROY HILSTAD, Whittier, Calif., assignor of two-thirds to George G. Griffith and of one-third to Harry H. Canterbury, Whittier, Calif. Filed July 1, 1925. Serial No. 40,964. 3 Claims. (Cl. 153—48.)

1. In combination a power operated hammer including a hammer element, a yoke secured to the hammer and including a movable member pivotally connected to the yoke and a die secured to the movable member and supported in coacting relation to the hammer element.



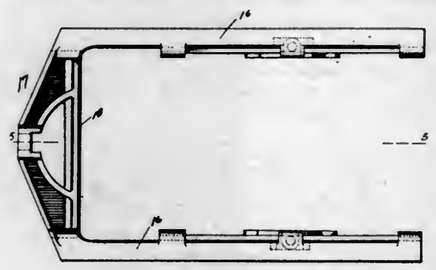
1,809,341. AUTOMATIC CONTAINER-CAP LINING MACHINE. THORMOD JENSEN, Brooklyn, N. Y. Filed Sept. 12, 1929. Serial No. 392,199. 8 Claims. (Cl. 113—80.)

1. In a container-cap-liner making and inserting machine through which travels a continuous liner strip, the combination, with a continuously moving cap-conveyer, of a twin punch and die carried by a reciprocating head, the said head moving with the said cap conveyer and liner strip and at the same speed during a portion of its forward stroke.



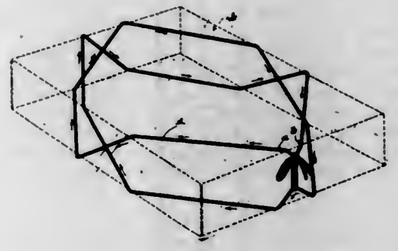
1,809,342. PIPE PUSHING MACHINE. HARRY A. JOHNSON, Chicago, Ill. Filed Nov. 16, 1927. Serial No. 233,536. 13 Claims. (Cl. 254—135.)

1. In a pipe pushing machine for forcing a service pipe from a trench through a section of earth, a motor driven vehicle having power take off means, a pushing unit secured to the vehicle and adapted to be extended into the trench, a reciprocable pipe engaging carriage on said unit, a pair of drums carried by the vehicle, means for



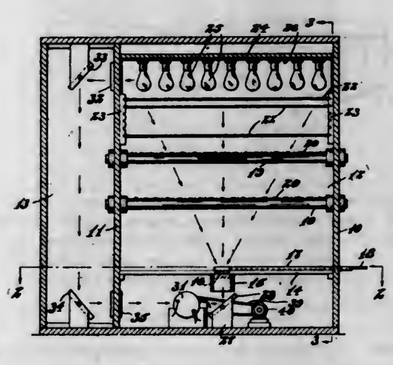
driving the drums from the power take off means and cables connected to said drums and to opposite ends of said carriage for operating the same.

1,809,343. AUTOMATIC COUPLER VALVE. JESSE D. LANGDON, Los Angeles, Calif. Filed Sept. 4, 1928. Serial No. 303,825. 7 Claims. (Cl. 284—18.)



1. A coupler valve comprising two members having interengageable means to hold them together, and a bodily movable valve member seatable in one of the firstnamed members, the other firstnamed member having means to unseat said valve member with a tilting motion and to then move the valve member bodily from its seat when said firstnamed members are moved together.

1,809,344. TRACTOR. HOLMAN HARRY LINN, Morris, N. Y., assignor to The Linn Manufacturing Corporation, Morris, N. Y., a Corporation of New York. Original application filed May 13, 1924, Serial No. 713,022. Divided and this application filed Aug. 27, 1928. Serial No. 302,365. 1 Claim. (Cl. 308—59.)

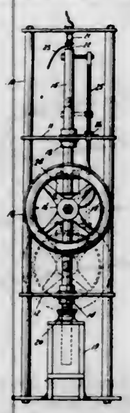


A carrier for tractor frames, including a hair-pin frame having side sills and a transverse yoke connecting them at one end, each of said sills being formed with longitudinally ranging channels to permit sliding cooperation of the carrier in the tractor frame, and idler-sprocket shaft bearings carried by the sills intermediate their ends and below said channels.

1,809,345. PACKAGE TIE. JOHN J. LYNCH, Riverdale, Md. Filed Feb. 14, 1930. Serial No. 428,312. 3 Claims. (Cl. 24—16.)

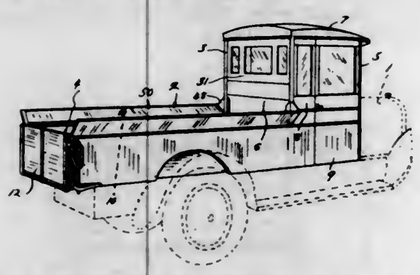
1. The system of forming a package tie comprising the passing of a single length of cord alternately over and under the adjacent corners of the package, forming a twist in the cord by turning the package, and again alternately passing the cord under and over adjacent corners of the package.

1,809,346. AREA MEASURING BY LIGHT. GILES W. O. MARTIN, Newton Highlands, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed May 23, 1928. Serial No. 280,000. 1 Claim. (Cl. 88—14.)



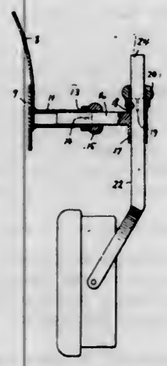
An improved device for measuring the superficial area of hides or skins comprising a photo electric cell, amplifying and indicating devices associated therewith, a light, means for dividing said source of light into two beams which impinges on the photo electric cell at two separate and distinct points, means for alternately cutting off the beams of light from the photo electric cell and means associated with said photo electric cell for indicating variations in the intensity of the lights in one of said beams due to the interposition of a hide or skin therein.

1,809,347. TIRE TESTING MACHINE. JOHN I. MARTIN, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 31, 1928. Serial No. 281,787. 10 Claims. (Cl. 265—13.)



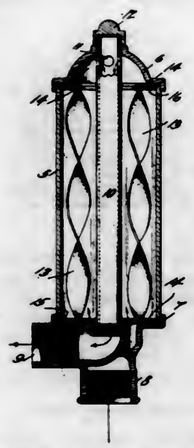
1. A testing machine of the class described comprising a reciprocable shaft, a tire-carrying wheel attached to said shaft, an anvil mounted below said wheel, means

for supporting said shaft with the wheel in raised position above said anvil, means for releasing said shaft to



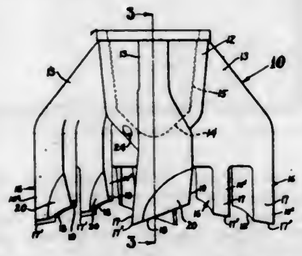
permit the same to fall until a tire carried by the wheel impacts with the anvil, and means for arresting the motion of the shaft after the tire has rebounded.

1,809,348. TRUCK BODY. NUGENT MILNER, Evansville, Ind., assignor to Graham Brothers, Evansville, Ind., a Corporation of Indiana. Filed Dec. 28, 1925. Serial No. 77,993. 6 Claims. (Cl. 296—28.)



1. In a vehicle body, the combination with a base section, of a seat support thereon, a post projecting upwardly from the base section adjacent to said seat support, and a rear quarter section on the post having a plate provided with a laterally extending flange secured to said seat support.

1,809,349. SUPPORT FOR EAR PHONES. DONALD L. MOORE, St. Anthony, Newfoundland. Filed Aug. 23, 1929. Serial No. 387,950. 4 Claims. (Cl. 179—156.)



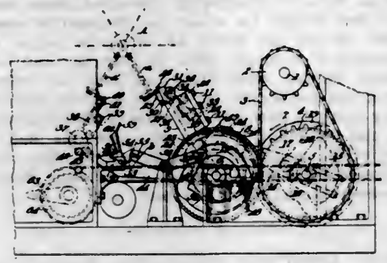
1. A supporting frame for earphones comprising a flat resilient metallic band of semi-circular configuration, a pair of plates secured to the ends of the band and extending on the opposite sides at right angles thereto, a sleeve secured at its inner end to each end of the band and projecting at right angles to the head of the user when the band is supported thereon, each sleeve having a threaded yieldable portion on its free end, a T-shaped member having a stem seated in and normally rotatable and horizontally movable with respect to the sleeve, means threadably engageable with the yieldable end of the sleeve for selectively locking the stem with respect to the sleeve, the head of the T-shaped member formed of a sleeve, having its upper end threaded and yieldable, a pair of forked supports, stems on the forked supports rotatably and vertically movable in the sleeves of the T-shaped members, means supported on the yieldable ends of the last-mentioned sleeves for locking the stems of the forked supports in selective position, the forked ends of the forked supports extending inwardly at an inclination to a vertical plane, and a pair of ear phones rotatably mounted in the forked support.

1,809,350. FLOW INDICATOR FOR OIL DISPLAY PUMPS. ROSCOE W. NICHOLS, Maywood, Ill., assignor to Oil Products Appliance Co., Maywood, Ill., a Corporation of Illinois. Filed Apr. 14, 1930. Serial No. 444,220. 1 Claim. (Cl. 116—117.)

A fluid flow indicator designed to be arranged in a transparent casing, including an upper ring, a lower ring, each of said rings corresponding to the internal diameter of the casing, and a series of whirligigs independently mounted in and freely rotatable with respect to both the upper and lower rings.

1,809,351. DRILLING BIT. GUY CARLTON OLIVER, Whittier, Calif., assignor of one-half to Roland R. Crum, Los Neitos, Calif. Filed June 26, 1929. Serial No. 373,883. 7 Claims. (Cl. 255—61.)

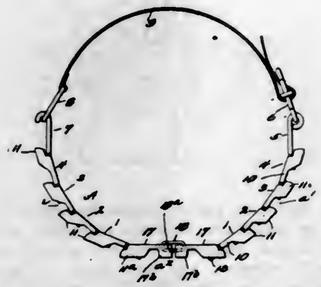
1. In a drill bit, a body, wings on said body, said wings comprising a plurality of pairs, with the wings of each pair



CARNEGIE LIBRARY OF ATLANTA

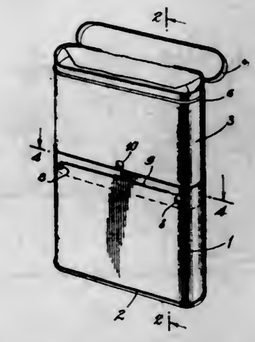
arranged on opposite sides of the axis of said body, a plurality of arcuate cutting blades arranged in spaced relation on each wing, said blades having a front cutting edge and a narrower trailing cutting portion, said front cutting portion being disposed farther from the axis of said bit than the said trailing portion.

1,809,352. METHOD OF OBTAINING PHENYL-AZO-ALPHA-ALPHA-DIAMINO-PYRIDINE HYDROCHLORIDES. IWAN OSTROMISLENSKY, New York, N. Y., assignor to The Pyridium Corporation, New York, N. Y., a Corporation of New York. Original application filed Sept. 23, 1927, Serial No. 221,629. Divided and this application filed May 31, 1928. Serial No. 282,052. 1 Claim. (Cl. 260—42.)



The method of obtaining dihydrochloride of phenyl-azo-alpha-alpha-diamino-pyridine, which consists in copulation of phenyl-diazonium-chloride with diamino-pyridine in a medium containing not less than 8% (by weight) hydrochloric acid.

1,809,353. TRANSFER MECHANISM FOR BOOK MATCH MACHINES. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed May 25, 1929. Serial No. 366,071. 12 Claims. (Cl. 226—4.)



2. In a transfer mechanism for book match machines, means for grasping each match book after its completion by said machine and transferring it to a horizontally disposed carrier, the operation of said means being such that successive match books are deposited by gravity upon said carrier in recumbent position and in end-for-end reversed partially overlapping relation whereby they will stack evenly, and means for operating said transfer mechanism in timed relation to the operation of the book match machine.

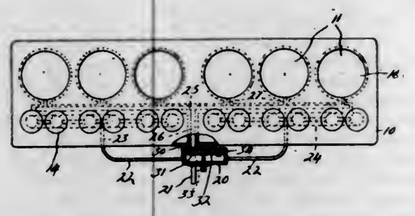
1,809,354. NONSKID ATTACHMENT FOR VEHICLE WHEELS. OSCAR M. PETERS, Waynesboro, Pa. Filed May 21, 1930. Serial No. 454,382. 1 Claim. (Cl. 152—14.)

A non-skid cross chain comprising two side sections each composed of a plurality of similar links, the links in the side sections being reversely arranged, each of said links comprising a relatively flat body portion having an opening therethrough and having a finage at one end and a headed shank at the opposite end, the shank of each of said links extending through the opening in an adjacent link, and a central section comprising two similar oppositely arranged links each of the last mentioned links comprising a flat-body portion having at one end a flange and a slot similar to the flanges and slots in the links of the side sections, said slots in the central links each adapted to receive the headed shank of an adjacent side link, said central links being formed at their opposed ends with transverse slots and side flanges, and a flat metal loop extending through said slots, said side flanges projecting beyond the loop to protect the latter from wear on the roadway.

1,809,355. TELESCOPICALLY COLLAPSIBLE BOX. JAMES A. POWELL, Richmond, Va., assignor to The American Tobacco Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 18, 1929. Serial No. 356,060. 5 Claims. (Cl. 206—56.)

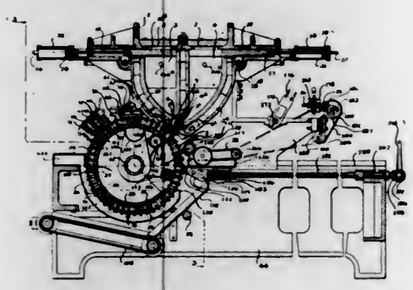
5. A pocket tobacco box composed of two telescoping sections having plane relatively wide side walls, and relatively narrow end walls, the sections having complemental stamped out bosses arranged to interlock when the sections are fully extended, said bosses being on the plane sides near their junction with the relatively narrow sides for the purpose set forth.

1,809,356. ARTIFICIAL FUR. GEORGES ROMANE, St. Mande, France. Filed Feb. 24, 1928, Serial No. 256,678, and in France May 19, 1927. 1 Claim. (Cl. 139—391.)



An imitation fur, comprising a support having carded looped threads attached thereto, each such thread itself embodying a multitude of small loops connected to a core.

1,809,357. LUBRICATING SYSTEM. HARRY G. SANGER and FLOYD F. KISHLINE, Detroit, Mich., assignors to Graham-Paige Motors Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 16, 1928. Serial No. 270,535. 5 Claims. (Cl. 184—6.)



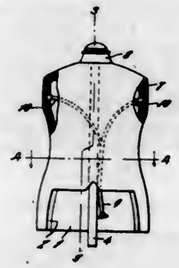
1. The combination with an internal combustion engine having cylinders and tappet bearings, of a lubricant

chamber adapted to receive a supply of lubricant under pressure, conduits for conducting lubricant from said cham-

ber to said cylinders and said bearings, and a thermostat in said lubricant chamber for controlling the flow of lubricant through one of said conduits.

1,809,358. MOLDING MACHINE. EDWARD S. SAVAGE, Rochester, N. Y. Filed Feb. 23, 1928. Serial No. 256,279. 33 Claims. (Cl. 107—17.)

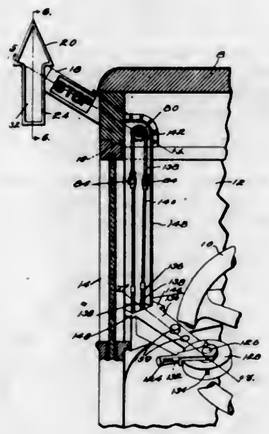
1. A molding machine comprising a mold carrier movable in an endless path and provided with mold pockets arranged in a plurality of series extending transversely of the line of movement of the carrier, guides on the opposite side of the mold carrier, a crosshead, a series of pressers carried by said crosshead to cooperate with a series of mold pockets on the mold carrier, means for oscillating the crosshead over the mold carrier, means for effecting the movement of the crosshead toward and from the mold carrier to cause the pressers to cooperate with the mold pockets, and means on the crosshead for engaging with the guides on the mold carrier to center the crosshead as it travels toward the mold carrier.



1,809,359. METHOD OF WATERPROOFING PILES. AUGUST E. SCHUTTE, Northboro, Mass. Filed Mar. 7, 1928. Serial No. 259,930. 1 Claim. (Cl. 91—70.)

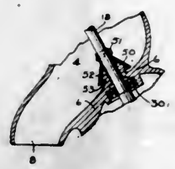
A method of waterproofing and strengthening concrete pile by first applying heat to the concrete, evaporating the moisture locally and at the surface, applying an asphalt, subjecting said asphalt superficially to an intense heat until it penetrates to the desired depth, applying more asphalt and continuing the process until a desired penetration has been achieved, and proceeding thus from spot to spot until the entire surface has been covered.

1,809,360. CONCRETE PILE AND SIMILAR STRUCTURE. AUGUST E. SCHUTTE, Northboro, Mass. Filed Mar. 7, 1928. Serial No. 259,932. 2 Claims. (Cl. 91—70.)



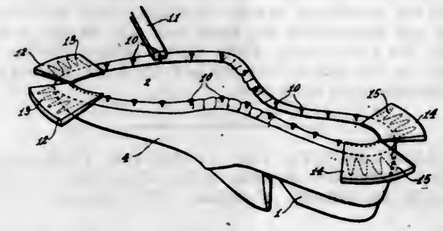
1. The method of producing waterproofed concrete structures which comprises molding a wet aggregate; allowing the molded structure to set; causing by successive steps slow relative movement between the molded structure having moisture inherently present therein and a body of liquid waterproofing material having a temperature sufficient to expel moisture from the structure, the interval between the steps being sufficient to permit the removal of the moisture, thereby to gradually heat and dry the structure in advance of the line of submergence of the structure in the liquid.

1,809,361. DISPLAY FORM. ALEXANDER SIMSON, Reno, Nev. Filed Dec. 10, 1929. Serial No. 413,096. 1 Claim. (Cl. 223—18.1.)



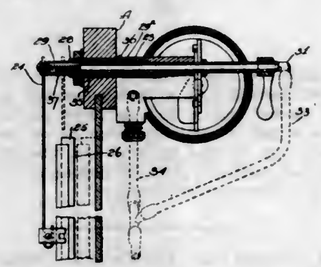
A display form of the character described comprising a hollow core having a cap block provided with an annular shoulder, a supporting standard secured to the cap block, a tubular one-piece covering of rubberized fabric mounted on the core having its upper end disposed to meet the shoulder on the cap block, an inflatable rubber casing constructed of a single piece of material and of substantially tubular form extending over the rubberized covering and having its upper end disposed beneath the annular flange, a metallic cap plate mounted on the cap block and extending downwardly over the upper end portion of the casing for maintaining said casing in position on said cap block, and means for inflating the casing, said means disposed within the core.

1,809,362. DIRECTION INDICATOR. ROBERT F. SMITH, Lynn, Mass. Filed Feb. 5, 1927. Serial No. 166,139. 2 Claims. (Cl. 116—47.)



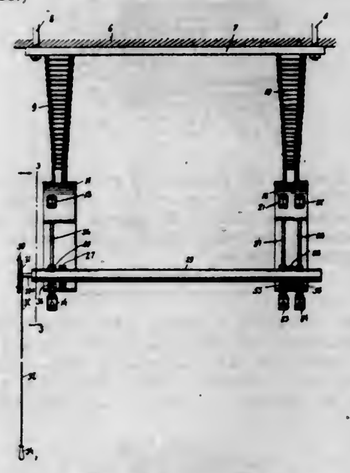
1. In a device of the character described, the combination of an oscillatory direction indicator, an operating member therefor, endless operating geared connections between said indicator and said operating member, and positive adjusting means arranged in each of the runs of said endless connection adapted to maintain said indicator and operating member in predetermined operative relation.

1,809,363. MATERIAL TREATING MACHINE. ALBERT R. TEARE, Lakewood, Ohio, assignor to Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 8, 1927. Serial No. 197,300. 9 Claims. (Cl. 83—13.)



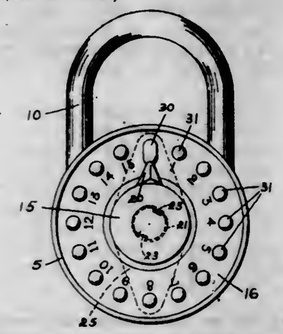
1. In a machine of the class described, a hollow casing member in the nature of a cup and having a discharge spout leading laterally from its bottom wall portion, an annular member partially closing the top of the cup and having a circular surface, a rotor having a complementary surface in close relation to the first mentioned surface, means extending through the said bottom wall portion and connected to the rotor for driving it, and means for containing material to be mixed and directing such material toward the said surfaces, said latter means being removable without disturbing the relationship of said surfaces.

1,809,364. ART OF MAKING SHOES. CHARLES TWEEDIE, Jefferson City, Mo., assignor to himself as trustee. Filed Oct. 8, 1927. Serial No. 224,813. 13 Claims. (Cl. 12—145.)



1. In the art of making shoes, the process comprising, applying cement to the margins of the upper, permitting the cement to harden, then lasting the upper over the insole in order to conform the upper to the last, softening the cement after such lasting, and sticking the cemented upper margin to the insole while it is held under tension and conformed to the last.

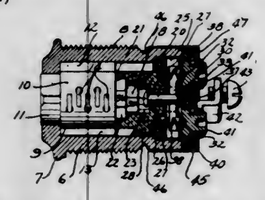
1,809,365. WINDSHIELD CLEANER. WALTER VAN GUILDER, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Dec. 3, 1928. Serial No. 323,334. 10 Claims. (Cl. 15—253.)



1. In a windshield wiper arranged to be operated by engine suction for giving the wiper its wiping movement over the windshield, a wiper mounted for being withdrawably pressed against the windshield; suction-operated means for pressing the wiper against the windshield consisting of two parts, one of which is telescoped within the other, the inner-telescoping one of said parts being tubular and having the connection with the suction conduit; whereby its cavity becomes a vacuum chamber, the outer telescoping part being that upon which the wiping member is mounted, and by its telescoping movement due to suction operating for pressing the wiper against the windshield.

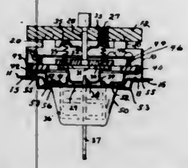
1,809,366. HIGH TENSION SWITCH. FREDERICK H. WAPPLER, Flushing, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed June 11, 1928. Serial No. 284,443. 5 Claims. (Cl. 200—48.)

1. A high tension switch comprising a pair of high tension insulators, means for supporting said high tension insulators upon the under side of a ceiling or the like, a pair of ring insulators mounted upon said first mentioned insulators and hanging therebelow, said ring insulators being parallel with each other, a rocking shaft of insulating material extending through said ring insulators, means for actuating said rocking shaft, and contact mechanisms carried by said ring insulators for opening and closing high tension electric circuits, said contact mechanisms being connected with said rocking shaft and controllable by movements thereof.



1,809,367. PERMUTATION LOCK. ROBERT K. WINNING, Wauwatosa, Wis., assignor, by mesne assignments, to Dudley Lock Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 28, 1929. Serial No. 335,511. 10 Claims. (Cl. 70—113.)

1. A permutation lock comprising a casing having a front wall outwardly embossed at predetermined stations,

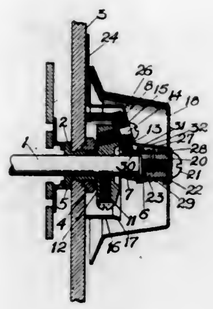


a knob rotatable with respect to said wall, and a spring connected with said knob for rotation therewith and provided with diametrically opposite parts arranged for substantially balanced interaction at said stations with the outwardly embossed portions of said wall.

1,809,368. IGNITION SWITCH, CONTACT CARRIER AND ACTUATOR. ROBERT K. WINNING, Wauwatosa, Wis., assignor to Clum Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 10, 1929. Serial No. 369,712. 16 Claims. (Cl. 200—166.)

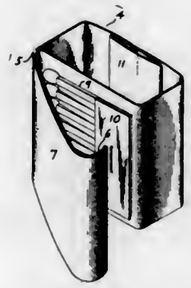
1. In a switch, the combination with a contact carrier, of a contact actuator channeled to receive the carrier, central means for holding the carrier within the channeled actuator, and compression spring means between the actuator and carrier.

1,809,369. SWITCH BARREL AND THE LIKE AND METHOD FOR ITS MANUFACTURE. ROBERT K. WINNING, Milwaukee, Wis., assignor to Clum Manufacturing Company, Milwaukee, Wis. Filed Feb. 11, 1924. Serial No. 692,015. 8 Claims. (Cl. 200—168.)



1. In a device of the character described, a tubular barrel having a cut from end to end in its wall, tongues integrally connected with said barrel adjacent the margins of said cut on opposite sides thereof, and a disk closure secured to the end of said barrel and provided with means to receive said tongues and to key said tongues together, whereby to maintain said barrel in tubular form, the engagement of said tongues in said disk constituting the sole means at said end of the barrel for maintaining the margins of the barrel together.

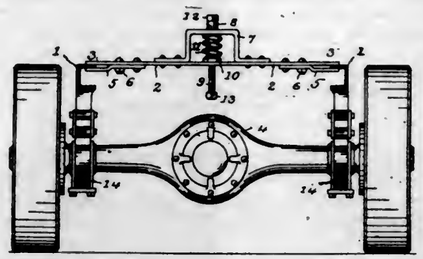
1,809,370. ILLUMINATED SIGN. ARCH K. WOOD, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Feb. 17, 1930. Serial No. 428,884. 1 Claim. (Cl. 40—14.1.)



An element for an illuminated sign consisting of a plate of glass in which is formed a character in relief, the outer surface from which the character rises being a blown surface.

1,809,371. VARIABLE CONDENSER CONTROL. MORRIS H. BENNETT, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 7, 1927. Serial No. 203,898. 2 Claims. (Cl. 74—7.)

1. In a vernier condenser control, and in combination, a condenser shaft, an annular member fixed on said shaft, screws threaded into the annular memebr with axes oblique to the axis of the condenser shaft, friction wheels mounted on the screw shanks between the annular member and the screw heads, a bearing free on the end of the shaft and having an outer cone surface for contacting with the wheels, an annular stationary cage concentric with and surrounding the shaft, said cage having at its outer end an internal axially flaring surface forming a track for the wheels, and means to turn the bearing to frictionally drive the wheels.

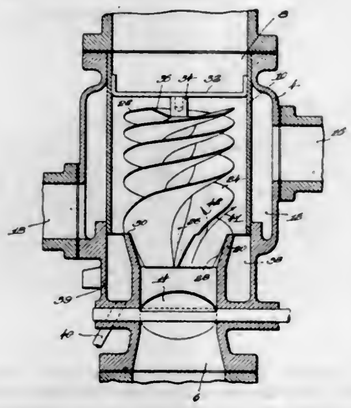


1,809,372. SHEATH FOR CIGARETTE PACKAGES. OLGA BERGHORN, Teaneck, N. J. Filed July 5, 1929. Serial No. 375,966. 3 Claims. (Cl. 206—48.)

1. An article of the character described, comprising a paper strip formed into a sheath adapted to receive a cigarette packet and a flap to cover one side of the sheath, a supply of matches mounted on said side of the sheath and covered by said flap, the opposite side of said sheath having a plait forming an external pocket, and means for securing said plait.

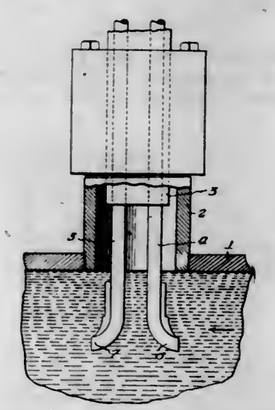
1,809,373. OVERLOAD INDICATOR. PERRY B. BONNETTE, Chicago, Ill. Filed Aug. 14, 1930. Serial No. 475,309. 2 Claims. (Cl. 116—114.)

1. An overload indicator for trucks comprising a transverse rail adapted for fixed attachment to the longitudinal beams of the truck underframe, an arch frame fixed centrally on said rail, an indicator stem guided vertically in said rail and frame, and a spring tending to force said



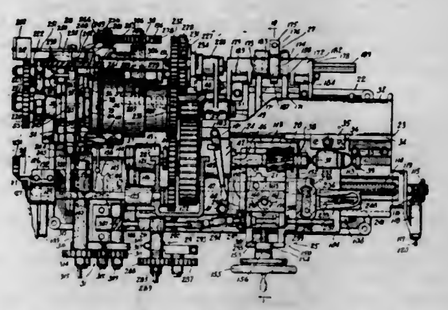
indicator stem downwardly, the lower end of the indicator stem having a normal spaced relation to the top of the transmission housing of the rear axle of the truck.

1,809,374. RAILWAY SIGNAL. VETABELLE PHILLIPS CARTER, San Francisco, Calif. Filed Dec. 3, 1927, Serial No. 237,361. Renewed Nov. 7, 1930. 14 Claims. (Cl. 246—126.)



1. A railway signal comprising a plurality of electric lights, means adapted to energize repeatedly said lights in progression to represent the direction of approach of a train, and means operated by the approach of a train from said direction for actuating said means.

1,809,375. VAPORIZER. FRANCIS F. CHASE, Melrose, Mass. Filed Mar. 16, 1928. Serial No. 262,210. 6 Claims. (Cl. 48—180.)

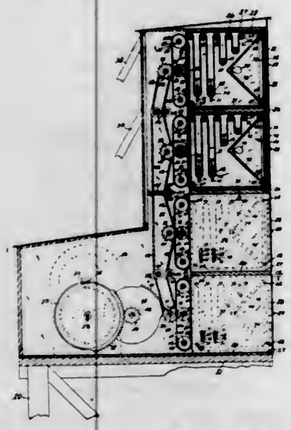


3. A vaporizer for internal combustion motors comprising a chamber adapted to be placed between the carburetor and intake manifold of the motor and having an opposed inlet and outlet, a stationary swirling device in the chamber coaxial with the inlet and outlet and comprising upwardly inclined helically shaped vanes having a plurality of convolutions, the outer edges of the vanes being spaced from the inner wall of the chamber to provide an unobstructed zone subjected to the engine suction through which the vapor mixture is free to pass upwardly and across which unvaporized particles are directed laterally by centrifugal force, and means for heating the wall of the chamber.

1,809,376. ORIFICE FOR FLOW MEASURING SYSTEMS. EDWARD S. COLE, New York, N. Y. Filed Apr. 11, 1924. Serial No. 705,811. 5 Claims. (Cl. 73—167.)

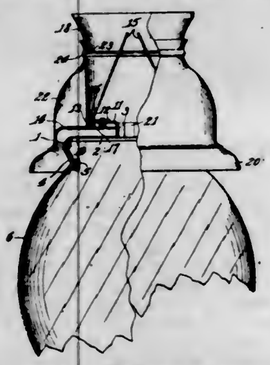
1. A rod-meter for flow-measuring systems having an orificed inlet end of such inclination to the vertical that it will cause an indication of the axial components of angular flows.

1,809,377. METHOD OF AND MACHINE FOR RELIEVING CUTTERS. JOHN EDGAR, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed July 9, 1928. Serial No. 291,161. 20 Claims. (Cl. 82—19.)



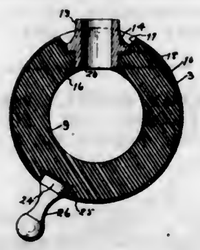
1. A machine for relieving the teeth of cutters having cutting faces longitudinally inclined to the axis of the cutter and having a contour with a peripheral lead comprising, in combination, cutter rotating mechanism, a tool having a cutting edge longitudinally inclined to the axis of the cutter, means for relatively moving the cutter and tool transversely of the cutter axis to back off the teeth, means for relatively moving the cutter and tool tangentially of the cutter at the cutting point, and means for varying the action of said first mentioned means to compensate for the inclination of the faces and for relatively adjusting the cutter and the tool longitudinally of the cutter to compensate for the lead of the contour.

10. A machine for cutting rotary cutters having generally longitudinal spiral gashes and having a spiral groove



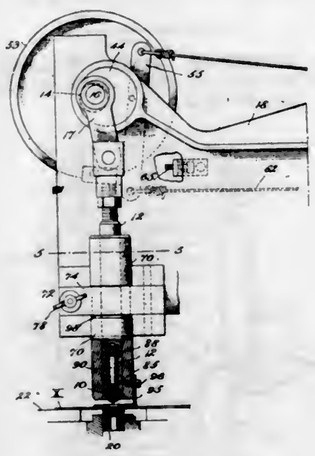
intersecting said gashes to define hob teeth comprising, in combination, a main drive shaft, a reversing clutch for said drive shaft, means connected to said shaft for rotating the cutter blank, a cutting tool, means operatively connected to said shaft for relatively traversing said tool longitudinally of said cutter, a relieving mechanism operatively connected to said shaft for effecting a relative relieving reciprocation between said tool and the cutter laterally of the latter once for each tooth, a separating mechanism operatively connected to said shaft for separating said tool and the cutter during each traverse in one direction, a cam operatively connected to said shaft for periodically opening said clutch, and means for automatically closing said clutch in the reverse direction from which it was opened.

1,809,378. INTERCHANGEABLE BLOCK BILLBOARD. GUSTAVUS W. ESCHENBACH, Los Angeles, Calif. Filed Aug. 22, 1929. Serial No. 387,569. 11 Claims. (Cl. 40—32.)



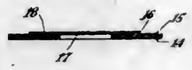
1. A bill-board including a vertically arranged frame, a plurality of interchangeable box units adapted to be placed adjacent each other and detachably secured in said frame so their pictorial sides are aligned with the front surface of said frame, and having panoramic pictorial advertising thereon formed to match at adjacent edges when arranged on the bill-board and interchangeable in position relative to each other.

1,809,379. GLOBE SUPPORT FOR ELECTRIC LIGHTS. CHARLES LEE FITCHET, Oakland, Calif. Filed May 12, 1930. Serial No. 451,545. 5 Claims. (Cl. 240—128.)



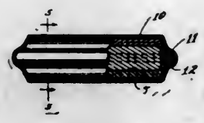
1. A globe support comprising a holder composed of complemental sections detachably secured in rigid relation, said holder including a substantially horizontal apertured body portion, a circumferential depending skirt portion contracted to embrace the neck of the globe, and a neck for embracing a lamp socket; arms directed radially outward from the neck of said holder, a reflector having radial arms supported upon and attached to the arms of said holder, a chimney-like draft tube superposed on said reflector, and suspension means leading outward from said attached arms.

1,809,380. CLARINET AND THE METHOD OF MANUFACTURE THEREOF. EDWARD J. GULICK, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Oct. 12, 1928. Serial No. 312,089. 11 Claims. (Cl. 84—382.)



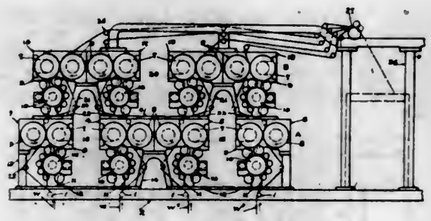
7. A musical instrument of the type described, comprising a body portion of non-metallic material, a layer of metallic material enclosing said body portion and a metallic ferrule firmly united with an end part of the body portion and covered by said layer of metallic material.

1,809,381. SCROLL CUTTING MACHINE. ROY E. HALLINOS, New York, N. Y. Filed Aug. 2, 1928. Serial No. 296,875. 4 Claims. (Cl. 164—86.)



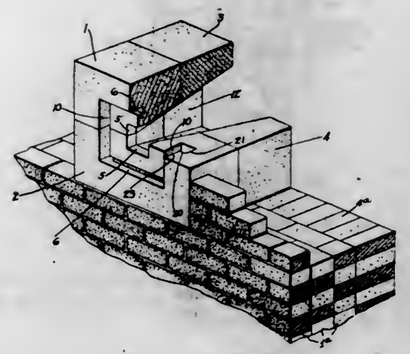
1. A machine of the character described comprising a frame, a crank pin journaled therein, a pitman connected to said crank pin and adapted to be disconected by sliding same axially of the pin, a plunger reciprocated by said pitman, a tubular guide for said plunger, means for detachably fastening the guide to said frame, and a punch removably carried by said plunger.

1,809,382. ILLUMINATED TRANSPARENCY. ROY E. HALLINOS, New York, N. Y. Filed June 18, 1928. Serial No. 286,173. 4 Claims. (Cl. 40—133.)



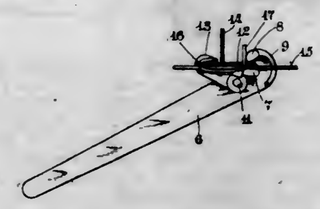
1. An illuminated sign, comprising a front plate having suitable apertures, a transparent sheet secured by adhesive material to the back of the said plate, said transparent sheet being fabric, and transparent globules secured by adhesive to one side of said fabric coincident with said apertures.

1,809,383. EDIBLE PRODUCT. ADRIAN HEYBOER, Grand Rapids, Mich. Filed Feb. 4, 1929. Serial No. 337,215. 1 Claim. (Cl. 99—10.)



An edible product of the class described comprising a pair of narrow longitudinal shells consisting of crusts and provided with end walls and having horizontal marginal flanges extending around the sides and ends of the shells, central longitudinal strengthening ribs arranged interiorly of the shells and extending from one end wall to the other, interiorly arranged transverse strengthening ribs extending in opposite directions from the central rib to the side walls of the shells, said shells being placed together with their longitudinal flanges fitted flat against each other to form a hollow stick, and filling in said stick.

1,809,384. PRINTING MACHINE. ALBERT J. HORTON, White Plains, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 3, 1929. Serial No. 352,083. 8 Claims. (Cl. 270—5.)

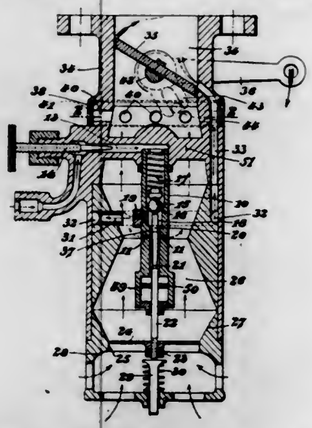


1. In a multi-unit press arrangement in which the printing members are cylinders, the combination of a plurality of printing units arranged in line with a space between the form cylinders which the form cylinders face and a closely adjacent superposed line of printing units spaced apart to form an aisle space which the form cylinders of two adjacent couples face, the units of each line being so arranged that certain of the cylinders of the lower units are below a space between the upper units and certain of the cylinders of the upper units are above a space between the lower units.

1,809,385. INSPECTION HOLE WALL STRUCTURE. MICHAEL LIPTAK, St. Paul, Minn. Filed Mar. 28, 1929. Serial No. 350,642. Renewed Feb. 10, 1930. 18 Claims. (Cl. 126—200.)

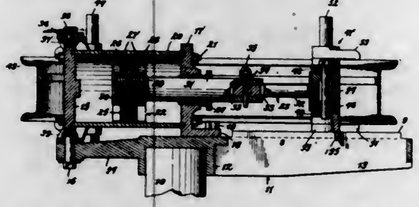
1. A fire wall element having an inspection opening, a groove in the face of the element circumscribing the opening, a face plate having an opening registered with said inspection opening and having a continuous bead projecting into said circumscribing groove, and cement filling said groove and embedding said bead.

1,809,386. FENCE FASTENER TOOL. WILLIAM H. MASON, Leesburg, Ohio. Filed May 27, 1929. Serial No. 366,141. 4 Claims. (Cl. 81—15.)



1. A fence clip fastening tool comprising a handle bar having at one end a curved portion to extend around one edge of a fence post and provided with a laterally offset portion forming a clip-bending jaw, a hook member pivoted to said handle bar to engage the other edge of said post, said hook member having a laterally offset portion near the axis of its pivotal connection constituting a clip-engaging jaw cooperating with the clip-bending jaw to press the clip toward the post during the clip bending operation.

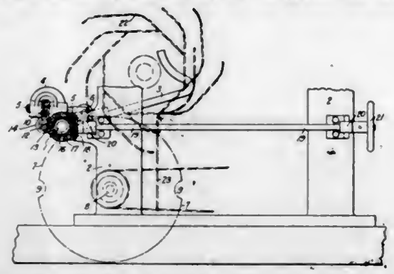
1,809,387. CARBURETER. SAÜL EMMANUEL MELKMAN, Montreal, Quebec, Canada, assignor to Thelma Carburetor Company, Societe Anonyme, Brussels, Belgium, a Corporation of Belgium. Filed Jan. 22, 1927, Serial No. 162,803, and in Belgium Aug. 18, 1926. 8 Claims. (Cl. 261—41.)



1. In a carburetor, a throttle valve, said carburetor having a duct adapted to form a by-pass around said

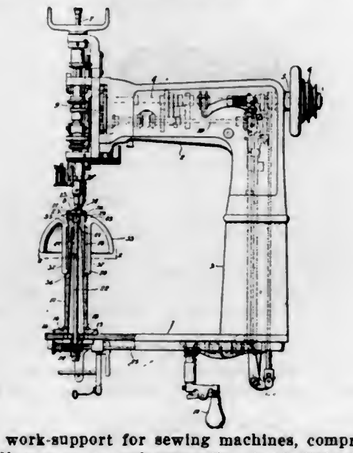
throttle valve, a fuel valve having an idling fuel outlet disposed opposite the inner end of the by-pass and adapted to discharge therein and also having a normal

speed fuel outlet, and means controlling the said fuel valve to successively discharge the fuel through the idling outlet and the normal speed outlet.



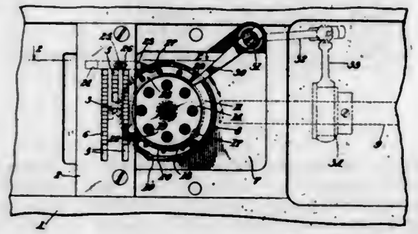
1,809,388. TIRE CHANGER. PURLEY V. MORGAN, Buffalo, N. Y., assignor, by mesne assignments, to Pneumatic Appliances, Inc., Kenmore, N. Y., a Corporation of New York. Filed Nov. 1, 1928. Serial No. 316,450. 3 Claims. (Cl. 157—1.)

1. A tire changer including a horizontal stationary enclosed cylinder, a piston in said cylinder, a piston rod secured to said piston and projecting outwardly from said cylinder, means for introducing fluid pressure to move said piston in opposite directions, a cross head pivoted intermediate its ends for horizontally swinging movement on the outer end of said piston rod, and a second cross head similarly mounted adjacent the opposite cylinder head, each of said cross heads comprising upper and lower arms and vertical rounded parts connecting said arms at their outer ends, said rounded parts forming shoulders adapted to engage the inner side of said rim to expand the same, upwardly inturned fixed hooks pivotally mounted at the lower outer ends of each vertical rounded part, and adapted to engage the lower flange of said tire rim to contract the same and removable inturned hooks pivotally mounted at the upper outer ends of said vertical rounded parts and adapted to engage the upper flange of said rim.



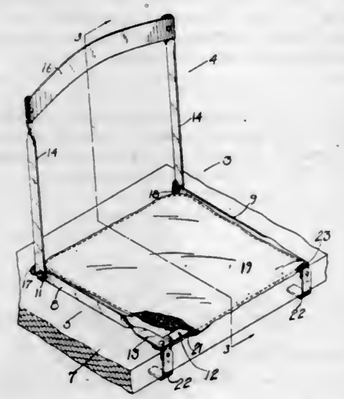
1,809,389. PRINTING MACHINE KICKER MECHANISM. EDWARD THOMAS MORRIS and THOMAS JOSEPH MILLS, London, England, assignors, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 19, 1923, Serial No. 613,630, and in Great Britain Jan. 28, 1922. 20 Claims. (Cl. 93—98.)

1. In a printing machine, the combination of a kicker mechanism for displacing a newspaper to indicate a group consisting of a predetermined number of papers, means for adjusting the timing of the kicker mechanism,



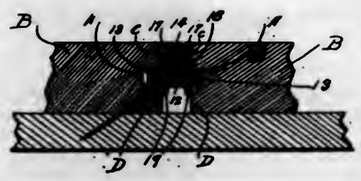
and means normally stationary relatively to the adjusting mechanism but operable while the machine is running for actuating said mechanism.

1,809,390. SEWING MACHINE WORK SUPPORT. WALTER MYERS, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 17, 1929. Serial No. 363,775. 6 Claims. (Cl. 112—260.)



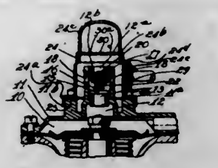
1. A work-support for sewing machines, comprising an upstanding post, a work-supporting head divided lengthwise of the post to provide complemental sections having outwardly extending flanges together providing a work-supporting surface encompassing the post, and means for securing the head sections upon the post for lateral detachment therefrom.

1,809,391. SEWING MACHINE LOOP-TAKER MECHANISM. WILLIAM N. PARKES, Brooklyn, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 10, 1929. Serial No. 361,896. 7 Claims. (Cl. 112—184.)



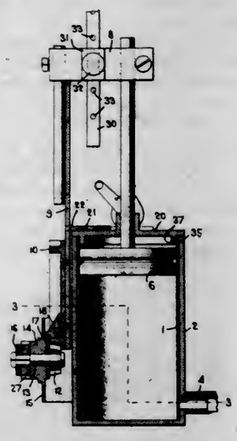
1. In a sewing machine provided with a throat-plate having a needle-aperture, a reciprocatory needle, a vertical-axis rotary loop-taker having a loop-seizing beak, a bobbin-carrier journaled in said loop-taker, means for restraining the bobbin-carrier against rotation with the loop-taker, and means for limiting oscillation of the bobbin-carrier in a direction opposite to the direction of rotation of the loop-taker comprising a stationary stop-element engaging the bobbin-carrier on its thread-loop cast-on side at a point spaced a substantial distance from a straight line transverse to the tangent to the path of the loop-taker beak in its loop-seizing position.

1,809,392. PORTABLE STADIUM SEAT. JEAN S. PONTEN, Piedmont, and OLAF W. PONTEN, Berkeley, Calif. Filed Apr. 4, 1929. Serial No. 352,368. 2 Claims. (Cl. 155—131.)



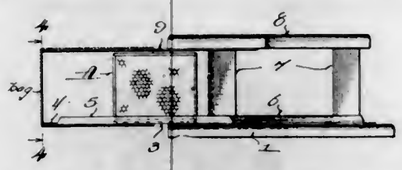
1. In a portable stadium seat, a back frame, a seat frame pivoted to the inner faces of the sides of said back frame, laterally and outwardly extended stop members integral with and lying in the plane of said seat frame for limiting the relative positioning of the two frames, downwardly extending portions on the forward ends of the sides of said seat frame arranged to lie against the forward edge of a stadium seat and seat engaging members pivoted to the outer faces of said portions and adapted to be swung on their pivots into an out of the way position above the plane of the lower ends of said downwardly extending portions and laterally to one side thereof.

1,809,393. INLAY FLOOR CONSTRUCTION. BYRD C. ROCKWELL, Camden, Ark. Filed May 9, 1929. Serial No. 361,769. 13 Claims. (Cl. 20—8.)



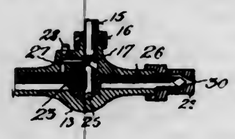
1. The method of manufacturing composite inlay tongues consisting in forming a tongue member having the sides provided with longitudinally disposed grooves, securing a resilient strip in the bottom of each groove and cutting away one side of the groove so as to expose the upper edges of said strips and of the intermediate portions to which said strips are secured.

1,809,394. VAPOR AND PRESSURE TRAPPING DOME FOR FUEL PUMPS. FRED G. SCHWEISTHAL, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Mar. 10, 1930. Serial No. 434,679. 7 Claims. (Cl. 103—223.)



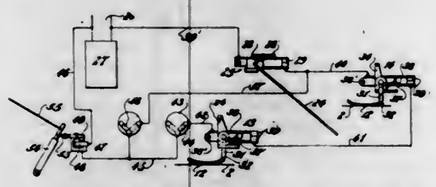
1. A device for the purpose indicated comprising a metal shell construction containing a vertically extending chamber closed at the upper end and open at the lower end and arranged at the lower end for mounting on the apparatus served, said shell encompassing at its lower open end a valve port of discharge from the apparatus served, a member containing said port and valve seat, and a valve controlling said port; a perforated member separably mounted in fixed position in the shell at the discharge side of said port and valve seat, said member forming at its perforated area a transverse partition in the shell separating a lower from an upper part of the shell cavity, a stop fixedly positioned with respect to said partition below the latter for limiting the opening movement of the valve, the structure having a discharge connection positioned laterally with respect to said chamber intermediate the valve seat and the partition; whereby the air and vapor carried by the liquid entering the shell is separated from the liquid by the perforated partition and trapped in the shell above said partition.

1,809,395. MEASURING PUMP. HARRY SEBELL, Boston, Mass., assignor of one-half to Arthur H. Parker, Lexington, Mass. Filed June 4, 1929. Serial No. 368,248. 6 Claims. (Cl. 103—163.)



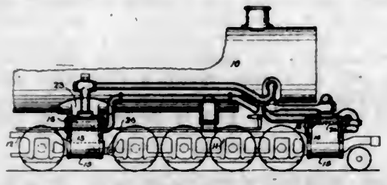
4. In a measuring pump, the combination with a cylinder having a port, of an inlet pipe, a discharge pipe, said cylinder being turnable about its axis from a position in which its port communicates with one pipe to a position in which its port communicates with the other pipe, a piston operating in said cylinder, an actuator connected to said piston and having a rack bar, and an operating pinion meshing with the rack bar, movement of the rack bar given to it by the pinion operating both to reciprocate the piston and to move the cylinder from one position to the other.

1,809,396. PACKAGING DEVICE. CARL W. AEPPLER and LESLIE LAWRENCE, Oconomowoc, Wis. Filed Mar. 15, 1930. Serial No. 436,213. 2 Claims. (Cl. 226—18.)



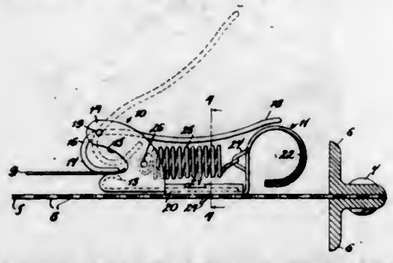
1. A device of the character described comprising a base, a blade secured thereto and projecting beyond said base, a support positioned above said base, a second blade carried by said support and aligned longitudinally and vertically with said first mentioned blade and cooperating with said first mentioned blade for receiving and spreading a folded paper bag, and means carried by said first mentioned blade for guiding an article into the bag.

1,809,397. GAS PILOT AND BURNER. IRVING M. AUSTIN, Jr., Rye, N. Y. Filed Mar. 23, 1929. Serial No. 349,346. 1 Claim. (Cl. 158—115.)



In a gas burner and pilot therefor located near the burner, a gas cock connected to the burner for controlling the supply of gas thereto, said gas cock comprising a body portion and a movable member with a bore therethrough, the body member having a pilot gas feeding bore connected to the pilot and a by-pass connecting the pilot bore with the gas supply side of the cock, the relative size and position of the bore in the movable element and the pilot bore being such that the supply of gas to the pilot is greatly increased just before and at the time gas is supplied to the burner which supply of gas to the pilot is decreased as the supply to the burner is increased through the movable element of the cock.

1,809,398. STOP MECHANISM FOR CLOTH DRYING MACHINES. CHARLES E. BEAN, Stafford Springs, Conn. Filed May 18, 1928. Serial No. 278,719. 5 Claims. (Cl. 192—127.)

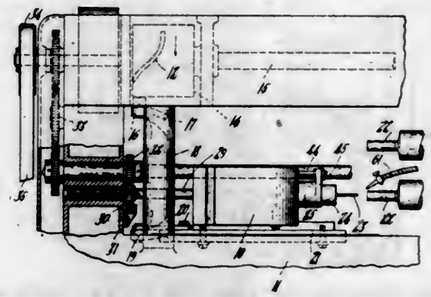


1. In combination with a cloth drying machine including a carrier chain and driving mechanism including a belt shipper, means for automatically stopping the machine should the cloth become detached from the carrier chain, said means comprising an arm for engaging the moving cloth, a contact operated by the arm, an electric circuit, an electro-magnet in the circuit, an armature for the electro-magnet, means operatively connected to the armature and belt shipper to release the belt shipper when the armature is demagnetized by the opening of the circuit by said arm becoming disengaged from the moving cloth.

1,809,399. LOCOMOTIVE. JAMES G. BLUNT and HARRY S. BURNHAM, Schenectady, N. Y. Filed May 26, 1930. Serial No. 455,499. 13 Claims. (Cl. 105—44.)

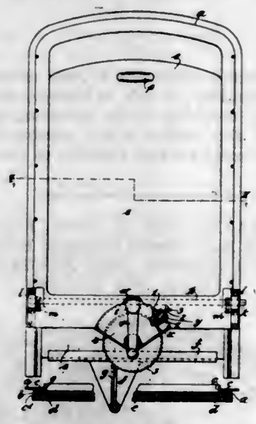
1. In a steam locomotive, the combination of two longitudinally spaced engines each comprising two duplicate castings, each casting having a working cylinder and a half saddle, the half saddle being formed at its top with a portion constituting one half of a shelf adapted to support either a boiler bearing or a platform, the four castings constituting the two engines being counterparts and interchangeable one with the other.

1,809,400. CLIP. CLAUDE A. BULKELEY, Kenmore, N. Y., assignor to Niagara Blower Company, Buffalo, N. Y., a Corporation of New York. Filed Aug. 5, 1930. Serial No. 473,147. 5 Claims. (Cl. 24—84.)



4. A fastener for holding hides or the like in a stretched condition on a frame, comprising a part having a lower flat portion having a depending finger by which it is adapted to be secured to said frame, a handle and reversely formed lips at the sides of said lower flat portion, a second part including a tongue slidably received between the said lips of said first part and formed at its front end to provide a reversely formed lower jaw and upstanding side wings and a movable jaw pivoted between said upstanding wings and movable toward said lower jaw to grip the edge of the hide therebetween and spring tension means tending to draw said parts together.

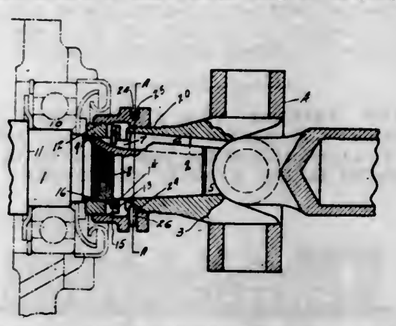
1,809,401. ADJUSTABLE JOINER. HERMAN C. CATTELL, Alliance, Ohio. Filed Mar. 5, 1928. Serial No. 259,333. 2 Claims. (Cl. 33—98.)



2. A tool of the class described comprising an extension member composed of telescoping sections, a sleeve adjustably secured to one section, a bushing within the sleeve, a slot in the next larger adjoining section, a projection on the sleeve adapted to extend within the slot, a spring within the said sleeve interposed between the bushing and the end of the said adjoining section, a bracket secured to one end of said extension member, a bolt passing through the said bracket, a tongue pivotally mounted on said bolt, a lock nut threaded on said bolt, a spring interposed between the bracket and the said locknut and a binding nut threaded on said bolt adapted to bind the tongue against movement with respect to the extension member.

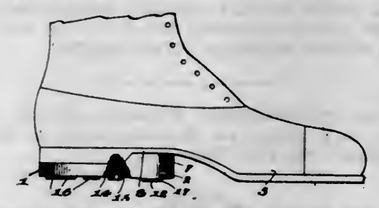
1,809,402. RELIEVING DEVICE FOR HIGH SPEED DRILLS. FRANK L. CONE, Windsor, Vt. Filed Mar. 22, 1926. Serial No. 96,655. 2 Claims. (Cl. 77—32.)

1. In a device of the class described, a tool carriage having a tool-holder thereon, means for positively advancing the carriage continuously at a relatively slow speed through its range of travel toward the work, and means on said carriage for supporting said tool holder for advance substantially with the carriage, said last-named means operating periodically during the advance of the carriage for retracting said tool-holder from the work and returning the tool-holder at a relatively fast speed as far only as the position with respect to the work from which it was retracted.



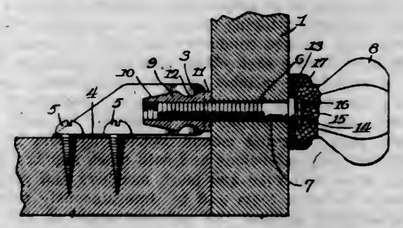
1,809,403. SLIDING WINDOW. ERNEST WILLIAM COTTER, London, England, assignor to J. Stone & Company Limited, Deptford, England, a Company of Great Britain. Filed Aug. 11, 1930, Serial No. 474,648, and in Great Britain Sept. 9, 1929. 5 Claims. (Cl. 114—177.)

1. Sliding window, particularly of the deckhouse type, comprising a fixed frame, a sliding light, a seating for said light, bars in which the light is guided in its sliding movement, rack and pinion operating means for adjusting said bars longitudinally and wedging means formed upon and engaging directly between said bars and said frame and operative, when said bars are adjusted longitudinally, to produce bodily lateral movement of said bars and the light in relation to said seating.



1,809,404. CONNECTION FOR UNIVERSAL JOINTS OR COUPLINGS. E. ESTAY CULBERTSON, Detroit, Mich., assignor to Spicer Manufacturing Corporation, a Corporation of Virginia. Filed Apr. 10, 1926. Serial No. 101,147. 3 Claims. (Cl. 287—53.)

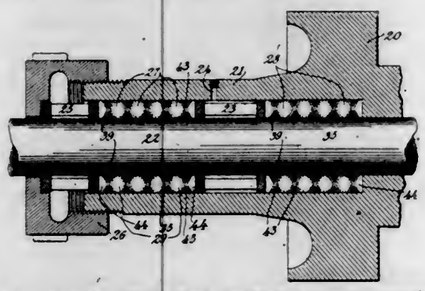
1. In a device of the character described, the combination with a shaft having a seat, of a ring threaded on said shaft adjacent said seat, and being externally threaded, means for locking said ring to said shaft, a hub mounted on said shaft and having threads, of opposite direction of lead to those on said ring, on its periphery,



a coupling member having right and left hand internal threads adjacent its ends for engagement with the threads on said ring and hub, and means for locking said coupling member in operative position.

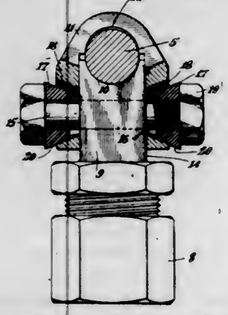
1,809,405. SHOE HEEL. ALBERT EHRENFRIED, Boston, Mass. Filed May 3, 1929. Serial No. 360,087. 1 Claim. (Cl. 36—76.)

An arch support, comprising a main portion adapted to be attached to the heel of a shoe to form the top lift thereof, and a forward portion extending under the inner edge of the shank of the shoe to support the inner longitudinal arch of the foot, the said forward portion being tapered in width and height longitudinally from the heel end and in height transversely from the inner side, the said portion contacting throughout with the shank of the shoe, the said forward portion having a protuberance extending below the normal traced surface of the heel.



1,809,406. DOOR CATCH. WILLIAM D. FERRIS, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois Filed Aug. 6, 1928. Serial No. 297,670. 1 Claim. (Cl. 292—17.)

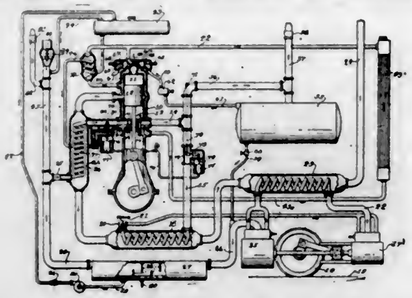
A spring catch for doors or other closures, comprising a pair of opposed spring jaws, means for attaching the jaws to a stationary support adjacent the door, a rotatable catch member tapered to be pushed between said jaws, said member having a polygonal nut portion and a circumferential groove to receive the jaws, so that said member is operative in any rotated adjustment thereof, means for mounting said member on the door in position to engage the jaws, having screw provisions whereby



rotation of said member alone tightens the member against one side of the door, whereby the member is adjustable within limit for any thickness of door, a handle for pushing the door closed in latched position and for pulling the door open, said member serving also to retain said handle in position on the door, and means other than said member for positively limiting the closing of the door.

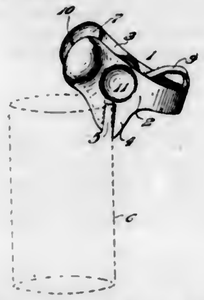
1,809,407. PACKING. EDGAR N. FOX, Palmyra, N. Y., assignor to The Garlock Packing Company, Palmyra, N. Y., a Corporation of New York. Filed May 15, 1922. Serial No. 561,139. 6 Claims. (Cl. 286—25.)

6. An annular piston rod packing element comprising a circular segmental ring of semi-rigid material, X shaped in cross section, having a cylindrical inner working face, an outer cylindrical bearing face, and inner, outer and lateral recesses bounded by conical surfaces.



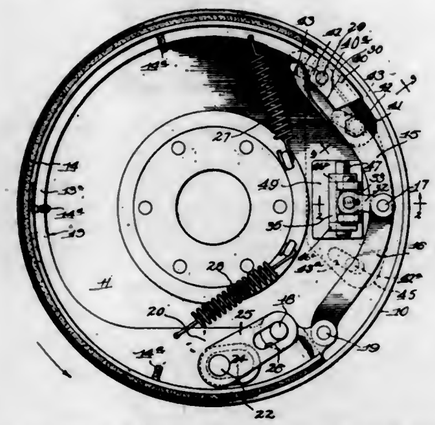
1,809,408. T-CONNECTER. ROBERT A. GOELLER, Larchmont, N. Y. Filed June 29, 1927. Serial No. 202,248. 7 Claims. (Cl. 173—273.)

1. In a connecter the combination with a block member having an end gripping surface for engaging one side of a conductor, of a cooperating relatively movable yoke member having a gripping surface for contacting with the opposite side of said conductor and side extensions having surfaces facing each other adjacent oppositely facing sides of said block member, and fastening means extending in a line passing transversely through said block member and side extensions and supported by said block member, said fastening means cooperating with at least one of said side extensions and said block member to relatively move said yoke and block members and grip said conductor between them and to simultaneously force the side extensions against the adjacent sides of the block member.



1,809,409. POWER GENERATING AND CONVERTING SYSTEMS. IRVING J. GRANGER, Waterbury, Conn. Filed July 13, 1926. Serial No. 122,091. 6 Claims. (Cl. 60—19.)

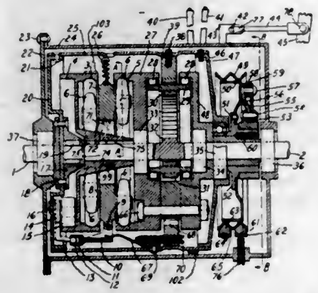
1. In a power transmitting apparatus, a chamber for mixing air with atomized water, means for compressing said mixture to form a vapor, a vapor engine driven by said compressed vapor, a condenser for separating the



water element of said vapor from the air thereof, and means for returning said air and liquefied water to the mixing chamber.

1,809,410. JUICE EXTRACTOR. ANNA L. GROSS, Philadelphia, Pa. Filed Apr. 15, 1929. Serial No. 355,143. 1 Claim. (Cl. 100—41.)

A juice extractor comprising a piece of sheet material deflected intermediate its ends to form opposed sides and having a fruit receiving prong extending between said sides and each side having a slot opening extending inward from its lower edge to adapt it to be supported on a glass.

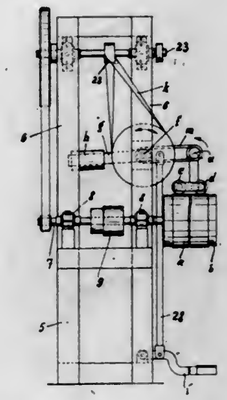


1,809,411. BRAKE. EARL G. GUNN, Racine, Wis., assignor to The Nash Motors Company, Kenosha, Wis., a Corporation of Maryland. Filed June 24, 1929. Serial No. 373,104. 9 Claims. (Cl. 188—78.)

1. In a brake, a drum, a support, friction means engageable with said drum, means for adjusting the idle position

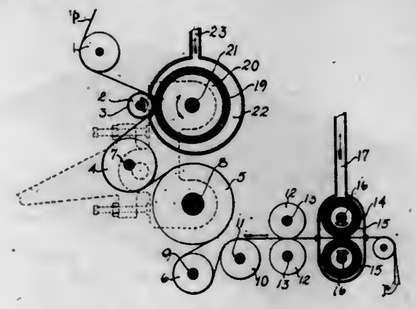
of said friction means relative to said drum comprising a member movably mounted on said support, and applying means for said friction means including a lever having a pivotal connection on said support which is movable with said adjusting means, and maintaining said lever in a predetermined angular relation with said support in its various adjusted positions.

1,809,412. FLEXIBLE AUTOMATIC TRANSMISSION. GAIL H. HINES, Lansing, Mich. Filed Oct. 13, 1930. Serial No. 488,411. 20 Claims. (Cl. 74—34.)



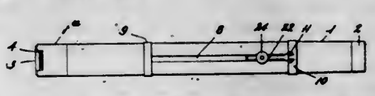
1. In a power transmission device, the combination of a drive member and a driven member, a differential mechanism connecting said members possessing a weight, means to revolve said weight in proportion to the speed of the driven member, means attached to the drive member to work the weight against centrifugal resistance, a drive gear attached to the drive member, an internal driven gear attached to the driven member, a connecting gear having a series of spiral teeth meshing with teeth of the drive gear and teeth of the driven gear, and means having operative connection with the driven member through said connecting gear to work the weight whereby to vary gradually the ratio of speed transmission, and of means to control the differential mechanism.

1,809,413. DRAIN. JOSEPH HIRSHSTEIN, Cleveland, Ohio, assignor to The Josam Manufacturing Company, Cleveland, Ohio, a Corporation of Delaware. Filed Oct. 20, 1926. Serial No. 142,983. 3 Claims. (Cl. 285—37.)



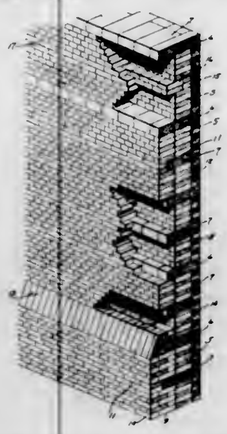
1. In combination, a drain having an upwardly extending portion and a laterally extending portion, an arm provided with a T-shaped head portion adapted to engage the outwardly and laterally extending portions of said body at the juncture of said portions with each other, a lug on said upwardly extending portion overlying and contacting with the upper side of said head portion and lugs on said laterally extending portion radially abutting the outside vertical surfaces of said T-shaped head portion of said arm whereby the arm is held against movement in one direction with reference to the drain body, a sheet of waterproofing material disposed above the laterally extending portion of said drain, and means associated with said arm for urging the waterproofing material into clamping engagement with the horizontal portion of said drain.

1,809,414. GRINDING MACHINE. JOHANN HÜSER, Polsum, Germany. Filed Feb. 15, 1929, Serial No. 340,094, and in Germany Mar. 19, 1928. 7 Claims. (Cl. 51—135.)



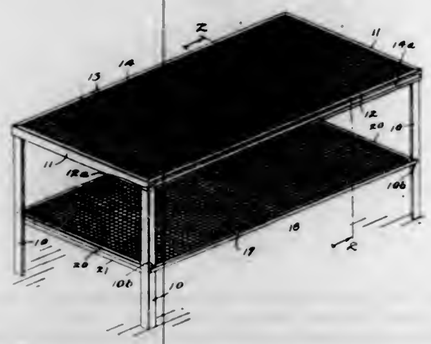
6. In a machine of the character set forth, the combination with a shaft, of a lever mounted on the shaft for rocking movement, a frame carried by the lever, rollers on the frame, means by which to impart rocking movement to the lever, and means for driving the rollers from said shaft.

1,809,415. METHOD AND APPARATUS FOR MAKING PHOTOGRAPHIC FILM BACKING PAPER WITH THIN EDGES. JOHN G. JONES and HAYWOOD G. DEWEY, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 25, 1929. Serial No. 395,014. 13 Claims. (Cl. 92—70.)



1. In a paper skiving machine, the combination with an anvil having a smooth surface, of a crown on the smooth surface of the anvil, means for stretching a sheet of paper over the anvil whereby a ridge is stretched in the surface of the paper sheet and mechanism for reducing the thickness of the stretched ridge.

1,809,416. FOUNTAIN PEN. JOHN G. LIDDELL, Everett, Mass. Filed July 11, 1929. Serial No. 377,388. 4 Claims. (Cl. 120—49.)



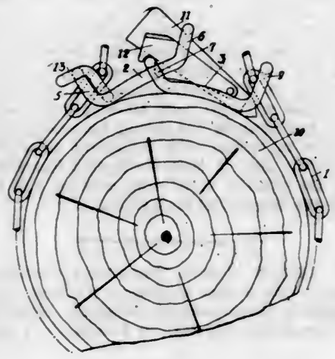
1. A fountain pen comprising a casing; a pen movably mounted within the casing; and a cap permanently attached to the casing but movable from closed position to permit protrusion of the pen, said cap being mounted to rotate about the longitudinal axis of the device.

1,809,417. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn. Filed Oct. 5, 1925. Serial No. 60,463. 14 Claims. (Cl. 72—102.)

1. A wall structure comprising a permanent wall and a replaceable wall, the former having tie blocks that extend therefrom into the latter, said replaceable wall having a relatively thick lower portion, and sill blocks located at the line of junction between the thick and relatively thin portions of said replaceable wall, said sill blocks having beveled surfaces blending together the exposed surfaces of the relatively thin and thick portions of said replaceable wall.

1,809,418. TABLE WITH DUSTLESS STRUCTURE. CHARLES M. MCCARTHY, Minneapolis, Minn. Filed Dec. 6, 1929. Serial No. 412,066. 4 Claims. (Cl. 211—126.)

4. A table for displaying articles in a store, having in combination, a plurality of legs, an openwork frame supported by said legs at the tops thereof, a wire screen supported by the sides of said openwork frame, and forming the horizontal top of the table, the wires of said screen being spaced so that dust from the atmosphere will pass therebetween, said frame having means for removably receiving a plate, and a plate slidable into said frame from one side thereof, said plate being readily removable so that dust deposited thereon can be removed.

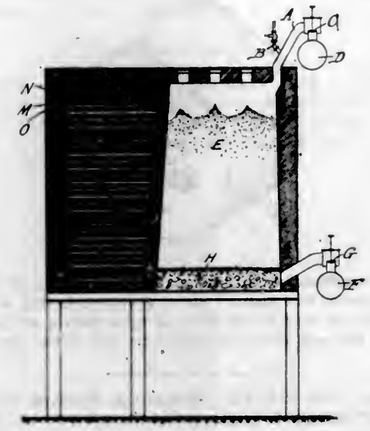


1,809,419. VALVE. EDWARD MULLER, North Bergen, N. J. Filed Jan. 4, 1927. Serial No. 158,924. 5 Claims. (Cl. 251—143.)

5. A valve comprising a casing having an inlet passage and an outlet passage separated by a partition formed with a valve opening surrounded by a valve seat, a valve stem slidably mounted in said casing, a valve head mounted on said stem to cooperate with said valve seat to close and open said valve opening upon movement of said stem in the direction of flow of liquid through the valve and in the opposite direction respectively, a piston disk fast on said valve stem, a pair of oppositely facing cups slid-

able on said valve stem between said piston disk and valve head and forming cylinders to loosely receive said parts, both said cups being movable with said piston disk and valve head upon opening movement of the latter, and means for limiting movement of said cups with respect to said piston disk and valve head upon closing movement of the latter, whereby closing of the said valve head is retarded.

1,809,420. CHAIN FOR TIMBER IN COMBINATION WITH A TIGHTENING DEVICE AND KEY. KARL RICHARD ALBERT NYLÉN, Solleftea, Sweden. Filed Aug. 31, 1929, Serial No. 389,854, and in Norway Mar. 2, 1929. 3 Claims. (Cl. 24—116.)

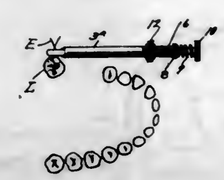


1. In combination with a chain laid around round timber logs, a member with upwardly curved narrow part engaging an upstanding link of said chain, a central larger part of said member allowing the free passage of said chain, an upwardly curved ring-shaped part of said member, a second member with upwardly curved narrow part engaging an upstanding link of said chain, a central larger part of said second member allowing the free passage of said chain, an upwardly curved part of said second member adapted to be inserted through the upwardly curved ring-shaped part of the first member, a hole in the upwardly curved part of the second member, a key adapted to be passed through said hole in the upwardly curved part of said second member.

1,809,421. APPARATUS AND PROCESS FOR PRODUCING COKE AND WATER GAS IN VERTICAL CHAMBER OVENS. CARL OTTO, Hellerup, Denmark, and CHARLES W. ANDREWS, Duluth, Minn. Filed May 8, 1925. Serial No. 28,822. 5 Claims. (Cl. 202—23.)

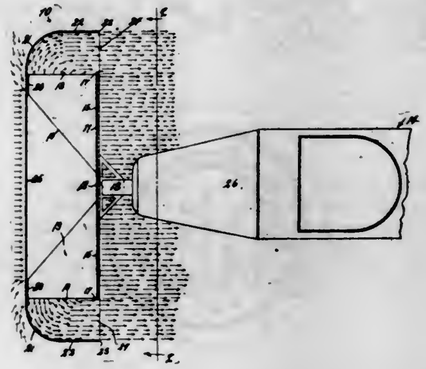
1. The process of producing coke and water gas in vertical chamber coke ovens, which consists in coking

the upper portion of the coal in the chamber of the oven, feeding steam to the top of the chamber after the ending of the coking of the coal in the upper part of the chamber



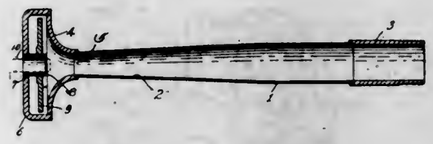
and before ending of the coking in the lower part of the chamber, and in drawing off the water gas so produced, at the bottom of the chamber, with the distillation gas which is still being produced.

1,809,422. METHOD OF MANUFACTURING SOLUTIONS OF CHOLESTERINE. FRIEDRICH PASSEK, Hamburg, Germany. Filed Feb. 14, 1929, Serial No. 340,003, and in Germany Sept. 10, 1927. 5 Claims. (Cl. 167—65.)



1. The method of manufacturing a substantially clear aqueous alcoholic solution of cholesterine or derivatives thereof comprising dissolving cholesterine or derivatives thereof in a comparatively small quantity of an aliphatic halogenated hydrocarbon having a marked solvent power therefor, and diluting the resulting solution with such a quantity of a diluted alcohol as will ensure the production of a permanently clear solution.

1,809,423. TOOTH BAND HOLDER AND CLAMP. ARTHUR E. PECK, Los Angeles, Calif. Filed Sept. 25, 1929. Serial No. 395,060. 2 Claims. (Cl. 32—17.)



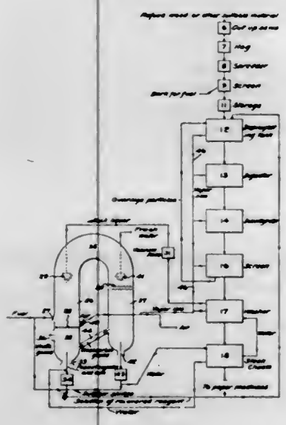
1. A dental wax-band holder comprising a center rod part and a slotted sleeve part in which it is non-turnable and longitudinally slidable, said rod and sleeve having on coordinate ends a pair of lateral jaws to receive the part to be gripped, and a spring operative on said rod and sleeve to close the jaws, a spur projecting through the slot from the rod, and a jamming nut running on said sleeve to engage the nut and jam the effective jaws closed on an object.

1,809,424. PROPELLER FOR DRIVING AND STABILIZING AIRCRAFT. ANDREW C. PEREBOOM, Los Angeles, Calif. Filed Nov. 28, 1928. Serial No. 322,518. 1 Claim. (Cl. 170—168.)

A propeller for driving and stabilizing an aircraft including a flanged hub secured to the engine shaft of the aircraft, a back plate arranged transversely to said shaft that is secured to said hub, taper blades arranged radially relative to the longitudinal axis of said shaft and extended straight forward from said back plate, flanged rear ends to said blades that are secured to said back plate, as casing enclosing said blades, a nose plate integral with said casing and arranged parallel to said back plate, forward end flanges to said blades that are secured to said nose plate so as to support said casing in advance of said blades, said nose plate having an air inlet therethrough that is greater in diameter than the diameter through the body of said aircraft, and a circumferential wall integral with said casing surrounding the rim of said back plate and spaced therefrom to form an annular discharge outlet through which said propeller can drive a cylindrical column of air so as to surround and stabilize said aircraft and propel it forward substantially as described.

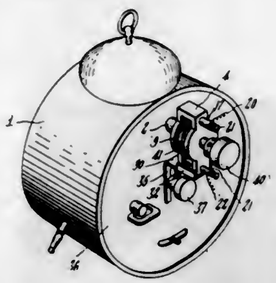
1,809,425. MIXING DEVICE FOR GAS BURNERS AND THE LIKE. MILLARD J. ROBERTS, Tonawanda, N. Y., assignor, by mesne assignments, to Roberts-Gordon Appliance Corporation, Buffalo, N. Y., a Corporation of New York. Filed Sept. 27, 1927. Serial No. 222,357. 5 Claims. (Cl. 158—118.)

3. A mixing device for gas burners and the like comprising a metal conduit having a bell-like inlet end and a continuously smooth finished internal passage from said inlet end, and first converging from said inlet end and then slowing diverging to form a Venturi passage, said bell-like part and conduit being joined by a smooth joint at the smaller end of said passage, a strap extending across the bell-like end, and having angular legs extending towards and connected to the peripheral portion of the inlet end with the strap spaced from the flared inlet end, a sleeve carried by and extending through said strap towards and axially of the inlet end of the passage for receiving a jet device, and a valve plate disposed between



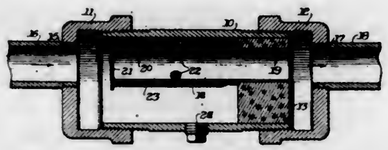
said strap and said inlet end and carried by and adjustable along said sleeve to vary the amount of air admitted to the inlet end around said sleeve.

1,809,426. HYGROMETER. ROY B. SOMERS, Zeeland, Mich. Filed Feb. 20, 1928. Serial No. 255,526. 3 Claims. (Cl. 73—24.)



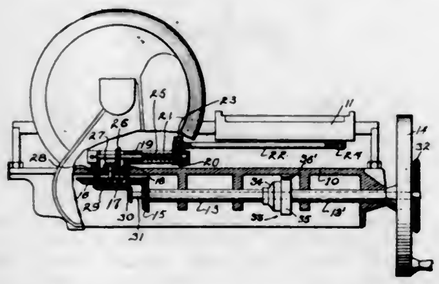
3. A device of the class described comprising, a supporting member, a curved band of metal fastened at one end to the said supporting member, flanges extending inwardly from the ends of said band and a plurality of tapered blocks capable of absorbing moisture from the air placed against the inner side of the band with their tapered sides in tight abutting relationship, said blocks extending continuously from one flange to the other.

1,809,427. PROCESS AND APPARATUS FOR MANUFACTURING PAPER. JOHN H. SPOHN, Jr., San Francisco, Calif., assignor to Chemical Development Co. Ltd., San Francisco, Calif., a Corporation of California. Filed Nov. 3, 1928. Serial No. 316,891. 2 Claims. (Cl. 92—11.)



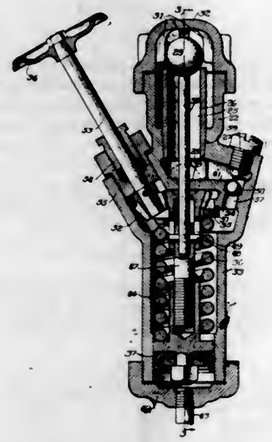
1. The process of recovering reagents used in a manufacturing process comprising injecting a black liquor into a furnace to concentrate the same and to burn out organic matter, scrubbing products of combustion and vaporized reagents from the furnace with a fluid to recover the reagents and to remove obnoxious gases, and separating a reagent constituent substantially insoluble in the scrubbing fluid from the fluid.

1,809,428. TIME CONTROLLED SWITCH. EVERETT E. STONE, Brookline, Mass. Filed May 9, 1930. Serial No. 451,001. 4 Claims. (Cl. 200—36.)



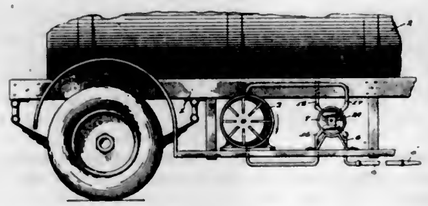
1. In combination with an alarm clock having an alarm winding stem and another stem, a switch having a shaft attachable to said alarm winding stem, and a supporting element for said switch securable to said other stem.

1,809,429. OIL FILTER. WILLIAM B. STURGIS, Chicago, Ill. Filed July 2, 1928. Serial No. 289,749. 3 Claims. (Cl. 210—165.)



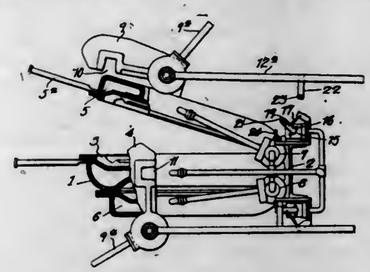
1. In an oil filter, the combination of a horizontally disposed pipe section having a normally closed drain in the bottom, a cylindrical cork forced into direct engagement with and confined wholly within one end of the pipe section and having a bore or aperture of uniform diameter extending therethrough, an elongated filtering element extending longitudinally of said pipe section and having one end thereof forced into and held in the aperture in the cork, and reducer caps screwed onto the ends of the pipe section for connecting the filter to a feed line.

1,809,430. SLICING MACHINE. ADRIANUS VAN DUYN, Rotterdam, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Jan. 20, 1927, Serial No. 162,229, and in Germany May 20, 1926. 18 Claims. (Cl. 146—102.)



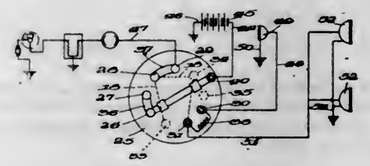
8. A slicing machine comprising a rotary slicing knife, a reciprocating table for presenting material to said knife to be sliced, a rotary crank arm having a cross-head adjustable longitudinally thereof, a link connecting said cross-head and table, a screw shaft for moving said cross-head along said crank arm, a hollow drive shaft for rotating said crank arm, an operating shaft extending through said hollow drive shaft, means connecting said operating shaft with said screw shaft to rotate said screw shaft from said operating shaft, a drive wheel, and variable speed connection between said drive wheel and drive shaft.

1,809,431. VALVE CONSTRUCTION. IRA A. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Oct. 5, 1928. Serial No. 310,494. 3 Claims. (Cl. 137—153.)



1. In a valve, the combination of a valve-casing having inlet and discharge ports, a valve controlling the passage connecting said ports, a piston slidable in a cylindrical part of said casing, a rod having a screw-threaded connection with said piston and adapted to open said valve upon movement of said piston, a spring opposing the valve-opening travel of said piston, means to apply fluid pressure to said piston in opposition to the action of said spring thereon, a gear in said casing having a sliding connection with said rod permitting the gear to turn said rod to change its effective length with relation to said piston, a second gear in said casing in mesh with said first gear, and means projecting outside of said casing by which said second gear may be turned to adjust the fluid pressure on said piston at which the latter will unseat said valve.

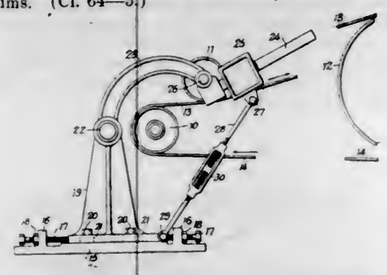
1,809,432. DELIVERY VALVE FOR LIQUID DELIVERY TRUCKS. SCOTT E. WEBB, Santa Rosa, Calif. Filed Feb. 25, 1930. Serial No. 431,105. 11 Claims. (Cl. 137—21.)



1. The combination with a delivery truck for liquid products provided with a tank, a pump, and a delivery nozzle, of a delivery valve comprising a hollow body having a suction port connected to the suction side of the pump, a pressure port connected to the pressure side of the pump, a delivery port connected to the delivery nozzle, and a tank port connected to the tank, said valve being provided with a movable member mounted within the hollow body provided with a pair of noncommunicating passages having ports movable to registering relation with the valve ports, to connect the nozzle port with either pump port and to connect the tank port with the other pump port as desired whereby liquid may be pumped to or from the tank as desired, the hollow body normally being filled with the liquid product to be delivered.

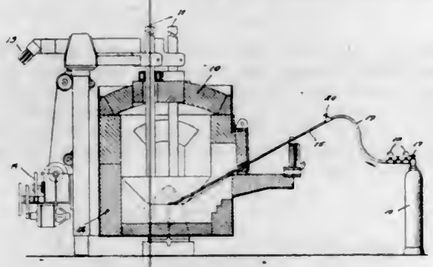
1,809,433. APPARATUS FOR VULCANIZING TIRES. HARRY WILLSHAW, THOMAS NORCROSS, and FREDERICK GEORGE BROADBENT, Erdington, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a Corporation of New York. Filed Mar. 15, 1928, Serial No. 261,763, and in Great Britain Mar. 19, 1927. 5 Claims. (Cl. 18—17.)

1. Apparatus of the type described which comprises a chest in two parts, a link concentrically mounted on one part and adapted to engage the other of said parts with its free end, means for turning said eccentric against the part on which it is mounted, and means actuated by said eccentric turning means when the free end of said link is in engagement with said second part to admit fluid under pressure to the work within said chest.



1,809,434. CONTROL SWITCH CIRCUITS FOR AUTOMOBILES. ROBERT K. WINNING, Wauwatosa, Wis., assignor to Clum Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Aug. 16, 1922, Serial No. 582,210. Divided and this application filed Apr. 24, 1928. Serial No. 272,468. 7 Claims. (Cl. 171—97.)

7. In the electrical system of an automobile, the combination with ignition, battery and lighting conductors; of a switch comprising nine arcuately arranged stations in a common plane; a first, second, third and fourth of said stations comprising terminals and a seventh and eighth of said stations comprising additional terminals; conductors connecting the terminals at the first and second stations and at the third and fourth stations, said conductors being in operative electrical connection respectively with said battery and ignition conductors, a resistance connecting the terminals at the seventh and

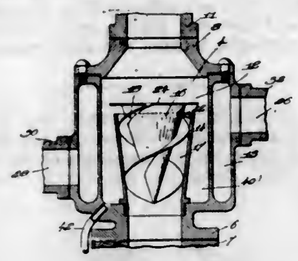


eighth stations, said lighting conductor being connected with the terminal at the eighth station; an additional lighting conductor connected with the terminal at the seventh station; and a movable contact element oscillatable with respect to said terminals and provided with contacts adapted to register with selected terminals in the various positions of said elements, there being contacts spaced apart the distance between two consecutive stations on one side of said element and contacts spaced apart the distance between three consecutive stations on the other side of said element, all of said contacts being in electrical connection.

1,809,435. BELT DRIVE. CHARLES O. WOOD, Chambersburg, Pa. Filed Aug. 18, 1927. Serial No. 213,895. 7 Claims. (Cl. 64—5.)

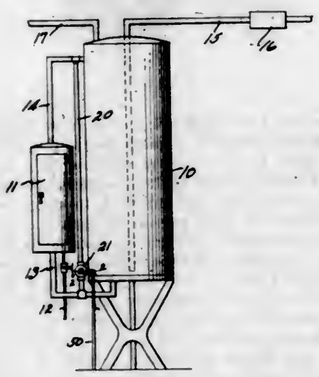
2. In a belt drive, the combination with a driving pulley, a driven pulley and a belt connecting them; of a contactor pulley engaging the slack reach of the belt, means for loading the contactor pulley, manual means to adjust the load on said contactor pulley, and means to automatically adjust the load on the contactor pulley in accordance with the stretching of the belt.

1,809,436. PROCESS OF PURIFYING METALS. CHARLES W. CARMAN, Washington, Pa., assignor, by mesne assignments, to Stainless Steel Corporation, Youngstown, Ohio, a Corporation of Delaware. Filed Feb. 26, 1927. Serial No. 171,318. 10 Claims. (Cl. 75—44.)



1. The process of purifying molten steel in a closed container which comprises adding material containing palladium oxide and aluminum in sufficient quantity to float the palladium oxide.

1,809,437. STAINLESS CHROMIUM ALLOY AND METHOD OF PRODUCING SAME. CHARLES W. CARMAN, Washington, Pa., assignor, by mesne assignments, to Stainless Steel Corporation, Youngstown, Ohio, a Corporation of Delaware. Filed Sept. 15, 1927. Serial No. 219,825. 6 Claims. (Cl. 75—44.)

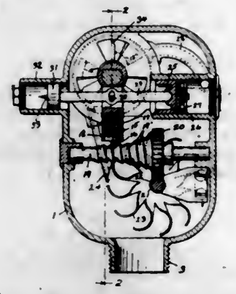


1. The method of purifying a bath of molten metal which comprises slagging off impurities, adding ferrochromium, injecting oxygen into the bath and adding a floatable material comprising a metallic oxide and a reducing agent that fuses off during the oxygen injection.

1,809,438. VAPORIZER. FRANCIS F. CHASE, Melrose, Mass. Filed July 7, 1927. Serial No. 203,939. 10 Claims. (Cl. 48—180.)

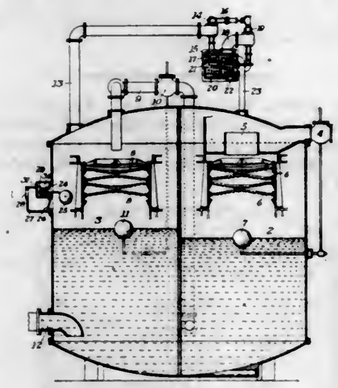
1. A vaporizer comprising a casing having an inlet and an outlet, means forming a helical conduit through which the mixture passes from the inlet toward the outlet, said means including vanes having their axis extending longitudinally between the inlet and the outlet and laterally opposed to the wall of the casing to direct the mixture by centrifugal force laterally toward the wall of the casing, means for supporting and enclosing the vanes and means for applying heat externally of the casing.

1,809,439. SAFETY VALVE FOR HEATERS. EARL R. CLARK, Highland Park, Mich. Filed Aug. 24, 1928. Serial No. 301,763. 1 Claim. (Cl. 122—504.)



In a hot water heating system, a storage tank having a cold water inlet leading to and opening adjacent the tank bottom, and a hot water outlet in the top of the tank, a hot water heater on the side of the tank, a pipe leading from the bottom of the tank to the bottom of the heater, a pipe leading from the top of the heater to the upper portion of the tank, a by pass pipe connecting the latter two pipes, and a thermally sensitive relief valve in said by pass pipe near the lower end thereof and constructed to discharge a portion of the tank contents which has accumulated in said tank and spread thru said by pass pipe, when the tank contents have exceeded a predetermined temperature and not before.

1,809,440. FLUSH VALVE. DONALD ELDER, Berkeley, Calif. Filed Jan. 27, 1930. Serial No. 428,859. 17 Claims. (Cl. 221—101.)

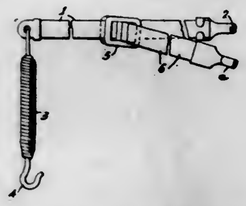


1. A water flow controlling device comprising a chambered body with an inlet and an outlet passage for water to flow therethrough, a rotary valve across the inlet passage, means accessible at the exterior of said body for

manually rotating said valve to open the same, means tending to close said valve including a piston under

pressure of water from a point ahead of said valve, and means within said body operated by flow of water therethrough controlling the time of closing.

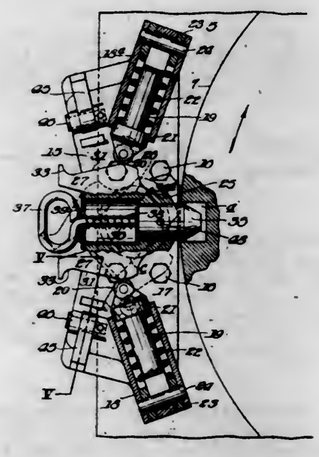
1,809,441. METHOD AND APPARATUS FOR THE TREATMENT OF LIQUIDS. WILLIAM S. ELLIOTT, Pittsburgh, Pa. Filed Aug. 6, 1925. Serial No. 48,543. 21 Claims. (Cl. 183—2.5.)



6. In a liquid handling apparatus, a vacuum chamber, and a combined vacuum breaker and overflow connection for said chamber.

14. In the method of deaerating and delivering low temperature water, the steps comprising treating the water under a vacuum the temperature corresponding to which is above the temperature of the supplied water, and then subjecting the water so treated to a vacuum the temperature corresponding to which is not materially below the temperature of the water being treated.

1,809,442. PROCESS FOR THE MANUFACTURE OF METALLIC BERYLLIUM OR ITS ALLOYS. HELLMUT FISCHER, Berlin-Friedenau, Germany, assignor, by mesne assignments, to Metal & Thermit Corporation, New York, N. Y., a Corporation of New Jersey. Filed Oct. 3, 1927, Serial No. 223,835, and in Germany Oct. 7, 1926. 3 Claims. (Cl. 204—19.)

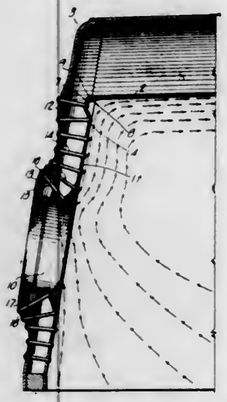


1. In the production of electrodeposited coatings containing beryllium, the process which comprises electrolyzing a molten bath containing a beryllium compound selected from a class consisting of bassic beryllium fluoride and beryllium oxyfluoride, and replenishing the bath by the addition of the same said class of beryllium compounds, as such.

1,809,443. DEVICE FOR APPLYING ANTISKID CHAINS. HERBERT A. FRAZIER, Butler, Pa. Filed May 8, 1930. Serial No. 450,837. 3 Claims. (Cl. 152—14.)

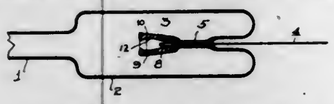
2. A device for applying anti-skid chains to vehicle wheels which comprises in combination a flexible strap, a hook attached to one end of the strap, a helical spring attached to the other end of the strap, a hook attached to the free end of the spring, a tongueless buckle mounted on said strap, a second strap attached to the bar of said buckle, and a hook on the free end of the second strap.

1,809,444. ROTARY DRILLING APPARATUS. EDGAR E. GREVE, Bellevue, Pa., assignor, by mesne assignments, to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 23, 1929. Serial No. 365,360. 6 Claims. (Cl. 255—23.)



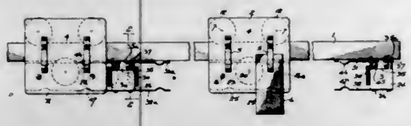
1. In a rotary, a plurality of members, at least two of which are rotatable relative to each other about the axis of the rotary and to a third member, means for positively rotating one of said rotatable members, and means for releasably locking the second of said rotatable members to said third member, said locking means having a cam surface cooperating with means acting to release said second member when the torque tending to turn the locked member exceeds a predetermined amount.

1,809,445. PRODUCTION OF POLYMERIZATION PRODUCTS OF DIOLEFINES. CLAUS HEUCK and HANS ENDERLEIN, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Jan. 25, 1930, Serial No. 423,540, and in Germany Feb. 21, 1929. 4 Claims. (Cl. 260—6.)



1. In the polymerization of a diolefine to a non-distillable product, facilitating the removal of the polymerization product from the reaction vessel by covering the inner wall of the reaction vessel with a sheet material which is readily removed.

1,809,446. STEAM BOILER. IRVING C. HICKS, Topeka, Kans., assignor of one-half to Henry V. Stevens, Topeka, Kans. Filed June 8, 1929. Serial No. 369,446. 4 Claims. (Cl. 122—58.)

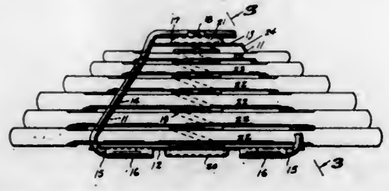


4. In a boiler, an end wall having a substantially plane inner surface, a door opening therethrough, and a water leg enlarged outwardly of the boiler circumferentially of the door opening for providing increased water capacity about said opening.

1,809,447. LUMINOUS TUBE. HAROLD W. HOWARD, Cleveland, Ohio, assignor to Neon Process, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 16, 1929. Serial No. 347,506. 8 Claims. (Cl. 176—126.)

1. An illuminating device of the character described, comprising a glass tube, a metallic electrode supported within said tube in spaced relation to the surrounding wall thereof, and a sheath of dielectric material surrounding and extending from said electrode and having a conical cavity almost closed at its free end to confine the metal sputtered from said electrode.

1,809,448. MONORAIL SYSTEM. PETER J. KOSTER and ALBERT A. KOORS, Pleasant Ridge, Mich. Filed Feb. 23, 1929. Serial No. 341,893. 38 Claims. (Cl. 105—151.)



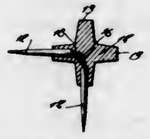
1. A monorail system comprising a rail, a car adapted to travel along it, wheels on said car adapted to ride on the upper and lower margins of said rail, and a member adapted to maintain said car in an upright position.

1,809,449. IMITATION PEARL. WILLIAM G. LINDSAY, Newark, N. J., assignor, by mesne assignments, to Celluloid Corporation, a Corporation of New Jersey. Filed Mar. 19, 1925. Serial No. 16,681. 22 Claims. (Cl. 106—37.)

4. A translucent article formed of a pyroxylin plastic having the silky variety of mercurous chloride distributed throughout the body thereof.

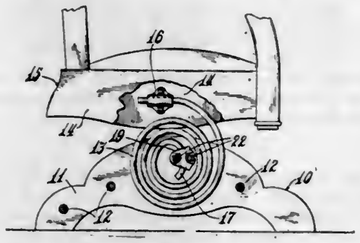
20. The method of forming a decorative material which comprises precipitating from a solution a silky, scintillating precipitate of a metallic salt in particles of a size sufficiently fine to give a pearly effect when distributed in a transparent medium, and incorporating said precipitate by mixing it into a mass of plastic material and below the surface thereof so as to impart to said material a pearly lustre.

1,809,450. WRENCH KIT HOLDER. ARTHUR I. PLATT, Fairfield, Conn., assignor to The Bridgeport Hardware Manufacturing Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 16, 1928. Serial No. 299,945. 6 Claims. (Cl. 206—16.)



1. In a wrench kit holder, a base member having side flanges on which a plurality of wrenches may rest, a spring catch secured to the front of the base, a holder pivoted to the rear portion of the base and adapted to be swung over the wrenches and engage the catch to prevent removal of the wrenches, and a coiled spring extending between the front and rear walls of the base and adapted to hold the shanks of the wrenches between its respective coils as they rest on said flanges.

1,809,451. HAND OPENING CAN. JOSEPH F. QUINN, Burlingame, Calif., assignor to Geo. W. Caswell Co., San Francisco, Calif., a Corporation of California. Filed July 31, 1929. Serial No. 382,440. 3 Claims. (Cl. 220—53.)

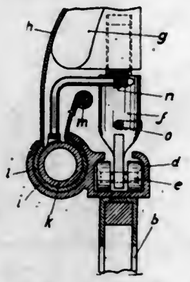


1. A can provided on one head with an opening covered with a thin plate, said plate removably secured along the entire length of its margins to the edges of the opening, and a device secured to said plate within the margins thereof adapted for gripping with the hand for forcibly removing said plate.

1,809,452. BATTERY CONNECTER TERMINAL. DAVID SCHAFFER, Pawtucket, R. I. Filed July 3, 1930. Serial No. 465,663. 3 Claims. (Cl. 173—259.)

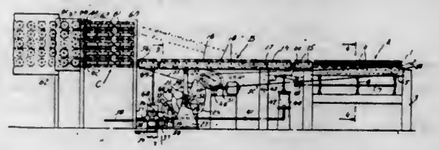
1. A battery connecter including a terminal having a double pointed pin formed from a single length of wire bent to position the points at right angles to each other, the bend of the wire being flattened to form a disk and having a loop struck therefrom, a conductor wire having its terminal portions engaged through said loops, and cruciform heads surrounding said pins and having the pins extending axially outward through two of the arms, the head being provided with a boss through which the conductor extends.

1,809,453. CHAIR. ADOLPH W. SCHRAM, Chicago, Ill. Filed June 12, 1929. Serial No. 370,234. 3 Claims. (Cl. 155—54.)



1. A chair comprising in combination a base member, a body member, two spiral springs each having a curved bearing portion at one end, brackets clamping said curved bearing portions adapted to be adjusted therealong and serving to hold such bearing portions in fixed position on one of said members, and other means for holding the other ends of said springs in fixed position on the other of said members.

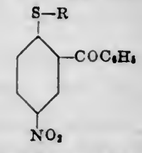
1,809,454. ALDOL CONDENSATION PRODUCTS AND VULCANIZATION OF CAOUTCHOUC THEREWITH. LORIN B. SEBRELL, Silver Lake, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Nov. 10, 1924, Serial No. 749,040. Divided and this application filed Dec. 4, 1929. Serial No. 411,692. 12 Claims. (Cl. 18—53.)



12. A method of treating rubber which comprises vulcanizing it in the presence of a reaction product of acetaldol and a material selected from a group consisting of ammonia, ethylene diamine, allylamine, butylamine, diethyl amine and dibutyl amine.

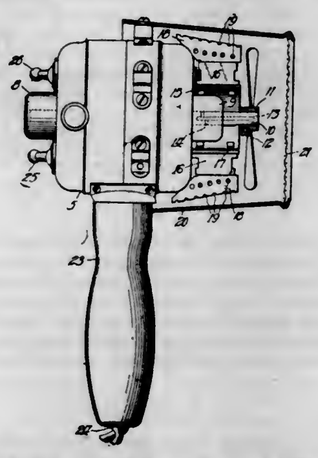
1,809,455. CANVAS COVER FOR VEHICLES AND THE LIKE. XAVER SEITZ, Emmishofen, Switzerland. Filed Nov. 25, 1927, Serial No. 235,579, and in Switzerland Dec. 6, 1926. 1 Claim. (Cl. 296—137.)

The combination with a canvas hood for a vehicle or the like, two supporting channels for said hood placed in juxtaposition, supporting hoops for the canvas guided in the innermost of said channels, and an inflatable tube adapted to be accommodated within the outer channel in a fold of the canvas.



1,809,456. TRANSFER DEVICE. EDWIN HENRY STREETER, Cloquet, Minn. Filed Mar. 21, 1928. Serial No. 263,275. 6 Claims. (Cl. 198—20.)

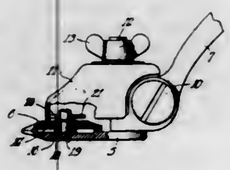
1. Transfer mechanism comprising a unit adapted to receive an article from a conveyor, a second unit adapted to receive an article from said first unit, means for automatically elevating the discharge end of said second unit, a conveyor having a plurality of tiers communicating with the discharge end of said second unit, and means controlled by said second unit for actuating a selected tier of said conveyor.



1,809,457. ACCELERATOR OF VULCANIZATION. JAN TEPPEMA, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 10, 1927. Serial No. 239,267. 8 Claims. (Cl. 18—53.)

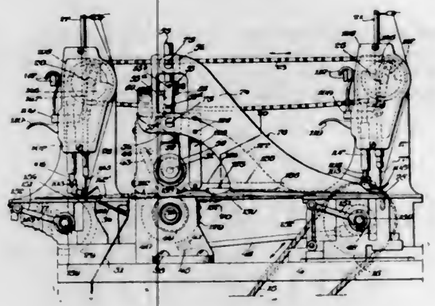
7. A method of accelerating the rate of vulcanization of rubber which comprises heating it in the presence of a material having the following formula:

in which R is a material selected from a group consisting of thiazyl and dithiocarbamates.



1,809,458. HAIR DRIER. LEO J. WAHL, Sterling, Ill., assignor to Wahl Clipper Corporation, Sterling, Ill., a Corporation of Illinois. Filed Sept. 20, 1929. Serial No. 393,932. 1 Claim. (Cl. 219—39.)

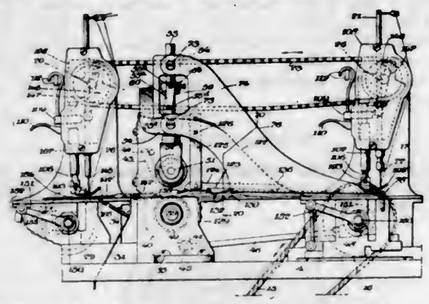
A hair drier comprising a motor having a casing, a projecting shaft at one end of said casing, a fan mounted on said shaft and spaced from the motor casing, a heater element encircling said shaft between the fan and motor casing, and a tubular member mounted on said motor casing and having its free end projecting beyond said fan and closed by a reticulated member, a handle projecting laterally from said motor casing and control switches



for said motor and heater mounted at the end of said motor casing opposite the fan, said motor switch being adjacent the handle so that it is operable by the thumb of the operator's hand when holding the handle.

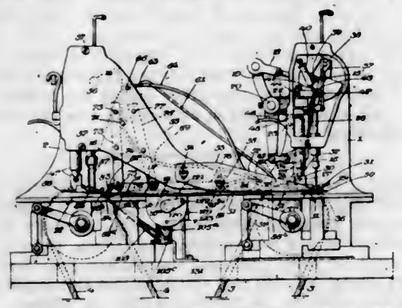
1,809,459. HAND CLIPPERS. LEO J. WAHL, Sterling, Ill., assignor to Wahl Clipper Corporation, Sterling, Ill., a Corporation of Illinois. Filed May 2, 1930. Serial No. 449,255. 4 Claims. (Cl. 30—1.)

1. In a hair clipper a stationary blade, a movable blade having a guide slot therein, and means cooperating with said slot for guiding said movable blade comprising a block adapted to rest on said stationary blade, and a screw rotatable relatively to said block having screw threaded engagement with the stationary blade and having a shoulder thereon engaging said block for clamping the block to said stationary blade, said block being adjustable laterally relative to said screw for aligning said movable blade.



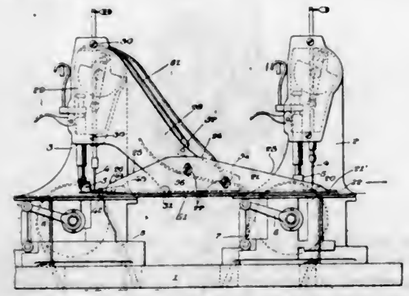
1,809,460. MACHINE FOR MAKING MULTIPLE SEAMS. JOHN P. WEIS, Nyack, N. Y., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a Corporation of Delaware. Filed Nov. 13, 1928. Serial No. 319,072. 36 Claims. (Cl. 112—2.)

1. In a machine for sewing multiple seams, the combination of means for stitching superposed plies of material with a line of stitches and positioning the seam margins at an angle to the work, means for overturning one ply of material, means for holding the seam margins spread in opposite directions and in parallelism with the plies of material, and means for stitching the seam margins with parallel rows of stitches.



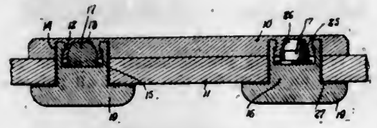
1,809,461. METHOD OF MAKING MULTIPLE SEAMS. JOHN P. WEIS, Nyack, N. Y., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a Corporation of Delaware. Original application filed Nov. 13, 1928, Serial No. 319,072. Divided and this application filed July 12, 1929. Serial No. 377,682. 12 Claims. (Cl. 112—262.)

1. The method of stitching articles with multiple seams which consists of stitching two superposed plies of material, then while the lower ply is maintained in substantially the same plane during the sequence of operations,



overturning the top ply thereof into reversed position with the inside outside, and then stitching the seam margins with parallel rows of stitches.

1,809,462. MACHINE AND METHOD FOR STITCHING SHOE UPPERS. JOHN P. WEIS, Nyack, N. Y., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a Corporation of Delaware. Filed Dec. 2, 1929. Serial No. 411,012. 31 Claims. (Cl. 112—2.)

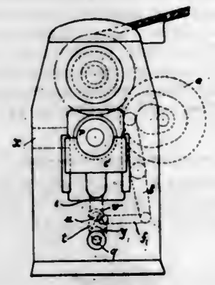


1. In a machine for sewing multiple seams, the combination of means for stitching superposed plies of material with a row of stitches, means for overturning a ply of material and throwing it in a direction opposite to its companion ply with its inside outside, means located in position to open the seam margins subsequent to the starting of the overturning of one of the plies, and means for stitching the opened seam margins.

1,809,463. MACHINE AND METHOD FOR FORMING FRENCH-FELLED SEAMS. JOHN P. WEIS, Nyack, N. Y., assignor to Metropolitan Sewing Machine Corporation, Nyack, N. Y., a Corporation of Delaware. Filed Dec. 2, 1929. Serial No. 411,013. 20 Claims. (Cl. 112—2.)

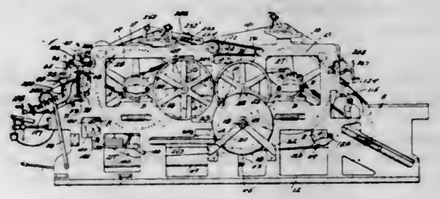
1. In a machine for sewing multiple seams, the combination of means for stitching superposed plies of material with a row of stitches, means for overturning a ply of material and throwing it in a direction opposite to its companion ply thereby forming a triple-ply seam, and means for stitching the triple plies with another row of stitches in parallelism with the first row thereof thereby to form a French-felled seam.

1,809,464. ANCHORAGE. WILLIAM H. WHEELER, New York, N. Y., and JUDSON C. LOGAN, Jersey City, N. J. Filed Feb. 17, 1927. Serial No. 168,909. 3 Claims. (Cl. 40—2.2.)



1. In an anchorage of the character described, a base formed with an aperture, a rivet comprising a head bearing against one side of the base and a shank passing through the aperture, the free end of the shank being formed with an undercut shouldered recess, a plate bearing against the opposite side of the base, said plate being formed with a flange adapted to enter the recess, and a plug movable in said recess and adapted to offset the flange into the undercut portion of the recess.

1,809,465. ANCHORAGE. WILLIAM H. WHEELER, New York, N. Y., and JUDSON C. LOGAN, Jersey City, N. J. Filed Feb. 17, 1927. Serial No. 168,911. 7 Claims. (Cl. 40—2.2.)



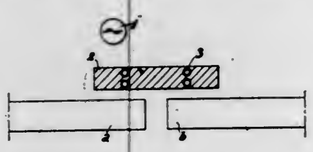
1. In an anchorage of the character described, a base formed with two apertures, a plate on one side of the base, a pair of screw plugs covered by and affixed to the plate and projecting through said apertures respectively, and, on the other side of the base, a nut common to both of said plugs and into which said plugs are screwed.

1,809,466. INTAGLIO PRINTING MACHINE. KARL ALBRECHT, Geisenheim-on-the-Rhine, Germany, assignor to Maschinenfabrik Johannisberg, G. m. b. H., Geisenheim-on-the-Rhine, Germany. Filed Dec. 3, 1928, Serial No. 323,430, and in Germany Dec. 8, 1927. 2 Claims. (Cl. 101—247.)

1. An intaglio printing machine comprising in combination an impression cylinder, a printing cylinder positioned below the impression cylinder and capable of coacting therewith, bearings for the said cylinders, frame ends for supporting the said bearings and having no free openings therein extending to the sides thereof, means for lowering the printing cylinder bearings in the said frame ends, each frame end having an internal recess extending from the printing cylinder bearing to the side of the frame end, the machine being adapted to receive means insertable therein for supporting the printing cylinder on the bearings thereof being lowered and guiding the cylinder through the said recesses at right angles to its axis out of the machine, as and for the purposes set forth.

1,809,467. IRONING MACHINE. WILLIAM J. ASHER, Colorado Springs, Colo. Filed July 8, 1926. Serial No. 121,220. 22 Claims. (Cl. 68—9.)

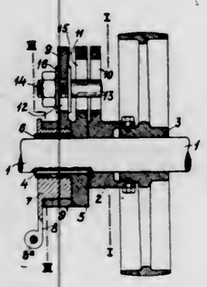
1. In an ironing machine of the class described, in combination, two spaced ironing cylinders, an apron associated with each of said cylinders, means for guiding said aprons in parallel substantially vertical paths between said cylinders, and a roller suspended in such manner as to swing toward and bear against one of said aprons under the influence of gravity, for the purpose set forth.



3. In an ironing machine, in combination, two spaced ironing cylinders, an apron associaed with each of said cylinders, said aprons cooperating in transporting the goods acted on by one cylinder to a point adjacent the second cylinder where they are separated, one apron passing around the second cylinder and the other returning toward the first cylinder, and means acting on said last mentioned apron adjacent the point of separation of said aprons, for causing dislodgement of any goods adhering thereto and their deposition on said second apron.

6. In an ironing machine of the class described, having a heating chamber, an apron and a plurality of parallel spaced endless tapes cooperating with the apron, means for maintaining a desired degree of tension in said tapes comprising a transverse member around which the tapes pass, and means for adjusting said members longitudinally of the tapes, said means including pinions on the said member meshing with stationary racks, and a pawl for holding said member against movement longitudinally of the tapes in one direction.

11. The combination with the power throw-off means of a power operated ironing machine, of an operating element therefor extending from the power throw off means to the feed end of the machine, and a plurality of control members operably engaging the same, each of said control members being so connected to said operating element that it may operate the same without moving the other members.

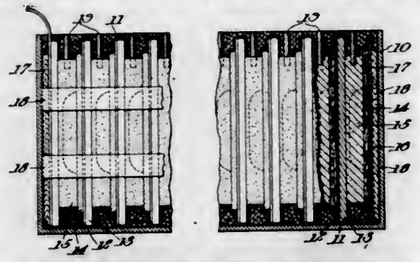


16. In an ironing machine, in combination, a frame, a heated cylinder mounted for rotation in the frame, a doffing bar for removing the work from the cylinder, an apron, tapes cooperating with the apron to remove the work from the vicinity of the doffing bar, a plurality of rollers around which the tapes and apron, respectively pass, adjustable arms upon which the rollers are rotatably supported, said arms being movable as a unit, and mechanical means for adjusting said arms so that all of the rollers may be simultaneously lifted away from the doffing bar.

1,809,468. ELECTRICAL METAL WELDING. EMILIEN BORNAND and HANS ARNOLD SCHLAEPFER, Geneva, Switzerland. Filed Nov. 29, 1929, Serial No. 410,583, and in France Feb. 19, 1929. 2 Claims. (Cl. 219—13.)

1. A welding appliance comprising an electrically insulating and refractory support placed in proximity of the seam to be welded, a coil embedded in said support, and a source of high frequency currents for feeding said coil to thereby induce Foucault currents in the parts to be welded.

1,809,469. DRIVING MECHANISM FOR ROTATING SHAFTS AT VARIABLE SPEED. FRIEDRICH BROCH, Vienna, Austria, assignor to Tannwalder Baumwoll-Spinnfabrik, Tannwald, Czechoslovakia, a Joint-Stock Company. Filed Feb. 13, 1930, Serial No. 428,181, and in Austria Feb. 20, 1929. 5 Claims. (Cl. 74—14.)



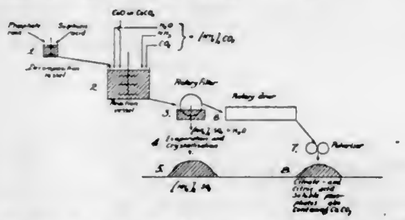
1. A driving mechanism for rotating shafts at a variable speed, which mechanism consists of a slotted arm idly mounted on the shaft to be driven and coupled to a driving member, another slotted arm, rigidly secured to the shaft and a third arm idly mounted on a fixed eccentric and carrying a pin, which extends through the two slots of the first mentioned arms, at least one of the said slots being inclined with respect to the radius passing through the respective slot.

1,809,470. DRESSING MEDIUM FOR TEXTILE MATTER AND THE PROCESS OF MANUFACTURING THE SAME. ISSAR BUDOWSKI, Berlin, Germany, assignor to Chemische Fabrik Jacobus, G. m. b. H., Charlottenburg, Germany, a Joint-Stock Company of Germany. Filed Feb. 15, 1928, Serial No. 254,628, and in Germany June 9, 1927. 2 Claims. (Cl. 134—11.)

1. The method of producing a restoring material, consisting in grinding oleic acids of high molecular weight with boric acid with the addition of an emulsion agent, so that a mass is formed which is emulsifiable in water.

1,809,471. DRY CELL BATTERY. NEWCOMB K. CHANEY, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Feb. 10, 1927. Serial No. 167,251. 3 Claims. (Cl. 136—177.)

3. In a flat type dry cell battery having a moist depolarizing mix; a carbon electrode in contact with said depolarizer mix; a casing of gas and liquid impervious material enclosing the mix and electrode; one or more vents of gas pervious, water repellant, carbon rods extending through said casing and into the mix of each

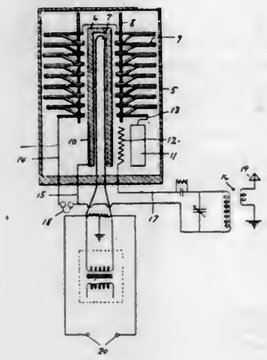


cell, each vent having promiscuously arranged gas passages, forming an outlet for the gas at all points of gas contact on the vent.

1,809,472. METHOD FOR PRESSING CORRUGATED CARDBOARD FLAT IN PLACES. LUDWIG CLEMENS, Berlin, Germany, assignor to the Firm Wezel & Naumann Aktiengesellschaft, Leipzig, Germany. Filed Apr. 18, 1928, Serial No. 270,998, and in Germany May 10, 1927. 1 Claim. (Cl. 154—2.)

A method for pressing corrugated cardboard flat in places which consists in supporting the cardboard on the reverse side and pressing it from the upper side to laterally lay over the corrugations on said upper side to shallow ribs corresponding in height to the thickness of the paper and to displace such shallow ribs during the pressing operation towards the yielding reverse side of the cardboard, thus producing a completely flat upper surface.

1,809,473. METHOD OF TREATING REACTION PRODUCTS OF PHOSPHATES AND SULPHURIC ACID. BJARNE COLBJÖRNSEN, Gaddviken, near Stockholm, Sweden. Filed Jan. 21, 1927, Serial No. 162,685, and in Sweden Jan. 23, 1926. 3 Claims. (Cl. 71—7.)

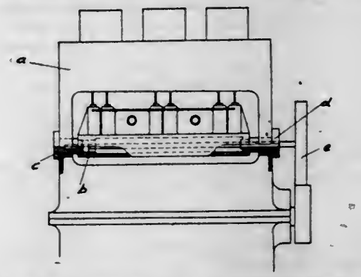


1. Method of treating raw phosphates decomposed by sulphuric acid, which comprises treating the decomposition product with water so as to partially dissolve and partially suspend the same, precipitating dicalcium phosphate therefrom, supplying ammonia and carbon dioxide thereto, separating the insoluble calcium salts from the solution and heating said solution so as to recover ammonium sulphate.

1,809,474. UMBRELLA. ROAL DOS SANTOS, Honolulu, Territory of Hawaii. Filed Aug. 7, 1929. Serial No. 384,009. 1 Claim. (Cl. 135—46.)

In a collapsible umbrella, a telescoping sectional handle having a pair of opposed pins radially and slidably mounted in the inner end of the smaller section, spring means engaging the pins to normally urge the same outward for engagement with the edge of the outer end of the larger section, said larger section having opposed notches in its inner wall at its outer end, said notches having inclined bottom walls merging into the inner wall of the larger section, said sections adapted to be turned relatively one to the other to register the pins with said notches whereby collapsing pressure on the sections moves said pins over said inclined bottom walls and retracts said pins into the larger section.

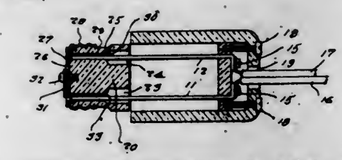
1,809,475. AUDION TUBE. RALPH B. DOWLER, Jr., Memphis, Tenn. Filed Mar. 5, 1930. Serial No. 433,393. 1 Claim. (Cl. 250—27.5.)



An audion tube comprising an evacuated container, a di-electric tube mounted within the container, a heating element disposed within said di-electric tube, a thermo-pile mounted outside of said di-electric tube and within the container, one end of the thermo-pile being connected to a terminal, a plate, said plate being connected to the opposite end of the thermo-pile, a grid interposed between the plate and the tube, said grid being connected to another terminal, and a cathode element mounted on said di-electric tube in opposed relation to the said grid.

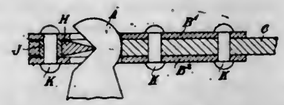
1,809,476. PROCESS OF MAKING SODIUM FLUORIDE. ERICH ECKOLDT, Dresden, Germany. Filed July 18, 1927, Serial No. 206,796, and in Germany Aug. 6, 1926. 1 Claim. (Cl. 23—88.)

A process of making sodium fluoride from raw materials containing calcium fluoride consisting in mixing raw materials containing calcium fluoride with silica and melting them with potassium carbonate, washing the melt with water, separating silica from the solution obtained by adding potassium silica fluoride and adding sodium carbonate to the remaining solution of potassium fluoride after separating it from the precipitated silica.



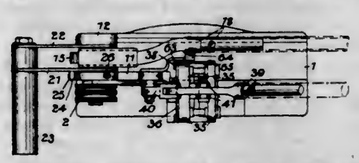
1,809,477. INTERNAL COMBUSTION ENGINE. KURT ELTZE, Mannheim-Kafertal, Germany, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart Untertürkheim, a Company of Germany. Filed Jan. 12, 1928, Serial No. 246,329, and in Germany Jan. 19, 1927. 4 Claims. (Cl. 123—90.)

2. An internal combustion engine with tappet valve gear having a cam shaft, a cam shaft housing, cam shaft bearings and tappet guides associated with the housing, the said cam shaft bearings consisting of sleeves acting as supports for the cam shaft housing, apertures in the end walls of the body of the engine to allow the said sleeves to be inserted endwise for engagement with the cam shaft housing, further cam shaft bearings inside the



housing, the said cam shaft bearings inside the housing and tappet guides being both mounted in a removable manner on the engine, as set forth.

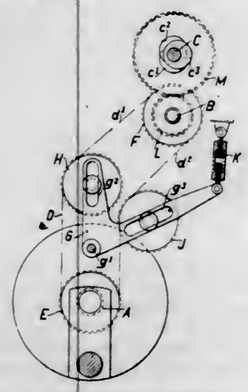
1,809,478. COMBINED SCREW AND PUSH ELECTRIC PLUG. JOHN A. GEFFERT, West Bridgewater, Pa. Filed Mar. 5, 1930. Serial No. 433,389. 3 Claims. (Cl. 173—361.)



1. An electric plug comprising a casing, a pair of prongs extending from and within the casing and projecting therefrom, a peripherally threaded plug slidable on the prongs and in electrical contact therewith, and means extending through the casing and engageable with the plug for moving the screw plug on the prongs.

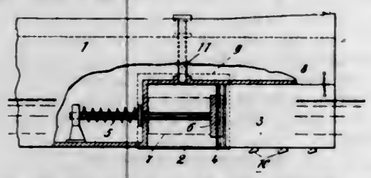
1,809,479. BRAKING MECHANISM. ALBERT HENRY GODFREY GIRLING, Harlow, England. Filed Mar. 28, 1929, Serial No. 350,673, and in Great Britain Apr. 5, 1928. 2 Claims. (Cl. 308—2.)

2. In combination, a lever having a notch formed in one edge thereof and having its opposite edge formed to a circumference struck from the root of the notch and an actuating member having a slot near one end, and a knife-edge at one edge of said slot, said lever being passed into said slot with the knife-edge in engagement with the notch and bearing at the root of the notch and having a taper section so as to enable it to swing freely sideways in the slot and at the same time fit closely sideways, as set forth.



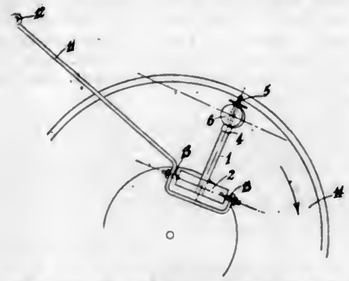
1,809,480. STRAP STRETCHING AND SEALING MECHANISM. EDOUARD CHARLES GLARDON, Hamburg, Germany. Filed Dec. 18, 1929, Serial No. 415,093, and in Germany Oct. 31, 1929. 3 Claims. (Cl. 81—9.1.)

1. An improved stretching and sealing mechanism for straps banding packing cases, boxes, bales and other pack-



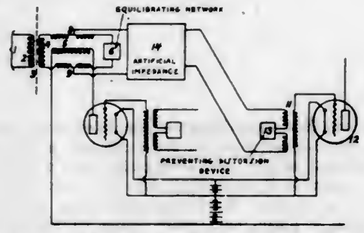
ages, comprising a pair of feed rollers, a shaft to which one of said rollers is secured, eccentric bearings for said shaft, means for rotating said bearings, a slotted frame carrying the second roller and guided by means of its slot on said shaft, a strap clamping plug arranged under the frame so as to take the thrust of the latter, the rotation of said eccentric bearings lowering the shaft and causing the movement of the frame relatively to the clamping plug and causing the feed rollers to be pressed together, and means for rotating the shaft so as to stretch a strap placed between the feed rollers while one end of said strap is held stationary between the frame and clamping ring.

1,809,481. CAM SHAFT DRIVE FOR INTERNAL COMBUSTION ENGINES. KARL HAUSSMANN, Kiel, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed June 17, 1929, Serial No. 371,388, and in Germany June 20, 1928. 4 Claims. (Cl. 64—5.)



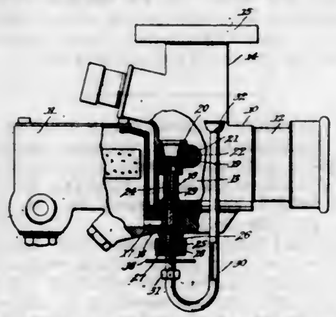
1. In an internal combustion engine a crank shaft, a controlling shaft, an endless chain drive inserted between said controlling shaft and the crank shaft, a tightening wheel for each side of said chain drive, a fulcrum, a swing member pivoted on said fulcrum and having mounted on it said two tightening wheels, and means for varying the distance existing between said wheels and said fulcrum.

1,809,482. RE-FLOATING OF STRANDED SHIPS. VICTOR HUBEATI, Berlin, Germany. Filed July 23, 1930, Serial No. 470,177, and in Germany Mar. 10, 1930. 6 Claims. (Cl. 114—219.)



1. A shock absorbing device for ships including in combination, a hull the bow of which consists of two parts of which the part above the water line is integral with the hull while the submerged part is movable with respect to the hull, means for loosely and resiliently connecting the movable part to the hull in such manner that when striking an obstruction the movable part takes the impact in a yielding manner, said connecting means normally holding the movable part substantially flush with the front end of the bow of the hull and being breakable so as to become separate from the hull when the impact occurs, means on the movable part whereby the latter is anchored to the obstruction, and means on the integral stationary part to raise the hull to enable the hull to slide down and be freed from the lower part of the hull and the obstruction.

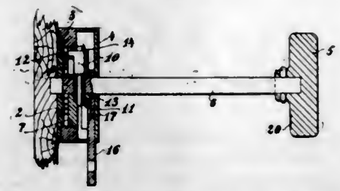
1,809,483. APPARATUS FOR THE REPRODUCTION OF MUSIC, SPEECH AND THE LIKE. FREDERICK WILLIAM LANCHESTER, Moseley, England. Filed Sept. 8, 1930, Serial No. 480,484, and in Great Britain Sept. 14, 1929. 6 Claims. (Cl. 179—100.41.)



1. A pick-up to be used in conjunction with a record for the reproduction of music, speech, and the like in which a permanent magnet constitutes at least part of the supporting arm radially arranged in relation to the pivotal mounting of the pick-up.

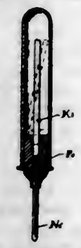
1,809,484. ARTIFICIAL IMPEDANCE FOR TELEPHONE REPEATERS. MYRON LEBEDINSKY, Paris, France, assignor to Société des Téléphones Grammont, Paris, France, a Corporation of France. Filed July 25, 1929, Serial No. 380,977, and in France Nov. 24, 1928. 2 Claims. (Cl. 179—170.)

1. In a telephone circuit, the combination of a repeater, a transformer at the input side of said repeater, double wire connections therefor, a grid transformer forming part of the repeater, double means connecting the transformer and the grid transformer two opposed induction coils inserted in each of said means, a condenser shunting one of the coils of each connecting means, a wire connecting points in each connecting means between the corresponding coils and a condenser inserted in said wire.



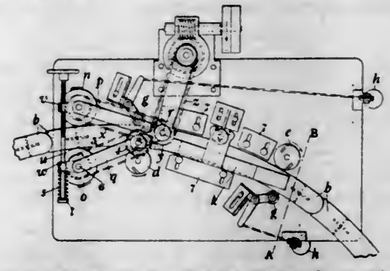
1,809,485. CARBURETOR. ALBERT W. LEE and ARTHUR W. HAMBY, Columbia, S. C. Filed Dec. 27, 1929. Serial No. 416,965. 12 Claims. (Cl. 261—121.)

1. In combination with the mixing chamber of a carburetor, a valve seat mounted in said chamber and having



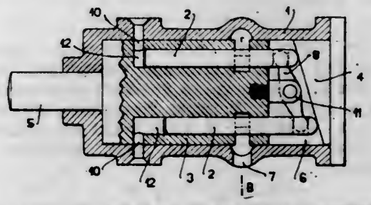
a supply opening therethrough, means for supplying gasoline through said opening to the engine, a needle valve having an axially disposed air hole and a coned-tip arranged to extend into said valve seat for controlling the flow of the fuel supply, said tip having a flat face in alignment with said hole whereby the fuel is vaporized before being introduced into the engine manifold.

1,809,486. SAFETY LOCK. ALFRED MAIRE, St. Imier, and ARMAND BÉGUELIN, Renan, Switzerland. Filed Dec. 17, 1928, Serial No. 326,532, and in Switzerland Jan. 4, 1928. 2 Claims. (Cl. 70—53.)



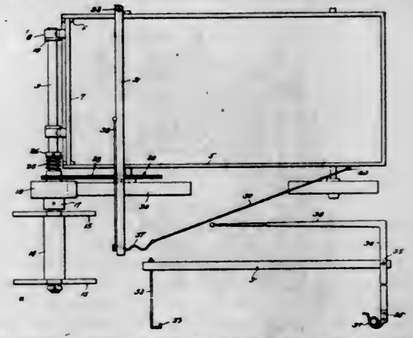
1. In a safety lock and in combination a casing having an annular rim provided with an inside division marked with notches, a projecting shaft with a handle arranged concentrically to said division and rotatable in said casing and constituting the locking and unlocking means, a similar division like the first and a guiding mark provided on said handle, a rotatable member fitting said annular rim and secured to said shaft, a short pointed pin lodged resiliently in said member and adapted to mark the steps taken by said member while passing said notches of the rim, a slidable pin carrying two cross pegs projecting on opposite sides, said pin being resiliently mounted in said member having a nose projecting beyond the periphery of the member, a stationary nose secured to the said rim and projecting in the path of the first nose, a latch held loose on the shaft close beside the said member and having a recessed part on the side of this member in the path of the respective peg of said slidable pin and a labyrinth of springy blades arranged concentrically to the shaft and forming a number of passages for the second peg on the bottom of the casing and arranged so as to constitute a guide for said peg and for the sliding pin in order to bring the first peg in contact with the non recessed part of the latch so as to release it from its catch.

1,809,487. HYPODERMIC SYRINGE FOR INJECTING LIQUIDS INTO THE BODY OR FOR TAKING THEM THEREFROM. FELIX MEYER, Aachen, Germany. Original application filed Nov. 7, 1924, Serial No. 748,390, and in Germany May 31, 1924. Divided and this application filed June 23, 1930. Serial No. 463,260. 1 Claim. (Cl. 128—216.)



In a device of the character described including a needle, a mounting and a transparent container having an internal pressure different to that of the atmosphere, and adapted for communication with the needle, a frangible capillary tube seal of transparent material forming initially a continuation of the passage through the needle from the inner end of the needle within said container.

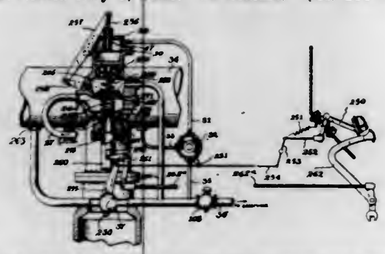
1,809,488. DOUBLE SPINDLE MOLDING MACHINE. EDGAR WALTER NEALE and ARTHUR HENRY HANDLEY, Birmingham, England. Filed Mar. 31, 1930, Serial No. 440,607, and in Great Britain Apr. 4, 1929. 7 Claims. (Cl. 144—145.)



1. In double spindle molding machines, the provision of two feed rollers on radial arms adjustably and flexibly anchored together and pivoted about a common axis about which they can turn to allow the rollers to follow the contour of the work.

1,809,489. PUMP FOR SPINNING LIQUID SUCH AS VISCOSE. GUSTAV NEMETZ, Vienna, Austria, assignor to the Firm Alex. Friedmann, Vienna, Austria. Filed July 5, 1928, Serial No. 290,648, and in Austria Feb. 16, 1928. 2 Claims. (Cl. 103—162.)

2. In a pump for spinning liquids liable to solidification such as viscose, a piston, a cylinder, driving members for said piston, a chamber surrounding said piston and interrupting the walls of said cylinder, said chamber being located between the working space of said cylinder and said driving members, and adapted to collect liquid creeping along the piston from the working space and from the driving mechanism, said chamber having a wide and flaring opening against the outside allowing easy discharge of the liquid liable to solidification and easy cleaning and inspection.

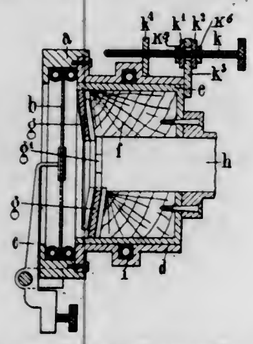


1,809,490. WIRE ROLLER. EMIL W. RIPPE, Ohiowa, Nebr. Filed Aug. 7, 1928. Serial No. 298,094. 1 Claim. (Cl. 242—91.)

In combination with a wagon body having a tail gate guide, of a panel removably fitted in said guide having horizontally alined bearings, a shaft rotatable in

the bearings extending beyond one end of the wagon body, a hub rotatable on the shaft, a wire reel on the shaft, means detachably connecting the reel to the hub, a frictional drive for the hub, a horizontal support detachably secured to the body in advance of the reel, and a wire guide pivoted to said support.

1,809,491. VACUUM BRAKE. CHARLES VICTOR ROWELL, McMahons Point, near Sydney, New South Wales, Australia. Filed May 3, 1927, Serial No. 188,581, and in Australia May 3, 1926. 10 Claims. (Cl. 188—152.)

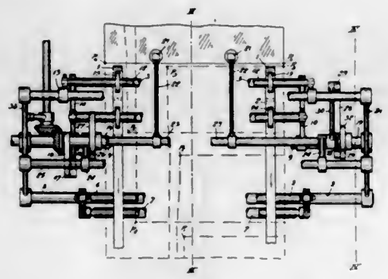


9. In a vacuum brake adapted to be associated with an internal combustion engine, an air valve normally open, means for closing said valve, a vacuum valve, a spring for normally holding said vacuum valve closed against vacuum which tends to lift it, and another spring tensioned to open said vacuum valve after the air valve has been closed.

1,809,492. CURRENT COLLECTOR FOR ELECTRIC TRAMWAY AND RAILWAY VEHICLES. THOMAS CARLYLE ELLISON ROWLAND, Sparkhill, Birmingham, and HECTOR MCPHAIL DUDGEON, Perry Barr, Birmingham, England. Filed Feb. 13, 1930, Serial No. 428,186, and in Great Britain Feb. 14, 1929. 5 Claims. (Cl. 191—55.)

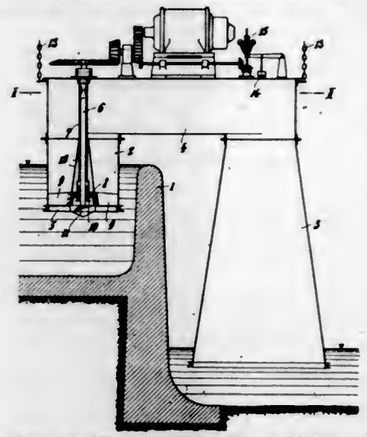
1. In current collectors of the bow or pantagraph types for electric tramway or railway vehicles, the combination of a perforated collecting plate, a lubricating pad arranged at one side of the plate, and means for pressing the pad into contact with the plate, substantially as described.

1,809,493. SOUND BOX FOR TALKING MACHINES AND LIKE DEVICES. LEO ANDREA SMITH, Wimbledon, England. Filed July 15, 1926, Serial No. 122,707, and in Great Britain July 25, 1925. 3 Claims. (Cl. 274—27.)



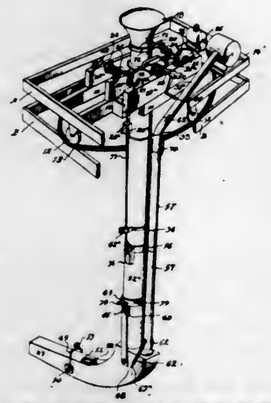
1. A sound box of the kind referred to comprising a casing, a diaphragm mounted in said casing, the latter having a surface immediately adjacent to and out of parallelism with the diaphragm, said surface constituting the base of the sound box and being formed as a plurality of radial steps which are spaced at different distances from said diaphragm.

1,809,494. MOUNTING FOR OPHTHALMIC LENSES. GEORGE A. SQUIER, Cleveland, Ohio. Filed May 9, 1930. Serial No. 450,932. 4 Claims. (Cl. 88—48.)



1. A mounting for ophthalmic lenses comprising a pair of guards, and arms connected at one end to said guards and having their opposite ends connected to the mounting substantially at the horizontal center of the lenses, said arms extending inwardly to a point above said horizontal center of the lenses, and being mounted at such a level on the mounting that the centers of the guards are above said horizontal center to position the guards with their nose contacting areas in contact with the upper structure of the nose immediately beneath the eyebrow and above the point where the nose starts to widen while such arms do not contact with the nose, each of said guards having that side thereof which faces the nose sufficiently small so that it will not project downwardly onto the bony structure of the nose, and made of non-yielding material of smooth convex form with its highest point in the center and with its surrounding area of uniform curvature throughout, such curvature being sufficiently gradual to prevent such highest portion from digging into the nose to an excessive extent and to prevent the edges thereof from digging into the nose to an excessive extent.

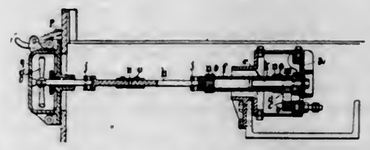
1,809,495. SHEET FEEDING MECHANISM. NILS GUSTAF ALLANSON STRÖMBERG and GEORG WILHELM WIDLUND, Stockholm, Sweden. Filed Sept. 4, 1929, Serial No. 390,408, and in Sweden Nov. 17, 1928. 13 Claims. (Cl. 271—30.)



1. An arrangement for feeding sheets in sheet feeding apparatus for printing machines and the like, including endless sheet conveying bands, means movably supporting the bands in spaced relation whereby portions thereof may be utilized as supporting and conveying means for sheets, and gripping and conveying members movable above and below the plane of the supporting and conveying portions of the bands, and power operated actuating means for moving the gripping and conveying members to displace the latter relative to the plane of the conveying means of the bands.

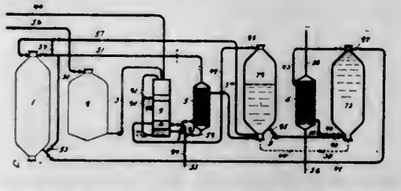
1,809,496. SIPHON TURBINE. EDUARD SUESS, Vienna, Austria. Filed June 7, 1928, Serial No. 283,658, and in Austria Apr. 13, 1928. 3 Claims. (Cl. 253—141.)

1. A siphon-turbine comprising in combination an inlet pipe, a suction pipe, a box-shaped intermediate member adapted to establish communication between the two pipes, and a rotor in the admission opening of the inlet pipe.



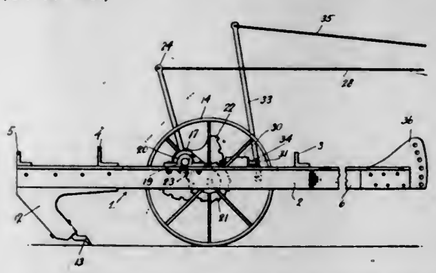
1,809,497. APPLIANCES FOR TRIMMING GRAIN THAT IS BEING LOADED IN BULK. FREDERICH WILLIAM THOMPSON, Paddington, New South Wales, Australia. Filed May 2, 1929, Serial No. 359,968, and in Australia Aug. 27, 1928. 4 Claims. (Cl. 193—3.)

1. Appliances for trimming grain as it is being loaded in bulk comprising a supporting platform, a tubular shoot formed in three sections and passing through the platform downwardly for any suitable distance, a bell mouth at the upper end of the shoot and a curved outflow section at the lower end thereof, a winch mounted upon the platform, means for shackling the winch rope to the section adjacent to the outflow section, means for increasing the length of the shoot by inserting an additional length of pipe and means for detachably clamping such additional pipe to the rope.



1,809,498. ELECTRIC SWITCH. ALFRED WILLIAM GEORGE TUCKER, Hollinwood, England, assignor to Ferranti, Limited, Hollinwood, Lancaster, England. Filed Dec. 21, 1923, Serial No. 682,103, and in Great Britain Jan. 6, 1923. 1 Claim. (Cl. 200—16.)

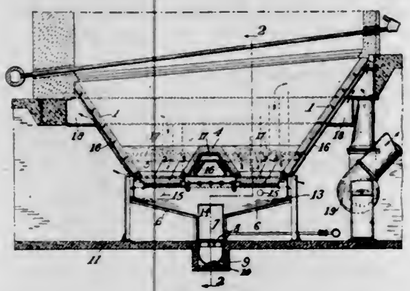
An electric switch including a series of contacts mounted upon a base, a spindle, a longitudinally displaceable and rotatable contact blade mounted thereon, means constantly urging said blade towards said contacts, a slotted cup secured to said base and constituting a bushing for



said spindle, means ensuring a correct registration between the contact blade and the fixed contacts and a swivelable mounting for said base providing a self-alignment between the spindle carrying the contact blade and said cup.

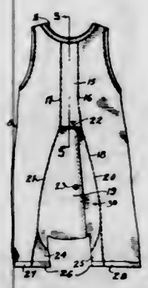
1,809,499. METHOD OF MANUFACTURING CELLULOSE ACCORDING TO THE SULPHITE METHOD. TORSTEN E. WAENERLUND, Ornskoldsvik, Sweden, assignor to M. O. Och Domsjö Aktiebolag, Ornskoldsvik, Sweden. Filed Sept. 8, 1930, Serial No. 480,530, and in Sweden Feb. 20, 1929. 4 Claims. (Cl. 92—11.)

1. Method of manufacturing cellulose by cooking cellulosic material with a cooking acid of high percentage of free sulphuric acid, comprising causing the cold raw acid, before introducing the same into the boiler, to pass through an absorption apparatus, enriching the same in said apparatus with SO_2 at atmospheric pressure passing the acid thus enriched through a heat transmission apparatus, introducing into said apparatus as heating medium warm waste products from the boiler and leading said heating medium, after it has given off heat to the acid, into the absorption apparatus, forcing the acid thus enriched and heated into a storage receptacle, heating the same and introducing it into the boiler for cooking cellulosic material therewith under pressure.



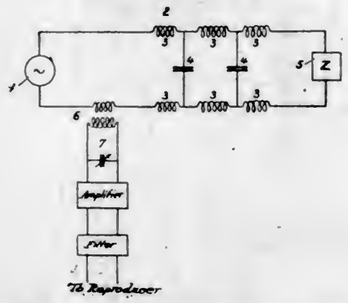
1,809,500. LIFT MECHANISM FOR AGRICULTURAL IMPLEMENTS. BRUNO W. WILLIG, San Angelo, Tex. Filed Aug. 20, 1929. Serial No. 387,107. 6 Claims. (Cl. 97—73.)

1. An agricultural implement of the character described comprising a frame, a pair of crank axles mounted for rotation on said frame in transverse alignment, toothed segments rigidly secured to said crank axles, shiftable latch bolts supported on said frame and normally engaging said segments, said segments and latch bolts constituting means for maintaining the crank axles against rotation with respect to the frame in selective adjusted position, means for simultaneously shifting said latch



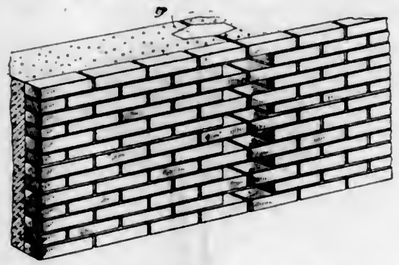
bolts out of engagement with the segments, wheels loosely mounted for rotation on the axles, annular ratchets carried by the wheels, pawls pivotally mounted on the crank axles for engagement with the ratchets, levers pivotally mounted on said crank axles, connecting links coupling said levers to the pawls, said ratchets, pawls, levers and connecting links constituting means for effecting the coupling of the wheels to the axles, resilient elements for shifting the levers in a manner to engage the pawls with the ratchets, and means connected with the levers for shifting the same in a manner to disengage the pawls from the ratchets.

1,809,501. APPARATUS FOR HANDLING ASHES. FRANK B. ALLEN, Lower Marion Township, Montgomery County, Pa., assignor, by mesne assignments, to The Allen-Sherman-Hoff Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1927. Serial No. 159,560. 3 Claims. (Cl. 110—171.)



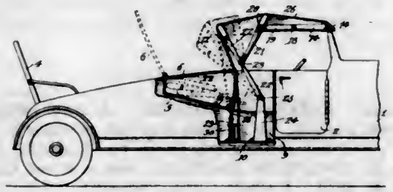
1. Apparatus for handling furnace residues comprising a hopper having a plurality of discharge openings disposed in rows lengthwise of the hopper and in pairs transversely of the hopper, the exterior faces of the walls between adjoining pairs of openings extending upwardly in spaced relation whereby an open passageway is formed, a wall beneath each opening of each pair, the walls of each pair converging downwardly and adapted to receive residues discharged through the opening, and a sluice beneath the discharge ends of the walls and extending lengthwise of the hopper adapted to receive residues discharged from the walls.

1,809,502. GARMENT. HOWARD JACOB BARCLAY, Sr., Spring City, Pa. Filed Jan. 7, 1930. Serial No. 419,142. 5 Claims. (Cl. 2—78.)



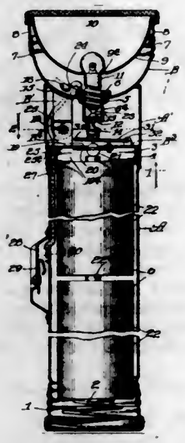
4. A garment comprising a back portion, a plural ply longitudinal reinforcement formed by folding a strip upwardly against said back portion, and being stitched thereto, a plurality of gussets forming a seat, overlapping adjacent the fold of said strip, the overlapping portions of said gussets being secured to said strip at said fold.

1,809,503. OSCILLATING CIRCUITS APPLIED TO ELECTRICAL MUSICAL INSTRUMENTS AND THE LIKE. JOSEPH BETHENOD, Paris, France. Filed May 20, 1929, Serial No. 364,633, and in France May 31, 1928. 6 Claims. (Cl. 178—44.)



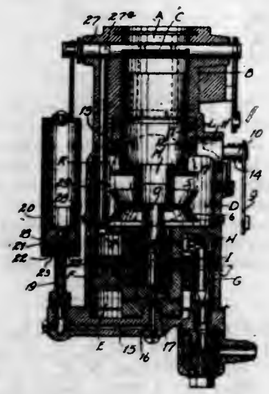
1. In an electrical musical instrument, a source generating an alternating current containing a fundamental and its harmonics, an artificial line supplied by said source, a shunt impedance terminating said artificial line, at least one circuit element inserted in series in a conductor of said line, and means for transmitting the potential difference delivered at the terminals of said circuit element to locations remote from said source.

1,809,504. BUILDING CONSTRUCTION. RICHARD CARVEL, New York, N. Y. Filed Oct. 11, 1927. Serial No. 225,426. 3 Claims. (Cl. 25—155.)



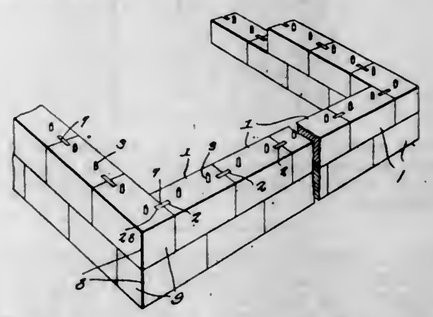
1. The method of forming a wall which comprises precasting a concrete section of sufficient size to form a substantial part of a finished wall, embedding in the front face of said wall during the precasting operation units of facing material such as stone, bricks or blocks which are commonly used in building walls, forming voids in said facing material along abutting edges of said sections, hoisting said sections into position, and filling in said voids by embedding units of similar facing material therein, arranged to overlap the joint between the sections.

1,809,505. AUTO BODY AND TOP. JAMES CAMPBELL, Jackson, Mich. Filed Nov. 12, 1929. Serial No. 406,648. 2 Claims. (Cl. 296—107.)



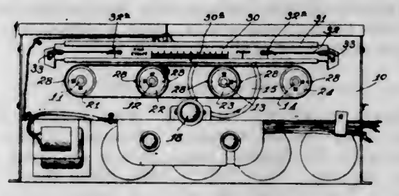
1. In an auto body and top, an automobile provided with a seat and having a platform, the automobile being provided with a compartment located behind the seat and having a bottom arranged above the platform and spaced vertically from the platform, a tension device disposed in said space and below the bottom of the compartment, a cover frame, a cover carried by the cover frame, means for pivotally connecting the cover frame to the automobile for folding into the compartment, and a connection between the lower end of the cover and the tension device, the connection being slidably mounted through the bottom of the compartment.

1,809,506. FLASH LIGHT. WILLIAM W. CARGILL, Madison, Wis., assignor to French Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Oct. 1, 1930. Serial No. 485,765. 10 Claims. (Cl. 240—10.67.)



1. A flashlight comprising a main casing-section equipped with a support; a lamp-head carried by said support and adapted to be turned at an angle to the axis of the main casing-section; and a tubular casing-extension telescopically related to the main casing-section and adapted to bridge the space between the lamp-head and main casing-section.

1,809,507. CARBURETOR. WILLIAM C. CARTER, Flint, Mich. Filed Apr. 29, 1929. Serial No. 359,100. 8 Claims. (Cl. 261—46.)

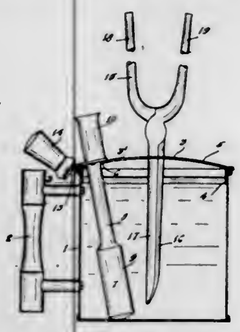


1. A carburetor provided with a main passageway, a throttle valve for said main passageway, a main fuel supply device, a plurality of venturis arranged in superimposed and concentric relation between the throttle valve and said fuel supply device, means for enabling the venturi that produces the first stage of suction amplification to be moved into a position wherein it serves as a choking device which cuts off the supply of air to said first venturi, and means whereby the venturi that produces the second stage of suction amplification can be moved into such a position that the supply of air is cut off from the annular passageways of the second and third venturis.

1,809,508. CHILD'S BUILDING BLOCK. WILLIS H. COLBY, Morehead City, N. C. Filed Nov. 22, 1929. Serial No. 409,097. 1 Claim. (Cl. 46—35.)

A rectangular block of the class described, provided in its ends with like slots, the block being supplied on one side with projecting pins spaced apart longitudinally of the block, the block being provided on its opposite side with an opening so shaped as to receive the pin of a similar block, the last specified side of the block having a transverse slot disposed at right angles to the slots in the ends of the blocks of the same size and shape as the slots in the ends of the block, the transverse slot being spaced from one end of the block by a distance equal to the distance between either of the slots in the ends of the block and the remaining side of the block.

1,809,509. RADIO TUNING MECHANISM. ALFRED CROSSLEY and LELAND H. HANSEN, South Haven, Mich., assignors to Howard Radio Company, South Haven, Mich., a Corporation of Illinois. Filed June 27, 1930. Serial No. 464,409. 2 Claims. (Cl. 116—124.1.)

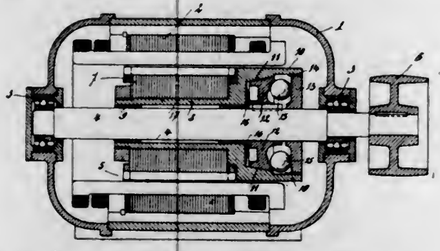


1. In combination with a plurality of shafts, tuning mechanism of the character described, for simultaneously rotating said shafts, said tuning mechanism including; a grooved driven friction disk on one of the shafts; a co-operating driving friction disk; pulleys mounted on said shafts; belt interconnecting said pulleys, whereby rotation of one shaft will simultaneously rotate the other shafts; and an elongated scale reciprocated by a flexible member wound about the groove in the driven friction disk with its ends attached to the ends of the scale.

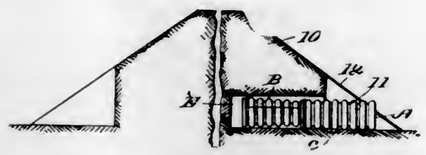
1,809,510. CURLING IRON HEATER. ELIAS A. CHURCHILL, Brandon, Manitoba, Canada. Filed Mar. 2, 1929. Serial No. 343,922. 1 Claim. (Cl. 219—24.)

In a curling iron heater, a liquid containing vessel, a removable cover normally closing the open upper end

of the vessel and provided with suitably located openings permitting of the insertion within the vessel of the jaws of curling irons and with a side slot and an electrically operated immersion heater having the upper end resting on and supported by the cover, the shank thereof passing freely through the slot and laterally removable therefrom and the lower end thereof immersed in the liquid.

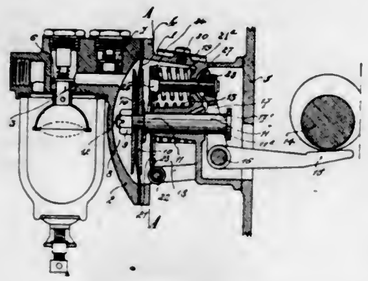


1,809,511. MESHED HEADPIECE. HELEN DAVIS, Topeka, Kans., assignor to The Helen Davis Cap Co., Topeka, Kans., a Corporation of Kansas. Filed Aug. 16, 1928. Serial No. 300,004. 7 Claims. (Cl. 132—49.)



1. A head gear formed of generally limp and elastic fabric, including a head-pocket portion adapted to fit snugly over the head of the wearer to form the crown of the assembled head dress and a generally elongated streamer portion at least approximately twice as long as the head-pocket portion and extending from an end thereof, adapted to surround the lower periphery of the head-pocket portion to form the rim of the assembled head dress; the shape of the head dress, when mounted upon the head of the wearer; being maintained by the contour of the head of the wearer.

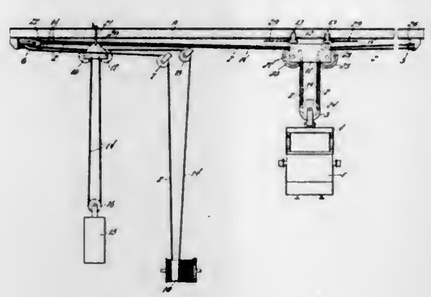
1,809,512. ELECTRIC MOTOR. VICTOR JEAN DEFAYS and PAUL JOSEPH LEFEBVRE, Brussels, Belgium, assignors to La Magneto Belge, Societe Anonyme, Brussels, Belgium. Filed July 9, 1929, Serial No. 377,010, and in Belgium July 13, 1928. 5 Claims. (Cl. 172—120.)



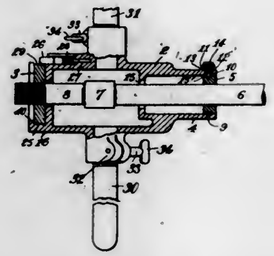
1. In an electric motor in combination a rotor, a sleeve on which the rotor is mounted, the said sleeve being free to turn on the shaft of the motor and being adapted to be displaced axially on the said shaft, whereby the magnetic centering of the rotor is obtained, a coupling clutch and a plate formed by the said sleeve, a clutch member keyed on the shaft and adapted to be displaced axially on the latter, balls free to rotate and disposed between the said plate and an inclined face of the said clutch member, the said balls being adapted to be displaced around the shaft and to be thrown away from the latter under the action of the centrifugal force, whereby the rotor is adapted to be clutched with the shaft.

1,809,513. METHOD OF CONSTRUCTING CULVERTS. DANIEL T. FINKBEINER, Beaver, Pa. Filed Apr. 2, 1927. Serial No. 180,492. 4 Claims. (Cl. 61—45.)

1. The method of constructing culverts and the like comprising forming a pipe of a plurality of sections, each pipe section after the first one laid being first contracted to less than normal diameter so as to maintain an expansible tension thereon, and while so contracted being passed through the previously laid sections and then allowed to expand under its natural expansible tension to its normal diameter, and finally securing one end of each expanded sections to a contiguous end of the last previously laid section.



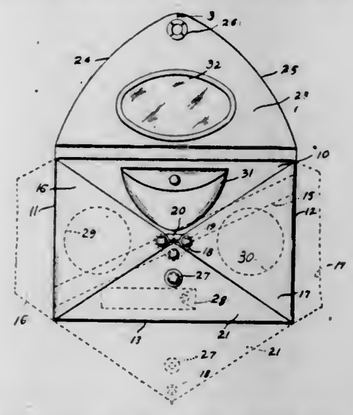
1,809,514. MOTOR FUEL PUMP. AUGUSTE GUIOT, Neuilly-sur-Seine, France. Filed Apr. 3, 1930, Serial No. 441,321, and in France Apr. 8, 1929. 4 Claims. (Cl. 103—150.)



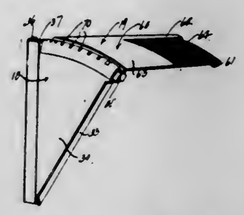
1. A motor fuel pump for feeding motors, which comprises an operating chamber, suction and delivery valves opening into said chamber, a pliable diaphragm obturating said chamber, a cage supporting the chamber, means operated by the motor to cause alternating movement of said diaphragm, a ventilating shutter placed at the rear of the diaphragm and outside the operating chamber in said cage freely open to the atmosphere and also driven by the motor operated means to actuate said shutter.

1,809,515. TROLLEY BUCKET INSTALLATION. HAROLD E. HALLENBECK, Hudson, N. Y., assignor to Gifford-Wood Company, Hudson, N. Y., a Corporation of New York. Filed May 9, 1930. Serial No. 451,038. 6 Claims. (Cl. 212—95.)

1. In a trolley bucket installation, the combination of a bucket; a trolley; two cables for supporting the bucket from the trolley; both cables being secured to a fixed member at one end; a counterweight acting on one cable to maintain a tension thereon so as nearly to overcome the weight of the empty bucket; and a hoist drum; both cables being wrapped around said hoist drum, but in opposite directions.



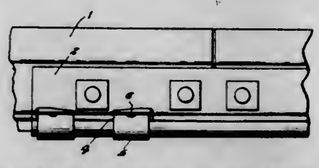
1,809,516. STOCK AND DIE. LOUIS W. JONES, New York, N. Y. Filed Jan. 20, 1930. Serial No. 421,978. 5 Claims. (Cl. 10—127.)



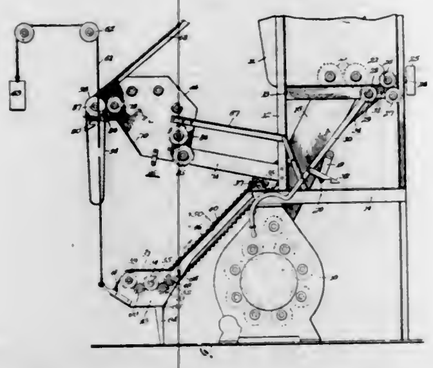
1. A die stock adapted to receive pipe sections and a coupling connecting the sections and including a hollow body having an apertured closure at one side thereof, a die holder external to said closure, a diaphragm intermediate the sides of said body and having an aperture of sufficient size to permit passage of a pipe coupling, the body externally of the diaphragm consisting of a bushing guide of considerably greater length than the length of a pipe coupling, and an annular bushing slidable in said guide from one end to the other thereof to take position at either end of the guide said bushing being of uniform external diameter throughout its length and being of considerably less length than the bushing guide whereby the bushing may rest against the diaphragm and provide space on the outer side of the bushing within the bushing guide for a coupling.

1,809,517. POCKETBOOK COMPACT. RAYMOND KATRINAK, Bridgeport, Conn. Filed Mar. 11, 1930. Serial No. 434,905. 5 Claims. (Cl. 150—34.)

1. A pocket book compact comprising a case, a substantially triangular flap hinged to each side of said case, each of said flaps having one element of a fastener at its apex, means in the case to secure the other element of a plurality of fasteners, a plurality of fastener elements on said means and adapted to cooperate with the fastener elements on the respective flaps with the exception of one flap, whereby said flaps may be individually secured closed and individually opened, the excepted flap overlapping the apexes of the other flaps, an element of a fastener secured on one of the overlapped flaps, and adapted to co-operate with the fastener at the apex of the overlapping flap, and said flaps substantially dividing said case into a plurality of compartments each adapted to receive a toilet article.

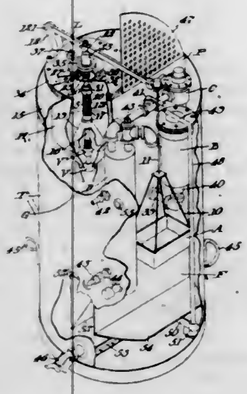


1,809,518. WINDOW VENTILATOR. OTTO KUBATZKY, Tulsa, Okla. Filed Jan. 6, 1930. Serial No. 418,869. 3 Claims. (Cl. 98—96.)



1. In a ventilating structure of the class described the combination of a sash including a frame having a window pane therein spaced from a portion of the frame to provide an opening, a main shield, side shields at the ends of the main shield, means mounting the lower margin of the main shield and the side shields in a movable relation in the openings of said sash to shut off or permit passage of a draft through the opening of the sash, guide members carried by the frame at the upper portion of the opening, and means providing guide channels in the end shields wherein said members project for stabilizing the end shields and main shield in operating movement during ventilating adjustments thereof.

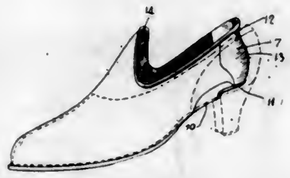
1,809,519. RAILROAD SPIKE ANCHOR. JOHN A. LAMBERT, Spokane, Wash. Filed July 7, 1930. Serial No. 466,251. 2 Claims. (Cl. 238—294.)



1. A spike anchor including a plate having angularly disposed legs and provided near the junction of said legs with a spike receiving opening, one of said legs being bent to provide a hook for engagement with a fish plate and the other of said legs being adapted to be bent to engage the head of a spike extending through said opening whereby said spike will be held in position in a tie.

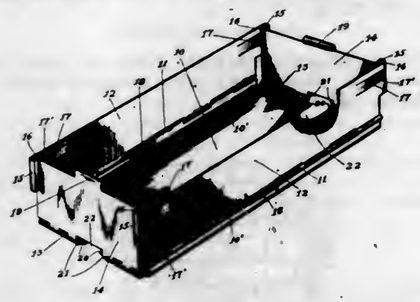
1,809,520. COTTON BALING MACHINERY. ALEXANDER S. MACKENZIE, Houston, Tex., assignor to Clayton Gin Compress Company, Houston, Tex., a Corporation of Texas. Filed Sept. 30, 1925. Serial No. 59,566. 34 Claims. (Cl. 100—1.)

1. An accumulator for bale formers comprising a pair of sections forming a baling chamber, said sections when closed being adapted to wind or unwind cotton bat, and one of said sections being capable of movement to a position to operate independently of the other for unwinding cotton bat.



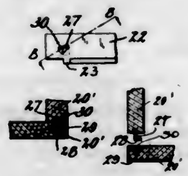
1,809,521. ACETYLENE GENERATOR. JOHN L. MANDEVILLE, Arlington, N. J., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Sept. 3, 1925. Serial No. 54,322. 7 Claims. (Cl. 48—53.4.)

1. In an acetylene generator, the combination with a generating chamber and a buoyancy member chamber in hydraulic communication with each other, of mechanism for automatically feeding carbide to said generating chamber comprising a heavier-than-water buoyancy member operating in said buoyancy member chamber, and means for partially supporting the weight of said buoyancy member.



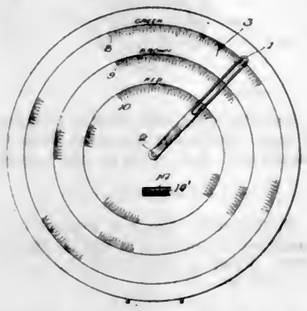
1,809,522. OVERSHOE. PETER H. MAROULIS, New York, N. Y. Filed Dec. 24, 1927. Serial No. 242,443. 9 Claims. (Cl. 36—6.)

1. An overshoe comprising a lined upper, and an unlined counter, an inner shoe heel opening being provided, and said opening and the opening of the overshoe for the insertion of the foot having each an elastic reinforcing bead encircling the opening, a sole connected with the



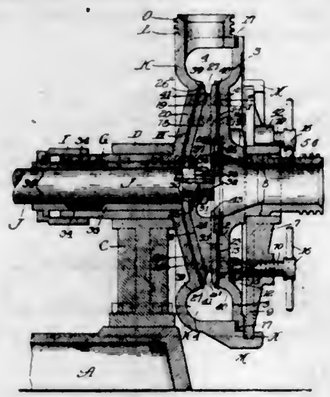
inturned edges of the upper, said sole having a nonelastic reinforce extending to the heel opening and having extensions on each side thereof.

1,809,523. WRAPPED-COIN CONTAINER. CHARLES E. MCLEAN, South Portland, Me. Filed Apr. 26, 1929. Serial No. 358,266. 3 Claims. (Cl. 220—97.)



1. A wrapped-coin container comprising in combination, a box having two sides, two end members and a bottom member, an aperture through said bottom member, at each end thereof, providing access to the interior of said container from the under side thereof, a relatively narrow, upwardly extending and centrally disposed portion on the top of each of said end members, and means on said end members co-acting with means on said bottom member of one container, adaptable, respectively, of engagement with the end and inner surfaces of said centrally disposed portions on a subjacent container, whereby the two containers may be held, relatively, against horizontal movement in all directions, when assembled one upon the other.

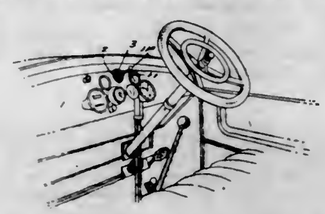
1,809,524. DAY AND NIGHT LICENSE PLATE FOR MOTOR VEHICLES. JOHN M. MOORE, New York, N. Y. Filed Aug. 16, 1929. Serial No. 386,351. 3 Claims. (Cl. 40—133.)



1. In a day and night license plate, a plate with outwardly embossed symbols having cutout portions, letters engaged on the plate and consisting of separate sections and having portions engaging in said cutouts for preventing relative turning of the sections, and coacting means on the letter sections for holding them together in relative positions as engaged on said plate and upon removal from the plate to release the sections upon slight rotation.

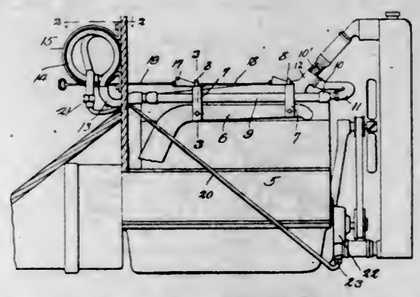
1,809,525. INDICATOR MECHANISM. WILLIAM C. MORAN, Laurel Springs, N. J., assignor to Riehle Bros. Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 9, 1931. Serial No. 514,573. 13 Claims. (Cl. 116—129.)

1. In a device of the type described, a dial, a single pointer, means for causing a rotary motion of at least one of the aforementioned elements through more than one revolution, a scale on said dial corresponding to each revolution, and means comprising an indicator associated with said rotatable element for indicating which scale corresponds to the revolutions of the rotatable element at any time.



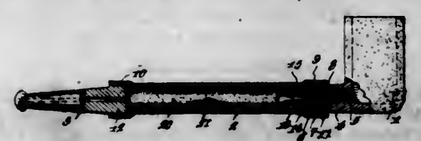
1,809,526. SANITARY CENTRIFUGAL MILK PUMP. JOSEPH NAMUR, Kenosha, Wis., assignor to Specialty Brass Company, a Corporation of Wisconsin. Filed Apr. 19, 1926. Serial No. 103,064. 2 Claims. (Cl. 103—115.)

1. A rotary impeller for pumps, comprising a rear impeller plate provided with a hub which is adapted to be received over the end of a drive-shaft, a centrally recessed front impeller plate adapted to be received over said hub, blades between said plates, and means for releasably securing said plates to said shaft and to each other, said means comprising a key, alignable keyways in said shaft and impeller parts, and a nut in threaded relation with the end of said drive-shaft.



1,809,527. SWITCH. MATTHEW J. PATE, Wilson, N. C., assignor of one-half to Doane Herring, Wilson, N. C. Filed Aug. 10, 1928. Serial No. 298,730. 8 Claims. (Cl. 200—6.)

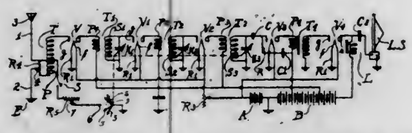
1. A device of the class described comprising a mounting plate, an annular block, supporting means carried by said mounting plate for supporting said block in spaced relationship to said plate, a current carrying annulus secured to one face of said block, current contacts secured to said block adjacent said current carrying annulus and spaced from contact therewith, an operating lever, said base plate having an oversized hole through which said operating lever extends, said operating lever having means to limit its movement in an axial direction toward the outer face of said base plate and the inner end of said operating lever extending into said annular block, a circuit closing enlargement on said lever within said block and adapted to



selectively engage the respective circuit contacts and said current carrying annulus, a cross piece carried by said supporting means, a supporting stem loosely extending through a hole in said cross piece, said stem and lever having a ball and socket connection, and a coil spring on said stem, said stem having a head enlargement against which said spring bears, the other end of said spring bearing against said cross piece whereby to hold said ball and socket joint assembled and the limiting means of said handle in contact with said base plate.

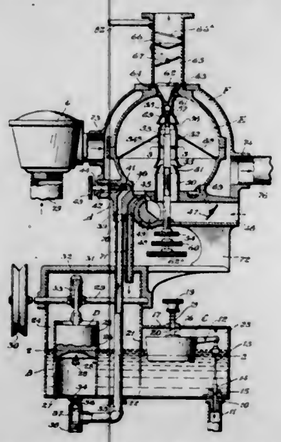
1,809,528. AUTO HEATER. LINDLEY H. PATTEN, Rugby, N. Dak. Filed Apr. 17, 1930. Serial No. 445,063. 3 Claims. (Cl. 257—241.)

1. In combination with the radiator of an internal combustion engine of a motor vehicle, a heater comprising pipes, means for establishing communication between the pipes and radiator to allow water from the radiator to pass through the pipes, means for adjustably supporting the pipes in proximity to the exhaust manifold of the engine, and a coil within the body portion of the vehicle and in communication with the pipes to direct heat to the vehicle.



1,809,529. PROCESS AND MEANS FOR FILTERING AND COOLING THE SMOKE OF TOBACCO PIPES. WALTER G. PETTIBONE, Wilmington, Calif. Filed Jan. 9, 1929. Serial No. 331,367. 2 Claims. (Cl. 131—12.)

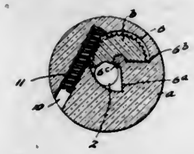
1. In a combination of the class described, a bowl, a stem, a mouthpiece, a coupling connected to said bowl, said coupling having a hollow boss which is internally



screw threaded and has a conical outer surface, a conical holder having a reduced screw threaded stem, said last mentioned stem being adapted to screw into said boss, at which time the conical holder will extend toward said mouthpiece, or said holder being adapted to fit upon the conical surface of said boss, at which time the screw threaded stem will extend toward said mouthpiece, as and for the purposes set forth.

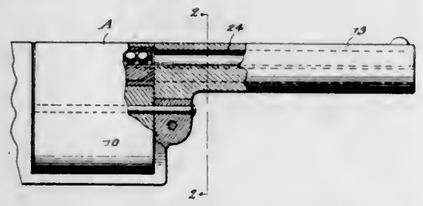
1,809,530. VOLUME CONTROL. LAWRENCE T. PHELAN, Philadelphia, Pa. Filed Apr. 11, 1929. Serial No. 354,240. 7 Claims. (Cl. 250—20.)

1. In the operation of radio receiving apparatus having one or more circuits tunable by adjustment of the movable elements of tuning devices associated therewith, the method which comprises moving said elements continuously to change the resonant frequency of said circuits in search of signals from a desired station, and utilizing the movement temporarily to depress the sensitivity of the apparatus as the resonant frequency of the circuits passes through transmission frequency of nearby or powerful stations.



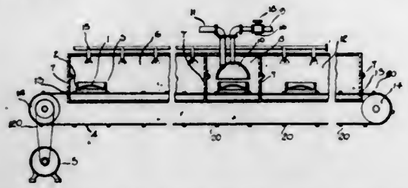
1,809,531. CARBURETOR. CHARLES NELSON POGUE, Winnipeg, Manitoba, Canada, assignor to Alfred Joseph Andrews, trustee, Winnipeg, Canada. Filed Aug. 20, 1927. Serial No. 214,360. 11 Claims. (Cl. 261—36.)

1. In a device of the character described and in combination, a fuel supply chamber, a vaporizing chamber, a pump in the fuel supply chamber, a conduit extending from the pump to the vaporizing chamber, a valve controlling the passage of fuel to the vaporising chamber, means for introducing a regulated quantity of air to atomize the fuel and means for introducing further regulated quantities of air at different portions of the vaporizing chamber to admix with the atomized fuel.



1,809,532. CORD ATTACHMENT FOR PLUGS AND SOCKETS. EDWIN ROLKER, Baltimore, Md., assignor to Safeasy Fixture Company, Baltimore, Md., a Corporation of Maryland. Filed Jan. 17, 1930. Serial No. 421,499. 8 Claims. (Cl. 173—322.)

6. The combination with a connector comprising a body of insulating material having a bore for receiving an electric cord and having terminals to which the wires of the cord may be attached, of a segmental gear journaled

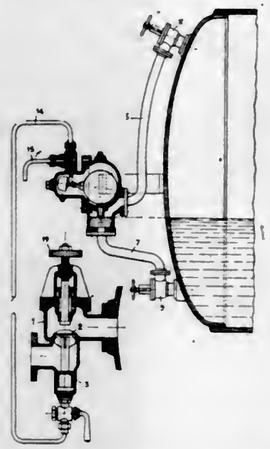


within the connector body and adapted to clamp the cord against the body, and means accessible from without the body for moving said gear to clamp and release the cord.

1,809,533. ORDNANCE. NOAH E. SCHOONOVER, Interior, S. Dak., assignor of one-half to Esli A. Woodburn, Interior, S. Dak. Filed May 21, 1930. Serial No. 454,378. 3 Claims. (Cl. 42—59.)

1. In a firearm, a single barrel having a plurality of longitudinally extending bores, a rotatable cylinder provided with chambers, cartridges for the chambers having a plurality of compartments therein adapted to align with the bores in the barrel, and projectiles in the different compartments of the cartridge.

1,809,534. GLASS TREATMENT. EDGAR D. TILLYER, Southbridge, and HAROLD R. MOULTON, Sturbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts. Filed Aug. 1, 1929. Serial No. 382,706. 7 Claims. (Cl. 49—47.)

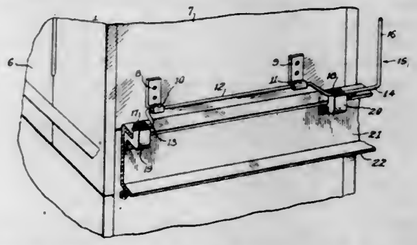


3. In a device of the character described, a block, a lens mounted on the block, a moving belt to carry the lens and block, a chamber to heat the lens when carried therethrough by the moving belt, a cooling blast adjacent the heating chamber under which the lens is carried by the moving belt to strengthen it, and a cooling chamber adjacent the blast adapted to receive the strengthened lens and slowly reduce it to its original temperature.

1,809,535. FEED REGULATOR FOR STEAM BOILERS. EGIDIO TORRE, Genoa, Italy. Filed Aug. 10, 1928, Serial No. 298,737, and in Great Britain Sept. 20, 1927. 1 Claim. (Cl. 137—101.)

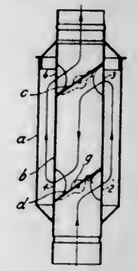
In combination with a steam boiler, an automatic feed regulator comprising a hollow, steam-tight casing forming a float chamber, a short depending tubular nozzle projecting downwardly of said casing and arranged with its mouth in alignment with the average level of the water

in the boiler, a sump below this tubular element and in communication through the nozzle with the float chamber and in communication with the steam and water space of the boiler, a hollow steam pressure resisting float member attached to a conterweighted double-armed lever housed within the float chamber, a needle valve attached to the float lever and tightly seated when the float is in its lowermost position; a separate differential valve inserted in



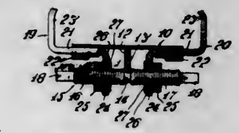
the water feed line of the boiler and comprising a larger valve head adapted to be tightly fitted on its seat and through which the feed takes place, and a plunger head connected to the valve and sliding with an untight fit in a bore of the valve casing; a pipe opening in the feed valve casing to the under side of the plunger head and leading to the seat of the said needle valve, and an outlet pipe connected to the discharge of the casing of said needle valve.

1,809,536. GOLF BAG. HENRY T. TUCKER, Fort Smith, Ark., assignor to Tucker Duck & Rubber Co., Fort Smith, Ark., a Corporation of Arkansas. Filed Aug. 27, 1929. Serial No. 388,789. 6 Claims. (Cl. 150—1.5.)



1. A bag for golf clubs comprising a bag-like flexible body portion of polygonal cross section including front and rear walls, flexible stiffening frames arranged in the front and rear walls of the body portion to maintain each yieldably stretched, and a plurality of flexible partitions arranged in the body portion and extending lengthwise thereof from side to side and from front wall to rear wall and dividing the body portion into rows of compartments extending crosswise of the bag and the rows of compartments being arranged one behind the other from front to rear of the bag.

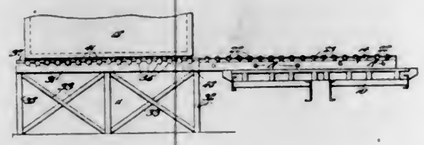
1,809,537. END DOOR LIFT MECHANISM. JEFFREY JOHN WALLACE, Amite, La., assignor to Gullett Gin Company, Amite, La. Filed June 15, 1928. Serial No. 285,744. 5 Claims. (Cl. 100—19.)



1. In a cotton baling press, supporting framework, a pair of side doors hinged to said framework, a pair of end doors movable bodily into and out of position between said side doors to form therewith a baling box, brackets fixed to said framework below the lower ends of said end doors having upwardly open notches, lugs fixed to the lower ends of said doors having downwardly open hooks, and crank shafts bearing in said bracket notches and lug hooks to lift said end doors and move them outwardly from baling position.

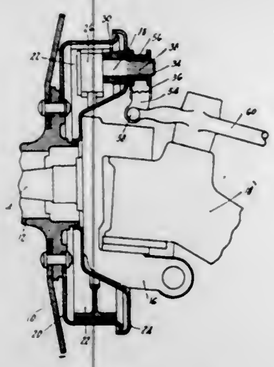
1,809,538. HEAT UTILIZER. HEINRICH WEISSHAAR, Stuttgart, Germany. Filed Feb. 19, 1930, Serial No. 429,799, and in Germany Feb. 27, 1929. 2 Claims. (Cl. 257—172.)

1. A heat utilizer for building in flues of heating furnaces, stoves and the like, comprising in combination an inner flue pipe, an outer heating jacket, partitions subdividing the space between said jacket and said pipe into two separate chambers with lateral openings between the same, and registers adapted to control said openings.



1,809,539. SKATE CLAMP. HENRY F. WHITCOMB, Jr., Milwaukee, Wis., assignor to Richardson Ball Bearing Skate Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1930. Serial No. 432,417. 1 Claim. (Cl. 208—180.)

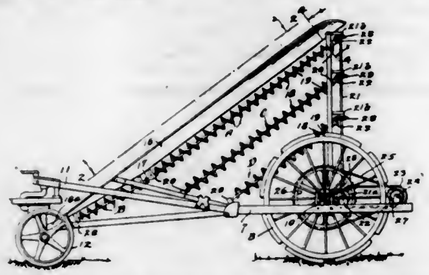
In combination with the clamp screw of a skate, a clamp comprising a steel stamping forming the body of the clamp



and provided with a perforated depending flange, and a ferrule internally threaded to engage the threading of the clamp screw and formed with a portion of reduced diameter to provide a shoulder, the reduced portion extending through the perforation of said flange and being upset at its end against the flange to secure the ferrule to the stamping.

1,809,540. CONTAINER HANDLING SYSTEM AND APPARATUS. CHARLES D. YOUNG, Wayne, Pa. Filed Sept. 17, 1928. Serial No. 306,551. 6 Claims. (Cl. 214—38.)

1. A container handling system which consists in locating two roller trackways upon a support, moving a container upon said tracks, driving wedge members beneath said container to elevate said container from said tracks, and removing said tracks for use with other containers.

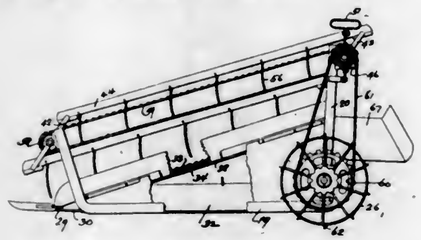


1,809,541. OPERATING DEVICE. WILLIAM J. ANDRES and CHARLES T. WAFFLE, South Bend, Ind., assignors to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed Dec. 23, 1926. Serial No. 156,549. 9 Claims. (Cl. 188—196.)

1. An operating device comprising, in combination, a shaft, an arm fixed on the shaft and having a sleeve portion embracing the shaft, a second arm having a sleeve portion loosely embracing the sleeve portion of the fixed arm, and a thrust member through which the second arm operates the fixed arm and the shaft.

1,809,542. CONVEYING AND GATHERING MECHANISM FOR HARVESTERS AND ANALOGOUS IMPLEMENTS. HARVEY H. BARDSLEY and WILLIAM J. EHLER, Kansasville, Wis. Filed Oct. 28, 1929. Serial No. 402,923. 4 Claims. (Cl. 56—119.)

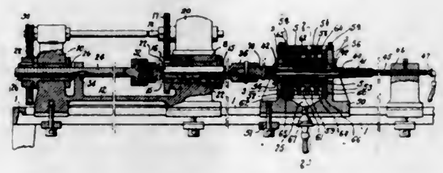
1. In a harvester or analogous machine, of the type having a pair of forwardly disposed gathering members provided with converging and opposed inner edges and a throat, a pair of oppositely disposed spiral conveying elements mounted longitudinally of and below said converging inner edges, a pair of oppositely disposed conveying elements extending longitudinally of and at opposite sides of said throat, and means for rotating said several



conveying elements to cause the screw conveying movement thereof to equal the forward movement of the harvester or machine over the ground.

1,809,543. DEVICE FOR PREVENTING THE ROTATION OF CABLES IN HANGER SEATS. JASPER BLACKBURN, Webster Groves, Mo. Filed June 6, 1927. Serial No. 196,990. 2 Claims. (Cl. 24—115.)

2. A device for preventing the rotation of cables in hanger seats comprising a U shaped member formed of spring material and having a bifurcated jaw adapted to receive one arm of a cable hanger suspended from a messenger wire, the ends of said U shaped member being bent outwardly, said member adapted to simultaneously engage with said cable hanger and having a cable carried thereby so as to prevent rotation of said cable in said hanger.

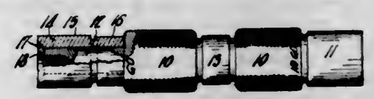


1,809,544. SEED HARVESTER. DELOSS BORLAND, Charleston, Miss., assignor of three-fourths to Morris Isenberg, Charleston, Miss. Filed Mar. 14, 1927. Serial No. 175,146. 4 Claims. (Cl. 56—207.)

1. A seed saver for attachment to the cutter bar of a mowing machine, including opposite, horizontally disposed, side members secured and braced apart, said side members having upwardly turned forward ends and having inwardly disposed flanges forming a support, a removable pan longitudinally slidable along said flanges and supported thereby, vertical posts secured to the rear ends of said side members and extending upward therefrom, axles extending laterally from said posts, and wheels on said axles, parallel supports secured to said posts, extending forwardly and downwardly therefrom to and secured to said upwardly

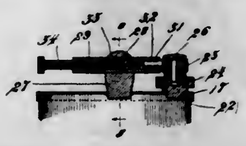
turned side members, a removable screen slidably disposed on said inclined supports and above said pan, a plurality of tedder bars disposed above said screen and means for actuating said bars from said wheels to move cut grasses backward along said screen.

1,809,545. APPARATUS FOR FINISHING BEARINGS AND BUSHINGS. THOMAS DAVID BOWES, Cynwyd, Pa. Filed July 5, 1928. Serial No. 290,679. 3 Claims. (Cl. 29—90.)



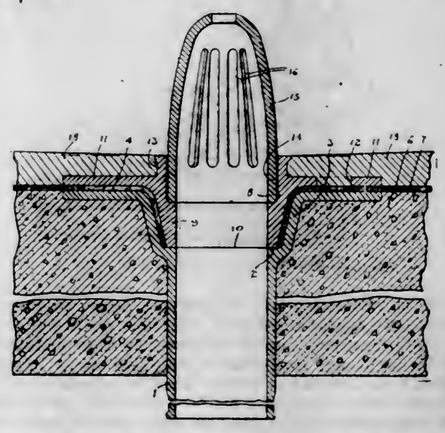
1. A bearing and bushing finishing apparatus comprising a clamp member, a rotatable mandrel, a bed plate upon which the mandrel and clamp member are operatively movable relatively to each other, said clamp member having a base plate adjustably mounted upon said bed plate, walls upon said base plate forming a clamp box to receive said bearing, said walls having an opening formed therethrough for the passage of the mandrel, sectional clamp plates within the clamp box adapted to embrace said bearing for rigidly holding the latter within the walls of the clamp member, said clamp member having a heating chamber formed therein, means for supplying heat to said chamber for heating the bearing, one of said clamp plates having apertures formed therein for the free passage of heat to the bearing, means for rotating the mandrel, and means for moving the mandrel axially through the bearing.

1,809,546. METHOD OF CLEANING WELLS. KIEL B. BOWMAN, Massillon, Ohio, assignor to The Ohio Drilling Company, Massillon, Ohio, a Corporation of Ohio. Filed Mar. 7, 1929. Serial No. 345,043. 12 Claims. (Cl. 166—21.)



1. The process of removing incrusting solids from water wells which includes introducing an acid into the water, forcing gas under pressure into and through the solution for about twenty-four hours to drive off carbon dioxide formed by the action of the acid upon the incrusting solids, and then pumping the solution out of the well.

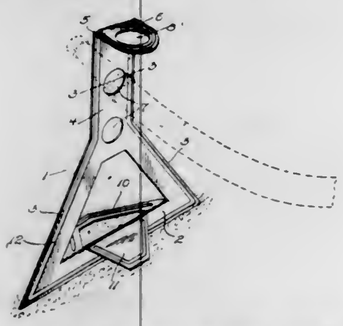
1,809,547. GAUGE DEVICE. OTTIS R. BRINEY, Pontiac, Mich. Filed Feb. 7, 1928. Serial No. 252,546. 6 Claims. (Cl. 33—178.)



3. A gauge device having a handle and a gaging member on one end thereof and a diametrically reduced member on the other end thereof, a one piece element extendable over and removable from said reduced member and having a gaging portion and a checking portion smaller than said gaging portion by an amount equal to permissible wear of said gaging portion, and a checking portion on said handle and intermediate the ends thereof to facilitate calibration of the checking portion and of the same size as the first mentioned checking portion and diametrically smaller than said handle.

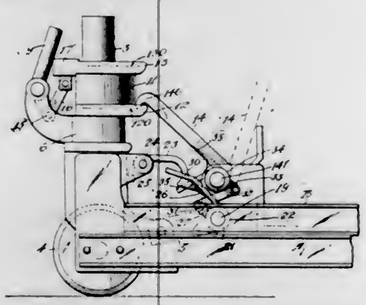
1,809,548. POCKET LIGHTER. WILLIAM J. BUTLER, Cranston, R. I., assignor to Henry Lederer & Bro. Inc., Providence, R. I., a Corporation of Rhode Island. Filed Apr. 11, 1928. Serial No. 269,268. 1 Claim. (Cl. 67—7.1.)

In a pocket lighter, a fuel reservoir, a tubular post upstanding from said reservoir, a combined friction wheel and thumb wheel element rotatably mounted on said post, a pin frictionally engaging the bore of said post and having a head projecting over said wheel element to lock the same on said post, a vertical standard on said reservoir having a transverse bore, and a pyrophoric tube frictionally engaging the transverse bore and having its end extending over the thumb wheel to additionally lock said wheel element on said post.



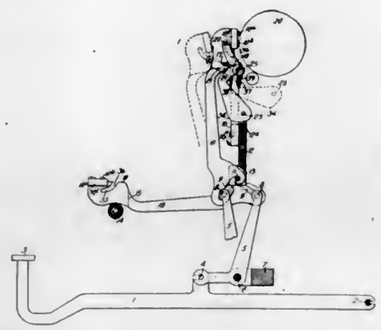
1,809,549. DRAIN HOPPER. ERSKINE DUNCAN and JOHN R. W. AMBROSE, Toronto, Ontario, Canada. Filed Aug. 22, 1927. Serial No. 214,650. 2 Claims. (Cl. 285—37.)

1. In a roof structure, the combination with a thin waterproof membrane covering therefor, of a tubular mem-



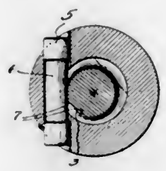
ber having a conical walled cup at the upper end bedded in the roof surface and having the membranous roof covering extending over the edge of the cup and downwardly thereinto, a cap having a flange resting on the top of the membranous roof covering and a conical boss extending down into the cup and binding the edge portions of the thin roof covering against the conical wall of said cup, said cap being formed with a flange extending upwardly above the level of its lateral flange, and a mastic roof covering extending over the lateral flange of the cap and the membrane and locking the cap in place.

1,809,550. HOSE HOLDER. KILBY FARRAR, London, Ohio. Filed Sept. 29, 1930. Serial No. 485,130. 3 Claims. (Cl. 248—29.)



1. A hose holder made from a single piece of sheet metal comprising a substantially triangular base section arranged vertical and which base section is formed with struck-out portions serving as legs to hold the holder in a substantially vertical position, an elongated portion forming an extension of said base section provided with vertically spaced apertures therein, and a laterally directed portion formed with the upper end of said elongated portion which is also provided with an opening, said openings serving to hold the nozzle of a hose and to support the same in various angular positions with respect to the holder.

1,809,551. ELEVATING TRUCK. HENRY S. GERMOND, Bayonne, N. J. Filed Oct. 10, 1929. Serial No. 398,612. 10 Claims. (Cl. 254—10.)

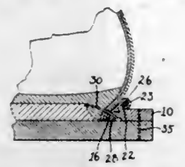


1. An elevating truck, comprising a frame, an elevating platform mounted thereon for composite vertical and horizontal movement, means for elevating said platform, a latch mechanism comprising a rotatable keeper having a curved surface and a pivotal hook to engage over said curved surface when said platform is raised, one arranged on said frame and the other on said platform, said keeper having a projection which upon rotation of the keeper engages said hook and dislodges it from said keeper, and means for rotating said keeper in one direction.

1,809,552. TYPEWRITING MACHINE. GEORGE G. GOING, Glenbrook, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 20, 1930. Serial No. 422,077. 17 Claims. (Cl. 197—27.)

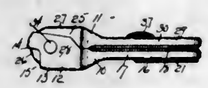
6. The combination of a series of pivoted type bars, a cam on each type bar, key controlled means for actuating each type bar, and means for slowing down the movement of each type bar as it approaches the printing point and effecting substantially a noiseless pressure imprint, said means comprising a single momentum accumulator arranged in the path of each type bar to be actuated thereby, and a contact member carried by said momentum accumulater and with which the said cam on each type bar coacts as the latter approaches the printing position, whereby the momentum accumulator may be actuated by a type bar with a camming action.

1,809,553. TOOL HOLDER. HERMANN M. GRAUL, Detroit, Mich.; Edith P. Graul administratrix of said Hermann M. Graul, deceased. Filed Mar. 25, 1926. Serial No. 97,480. 4 Claims. (Cl. 279—89.)



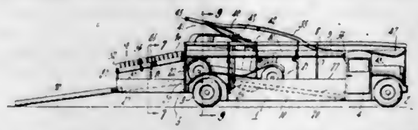
1. In a tool holder, the combination of a holder member provided with a tool receiving aperture, a yieldable pin positioned in the walls of the said holder member, the central portion of said pin being turned down and spaced from the walls of said tool holder, and a tool insertable longitudinally in said holder member, said tool being rotatable to press a portion of said pin out of alignment with the normal axis thereof to permit the tool to be moved in positive locking position.

1,809,554. COMPOSITION FOR PURIFYING PETROLEUM OILS. JULES H. HIAT, El Paso, Tex.; Harriet M. Hirt, executrix of said Jules H. Hirt, deceased, assignor to L. J. Hirt, New York, N. Y. Filed Mar. 23, 1929. Serial No. 349,520. 6 Claims. (Cl. 252—1.)



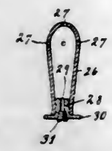
1. The process of making a composition for treating petroleum base liquids comprising dissolving a caustic alkali in water and adding thereto a metallic oxide and an alkali earth compound, and heating to produce a dry active product.

1,809,555. BEADED WELT. ALBERT L. HOWARD, Brockton, Mass., assignor to Hamilton-Wade Company, Brockton, Mass., a Corporation. Filed Nov. 9, 1929. Serial No. 405,968. 8 Claims. (Cl. 36—78.)



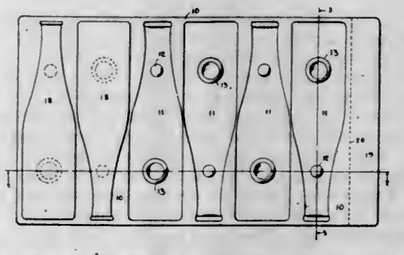
1. A beaded welt comprising a body portion having a bead-forming flap formed by an incision in the upper part of the body portion extending from the inner side edge of the welt, said flap being folded outwardly beyond the juncture of the flap with the body portion and then inwardly to form the bead, and said outwardly folded portion being fastened to the body of the welt.

1,809,556. NAIL TRIMMER. CHARLES J. JOLIDON, Hartford, Conn. Filed Sept. 15, 1928. Serial No. 306,169. 5 Claims. (Cl. 30—23.)



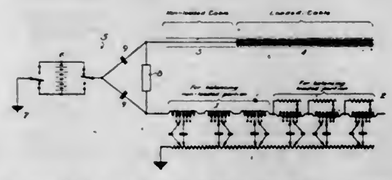
1. A nail trimmer including two members pivotally united and each comprising a head having registering and overlapping side closing walls and bottom walls forming a compartment to receive clippings, said members also including handles having registering closing side walls to form a hollow extension from said compartment and crossed cutting jaws located in cooperative cutting relation on each of said heads.

1,809,557. AUTOMOBILE TRANSPORTING TRUCK. LESTER J. LISHON, Brookline, Mass. Filed May 20, 1930. Serial No. 453,994. 17 Claims. (Cl. 296—1.)



1. A device of the class described comprising a frame having front and rear pairs of supporting wheels, said rear wheels having an axle extending therebetween, a vehicle support movable relative to said frame and positioned between said pair of wheels, and means for adjusting the rear end of said support between a position to receive the wheels of a vehicle passed over said axle and a position substantially below said receiving position.

1,809,558. SURGICAL APPLIANCE. GOTTLOB E. LOEBLE, New York, N. Y. Filed Sept 6, 1928. Serial No. 304,194. 2 Claims. (Cl. 128—271.



1. A surgical appliance comprising a hollow tubular member, one end of said member being curved and provided with perforations, the other end of said member being open, a bored plug fitting into the open end of said member, said plug having a flange on its outer end, and a removable filling plug fitting into the bore in the flanged plug.

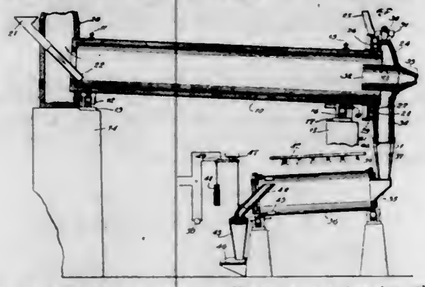
1,809,559. PACKING CONTAINERS FOR FRAGILE ARTICLES. LEON MANN, Mount Vernon, N. Y., assignor, by mesne assignments, to Holed-Tite Packing Corporation, a Corporation of New York. Filed Dec. 14, 1927. Serial No. 239,877. 8 Claims. (Cl. 217—19.)

1. A packing of the character described, comprising a sheet of material provided with spaced recesses to form compartments for receiving articles to be packed, cushion elements formed in the walls of said recesses, said elements having curved portions extending laterally and longitudinally of said recesses and having locking relation with similar elements of a superimposed tray, whereby relative sliding movement in all directions is prevented.

1,809,560. ARTIFICIAL LINE NETWORK. JOSEPH W. MILNOR, Maplewood, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Apr. 12, 1929. Serial No. 354,573. 18 Claims. (Cl. 178—45.)

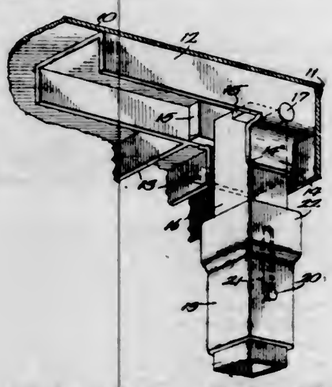
1. An artificial line comprising a series inductance provided with a plurality of central taps, a shunt condenser, an auxiliary shunt condenser having a capacity small with respect to that of the first mentioned condenser, and means for adjustably connecting each of said condensers to said central taps.

1,809,561. FOLDABLE GARMENT HANGER. ELISABETH MÜLLER, Brooklyn, N. Y. Filed Aug. 28, 1930. Serial No. 478,374. 1 Claim. (Cl. 223—63.)



A garment hanger comprising a channeled body member, arms pivotal with their inner ends between the outer ends of the channeled member, and end members pivoted to the outer ends of said arms, and adapted to be folded into the same and with said arms into the channel of said body member, a flexible supporting member, and shoulders formed on said body member and said arms for engagement by the lower inner edges of said arms and end members, for preventing a collapsing of the structure in its garment supporting position.

1,809,562. SIGN HOOK. JOHN NELSON, Boston, Mass. Original application filed Oct. 25, 1927, Serial No. 228,573. Divided and this application filed Dec. 8, 1928. Serial No. 324,792. 2 Claims. (Cl. 40—125.)

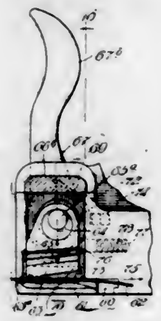


1. A sign hook formed from a single piece of material comprising a body, a penetrating portion, a head and an ear, said body being substantially wider than it is thick and tapering on all sides at one end to form said penetrating portion, the thickness of said penetrating portion at its lower end being less than one-third the thickness of said body, the other end of said body forming said head, said head being of substantially the same width and thickness as said body and being flat on its outer surface and adapted to receive the driving blow, the top surface of said ear slanting downwardly and outwardly from said head toward the outside end and its under surface being flat.

1,809,563. ROTARY FURNACE. HARLAND D. NEWKIRK, Syracuse, N. Y., assignor to Onondaga Steel Company, Inc., a Corporation of New York. Filed June 18, 1929. Serial No. 371,797. 9 Claims. (Cl. 263—32.)

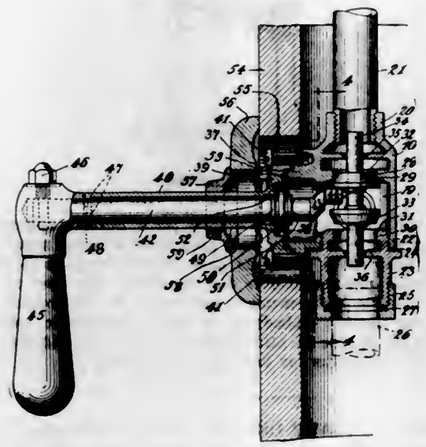
1. In a furnace a rotary cylinder and a bearing therefor, and suction means for producing a partial vacuum surrounding the area of engagement of the bearing and cylinder.

1,809,564. FOLDING TABLE. JOHN B. O'CONNOR and JOHN B. ADLER, Aurora, Ill., assignors to Lyon Metal Products, Incorporated, Aurora, Ill., a Corporation of Illinois. Filed Aug. 16, 1926. Serial No. 129,867. 31 Claims. (Cl. 45—11.)



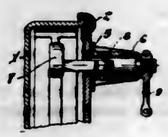
26. In a folding table, in combination with the top having a depending housing on its under side, said housing having opposed openings, a leg also having opposed registering openings, a pivotal pin passing through said openings and housing for hinging the leg to the table, a locking sleeve slidably mounted on said leg, a spring normally urging said sleeve in one direction to cause said sleeve to lockingly engage a portion of said housing, said housing having a cam portion across which the sleeve may travel during the movement of the leg for holding said sleeve out of locking position until said leg is swung to open position.

1,809,565. ELECTRICAL HEAT PRODUCING ELEMENT. JOSEPH OSTRAK, St. Louis, Mo. Filed Jan. 18, 1929. Serial No. 333,347. 1 Claim. (Cl. 219—34.)



A heat producing unit comprising a high resistance electric conductor, a heat distributing element associated with said high resistance conductor, said heat distributing element being of greater area than said high resistance conductor and being provided with a substantially U-shaped recess in which said high resistance conductor is positioned in a manner to cause wall portions of the recess to be in close proximity to a plurality of sides of said high resistance conductor, and a substantially U-shaped electric insulating element interposed between said high resistance conductor and portions of the wall of said recess, said recess being of a depth which is substantially greater than the corresponding dimension of the electric conductor, whereby the heat distributing area of the walls of said recess is increased.

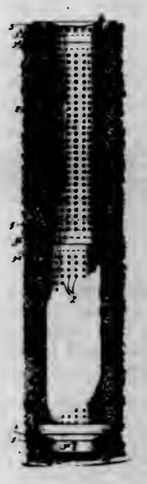
1,809,566. GRIPPING DOG. JOHN EKREN OTT, Chicago, Ill., assignor to Acme Steel Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1928. Serial No. 276,564. 8 Claims. (Cl. 24—134.)



1. A gripping dog comprising a frame member having a part to engage a strap to be gripped, a gripping member, a supporting member on which said gripping member is rotatably mounted, and means having an eccentric connection with said supporting member for effecting rotation thereof to move said gripping member toward and from said strap, said gripping member having a gripping surface in one plane located at one side of a plane passing through the axis of movement of said supporting member normal to the surface of said strap.

1,809,567. TRANSFER VALVE. ABRAM N. PASMAN, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 26, 1928. Serial No. 249,544. 16 Claims. (Cl. 277—7.

9. A combination spout and spray fixture including a spray, a spout, means for connecting the spout and spray with a source of water under pressure, a diverter member adapted to remain normally open to permit water to flow from said source through the spout and adapted to be closed to cause said water to flow through the spray, the diverter member being held closed by the pressure of the water, and means to return the diverter member to the open position when the flow of water from the source is stopped.



1,809,568. BRAKE. HENRI PERROT, Paris, France, and GERMAIN CALVIGNAC, Mannheim, Germany, assignors, by mesne assignments, to Bendix Aviation Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 2, 1929, Serial No. 337,127, and in France Sept. 26, 1928. 7 Claims. (Cl. 188—78.)

1. A brake comprising, in combination, friction means having separable ends, a bearing adjacent said ends, a shaft having a slotted end journaled in the bearing, and a cam between said ends having a flattened shaft portion pivoted in said slot.

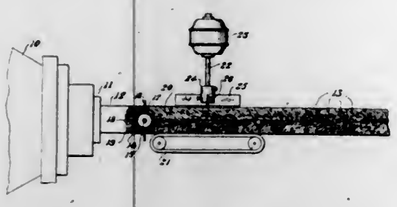
1,809,569. MAKING AND SETTING TUBULAR WELL SCREENS. THOMAS O. POE, Massillon, Ohio. Filed Oct. 11, 1923. Serial No. 667,893. 3 Claims. (Cl. 166—5.)

1. A perforate, tubular well tube adapted to be inserted into an opening in the ground and provided with a series of perforate annular screening material support flanges terminating in upwardly disposed peripheral rims arranged to bear against the wall of said opening in the ground, for supporting screening material in a cylindrical

column around the tube and in direct contact with the wall of said opening in the ground, and for preventing deflection of the tube throughout the length of the tube.

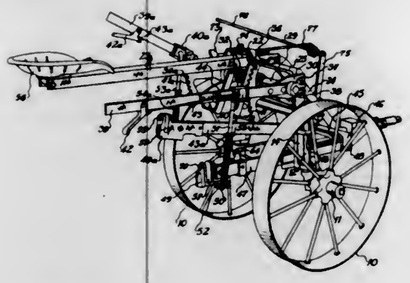
1,809,570. SYNTHETIC RESINOUS COMPLEX AND METHOD OF MAKING SAME. ISRAEL ROSENBLUM, Jackson Heights, N. Y. Filed Jan. 31, 1929. Serial No. 336,632. 18 Claims. (Cl. 260—4.)

1. The method which comprises reacting a phenol, an aldehyde and an organic salt of a metal selected from the group consisting of the members of the alkali metal group and of the second group of the periodic system lead, manganese and cobalt in the presence of a natural resin which has been dry-distilled at a temperature of about 260° C., adding a polyhydric alcohol in quantity sufficient to form partial esters with such resin, and further heating the mass until a soluble resinous reaction product is obtained.



9. The soluble reaction product of a phenol, an aldehyde, an organic salt of a metal selected from the group consisting of the members of the alkali metal group and of the second group of the periodic system, lead, manganese and cobalt, a polyhydric alcohol and a cracked natural resin.

1,809,571. LOUD SPEAKER. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Nov. 11, 1924, Serial No. 749,117, and in Great Britain Nov. 19, 1923. 12 Claims. (Cl. 181—31.)

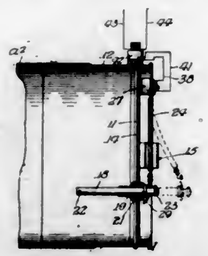


1. In combination, a plurality of spaced strips, a membrane covering the strips, stretchers attached to the strips and means for actuating the structure to reproduce sound.

1,809,572. APPARATUS AND PROCESS FOR TEXTURING BRICK. J. EBROL SMITH, Stonecreek, Ohio, assignor to The Stone Creek Brick Company, Stonecreek, Ohio, a Corporation of Ohio. Filed Jan. 28, 1929. Serial No. 335,616. 6 Claims. (Cl. 25—1.)

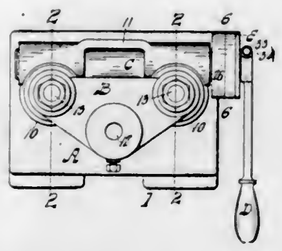
1. A texturing apparatus for a plastic column, and the like, including opposed cutters having radial blades and mounted upon axes perpendicular to opposite side surfaces of the column, and means for rotating the cutters upon their axes.

1,809,573. SULKY FOR PLOWS AND THE LIKE. CHARLES C. STEDMAN, Cleveland Heights, Ohio, assignor to Centaur Tractor Corporation, Greenwich, Ohio., a Corporation of Ohio. Filed Aug. 22, 1929. Serial No. 387,598. 14 Claims. (Cl. 97—91.)



1. A sulky for plows and the like including a frame, wheels upon the frame, a transverse crossbar for supporting a plow and the like, means for raising or lowering each end of the crossbar relative to the other end thereof and means for raising or lowering both ends of the crossbar simultaneously.

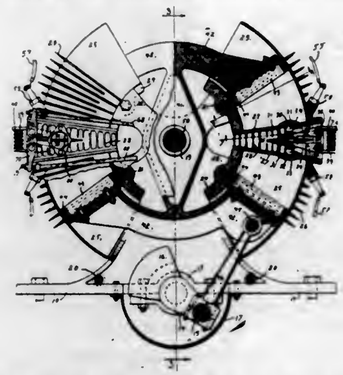
1,809,574. REINFORCED PILING. JAMES M. STRAUB, Pittsburgh, Pa., assignor to Electric Welding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1930. Serial No. 440,212. 5 Claims. (Cl. 61—56.)



1. A pile of the kind disclosed composed of a continuous body of concrete having a series of pairs of internal longitudinal reinforcing rods having diametrically crossed U-shaped ends terminating near the driving head of the pile and provided with spirally wound retaining wires, and a surrounding cage-like reinforcing head telescoped thereover in tight engagement with said wires and forming an extension of the reinforcing rods.

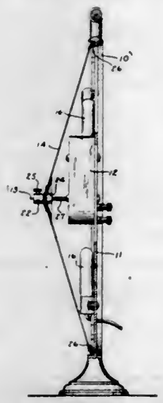
1,809,575. DRAFT REGULATING SYSTEM. WILLIAM B. STURGIS, Chicago, Ill. Filed June 8, 1929. Serial No. 369,274. 14 Claims. (Cl. 236—68.)

1. A draft regulating system for a heating apparatus, comprising a casing-member associated with the apparatus and adapted to have gas pass therethrough, a movably mounted damper-member for regulating the flow of gas through the casing-member, and means for controlling the damper-member embodying a thermo-responsive element mounted on one of said members and means independent of the apparatus for heating the element.



1,809,576. CLAMP DEVICE. JOSEPH VERDERBER, Cleveland, Ohio. Filed Mar. 29, 1928. Serial No. 265,759. 10 Claims. (Cl. 77—62.)

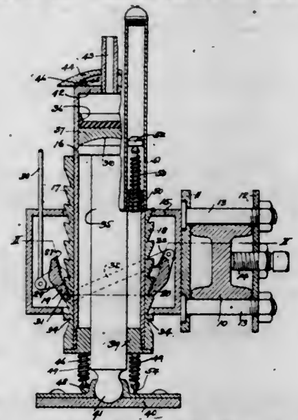
1. A clamp device including a movable clamping element, a fixed cup member, a shaft journaled in said cup member and operatively connected with said clamping element to move the same, a disc rotatable with said shaft and having a slot therein, a brake member in said slot adjacent the inner wall of said cup, a wedge member in said slot inwardly adjacent to said brake member, and an operating member rotatable on said shaft and having means to engage said wedge member to move the same and thereby rotate said disc to move said clamping element into clamping position and thereafter wedge said brake mamber into locking contact with said cup when said clamping element meets resistance to clamping movement thereof.



1,809,577. INTERNAL COMBUSTION ENGINE. LOUIS J. WOLFF, Omaha, Nebr., assignor to Oscillating Motors Company, Omaha, Nebr., a Corporation of Nebraska. Filed Mar. 2, 1929. Serial No. 344,085. 7 Claims. (Cl. 123—18.)

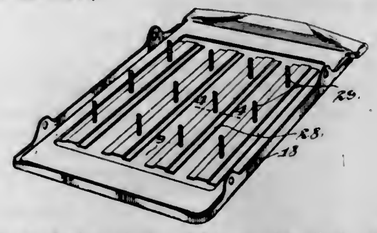
7. In an internal combustion engine, a plurality of toroidal cylinders arranged fixedly about a common axis, each cylinder having an open end, a rocker mounted for oscillation about said axis and having portions entering the open ends of the cylinders, pistons mounted fixedly upon said portions of the rocker and movable therewith within the cylinders, said pistons being supported solely by said rocker and being spaced from the cylinder-walls sufficiently to remain entirely out of contact therewith and provide an intervening clearance-space between the pistons and cylinder-walls under all conditions of operation, whereby to eliminate friction between the pistons and cylinders and inhibit conduction of heat from one to the other, and whereby heat may be conducted from the pistons through the connecting portions of the rocker,

and expansible packing rings carried by the pistons and extending across the clearance-spaces to engage the cylinder-walls, said rings being the sole elements contacting movably with the cylinder-walls.



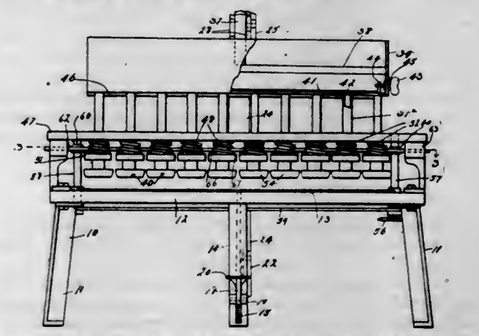
1,809,578. CONE TYPE LOUD SPEAKER. WILLIAM H. BRISTOL and FRANKLIN B. BRISTOL, Waterbury, Conn., assignors, by mesne assignments, to Wm. H. Bristol Talking Picture Corporation, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 10, 1926. Serial No. 101,064. 3 Claims. (Cl. 181—31.)

1. A cone type loud speaker, comprising a circular spider supporting frame, actuating mechanism mounted thereon, a reciprocatory rod adapted to be actuated thereby and extending substantially in the axis of the frame, a sound producing cone-shaped member mounted upon and carried by the rod with its mouth directed toward the actuating mechanism and covering substantially the front of the frame and having its edge unattached and free thereof to be freely removable from the front of said frame and to admit of ready substitution of the cone-shaped member, and means to removably secure the cone member at its apex to the rod.



1,809,579. VEHICLE JACK. LEONARD N. BRYANT, Memphis, Tenn., WILLIAM W. EAST, Jr., Oxford, Miss., and MARTIN S. SWAIN, Chicago, Ill. Filed Apr. 16, 1930. Serial No. 444,656. 10 Claims. (Cl. 138—9.)

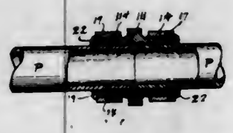
1. In a vehicle jack, a casing and means for attaching same to a part to be raised, a cylinder mounted and vertically slidable, in said casing, a plunger within said cylinder, releasable means for retaining said cylinder in raised position relative to said casing, means for releasing same



to allow said cylinder and plunger assembly to descend, releasable means for holding said cylinder in lowered position, and means for introducing fluid pressure into said cylinder to actuate said plunger.

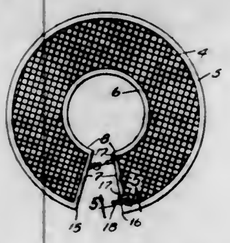
1,809,580. APPARATUS FOR BROILING BACON AND THE LIKE. CLARENCE W. CARTER, Minneapolis, Minn. Filed Sept 27, 1928. Serial No. 308,706. 3 Claims. (Cl. 219—19.)

2. In a device of the character described, relatively movable shells, co-operating thin sheet metal broiling plates applied to the respective shells, and metallic reinforcing strips secured to the backs of the respective broiling plates, screws projecting through said stiffening strips and having heads held by said strips, and beating elements secured to the backs of the respective broiling plates, by the said screws.



1,809,581. PAN GREASING MACHINE. JOSEPH CHVOJKA, Philadelphia, Pa. Filed May 31, 1930. Serial No. 458,319. 6 Claims. (Cl. 91—39.)

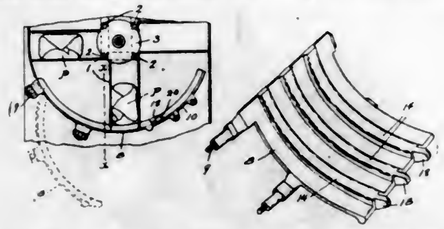
1. A pan greasing machine including a plurality of rotatable greasing elements, means to rotate said elements,



an elevating platform beneath said elements to hold a pan and move the same into operative relation with the greasing elements, manually operated means for actuating the elevating platform, a grease reservoir, conduits connecting said reservoir with several greasing elements, a piston for applying pressure to the grease in the reservoir, and means connected with the manually operated means for transmitting movement to the piston.

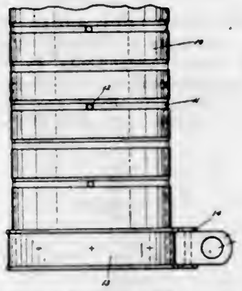
1,809,582. PIPE COUPLER. LEWIS H. CHURCH, Elizabeth, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 31, 1926. Serial No. 158,145. 4 Claims. (Cl. 285—124.)

1. A coupler comprising, a coupler member having an outwardly threaded neck terminating in a circumferential inwardly bevelled ring receiving and reducing surface, a gland nut adapted to be screwed onto the neck and formed with an inwardly bevelled ring receiving and reducing surface cooperating with the first named surface, and a split ductile gland ring being V-shaped in cross-section such that the sides of the ring are at a greater angle than the bevel of the gland nut disposed between the member and nut surfaces and adapted to have its over-all diameter first-reduced and subsequently its radial thickness reduced by approach of the surfaces.



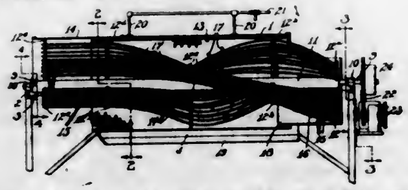
1,809,583. FAN PROTECTOR. EMMA K. COOK, St. Louis, Mo. Filed May 26, 1930. Serial No. 455,709. 1 Claim. (Cl. 230—275.)

A fan protector of the class described, comprising a cylindrical barrel of wire cloth, permanently closed at its outer end and having its inner end bound around with tri-folded metal, the outer fold of said tri-folded binding extending beyond the two other folds and curved first radially outward and then radially inward thereby forming a circumferential groove about the periphery of the inner end of said cylindrical barrel, an annular split ring member of wire mesh cloth circumferentially bound with bifolded sheet metal, said split annular ring having an external diameter greater than the diameter of said barrel and less than the internal diameter of said inwardly turned outer fold of said metal binding, means for fastening the ends of said split annular ring member.



1,809,584. DISPENSING MECHANISM. ARTHUR H. DU GRENIER, Haverhill, Mass. Filed Mar. 18, 1930. Serial No. 436,685. 5 Claims. (Cl. 312—97.)

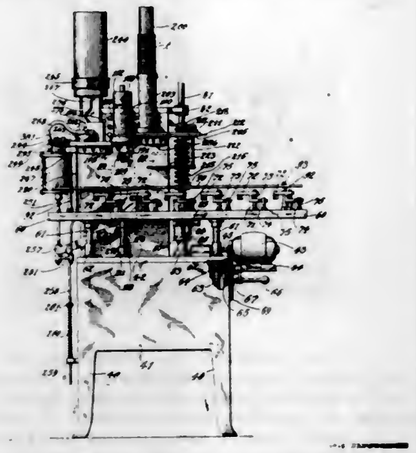
1. In a dispensing machine, an endless carrier arranged to be moved circularly in a vertical plane and having a series of article receiving receptacles each comprising a bottom and front and rear sides, and opening at its outer end to permit the discharge of the article therefrom, and a support located beneath the carrier having its upper surface disposed in proximity to the path of movement of the outer end edges of said sides, said support and said sides having oppositely projecting portions arranged



to extend in overlapping relation, the projections on the support being adapted and arranged to support the article above the ends of the projections on the sides during the portion of the movement of each receptacle in which the article tends to be discharged therefrom.

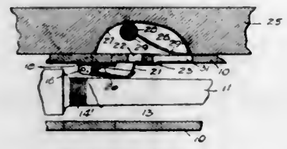
1,809,585. ENGINE VALVE SLEEVE. HENRY J. EDWARDS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed June 7, 1927. Serial No. 197,069. 6 Claims. (Cl. 123—75.)

1. A sleeve for internal combustion engines comprising a cylindrical sheet metal member, a flanged sheet metal annular member rigidly secured to the base portion of the sleeve, and a bearing lug rigidly secured to the flange of the annular member.



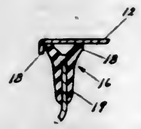
1,809,586. CONVEYER-SEPARATOR. LEONARD T. EVANS, Indianapolis, Ind. Filed Feb. 11, 1929. Serial No. 339,143. 8 Claims. (Cl. 19—90.)

1. In a device of the character described, the combination with a rotating foraminous cylinder, of a rotatable propeller mounted within said cylinder to rotate therewith and comprising a plurality of helically disposed slats arranged side by side.



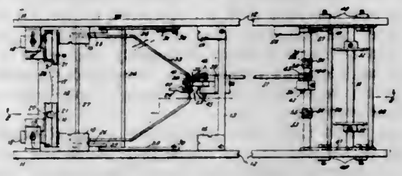
1,809,587. BOTTLE CAPPING AND SEALING MACHINE. HENRY B. FOULDES, Glenbrook, Conn., assignor of one-half to John P. Curry, Riverside, Conn. Filed Apr. 16, 1929. Serial No. 355,597. 69 Claims. (Cl. 140—94.)

1. In an apparatus of the character described, in combination, means for applying a skirted hood cap to an article to be sealed, means for encircling the skirt of the applied hood cap with a ring tie, means for twisting the tie to bind the hood cap on the article, and means for



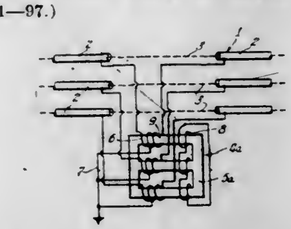
placing a nick in the tie adjacent the twisted portion to cause the tie to break at the neck when subjected to subsequent twisting.

1,809,588. LOOM. BENSON CLIFFORD GOODMAN, Far Rockaway, N. Y. Filed Jan. 27, 1928. Serial No. 250,065. 3 Claims. (Cl. 139—273.)



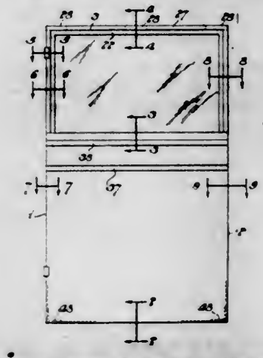
1. In a loom, the combination of a shuttle box and a shuttle, a yarn filled bobbin arranged in said shuttle, a detector disposed longitudinally of the bobbin and pivoted at one end in said shuttle and provided with a rounded nose yieldably urged towards the bobbin and into constant contact with the exterior of the yarn on the bobbin, an electrical contact carried in the shuttle and completed when the yarn is exhausted from the bobbin and the detector contacts with the said contact, and an electric circuit including an electromagnet controlled by said contact and position of the detector.

1,809,589. COWL VENTILATOR. GEORGE E. GRIMM, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed May 31, 1927. Serial No. 195,243. 2 Claims. (Cl. 20—69.)



1. A gasket for sealing a joint between two adjacent sheet metal members arranged at right angles to each other, comprising a body portion having a slot adapted to engage opposite sides of one member, and a pair of identical extensions forming a V adapted to engage the other member.

1,809,590. BILLING MACHINE ALIGNER. LOUIS FRED HAGEMANN, Niagara Falls, N. Y., assignor to American Sales Book Company, Limited, Toronto, Canada, a Corporation of Ontario, Canada. Filed June 17, 1926. Serial No. 116,592. 29 Claims. (Cl. 197—133.)

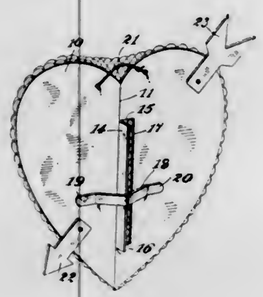


22. In a strip aligning device, in combination, an aligning pin movably mounted for engagement with a strip, operating mechanism connected to said aligning pin to move the same to effect strip alignment and a rigid locking mechanism for locking said aligning pin in final strip aligning position.

1,809,591. SHEATH BONDING AND METHOD. HERMAN HALPERIN and KENNETH W. MILLER, Chicago, Ill. Filed Nov. 30, 1927. Serial No. 236,634. 14 Claims. (Cl. 171—97.)

14. In a polyphase transmission system wherein there are provided separate sheathed cables for the respective phases, the sheath of each cable being divided into sections insulated from one another, the method of controlling the sheath current which comprises forcing the sheath currents to divide between the sheaths of the cables during abnormal conditions, and substantially preventing such division of current during normal operating conditions.

1,809,592. AUTOMOBILE DOOR CONSTRUCTION. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 13, 1927. Serial No. 160,867. 10 Claims. (Cl. 296—44.)



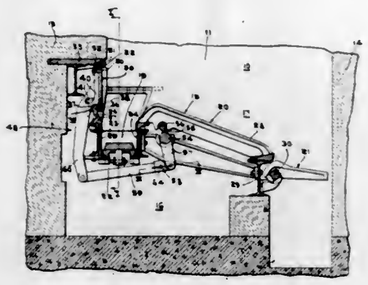
1. An automobile door having a slidable window arranged therein comprising a substantially Z shaped side rail formed of an integral stamping and having an inwardly directed offset in one of its arms, another of the arms of said rail forming, with an arm of said offset, a

guide channel for the slidable window, the outer face of the rail outside of the window guiding arm of the offset forming the finish molding of the door independently of outer paneling.

3. An automobile door having a slidable window arranged therein comprising an upwardly presenting channel top rail provided with an upwardly projecting flange on one of its arms forming the upper overlap of the door, and an angle member detachably connected to the top rail and forming therewith a downwardly presenting channel for receiving the upper edge of the window in its raised position.

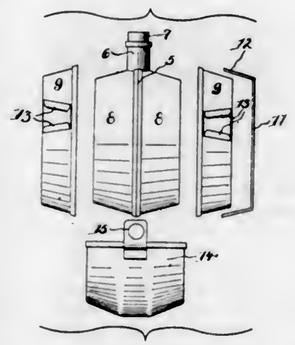
5. An automobile door comprising a metal stamping secured to the top of the inner door panel and formed with a curved portion having its end backwardly flanged upon itself adapted to furnish a pocket for receiving the upholstery and a beading for the inner trim.

1,809,593. FOLDING ORNAMENT OF EXPANSIBLE TISSUE. HENRY E. LUHRS, Shippensburg, Pa., assignor to The Beistle Company, Shippensburg, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1930. Serial No. 430,155. 8 Claims. (Cl. 41—11.)



1. A folding ornament comprising a base formed of two members integrally connected together along a fold line, expansible material secured to said base and serving to cause folding of said members, a tab homogeneous with part of the base, and a strap extending across the fold line and over the tab, one end of the strap being attached to one half of the base and the other end of the strap being attached to the other half of the base, the tab being adapted to engage the strap to hold the base members in unfolded position against the action of said expansible matter.

1,809,594. NECKTIE. JAMES C. MCCURRACH, Brooklyn, N. Y., assignor to McCurrach Organization, New York, N. Y., a Corporation of New York. Filed Oct. 24, 1929. Serial No. 402,037. 3 Claims. (Cl. 139—426.)

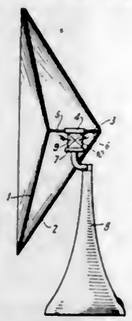


1. A fabric neck-tie formed on one face and to one end of a facing mesh and on the other face and as to its mid-portion but short of said end of a distinct backing mesh more resilient than the facing mesh, said tie including thread-loops scattered throughout the area common to the two meshes and connecting them together.

1,809,595. STOKER. CHARLES F. MILLER, Moores, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 6, 1929. Serial No. 405,167. 4 Claims. (Cl. 110—48.)

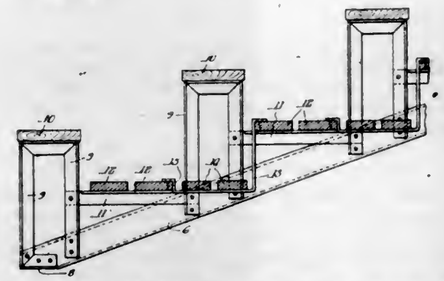
1. In stoker apparatus, the combination with a fuel trough having bottom and side walls; of a plate-like member disposed above one of the side walls, means for supporting the plate-like member adjacent its lower edge for movement about an axis extending substantially parallel to the walls of the trough; and means for moving the plate-like member about its axis of movement.

1,809,596. COMBINATION CANTEEN AND MESS KIT. WILLIS R. NASON, St. Paul, Minn. Filed Jan. 5, 1929. Serial No. 330,488. 4 Claims. (Cl. 206—4.)



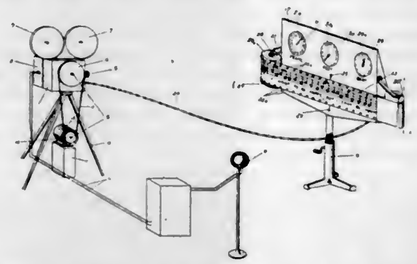
1. In a mess outfit, a canteen having opposite side portions of frusto-conical shape, a pair of pans of frusto-conical form adapted to fit in nesting engagement with the side portions of the canteen, a removable handle for a pan, means for detachably connecting said handle to at least one of said pans, said handle being formed to fit in nesting engagement with a pan when detached therefrom, a kettle formed to receive and hold together said canteen, pans and handle when in nesting engagement with each other and eye members secured to opposite sides of said kettle to receive a rigid shaft for supporting the same in horizontal position for cooking.

1,809,597. DOUBLE REENTRANT CONE LOUD SPEAKER. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor, by mesne assignments, to Federal Telegraph Company, a Corporation of California. Filed Mar. 17, 1927. Serial No. 175,989. 9 Claims. (Cl. 181—31.)



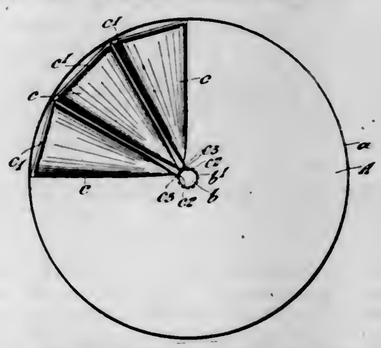
1. A loud speaker comprising a pair of conical diaphragms of different altitudes having their peripheries

secured together and their apexes disposed on the same side of the peripheral plane but spaced apart and driv-



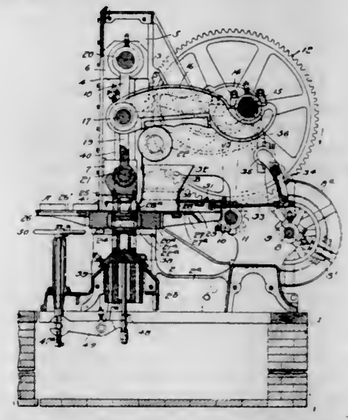
ing mechanism disposed between the apexes and connected thereto for imparting vibrations to each of said diaphragms.

1,809,598. STEEL BLEACHER. HENRY D. OBERDORFER, Newcastle, Ind., and JOHN B. JOHNSON, Louisville, Ky. Filed July 22, 1929. Serial No. 379,907. 10 Claims. (Cl. 189—2.)



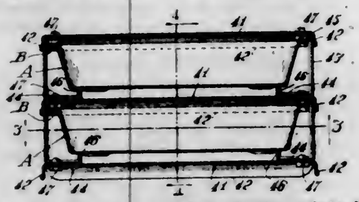
1. In a sectional stand construction, an inclined sectional stringer, a plurality of supports graduated in height, each support having a foot piece resting upon the ground into which the support is inserted, a head piece for each support attached to the stringer and supporting the stringer at an angle to the support, the angle supports having sleeves disposed intermediate the ends thereof, the sleeves, head pieces and foot pieces all being formed with perforated attachment wings, and a plurality of braces of different lengths extending from the wings to the stringers intermediate the supports and from some of the wings to adjacent wings for directly and cross connecting adjacent supports for bracing them against movement in all directions.

1,809,599. TALKING CARTOON MOTION PICTURE. FREEMAN H. OWENS, New York, N. Y. Filed Jan. 6, 1927. Serial No. 159,340. 20 Claims. (Cl. 88—16.2.)



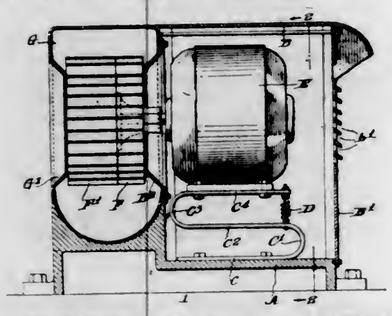
1. The method of synchronizing sound and motion pictures comprising the steps of, moving a sound chart, simultaneously photographing said moving sound chart and recording sound made in accordance with said chart, observing successive photographs of said chart, and then photographing cartoon pictures in corresponding relation to the successive photographs of said sound chart.

1,809,600. PACKING SEALED CONTAINERS CONTAINING MILK OR OTHER SUBSTANCES. HENRY WILLIAM SAMUEL PALMER, Gerrards Cross, England. Filed Sept. 20, 1929, Serial No. 393,857, and in Great Britain July 9, 1929. 4 Claims. (Cl. 206—46.)



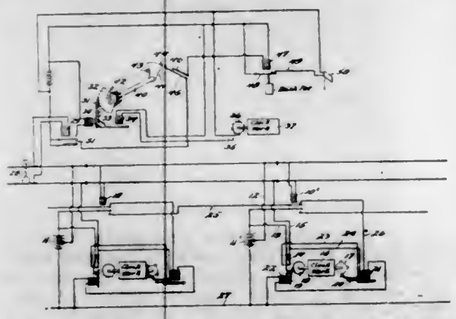
1. A packing box or casing for the reception of containers of cylindrical shape sealed at one end by a circular disc and at the other by pressing its opposite sides together to form a straight diametrical seam, comprising a cylindrical box or casing, and a vertical column fixed in the centre of the box or casing, the column being of a depth corresponding to the length of the diametrical seam of the container, while the distance between the column and the walls of the box or casing corresponds to the axial length of the container so as to prevent radial movement thereof when they are arranged radially therein side by side.

1,809,601. BRICK MACHINE. JACOB NESSLY PORTER, Kenilworth, W. Va., assignor to The Globe Brick Company, East Liverpool, Ohio, a Corporation of West Virginia. Filed Dec. 9, 1929. Serial No. 412,829. 13 Claims. (Cl. 25—89.)



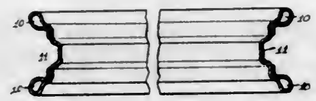
1. In a brick machine, the combination with brick shaping means, a feed table and a reciprocating member for successively feeding shaped bricks along said table to one position, of means disposed forward of and in spaced relation to said member, for moving each brick from the first referred to position along said table to another position.

1,809,602. KNOCKDOWN SECTIONAL RACK. WALTHER RASTER, Chicago, Ill. Filed May 17, 1930. Serial No. 453,338. 5 Claims. (Cl. 211—126.)



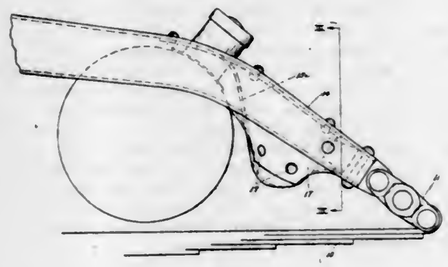
1. A sectional rack comprising a bottom plate for each compartment, receptacle supporting means disposed at a higher elevation than the plane of the lowermost surface portion of said member, side plates associated with said bottom plates and supporting the latter in spaced relation to each other, there being channel formations between said receptacle supporting means and said side plates, and both associating said side plates with said bottom plates and having projecting portions disposed in said channel formations.

1,809,603. SPRING SUPPORT FOR MOTORS. ARTHUR J. REED, Philadelphia, Pa. Filed Dec. 20, 1928. Serial No. 327,453. 3 Claims. (Cl. 248—16.)



1. A spring support for a motor comprising in combination a U shaped spring, to one side of which the motor is attached, a spring under tension attached only to the ends of the U spring, and acting to exert a compression force thereon and a spring support for the U shaped spring extending from the end of the lower arm of the U to a base support.

1,809,604. RAILWAY SIGNALING. EDWARD C. SASNETT, Washington, D. C., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 20, 1925, Serial No. 24,544. Renewed Jan. 9, 1931. 29 Claims. (Cl. 246—41.)

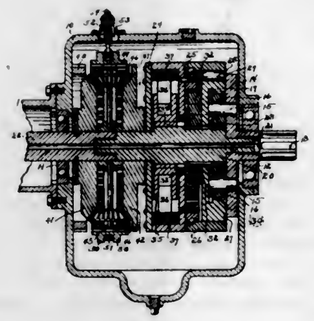


1. A code continuous indication system for the automatic control of railway vehicles, comprising a stretch of track divided into insulated blocks, a track relay connected across the rails at the entrance end of each block, a source of electrical energy connected across the rails at the exit end of each block, traffic controlled means for disconnecting the source of energy from the exit end of a block when a vehicle enters therein and for intermittently connecting a source of higher potential across the exit end of said block to cause relatively strong current impulses separated by a fixed time interval to flow in the rails of said block, in combination with a vehicle travelling on the track, a relay on the vehicle responsive to said current impulses, a timing device on the vehicle controlled by the vehicle relay, and train governing means controlled by said timing device and adapted to be held at one indication only so long as impulses are received from the track.

1,809,605. METHOD OF MAKING WHEEL RIMS. CLAUDE SAUZEDDE, Detroit, Mich. Filed Apr. 8, 1929. Serial No. 353,373. 7 Claims. (Cl. 29—159.1.)

1. A method of making a wheel rim consisting in forming a central boss in a disk of metal and retaining a flat ring in the original plane of said disk, flanging the free end of said boss, and shaping said ring and flange into curled rim edges.

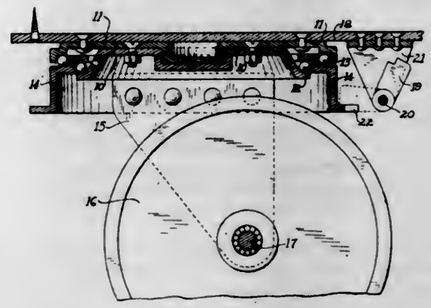
1,809,606. VEHICLE FRAME. WILLIAM P. STRONG, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 16, 1928. Serial No. 300,066. 12 Claims. (Cl. 280—106.)



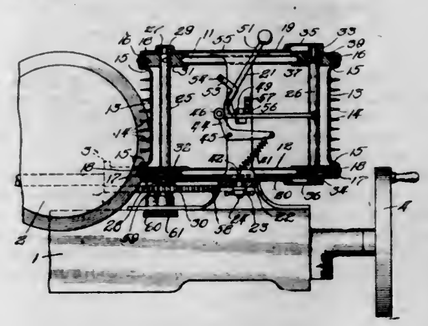
1. In a vehicle frame, the combination of two longitudinal channel members each comprising a vertical web and parallel horizontal flanged portions, a vertically inclined ear formed integrally with the lower flanged portion adjacent the extremity of each longitudinal member, a cross member interconnecting the longitudinal members having its ends turned substantially ninety degrees into engagement with the ears, the upper edge of the cross member adjoining the ears being flanged horizontally to engage the upper flange of the channel, and means for securing the horizontal member to the cross member at point of engagement.

1,809,607. DEVICE FOR HOLDING AND APPLYING TWINE. PHILIP J. SWIGART, Akron, Ohio. Filed Aug. 16, 1926. Serial No. 129,629. 3 Claims. (Cl. 242—141.)

2. In a device of the class described, a container, a handle projecting therefrom, a pad on said handle at a point adjacent the free end thereof, said handle provided with a longitudinally directed bore leading from said container and emerging from said handle at a point adjacent said pad, a second bore leading from a point on the other side of said pad to the free end of the handle, said container adapted to hold a ball of twine with the free end portion of the twine extending through said bores and contacting with said pad.

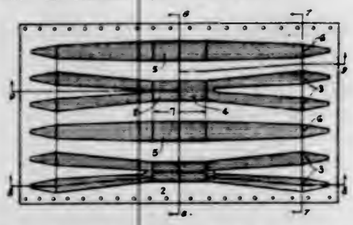


1,809,608. SEMIAUTOMATIC TRANSMISSION. THEODORE F. THOMPSON, Fort Dodge, Iowa. Filed Sept. 11, 1930. Serial No. 481,316. 8 Claims. (Cl. 74—34.)



1. In a device of the class described, a shaft designed to have one of its ends operatively connected to a prime mover, a second shaft capable of being operatively connected to said first mentioned shaft at times, an internal ring gear embracing said second shaft and of a diameter much greater than the diameter of the said second shaft, gear teeth on said second shaft, a governor on said second shaft capable of locking said ring gear against independent rotation relative to said second shaft when a certain speed or lack of load pull of said shaft is realized, a spur gear engaging said internal ring gear and said teeth at points diametrically opposite from each other, a third shaft, a brake having a fixed portion and a movable portion; said movable portion capable of engaging and being locked against movement when rotated in one direction, a shaft secured to the movable portion of said brake for rotatably securing said spur gear to said movable portion, an internal ring gear secured to said movable portion, a plate secured to said third shaft, and a spur gear rotatably mounted on said plate having its teeth engaging said movable portion and teeth on said second shaft at points diametrically opposite from each other.

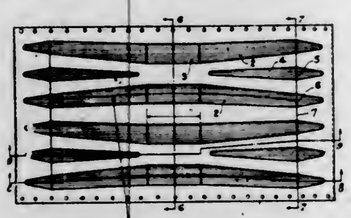
1,809,609. CASTER. GILES M. TURNER, Milwaukee, Wis. Filed Jan. 6, 1928. Serial No. 244,881. 2 Claims. (Cl. 16—21.)



2. A caster comprising a ring member having a stepped inwardly extending annular flange forming inner and outer bearing shoulders, a pair of disk members secured together and shouldered and flanged to complete inner and outer ball raceways with said bearing shoulders of the ring member, bearing balls in said ball raceways, an outwardly extending strengthening flange at the lower edge of the ring member, curved bracket plates secured within the ring member and bearing against the upper flange thereof, a wheel mounted between the bracket members, a gusset plate secured to the disk members, a bearing bracket on the gusset plate, and a dog mounted on the bearing bracket and adapted to rest on the outwardly extending flange, said flange having a notch to receive the dog for locking the ring member against turning.

1,809,610. SLICING MACHINE. CORNELIS F. M. VAN BERKEL, Wassenaar, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed June 14, 1928, Serial No. 285,346, and in Great Britain June 28, 1927. 11 Claims. (Cl. 146—94.)

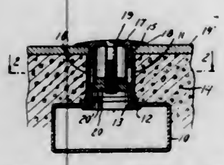
1. A slice conveyer for slicing machines comprising in combination; a pair of spaced flexible traveling elements, slice-engaging means connecting said elements, pulleys around which said elements are guided, a pair of spaced supports upon which said pulleys are mounted, a pair of spaced plates, each plate being disposed at the opposite ends of said supports, alined guides at one end of each plate in which the opposite ends of one of said supports are slidably received, the ends of said other support being mounted in the other ends of said plates, a spacing member connecting said plates, and spring-operated means mounted on said spacing member and connected with said slidably mounted support to urge said support away from said spacing member and maintain said traveling element taut.



1,809,611. METAL STRUCTURE FOR RAILWAY CARS. WILLIAM E. VAN DORN, Pasadena, Calif., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 25, 1929. Serial No. 395,032. 12 Claims. (Cl. 105—410.)

1. A metallic plate formed with a plurality of substantially parallel embossments of substantially the same length, the alternate embossments having their opposite ends divided to form a greater number of portions and the embossments between said alternate embossments being not so divided.

2. A metallic plate formed with a plurality of substantially parallel equal width embossments of substantially the same length, the alternate embossments having their opposite ends divided to form a greater number of portions and the embossments between said alternate embossments being not so divided.

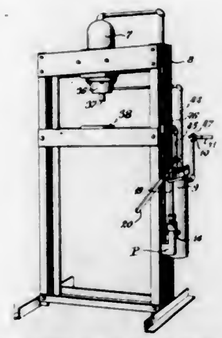


1,809,612. METALLIC STRUCTURE FOR RAILWAY CARS. WILLIAM E. VAN DORN, Pasadena, Calif., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 25, 1929. Serial No. 395,033. 16 Claims. (Cl. 105—410.)

1. A metallic plate formed with a pair of major embossments, the longitudinal axes of said major embossments diverging from each other at their ends, said plate also formed with a minor embossment between said ends of the major embossments.

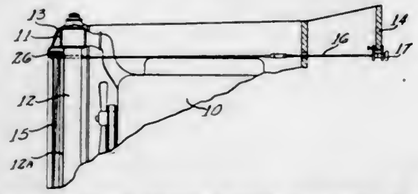
2. A metallic plate formed with a pair of equal width major embossments which decrease in width toward their opposite ends, the longitudinal axes of said major embossments diverging from each other at their ends, said plate also formed with a minor embossment between said ends of the major embossments equal in width to the ends of the major embossments.

1,809,613. ACCESSORY FOR UNDERFLOOR DUCT SYSTEMS. HERVEY S. WALKER, Ardmore, Pa. Filed Mar. 15, 1929. Serial No. 347,199. 10 Claims. (Cl. 247—28.)



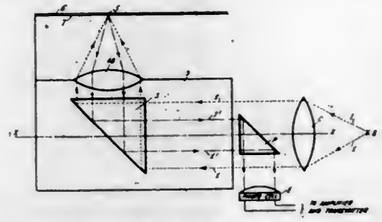
4. In an underfloor wiring system, a duct in the floor structure, an outlet element extending from the duct toward the floor surface, and a closure for the end of the element comprising a tube receivable into the element, an end plate closing one end of the tube and lying in contact with the floor surface, the open end of the tube being expansible and said plate having a smooth substantially flat top and being of greater diameter than said tube, an expanding member carried by the closure and engaging the open end of the tube, and means carried by said closure operable from the floor surface for actuating the said member.

1,809,614. PRODUCTION OF VACUA. HERBERT J. WERT, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 27, 1930. Serial No. 505,205. 7 Claims. (Cl. 230—101.)



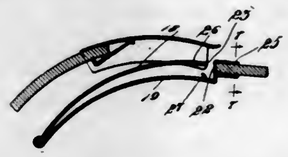
1. In a method of producing high-vacua by means of condensation pumps the improvement which comprises using a pumping substance for providing the propellent vapor, one containing at least one ester of a keto aromatic acid.

1,809,615. SAFETY DEVICE FOR HYDRAULIC PRESSES. FRANK C. WILSON, Arcade, N. Y. Filed Nov. 22, 1929. Serial No. 409,176. 5 Claims. (Cl. 138—10.)



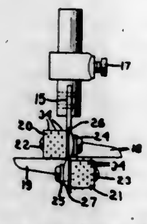
1. A hydraulic press including a working cylinder, said cylinder having a piston adapted to operate the movable members of the press and being in communication with a fluid reservoir, means for applying pressure to the fluid in said reservoir to operate said piston, an auxiliary hand pump in communication with said reservoir and adapted upon operation to force fluid from the same into the working cylinder of the press, and means operative upon pressure being applied to the fluid in said reservoir to lock the operating handle of said pump against movement.

1,809,616. CONTROL SHUTTER FOR ENGINE RADIATORS. DANIEL M. WINANS, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed July 15, 1929. Serial No. 378,197. 20 Claims. (Cl. 189—62.)



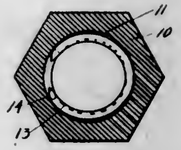
1. In a radiator shutter serving to control air-flow, a fenestrated frame work, slats of the twistable type pivotally mounted therein, and means for twisting the respective slats against said frame work and thereby substantially closing the frame fenestration to air-flow.

1,809,617. FACSIMILE SYSTEM. GEORGE MAURICE WRIGHT, Great Baddow, Chelmsford, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 23, 1929, Serial No. 365,355, and in Great Britain May 31, 1928. 2 Claims. (Cl. 178—7.)



1. A picture transmission system, including a record carrying drum, a rotating prism mounted internally of said record carrying drum and adapted to be rotated within said drum, a wide aperture lens adjacent said prism and adapted to be rotated simultaneously therewith, a light source arranged centrally of said prism, said prism and lens being adapted to direct the light from said source toward the record surface carried upon said drum and to collect and re-direct the reflected light from said record surface along a path parallel to the path of projection, a stationary prism external to the path of incident light for re-directing the reflected light, and a photoelectric element in the path of said re-directed light from said prism for converting the re-directed light into proportionate strength electric current impulses.

1,809,618. EXTENSION DEVICE. MAURICE ANDERSON, Edgewood, R. I., assignor to Levy, Anderson Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Jan. 7, 1930. Serial No. 419,048. 10 Claims. (Cl. 24—71.)

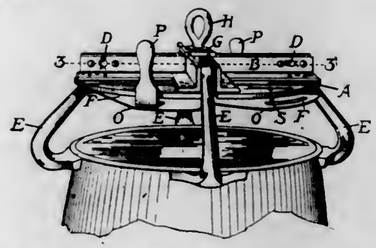


1. In a flexible bracelet, an extension device comprising a longitudinally arcuate sheet metal member having bracelet end clamping means at one end thereof, a longitudinally arcuate sheet metal end extension link hingedly secured thereto, said links also being arcuate in transverse section whereby said links are strengthened and fitting together when in folded position, and bracelet end clamping means at the free end of the end link.

1,809,619. CLOTH SPLITTING ATTACHMENT FOR LOOMS. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 9, 1929. Serial No. 384,721. 6 Claims. (Cl. 164—70.)

1. A cloth splitting attachment for looms comprising a rotary shear, means to support said shear normal to, and with its cutting point in, the plane of the cloth, and means actuated by the forward movement of the cloth to rotate said shear to split the cloth longitudinally during the weaving operation.

1,809,620. NUT LOCK. ELWYN Z. COLE, Philadelphia, Pa. Filed Feb. 7, 1929. Serial No. 338,096. 1 Claim. (Cl. 101—7.)

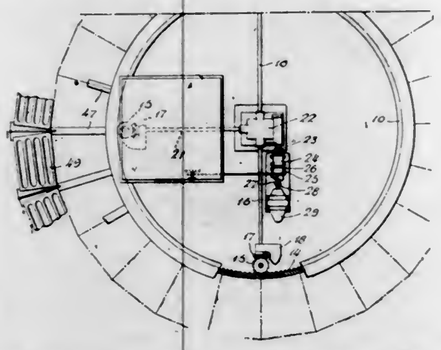


A locking nut comprising a nut having an internally threaded bore for coacting with a threaded bolt, said nut also having an annular groove around the bore; and a split spring metal ring fitted in said groove so as to track in the threads of said bolt and exert spring pressure upon the outer wall of the groove and upon the threads in which it is tracking, said ring having its ends bevelled in opposite directions to facilitate entrance in said threads.

1,809,621. INHIBITOR. HARRY P. CORSON, Lakewood, Ohio, assignor, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Delaware. Filed Aug. 9, 1928. Serial No. 298,630. 9 Claims. (Cl. 148—8.)

1. A pickling and cleaning bath for metals comprising a dilute acid containing a small amount of a thiuram sulfide.

1,809,622. GRAPPLING APPARATUS. VERN G. ELLEN, Minneapolis, Minn., assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed June 18, 1930. Serial No. 461,966. 4 Claims. (Cl. 294—82.)

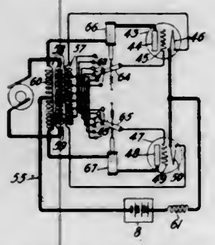


1. In a grappling apparatus, a main member adapted to be connected to a hoisting or a carrying device, and having grappling hooks pivoted on its opposite edges, whereby they tend to swing inward and engage and hold the article to be handled, and a subsidiary member centrally pivoted below the main member, the edges of said subsidiary member being so formed that by turning it on its pivot in one direction the hooks will be free to move inward and engage the article to be handled and by turning it in the opposite direction the hooks will be moved outward and be disconnected from said article.

1,809,623. APPARATUS FOR CASTING COPPER INGOTS AND OTHER ARTICLES. DANIEL R. FRANCIS, Waterbury, Conn., assignor to The Waterbury Tool Company, Waterbury, Conn., a Corporation of Connecticut. Filed Nov. 30, 1929. Serial No. 410,667. 4 Claims. (Cl. 22—77.)

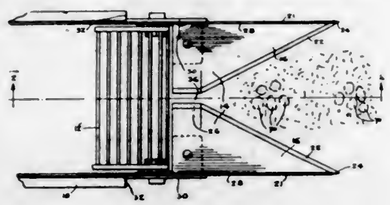
1. The combination with a casting wheel for casting metallic ingots, bars, or the like, and having a plurality

of casting molds arranged at spaced intervals about said wheel and adapted to be successively brought to a charging position, of means for driving said wheel continuously at varying speeds without the production of shocks or jerks during an operative period consisting of successive



mold charging intervals of relatively slow wheel travelling speeds and mold shifting intervals of relatively higher wheel travelling speeds, said means comprising a hydraulic pump and a hydraulic motor, the latter having a driving shaft, and gearing connecting the driving shaft of said motor with said casting wheel.

1,809,624. RESONATOR. ERICH GIEBE and ADOLF SCHEIBE, Charlottenburg, near Berlin, Germany, assignors to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 21, 1927. Serial No. 185,429, and in Germany Apr. 24, 1926. 6 Claims. (Cl. 171—327.)

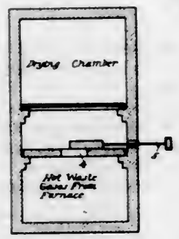


1. A piezo-electric resonator having an annular shape.

1,809,625. ELECTRIC CONTROL CIRCUITS. ELMER V. GRIGGS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1921. Serial No. 504,933. 11 Claims. (Cl. 175—363.)

1. In a rectifying system, a pair of rectifiers, each having an anode, a cathode, and a grid, a source of alternating current oppositely related to said anodes, a transformer for connecting said source to the grids, and means for varying the effective ratio of secondary turns to primary turns of said transformer to apply similar potentials to each of said grids and to mechanically vary the adjustment of said grid potentials in response to variations in rectified current.

1,809,626. SCOOP FOR POTATO DIGGERS. GUST HEGLUND, Constance, Minn. Filed Dec. 23, 1929. Serial No. 416,031. 3 Claims. (Cl. 55—9.)

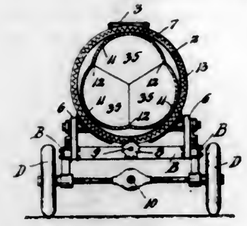


1. A scoop for potato diggers comprising two complementary members, each of said members having a triangular side wall and a triangular bottom wall, the bottom walls sloping downwardly toward the rear and the side walls forming points with the bottom walls at the front of the scoop, the edges of the side walls inclining upwardly and being sharp and the edges of the bottom walls being rearwardly convergent to produce a gap diminishing in width and being sharp.

1,809,627. PRODUCTION OF VACUUMS. ALPHONS O. JAEGER, Mount Lebanon, and HERBERT J. WEST, Crafton, Pa., assignors to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 28, 1931. Serial No. 526,136. 4 Claims. (Cl. 230—101.)

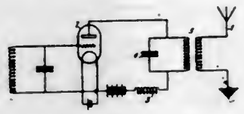
1. In a method of producing high-vacua by means of condensation pumps the improvement which comprises using a pumping substance for providing the propellent vapor, one containing at least one hexahydrophthalide.

1,809,628. MEANS FOR UTILIZING THE WASTE GASES FROM FURNACES. BOYD MILO JOHNSON, Metuchen, N. J., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Aug. 13, 1928. Serial No. 299,428. 16 Claims. (Cl. 25—142.)



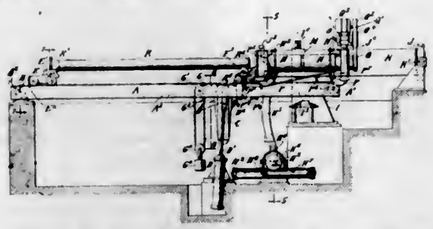
1. The combination with a kiln, of a drier, means for conducting waste combustion gases from the kiln to the drier, a heat exchanger, and means for deflecting some of the waste gases from the kiln to the heat exchanger, said means being variable whereby the amount of combustion gases necessary for the operation of the drier may be supplied the drier and the heat from the excess conserved without overheating the drier.

1,809,629. CONCRETE TRANSPORTING TRUCK. PHILIP A. KOEHRING, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Apr. 1, 1929. Serial No. 351,773. 2 Claims. (Cl. 83—73.)



1. In a concrete mixing machine of the class described, in combination, a concrete mixing drum having an internal

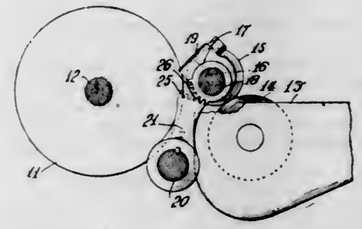
shell having an interrupted periphery consisting of longitudinally extending sectors of equal convex contour, each sector being generated on a radius of equal length, an outer cylindrical shell member having a discharge end,



a closed end remote therefrom, an inlet passing through the outer shell and communicating with the internal shell, a closure for the discharge and a closure for the inlet opening.

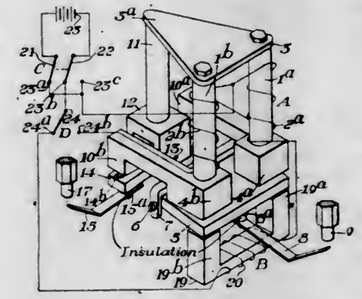
1,809,630. VALVE TRANSMITTER ARRANGEMENT. WILHELM KUMMERER, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose, Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Dec. 15, 1928, Serial No. 326,277, and in Germany Dec. 29, 1927. 3 Claims. (Cl. 250—17.)

1. In a transmitting device, an oscillation circuit comprising an inductive branch and a capacitive branch in parallel, an antenna circuit coupled to one of said branches and a reactance in series with said oscillation circuit having a value equal and opposite to the reactance of the other branch.



1,809,631. CENTRIFUGAL CASTING MACHINE. JAMES B. LADD, Ardmore, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Nov. 5, 1921. Serial No. 512,980. 15 Claims. (Cl. 22—65.)

1. In a centrifugal casting machine a rotatable sleeve adapted to receive a flask and means for rotating said sleeve in combination with self centering chucks secured to the sleeve and having gripping jaws movable in radial planes, said jaws being adapted to center and grip a flask.

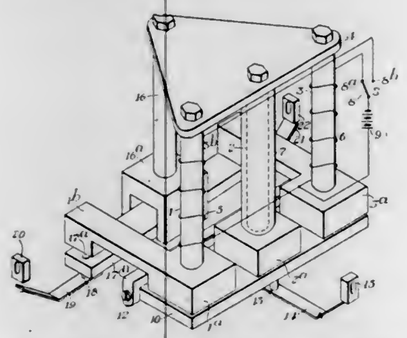


1,809,632. INKING MECHANISM FOR PRINTING PRESSES. HUBERT LANG, La Grange, Ill., assignor to The Goss Printing Press Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 17, 1929. Serial No. 386,563. 5 Claims. (Cl. 101—363.)

1. In an inking mechanism, the combination of an ink fountain, a fountain roller revolubly mounted therein, an ink drum in parallel relation to said fountain roller at a short distance therefrom, a transfer roller, means for supporting the transfer roller comprising movable supporting parts between which said transfer roller is revolubly mounted and rigidly stationary parts by which said movable supporting parts are revolubly supported in close proximity to said transfer roller on an axis in slightly eccentric position with respect to the axis of the roller, means for adjusting one of said movable supporting

parts circumferentially with respect to the other for changing the alignment of said transfer roller, and means for giving said movable supporting parts rotary movements in unison in alternately opposite directions for moving said transfer roller into contact alternately with said ink drum and said fountain roller.

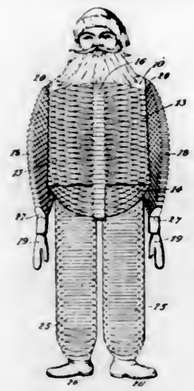
1,809,633. ELECTRICAL RELAY. BRANKO LAZICH, Pittsburgh, Pa., asignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 9, 1929. Serial No. 398,337. 11 Claims. (Cl. 175—335.)



1. In combination, a main electromagnet and an auxiliary electromagnet, means for at times supplying current of one polarity or the other to both said electro magnets, means for at other times supplying current of one polarity or the other to said main electromagnet only, a first armature controlled by said main electromagnet in accordance with the polarity of the current supplied thereto, and a second armature normally occupying one position and arranged to be operated to another position when said main electromagnet is energized provided said auxiliary electromagnetic is de-energized.

10. In combination, a main electromagnet comprising two parallel cores connected together at one end by a back strap and each provided at the other end with pole pieces having integral extensions, a first winding on one core of said main electromagnet and a second winding on the other core of said main electromagnet, an auxiliary electromagnet comprising a magnetizable core provided with a third winding and having two poles, means for at times supplying said first winding with current of one polarity or the other and for at other times supplying said second and third windings in series with current of one polarity or the other, a main armature pivoted to swing between the pole pieces of said main electromagnet and the

poles of said auxiliary electromagnet and controlled by both said electromagnets in such manner that said main armature moves toward the pole pieces of said main electromagnet when said first winding is supplied with current but that said main armature is held away from said pole pieces by the poles of said auxiliary electromagnet when said second and third windings are supplied with current, a permanently magnetized core having one end engaging said back strap and having the free end located between the extensions of the pole pieces of said main electromagnet, and a polarized armature pivotally supported by the free end of said permanently magnetized core and arranged to swing toward one or the other of the extensions of the pole pieces of said main electromagnet depending upon the relative polarity of the current supplied to said first or said second winding.

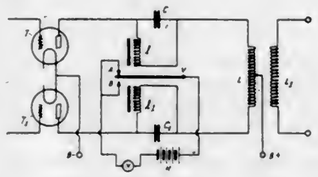


1,809,634. ELECTRICAL RELAY. BRANKO LAZICH, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 12, 1929. Serial No. 399,301. 11 Claims. (Cl. 175—335.)

8. A relay comprising a first and second parallel cores connected at their upper ends by a back strap and each provided at their lower ends with an enlarged pole piece, a third magnetizable core located between said first and second cores and connected at its upper end with said back strap and provided at its lower end with a third enlarged pole piece, a first winding on said first core and a second winding on said second core, means for energizing said first or said second winding in such manner that the flux set up by either of said windings threads said third core in the same direction, a neutral armature pivoted to swing toward said pole pieces when either of said windings is energized, a first and second integral extensions on said first and second cores respectively, a constantly magnetized core having one end engaging said back strap and having the other end located between said first and second extensions, a polarized armature pivoted intermediate its ends on such other end of said constantly magnetized core and arranged to swing toward said first or said second extension according as said first or said second winding is energized, contacts controlled by said armatures, respectively, and a sleeve of conducting material on said third core for delaying the decay of flux in said third core to prevent said neutral armature from opening if one of said windings is energized immediately after the other winding is deenergized.

1,809,635. MANIKIN. HENRY E. LUHRS, Shippensburg, Pa. Filed Sept. 13, 1930. Serial No. 481,630. 12 Claims. (Cl. 46—40.)

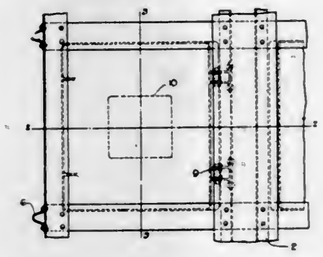
1. A figure comprising a piece of sheet material comprising a shoulder piece, a piece of sheet material comprising a hip piece, the hip piece being spaced from the shoulder piece, a supporting strip of flexible material attached to the shoulder piece and to the hip piece, and expansible cellular tissue forming the body of the figure,



one end of the body tissue being attached to the front of the shoulder piece and the other end of the body tissue being attached to the front of the hip piece.

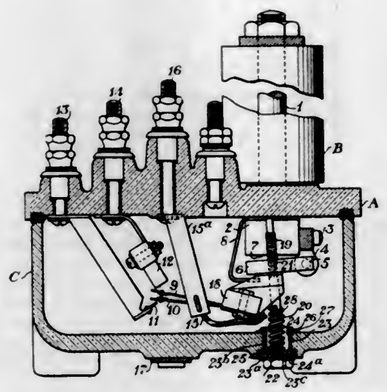
1,809,636. DAM. JAMES S. MILLER, Pittsburgh, Pa., assignor to Dravo Contracting Company, a Corporation of Pennsylvania. Filed July 3, 1929. Serial No. 375,662. 4 Claims. (Cl. 61—30.)

1. A monolithic dam structure including a block of concrete having embedded in its base a horizontally extending metallic reinforcement resting upon two parallel lines of sheet-piling, upon which piling the said reinforcement immediately rests and upon the upper rim of which piling the concrete is shaped and hardened.



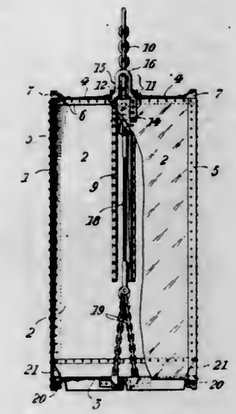
1,809,637. INDICATING DEVICE. ALFRED B. MOULTON, Riverhead, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 3, 1927. Serial No. 237,390. 5 Claims. (Cl. 250—27.)

1. In radio apparatus comprising a push pull stage having a pair of vacuum tubes, an output circuit connected



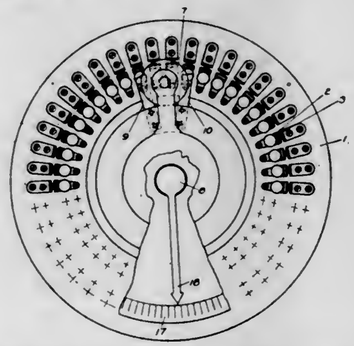
to the output elements of each of said tubes including a capacity shunted winding, an output winding in series therewith and a source of high potential common to both of said circuits, an armature associated with said capacity shunted windings, contacts associated with said armature, a circuit including a source of power connecting said contacts and armature, and a signalling device actuated by said last named circuit when closed.

1,809,638. CAST METAL HOPPER DOOR FOR RAILWAY CARS. WALTER P. MURPHY, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 2, 1929. Serial No. 396,666. 8 Claims. (Cl. 105—280.)



1. A cast metal hopper door for a railway car having a body part with a flat upper surface, said body part comprising a relatively thick middle portion extending between the ends of the door and a relatively thin portion adjacent each side of the door.

1,809,639. HOLDING MEANS FOR INSTRUMENTS. NOBLE C. SHAW, Swissvale, and THOMAS J. O'MEARA, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 22, 1931. Serial No. 510,578. 8 Claims. (Cl. 175—336.)

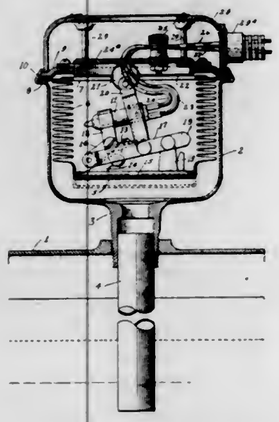


1. In combination, an instrument having a fixed part and a movable member, a second member attached to said movable member in such manner that said second member will engage said fixed part when said movable member occupies an intermediate position, and resilient means cooperating with said second member for holding said second member in the position in which said second member engages said fixed part.

1,809,640. DROP-BOTTOM CONTAINER. LEWIS M. SHOWERS, Jr., Juniata, Pa. Filed June 24, 1930. Serial No. 463,414. 7 Claims. (Cl. 294—71.)

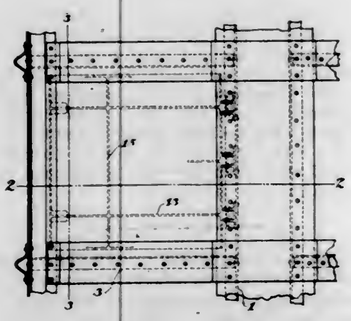
1. In a drop-bottom shipping container, a container body, a bottom door, cables for holding said door closed, and guides for said cables disposed at opposite sides of the container, said guides having loops formed integrally therewith to afford points of attachment for the suspension of the container body.

1,809,641. COMPENSATOR SWITCH. ARNOLD M. SKUDRE, West Newton, Mass., assignor to Submarine Signal Company, Boston, Mass., a Corporation of Maine. Filed Aug. 31, 1929. Serial No. 389,726. 5 Claims. (Cl. 200—7.)



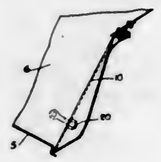
1. In an electric compensator for connecting retardation elements between receivers and indicators, a group of switch contacts, means for opening said switch contacts successively to vary the amount of retardation connected between the indicators and the receivers, a scale and pointer associated with said means to locate the position of said means, and resilient means normally maintaining said switch contacts closed and means adjusting the tension on said resilient means whereby the point of opening of said contacts may be adjusted.

1,809,642. PRESSURE ACTUATED ELECTRIC SWITCH. FRANK EARL SPERRY, Batavia, Ill., assignor to Mechanical Devices Company, Bloomington, Ill., a Corporation of Illinois. Filed Sept. 18, 1929. Serial No. 393,400. 2 Claims. (Cl. 200—83.)



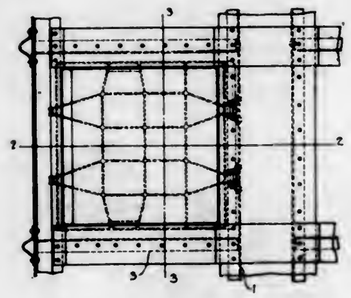
1. In a device of the character described, the combination of a closed casing with an expansible and contracta-

ble bellows member closed at the lower end and secured to the casing closure at the other end, said casing having a tubular projection adapted to be passed through and be secured to the wall of a tank and terminating adjacent the bottom of said tank affording a communication between the space in the casing surrounding the bellows and the air confined in the tubular member above the level of the liquid therein, whereby variations of said liquid level impart a vertical movement to the closed bottom of the bellows, a mercury tube switch adapted to be connected in the motor circuit of a pump for supplying liquid to said tank, a support for said switch having a depending ear pivoted to a



support carried upon the interior of the bellows closure, a short link pivoted at one end to said support above its pivoted point and at the other end to a lever pivoted at its opposite end to a support also carried upon the interior of the bellows closure, said lever intermediate its length pivotally connected to one end of a link pivoted at its opposite end to the casing closure all so proportioned that extreme contraction or expansion of the bellows through the pivoted links and lever imparts a movement to the mercury tube switch about its supporting pivot to break the circuit therethrough and at intermediate positions of the bellows to close the circuit through said switch.

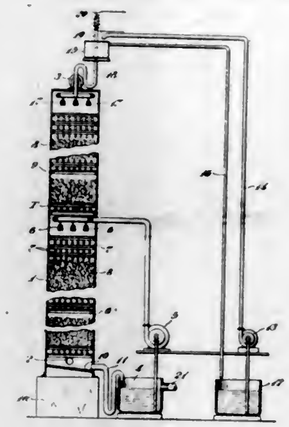
1,809,643. RAILWAY CAR DROP DOOR. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 25, 1929. Serial No. 358,008. 7 Claims. (Cl. 105—280.)



1. A door for a railway dump car comprising hinge elements adjacent one end thereof, support elements adjacent the other end thereof, bumpers adjacent the opposite sides thereof, a rib extending between each of the hinge elements and the opposite support elements, and another rib substantially normal to the first mentioned ribs extending between said bumpers.

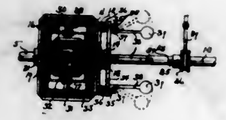
1,809,644. HOPPER DOOR FOR RAILWAY HOPPER CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 10, 1929. Serial No. 398,625. 9 Claims. (Cl. 105—280.)

1. In a railway car, the combination of a pair of hoppers, each provided with a discharge opening, and a one piece casting comprising a pair of doors for said openings and an integral spreader beam connecting the doors.



1,809,645. RAILWAY CAR DROP DOOR. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed Apr. 25, 1929, Serial No. 358,008. Divided and this application filed June 7, 1930. Serial No. 459,688. 5 Claims. (Cl. 105—280.)

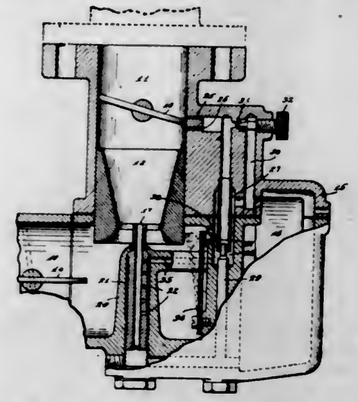
1. A door for a railway dump car comprising hinge elements adjacent one end thereof, support elements adjacent the other end thereof, bumpers adjacent the opposite sides thereof, a pair of spaced apart ribs extending between each of the hinge elements and the opposite support elements which converge toward the hinge elements and support elementa, respectively, and another rib substantially normal to the first mentioned ribs extending between said bumpers.



1,809,646. APPARATUS FOR TREATING GASES. FREDERICK W. SPERR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, a Corporation of Pennsylvania. Original application filed Jan. 29, 1926, Serial No. 84,640. Divided and this application filed Oct. 1, 1927. Serial No. 223,305. 1 Claim. (Cl. 261—97.)

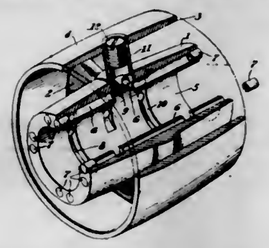
Apparatus for treating a gas with a liquid which comprises a tower containing alternately disposed strata of distributive units and permeable contact masses, the distributive units being comprised of superimposed layers of bars of quadrilateral cross section having the bars in one

layer contacting with the bars in another layer at their angular edges and at an angle with the bars in other layers of the same unit.



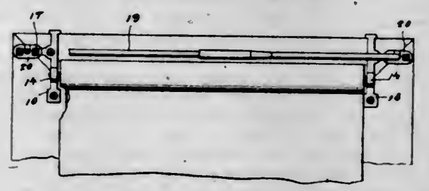
1,809,647. TRANSMISSION. THEODORE F. THOMPSON, Fort Dodge, Iowa. Filed Feb. 10, 1930. Serial No. 427,349. 7 Claims. (Cl. 74—34.)

1. In a device of the class described, a drive shaft designed to be in operative communication with a prime mover, a second drive shaft, a toothed gear loosely mounted on said first mentioned shaft, a second toothed gear rigidly secured to said second shaft, a third toothed gear on said first mentioned shaft and smaller in size than said before mentioned toothed gears, a means for rigidly securing said last mentioned toothed gear to said first mentioned shaft, a fourth toothed gear engaging the first and second toothed gears, a fifth toothed gear operatively connected to the fourth toothed gear and engaging the third mentioned toothed gear and of approximately the same size as the said third toothed gear, a plate rigidly secured to the first mentioned shaft and adjacent the first mentioned toothed gear, and a means for operatively connecting said plate with said first mentioned toothed gear after said first mentioned shaft has reached a predetermined speed rotation thereby preventing independent rotation between said plate and said first mentioned toothed gear.



1,809,648. CARBURETOR. HAROLD H. TIMIAN, Indianapolis, Ind., assignor to The Wheeler-Schebler Carburetor Co., Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 17, 1928. Serial No. 262,518. 3 Claims. (Cl. 261—41.)

1. In a carburetor, an air and mixture conduit, a main fuel nozzle arranged to discharge thereinto, an idling jet also arranged to discharge into said conduit, said main nozzle and idling jet being provided with air bleed openings



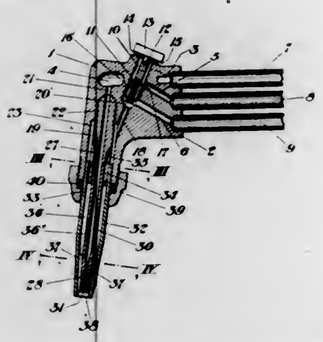
having fixed sizes to provide for a maximum amount of air-bleeding, and thermostatic means for varying the flow of air through said fixed air bleed openings.

1,809,649. LUBRICATING MEANS FOR BEARING SURFACES. EMIL TRAUB, Newark, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 28, 1928. Serial No. 328,943. 7 Claims. (Cl. 308—109.)

1. A rotatable member having a hub defining a bearing surface, said hub being provided with a plurality of lubricant-chambers spaced circumferentially of and extending lengthwise of the hub, said hub having in its bearing surface a plurality of segmental-grooves each intersecting less than the whole number of said chambers, and means for supplying lubricant to one of said chambers.

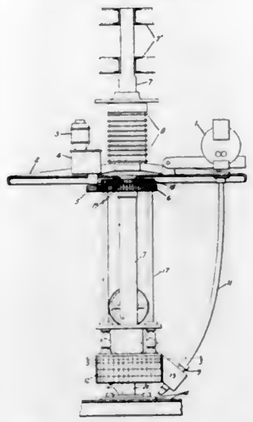
1,809,650. WINDOW SHADE BRACKET. DONATO VACCARO, Cleveland, Ohio. Filed July 30, 1930. Serial No. 471,765. 1 Claim. (Cl. 156—24.)

A curtain rod support provided with an ear disposed for abutting engagement with the attaching end of the curtain rod, a locking plate removably positioned upon the ear and attaching end of the rod and having a cut-out portion to accommodate an appropriate portion of the rod, and fastening means adapted to extend through the ear, end of the rod and the locking plate.



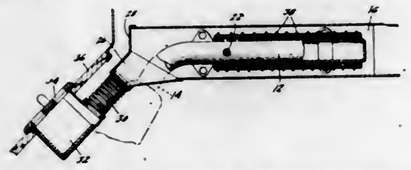
CARNEGIE LIBRARY OF ATLANTA

1,809,651. COMBINED SWITCH AND SEAT OPERATING MEANS. OTTO H. VAN AMBURG and GEORGE W. LIEBERUM, Bridgeport, Conn., assignors to General Electric Company, a Corporation of New York. Filed June 27, 1927. Serial No. 201,678. 3 Claims. (Cl. 200—85.)



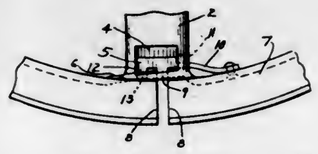
1. The combination with a chair having a frame and a pivoted seat, of a combined switch and seat operating means comprising a socket pivoted to the frame adjacent to the seat pivot, a casing fixed to the under side of the seat, a plunger in the casing, a plunger arm connected to the plunger at one end and having its other end located in said socket and adapted to slide therein, said casing, plunger arm and socket being in alignment and making a small angle with the bottom of the seat, a circuit closer in said casing controlled by movement of the plunger, and a spring between the end of the casing and the plunger and acting in a direction to raise the seat.

1,809,652. BLOWPIPE. JAMES E. VINCENT, Johnstown, Pa. Filed Mar. 1, 1929. Serial No. 343,647. 1 Claim. (Cl. 158—27.4.)



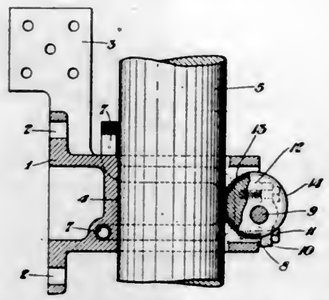
A blow pipe of the character described comprising a head, tip carried by said head and comprising an inner tip member having a central passageway for cutting oxygen, an outer tip member surrounding said inner tip member, said inner tip member having a materially reduced diameter for more than half of its length within said outer tip member so as to form a mixing chamber of material size, a plurality of V-shaped grooves in the portion of said inner tip member above said reduced diameter portion, the combined cross-sectional area of said V-shaped grooves being at least half of the cross-sectional area of the space formed by said reduced diameter portion and said grooves extending from above said outer tip member into said space formed by said reduced diameter portion, and the lower end of said inner tip member below said reduced diameter portion being also provided with a plurality of V-shaped grooves for the passage of the mixture of gases from said mixing chamber, and means for supplying cutting oxygen to the central passageway in said inner tip and a mixture of preheating oxygen and a combustible gas to the V-shaped grooves in said inner tip.

1,809,653. AUTOMATIC ARC WELDING MACHINE. PAUL WAGNER, Charlottenburg, and SALLY SANDELOWSKY, Berlin-Grunewald, Germany, assignors to General Electric Company, a Corporation of New York. Filed Dec. 7, 1928, Serial No. 324,420, and in Germany Jan. 14, 1928. 9 Claims. (Cl. 219—8.)



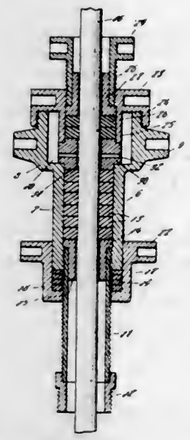
1. Welding apparatus comprising a flexible band, welding means mounted on said band, and means for moving said band above and about the surface of the work in a path of predetermined configuration.

1,809,654. VEHICLE HEATER. ROBERT R. WAGNER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 17, 1928. Serial No. 320,103. 2 Claims. (Cl. 257—241.)



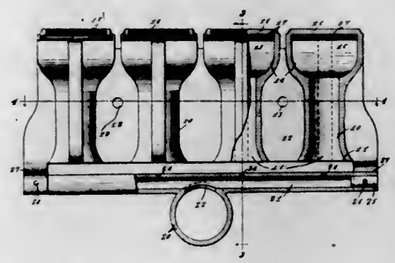
1. A vehicle heater comprising an exhaust manifold, a casing surrounding said manifold and forming a passageway around said manifold through which air may be conducted into the interior of the vehicle, and a mass of metal wool located in said passageway in contact with said exhaust manifold for the purpose of increasing the area of the heat radiating surface in said passageway.

1,809,655. METAL WHEEL. GEORGE WALTHER, near Dayton, Ohio, assignor to The Dayton Steel Foundry Company, a Corporation of Ohio. Filed Jan. 10, 1927. Serial No. 160,204. 4 Claims. (Cl. 301—12.)



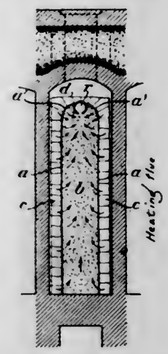
4. A metal wheel comprising a spider made up of a hub and spokes, an axially split rim adapted to be mounted upon the spoke ends, and a member radially movable from a spoke end, to a position between the ends of the rim to hold it expanded until it is mounted in its home position upon the spider.

1,809,656. ELECTRODE HOLDER. WILLIAM H. WALTER, Cynwyd, Pa. Filed Apr. 14, 1930. Serial No. 444,230. 1 Claim. (Cl. 266—1.5.)



An electrode holder for electric furnaces, comprising in combination a one-piece supporting bracket provided with an opening conforming generally to the size and shape of the electrode to be supported, said bracket being slotted at its forward end to receive an eccentric locking member, a shaft journaled in bearings on the forward end of said bracket, said eccentric being mounted on said shaft and rotatable therewith, said eccentric being positioned with its longest radius at its top and having a serrated concave peripheral surface complementary to the outer periphery of the electrode to provide a maximum contact surface with the electrode, and said shaft having its ends projecting beyond the sides of said bracket and squared to receive a suitable tool for rotating said eccentric to grip or release the electrode.

1,809,657. STUFFING BOX. ROY C. WEANT, Ponca City, Okla. Filed Feb. 25, 1929. Serial No. 342,583. 1 Claim. (Cl. 286—17.)

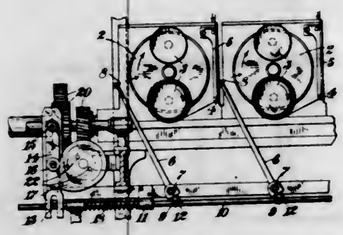


A stuffing box of the character described comprising a cylinder having an integral enlarged head on one end constituting an oil reservoir, a spacing ring seated on the upper end of the cylinder and disposed within the head in spaced relation therefrom having a central bore and oil conducting passages communicating with the bore and the oil reservoir, a closure threaded on the head and having an integral annulus depending therefrom and engaged with the spacing ring for maintaining same in position on the cylinder, packing rings mounted in the cylinder in engagement with the lower side of the spacing ring, means for compressing the packing rings against the spacing ring comprising a sleeve threaded for longitudinal adjustment in the lower end portion of the cylinder, a follower loosely mounted on the inner end of the sleeve for engagement with the packing rings, means threaded on the sleeve and slidable over the cylinder for securing said sleeve in adjusted position, wiping rings disposed in the annulus and resting on the upper side of the spacing ring, and means for compressing the wiping rings against the spacing ring comprising a sleeve threaded for adjustment in the closure and a follower mounted in the inner end of said sleeve for sliding movement through the annulus for engagement with the wiping rings.

1,809,658. GAS BURNER. CARL A. WENDT, Tulsa, Okla. Filed Feb. 6, 1929. Serial No. 337,883. 2 Claims. (Cl. 158—104.)

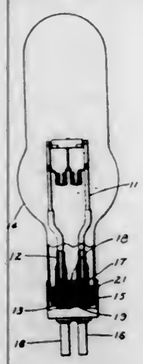
1. A gas burning unit, comprising a plurality of individual burners and intermediate webs connecting the burners as a single structure, said burners including independent air supply means, and said unit including a fuel feeding manifold having ports substantially aligned with the vertical axes of the burners, closures for the manifold, and a device securing each enclosure to the manifold and to the web structure of the unit, and passing through each of these members.

1,809,659. COKE OVEN AND METHOD OF OPERATING SAME. CARL WESSEL, Borbeck, near Essen-on-the-Ruhr, Germany, assignor to the Firm Carl Still, Recklinghausen, Germany. Filed Oct. 26, 1926, Serial No. 144,307, and in Germany Nov. 6, 1925. 5 Claims. (Cl. 202—5.)



1. In a horizontal coke oven to produce coke as a final product, a chamber receiving a charge of fuel so as to leave a free gas space adjacent the top and having heated side walls, and suction means disposed in the upper part only of the chamber for withdrawing the gaseous products of distillation, said means having an entrance opening situated below the free upper surface of the charge.

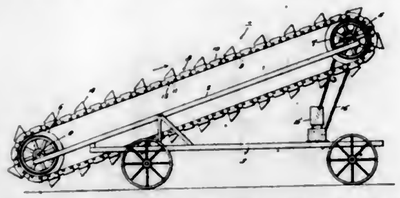
5. In a horizontal coke oven to produce coke as a final product having means for drawing off gases, the process of withdrawing such gases from said chamber which consists in charging the chamber with a solid carbonizable material, heating the side walls of said chamber to gradu-



ally coke the solid products of the charge and therefore form seams, said heating causing the gases to ascend along said seams, and then withdrawing said gases from the chamber at a point immediately below the upper surface of said carbonizable material.

1,809,660. WINDING APPARATUS FOR THREAD OR THE LIKE. SAMUEL WILD and ERNEST HUGENTOBLER, Basel, Switzerland, assignors to Syntheta A. G., Basel, Switzerland, a Swiss Company. Filed Nov. 12, 1928, Serial No. 318,946, and in Great Britain Aug. 18, 1928. 1 Claim. (Cl. 242—19.)

For a winding apparatus of the character described having an intermittently movable carrier for a plurality of reels on which thread is to be wound in succession, a thread severing mechanism comprising in combination a fixedly pivoted lever arm, a knife secured at one end thereof, which lever arm is arranged so that the arc of movement of the knife extends between an empty and full reel, a cam for moving said lever arm, gearing for connecting the cam to the reel carrier, which gearing is timed so as to move the knife to cut the thread when a full reel is moved out of the winding position.

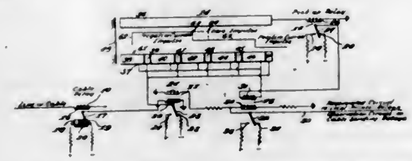


1,809,661. ELECTRIC LAMP. DANIEL K. WRIGHT, Cleveland Heights, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Feb. 18, 1929. Serial No. 341,004. 4 Claims. (Cl. 176—16.)

1. In an electric lamp or similar device comprising a translation element which is heated to high temperature during operation and which is enclosed in a hermetically sealed transparent container, a deposit removing means consisting of loose granules of a highly refractory material of substantially the same composition as the said translation element.

1,809,662. CONVEYER. JOHN ALBERT ALGER, Mantua, Ohio. Filed Jan. 29, 1929. Serial No. 335,812. 5 Claims. (Cl. 198—140.)

1. In a conveyer belt of the class described, a friction pulley, a series of spaced channel shaped units adapted to fit over the tread of the pulley so as to be propelled by the frictional contact of the pulley with the side walls of the units, a series of channel shaped plates arranged over the



adjacent edge portions of the respective channel shaped units, means for securing the channel shaped units to the adjacent plates, and buckets arranged on the crown portions of the channel shaped plates.

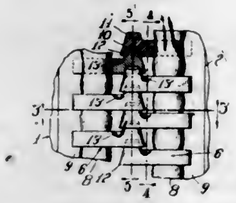
1,809,663. TROLLING SPOON. EDWARD G. ALLEN, Everett, Wash. Filed Sept. 17, 1930. Serial No. 482,626. 3 Claims. (Cl. 43—45.)

1. A trolling spoon comprising a body of elongated form and stamped from sheet metal, the front end of the body being bent downwardly and the rear end upwardly, said rear end being of concavo-convex shape in cross section, a hook connected with the rear end, a swivel connected with the front end, a line connected with the swivel, an opening in the center of the body and a member extending through the center of the opening and connected with the body and arranged at right angles to the body.

1,809,664. CORRECTING DISTORTION AND INTERPOLATING IMPULSES IN CABLE TELEGRAPHY. HERBERT ANGEL, Brooklyn, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1929. Serial No. 400,868. 13 Claims. (Cl. 178—63.)

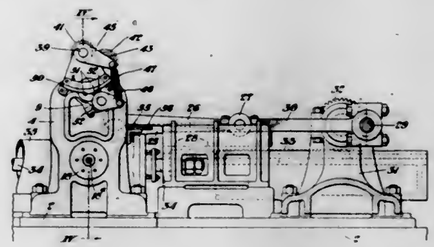
1. In a signaling system, an incoming line over which negative, zero and positive current conditions are received, a receiver associated with said line for translating the zero conditions into alternate negative and positive signals, and means including circuit connections so arranged that the receiver will invariably interpolate said negative and positive signals regardless of the duration of an impulse interval caused by any displacement from normal in the received signal.

1,809,665. MAGAZINE PENCIL. MONICO S. ANGELES, San Leonardo, Mueva Ecya, P. I. Filed Dec. 27, 1929. Serial No. 416,922. 3 Claims. (Cl. 120—14.)



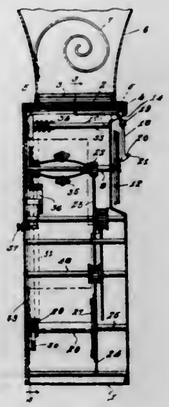
1. In a pencil, a barrel including an interiorly threaded rotatable section and a relatively stationary section, means to slidingly connect said sections, a plurality of longitudinally disposed individual lead carriers, a guide for each carrier, a thread engaging element rigid with each carrier and normally spaced from the threaded section of the barrel, and means engageable with the thread engaging elements to hold the latter in inactive position, or selectively move said elements to thread engaging position, whereby rotation of the rotatable section of the barrel will project a lead carrier outward.

1,809,666. SUPPLY CONDUIT FOR STEAM AND GAS TURBINES. GUSTAV BAUER, Hamburg, and CARL SCHMIESKE, Bremen, Germany. Filed Nov. 6, 1930, Serial No. 493,839, and in Italy Oct. 30, 1929. 3 Claims. (Cl. 253—69.)



1. A turbine including a main casing and having an opening leading into the interior of said casing, a motive fluid supply connection on said casing and registering with said opening and larger than the latter, a removable tubular member within said connection and having a passage aligned with said opening, and having the peripheral wall thereof spaced from the wall of said connection, said tubular member being provided with a flange at the inlet end, and extending to the wall of said conduit so as to leave an annular space, a nozzle casing disposed entirely in said main casing, and securing members connecting said nozzle casing to said main casing, and having portions thereof extending into said space, whereby said securing members are protected from the stream of motive fluid.

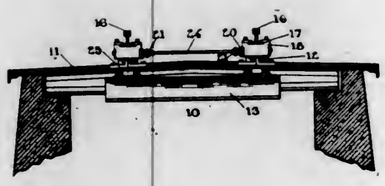
1,809,667. FASTENER WITH LATERAL CLEARANCE. GEORGE W. BLAIR, Mishawaka, Ind., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed July 26, 1926. Serial No. 124,854. 2 Claims. (Cl. 24—205.)



1. A fastening device of the type described, comprising in combination a plurality of fastener elements adapted to interlock in series with adjacent elements oppositely disposed, each of said elements being of elongated plate-like form having mounting means at one end and having at the other end a ridge extending thereacross from edge to edge of the element above one face and a correspondingly located recess in the other face, each of said elements being notched at each side opposite the end wall of the recess of the adjacent element for permitting free lateral flexing of the series of interlocked elements.

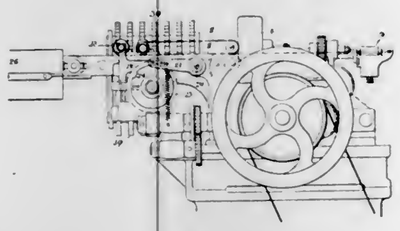
1,809,668. FLYING SHEAR. BRUCE N. BLETSO, East Cleveland, and GEORGE H. ROSE, Cleveland Heights, Ohio. Filed Oct. 16, 1929. Serial No. 400,066. 13 Claims. (Cl. 164—43.)

1. In a flying shear, a pair of knives each mounted to move about separate vertically spaced fixed axes, at least one of said knives being pivoted on a second axis movable about said fixed axis as said knife is moved about its fixed axis, means for moving said knives through a partial revolution alternately in opposite directions about said fixed axes, and means for automatically moving said pivoted knife about its pivoted axis in the direction it is being moved about its fixed axis adjacent the end of its movement in either direction.



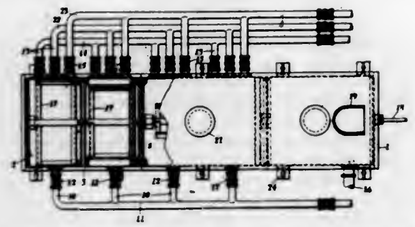
1,809,669. SOUND PRODUCING DEVICE. RUPERTO G. BORROMEO, Samar, P. I. Filed July 20, 1928. Serial No. 294,299. 1 Claim. (Cl. 274—1.)

A sound reproducing device comprising an upright casing having an opening it its top, a horn connected with the top of the casing and surrounding the opening, a diaphragm closing the opening, the upper front part of the casing having an opening therein, a block fitting in said opening and supported for movement about a horizontal axis, an arm connected with the diaphragm and having a part adjacent its front end connected with the block, the



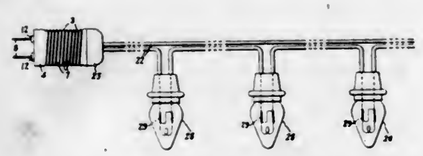
front end of the arm depending downwardly, a stylus arm having its upper end pivoted on said depending end, a horizontal shaft supported for rotary movement in the casing and having its front end extending through the front wall of the casing, a turntable and record disk detachably connected with said front end of the shaft, a needle carried by the lower end of the stylus arm and engaging the record and means for rotating the shaft.

1,809,670. ANTIRAIL SPREADER FOR TRACK SCALES. ALFRED BOUSFIELD, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed June 7, 1928. Serial No. 283,582. 5 Claims. (Cl. 265—71.)



1. In a track scale, the combination with a plurality of rail stands having rails supported thereon, of a means pivotally connected to said rail stands comprising tie bars connecting said rail stands and mounted on pivot pins carried by the said rail stands, whereby said rails are prevented from spreading when a heavy load is run onto said scale.

1,809,671. MACHINE FOR INTERFOLDING SHEETS OF CIGARETTE PAPERS. ROGER BRAUNSTEIN, Paris, France, assignor to Société Anonyme des Anciens Etablissements Braunstein Fréres, Paris, France. Filed June 27, 1927, Serial No. 201,867, and in France July 6, 1926. 2 Claims. (Cl. 270—73.)

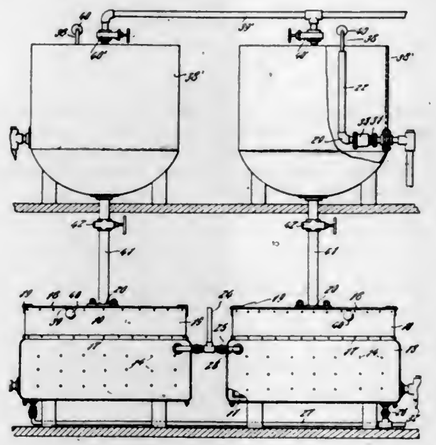


1. A machine for interfolding sheets of cigarette paper in which the paper is supplied in the form of a continuous web, comprising means for folding the web longitudinally before cutting, means for cutting the folded web into sheets of suitable length, toothed interfolding wheels for receiving the cut sheets, upper and lower conveying bands between which the sheets are conveyed from the cutting means to the interfolding wheels, a suction device by which the sheets are withdrawn from between the conveying bands and placed into the toothed spaces of the interfolding wheels, the several elements being so arranged as to positively control the paper through the conveying and manipulative steps, so that at no moment is it left to itself during its passage through the machine.

1,809,672. APPARATUS FOR MIXING LIQUIDS. ERIC WAKEFIELD BUTLER, Bristol, and JOHN CHRISTOPHER MANN, Birmingham, England, assignors to Robinson Brothers Limited, Birmingham, England, a Company of Great Britain, and Wm. Butler & Company (Bristol) Limited, Bristol, England, a Company of Great Britain. Filed July 6, 1929, Serial No. 376,374, and in Great Britain Jan. 19, 1929. 6 Claims. (Cl. 259—68.)

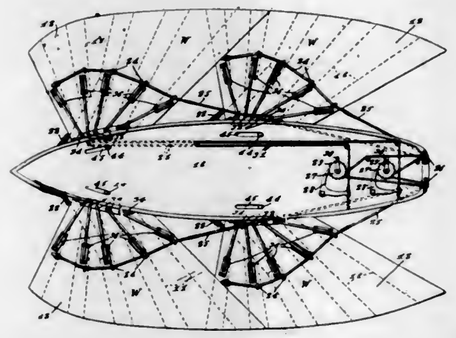
1. In an apparatus for mixing tarry liquids in a continuous process, in combination, a mixing vessel having a semi-cylindrical bottom, a rotatable shaft extending through the vessel and coaxial with the aforesaid semi-cylindrical bottom, stirrers mounted upon said shaft and arranged with their tips passing in proximity to the aforesaid bottom, a plurality of pairs of baffles within said vessel spaced along it and dividing it into a series of compartments each pair constituting a conduit connecting the compartments, and means for admitting liquid to some at least of said compartments, said terminal compartment having an outlet, said conduits and said outlet being operative to maintain a free surface of liquid at a substantially uniform level in said vessel, the stirrers being disposed to break through said liquid level upon rotation of the shaft.

1,809,673. ELECTRICAL PROTECTIVE DEVICE. HENRY E. BUTLER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 21, 1930. Serial No. 454,499. 5 Claims. (Cl. 171—97.)



3. The combination with a string of incandescent lamps connected in series, and a cut-out connected across the filament terminals of each lamp, of a combined plug terminal and resistance connected to said string of lamps, said resistance being normally disconnected from the series circuit, and means actuated by the increase in current caused by the burning out of any one of said lamps and the operation of its cut-out for effecting the insertion of said resistance into the series circuit.

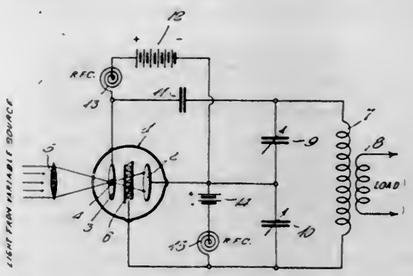
1,809,674. SETTLING AND EVAPORATING TANK. CHARLES E. CHANDLER, Philadelphia, Pa., assignor of one-half to Harry Garside, Philadelphia, Pa. Filed May 23, 1927. Serial No. 193,633. 1 Claim. (Cl. 137—21.)



In a settling and evaporating tank, a drain pipe including a pair of horizontal sections arranged in end to end relation at a point adjacent the bottom of the tank, a sleeve threadedly secured to one of said sections and surrounding the adjacent section in spaced relation thereto, a flange formed on the outer end of the sleeve, a flanged cap closing said end of the sleeve, means for connecting said flanges in face to face contact, a flange formed on the inner end of the second mentioned pipe section and

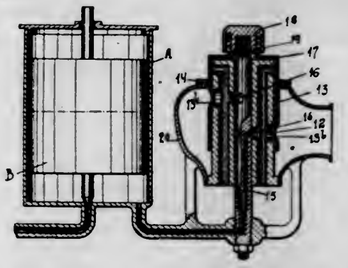
arranged within the sleeve, thrust rings arranged at the opposite sides of the last mentioned flange, packing surrounding the said pipe section and maintained within the sleeve by said cap, said pipe section projecting through

an opening in said cap, a pipe section located within the tank, and mounted on the said last mentioned pipe section to swing in a path parallel to a vertical plane, and means for adjusting the said pipe section in said path within the tank for the purpose specified.



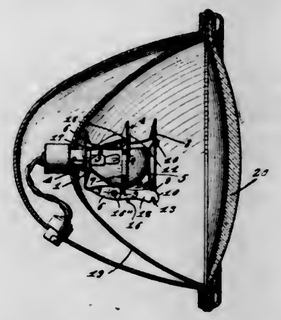
1,809,675. SAFETY DEVICE FOR BOATS. JOHN CHISON, Elm Grove, W. Va. Filed July 6, 1929. Serial No. 376,347. 7 Claims. (Cl. 114—126.)

1. In a boat, a hull, horizontally disposed foldable wings at opposite sides of the hull, means to secure the inner ends of the wings to the hull whereby the wings may fold against or be extended laterally from the hull, means to fold said wings and hold the same in folded position, and means movable longitudinally of the hull and operatively connected with said wings to move the latter to extended position.



1,809,676. ELECTRICAL GENERATING SYSTEM CHARLES A. CULVER, Northfield, Minn., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1929. Serial No. 340,206. 5 Claims. (Cl. 250—36.)

2. A high frequency generating system comprising in combination a photoelectric cell having a light sensitive cathode, an anode and control electrode, input and output circuits connected to said cathode, anode and control

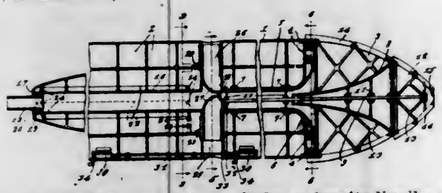


electrode for establishing high frequency oscillations, and a source of light energy incident upon said cathode for modulating said high frequency oscillations.

1,809,677. CARBURETOR. AGUSTIN PARIENTE DE LA CRUZ, Madrid, Spain. Filed May 10, 1926, Serial No. 108,102, and in France Apr. 7, 1926. 2 Claims. (Cl. 261—41.)

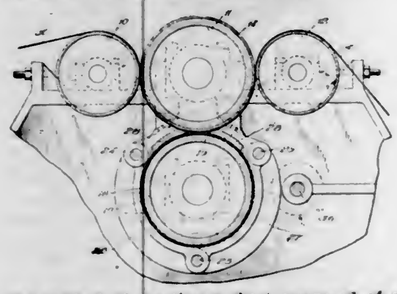
1. In a carburetor of the type comprising means forming a plurality of air passages with a nozzle in each of them for introducing the liquid fuel, means forming air passages with inlet ports at each end, and an outlet port in the middle part and a fuel nozzle in the axis of said outlet port.

1,809,678. GLARE ELIMINATING DEVICE. ELVIN C. DE VORSS and WILLIAM F. LUMSDEN, Denver, Colo. Filed May 9, 1930. Serial No. 451,074. 3 Claims. (Cl. 240—48.6.)



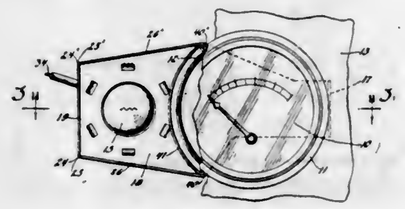
1. A glare eliminator for automobile headlights, comprising a cage in which the bulb of the headlight is enclosed, said cage comprising an inner base element, a central ring element and an outer disc element which is arranged against the outer face of the bulb, fixed arms on the base element and removable and swingable arms on the disc and on the ring member connected with the fixed arms.

1,809,679. CORRUGATED IRON BAND. WILLIAM S. DORSET, Sherman, Tex., assignor to Interstate Cotton Oil Refining Company, Sherman, Tex. Filed July 24, 1928. Serial No. 294,964. 1 Claim. (Cl. 217—66.)



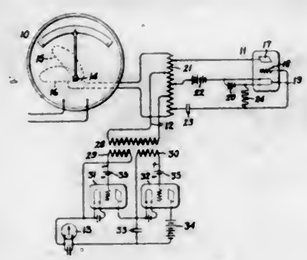
A flexible metal band for fastening boxes and the like having arcuate ends and a continuous bead extending along each edge and around the arcuate ends of said band, and in which the outer edge of the continuous bead is downturned to lie in a plane below the plane of that part of the band bounded by said continuous bead, the middle zone of the band within the bead being flat and yielding.

1,809,680. AIRSHIP. MATHEW M. EGAN, Fort Worth, Tex. Filed Feb. 17, 1930. Serial No. 429,172. 5 Claims. (Cl. 240—10.)



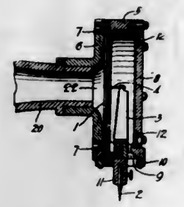
1. A dirigible comprising a body, a longitudinally arranged passage passing through the central part of the body, a pair of propellers at the front end of the body, one propeller being arranged in front of the other, means whereby the blades of the propellers will force air into the front end of the passage so that the air escaping from the rear end of the passage will act to force the ship forwardly, means at the rear end of the passage for directing the air in certain directions to guide the ship, means whereby some of the air from the passage can be directed through the top of the ship to force the ship downwardly and means whereby some of the air from the passage can be forced through the bottom of the ship to raise the ship such means comprising a vertically arranged tube passing through the body and intersecting the passage, a valve member in the lower part of the said tube which, when raised, will direct some of the air from the passage downwardly through the lower part of the ship to raise the same and a second valve member in the top part of the tube which, when lowered, will force some of the air from the passage upwardly through the top of the ship to cause the ship to descend.

1,809,681. METHOD OF AND MACHINE FOR TREATING FLEXIBLE VENEERED SHEETS. ARMIN ELMENDORF, Chicago, Ill., assignor to The Flexwood Company, a Corporation of Delaware. Filed Dec. 11, 1929. Serial No. 413,192. 9 Claims. (Cl. 144—309.)



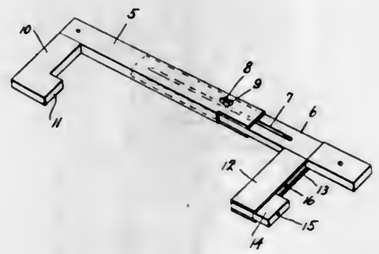
1. The method of treating a sheet composed of a flexible backing and a facing of wood veneer glued thereto, which consists in placing the sheet between a cushion and a roller of small diameter with the veneer on the side toward the cushion and the grain of the wood extending in the general direction of the long axis of the roller, and moving the cushion and roller relatively to each other under pressure so as to cause the roller to roll over the sheet and form therein a bend travelling progressively across the sheet and sufficiently sharp to stress the veneer across the grain beyond the rupture point.

1,809,682. INSTRUMENT CLAMP AND LIGHT HOUSING. JESSE E. ESHBAUGH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Dec. 12, 1928. Serial No. 325,440. 2 Claims. (Cl. 240—8.16.)



1. In an automotive vehicle: an instrument board provided with a circular aperture; and instrument initially rotatable therein and including a casing which has both a flange engaging said board and also a lateral light-admitting aperture; and a combined compression-flange clamp and light housing,— which is provided with means for retaining said instrument in the aperture in said instrument board and with means for retaining illuminating means within said housing and opposite said aperture.

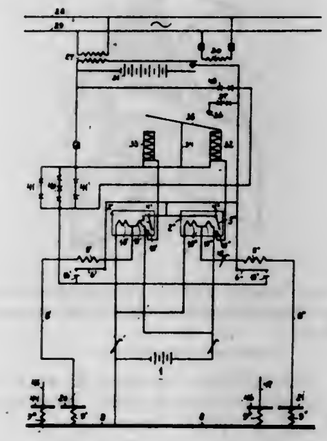
1,809,683. FREQUENCY RESPONSIVE APPARATUS. ALAN S. FITZ GERALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 4, 1928. Serial No. 310,397. 5 Claims. (Cl. 177—351.)



1. Frequency responsive apparatus for producing an indication proportional to the frequency of electric signalling currents comprising a source of direct current, a condenser, means including a thermionic valve for charging said condenser from said source, means including a second thermionic valve for discharging said condenser, the condenser thus having charging and discharging currents, a measuring instrument for measuring one of such condenser currents, and means responsive to signaling currents for alternately controlling said valves to alternately charge and discharge said condenser at a rate proportional to the signaling frequency.

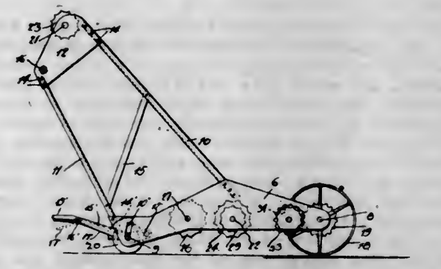
1,809,684. SOUND RECORDING AND REPRODUCING INSTRUMENT. PAUL B. FLANDERS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1928. Serial No. 273,525. 5 Claims. (Cl. 274—35.)

2. An acoustic system comprising in combination a diaphragm, a sound conduit coupled to one side of said diaphragm, a casing enclosing the other side of said diaphragm, said casing having a plurality of apertures forming parallel walled slots of width between walls less than .005 inch, and the cross sectional area and length of said apertures being proportioned with respect to the area of said conduit whereby the apertures present a load impedance to said diaphragm which is constant and less than 20 per cent of the load due to said conduit at all important speech frequencies.



1,809,685. ANCHOR FOR TYPEWRITERS. LOTUS FOVAL, Maplewood, Mo. Filed Apr. 21, 1930. Serial No. 446,056. 3 Claims. (Cl. 248—16.5.)

1. An anchor for typewriters comprising a bar, means for fixedly securing the same to a support, an arm extending laterally from the bar intermediate the ends of the latter, a block slidably engaging said arm and cooperable with an adjacent portion of the bar for clamping therebetween a leg of the typewriter and means for retaining the block in engagement with the arm against casual movement relative thereto.

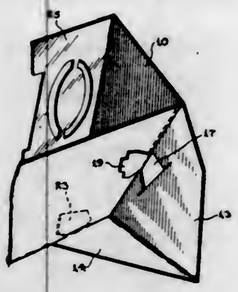


1,809,686. ELECTRICAL REMOTE CONTROL SYSTEM. HENRICUS FROGER, The Hague, Netherlands. Filed Feb. 29, 1928, Serial No. 258,010, and in the Netherlands Mar. 8, 1927. 2 Claims. (Cl. 246—128.)

1. In a remote control electrical system for signaling trains at crossings, the combination of a normally open signal circuit embracing means for causing a light signal, a source of electrical energy and a movable relay part for closing said circuit, and a normally closed signal controlling circuit embracing a source of electrical energy, a resistance arranged between an insulated portion of one rail of the railroad track and the other rail of said track and a signal relay comprising said movable part and adapted to cause said part to close the signal circuit upon short-circuiting of said resistance, with a normally open defect circuit embracing means for causing another light signal for indicating a defect, a source of electrical energy

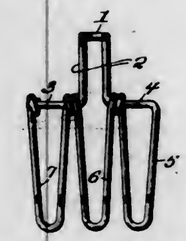
and a movable part of a defect relay which is so embraced by the signal-controlling circuit that its movable part is caused to close the defect circuit upon the part of the controlling circuit comprising the said resistance becoming currentless.

1,809,687. WEED PICKER. JOE GAVRILOFF, Kent, Ohio. Filed Oct. 3, 1929. Serial No. 397,084. 2 Claims. (Cl. 55—66.)



1. A weeder of the character described comprising a wheeled frame, an endless weeder supported thereon and operatively engaged with the frame wheels, said frame having substantially vertical arcuate slots at one end, a wheel axle movable in the slots, a lever associated with the axle for raising and lowering the same for varying the depth of cut of the weeder, and means for holding the axle in adjusted positions.

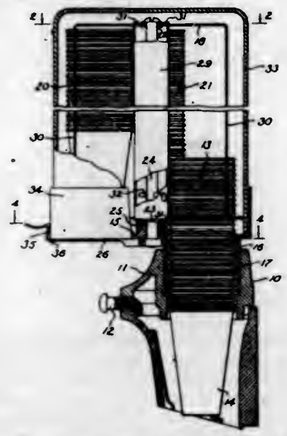
1,809,688. DISPLAY SIGN. ENOS GORDON GOUDEY, Allston, Mass., DAVID ALBERT STEVENS, Providence, R. I., and LESLIE CHAPMAN CRAFTS, Portland, Me. Filed July 30, 1927, Serial No. 209,474. Renewed Nov. 5, 1930. 3 Claims. (Cl. 40—130.)



1. A display device formed from a single blank of material comprising front, bottom, end, back and supporting members, the ends consisting of extensions of the front member and having tabs adapted to engage the back member, and the supporting members consisting of extensions of the back member adapted to be folded back exteriorly of the main device and parts thereof adapted to be

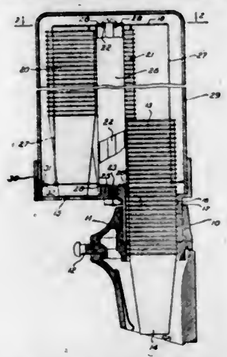
bent into the plane of the bottom and having tabs adapted to engage the bottom member, the front member having

display indicia thereon and the rear member serving as a reflector of light to facilitate the display carried by said front member.



1,809,689. CLOTHESPIN. ANDREW H. GRAVES, Arkansas City, Kans. Filed Feb. 21, 1930. Serial No. 430,331. 1 Claim. (Cl. 24—139.)

A clothes pin shaped from a single strand of wire which is bent to provide a U-shaped portion and parallel arms extending right-angularly from the ends of the U-shaped portion, and which arms and U-shaped portion provide a handle, the arms having their ends bent to provide oppositely directed longitudinally extending strands, the end of one of such strands being bent downwardly and outwardly to provide the outer arm of a jaw, the second arm of the said jaw being similarly bent and coiled around the said longitudinal strand and from thence rounded downwardly and outwardly to provide one arm of a central jaw, the second arm of the central jaw being bent similar to the first named arm of the said central jaw and being coiled around the second longitudinal extension of the handle, the end coil being bent downwardly and outwardly to provide the inner arm of the second end jaw, the outer arm of the said jaw being bent similar to the first mentioned arm thereof and having its end coiled around the said longitudinal strand, all of the jaws being substantially V-shaped in plan and the end jaws having their outer ends extended in opposite angles from that of the intermediate jaw to provide a flared passage between the jaws.

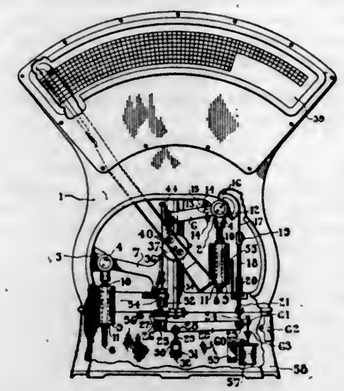


1,809,690. DISPENSING DEVICE FOR STACKED ARTICLES. HAROLD D. GREGORY, Haddonfield, N. J., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1929. Serial No. 332,386. 7 Claims. (Cl. 312—44.)

1. A device of the character described comprising a base adapted to support a plurality of columns of stacked articles and provided with an opening through which said columns may pass, means associated with said base for rotation with respect thereto and adapted and arranged to effect movement of said columns into alignment successively with said opening for movement therethrough, said means being provided with a pivot passing loosely through said base, and manually-operable means connected to said pivot and adapted and arranged for cooperation

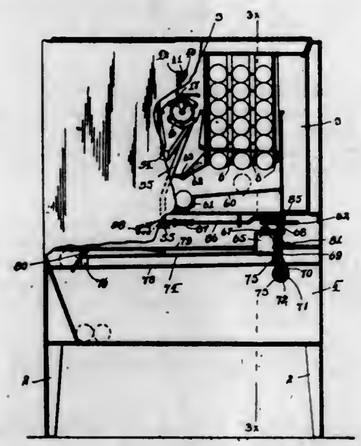
therewith to effect rotation of said means with respect to said base and movement of said columns into alignment successively with said opening for movement therethrough.

1,809,691. DISPENSING DEVICE FOR STACKED ARTICLES. HAROLD D. GREGORY, Haddonfield, N. J., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Feb. 19, 1929. Serial No. 341,063. 3 Claims. (Cl. 312—44.)



1. A dispensing device including a base having a discharge opening therein, a member rotatably supported by the base and adapted to support a plurality of stacks of articles to be dispensed with one of the stacks normally in alignment with the opening for discharge of articles therethrough and the lowermost articles of the remaining stacks resting upon the base for support thereby and operation thereover, an outwardly extending projection on the rotatable member, and a cover rotatably supported by the base for enclosing the articles and provided with an inwardly directed lug, the outwardly directed projection of the rotatable member engaging the lug on the cover whereby the member may be rotated by the cover to successively bring the stacks of articles into alignment with the discharge opening.

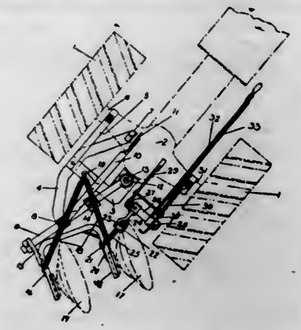
1,809,692. SCALES. HARLAN A. HADLEY, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed June 27, 1927. Serial No. 201,780. 9 Claims. (Cl. 265—37.)



1. In a device of the character described, a frame, opposed pendulum arms carrying pendulums and a drum

mounted in the said frame, an indicator arm attached to said drum, means connecting the said pendulum arms to

said drum, and a balancing weight attached to said indicator arm and adapted to return the indicator arm to normal position after a weighing operation.

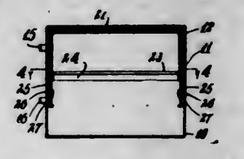


1,809,693. BOTTLE VENDING MACHINE. CHARLES HAHLING, Rochester, N. Y. Filed Nov. 4, 1929. Serial No. 404,672. 4 Claims. (Cl. 194—4.)

1. In a bottle vending and receiving machine the combination of means for ejecting a filled bottle, a plurality of coin controlled means for locking said ejecting mechanism, means for receiving an empty bottle and means controlled by said receiving mechanism to eject part of the coins used for operating said ejecting mechanism.

1,809,694. TRACTOR DRAWN DISK PLOW. FREDERICK GAINFORD HARRIS, Mount Bauple, Queensland, Australia. Filed Aug. 22, 1929, Serial No. 387,720, and in Australia Jan. 21, 1929. 3 Claims. (Cl. 97—47.)

1. A plow attachment for tractors, comprising a frame adapted to be secured to the differential housing of a tractor and to extend rearwardly therefrom, a bar secured to said frame and extending rearwardly therefrom and diagonally with respect to the axis of the tractor, a plow carrier frame pivotally connected to said bar and extending laterally therefrom, brackets adapted to be secured to the differential housing on the side opposite the first named frame, and a lever having a shaft mounted in

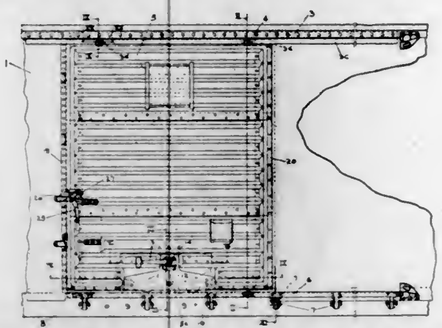


bearings, with which said brackets are provided, and also having an arm connected to said plow carrier frame, said lever serving to raise and lower the plow carrier frame.

1,809,695. MANUFACTURE OF NITROCELLULOSE SMOKELESS POWDER. ALAN S. HAWKESWORTH, Washington, D. C. Filed June 13, 1930. Serial No. 461,056. 1 Claim. (Cl. 52—22.)

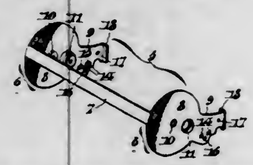
The process of making nitrocellulose smokeless powder which comprises, the addition as a solvent and stabilizer of mono-nitro-toluene of around at least 6% by volume of the finished powder grain as the irreducible minimum, needed to completely coat each molecule of the nitrocellulose, together with the addition of an easily evaporable solvent sufficient to make a compound solvent that will completely dissolve the nitrocellulose into a smooth paste, and evenly distribute the mono-nitro-toluene, then moulding the said paste into the desired powder grain, and driving off the excess evaporable solvent from the finished powder grain by means of moderate heat, thereby leaving the non-evaporable mono-nitro-toluene coating over each and every one of the nitrocellulose molecules.

1,809,696. WATERPROOF BATHER'S CASE. SAMUEL HEILWEIL, New York, N. Y., assignor, by direct and mesne assignments, to Jacob Schierer, New York, N. Y. Filed Feb. 28, 1929. Serial No. 343,291. 3 Claims. (Cl. 206—37.)



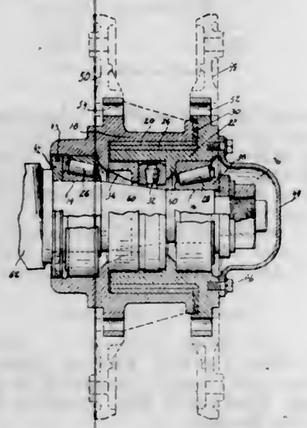
1. A case of the class described, comprising a hollow body open at the top, a cover hinged on the body, a horizontal ring supported within the body, a washer resting on the ring, and a lining of hard material within the cover and extending therefrom and pressing against the washer in closed position of the cover, and means for adjusting the vertical position of the said ring, consisting of lugs projecting from said body, and screws threadedly engaging thru said lugs and rotatively connected with said ring.

1,809,697. CAR DOOR. FREDERICK C. HEINEN, KENNETH J. TOBIN, and AXEL WARBERG, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1927. Serial No. 158,519. 1 Claim. (Cl. 16—99.)



Door lift mechanism for a door provided with a pressed out portion extending forwardly of said door and form-

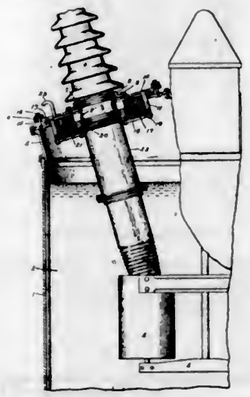
ing a casing, a pair of roller frames pivoted to said door adjacent the lower edge thereof within said casing, rollers journalled in said frames, a link pivotally connecting the inner ends of said frames, said roller frames and link



lying within said casing, an operating lever on the outside of said casing, a pivot rigid with said lever and pivotally connected to said casing, said pivot being provided with an arm lying within said casing and pivotally connected to said link.

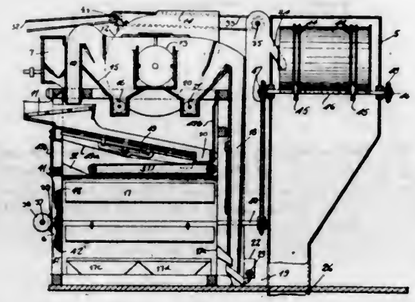
1,809,698. LAWN MOWER FRAME. HERMANN M. HESSENBRUCH, Wynnewood, Pa., assignor to Philadelphia Lawn Mower Company Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1929. Serial No. 330,768. 6 Claims. (Cl. 56—253.)

1. A lawn mower frame comprising symmetrical paralleling side members united by an integrally formed brace component, each said side member being symmetrically-configured and having an inwardly-angled terminal extension.



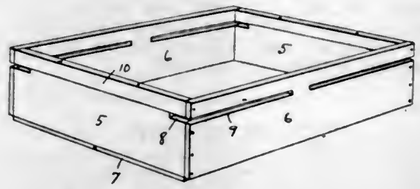
1,809,699. DUAL WHEEL ASSEMBLY. JAMES F. HIGBEE, Detroit, Mich., assignor of one-half to Stephen A. Griggs, Detroit, Mich. Filed Sept. 18, 1930. Serial No. 482,688. 6 Claims. (Cl. 280—96.1.)

1. A dual wheel assembly comprising, in combination, a spindle, a pair of telescoped wheel hubs each having an independent rotary bearing upon said spindle, and an intermediate bearing adapted to take the axial thrust of each of said hubs.



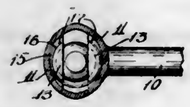
6. A dual wheel assembly comprising, in combination; a spindle, a wheel hub mounted thereon, a second wheel hub journalled thereon for rotation independently of the first hub and having a portion overlapping a portion of the first hub, and a bearing intermediate the extremities of the hub assembly for taking the axial thrust of each hub.

1,809,700. ELECTRICAL TRANSMISSION DEVICE. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 10, 1929. Serial No. 369,904. 8 Claims. (Cl. 200—150.)



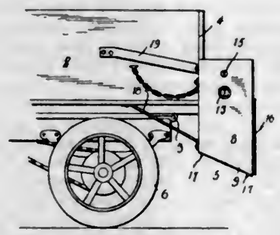
1. The combination with a metallic circuit breaker housing and insulating structure of brittle material supported thereby, of cushioning means interposed between said housing and structure for substantially precluding transmission of shock from said housing to said structure.

1,809,701. GRAIN CLEANING AND SEED TREATING APPARATUS. JOHN W. HOEFLING and PHILIP M. HOEFLING, Chico, Calif. Filed May 7, 1929. Serial No. 361,120. 1 Claim. (Cl. 209—12.)



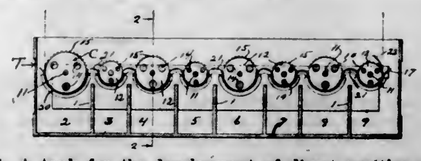
In a portable grain cleaning and treating machine, the combination with suction apparatus, of a disk separator associated with the suction apparatus with the grain aspirated by the suction apparatus before entering and after leaving the disk separator, and a vibrating screen interposed between the suction apparatus and disk separator, a mixing barrel receiving the grain from the separator, and means for metering a treating substance to the grain after discharge from the separator and prior to delivery into the tumbling barrel.

1,809,702. CONTAINER FOR PACKING AND SHIPPING FRESH FRUIT. CLARENCE J. HORN, Fresno, Calif., assignor to Growers Service Company, Fresno, Calif. Filed July 28, 1930. Serial No. 471,275. 1 Claim. (Cl. 217—40.)



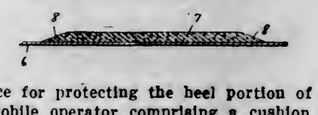
A box of the class described comprising a pair of side panels, a pair of end panels secured to the side panels, said end panels being shorter in height than the side panels, panel sections secured to the upper edges of the end panels terminating flush with the upper edges of the side panels and disposed therebetween, said side panels being formed with longitudinally extending slots starting from the ends thereof and terminating distances from the center thereof, and said end panels being provided with notches in their upper end corners registering with the slots the upper walls of the notches in the end panels being formed by the lower edges of the panel sections.

1,809,703. BALL JOINT CONNECTION. GEORGE H. HUFFERD and MATTHEW P. GRAHAM, Detroit, Mich., assignors to Thompson Products, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 26, 1928. Serial No. 315,208. 4 Claims. (Cl. 287—90.)



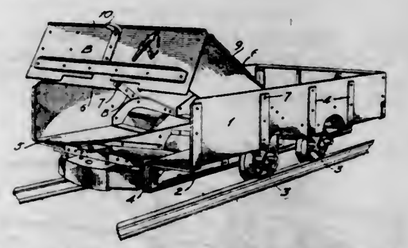
1. In a ball joint, a spherical member, separated seat members engaging said spherical member on opposite sides thereof and having outer cylindrical surfaces and a symmetrical housing having cylindrical surfaces eccentric with respect to each other and to said spherical member and engaging the cylindrical surfaces of said seat members and resilient means urging said seat members in opposite directions circumferentially of said spherical member.

1,809,704. STONE SPREADER. FRANK B. HURT, La Grande, Oreg. Filed Dec. 26, 1928. Serial No. 328,608. 4 Claims. (Cl. 275—2.)



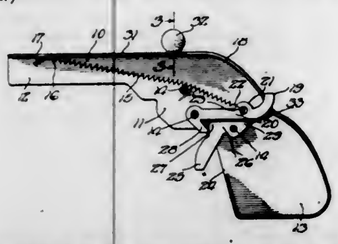
4. Means for spreading road material comprising a hopper having a centrally recessed front wall to fit below and extend laterally beyond and upwardly at the sides of a dumping truck body, means to secure the hopper to the truck body, and closure plates mounted on the end portions of the hopper front wall and adjustable laterally with respect to the truck body whereby the space between the ends of the hopper and the sides of the truck body may be bridged and the hopper applied to truck bodies of various widths.

1,809,705. DEVELOPING APPARATUS. WILLIAM H. JAEGER, Trenton, N. J. Filed Jan. 5, 1929. Serial No. 330,665. 3 Claims. (Cl. 95—94.)



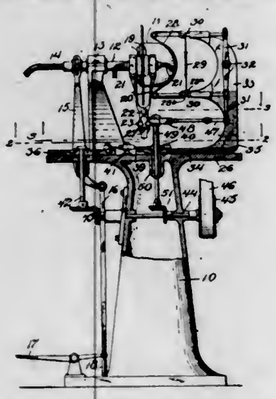
1. A tank for the development of direct positive print paper divided into a plurality of chambers, each containing a liquid incident to the development of the paper, spaced discs rotatably supported above each of the chambers and extending downwardly thereinto, means for driving said discs at the same peripheral speeds, guides associated with the lower portions of the discs to maintain the paper in proper position with respect to the discs, said discs having outstanding teeth for engagement with perforations in the paper, the guides being positioned outwardly of the teeth and engaging the marginal portions of said paper.

1,809,706. HEEL CUSHION FOR AUTOMOBILES. MARCIA B. JAMIESON, Houston, Tex. Filed Apr. 12, 1930. Serial No. 443,826. 1 Claim. (Cl. 74—81.)



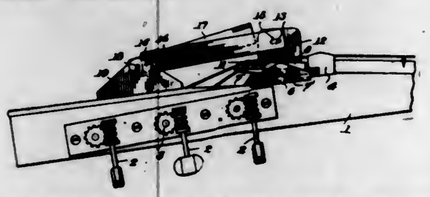
A device for protecting the heel portion of a shoe of an automobile operator comprising a cushion placed on the floor board in rear of the pedals of an automobile for engaging the rear part of the heel portion of the shoe when the foot is operating the pedals with the tip of the heel resting on a part of the floor board, said cushion comprising a rectangular flat strip of hard rubber and a rectangular strip of sponge rubber secured to the flat strip and of less area than the flat strip with the front edge beveled to receive said rear part of the heel.

1,809,707. MINE CAR. GEORGE E. JONES, Jr., and PERRY S. MCCALLEN, Knoxville, Tenn., assignors to Sanford Investment Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 23, 1929. Serial No. 416,188. 16 Claims. (Cl. 105—261.)



1. A car of the general type described, including car body sides and an end-gate having arms between the car body sides and means in position to embrace extended portions of the upper edges of the car body sides to resist spreading when the end-gate is in its closed position.

1,809,708. MISSILE PROJECTING DEVICE. PAUL F. KAHLER and STANLEY S. WICKER, Chicago, Ill. Filed Oct. 21, 1929. Serial No. 401,214. 1 Claim. (Cl. 124—12.)



The combination with a toy pistol including side plates, said body providing a barrel and stock having an arcuate slot extending from the rear end of the barrel along the upper and rear wall of the stock, and means for moving a hammer head through said slot, of means for mounting a missile above the barrel and adjacent the rear end thereof, said means including spacing fingers extending parallel to said barrel rearwardly thereof, said side plates having slots therein parallel to and extending rearwardly of said barrel to provide said fingers so that a missile may be frictionally held therebetween in the path of said hammer head.

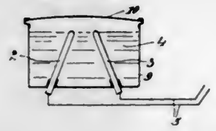
1,809,709. MACHINE FOR SURFACING HAT BODIES. FERDINAND E. KAUFFMANN, Rahway, N. J. Filed Sept. 11, 1926. Serial No. 134,784. 3 Claims. (Cl. 223—30.)

1. A machine for surfacing hat bodies comprising a rotatable hat support, a bracket arranged to oscillate adjacent the hat support, arms on the bracket, means for reciprocating the arms in opposite directions, a strip yieldingly supported by the arms, and means for rotating the hat support and reciprocating the arms.

1,809,710. STRINGED MUSICAL INSTRUMENT. JOHN T. KAUFMAN, Marion, and CHRIS KAUFMAN, Yankton, S. Dak. Filed July 13, 1928. Serial No. 292,567. 3 Claims. (Cl. 84—312.)

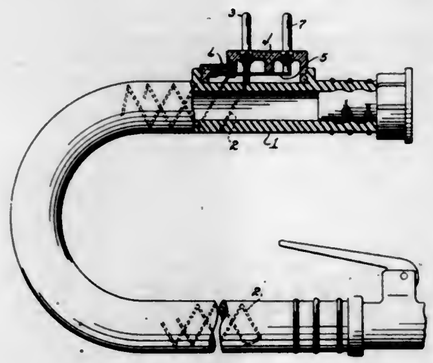
1. An attachment for a stringed musical instrument and comprising a base plate adapted to be secured to the neck of the instrument, a rock plate pivotally secured to said base plate at one end thereof, grooved rollers having connection with the rock plate for movement therewith, and for receiving the strings of the instrument, a block mounted for upward movement with respect to the neck, and receiving the strings thereon, said block being arranged in the path of the rock plate whereby the latter engages the same, means for rocking the rock plate to lift the block, and means for retaining the lifting means in operative or inoperative positions.

1,809,711. AUXILIARY MUDGUARD FOR AUTOMOBILE FENDERS. ALFRED W. KILE, Minneapolis, Minn., assignor to Durkee-Atwood Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Sept. 12, 1930. Serial No. 481,408. 5 Claims. (Cl. 280—152.)



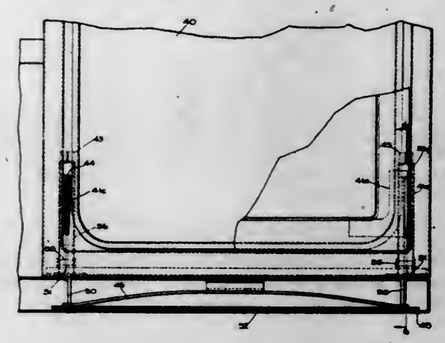
1. A splash guard comprising a semi-rigid body portion of unbreakable material, and clamping elements on said body portion adapted to engage an edge portion of an automobile fender to secure said body portion at any desired angle with respect to said fender at such points of attachment.

1,809,712. VALVE GEAR FOR STEAM ENGINES. FREDERICO ANTON KOWARICK, Sao Paolo, Brazil. Filed Jan. 9, 1929, Serial No. 331,263, and in Germany Jan. 16, 1928. 2 Claims. (Cl. 121—176.)



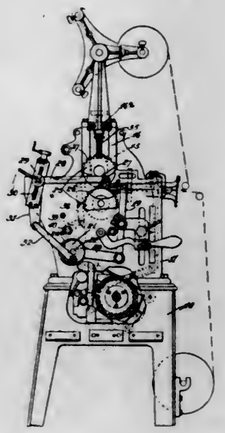
1. An eccentric valve gear for steam engines comprising a valve gear shaft, a sectional eccentric, one section of said eccentric being mounted upon said shaft, an eccentric strap, a second section of said eccentric having an inner diameter corresponding to the outer diameter of said first mentioned section and its outer diameter corresponding with the inner diameter of said strap, said two sections being eccentric to one another and rotatably mounted relatively to said valve gear shaft but in opposite direction to one another in order to secure any desired cut-off between the absolute zero-cut-off and a given maximum cut-off even while the engine is running and the lead may be adjusted also corresponding to the cut-off in question proportionately increasing or decreasing or may be held constant, an adjusting member mounted rotatively and longitudinally shiftable on the valve gear shaft with a helical connection, said adjustable member having a curved slot guide arranged to act on the said second section and said adjustable member having a further helical connection of different inclination arranged to act on the said first section, a fork for operating said adjusting member, a thickened part or collar on the valve gear shaft, a disk, curved slots in said disk, entraining pins on the second section of the eccentric projecting into said curved slots in said disk, a socket on the first mentioned section of the eccentric forming a boss surrounding the inner part of the valve gear shaft, a hollow boss on the disk fitted on the said socket and connected thereto by a helical connection.

1,809,713. MICROPHONE. WALTER KÜHNERT, Vienna, and MAX MAURER, Klosterneuburg, Austria. Filed Jan. 7, 1927, Serial No. 159,701, and in Austria Apr. 16, 1926. 9 Claims. (Cl. 177—386.)



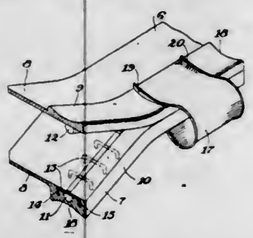
1. In an apparatus for transforming sound waves into variations of electric current, the combination of two electrodes mounted on a carrier at a fixed distance from each other, and an electrolyte in contact with the said two electrodes and forming a path of constant cross section for the current from one electrode to the other, the length of such current path being altered by the incoming sound waves during the action of the device.

1,809,714. HEATED WATER HOSE FOR FILLING STATIONS. CARL RAYMOND MATHEWS, Claremore, Okla. Filed Apr. 1, 1929. Serial No. 351,791. 1 Claim. (Cl. 219—39.)



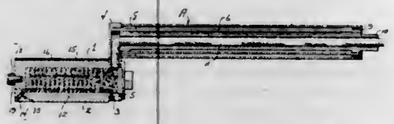
A fluid heater comprising a hose, an electrical heating coil embedded in the hose, walls formed on the hose to provide a socket, an insulated casing mounted in the socket, a shoulder in the casing, a terminal post carried by the casing and connected to one end of the coil, a second terminal post carried by the casing and located adjacent the shoulder, and a thermostat member having one end secured to the casing and the other end of the coil and extending across the shoulder into engagement with the second mentioned terminal post to complete a circuit and influenced by the heat of the coil to break the circuit when the fluid in the hose has been heated to a desired temperature.

1,809,715. COUNTERBALANCE FOR DOORS. FRANCIS H. MCCORMICK, Glen Ellyn, Ill., assignor to Edison Electric Appliance Company, Chicago, Ill., a Corporation of New York. Filed Oct. 12, 1929. Serial No. 399,331. 14 Claims. (Cl. 126—191.)



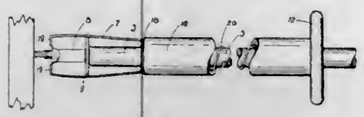
1. The combination with a member movable between a pair of limiting positions and biased to one of said positions, of a counterbalancing spring cooperating with said member and an auxiliary member frictionally engaging said spring so as to damp the motion of said first member.

1,809,716. PLAITING MACHINE. LAWRENCE E. MCDONOUGH, Chicago, Ill. Filed Apr. 20, 1929. Serial No. 356,755. 14 Claims. (Cl. 223—44.)



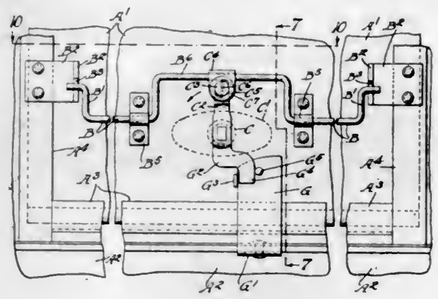
1. In a plaiting machine, a pair of cooperating pressure rolls, cloth-gripping members arranged to reciprocate adjacent the entering side of the rolls for over-tucking or under-tucking the cloth to form plaits, and means for relieving the pressure between the rolls in timed relation to the reciprocation of the cloth-gripping members to admit the loosely folded cloth.

1,809,717. FASTENING DEVICE. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Filed Feb. 5, 1930. Serial No. 426,013. 7 Claims. (Cl. 24—205.)



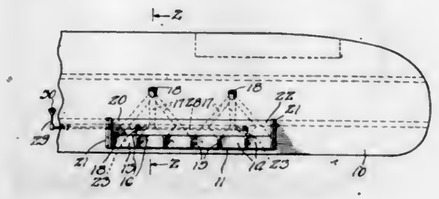
1. In a multiple fastener, a pair of flexible strips, interlocking projections on one of said strips, a projection-receiving recess on the other of said strips, and reinforcing means extending directly across said recess to resist separation of the walls thereof.

1,809,718. ELECTRICALLY HEATED SCRAPER. JAMES MCNEIL, Pittsburgh, Pa. Filed Nov. 9, 1929. Serial No. 406,009. 3 Claims. (Cl. 219—21.)



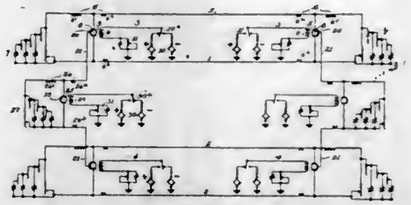
1. A device of the class described comprising a hollow member having a flat bottom, a heating unit in the member for heating the same, the front lower corner of the member having a diagonally arranged slot therein, a scraper blade in the slot, a hollow handle, an upright connecting one end of the handle with the rear of the member and conductors passing through the hollow handle and connected with the heating element.

1,809,719. SCREW DRIVER. STEPHEN MCWADE, Cobden, Ontario, Canada. Filed Aug. 31, 1928. Serial No. 303,293. 1 Claim. (Cl. 145—52.)



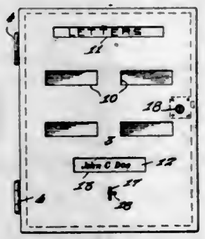
A screw driver comprising a shank, having a handle suitably retained on one end thereof; the other end of said shank being provided with a tapered bit; an enlarged portion adjacent the inner end of said bit of rectangular form in cross section having greater dimensions in one direction than on the transverse diameter; a cylindrical casing reciprocally and rotatably mounted on said shank; separate, removable, flat spring jaws supported from said casing; a tapered plug on said shank adapted to retain said jaws in position relative to said casing and to act as a bearing between said casing and said shank; a recoil spring connected between said shank and said plug adapted to retain said plug in tight position in said casing and to return said casing to normal position relative to said shank; an operating member on said casing adjacent said handle for rotating said casing and said enlarged portion adapted to spread and retain said jaws in spread position upon rotation of said casing a quarter turn and frictionally retaining the casing in fully projected position against the tension of the spring.

1,809,720. HOOD LATCH. NORTON A. MEARS and DIBRELL P. HYNES, Chicago, Ill., assignors to Chicago Forging & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 10, 1929. Serial No. 361,933. 12 Claims. (Cl. 292—49.)



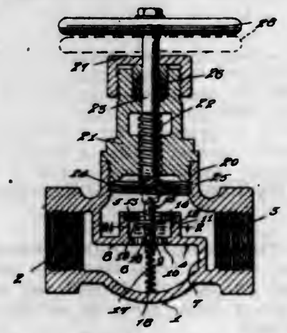
1. In combination with a latching device for the hinged section of an automobile hood, which includes a rock shaft mounted on the inner face of the hood, a plurality of latch abutments positioned within and spaced laterally inwardly from the hood and crank members associated with the rock shaft and adapted for locking engagement with the latch abutment in response to rotation of said shaft, means for rotating said rock shaft, including an offset portion intermediate the ends of the shaft, a stem pivotally mounted on the hood, an exterior handle therefor, a crank arm and crank pin associated with said stem, the pin being adapted to contact the offset portion of the crank arm, and a securing member, pivoted to the pin, adapted to maintain operative engagement between the offset portion and the pin, the pin being adapted to rotate the offset portion in response to rotation of the crank arm in one direction, the securing member being adapted to rotate the offset portion in response to rotation of the crank arm in the opposite direction.

1,809,721. WING STRUCTURE FOR AIRCRAFT AND THE LIKE. GEORGE MILLER, Chicago, Ill. Filed Mar. 19, 1930. Serial No. 437,196. 2 Claims. (Cl. 244—12.)



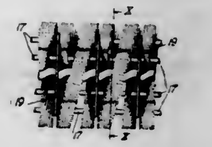
2. An aircraft wing structure including a body providing a compartment in the forward end of the wing, said wing having an opening therein leading into said compartment from the upper side thereof and adjacent the front end, means defining a plurality of pockets in said compartment, conduits leading angularly upward from said pockets and opening exteriorly on the upper side of the wing rearwardly of said opening, a slidable door over said opening, and means enabling the pilot to open and close said door for the purposes set forth.

1,809,722. SUPERPOSED TELEGRAPH SYSTEM. RONALD V. MORGENSTERN, Metuchen, and PAUL E. TETER, Plainfield, N. J., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1930. Serial No. 422,194. 8 Claims. (Cl. 178—65.)



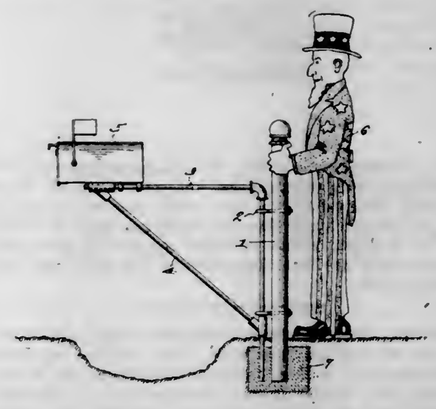
1. In a superposed telegraph system, a side circuit, generators at each end of the circuit, means to provide for polar signalling over said circuit by field reversals in said generator and means for superposing a circuit on said circuit by way of the armatures of said generators.

1,809,723. INDICATOR. NASEEB A. NADDAFF, Boston, Mass. Filed Sept. 10, 1930. Serial No. 481,026. 2 Claims. (Cl. 232—46.)



1. A mail box having a hinged and normally locked cover for the open face thereof, and which cover is provided with a slot and with a plurality of sight openings, a name card carried by the cover opposite one of the sight openings, a gravity influenced slidable plate on the inner face of the cover carrying name cards to aline with the remaining sight openings and to uncover the slot when the said slide moves downwardly and a key operated bolt to engage with the lower edge of the slide to move and sustain the same in a position to cover the sight openings and the slot.

1,809,724. VALVE. DEE R. PASSAUER, Lucinda, Pa. Filed May 31, 1930. Serial No. 458,777. 3 Claims. (Cl. 251—140.)

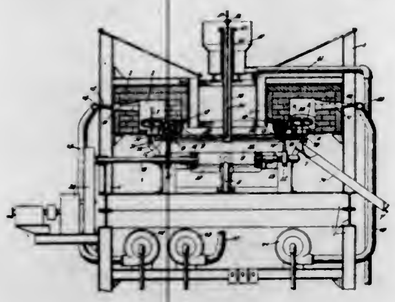


2. A valve comprising a body, a wall in said body and having a passage, a flange formed on the wall about the passage, a gasket carried by the flange, a disk detachably securing the gasket to the flange and cooperating with the latter in forming a valve seat, a spring pressed closure element for the seat, and a manual control means carried by the body to disengage the closure element from the valve seat.

1,809,725. BRUSH FOR CLEANING PIPES AND TUBES. JOSEPH HENRY ROE, Market Harborough, England. Filed Dec. 9, 1927, Serial No. 238,889, and in Great Britain Dec. 11, 1926. 7 Claims. (Cl. 15—206.)

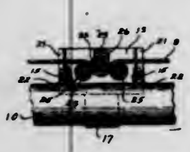
1. A circular brush comprising a shank composed of wires twisted together, bristles radially disposed thereon, and discs on said shank to afford lateral support for the free portion of the bristles under operation of the brush in an axial direction.

1,809,726. MAIL BOX HOLDER. OSCAR SANDERS, St. Joseph, Mo. Filed Sept. 9, 1929. Serial No. 391,267. 1 Claim. (Cl. 232—40.)



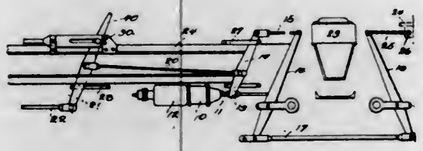
A mail box holder comprising a base embedded in the ground adjacent a roadway and having a socket opening outwardly through the top surface thereof, a vertical post having the lower end embedded in the base adjacent the socket, eye bolts secured to the post, a L-shaped support having the vertical portion thereof extending through the eye bolts and received in the socket and bearing against the bottom wall thereof, a brace connected to the horizontal portion of the support and to the vertical portion below the lowermost eye bolt to prevent vertical displacement of the vertical portion from the socket and from the post, and brackets attaching a mail box to the horizontal portion.

1,809,727. ROTARY VALVE FURNACE. WILBUR E. SANDERS, Muncie, Ind., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 12, 1929. Serial No. 385,133. 9 Claims. (Cl. 263—7.)



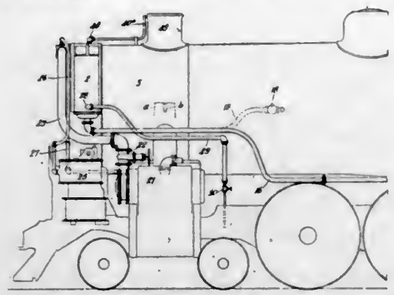
1. Heat treating apparatus including a chambered furnace, a movable conveyor for carrying articles through the

furnace and constituting one wall of the furnace chamber, and embodying refrigerating means so arranged that



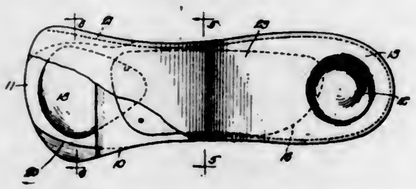
portions of the article positioned adjacent thereto are maintained cool while other portions extending into the furnace are heated.

1,809,728. FISHERMAN'S LINE DRIER. CARL O. SATHER and FELIX P. SAMPSON, Minneapolis, Minn. Filed Apr. 23, 1930. Serial No. 446,742. 9 Claims. (Cl. 43—25.)



1. A line drier for fishing rods comprising a casing for attachment longitudinally of the rod, wringer rollers mounted transversely in the casing, means for guiding the line longitudinally thru the casing and over the rollers, and a wringing roller pivotally carried by the casing for clamping the line therebetween and said first mentioned rollers.

1,809,729. FOUNDATION BRAKE RIGGING. WILLIAM H. SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Royal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 14, 1928. Serial No. 254,256. 11 Claims. (Cl. 188—33.)



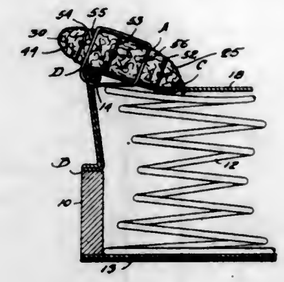
1. In a car brake rigging system of the character described, in combination, an air brake cylinder with cylinder levers, a lost motion regulator associated therewith, the effective operative ends of said levers being oppositely disposed with respect to the center sill of the car, live and dead truck brake levers connected with said cylinder levers, and points of anchorage on the car body for the dead truck levers.

1,809,730. FEED WATER HEATER. EUGENE L. SCHELLENS, Millburn, N. J., and CHRISTOPHER A. SCHELLENS, Marblehead, Mass., assignors to C-S Engineering Company, Jersey City, N. J., a Corporation of Delaware. Filed July 30, 1927. Serial No. 209,540. 17 Claims. (Cl. 122—441.)

1. A feed water heater having an arcuate casing formed of a pair of dished plates, and a pair of plates secured between them.

1,809,731. ARCH SUPPORT. WILLIAM M. SCHOLL, Chicago, Ill. Filed May 26, 1924. Serial No. 715,839. 1 Claim. (Cl. 36—71.)

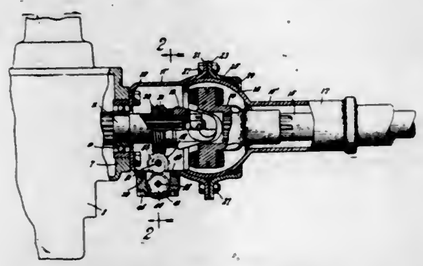
As an article of manufacture, an arch support including a sole member having on its upper surface at its rear portion a skived recess therein, adapted to be disposed below the oscalcis of the foot of the wearer, surrounded by a marginal area of substantial width, a substantially oval-shaped yieldable pad adjacent the forward end of said members having a widened forward portion to underlie the second, third, and fourth metatarsophalangeal joints of the foot, a longitudinally arched spring plate underlying the sole member and supporting the longitudinal arch of the foot, said plate extending forward beneath the yieldable pad and supporting the plantar surface of the foot, and a lower covering member disposed below the pad and spring plate and protecting these members from contact with the shoe sole.



1,809,732. PROCESS OF PRODUCING OIL SOLUBLE PHENOL-ALDEHYDE CONDENSATION PRODUCTS. FRITZ SEEBACH, Erkner-Berlin, Germany, assignor to Bakelite Gesellschaft mit beschraenkter Haftung, Berlin-Charlottenburg, Germany. Filed Dec. 9, 1927, Serial No. 239,008, and in Germany Dec. 14, 1926. 10 Claims. (Cl. 260—4.)

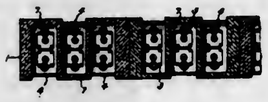
1. A process of producing fatty oil-soluble resinous products which comprises heating a fusible phenol-aldehyde condensation product together with a polynuclear phenol until the reaction mass is soluble in fatty oil.

1,809,733. UPHOLSTERING EDGING. FRANK L. SMITH, Columbiana, Ohio. Original application filed Mar. 29, 1928, Serial No. 265,710. Divided and this application filed Jan. 6, 1930. Serial No. 418,896. 4 Claims. (Cl. 155—184.)



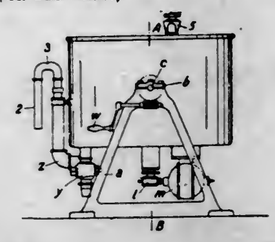
4. As an article of manufacture, upholstering edging comprising a transversely flattened elongated casing

of flexible sheet material doubled upon itself and having its marginal portions secured together, providing a pair of flaps in juxtaposed relation extending from the main



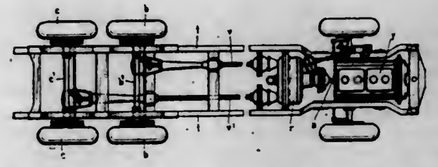
body of the casing inwardly of but adjacent to one only of the longitudinal edges of the said main body, and a filler of fiber-like material in said casing.

1,809,734. TORQUE BALL RETAINER AND SPEEDOMETER. WILLIAM R. SMITH, Toledo, Ohio, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 10, 1928. Serial No. 318,568. 2 Claims. (Cl. 74—7.)



2. A hollow torque ball retainer having at one end an inwardly directed flange, internally located fastening means to secure said flange to said gear housing, said ball retainer being throughout its length radially greater than the radial distance of said fastening means, means to drive a measuring instrument associated with said ball retainer comprising a carrier, meshing gears mounted in said carrier, one of said gears to engage a gear on the spline shaft of the transmission, the other to operate a speedometer shaft, means including shims to secure said carrier in adjusted position, relative to said ball retainer to permit interchange of gears.

1,809,735. ELECTRIC SWITCH CELL STRUCTURE. TOWNSEND H. SOREN, Hartford, Conn., assignor to General Electric Company, a Corporation of New York. Filed Dec. 30, 1926. Serial No. 158,116. 3 Claims. (Cl. 175—298.)



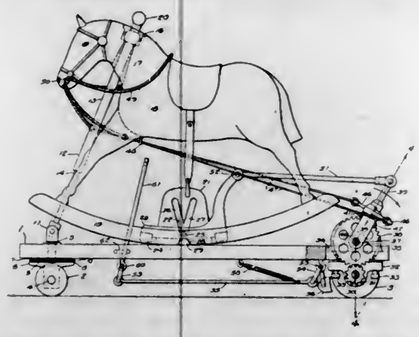
1. A switch cell structure providing a row of adjacent cells, switches in said cells, and a door for closing each cell at one side thereof, alternate cells having their doors arranged at one side of the row and other cells having their doors arranged at the other side of the row.

1,809,736. WASHING MACHINE FOR COMESTIBLES. ROBERT SPEIDEL, Pforsheim, Germany. Filed Mar. 26, 1927, Serial No. 178,603, and in Germany Dec. 20, 1926. 1 Claim. (Cl. 146—197.)

In a washing machine for potatoes, vegetables, fruit, salted meat, salted fish and other food substances, the combination with a tiltable receiver, of an agitator shaft extending up through the bottom of the receiver into the interior thereof, a frame upon the bottom of said receiver, said frame supporting a sieve bottom, a motor mounted on the bottom of the receiver and operatively connected to the lower end of the shaft below the bottom of the receiver, an agitator element having a central hub detachably mounted upon the upper end of the agitator shaft to rotate therewith, a water discharge pipe connected to the receiver, an upwardly extending telescoping pipe connected to said discharge pipe, and a U-shaped pipe connected to the upper end of the telescoping pipe and having a vent at its highest point.

1,809,737. DRIVING MECHANISM FOR MOTOR VEHICLES. WILLY STANIEWICZ, Brunswick, Germany, assignor to Automobilwerke H. Bussing, Aktiengesellschaft, Brunswick, Germany. Filed Jan. 25, 1930, Serial No. 423,462, and in Germany Dec. 8, 1928. 2 Claims. (Cl. 180—22.)

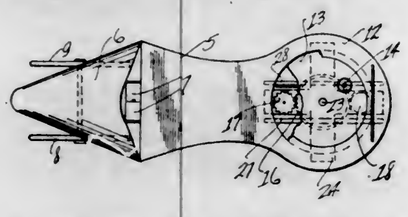
1. In a motor vehicle, the combination with a driving shaft and two driven axles, of two driven shafts each connected with a driven axle, gearings of different gear ratios each connecting said driving shaft to the driven shafts each set comprising a gear on the driving shaft and a gear for each driven shaft constantly in driving relation with said gear on the driving shaft, and coupling means for said gearings adapted to be shifted to connect one or the other of said gearings to the axles for driving the same.



1,809,738. PROCESS FOR TREATING RESINS. PAUL STUHLMANN, Cologne-Lindenthal, Germany. Filed Feb. 9, 1928, Serial No. 253,203, and in Germany Jan. 24, 1927. 2 Claims. (Cl. 87—16.)

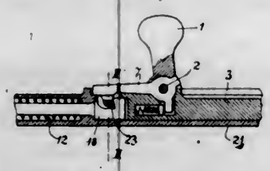
1. A process for bleaching resins which consists in subjecting them in an alkaline lye in the cold with continuous movement to the common action of a bleaching agent and of formaldehyde.

1,809,739. WHEELED TOY ROCKING FIGURE PROPELLED. GEORGE TAYLOR, Conshohocken, Pa. Filed Dec. 22, 1930. Serial No. 504,160. 9 Claims. (Cl. 208—42.)



1. In a wheeled toy, rocking figure propelled, a base having front steering wheels and a steering mechanism there-

for, a pair of rear supporting wheels including an axle, bearings for the axle, resilient means between the bear-

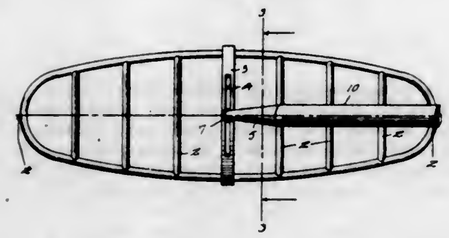


ings and the base, a shaft in bearings on the base and provided with a gear, a gear on the axle, so that when weight is applied to the base the two gears will intermesh.

1,809,740. CHILD'S VEHICLE. ALEXANDER N. TEBIEFF, Los Angeles, Calif. Filed June 3, 1929. Serial No. 367,999. 1 Claim. (Cl. 208—175.)

In a child's vehicle, a base, a disc rotatably secured in said base, means for rotating said disc, a master gear secured in said disc, a bearing plate pivotally positioned beneath said master gear, shafts carried in said bearing plate, planetary gears carried on said shafts and engaging said master gear, gears at the lower extremities of said shafts, a pair of steering wheels mounted below said bearing plate, said steering wheels having gears formed thereon and adapted to mesh with said last mentioned gears, for the purpose specified.

1,809,741. AUTOMATIC FIREARM. RUDOLF VON FROMMER, Budapest, Hungary. Filed Oct. 27, 1930, Serial No. 491,570, and in Hungary Nov. 13, 1929. 1 Claim. (Cl. 42—3.)

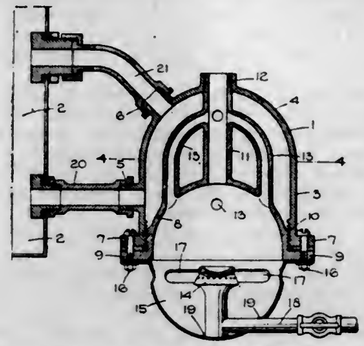


In an automatic fire arm, a breech bolt, a breech closing rod, an operating handle, a pivot bolt adapted to connect pivotally said handle with the breech bolt, a coupling arm pivotally mounted on said pivot bolt and having a hook adapted to engage and disengage with the closing rod, a guide for the coupling arm arranged on the breech casing, projections fitted on said hook, strips provided on the said guide and arranged above that part of the path of said projections, on which said coupling arm is intended to remain in engagement with the closing rod.

1,809,742. TOBACCO CAN. ELLIS MCWHORTER, Algona, Iowa. Filed Apr. 26, 1929. Serial No. 358,369. 2 Claims. (Cl. 206—38.)

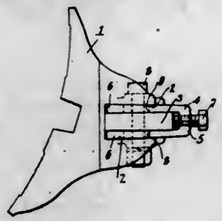
1. A box of the class described open at both ends and provided with closures for such ends, a container for mounting in said box, both of the ends of said box and said container being of uniform size and shape and having complementary interengaging means whereby the container may be interchangeably mounted in said ends.

1,809,743. RUB HOE. WALTER E. CHASE, Sarasota, Fla. Filed Jan. 4, 1930. Serial No. 418,568. 3 Claims. (Cl. 55—10.)



1. A rub hoe of the character described, comprising a frame having spaced bars arranged transversely thereof, said frame and bars being of substantially the same thickness whereby contact thereof with the surface of the ground will be had, and a handle connected at one end intermediate the ends of the frame and extending upwardly at an angle therefrom.

1,809,744. APPARATUS FOR HEATING LIQUIDS. EDWIN DARBY, Birmingham, England. Filed Nov. 23, 1929, Serial No. 409,326, and in Great Britain Nov. 29, 1928. 4 Claims. (Cl. 122—156.)

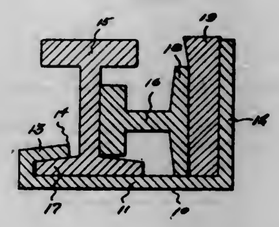


4. A liquid heating unit for application to a tank or supply pipe, comprising an outer shell domed at its upper end, a body member placed in said outer shell in spaced relation thereto, the space between said body and outer shell forming a liquid receptacle, said body having a domed lower end forming a combustion chamber, a vertical central flue tube projecting upwardly from said combustion chamber and projecting through said outer shell, a plu-

rality of auxiliary flue tubes connecting the central flue with the combustion chamber, the body portion together with the central main flue pipe and auxiliary flue pipes

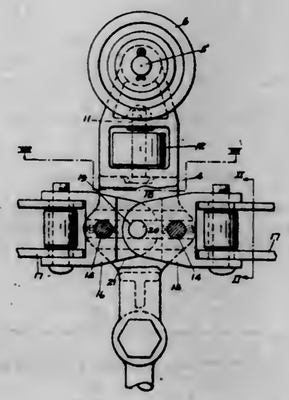
being detachable from the outer shell, the outer shell having means at its upper and lower ends for connection to a tank or supply pipe and a heating unit in said combustion chamber.

1,809,745. BRAKE SHOE HOLDER. LEWIS J. DAVIS, Brooklyn, N. Y. Filed Sept. 12, 1928. Serial No. 305,509. 12 Claims. (Cl. 188—223.)



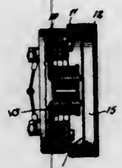
6. In combination, a brake shoe head having a rearwardly extending portion, a brake beam flatly confronting said rearwardly extending portion, and an adjustable wedge-shaped means for securing said brake shoe head against said brake beam.

1,809,746. CONTAINER FOR CIGARETTES AND THE LIKE. EDOUARD FRANÇOIS MICHAEL DÉCOBERT, Paris, France. Filed Aug. 22, 1928, Serial No. 301,359, and in France May 26, 1928. Renewed Apr. 25, 1931. 2 Claims. (Cl. 135—47.)



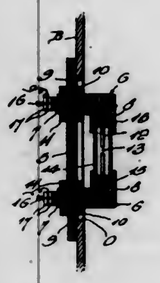
1. A cigarette case comprising a tube adapted to accommodate cigarettes arranged endwise, a sliding member supporting said cigarettes within the tube, a wire exterior to the tube connected with said sliding member and means associated with said wire for imparting sliding motion to said supporting member and ejecting the cigarettes singly from one end of the tube.

1,809,747. SLIDER RAIL CLAMP. EDWARD J. FILBURN, Terre Haute, Ind. Filed Dec. 30, 1929. Serial No. 417,522. 1 Claim. (Cl. 238—10.)



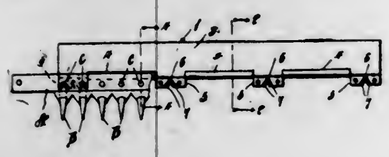
An inexpensive slider rail clamp comprising a flat rail supporting bottom, and one end of said bottom projecting upwardly at right angles thereto and then inwardly to cooperate with the flange of a work-ray rail, the other end thereof being folded at right angles to the bottom of the clamp to cooperate with the bottom of a slider rail, said latter folded upturned end lying within the same plane, said clamp being adapted to have a wedge inserted between the bottom of the slider rail and the upturned end cooperating therewith, whereby said wedge may be inserted or removed from the upper side.

1,809,748. TROLLEY CONVEYER. EARLE V. FRANCIS, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed May 4, 1928. Serial No. 275,212. 34 Claims. (Cl. 105—155.)



1. In a conveyer, the combination with a trolley hanger, a pair of draft members movably associated therewith and adapted to be normally arranged in longitudinal alignment; of means cooperating with said draft members for causing them to assume substantially the same angular relation with respect to said trolley hanger at both sides thereof.

1,809,749. TELEPHONE RECEIVER. GEORGE B. FRENCH, Southampton, N. Y. Filed Apr. 10, 1930. Serial No. 443,153. 4 Claims. (Cl. 179—107.)



1. A receiver of the class described, including a casing, a cover associated with said casing, a diaphragm within said casing, means for vibrating said diaphragm in response to voice currents, and said diaphragm and said cover forming a closed air space.

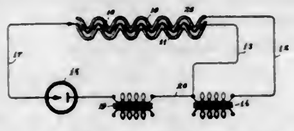
1,809,750. IGNITION INDICATOR. ATTILIO HENRY GIUSTI, Philadelphia, Pa. Filed Nov. 18, 1929, Serial No. 408,117. Renewed Feb. 7, 1931. 2 Claims. (Cl. 175—183.)

1. In an ignition indicator, a support having two spaced openings, two L-shaped members each having a threaded shank and a lateral head, said shanks passing through said openings and having shoulders abutting one side of said support, nuts threaded on said shanks and abutting the other sides of said support, electrodes projecting from the outer ends of said lateral heads and spaced apart to provide a spark gap, and binding posts in conducting relation with said electrodes and projecting beyond the free ends of said shanks.

1,809,751. SUPPORT FOR CUTTER BARS OF MOWING MACHINES. JAMES W. HARDY, Russellville, Ark. Filed June 13, 1929. Serial No. 370,509. 3 Claims. (Cl. 56—307.)

1. A support for mower cutter bars, comprising a plate attachable under a cutter bar and extending from end to end thereof, said plate being downwardly and rearwardly extended from said cutter bar and adapted to support it above the ground and obstructions thereon.

1,809,752. CATALYTIC OXIDATION OF NAPHTHALENE. ALPHONS O. JAEGER, Crafton, Pa., assignor, by meane assignments, to The Selden Research & Engineering Corporation, Pittsburgh, Pa., a Corporation of Delaware. Original application filed June 3, 1927, Serial No. 196,893. Divided and this application filed Mar. 26, 1928. Serial No. 264,974. 27 Claims. (Cl. 260—123.)



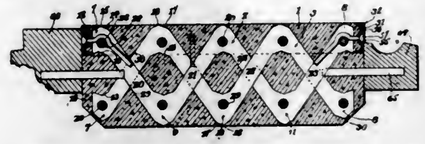
1. A method of oxidizing naphthalene to intermediate oxidation products, which comprises causing vapors of naphthalene and an oxidizing gas to react in the presence of a contact mass having associated therewith at least one compound, other than an oxide or hydroxide, of an element falling within the group consisting of alkali metals and alkaline earth metals.

1,809,753. MULTIPLE LAMP SOCKET. RICHARD L. JOHNSON, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 31, 1928. Serial No. 266,245. 1 Claim. (Cl. 173—335.)

In a multiple socket, socket members having openings therein, shell contacts in said socket members having tongues extending through said openings, each tongue extending also into an opening in an adjacent socket member and contacting with the tongue extending therethrough.

1,809,754. ELECTROSTATIC REPRODUCER. JOSEPH J. STEEDLE, Scranton, Pa. Filed May 13, 1929. Serial No. 362,681. 23 Claims. (Cl. 179—111.)

1. An electrostatic speaker, including a plurality of angular plates, and a diaphragm angularly disposed therebetween, whereby a plurality of angularly related propagating areas are formed by said diaphragm.



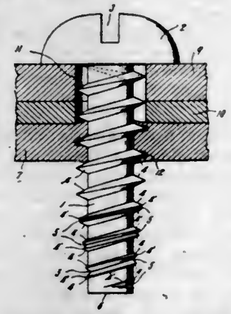
1,809,755. MATERIAL FOR FORMING COATINGS, FOR USE AS IMPREGNATING AGENTS OR FOR LIKE PURPOSES. GEORGE KING and RICHARD THRELFALL, Birmingham, England. Filed Feb. 7, 1928, Serial No. 252,669, and in Great Britain Feb. 16, 1927. 5 Claims. (Cl. 134—1.)

1. A process of making a solution of silica, which process comprises treating a silicic acid alkyl ester in presence of a solvent for the ester and for water, with a proportion of water not exceeding that required to decompose the ester completely.

1,809,756. ARMOR REENFORCED CONCRETE SLAB. GEORGE E. NAGEL, Columbus, Ohio. Filed Aug. 3, 1929. Serial No. 383,332. 10 Claims. (Cl. 94—8.)

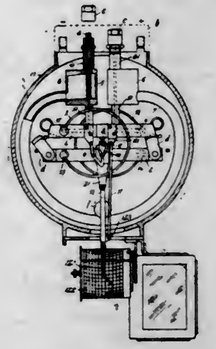
1. An armor for encompassing the concrete body of a crossing slab comprising a frame including a pair of side

walls and a pair of end walls, each of said walls provided at its top and bottom with an inwardly extending, right angularly disposed flange between which said body extends, each flange being of a length less than the wall



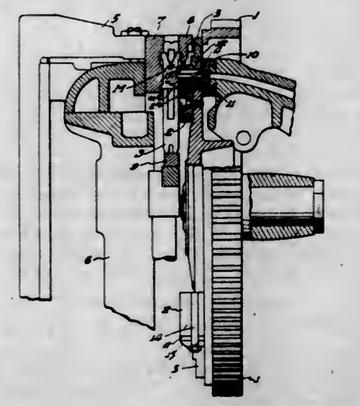
from which it extends whereby the ends of the flanges of the side walls will be spaced from the ends of the flanges of the end walls to provide the corners of the frame free of flanges.

1,809,757. CONCRETE FENCE POST. GEORGE E. NAGEL, Columbus, Ohio. Filed Feb. 2, 1931. Serial No. 513,015. 5 Claims. (Cl. 256—51.)



5. In wire fence construction, a post including a pair of sides and a front, fence wire coupling elements extending through said post, abutting the sides of the post and projecting beyond the front of the post, said elements having means at one end for anchoring fence wires against said front, and said elements being alternately disposed relatively to each other.

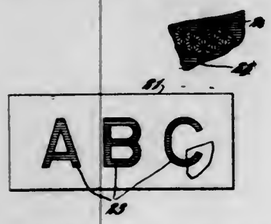
1,809,758. FASTENER. HEYMAN ROSENBERG, New York, N. Y. Filed July 23, 1926. Serial No. 124,454. 14 Claims. (Cl. 85—41.)



1. A fastener adapted for use in metal work comprising a body having a rib outstanding along the body and grooved longitudinally, providing a longitudinally-extending exposed entering edge at one side of the groove, the groove tapering along the rib.

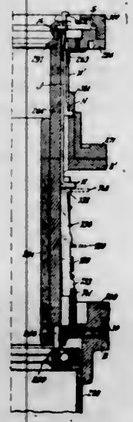
1,809,759. PRESSURE GAUGE. ALBERT RÖVER, Quedlinburg, Germany, assignor to Steinle & Hartung, G. m. b. H., Quedlinburg, Germany. Filed Mar. 8, 1928, Serial No. 260,199, and in Germany Mar. 3, 1926. 4 Claims. (Cl. 73—31.)

4. Apparatus for measuring differences of pressure between two points of a system compriaing two hollow stationary supports, a fixed beam carried by said supports, each of the two supports communicating with one of the two points between which the difference of pressure is to be determined, a movable beam having two passages therein and mounted to rock about a horizontal axis, a communicating tube curved to an arc of a circle, mounted on said movable beam and adapted to contain a liquid, the two passages of the movable beam communicating respectively with the two ends of the communicating tube, and two tubular springs, each curved to an arc of a circle extending to at least two-thirds of a complete turn, each of said springs being clamped at one end to one end of the fixed beam, and establishing communication between one of said hollow supports and the passage in the adjacent end of the movable beam, said springs being in planes substantially perpendicular to the axis about which the movable beam rocks, and tending to rock said beam in opposite directions, the axis about which the movable beam rocks being so positioned that as the beam rocks, each of the tubular springs is subjected to substantially a pure bending stress which is uniform throughout its length.



1,809,760. LINE CASTING MACHINE. SAMUEL E. SPERRY, Hollis, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 14, 1930. Serial No. 428,459. 6 Claims. (Cl. 199—55.)

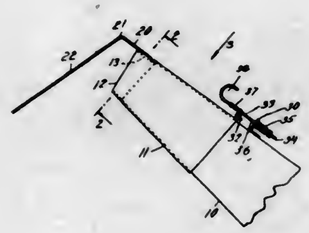
1. In a line casting machine, the combination of a mold having a cavity therein for casting a type slug and em-



bodying a cap having a bevelled surface through which a portion of the mold cavity is exposed, and a member for bringing a matrix line into position in front of the mold, said member having a bevelled surface thereon cooperative with the bevelled surface on the mold cap to seal said exposed portion of the mold cavity.

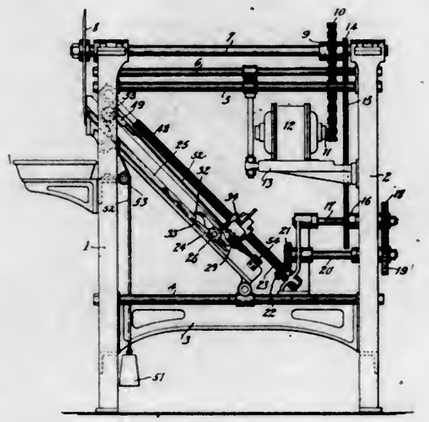
1,809,761. LUMINOUS DISPLAY OR REFLECTOR SIGN. JONATHAN C. STIMSON, St. Louis, Mo. Filed July 9, 1923. Serial No. 650,403. 21 Claims. (Cl. 40—130.)

9. A luminous display sign having display characters visible from within a selected field, and a light source in front of and distant from said characters, said characters being formed by triple reflecting surfaces adapted to reflect light impinging thereon back towards the light source, and means cooperating with said surfaces adapted to slightly spread the reflected light to a definite degree in the form of a spreading beam or beams so as to confine the same within said field.



1,809,762. CIRCULAR KNITTING MACHINE. HARRY SWINGLEHURST, Orange, N. J., assignor to Scott & Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed June 7, 1929. Serial No. 369,055. 12 Claims. (Cl. 66—36.)

1. A circular knitting machine having a needle cylinder, and needles in the tricks thereof and means to hold the needles radially inward, in combination with jacks in the tricks each adapted to flex the hook of its associated needle radially outward while said holding means for the flexed needle remains relatively stationary radially.

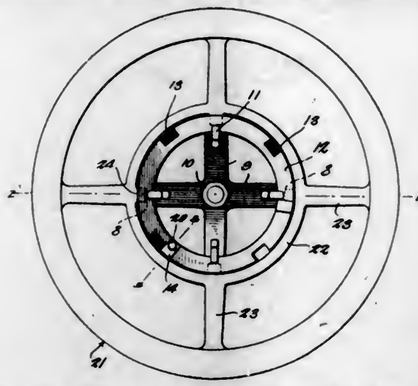


1,809,763. POURING POT NOZZLE. WILLIAM P. TARRANT, Saratoga Springs, N. Y., assignor to Tarrant Manufacturing Company, Saratoga Springs, N. Y., a Corporation of New York. Filed Jan. 29, 1930. Serial No. 424,248. 3 Claims. (Cl. 299—121.)

1. A nozzle comprising a tapered tubular sleeve having an orifice, a baffle plate secured to said sleeve, said sleeve being flattened at a point adjacent said orifice to provide a depressed bearing surface for said plate, the depression being sufficient to locate said plate flush with

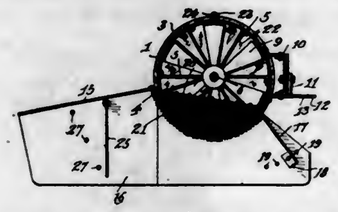
the extension of the nozzle therebeyond, said nozzle having an eye adjacent the end of the nozzle opposite to the baffle plate, effective to receive a retaining means for the nozzle.

1,809,764. BIAS BACON SLICER. MAX TRUNZ, Brooklyn, N. Y. Filed Sept. 22, 1927. Serial No. 221,311. 9 Claims. (Cl. 146—113.)



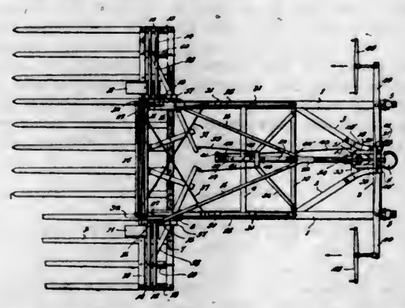
4. Apparatus for slicing bacon comprising a frame member, a rotary slicer supported by said frame member, an inclined bacon guide supported by said frame member at an acute angle to the plane of said slicer, means for advancing a strip of bacon in said guide upwardly toward said slicer; and means for simultaneously actuating said slicer and said advancing means.

1,809,765. THEFTPROOF STEERING WHEEL. ROBERT R. VAN HORN, Columbus, Ohio. Filed May 1, 1929. Serial No. 359,659. 1 Claim. (Cl. 74—33.)



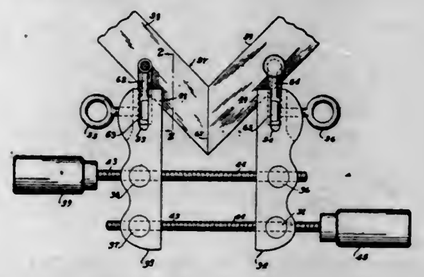
A steering wheel for motor vehicles, comprising a stationary disk-like member to be secured to the steering post of a motor vehicle, an upstanding circular central section of a diameter less than the diameter of the stationary member, providing a flange, said upstanding central section having notches, a locking ring having notches adapted to register with the notches of the central section, said locking ring being slidably mounted on the upstanding section, means for holding the locking ring against displacement on the upstanding section, a steering wheel, a central ring section forming a part of the steering wheel, lugs extending inwardly from the ring

section of the steering wheel and adapted to fit within the registering notches of the upstanding section of the



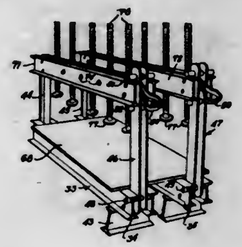
stationary member and locking ring, said locking ring adapted to move to overlie the lugs, and means for holding the locking ring against rotary movement.

1,809,766. INSECT CATCHER. GEORGE C. VAN KESSEL, Opa Locka, and MAURICE E. LINDGREN, Miami, Fla., assignors to International Insect Destroyer Manufacturing Company, a Corporation of Florida. Filed Apr. 14, 1930. Serial No. 444,231. 7 Claims. (Cl. 43—140.)



1. An insect catcher comprising, a cylindrical housing having a closed end and an open end and formed in its peripheral wall with a circumferentially extending recess in spaced relation to said open end, a rotatable shaft extending through the housing, a fan fixedly mounted on the shaft between said recess and the open end of the housing, a flexible bag secured to the open end of the housing, and a hood depending from the housing in registry with said recess.

1,809,767. SWEEP RAKE CLEARER. MANTLE VINEYARD, Milligan, Mont. Filed Dec. 17, 1928. Serial No. 326,583. 9 Claims. (Cl. 56—395.)

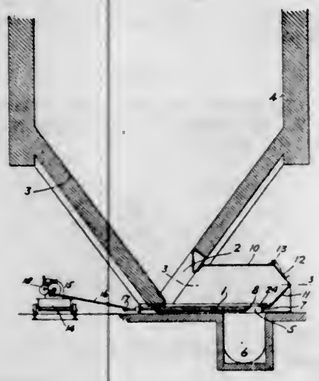


1. The combination with a sweep rake comprising a main frame, a rake head hingedly connected to the main frame and draft-applying devices mounted upon the rear end of the main frame and including a forwardly projecting connecting rod, of an ejecting gate mounted over the rake head, slide rods carrying said gate and mounted in bearings upon the main frame, a lost-motion connection between the rear ends of the slide rods and the front end of said connecting rod projecting forwardly from the draft devices, and releasable means on the main frame for positively locking the slide rods in either the forward or rearward position.

1,809,768. CLAMPING DEVICE. MAX WETZLER, New York, N. Y. Filed May 24, 1930. Serial No. 455,386. 2 Claims. (Cl. 144—300.)

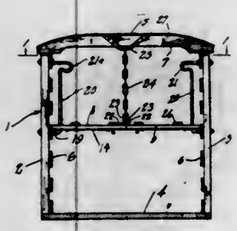
1. In a clamp of the kind described the combination with a saddle body consisting of two members, said members terminating into bifurcated gripping jaws, of auxiliary clamps having screw spindles, jaws and shanks, said shanks engaging said bifurcations, swivel means for varying the distance between said first named jaws, the whole being adapted to operate as a single clamp when manipulated by the adjustable swivel means.

1,809,769. VENEER PRESS. MAX WETZLER, New York, N. Y. Filed Feb. 9, 1931. Serial No. 514,679. 4 Claims. (Cl. 144—281.)



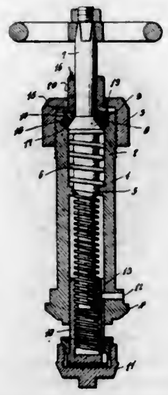
1. A press having a base, a header, a fixed end member, a pivotally disengaging end member, a connecting link, said base having within itself a track member capable of being elevated and lowered with the operation of said pivotal end member through the instrumentality of said link.

1,809,770. PROCESS OF MAKING SILVER SALT OF AMINO SULPHONATED CASTOR OIL. WALTER T. WINCKLER, Chicago, Ill., assignor to The Van Winkler Laboratories, Inc., Chicago, Ill., a Corporation of Illinois. Filed June 11, 1930. Serial No. 460,550. 2 Claims. (Cl. 260—11.)



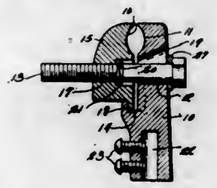
1. The process which comprises the preparation of a silver salt of amino sulphonated ricinoleic acid from the washed and dried silver salt of sulpho ricinoleic acid by the addition of ethylene diamine and the combination under pressure in an autoclave.

1,809,771. OUTLET APPARATUS FOR ASH BUNKERS. ROBERT H. BEAUMONT, Radnor, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1927. Serial No. 227,679. 4 Claims. (Cl. 110—165.)



1. Outlet apparatus for ash bunkers comprising a hood open at one end for the reception of ashes and clinker and having at its other end an upwardly and outwardly inclined portion and an outwardly opening door, said hood having near the closed end a frame providing an outlet, and a plate reciprocatably mounted across said outlet at the lower portion of the hood and adapted to operate as a gate and a feeder and a clinker crusher.

1,809,772. FOLDING DECK STOCK CAR. ARTHUR R. BURKE, Rochester, Minn. Filed Feb. 25, 1928. Serial No. 256,948. 2 Claims. (Cl. 119—9.)



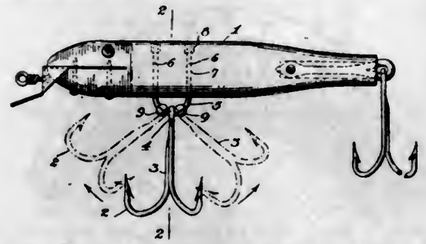
1. The combination of a car having side walls, a floor, and a top, spaced-apart supporting bars rigidly carried by the side walls, a deck comprising a pair of sections movably connected with said supporting bars, one of the sections being connected with the bars upon one side of the car and movable independently with respect to the section movably carried by the bars upon the opposite side, each of said bars being spaced away from the walls of the car and provided with a loop portion extending inwardly with respect to the car, said sections being arranged to be moved to depending positions from the lower ends of the bars or the loop portions, said sections being further arranged to be moved to inclined depending positions from the loop portions and connected together, said sections being further permitted to be placed substantially adjacent the top of the car while connected with the loop portions, and means cooperating with said bars whereby the sections may be supported in a plane parallel with the floor of the car.

1,809,773. PACKLESS VALVE. LOYD H. CAIN, Tyler, Tex. Filed June 4, 1929, Serial No. 368,368. Renewed Feb. 12, 1931. 3 Claims. (Cl. 251—47.)

1. A device of the class described comprising a tubular bonnet, a portion of the bore of which is enlarged, a valve stem therein having a conical enlargement, a bearing member for said valve stem seated in the enlarged portion of said bore and provided with a recess, a shoulder on said bearing member, means engaging said shoulder for securing the bearing member to the bonnet, and bearing material carried in the recess in the bearing member and engaged by said conical enlargement of the stem.

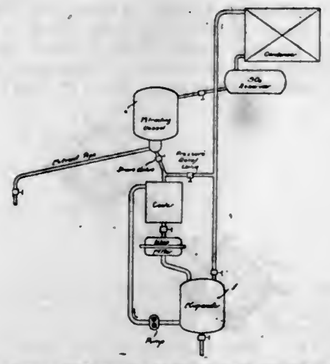
1,809,774. WIRE CLAMP. MANLEY R. COATES, Albany, Oreg. Filed Jan. 30, 1930. Serial No. 424,583. 2 Claims. (Cl. 173—273.)

1. A clamp of the character described comprising a fixed jaw member having a tapering slot therethrough elongated in the direction of the longitudinal axis thereof, said jaw member also having a transverse groove spaced downwardly from said slot, a movable jaw member having a threaded opening therethrough, a bolt loosely engaging said fixed jaw member in said elongated slot, said bolt threadedly engaging said movable jaw member, said movable jaw member having a downwardly extending transverse flange loosely engaging said transverse groove in said fixed jaw member, a pair of inwardly extending flanges secured to said movable jaw member and adapted to loosely engage the opposite side portions of said fixed jaw member, said bolt having an annular groove spaced intermediate the ends thereof, and a ring engaging in said annular groove whereby to prevent removal of the bolt from the fixed jaw member.



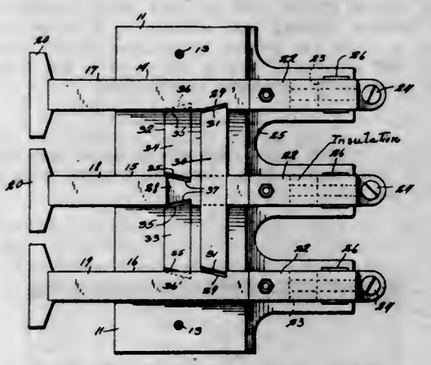
1,809,775. COMBINATION INSTRUMENT. ISAAC DAEHLIN, Freeport, Ill. Filed Jan. 2, 1929. Serial No. 329,834. 3 Claims. (Cl. 33—191.)

1. An instrument of the class described comprising a bar, a slide movable longitudinally of the bar, legs having their upper ends pivotally connected with the slide and arranged upon opposite sides of the bar, and links pivotally connecting the bar and legs, said links being pivoted to the bar on opposite sides and about a single



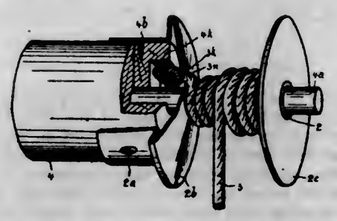
axis, said legs and links being adapted to move past each other to opposite sides of the bar to adjust the legs to measure inside or outside dimensions.

1,809,776. HOOK MOUNTING FOR LURES. SAM F. DAVENPORT, Auburn, Ind., assignor to The Creek Chub Bait Co., Garrett, Ind. Filed Mar. 12, 1930. Serial No. 435,293. 4 Claims. (Cl. 43—46.)



1. In a fish lure, a body portion, an integral substantially U-shaped member having its ends extending through the body portion and secured thereto with the base of the U-shaped portion extending beyond the lure body, and stops on said base for limiting the pivotal movements of a hook mounted thereon.

1,809,777. DEWAXING MINERAL OILS. LAZAR EDELEANU, Berlin-Charlottenburg, Germany, assignor to Edeleanu Gesellschaft m. b. H., Berlin, Germany. Filed Jan. 11, 1930. Serial No. 420,277. 8 Claims. (Cl. 196—19.)



1. A process of dewaxing mineral oil by the addition of liquid SO_2 to a fraction already saturated with liquid SO_2 at the existing temperature and pressure to render the wax less soluble, followed by extreme lowering of the temperature to precipitate the wax, and thereafter removing the wax mechanically.

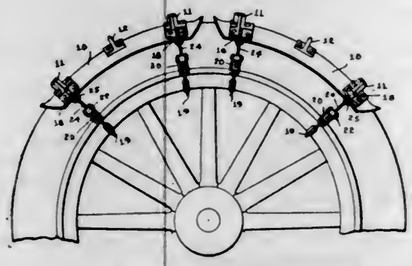
1,809,778. INTERLOCKING CONTROL MECHANISM. THEODORE C. EVANS, Terre Haute, Ind. Filed May 28, 1929. Serial No. 366,758. 2 Claims. (Cl. 74—83.)

1. A device of the character described including three rectilinearly movable rods, a support wherein the rods are mounted for rectilineal movement, the middle rod having a recess in one edge face and having ratchet recesses in its side faces, the lateral rods each having two ratchet recesses in the side face confronting the middle rod, a transverse bolt disposed in the recess of the middle rod, the recess being longer than the depth of the bolt and the bolt having beveled ends engageable in the corresponding ratchet recesses of the lateral rods, the middle rod having ratchet recesses in its side faces and bolts slidably mounted in said support on each side of the middle rod and having beveled ends adapted to fit into the ratchet recesses in the side faces of the lateral rods and into the ratchet recesses in the side faces of the middle rod whereby to cause the locking of the middle rod against movement when either of the lateral rods are shifted in one direction or to cause the locking of the lateral rods when the middle rod is shifted in one direction or to cause the locking of the middle and one of the lateral rods when the other lateral rod is shifted in one direction.

1,809,779. ROLLER FOR WINDOW SHADES AND WINDOW SHADE STICKS. LOUIS FROMONT, Brussels, Belgium. Filed Apr. 3, 1928, Serial No. 267,045, and in Belgium Apr. 19, 1927. 2 Claims. (Cl. 156—28.)

2. A curtain roller comprising a rod on which the curtain is to be rolled, and a reel consisting of a sleeve engaged on the end of said rod, a second sleeve smaller in diameter than said rod, and having a radial flange at its outer end, and a perforated web portion connecting said smaller sleeve with said first-mentioned sleeve and dished so as to leave a free space beyond the end of said rod wherein the knotted end of an operating cord may rest.

1,809,780. PRODUCING METALLIC ARTICLES. CHARLES L. GEBAUER, Shaker Heights, Ohio, assignor to The Ohio Instrument Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 4, 1929. Serial No. 337,532. 3 Claims. (Cl. 29—160.5.)

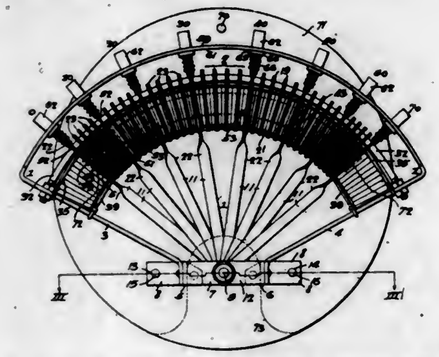


1. The process of producing a formed metallic article which consists in mixing intimately together powdered metal having a melting point about 2000° centigrade and a smaller amount of a second pulverized metal having a lower melting point, and of a nature not to dissolve in or become alloyed with the first metal; compacting said mixture, heating said mixture to a temperature which is above the critical temperature of the second metal, and afterwards forging the metal to the desired form at gradually decreasing temperatures.

1,809,781. SLIDE BOX. GERTRUDE G. GROSS, New York, N. Y. Filed Sept. 5, 1928. Serial No. 303,986. 4 Claims. (Cl. 206—16.)

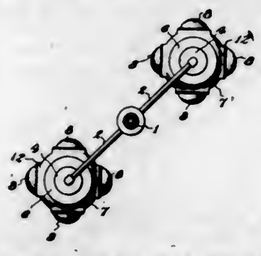
1. In a device of the character described, a receptacle, a plurality of longitudinally extending dividing members therefor, a plurality of receiving grooves therein adapted to receive vertically extending slides and a longitudinally extending buffing member associated with said container.

1,809,782. TRACTION SHOE. DAVID E. HOFFMAN, Marquette, Mich., assignor to Nicholas J. Marks and George Kromidas, Marquette, Mich. Filed June 21, 1929. Serial No. 372,706. 1 Claim. (Cl. 152—14.)



A traction shoe for a vehicle tire comprising a metal plate conforming to the curvature of the tire, said shoe having traction increasing members thereon, and means for securing said shoe to the tire, comprising hooks carried by said shoe at each side, a chain adapted to engage the rim of the wheel underneath said shoe and the ends thereof connected with said hooks, said chain comprising a U-shaped link, a swivel pin pivotally mounted in the ends of said link, said swivel pin having a central transverse threaded aperture, and a threaded pin adjustably secured in said aperture and having an eyelet for engaging a hook on said plate, said swivel pin and threaded pin constituting means for automatic angular adjustment with relation to said U-shaped link whereby said threaded pin and U-shaped link can conform generally to the curvature of the side wall of the tire.

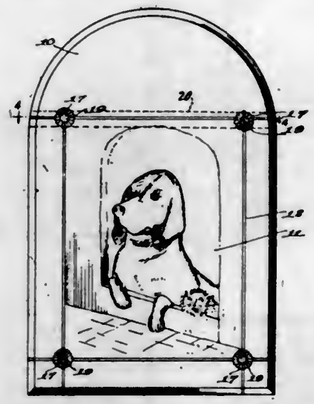
1,809,783. INSTRUMENT CALIBRATING APPARATUS. THEODOOR DE KONING, Brooklyn, N. Y. Filed Jan. 27, 1925. Serial No. 5,174. 8 Claims. (Cl. 177—311.)



1. In an apparatus for calibrating electrical measuring instruments, the combination with an electric circuit including a standard instrument having a movable element adapted to be actuated by an energizing current, of means for moving said element to a predetermined position independent of the energization of said instrument, means for adjusting the energizing current to a value approximately equal to that required to maintain said element in said predetermined position, and means in said first-mentioned circuit for indicating when the energizing current is substantially equal to that required to maintain said movable element in said predetermined position.

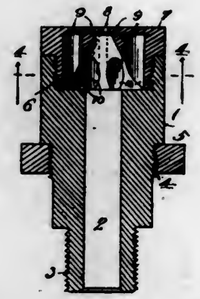
1,809,784. MEANS FOR METER DIAL MARKING. TH DE KONING, Brooklyn, N. Y. Filed May 15, 1925. Serial No. 30,521. 12 Claims. (Cl. 33—174.)

5. An expansible and contractable structure including a plurality of elements having openings, and a track arranged adjacent the extremities of said elements for guiding the same during said expansion and contraction, said elements having co-axially mounted portions.



1,809,785. COMBINED LIGHT GLOBE AND TRAFFIC SIGNAL. ROLPH J. LACKNER, Ozone Park, N. Y., assignor to Lackner Products Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed April 5, 1928. Serial No. 267,620. 4 Claims. (Cl. 177—329.)

1. In a combined street light and signal, a globe of light penetrable material adapted to be connected with a light

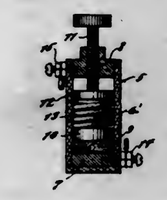


carrier in enclosing relation to a light carried thereby and having its intermediate portion formed with a hollow side extension projecting outwardly therefrom and formed with a circumferentially extending shoulder, an opening being formed in the outer end of the extension bordered by the shoulder, and a tinted lens secured against said shoulder in covering relation to the outer end of said extension and constituting an indicator.

1,809,786. PANEL MIRROR AND PICTURE MOUNTING. JAMES N. LE JEUNE, New Orleans, La. Filed July 11, 1929. Serial No. 377,501. 2 Claims. (Cl. 40—152.)

1. In a device of the class described, a mirror panel having an intermediate transparent area for the exposure to view therethrough of a picture positioned at the rear side thereof, a backing for said panel adapted to house the picture therebetween, means passing through said panel for securing said backing thereto, suspension means disposed at the rear side of said backing, and means for clamping said suspension means to the backing, said clamping means being held in place by certain of the securing means employed for securing the backing to said panel and acting as a reinforcement for the latter.

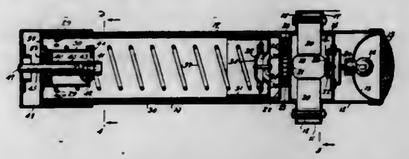
1,809,787. NOZZLE. MALCOLM WATE MCLAREN, Jackson Heights, N. Y., assignor, by mesne assignments, to Walter Kidde & Company, Inc., New York, N. Y., a Corporation of New York. Filed June 16, 1926. Serial No. 116,316. 6 Claims. (Cl. 62—121.)



1. In a spraying nozzle, a body member having a bore therethrough, a cap for said member, having an orifice and a plurality of small openings surrounding the orifice, and means for preventing the stoppage of the orifice comprising a plurality of chambers each communicating with one of the small openings and with the bore.

1,809,788. METHOD FOR PRODUCTION OF ALCOHOLS FROM OLEFINES. SYLVAN R. MERLEY, Dover, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 26, 1926. Serial No. 97,600. 10 Claims. (Cl. 260—156.)

5. In the process of forming alcohols from olefines, the steps comprising absorbing a mixture of olefines in a mineral acid to form a mixture of esters, diluting the mixture with water to maintain the acid concentration in said mixture at substantially 15%, and hydrolyzing the resulting mixture under reflux condensing conditions at temperatures not exceeding about 90° C. for a period of approximately four hours.

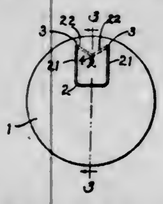


8. The process of removing polymers from a mixture of polymers and hydrolyzed alkyl esters, which comprises extracting the mixture with an alcohol having more than five carbon atoms in its molecule whereby the said polymers are dissolved in said alcohol and removed therewith from said mixture.

1,809,789. STATIC ELIMINATOR. FRED R. MONROE, HAROLD K. DOLSON, and BAYARD T. TUTTLE, Middletown, N. Y. Filed Feb. 12, 1930. Serial No. 427,669. 17 Claims. (Cl. 250—20.)

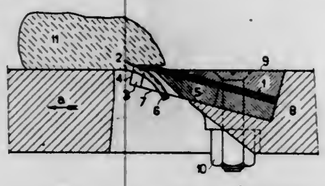
1. In combination, a radio receiving set, a speaker and electrical connections between the set and speaker, said connections having each interposed therein a static eliminator, said eliminator comprising conducting members spaced from each other, with the space therebetween containing a metallic powder with the particles forming it widely distributed throughout said space.

1,809,790. ELECTRIC LAMP. JULIO MORALES, Brooklyn, N. Y. Filed June 28, 1929. Serial No. 374,534. 5 Claims. (Cl. 240—10.5.)



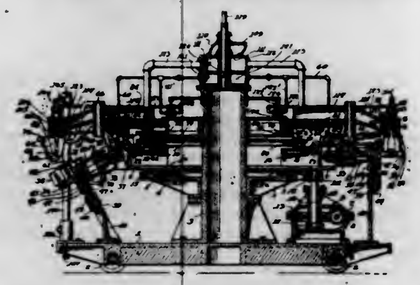
2. In a device of the character described, the combination with a lamp assembly and generator therefor, of fluid pressure energy transfer mechanism for operating said generator, a cylinder and piston for delivering fluid under pressure to said transfer mechanism, means within said cylinder for moving said piston, said means including a spring, a latch for retaining or releasing said spring, said latch being rotatable to compress said spring, and and means externally positioned on said device for controlling said latch.

1,809,791. CLOSURE FOR MILK BOTTLES AND OTHER CONTAINERS. FREDERIC K. PLYMPTON, Southport, Conn., assignor to Naomi D. Plympton, Fairfield, Conn. Filed Nov. 12, 1927. Serial No. 232,803. 5 Claims. (Cl. 215—51.)



1. A closure substantially as described comprising a closure-disk having combined therewith an extractor-de-

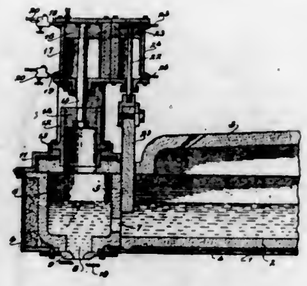
vice normally of U-shape providing a closed bail or loop handle lying against the top face of the disk, with the legs of the device passed through the material of the disk and joined positively together at the under face of the disk



by a V-shaped bridge extending across the latter face from one leg to the other, the bridge together with the juncture of the legs being pressed into the under face of the disk.

1,809,792. DEVICE FOR CUTTING VEGETABLES. ERMIN POKORNY and JOSEF NESMĚRÁK, Prague, Czechoslovakia. Filed May 17, 1929, Serial No. 363,910, and in Czechoslovakia May 25, 1928. 2 Claims. (Cl. 146—129.)

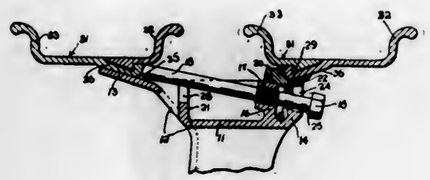
1. In a device for cutting vegetables, a slicing blade having a sharpened forward edge, and a second blade positioned beneath and in contact with the slicing blade, said second blade having at its forward end a plurality of separable fingers the free ends of which are sharpened to provide cutting edges extending substantially at right angles to the edge of the slicing blade and having their ends adjacent the slicing blade slightly in rear of the edge of said slicing blade.



1,809,793. GLASS FORMING MACHINE. THOMAS STENHOUSE and DAVID STENHOUSE, Washington, Pa., assignors to Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed May 11, 1926. Serial No. 108,826. 25 Claims. (Cl. 49—5.)

1. In a glass forming machine, a continuously rotating table, a parison mold carried by the table, and a charge receiver in fixed relation with the mold, said receiver communicating with the lower end of the mold cavity and having an upwardly presented mouth.

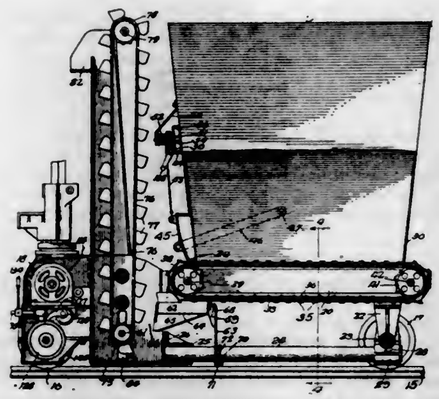
16. In a glass forming machine, a mold, and a single means movable to position to steady an article while the mold is being opened, and being further movable in substantially the same direction and in the same plane to eject an article after the mold is opened.



1,809,794. GLASS FEEDER. THOMAS STENHOUSE, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed July 8, 1927. Serial No. 204,233. 4 Claims. (Cl. 49—55.)

1. A glass feeder including a flow spout having a flow orifice, a pressure chamber associated with the flow orifice, an open-ended cylinder associated with and forming in effect an extension of said pressure chamber, and a piston reciprocable in said cylinder for producing variations in pressure in the pressure chamber, to alternately accelerate and retard the flow of glass through the flow orifice.

3. A timing mechanism including a rotatable shaft, cams mounted on said shaft, guideways arranged concentrically of said shaft, a valve mounted for sliding movement in each of said guideways, and means for independently adjusting each valve in its guideway.



1,809,795. WHEEL STRUCTURE. HARVEY C. ARMSTRONG, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 27, 1926. Serial No. 151,106. 10 Claims. (Cl. 301—13.)

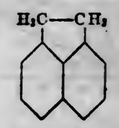
1. A wheel mounting comprising a felloe having an outwardly flared tapered portion forming an inner tire rim seat, an annular rib having a tapered outer surface and having a plurality of inclined screw-threaded apertures formed therein, a radial rib formed on the felloe and having slots cut therein and in registry with the inclined apertures, a tire rim formed with an inner circumferential tapered portion adapted to engage the rim seating surface on the felloe and means including a plurality

of bolts disposed through the inclined apertures and the slots and abutting the tapered portion of the rim to secure the rim upon the felloe.

1,809,796. SAND-HANDLING TRUCK. ELMER O. BEARDSLEY and WALTER F. PIPER, Chicago, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Original application filed Dec. 8, 1924, Serial No. 754,487. Divided and this application filed Jan. 11, 1926. Serial No. 80,447. 8 Claims. (Cl. 214—83.)

4. In foundry apparatus of the character described the combination of a wheeled truck comprising a housing extending transversely across the truck, a reservoir for containing a load of sand mounted on the truck, an elevator comprising a supporting-standard on the housing and having its lower end working in the housing, means for discharging sand in regulated quantity from the reservoir to the elevator, a motor mounted in and enclosed by the housing, said housing having chambers in its sides, gearing for driving the elevator from the motor including gears in said chambers, and removable means closing the outside of said chambers.

1,809,797. PRODUCTION OF ORGANIC ACIDS BY FERMENTATION. FRANK J. CAHN, Milwaukee, Wis. Filed Jan. 4, 1929. Serial No. 330,435. 14 Claims. (Cl. 260—120.)



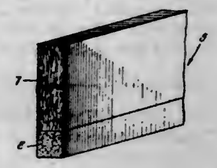
1. The method of producing organic acids by fugicidal action which comprises inoculating sections of plants containing fructose-yielding carbohydrates with a selected acid-producing fungus strain and growing said fungus thereon with exposure to the surrounding atmosphere to convert carbohydrate present to the desired acids.

1,809,798. ANTIOXIDANT OR AGE-RESISTER. ALBERT M. CLIFFORD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Apr. 7, 1928, Serial No. 268,387. Divided and this application filed Mar. 8, 1929. Serial No. 345,607. 6 Claims. (Cl. 18—50.)

1. A method of preserving rubber which comprises incorporating therein the reaction product of beta-beta-dinaphthylamine and sulphur, said product having been formed with the elimination of hydrogen sulphide.

1,809,799. ANTIOXIDANT OR AGE-RESISTER. ALBERT M. CLIFFORD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 16, 1930. Serial No. 421,261. 14 Claims. (Cl. 18—50.)

12. A method of preserving rubber which comprises subjecting it to vulcanization in the presence of a material having the formula

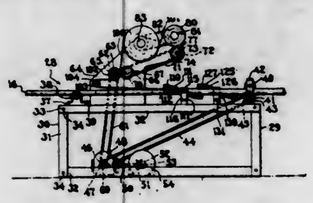


R, where R is attached to the naphthylene nucleus and is selected from the group consisting of hydrogen, —OH amino, hydrocarbon substituted amino groups naphthylamine groups, and residues obtained by condensing amino acenaphthene with an open chain aldehyde.

1,809,800. METHOD OF MAKING COMPRESSIBLE AND ELASTIC MATERIAL. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Dec. 21, 1925. Serial No. 76,906. 8 Claims. (Cl. 18—47.5.)

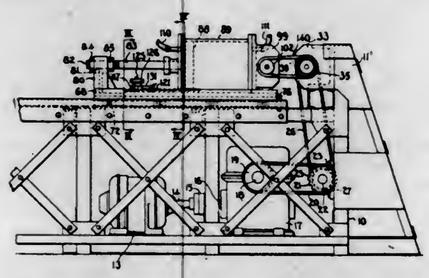
1. The herein described method of preparing preformed expansion joint material which consists in mixing a measured quantity of melted bituminous material with a measured quantity of liquid rubber, maintaining the bituminous material at a predetermined melted consistency, thereafter mixing in fibrous material in such a manner as to thoroughly incorporate the fibrous material in the mixture, and finally while the mixture is in a flowable, warm, plastic condition reducing it to form strips of expansion joint material of desired size.

1,809,801. PACKING MATERIAL. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed May 13, 1926. Serial No. 108,949. 11 Claims. (Cl. 154—45.5.)



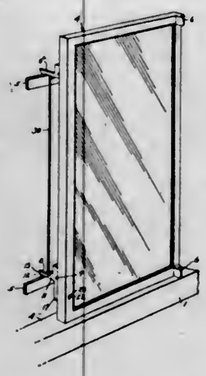
3. Packing material comprising a reenforced body of bituminous material which is compressible and expansible yet comparatively hard and tough, and an edge strip of bituminous material carried by said reenforced body, said edge strip being sufficiently hard enough to retain its preformed structure under ordinary conditions, yet being sufficiently soft and plastic to deform when subjected to pressure.

1,809,802. METHOD OF BUILDING CONDUITS. LOUIS H. GLADWIN, Akron, Ohio, and NIGEL G. BRUCE, deceased, Akron, Ohio, by Elizabeth W. Bruce, administratrix, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 15, 1929. Serial No. 355,324. 5 Claims. (Cl. 154—8.)



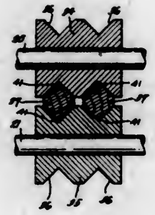
1. A method of manufacturing hose composed of rubberized material which comprises extruding a tube of rubber, disposing it on a cylindrical mandrel, successively folding a plurality of layers of rubberized fabric laterally about the mandrel during a continuous longitudinal move-

ment of the latter, spirally winding a strip of fabric about the mandrel during its aforesaid movement but subse-



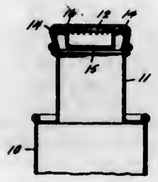
quent to the application of the rubberized fabric, vulcanizing the hose and thereafter removing the last mentioned fabric.

1,809,803. MACHINE FOR MANUFACTURING RUBBER BELTS. RAY M. JOHNSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 17, 1929. Serial No. 378,914. 10 Claims. (Cl. 69—1.5.)



1. A machine for stretching endless belts comprising a frame, a pair of spaced relatively adjustable belt retaining rollers, a cylinder slidably mounted on the frame and secured to one of the rollers, a piston within the cylinder and having a rod projecting from one end thereof, said rod being adjustably connected to the frame, means for supplying fluid under pressure to the cylinder, and means for rotating one of the rollers.

1,809,804. LATCH OPERATING MEANS FOR DIRECTORY BOARDS, ETC. GRANVILLE S. RIDER, Flushing, N. Y., assignor to Nathan Schoenthal, New York, N. Y. Filed Feb. 7, 1930. Serial No. 426,475. 11 Claims. (Cl. 40—63.)



1. In a structure of the character described, a frame having an opening for an exhibition panel or the like, a panel pivotally mounted therein, a latch pivotally mounted at the inner side of the panel and cooperating with a fixed frame member, the latch having a releasing arm and the panel having therethrough an internally threaded hole, and a screw in the hole confronting the latch releasing arm for latch release by rotation of the screw.

1,809,805. DROP HAMMER. FRANK J. VLCHEK, Cleveland, Ohio, assignor to The Vlchek Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 24, 1931. Serial No. 532,395. 9 Claims. (Cl. 78—29.)

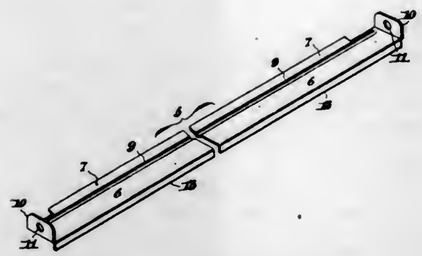
1. Actuating mechanism, as for actuating a drop-hammer hammer-head, including: a pair of cooperating roller means, and a rigid board of fibrous woody material, disposed therebetween and resiliently compressible under pressure; said roller means being forcibly engageable with said board, said board on the side toward at least one of said roller means being convex, and said roller means being cooperatingly concave, such convexity and concavity being of such sharp contour that said roller means embraces laterally to hold said board against slipping and edgewise splitting.

1,809,806. TAMPER-PROOF SEAL FOR CONTAINERS. GEORGE A. WILLIAMS, Decatur, Ill., assignor to Williams Sealing Corporation, Decatur, Ill., a Corporation of Illinois. Filed Oct. 6, 1926. Serial No. 139,824. 1 Claim. (Cl. 220—24.)

The combination with a nozzle having an inwardly rolled upper edge, of a cup-like sheet metal seal adapted to fit into the mouth of said nozzle, the upper edge of said seal flaring outwardly and contacting with the inner convex edge of said inrolled portion, and a cap having a lining contacting with said inrolled edge portion of the nozzle and outwardly flaring edge of the seal.

1,809,807. PROCESS FOR THE PRELIMINARY TREATMENT OF RAW SUGAR, AFTER PRODUCTS OR THE LIKE BEFORE REFINING. JULIEN BERGÉ, Tirlemont, Belgium, assignor to Raffinerie Tirlemontoise Société Anonyme, Tirlemont, Belgium, a Corporation. Filed Feb. 11, 1927, Serial No. 167,597, and in Germany Aug. 26, 1926. 4 Claims. (Cl. 127—61.)

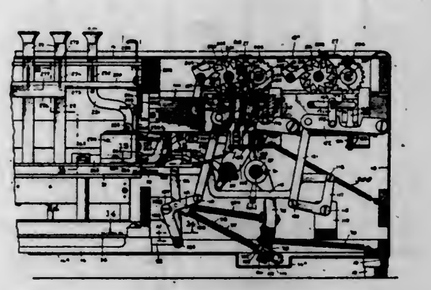
1. The process of reducing the sugar content of syrup adhering to sugar crystals in raw sugars, and after-products, comprising placing the said sugar in a storage chamber, and regulating the temperature and moisture content of the air in said chamber to reduce the sugar content of the syrup by crystallization, and then freeing the sugar from the largest portion of the adhering syrup in a centrifuge exerting a particularly high centrifugal force.



1,809,808. PROCESS FOR DESUGARING SYRUPS AND MOLASSES. JULIEN BERGÉ, Tirlemont, Belgium, assignor to Raffinerie Tirlemontoise Société Anonyme, Tirlemont, Belgium, a Corporation. Filed Feb. 6, 1928, Serial No. 252,417, and in Germany Jan. 26, 1927. 10 Claims. (Cl. 127—60.)

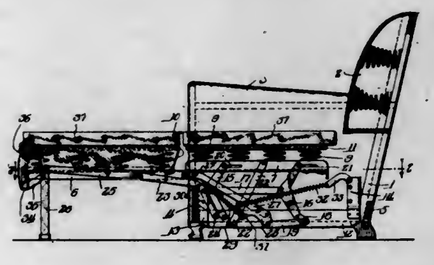
1. A method of desugaring sugar solutions comprising covering the surfaces of sugar crystals with thin layers of the solution, the quantity of crystals being sufficient to make the mass of a consistency similar to raw sugar, and aiding the desugaring of the solution by cooling and by evaporation.

1,809,809. PROCESS OF DESUGARING SYRUPS AND MOLASSES. JULIEN BERGÉ, Tirlemont, Belgium, assignor to Raffinerie Tirlemontoise Société Anonyme, Tirlemont, Belgium, a Corporation. Original application filed Feb. 6, 1928, Serial No. 252,417, and in Germany Jan. 26, 1927. Divided and this application filed Aug. 21, 1929. Serial No. 387,552. 10 Claims. (Cl. 127—60.)



1. A method for crystallizing sugar from solutions, comprising admixing sugar crystals with massecuite to form a mass having a relatively large quantity of sugar crystals comprising about 85% of the mass and a relatively small quantity of syrup comprising about 15% of the mass so that the syrup is widely distributed over the surfaces of the sugar crystals and substantially all of the syrup is brought into close and intimate contact with the sugar crystals, and then cooling the mass.

1,809,810. STATIONARY KNIFE FOR LAWN MOWERS. HARRY T. COLDWELL, Philadelphia, Pa., assignor to Philadelphia Lawn Mower Company Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1929. Serial No. 330,777. 7 Claims. (Cl. 56—294.)

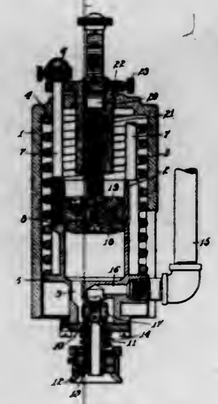


1. A stationary knife for lawn mowers integrally formed from sheet metal with a cutting edge and pivot sections at opposite ends, and a co-extensive longitudinal stiffening adjacent its cutting edge.

1,809,811. CALCULATING MACHINE. MICHELE GUGLIELMO DE SIMONE, Stapleton, N. Y., assignor to George B. Agnew, New York, N. Y. Filed May 26, 1925. Serial No. 32,892. 13 Claims. (Cl. 235—60.)

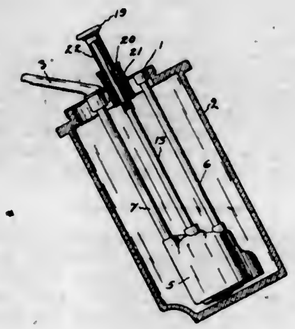
7. In a machine of the character described, the combination with a keyboard, of a bar corresponding to a monetary value, a counter, a shaft, and means operated by said shaft and controlled by said bar for operating said counter in correspondence to the numerical value of the operated key of said keyboard, said counter-operating means including a variable rack member having spring urged movable teeth elements, stop means co-acting with said spring urged movable teeth elements, and means connecting said bar with said movable teeth elements for moving said movable teeth elements into and out of operative position relative to said counter.

1,809,812. DAVENPORT BED. MARTIN FOX, Chicago, Ill., assignor to The Seng Company, a Corporation of Illinois. Filed Mar. 31, 1926. Serial No. 98,709. 5 Claims. (Cl. 5—22.)



3. In a davenport bed, a pair of coil spring supporting frames, a support at each end of the frames, means for mounting the uppermost frame to swing outwardly in front of the support, means for mounting the lowermost frame to swing upwardly in the support, a connection between the mounting means of the frames for causing the lower frame to move upwardly when the upper frame is swung in front of the lower frame, and controlling means pivoted to the support and to the end of the lower frame for producing a forward movement of the frame with respect to the support when the frame is raised.

1,809,813. SIRUP VALVE FOR BOTTLE FILLERS. JAMES KANTOR, Chicago, Ill., assignor to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 29, 1929. Serial No. 381,927. 6 Claims. (Cl. 226—103.)



1. In a sirup dispenser for bottle filling machines, the combination with a reciprocating cylinder, of a sirup

receptacle mounted therein, movable with and relatively to said cylinder, a filler spout carried by said receptacle and having a limited movement relative thereto, a valve operated by said spout for controlling the delivery of sirup

to and from said receptacle, a plunger operating in said receptacle and having a stem, and a nut in which said stem is adjustably mounted, said nut being movable in one direction with respect to said cylinder by gravity and in the other direction by said cylinder.

1,809,814. LIQUID DISPENSING PUMP. THEODORE H. SCHUTT, Cleveland, Ohio. Filed Apr. 19, 1929. Serial No. 356,524. 9 Claims. (Cl. 225—35.)

5. In a syrup pump, a head, a casing supported below said head and having a cylinder closed at its ends, a discharge passage adjacent a side of said cylinder and opening thereinto at the lower end thereof, and an inlet passage adjacent a side of said cylinder, said inlet passage extending from adjacent the bottom of the casing and opening into said cylinder at the upper end thereof, a piston in said cylinder, and means for actuating said piston.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office

Vol. 407—No. 3 TUESDAY, JUNE 16, 1931 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,581,902, J. G. E. Wright, Resinous condensation products, decided April 7, 1931, claim 3.

Pat. 1,650,150, I. I. Nelson, Relief valve, decided May 25, 1931, claim 2.

Pat. 1,653,065, F. N. Ross, Button attaching machine, decided April 25, 1931, claims 20 and 21.

Pat. 1,692,762, C. W. Peterson, Loud speaker, decided April 2, 1931, claim 3.

Pat. 1,720,908, Daniel Kondakjian, decided May 26, 1931, claims 1, 2, 3, 4, 6, 7, 8, 10, 11, 12, 13, and 14.

Pat. 1,738,575, F. E. Greswold, Radio speaker diaphragm, decided May 27, 1931, claims 10 and 11.

Pat. 1,747,465, Wm. Cameron, Combined forming and thread rolling mechanism for caps, decided May 28, 1931, claims 1 and 2.

Pat. 1,773,330, I. A. Weaver, Vehicle lifting appliance, decided May 26, 1931, claims 1 and 2.

Adjudicated Patents

(C. C. A. Wash.) Claude patent, No. 1,125,476, for system of illuminating by luminescent tubes, *Held* valid and infringed. *Claude Neon Electrical Products* v. *Brilliant Tube Sign Co.*, 48 F.(2d) 176.

(D. C. Pa.) Schweyer patent, No. 1,279,454, for train-stopping apparatus, claims 3, 23, 26, 27, and 32 *Held* valid, but not infringed. *Schweyer Electric & Mfg. Co.* v. *Reading Co.*, 48 F.(2d) 274.

(D. C. Pa.) Schweyer patent, No. 1,389,602 for train-control system, claim 5 *Held* valid but not infringed. *Id.*

(C. C. A. Cal.) Young patent, No. 1,586,277 for tearing-strip can, claims 1, 2, 3, and 5 *Held* not infringed. *American Can Co.* v. *M. J. B. Co.*, 48 F.(2d) 144.

(D. C. N. Y.) Leoni patent, No. 1,634,032 for necktie and lining therefor, claims 1 and 2 *Held* not infringed. *Franc-Strohmenger & Cowan* v. *Flex Thread Corporation*, 48 F.(2d) 261.

(D. C. N. Y.) Jones patent, No. 1,658,804 for capacitive-coupling control system, *Held* invalid. *Jones* v. *Freed-Eisemann Radio Corporation*, 48 F.(2d) 300 and *Jones* v. *Walthal Electric Co.*, 48 F.(2d) 310.

(D. C. N. Y.) Jones patent, No. 1,658,805, for capacitive-coupling control system, *Held* invalid. *Id.*

(D. C. N. Y.) Ullrich patent, No. 1,699,459 for sprinkling can, *Held* invalid. *Republic Metalware Co.* v. *Weed & Co.*, 48 F.(2d) 360.

(D. C. N. J.) Steinwand patent, No. 1,721,929 for process for peeling fruits, *Held* invalid. *Rubyette Co.* v. *Vineland Products Co.*, 48 F.(2d) 288.

(C. C. A. Mich.) Smith Reissue patent, No. 16,817 for reaming and counterboring tool, claims 1–3, 5, 7–9 *Held* invalid, and claims 4 and 6 *Held* valid and infringed. *Gairing Tool Co.* v. *Eclipse Interchangeable Counterbore Co.*, 48 F.(2d) 73.

Condition of Applications Under Examination at Close of Business May 29, 1931

(Total number of applications awaiting action, excluding Trade-Mark Division, 94,189; Trade-Mark Division, 1,210. Oldest new case, Sept. 9, 1930; oldest amended, Sept. 9, 1930. The dates given are 1930 except where † indicates 1931.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

McFarland *v.* Bender

No. 2,568. Decided February 11, 1931

Trade-Marks—Interference—Use of Mark by Third Party—Abandonment.

Evidence reviewed and *Held* insufficient to establish that the use of the trade-mark which had been registered to a third party and assigned to another had been abandoned prior to the adoption and use by the parties to the interference and *Held* further that, under these circumstances, neither party to the interference is entitled to registration of the mark.

Appeal from the Patent Office. Affirmed.

Mr. Bernard F. Garvey and *Mr. Irving L. McCathran* for McFarland.

Mr. James M. Spear and *Mr. Ellis S. Middleton* for Bender.

Hatfield, *J.:*

This is an appeal in a trade-mark interference proceeding from the decision of the Commissioner of Patents holding that neither of the involved parties was entitled to register the trade-mark "Red Caps" for use on certain medicinal preparations.

In his application filed June 5, 1925, appellant alleged that he had used the trade-mark on his goods continuously since July 1, 1921.

Appellee, in his application filed October 26, 1925, alleged that he had used the trade-mark on his goods continuously since October 7, 1925.

Appellant submitted no evidence and is restricted, therefore, to his filing date.

Appellee submitted evidence for the purpose of establishing continuous use of the trade-mark since long prior to appellant's filing date—June 5, 1925.

The Examiner of Interferences held that the evidence was sufficient to establish that appellee had used the trade-mark in question continuously for many years prior to, and since, appellant's filing date; and that, as he was the first to adopt and use the mark, he was entitled to register the same.

In his decision rendered February 6, 1929, the Commissioner of Patents held that the evidence submitted by appellee was not sufficiently clear and convincing to show that he had adopted and used the trade-mark prior to October 7, 1925. He further held that, as the record disclosed that the trade-mark in issue was registered by one Flora Ely Schmauser on April 23, 1907—No. 62,211—for use on an alleged "cold cure" and, as it appeared from the assignment records in the Patent Office that the registrant's title to, and interest in, the mark had been assigned to R. A. Gamble and William E. Armstrong on May 26, 1910, the title and the right to use the trade-mark were vested in the assignees of record when each of the parties adopted and first used the mark; and that, therefore, neither could claim priority. In this connection, he said:

> It appears, therefore, that when the parties to this interference adopted and appropriated the said mark, they were trespassers and neither could claim priority on the abandonment of the mark by the legal owners thereof, assuming the mark to have been abandoned by said owners. As was stated by the Court of Appeals, D. C., in *Justin Seubert, Incorporated, v. A. Santaella & Co.* (166 O. G. 987, 36 App. D. C. 447, 1911 C. D. 341):
>
> "If two or more persons are using the mark at the time of abandonment, with or without knowledge of its prior use, neither would be prior to the other in point of time, since no one could in any event date priority of use beyond the time when the prior owner surrendered title by the act of abandonment."

Thereafter, on February 26, 1929, counsel for appellant, McFarland, formally notified the Commissioner of Patents that a letter had been received from the registrant, Flora Ely Schmauser, stating that she had not used the registered mark since 1909; that the assignment of her title and right to use the mark was invalid; and that, therefore, registration No. 62,211 ought not to be considered as a bar to the registration of the mark by appellant. It was also stated, by counsel for appellant, that, if the showing made by counsel was deemed by the Commissioner of Patents to be insufficient, appellant should be given an opportunity to submit further evidence.

The letter from the registrant, Flora Ely Schmauser, referred to by counsel, reads as follows:

2/18/29.

Mr. B. F. Garvey,
Washington, D. C.

Dear Sir:

Your letter of inquiry was forwarded to me in reply will say I have not used the word "Red Caps" in years. Since 1909 and probably a year or two before that date. As for Dr. Gamble and Armstrong I cannot say. Hope this will be of some assistance to you.

I am, very truly,

MRS. FLORA SCHMAUSER.
202 Market Ave. So., Canton, Ohio.

Thereupon, on March 2, 1929, the Commissioner of Patents set aside his former decision and granted the parties to the interference a period of forty days within which evidence of abandonment of said registered mark might be submitted.

On April 12, 1929, counsel for appellant filed an affidavit of the registrant, Flora E. Schmauser, and the cause was again submitted to the Commissioner. The pertinent part of the affidavit reads as follows:

> Flora E. Schmauser, of 202 Market Avenue, South, Canton, Ohio, being duly sworn, deposes and says that she is the registrant of trade-mark registration No. 62,211, on trade-mark "Red-Caps" registered April 23rd, 1907; that use of this trade-mark was voluntarily abandoned by her in or about the year 1909 and has never been used by her since that date; that she is not aware that the mark has been used by others subsequent to her abandonment of the same; and that she has no interest whatsoever in the controversy now pending in the U. S. Patent Office, captioned Trade-Mark Interference No. 1112, Eugene J. Murphy Company v. Walter C. Bender v. Chas. A. McFarland; and that she is not acquainted with any of the parties thereto.
>
> FLORA E. SCHMAUSER.

Thereafter, on April 23, 1929, the Commissioner reconsidered the evidence in the case and held that the testimony submitted originally by appellee was sufficient to establish adoption and use of the involved trade-mark for medicinal preparations prior to appellant's filing date. He held, however, that the evidence was not sufficient to establish that the

registrant, Flora Ely Schmauser, had abandoned the use of the trade-mark prior to the date of her assignment of her title and right to use the same to Gamble and Armstrong; that the registration of the mark and the assignment thereof by the registrant was prima facie evidence of ownership by the assignees, Gamble and Armstrong; and that, as it appeared that each of the parties to the interference had attempted to adopt, appropriate, and use the mark on goods of the same descriptive properties during its ownership by Gamble and Armstrong, neither of them was entitled to register it.

Counsel for each of the parties are here contending that the letter and affidavit of the registrant, Flora Ely Schmauser, are sufficient to establish that she had voluntarily abandoned the trade-mark prior to her assignment of the same to her assignees; that the assignment by the registrant was invalid; and that, therefore, neither the registration nor the assignment thereof by the registrant is a legal bar to the registration of the mark. Accordingly, it is agreed by counsel for the involved parties that the question of priority is the only issue that this court need consider.

It is conceded by counsel for the parties that, if the evidence in the record is insufficient to establish that the registrant, Flora Ely Schmauser, voluntarily abandoned her registered trade-mark prior to her assignment of the same to her assignees, Gamble and Armstrong, neither of the parties is entitled to have the mark registered.

It appears from the record that the attention of counsel for the parties was directed to registration No. 62,211 several years before the Commissioner rendered his original decision; that, at the request of counsel for appellant, the Commissioner set aside his original decision and granted the parties a period of forty days in which to establish that the registrant had voluntarily abandoned the involved trade-mark prior to her assignment of the same; that the only evidence submitted by counsel consists of a letter from the registrant in which she said that she had not used the trade-mark "since 1909, and probably a year or two before that date. As for Dr. Gamble and Armstrong, I cannot say," and an affidavit signed by the registrant in which it was stated "that use of this trade-mark was voluntarily abandoned by her in or about the year 1909, and has never been used by her since that time; and that she is not aware that the mark has been used by others subsequent to her abandonment of the same."

We are of opinion that the statement contained in the registrant's letter and affidavit are not sufficient to establish that she abandoned the registered trade-mark prior to her assignment of the same. It is true that she said she had voluntarily abandoned it about the year 1909. However, it appears that, for a valuable consideration she assigned her right and title to the same on May 26, 1910. This circumstance is not explained by the registrant, nor did she refer to it in either her letter or her affidavit of record, although counsel for the parties knew, or should have known, that her assignment was a vital factor in the case. If the registrant had ceased to use the mark and had abandoned it in 1909, but, nevertheless, had assigned it, or attempted to assign it, in May, 1910, those facts should have clearly appeared from the evidence. What counsel asks this court to infer, they should have proved.

The registration of a trade-mark is prima facie evidence of ownership, and abandonment ought not to be presumed.

We do not mean to be understood as holding that abandonment of a registered trade-mark may properly be raised in a proceeding of this character. Due to our views of the evidence, it is unnecessary to decide this question.

In view of the fact that the registrant's assignees, R. A. Gamble and William E. Armstrong, were presumptively, at least, the owners of the involved trade-mark when each of the parties attempted to adopt and use it, we are unable to hold that either is prior to the other in its adoption and use, since neither could establish adoption and the right to use it during its ownership by the registrant's assignees. *Seubert* v. *Santaella & Company*, 36 App. D. C. 447, 166 O. G. 987.

For the reasons stated, the decision is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

UNITED STATES GYPSUM CO. *v.* PLASTOID PRODUCTS, INC.

No. 2,603. Decided February 11, 1931

1. TRADE-MARKS — OPPOSITION — ALLEGED FALSE REPRESENTATION.

Where it was alleged that the opposer, in filing a registration for trade-mark registration, had been guilty of a materially false representation because the labels filed had been used on samples and not on goods sold in interstate commerce, *Held* that the record does not clearly show that the labels were not precisely in the form of the trade-mark actually used and there is no indication from the evidence that the opposer misrepresented or had any intention of misrepresenting the fact.

2. SAME—SIMILARITY—"ROCKLATH" AND "LOCKLATH".

The term "Rocklath" as applied to wall board *Held* confusingly similar to the term "Locklath" previously used by another on the same goods.

APPEAL from the Patent Office. Affirmed.

Mr. Arthur A. Olson and *Mr. A. Arnold Brand* for United States Gypsum Co.

Mr. Albert J. Fihe for Plastoid Products, Inc.

HATFIELD, *J.:*

This is an appeal in a trade-mark opposition proceeding from the decision of the Commissioner of Patents affirming the decision of the Examiner of Interferences sustaining the opposition to the registration by appellant of the trade-mark "Rocklath" for use on plaster boards and plaster wall boards.

In its application, filed October 16, 1925, appellant alleged that it had used its trade-mark on its goods since June 1, 1925.

In its notice of opposition, filed December 22, 1925, appellee alleged that it had used the trade-mark "Locklath" on plaster boards and plaster wall boards since July 1, 1919; that the goods of the parties possessed the same descriptive properties and were sold to the same trade; that the marks were confusingly similar; and that appellee would be damaged by the registration of appellant's mark.

It was stipulated by the parties on the trial below that appellant had used its trade-mark on its goods since, but not earlier than, June, 1925. Accordingly, it was incumbent upon appellee to establish adoption and continuous use of the trade-mark "Locklath" on its goods prior to June, 1925.

Each of the tribunals of the Patent Office discussed the evidence somewhat in detail, and each held that appellee had used the trade-mark "Locklath" on its goods for many years prior to June, 1925; that the goods of the parties possessed the same descriptive properties; that appellant's mark "Rocklath" closely simulated appellee's mark "Locklath"; that the registration of appellant's mark would be likely to cause confusion or mistake in the mind of the public and deceive purchasers; and that appellant was not entitled to have its mark registered.

[1] Although counsel for appellant has advanced in this court many reasons why, in his opinion, the decision of the Commissioner should be reversed, his main contention is that, when appellee filed an application for registration of its mark "Locklath" on June 10, 1926, it forwarded with its application a label which had been used on samples, but not on goods sold in interstate commerce; and that appellee was guilty of a material false representation in the filing of its application, and, therefore, is not in a position to urge its opposition to the registration by appellant of its trade-mark.

This matter was presented on the hearing before the Examiner of Interferences, and again on a motion for a rehearing. The same question was presented to the Commissioner of Patents on both the hearing and an application for a rehearing.

If the label filed with appellant's application was not precisely in the form of the trade-mark actually used by appellant, that fact does not clearly appear from the record. In any event, there is no indication from the evidence that appellee misrepresented or had any intention of misrepresenting the facts.

Counsel for appellant has cited, in support of his argument, several cases holding in substance that, in order to establish his right to protection in a trade-mark opposition proceeding, the opposer must come into court with clean hands.

In view of our conclusions hereinbefore stated, it is unnecessary to discuss these cases.

[2] We are of opinion that appellee has established that it used its trade-mark "Locklath" continuously since long prior to the adoption and use by appellant of the mark "Rocklath"; that the goods of the parties possess the same descriptive properties; that the marks are confusingly similar; and that appellee would be damaged by the registration of appellant's alleged trade-mark.

Accordingly, the decision of the Commissioner of Patents is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

CELANESE CORPORATION OF AMERICA *v.* VANITY FAIR SILK MILLS

No. 2,611. Decided February 11, 1931

TRADE-MARKS — SIMILARITY — "SILKENESE" AND "CELANESE."

The term "Silkenese" as applied to knitted and textile underwear *Held* confusingly similar to the term "Celanese" as applied to the same general class of goods.

APPEAL from the Patent Office. Reversed.

Messrs. Baldwin & Wight, Mr. Frank A. Bower, Mr. Isadore Seltzer, and *Mr. Chas. W. Levinson* for Celanese Corporation of America.

Messrs. Mason, Fenwick & Lawrence, Mr. Edward T. Fenwick, Mr. Edward G. Fenwick, and *Mr. Charles R. Fenwick* for Vanity Fair Silk Mills.

HATFIELD, *J.:*

This is an appeal in a trade-mark opposition proceeding from the decision of the Commissioner of Patents dismissing the opposition of appellant and holding that appellee was entitled to the registration of the mark "Silkenese" for use on knitted and textile underwear, consisting of vests, bloomers, knickerbockers, drawers, union suits, chemises, envelope chemises, corset covers, nightgowns, bathing suits, pajamas, pettibockers, step-in drawers, princess slips, bandeaux, bandeau chemises, and men's silk underwear.

In its application for registration, filed May 21, 1927, appellee alleged that it had used the trade-mark "Silkenese" since May 14, 1927.

In its notice of opposition, appellant alleged that it was the owner of the trade-mark "Celanese" for use on threads, yarns, fabrics, and garments; that it had continuously used said trade-mark on its goods since long prior to the first use by appellee of the trade-mark "Silkenese"; that it had expended large sums of money in advertising its trade-mark throughout the United States; that it has maintained the highest standards in the manufacture of its goods; that it has built up and is maintaining a large and valuable business throughout the United States in the manufacture and sale of its goods under the trade-mark "Celanese"; that the goods of the parties possess the same descriptive properties; and that the mark "Silkenese" sought to be registered by appellee is confusingly similar to appellant's trade-mark "Celanese".

Appellant pleaded ownership of the following trade-mark registrations: No. 178,422, January 8, 1924, of the trade-mark "Celanese" for use on "threads made wholly or principally from cellulose derivatives;" No. 179,796, February 19, 1924, for the trade-mark "Celanese" for use on "fabrics made wholly or principally from cellulose derivatives;" No. 186,516, July 22, 1924, for the trade-mark "Celanese" for use on 'ladies' knitted underwear—namely, knickers, and vests;" No. 191,844, November 18, 1924, for the trade-mark "Celanese" in combination with the word "Brand" for use on "women's and children's outerwear—namely, dresses, sweaters, jumpers, suits, gowns, and coats;" No. 207,622, Jan-

uary 5, 1926, for the trade-mark "Celanese" for use on "men's half hose;" No. 225,285, March 15, 1927, for the trade-mark "Celanese-Locknit" for use on "knitted, netted, and textile fabrics made wholly or partially of cellulose derivatives;" No. 226,304, April 5, 1927, of the trade-mark "Celanese" for use on "pyjamas, negligee shirts, undershirts of knitted fabric and textile fabric, collars, neckties, scrafs, mufflers, fabric gloves, cut-out linings for men's and women's coats and suits; men's underwear of knitted fabric and textile fabric; women's and children's hosiery;" No. 229,356, June 28, 1927, for the trade-mark "Celanese Ninon" for use on "woven, knitted, netted, and textile fabrics, in the piece, made wholly or partially of cellulose derivatives."

In its answer, appellee denied the material allegations contained in the notice of opposition and alleged that the opposer, appellant, was neither the originator nor the first to use a trade-mark which contained the "prefix the syllable or the letters 'Cela'" or the "suffix, syllable, or letters 'nese'" in a trade-mark for use on goods possessing the same descriptive properties as those upon which appellant used the trade-mark "Celanese".

Testimony was submitted by each of the parties.

It appears from the evidence submitted by appellee that it has been engaged in the manufacture and sale of garments and piece goods composed of silk for many years prior to March, 1927, and that its goods were sold under the trade-marks "Vanity Fair" and "Vanitysilk"; that, in March, 1927, appellee added to its line of silk goods certain articles and fabrics composed of "Japan silk and Bemberg synthetic yarn," on which it decided to use the trade-mark "Silkenese"; that it expended approximately $15,000 in advertising its so-called artificial-silk goods and the trade-mark "Silkenese". It also appears that appellant's celanese yarn was known to appellee as an artificial-silk product. The witnesses for appellee admitted that the trade-mark "Silkenese" was never used on appellee's piece goods.

It appears from the evidence offered by appellant that it expended from $200,000 to $300,000 in advertising its trade-mark "Celanese" and its so-called celanese products; that it used its trade-mark "Celanese" on yarns, piece goods, and on the various garments referred to in registrations Nos. 186,516, issued July 22, 1924, 191,844, issued November 18, 1924, and 207,622, issued January 5, 1926, long prior to the use by appellee of its mark "Silkenese" on its products. Appellant also introduced considerable testimony tending to establish that confusion already existed in the trade as to the goods bearing the marks "Silkenese" and "Celanese".

The Examiner of Interferences held that the goods of the respective parties possessed the same descriptive properties; that appellant had used its trade-mark "Celanese" long prior to the use by appellee of its trade-mark "Silkenese"; that the trade-mark "Silkenese" so closely simulated the trade-mark "Celanese" as to be likely to cause confusion in the mind of the public and, accordingly, sustained the opposition.

The Commissioner of Patents held that appellant had used its trade-mark "Celanese" on yarn, piece goods, and garments long prior to the use by appellee of the trade-mark "Silkenese"; that appellant had a very extensive business; and that its trade-mark was a valuable asset. He then said:

> Since the goods are deemed to possess the same descriptive properties and since it is regarded as established that the opposer was first in the field with its mark upon its goods, the decision in this case turns upon the question of similarity of the marks. * * * The only similarity to the applicant's mark resides in the suffix "nese" or "ese". This suffix has a definite meaning in our language when used in connection with certain words as signifying of or pertaining to. In the words Chinese, Japanese, Javanese, etc., this suffix indicates the people of such countries or goods or customs of the respective countries. The word "silken" of the applicant's mark is an ordinary descriptive word indicating a quality or the nature of the fabric or the goods. There is nothing similar in appearance, significance, or meaning between "celan" and "silken" and there is only a remote similarity in sound. The similarity between the two notations is regarded as residing substantially entirely in the suffix "nese" or "ese". If the opposer were the first to adopt upon goods of this character a notation ending in these letters, its claim for the broad protection it seeks might be more favorably considered. The applicant has, however, established that trade marks having these same letters as suffixes have been used and are still used upon goods of this same general character from a date long prior to the earliest date opposer entered the field.
>
> Registration No. 135,857, issued Oct. 19, 1920, is for the notation "Pominese" used upon woolen goods in the piece. Trade mark No. 174,132, registered Oct. 2, 1923, is for the notation "Bernese Swiss" used upon cotton goods in the piece. There is testimony of Charles Twining that this last named mark is still in use. There is also testimony showing the mark "Pominese" has been used in the trade. The testimony of H. L. Hoff and H. B. Snader is to the effect that the notation or trade name "Milanese" has been quite widely used in connection with silk fabrics. In view of these established facts as to prior adoption and use of marks upon this class of goods, which marks have the same suffix which constitutes the only similar portion of the two marks here under review, *it is deemed the opposer is not entitled to such a breadth of protection as would preclude others from using any mark or notation however dissimilar from opposer's which has the same suffix.* (Italics ours.)

Accordingly, the Commissioner of Patents reversed the decision of the Examiner of Interferences, dismissed the opposition of appellant, and adjudged the applicant, appellee, entitled to the registration of its trade-mark "Silkenese".

It is claimed by appellant that the goods of the respective parties possess the same descriptive properties; that the marks are confusingly similar; and that appellant will be damaged by the registration of appellee's mark "Silkenese".

Counsel for appellee, on the contrary, contends that the marks are not confusingly similar; that appellant has never used the mark "Celanese" on garments in commerce, although it has registered its mark "Celanese" for use on such articles; and that, in view of the prior registrations of trade-marks ending in "nese", appellant is not the originator of a mark ending with those letters, and, therefore, is not entitled to broad protection in the use of its mark "Celanese."

It is not contended here that appellee was the first to adopt and use a trade-mark ending in the letters "nese". It may be that appellant was not entitled to the registration of its mark "Celanese". However, that question is not before us and will not be considered by this court in this proceeding. *Sharp & Dohme* v. *Parke, Davis & Co.*, 17 C. C. P. A. (Patents) 842, 37 F.(2d) 960, 394 O. G. 545; *American Fruit Growers, Inc.*, v. *Michigan Fruit Growers, Inc.*, 17 C. C. P. A. (Patents) 906, 38 F.(2d) 696, 393 O. G. 789; *National Biscuit Company* v. *Sheridan*, 18 C. C. P. A. (Patents) ——, 44 F.(2d) 987, 402 O. G. 4; *Decker & Cohn (Inc.)* v. *S. Liebovitz & Sons (Inc.)*, 18 C. C. P. A. (Patents) ——, 46 F.(2d), 179, 404 O. G. 797.

From a careful examination of the record we are satisfied that the tribunals below were right in holding that appellant has used its trade-mark "Celanese" on yarn, fabrics, and garments since long prior to any use by appellee of its mark "Silkenese"; and that the goods of the respective parties possess the same descriptive properties. It appears from the record that, prior to the year 1927, appellee had been engaged in the manufacture of piece goods and garments composed of silk; that it used the trade-marks "Vanity Fair" and "Vanitysilk" on those products; that it was not until March, 1927, that appellee commenced the manufacture of so-called artificial-silk products; and that, when it did so, it decided to advertise and sell them under the trade-mark "Silkenese". At, and prior to, that time, appellant's products and its mark "Celanese" had been extensively advertised and were generally known throughout the United States.

The goods of the respective parties are sold in the same stores and to the same class of people. Furthermore, they are so nearly alike in appearance and texture that, if sold under similar trade-marks, confusion would likely result. Nevertheless, appellee selected a trade-mark closely simulating the trade-mark of appellant. It is true that the marks are not identical and that they differ to some extent both in sound and in appearance. However, the public should not be required to analyze trade-marks with scrupulous care, nor should it be compelled to resort to a study of etymology in order to avoid confusion and mistake. *Apex Electrical Mfg. Co.* v. *Landers, Frary & Clark*, 17 C. C. P. A. (Patents) 1184, 41 F.(2d) 99, 398 O. G. 708; *Postum Cereal Co.* v. *Enzo Jel Co.*, 17 C. C. P. A. (Patents) 1258, 41 F.(2d) 101, 401 O. G. 235.

We are of opinion that the marks are confusingly similar, and that appellee is not entitled to have its mark registered.

The decision is reversed.

Reversed.

U. S. Court of Customs and Patent Appeals

IN RE HALE

No. 2,818. Decided February 11, 1931

PATENTABILITY—WHEEL STRUCTURE.

Claims for a wheel structure and the method of making the same *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Albert L. Ely, Messrs. Ely & Barrows, and *Mr. Conway P. Coe* for Hale.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

The Board of Appeals of the Patent Office affirmed the action of the Examiner denying patent to Hale for claimed "improvements in resilient wheels and method of making same", and the matter is before us on appeal from the Board's decision.

There are seven claims of which Nos. 1 and 6 are for the article and the others for the method.

Claims 1 and 2 may be taken as typical.

> 1. In a wheel structure the combination of a felloe, an outer tire carrying rim, a cushion of compressible resilient rubber between said felloe and said rim, said cushion being placed under compression imposed thereon during the assembly of the wheel, and a rigid metallic band to which the cushion is permanently secured.
>
> 2. The method of making a resilient wheel comprising permanently securing an endless cushion element to the inner surface of a one-piece metallic band, applying the cushion element to a felloe having a circumference greater than the inner circumference of the element before assembling, and forcing a tire carrying rim upon the said band.

Claims 6 and 7 are stated, in the brief of appellant, to be "specifically directed to the commercial form of the invention".

All were rejected upon two references: Harding, 1,294,796, February 18, 1910; Willis, 1,396,984, November 15, 1921.

The application discloses four modifications of a resilient wheel. The particular modification specifically claimed is that comprised in the disclosure of a wheel having a resilient tire secured to a flanged rim. Between this rim and the felly-band is a rubber member or cushion. This cushion is secured by vulcanization to the inner surface of the flanged metallic rim, and to the outer surface of the metallic felly-band.

The method of assembling claimed is that of applying the cushion unit to a felly-band whose outer circumference is greater than the inner circumference of the cushion unit before assembling (thus stretching the cushion unit and causing it to be tight upon the metallic band when assembled), vulcanizing the same thereto, and then forcing a tire carrying rim over the outer surface of the cushion and vulcanizing same.

The patent to Harding discloses a tire for vehicle wheels which has a felly and an outer metallic band or rim with a rubber member or cushion between felly and outer band, said rubber member being secured to the outer metallic band by being vulcanized thereto. The outer band constitutes the tread of the tire, having no rubber member mounted upon or around it. The tire is evidently rendered resilient merely by the cushion between felly and outer band.

In the Willis patent there is shown a resilient wheel having a wooden felly with a metallic rim shrunk thereon. Upon this felly rim is a cushion ring around the outer circumference of which is a metallic rim. Upon this latter is, in turn, mounted the tire rim which carries the outer rubber member or tire. In this patent no vulcanization is shown.

It seems, therefore, that appellant took features, all of which are disclosed in the prior art cited, or are obvious to one skilled in the art, and combined them in the production of his structure—a resilient wheel.

We fail to see wherein the result obtained presents patentable novelty, either in the article or the method.

Harding shows a beveled felly and it may be true, as is argued for appellant, that force fitting the

Willis band on a beveled felly would be impracticable, but it seems obvious that Willis taught, if indeed such teaching be not a matter of common knowledge, the method of force fitting in the application of his cushion ring. The permanent securing of the cushion to the metallic rings by vulcanization is shown in Harding.

It has been very earnestly insisted in the brief and oral argument for appellant that whatever may be said of claims 1 to 5, inclusive, claims 6 and 7 should be allowed. The basis of this argument rests very largely upon the *forcing* feature.

We are unable to agree to the contention.

Force fitting must be a very ancient art and we fail to see wherein its application by appellant, as proposed in the case at issue, constitutes invention.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE WALKER

No. 2,615. Decided February 11, 1931

PATENTABILITY—AGGREGATION—MECHANICAL DISHWASHER.

Claims for a mechanical dishwasher *Held* unpatentable as involving merely an aggregation of features old in the art.

APPEAL from the Patent Office. Affirmed.

Messrs. Denison and Thompson and *Mr. T. K. Bryant* for Walker.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, *J.:*

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming that of the Examiner, rejecting all of the claims of appellant's application. Claim 13 is illustrative of the question involved, and reads as follows:

13. In a mechanical dishwasher, a vat having an outlet in its bottom, a stand pipe connected to the outlet and provided with an over-flow passage some distance above the level of the outlet to limit the normal rise of water in the vat, a tubular post secured to and projecting upwardly from the bottom of the vat above the level of the over-flow passage, a rotary impeller having a hollow hub surrounding the upper portion of the post and having its upper end extended over the top of the post and closed, and means operatively connected to the hub for rotating the impeller.

The references relied upon are: Wolcott, 1,390,223, September 6, 1921; Walker, 1,397,846, November 22, 1921; Walker (British), 178,318, April 20, 1922.

The alleged invention is described in the decision of the Board of Appeals as follows:

The rejected claims are directed to a dish-washing machine comprising a cylindrical vat having a frusto-conical bottom. From the central part of the bottom there is an upwardly extending open topped hollow post that projects above the highest desired level of the water in the vat. From the lowest point of the vat there is a water outlet that extends into a discharge chamber through a vertical tube the height of whose discharge end determines the elevation of the water in the vat. Water is supplied to the vat from a supply pipe opening into the cylindrical side of the vat at a point above the level at which water stands in the vat. In the bottom of the vat there is an impeller carried upon the upper end of a motor driven shaft that projects through the tubular post. The impeller arms project radially from the lower end of a tubular shaft open at its lower end and closed at its upper end where it is secured to the upper end of a motor driven shaft. The water in the vat does not rise above the upper end of the tubular post.

As stated in appellant's brief, the claims in issue "are predicated upon the fact that *the tubular post (as 12) is secured to and projects upwardly from the bottom of the vat above the level of the overflow passage (as 24)*, or that the level of the overflow passage is below the top of the post." (Italics quoted.)

The new and useful result asserted to be accomplished by the combination claimed is that the rise of water within the vat is limited to a level below the top of the tubular port irrespective of the amount of water which may be introduced into the vat, thus preventing any possibility of leakage of water from the interior of the vat downwardly along the impeller shaft.

Discussing the references relied upon, the Board of Appeals said:

The British patent to Walker shows a mechanical dishwasher having a vat provided with an inverted frusto-conical bottom with an outlet in its apex, a standpipe 50 connected to said outlet and provided with an overflow passage some distance above the level of said outlet, the outlet passage being determined in height by the height of the partition 51 in the standpipe 50. The British patent shows a bearing in the apex of the conical bottom 2 for the impeller shaft 62 that corresponds in location to the tubular post specified in the rejected claims, a rotary impeller 42, 63, having a hub 61, is seated upon the upper portion of the bearing and is operatively connected to the hub for rotating the impeller. This British patent also shows a water supply pipe 43 connected to the upright wall of the vat some distance above the level of the overflow and provided with a valve 44 for controlling the flow of water therethrough to the interior of the vat. The patent to Wolcott shows a vat having a conical bottom and having a discharge outlet passage controlled by a faucet, a rotary impeller 13 having a hollow hub 12 surrounding the upper portion of the post 9 and provided with a closed upper end overlying the top of the post 9, means 10 extending through the post and operatively connected to the hub by a nut on the screw threaded upper end of the shaft 10 for rotating the impeller. We see no invention involved in the substitution of the post 9 and hollow hub 12 of Wolcott for the bearing and impeller hub connections shown in the British patent. The substitution of such parts would require no more than the expected skill of a mechanic and would produce no unexpected results.

We fully agree with the Board of Appeals in its statement that:

The specific impeller operating mechanism and its support does not cooperate with the specific construction of the overflow passage to produce any new result. The claims including both of these features are for aggregations. Neither the impeller mechanism nor the overflow passage is modified in operation by the use of the other in the same dish-washing machine and each feature is old in dish-washing machines.

It is so obvious that the claims in issue are for mere aggregations, not producing any new and useful result, that extended discussion is unnecessary.

The decision of the Board of Appeals is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,040,461, G. Thorpe, Head covering, D. C. Mass., Doc. E 3150, *G. Thorpe et al.* v. *Gilchrist Co.* Consent decree dismissing bill with prejudice Jan. 25, 1930.

1,062,827, W. H. Hinz, Soap dish, D. C. Mass., Doc. E 3063, *W. H. Hinz et al.* v. *Hamblin & Russell Mfg. Co., Inc.* Dismissed without prejudice Dec. 3, 1929.

1,067,290, Washburn and Comtois, Culinary utensil, D. C. Mass., Doc. E 3064, *The Washburn Co.* v. *Hamblin & Russell Mfg. Co., Inc.* Dismissed without prejudice Dec. 3, 1929.

1,089,405, W. S. Ferguson, Reinforced concrete dock or pier, filed Mar. 2, 1931, D. C. N. J., Doc. E 4189, *The Dock & Terminal Engineering Co. et al.* v. *Standard Oil Co. of N. J.* Same, filed Mar. 5, 1931, D. C. N. J., Doc. E 4190, *The Dock & Terminal Engineering Co. et al.* v. *Bayway Terminal, Inc.* Same, filed Mar. 6, 1931, D. C., Territory of Hawaii (Honolulu), Doc. E 425, *The Dock & Terminal Engineering Co. et al.* v. *Inter-Island Steam Navigation Co., Ltd.* Doc. 4690, *The Dock & Terminal Engineering Co. et al.* v. *Ford Motor Co.* Dismissed Apr. 20, 1931.

1,104,013. (See 1,112,811.)

1,112,437, G. Cody, Anti-siphon self scouring trap, filed Jan. 20, 1931, D. C. N. J., Doc. E 4183, *Cody Brass Works, Inc., et al.* v. *J. O. Pearson et al.*

1,112,811, E. W. Labombarde, Combination feed for sheet material; 1,580,612, H. S. Labombarde, Stacker, filed Feb. 19, 1931; and 1,104,013, E. G. Staude, Folding and gluing machine; 1,127,538, same, Glue-pot for box-making machines, included by counter-claim Mar. 31, 1931, D. C. Minn. (St. Paul), Doc. E 2180, *The International Paper Box Machine Co.* v. *E. G. Staude Mfg. Co.*

1,113,149, E. H. Armstrong, Wireless receiving system, D. C. N. J., Doc. 4104, *Westinghouse Electric & Mfg. Co.* v. *Radio Craft Co., Inc., et al.* Dismissed Mar. 16, 1931.

1,125,476, G. Claude, System of illuminating by luminescent tubes, filed Apr. 17, 1931, D. C. N. D. Calif., N. Div., Doc. 582, *Claude Neon Electrical Products, Inc.*, v. *A. Alderson (Alderson Neon Sign Co.).* Doc. E 3158, *Claude Neon Lights, Inc., et al.* v. *J. B. Linstrom et al.* Consent decree dismissing bill against The Pierce-Arrow Sales Co. and for an injunction against J. B. Linstrom May 22, 1930.

1,127,538. (See 1,112,811.)

1,127,660, J. H. McMichael, Method of and apparatus for transporting and treating concrete, D. C. N. J., Doc. E 2838, *Concrete Mixing & Conveying Co.* v. *Heyman & Goodman Co. et al.* Dismissed Mar. 18, 1931.

1,179,476, G. P. Thomas, Metal punching machinery, filed Apr. 17, 1931, D. C., E. D. Mich., S. Div., Doc. 4743, *Whitman & Barnes, Inc.*, v. *Allied Products Corp.*

Re. 15,902, S. F. Zaloom, Preserving compound for pistachio nuts, D. C. Mass., Doc. E 2904, *Zenobia Co. v. Ararat Grocery Co.* Consent decree for plaintiff may 3, 1929.

Des. 79,799, J. B. Freysinger, Buckle, D. C. Mass., Doc. E 3296, *The North & Judd Mfg. Co. v. Haverhill Shoe Novelty Co.* Dismissed without prejudice Oct. 10, 1930.

Des. 82,765, A. Stockstrom, Range, filed Apr. 15, 1931, D. C., N. D. Ohio, E. Div., Doc. E 3734, *American Stove Co. v. H. P. Kirkland & Co.*

Des. 83,829, Peterson and Marcellus, Portable electric fan, filed Apr. 16, 1931, D. C., S. D. Ohio, W. Div., Doc. 294, *Barber-Colman Co. v. The Master Electric Co.*

Disclaimers

1,227,481.—*William L. Morris*, Fort Wayne, Ind. LUBRICATING MECHANISM. Patent dated May 22, 1917. Disclaimer filed May 20, 1931, by the assignee, *Auto Research Corporation*.

Hereby enters disclaimer to the combination of elements covered by claim 2 of said patent aforesaid except when said flow-impeding elements have diverse relative resistance capacities, maintained in such relative diversity as to be proportionate to the requirements of the bearings served thereby.

1,560,248.—*Harry E. Kerr*, Cleveland, Ohio. GAS BURNER. Patent dated November 3, 1925. Disclaimer filed May 23, 1931, by the assignee, *The Barber Gas Burner Company*.

Hereby enters this disclaimer to said claim 5 of said Letters Patent, which is in the following words, to-wit:

"5. A gas burner comprising an unobstructed commingler tube having a cross port forming an air inlet thereto and a gas jet aperture in the surface of said cross port aligned with said commingler tube, said air inlet port being restricted in area to retard the rate of flame propagation in the mixture whereby said tube will be swept free from all flame at mixture velocities obtainable with normal gas pressure."

1,593,356.—*David C. Prince*, Schenectady, N. Y. SYSTEM OF ELECTRICAL DISTRIBUTION. Patent dated July 20, 1926. Disclaimer filed May 20, 1931, by the assignee, *General Electric Company*.

Therefore, enters this disclaimer to claim 4 of said patent which is in the following words:—

"4. The combination in a system of electrical distribution of a transformer having primary and secondary windings, a source of direct current, a pair of electron discharge valves for supplying current from said source to each primary winding of said transformer, said valves being so connected that during the operation thereof the potential of the cathode of one valve of each pair remains substantially fixed with respect to earth while the potential of the cathode of the second valve of each pair varies with respect to earth potential, and means for producing similar current variations through all of said valves."

1,689,581.—*Morgan Robert Day*, Boston, Mass. STABILIZED LATEX AND PROCESS OF PRODUCING SAME. Patent dated October 30, 1928. Disclaimer filed May 22, 1931, by the assignee, *Rubber Latex Research Corporation*.

Therefore, enters this disclaimer as to claim 1 of said Letters Patent No. 1,689,581 which is in the following words:

"1. As a new material, stabilizer latex containing blood proteid."

And your petitioner, therefore, disclaims from the scope and meaning of claim 2 of said Letters Patent No. 1,689,581 any interpretation of the phrase "containing the 'red end' of blood" other than that the red end of blood contained in the stabilized latex is the isolated or separated fraction consisting substantially of the red end of blood.

1,710,348.—*Joseph H. Cohen*, Bridgeport, Conn. CIGAR LIGHTER. Patent dated April 23, 1929. Disclaimer filed May 20, 1931 by the patentee, assignee, *Casco Products Corporation*, assenting.

Hereby enters this disclaimer, to wit:

I hereby disclaim from the scope of claim 2 any and all cigar lighters except those in which the "cavity" referred to is deep and the "heating element" referred to is so located in the cavity as to prevent casual engagement of the heating element by parts of the operator's hand in handling the cigar lighter.

1,710,531.—*Joseph H. Cohen*, Bridgeport, Conn. ELECTRICAL DEVICE. Patent dated April 23, 1929. Disclaimer filed May 20, 1931, by the patentee, assignee, *Casco Products Corporation*, assenting.

Hereby enters this disclaimer, to wit:

I hereby disclaim from the scope of claim 1 any and all electric cigar lighters except those in which the igniting unit is in two-pole "closed circuit" engagement with the holding device when supported by the holding device.

1,762,376.—*Harry A. Andersen*, Racine, Wis. DRINK MIXER. Patent dated June 10, 1930. Disclaimer filed May 23, 1931, by the assignee, *Hamilton Beach Manufacturing Company*.

Hereby enters this disclaimer, to-wit:

(1) To the combination of claim 2, except where in such combination the diaphragm has one portion thereof fixedly secured to the bracket and another portion thereof fixedly secured to the support.

(2) To the combination of claim 3, except where in such combination the diaphragm has one portion thereof fixedly secured to the bracket and another portion thereof fixedly secured to the support.

(3) To the combination of claim 4, except where in such combination the diaphragm has one portion thereof fixedly secured to the bracket and another portion thereof fixedly secured to the support.

(4) To the combination of claim 10, except where in such combination the resilient means has a portion thereof fixedly connected to the bracket and another portion fixedly secured to the standard.

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 16, 1931

[VOL. 407. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 311,461. DONNEN-FUEL, INC., New York, N. Y. Filed Feb. 25, 1931.

Applicant disclaims unqualifiedly the lump of coal as well as the descriptive words "Coal, Service, Quality, Satisfaction."

For Coal.

Claims use since Dec. 20, 1930.

Ser. No. 312,608. A. C. LAWRENCE LEATHER COMPANY, Peabody, Mass. Filed Mar. 27, 1931.

ACE-HI

For Shearlings or Wool Pelts.

Claims use since Mar. 2, 1931.

Ser. No. 313,426. FEDERAL STAR DYERS CORPORATION, New York, N. Y. Filed Apr. 10, 1931.

Champelt

For Dyed Furs, Skins, Pelts, and Hides.

Claims use since Sept. 12, 1930.

Ser. No. 314,174. THE SENECA COAL & COKE COMPANY, Tulsa, Okla. Filed May 4, 1931.

VIBRO

For Coal.

Claims use since Oct. 13, 1930.

Ser. No. 314,323. THE CLINTON COMPANY, Cleveland, Ohio. Filed May 8, 1931.

ALPINE

For Coal.

Claims use since Mar. 15, 1928.

CLASS 2

Receptacles

Ser. No. 313,378. JOHN MARSELLUS CASKET COMPANY, Syracuse, N. Y. Filed Apr. 15, 1931.

MEMOROL

For Tubular Containers for Mortuary Records.

Claims use since Feb. 23, 1931.

Ser. No. 313,678. SHUTTLEWORTH CARTON CO. INC., New York, N. Y. Filed Apr. 22, 1931.

SAFE TEX-CARTON

The words "Safe" and "Carton" being disclaimed apart from the mark as shown.

For Paper Boxes and Cartons.

Claims use since October, 1930.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 312,790. E. W. BREDEMEIER & Co., Chicago, Ill. Filed Apr. 1, 1931.

ZIPFOLIO
BREDEMEIER
CHICAGO-ILL

No claim is made to the words "Bredemeier, Chicago—Ill." apart from the mark as shown.
For Portfolios and Pocket-Books.
Claims use since Dec. 1, 1930.

Ser. No. 313,943. WASHINGTON LEATHER GOODS CO. INC., New York, N. Y. Filed Apr. 28, 1931.

Crepe Fantasie

No rights are asserted for the exclusive use of the word "Crepe" apart from the trade-mark shown in the drawing.
For Pocketbooks, Particularly Leather Pocketbooks.
Claims use since June 1, 1930.

Ser. No. 313,984. VUITTON & VUITTON, SOCIETE A RESPONSABILITE LIMITEE, Paris, France. Filed Apr. 29, 1931.

For Hat Boxes and Shoe Boxes Used for Luggage.
Claims use since 1897.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 307,206. THEODORE JOHNSON, New York, N. Y. Filed Oct. 27, 1930.

LINUM

For Preparations for Cleaning Linoleums.
Claims use since Sept. 15, 1930.

Ser. No. 311,070. PURITAN SOAP COMPANY, Rochester, N. Y. Filed Feb. 14, 1931.

For Soap, Fabric Cleaner, and Nickel Polish.
Claims use since September, 1929.

Ser. No. 312,068. SHINEEN PRODUCTS CORPORATION, Neenah, Wis. Filed Mar. 12, 1931.

RED E SHINE

No claim is made to the word "Shine" apart from the mark as shown.
For Chemically Treated Polishing Cloths for Furniture, Vehicles, and Gold and Silverware.
Claims use since Feb. 4, 1931.

Ser. No. 312,190. M. M. A. CHEMICAL COMPANY, Boston, Mass. Filed Mar. 16, 1931.

VAP

For Paste or Semi-Liquid Preparation in the Nature of a Dry Cleaner.
Claims use since Aug. 25, 1930.

Ser. No. 313,139. LYONS & COMPANY, New York, N. Y. Filed Apr. 9, 1931.

LYCO

For Preparation for Polishing and Cleaning and Dressing Shoes.
Claims use since March, 1931.

Ser. No. 313,273. ALBERCO CORPORATION, LTD., Hollywood, Calif. Filed Apr. 13, 1931.

NIK-SOLV

For Solvent Preparation for Removing Nicotine Stains.
Claims use since Mar. 28, 1931.

Ser. No. 313,832. COLGATE-PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed Apr. 27, 1931.

PALMOLIVE

For Toilet Soap and Shaving Cream.
Claims use since Jan. 1, 1900.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 276,931. FLORASYNTH LABORATORIES, INC., New York, N. Y. Filed Dec. 18, 1928.

FLORASYNTH

VANILLIC ESTER

Applicant disclaims the use of the words "Vanillic Ester" apart from the mark as shown.
For Synthetic Organic Products for Use in Vanilla Flavors, Food Flavoring Compounds, and for General Food Flavoring Purposes.
Claims use since 1918.

Ser. No. 278,089. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y. Filed Jan. 17, 1929.

For Medicinal Acids, Acids for Chemical Reagents, Acids for Chemical Test Indicator, Albumens, Menthol, Medicinal Alkalies, Alkalies for Photographic Use, Alkalies for Chemical Analysis, Medicinal Alkaloids, Alums, Amids, Amins, Medicinal Ammonium Compounds, Anesthetics, Antiseptics, Benzin Derivatives, Acetanilid (Antifebrin), Acetphenetidin, Acetylsalicylic Acid, Amidol, Antipyrine (Phenazone), Amyl Nitrite, Benzoic Acid, Beta-Naphthol, Bismuth Subsalicylate, Creosote, Carbolic Acid (Phenol), Carbolic Acid Ointment, Dihydroxyphenylethylmethylamine, Diethylmalonylurea, Erythrol Tetranitrate, Guaiacol Carbonate, Guaiacol Camphorate, p-Hydroxyphenylethylamine, Homatropine Hydrobromide, Hydroquinone (Quinol), Iodohydroxyquinolinesulphonic Acid, Methyl Thioine Chloride, Mercury Salicylate, Mercury Succinimide, Metol, Metol-Quinol, Methynamine, Phenyl Salicylate, Romanowsky Stain, Sodium Sulphocarbolate, Stibamine Glucoside, Sodium Para-Amino-Phenylarsenilate, Sodio-p-Toluenesulphonchloroamide, Sodium Salicylate, Sulphonethylmethene, Sulphonmethane, Toluidine Blue, Zinc Sulphanilate, Zinc Sulphocarbolate, Cyanogen Derivatives, Deodorants, Dentifrice in Solid Form, Digestive Ferments, Disinfectants, Effervescent Salts, Germicides, Glucosids, Medicinal Vegetable Gums, Medicinal Vegetable Gum Resins, Iodine, Potassium Iodide, Calcium Iodoricineolate, Mercuric Potassium Iodide, Mercurous Iodide, Mercuric Iodide, Potassium Bromide (Medicinal), Potassium Bromide (Photographic Chemical), Sodium Bromide, Ammonium Bromide, Chloroform, Potassium Chlorate, Ammonium Chloride, Mercurous Chloride, Mercuric Chloride, Calcium Chloride, Calcium Hypo-Chlorite (Chlorinated Lime), Medicinal Animal Gland Substances (Thyroid Gland, Parotid Gland, Pituitary Gland, Prostate Gland, Thymus Gland, Mammary Gland), Dried Medicinal Animal Tissue Substances (Cerebrin, Ovarian), Ox Bile Substance, Pig Bile Substance, Residuum Rubrum (Dried Residue Ox Blood Substance), Bone Medulla Substance, Didymin (Testicular Substance), Kidney Substance, Spinal Cord Substance, Hemoglobin, Liquid Petrolatum (Plain), Liquid Petrolatum (Solidified), Cod Liver Oil, Calcium Iodoricineolate, Ethyl Iodo-Ricineolate, Chenopodium Oil, Phenol and Menthol Mixture, Sandalwood Oil, Chaulmoogra Oil, Cinnamon Oil, Ephedrine Inhalant (Plain), Ephedrine Inhalant Compound, "Paroleine" Spray Compound, Acetylsalicylic Acid, Sodium Salicylate, Bismuth Subgallate, Chrysarobin, Bismuth Subnitrate, Bismuth Subcarbonate, Bismuth Subsalicylate, Iron and Ammonium Citrate, Iron and Quinine Citrate, Iron Carbonate, Iron Hypophosphite, Iron Glycerophosphate, Iron Phosphate, Mercuric Potassium Iodide, Mercury Iodide, Lead Subacetate, Zinc Sulphate, Zinc Sulphocarbolate, Zinc Permanganate, Zinc Sulphanillic, Zinc Valerate, Zinc Oxide, Potassium Nitrate, Sodium Cacodylate, Methyl Alcohol, Methyl Salicylate, Methyl Violet, Methyl Orange, Methyl Thionine Chloride, Epinine, Magnesium Sulphate, Lithium Citrate, Potassium Bicarbonate, Potassium Iodide, Sodium Bicarbonate, Sodium Biphosphate, Sodium Citrate, Sodium Phosphate, Sodium Sulphate, Calcium Chloride, Sodium Chloride, Ammonium Chloride, Aluminium and Potassium Sulphate, Naphthols, Nucleins, Oleoresins, Phenols: Pho-

tographic Chemicals—Namely, Developers, Reducers, Intensifiers, Fixers, Sensitizers and Accelerators, Reducing Agents; Medicated Throat Pastilles—Namely, Lexative Fruit (Extract of Senna Fruit), Ammonium Chloride and Licorice, Codeine and Benzoic Acid Compound, Glycerin, Glycerin and Black Currant, Glycerin, Tannin, and Black Currant, Glycerin, Tannin, Capsicum, and Black Currant, Lemon Juice, Linseed, Licorice, and Chlorodyne, Menthol, Menthol and Eucalyptus, Pectoral, Pine-Tar Compound, Pinol; Blaud Pill, Blaud Pill and Aloin, Blaud Pill and Arsenic; Blaud Pill, Arsenic, and Strychnine; Blaud Pill and Cascara; Blaud Pill, Nux Vomica, and Cascara; Blaud Pill Compound; Blue Pill, Colocynth, and Hyoscyamus; Blue Pill, Squill, and Digitalis; Blue Pill and Rhubarb Compound, Pill Cathartic Compound, Pill Rhubarb Compound, Cocaine Hydrochloride, Homatropine Hydrobromide, Sodium Chloride, Ammonium Bromide, Emetine Bismuthus Iodide, Emetine Hydrochloride, Emetine Hydrobromide, Ephedrine Hydrochloride, Ephedrine Sulphate, "Ergamine" Acid Phosphate; Solid, Powdered, and Fluid Medicinal Extracts—Namely, Belladonna, Colocynth, Coffee, Aconite, Strophanthus, Digitalis, Cascara Sagrada, Nux Vomica, Hyoscyamus, Sugar of Milk.

Claims use since 1911.

Ser. No. 294,714. SEYMOUR B. DEWEY, Jr., Cleveland, Ohio. Filed Jan 13, 1930.

The drawing is lined to indicate red color. No claim is made to the word "Grippe" apart from the mark as shown.

For Cold and Grippe Capsules.

Claims use since Nov. 5, 1928.

Ser. No. 298,011. AARON GARD BURNETT, doing business as A. G. Burnett Pharmacal Co., Belleville, Ill. Filed Mar. 28, 1930.

The words "Medicine" and "Trade Mark" are disclaimed apart from the mark as shown. The portrait on the drawing is fanciful, and the signature is that of the applicant, Aaron Gard Burnett.

For Medicinal Preparation for Stomach Antacid, Gas Eliminant, Laxative, Mucous Tissue Sedative.

Claims use since Jan. 15, 1929.

Ser. No. 301,223. PIERRE ZIZINE, Paris, France. Filed May 24, 1930.

VIVOLEOL

For Cod Liver Oil.

Claims use since July 1, 1927.

Ser. No. 301,224. PIERRE ZIZINE, Paris, France. Filed May 24, 1930.

GASTROPANSEMENT

For Powder Used in Diseases of the Stomach and Intestines, for Dyspepsia and Gastrointestinal Troubles.

Claims use since Dec. 6, 1929.

Ser. No. 301,226. PIERRE ZIZINE, Paris, France. Filed May 24, 1930.

AGOZIZINE

For Medicinal Preparation for the Treatment of Liver Troubles.

Claims use since June 21, 1929.

Ser. No. 301,227. PIERRE ZIZINE, Paris, France. Filed May 24, 1930.

ZOOLEOL

For Cod Liver Oil.

Claims use since Oct. 30, 1928.

Ser. No. 301,228. PIERRE ZIZINE, Paris, France. Filed May 24, 1930.

SEDOGASTRINE

For Powder and Tablets Used for Diseases of the Stomach.

Claims use since Jan. 18, 1923.

Ser. No. 305,017. SECRETS, INC., Ottawa, Ill. Filed Aug. 25, 1930.

No claim being made to the word "Beauty" apart from the mark shown.

For Cleansing Cream, Tissue Building Cream, Cold Cream, Vanishing Cream, Bleaching Cream, Peroxide Cream, Benzoin Cream, Freckle Cream, Whiting Cream, Wrinkle Cream, Massage Cream, Almond Cream, Lemon Cream, Pore Cream, Mentholated Cream, Developing Cream, Astringent Cream, Acne Cream, Sunburn Cream, Cucumber Lotion, Lemon Lotion, Astringent Lotion, Freckle Lotion, Almond Lotion, Bleaching Lotion, Sun-burn Lotion, Chap Lotion, Eye Brow Pencil, Creme Rouge, Lip Rouge, Cake Rouge, Brilliantine, Permanent Wave Oil, Curl Set Preparation, Bandoline, Dandruff Pomade, Hair Tonic, Tar Shampoo, Cocoanut Oil Shampoo, Hair Dyes, Dandruff Eradicator, Depilatory; Secro-oil—Namely, a Water Soluble Vegetable Oil Shampoo; Toilet Water, Perfumes, After Shave Lotion, Muscle Oil, Skin Tonic, Deodorant, Complexion Beautifying Preparation, Bath Salts, Bath Powder, Face Powder, Talcum Powder, Tooth Powder, Tooth Paste, Foundation Cream, Skin Tonic, Hair Curling Fluid, and Scalp Ointment.

RIN-O-CUR

For Nasal Cream.
Claims use since February, 1931.

Ser. No. 313,762. SWAMP & DIXIE LABORATORIES, INC., Fort Smith, Ark. Filed Apr. 24, 1931.

DIXIE

For Fever and Pain Powder.
Claims use since Nov. 14, 1899.

Ser. No. 313,953. ASSOCIATED LABORATORIES, INC., doing business as The Besinol Company, New York, N. Y. Filed Apr. 29, 1931.

BESINOL

For Obesity Preparation.
Claims use since Mar. 2, 1931.

Ser. No. 313,970. PITMAN-MOORE COMPANY, Indianapolis, Ind. Filed Apr. 29, 1931.

PHYCAMPHOL

For Ointment for Treating Acute Mammitus.
Claims use since 1917.

Ser. No. 313,972. PITMAN-MOORE COMPANY, Indianapolis, Ind. Filed Apr. 29, 1931.

NATRONOX

For Medicine for Treating Necrotic Inflammation for the Gastro-Intestinal Tract in Swine.
Claims use since May, 1930.

Ser. No. 313,973. PITMAN-MOORE COMPANY, Indianapolis, Ind. Filed Apr. 29, 1931.

SECTOFF

For Animal Insecticide.
Claims use since 1924.

Ser. No. 313,976. SANOVAPOR LABORATORIES, INC., Huntington, W. Va. Filed Apr. 29, 1931.

DEXENE

For Preparation for the Treatment of Diabetes.
Claims use since Apr. 11, 1930.

Ser. No. 313,988. PITMAN-MOORE COMPANY, Indianapolis, Ind. Filed Apr. 29, 1931.

CREGUIATONE

For Medicine for Treating Pulmonary Infections and Gastro-Intestinal Fermentation in Horses and Cattle.
Claims use since 1921.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 314,411. KOEHLER BROS., Saginaw, Mich. Filed May 11, 1931.

No claim is made to the exclusive use of the word "Backstop" apart from the mark as shown.
For Target Backstops.
Claims use since Apr. 20, 1931.

CLASS 11

Inks and Inking Materials

Ser. No. 313,872. STANDARD PIGMENT COMPANY, INC., Schuylerville, N. Y. Filed Apr. 27, 1931.

PERM-O-LITE

For Printing Inks.
Claims use since Oct. 1, 1928.

CLASS 12

Construction Materials

Ser. No. 293,933. SAYRE & FISHER BRICK COMPANY, Sayreville, N. J. Filed Dec. 20, 1929.

SAFISCO

For Fire Brick, Brick Specialties Such as Tile, and Fire Brick Cement and Ground Refractory of Ground Brick.
Claims use since Nov. 26, 1929.

Ser. No. 303,299. RAUB SUPPLY CO., Lancaster, Pa. Filed July 9, 1930.

MERCURY RAUB

The surname "Raub" is claimed only in connection with the other features of the mark.
For Galvanized Ridge Roll for Roofing, Corrugated and Wall Flashing.
Claims use since Apr. 12, 1919.

Ser. No. 306,991. ALBERT ARMSTRONG, Seattle, Wash. Filed Oct. 21, 1930.

ABCM

For Burned Clay Brick and Tile.
Claims use since Oct. 2, 1930.

Ser. No. 311,055. CERTAIN-TEED PRODUCTS CORPORATION, New York, N. Y. Filed Feb. 14, 1931.

WOODTEX

For Protective Siding for Buildings, Walls, Etc., to Simulate Clapboards and Like Siding Materials and Made from Sheet Roofing Materials Such as Slate-Surfaced Asphalt Saturated Felt Roofing.
Claims use since Dec. 11, 1930.

Ser. No. 311,947. AMERICAN BLUE STONE CO., New York, N. Y. Filed Mar. 10, 1931.

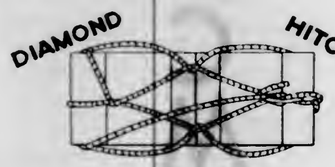
RAINBOW

For Flag Stones.
Claims use since July 22, 1930.

Ser. No. 312,338. FIRETITE PRODUCTS CORPORATION, Indianapolis, Ind. Filed Mar. 20, 1931.

Firetite

For Refractory Cements for High Temperature Work as a Coating for Saving of Fire Brick, Plastics for Heat Treating, Forging, and Welding Furnaces and Oil Burners, and Also for Application to Jambs, Arches, Door Lining, Side Walls, and Other Places in a Boiler Room, and Insulating Materials for Conserving Heat—That is, for Thermo Purposes.



Claims use since Jan. 18, 1930.

Ser. No. 312,659. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Mar. 28, 1931.

MONO-FIBRIK

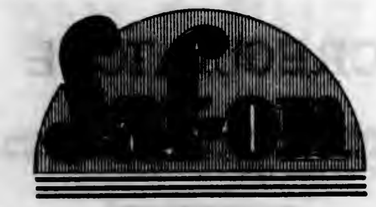
For Plastic Monolithic Fire Brick.
Claims use since October, 1930.

Ser. No. 312,696. H. B. CLIFFORD ROOFING COMPANY, Detroit, Mich. Filed Mar. 30, 1931.

For Composition Shingles.
Claims use since about Feb. 19, 1931.

Ser. No. 312,794. CHAMBERLIN METAL WEATHER STRIP COMPANY, Detroit, Mich. Filed Apr. 1, 1931.

CHAMBERLIN UNIVERSAL WEATHER STRIP



No claim is made to the words "Weather Strip."
For Weather Strips.
Claims use since Jan. 23, 1931.

Ser. No. 312,877. STANDARD WALL COVERING COMPANY, INC., Philadelphia, Pa. Filed Apr. 2, 1931.

No claim being made to the representation of the goods or the words "Large Panels One Piece Marble" apart from the mark as shown.
For Wall Panels.
Claims use since July 3, 1929.

Ser. No. 313,056. THE SAFETY PROCESSING COMPANY, Youngstown, Ohio. Filed Apr. 7, 1931.

The drawing is lined for red.
For Filler Comprising a Mixture of an Abrasive Material and a Binder in Plastic form for Filling Grooves in Marble, Stone, Terrazzo, Wood, Tile, Etc., as Used in Stair Treads, Ramps, and Floors and in Which the Mixture is Allowed to Harden, and Slabs Having Recesses Filled with the Filler Mixture.
Claims use since Nov. 20, 1930.

Ser. No. 313,089. NEW ENGLAND BRICK COMPANY, Boston, Mass. Filed Apr. 8, 1931.

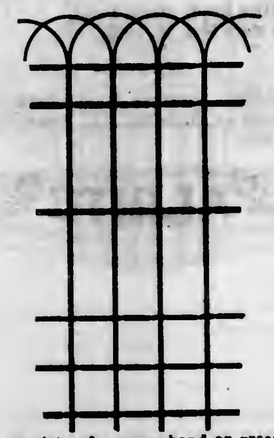
No registration rights are claimed in the words "Hand-Mades" apart from the mark shown in the drawing.
For Brick.
Claims use since Jan. 31, 1931.

Ser. No. 313,168. MICHAEL HAYMAN & CO., INC., Buffalo, N. Y. Filed Apr. 9, 1931.

HAYMANITE

For Cement for Jointing Water Mains.
Claims use since Apr. 2, 1931.

Ser. No. 313,884. THE FLEXWOOD COMPANY, Chicago, Ill. Filed Apr. 27, 1931.



Flexwood

For Fabric-Backed Wood Veneer.
Claims use since May 28, 1930.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 299,109. CONTINENTAL STEEL CORPORATION, Kokomo and Indianapolis, Ind., and Canton, Ohio. Filed Apr. 19, 1930.

The mark consists of a green band or green colored portion at or near the bottom of the fencing, no claim being made to the representation of fencing apart from the mark as shown by the drawing.
For Ornamental and Chain Link Metal Fencing.
Claims use since Mar. 15, 1930.

Ser. No. 307,875. ALUMINUM COMPANY OF AMERICA, Pittsburgh, Pa. Filed Nov. 14, 1930.

ALCOA

For Metal Cable Clamps, Devices for Preventing Vibration of Electric Cables, Non-Ferrous Tubing, Rivets, and Nails.
Claims use since May 9, 1930.

Ser. No. 307,876. ALUMINUM COMPANY OF AMERICA, Pittsburgh, Pa. Filed Nov. 14, 1930.

ALCOA

For Metal Cable Clamps, Devices for Preventing Vibration of Electric Cables, Non-Ferrous Tubing, Rivets, and Nails.
Claims use since May 9, 1930.

Ser. No. 312,685. GLENN ANDERSON, Galesburg, Ill. Filed Mar. 30, 1931.

TRAVELING PLUMBER

No claim is made for the words "No Returning to the Shop for This or That", apart from the mark shown in the drawing. The lining on the drawing is for shading only.
For Fittings and Supplies Used in Plumbing and Heating Systems—Namely, Lavatories, Bath Tubs, Sinks and Laundry Trays, Water Closets, Urinals; Enameled and Vitreous China Handles for Valves and Faucets, Water-Softening Plumbing Fixtures, Valves, Bibbs, Faucets, Cocks, Traps, Stationary and Portable Showers, Drinking Fountains, Metal, Fiber, and Hard Rubber Pipes and Fittings, and Valve Facings, Washers, and Plugs.
Claims use since March, 1927.

Ser. No. 313,880. WYRSTAPES, INC., New York, N. Y. Filed Apr. 25, 1931.

WYRSTAPES

For Staples Used in Stapling Machines for Fastening Papers, Cardboard, Metal, Etc., or to Wood, Etcetera.
Claims use since Feb. 27, 1931.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 314,290. MARINE STEEL CORPORATION, New York, N. Y. Filed May 7, 1931.

BLUE WATER

For Non-Staining, Non-Tarnishing or Bright Alloy Steels in Cast, Forged, and Rolled Form.
Claims use since Nov. 1, 1930.

CLASS 16

Paints and Painters' Materials

Ser. No. 290,220. MINNESOTA MINING & MANUFACTURING COMPANY, Wilmington, Del. Filed Sept. 25, 1929.

RETSUL

For Polishing Waxes for Lacquered Surfaces and for Automobiles, Furniture and Woodwork, and Lacquer Polishes for Automobile Finishes.
Claims use since Sept. 10, 1929.

Ser. No. 291,606. COLARDO PRODUCTS LIMITED, Reading, England. Filed Oct. 26, 1929.

For Fireproof Paints.
Claims use since May 2, 1929.

Ser. No. 310,343. JOHN G. MARSHALL, Brooklyn, N., Y. Filed Jan. 24, 1931.

EXTENDER

For Composition to be Mixed with Oil Paints to Modify or Decrease the Color Tone.
Claims use since November, 1927.

Ser. No. 312,064. THE RESINOUS PRODUCTS & CHEMICAL COMPANY, Philadelphia, Pa. Filed Mar. 12, 1931.

OILSOLATE

For Metallo-Organic Compounds, Being Brittle Resinous Materials for Use as Driers in Oils, Varnishes, Paints, Enamels, Baking Japans, Lacquers, and Coating Compositions.
Claims use since Dec. 18, 1930.

Ser. No. 312,107. JOHN G. MARSHALL, Brooklyn, N. Y. Filed Mar. 13, 1931.

MARLAC

For a Preparation in the Nature of a Waterproof Varnish to Give a Glossy Finish to Colored or Black and White Photographs to Make the Surface Waterproof and Effect a Glossy Appearance.
Claims use since Feb. 4, 1931.

Ser. No. 312,446. THE MORGAN COMPANY, Chicago, Ill. Filed Mar. 23, 1931.

METALEX

For Protective Ready Mixed Paint.
Claims use since Nov. 15, 1929.

Ser. No. 312,753. FIDELITY MANUFACTURING CO., INC., doing business as Alrite Mfg. Co., Zionsville, Pa. Filed Mar. 31, 1931.

For Touch-Up Enamel, Tire Paint, and Automobile and Wood Polishes.
Claims use since Jan. 17, 1931.

Ser. No. 313,059. THE STAMINITE CORPORATION, New Haven, Conn. Filed Apr. 7, 1931.

STAMINITE

For Transparent Stainproof, Waterproof Coating Compound in the Nature of a Paint or Varnish for Surfacing Floors and the Like and Giving a Weather-Proof Coating on Many Kinds of Material.
Claims use since Mar. 17, 1931.

Ser. No. 313,177. BLACK DUCK PRODUCTS, INC., Whittier, Calif. Filed Apr. 10, 1931.

BLACK DUCK

The drawing is lined for color, the linings appearing on the drawing representing black, blue, brown, green, and red colors.
For Enamel Paint for Motor Vehicles, Enamel Paint for Engines, Water Proofing Paint for Canvas.
Claims use since June 1, 1925.

Ser. No. 313,187. HANOVIA CHEMICAL & MANUFACTURING COMPANY, Newark, N. J. Filed Apr. 10, 1931.

For Metallic Decorating Paints; Liquid, Dry, and Paste Lustre Colors, and Overglaze and Underglaze Colors.
Claims use since Apr. 1, 1910.

Ser. No. 313,260. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Apr. 11, 1931.

KEM-SPAR

Applicant makes no claim herein to the name "Spar" apart from the mark as shown.
For Paints in Paste, Semi-Liquid, or Ready-Mixed Form; Varnishes, Lacquers, Paint Enamels, Varnish Enamels, Lacquer Enamels, and Clear Varnishes.
Claims use since Mar. 27, 1931.

Ser. No. 313,541. HARPOON PAINT PRODUCTS, INC., Long Island City, N. Y. Filed Apr. 20, 1931.

No claim is made to the word "Paint" apart from the mark shown in the drawing.
For Ready Mixed Paint.
Claims use since Apr. 11, 1931.

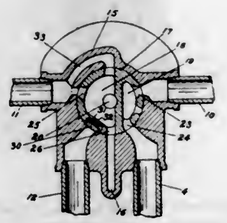
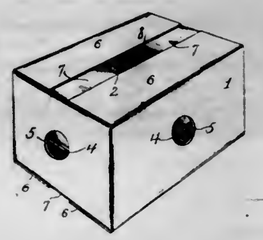
CARNEGIE LIBRARY OF ATLANTA

REISSUES



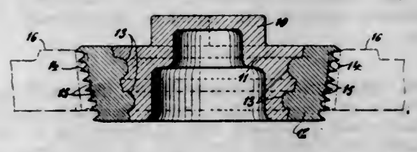
JUNE 16, 1931

18,097. SEMISLEEVE VALVE MOTOR. JOHN HEBER COYNE, Buffalo, N. Y., assignor, by mesne assignments, to Bi-Sleeve Engine Company, Chicago, Ill., a Corporation of Illinois. Original No. 1,549,297, dated Aug. 11, 1925, Serial No. 703,107, filed Mar. 31, 1924. Application for reissue filed Feb. 16, 1931. Serial No. 516,231. 14 Claims. (Cl. 123—75.)



1. In an internal combustion engine, the combination of an engine block provided with an outer cylinder having intake and exhaust passages, an inner cylinder provided with intake and exhaust ports registering with said passages, said inner cylinder spaced from the outer cylinder, semi-sleeve valves operating in said space for controlling said ports, and a ported junk ring for sealing said valves with respect to the ports, said junk ring being sealed by thrust at both ends.

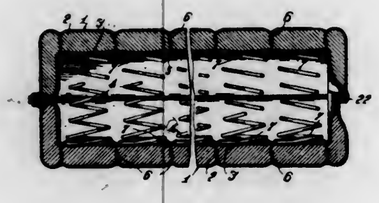
18,098. WATER SOFTENER VALVE. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Original No. 1,695,541, dated Dec. 18, 1928, Serial No. 3,951, filed Jan. 22, 1925. Application for reissue filed Feb. 26, 1930. Serial No. 431,612. 19 Claims. (Cl. 210—24.)



15. In a water softener, a tank, a valve housing having an upper and a lower connection with said tank, a supply inlet, a service outlet and a waste outlet, a valve member in said housing adapted in one position to direct the water from the supply inlet to the tank and from the tank to the service outlet, and a seal member on said valve member to seal the waste outlet.

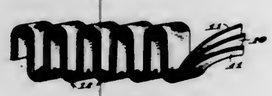
18,099. ART OF PACKAGING FRUIT AND THE LIKE. GEORGE K. S. FERGUSON, North East, Pa. Original No. 1,732,264, dated Oct. 22, 1929, Serial No. 224,860, filed Oct. 8, 1927. Application for reissue filed Sept. 3, 1930. Serial No. 479,562. 5 Claims. (Cl. 206—46.)

3. Means for packaging fruit and the like, comprising a primary carton formed of manufactured fibrous sheet material and having plane sides and a flat top and bottom, the top and bottom and each side being provided with a ventilating opening of substantial area, superposed tiers of secondary containers so arranged in said carton as to allow air circulation around the secondary containers and through said openings, a horizontal divider between the tiers of containers, and means on the several containers supporting the divider and the top of the carton respectively in spaced relation to the respectively subjacent containers.



18,100. CLEAN OUT PLUG. FREDERICK J. MERSFELDER and PAUL BALZE, Leonia, N. J., assignors to M. & B. Manufacturing Co. Inc., Leonia, N. J., a Corporation of New Jersey. Original No. 1,702,878, dated Feb. 19, 1929, Serial No. 192,357, filed May 18, 1927. Reissue No. 17,528, dated Dec. 17, 1929, Serial No. 361,238, filed May 7, 1929, and subsequently became Reissue No. 17,667, dated May 13, 1930, Serial No. 432,885, filed Mar. 3, 1930. This application for reisaue filed Feb. 4, 1931, Serial No. 513,402. 10 Claims. (Cl. 137—76.)

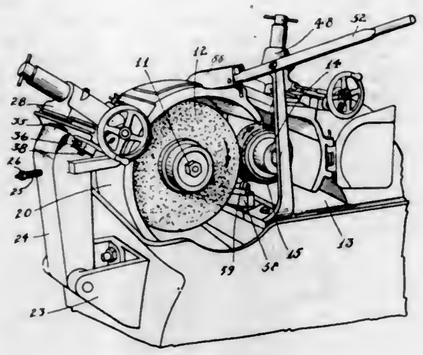
1. The herein described fitting comprising a member having a uniform taper throughout the length thereof,



the thread having a broad root of a different diameter than a thread to engage same, said member having a soft metal body to permit a new thread to be cut into the said root on engaging said member with a hard metal threaded member, the taper of the thread of the soft metal member being greater than that of the other member, the pitch of the angles of the sides of the thread being substantially the same for both members.

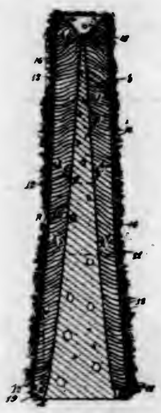
18,101. MATTRESS AND CUSHION. LOUIS A. SUEKOFF, Wilmette, Ill., assignor of one-half to Fred A. Nachman, Chicago, Ill. Original No. 1,700,339, dated Jan. 29, 1929, Serial No. 114,599, filed June 9, 1926. Application for reissue filed Nov. 5, 1930. Serial No. 493,665. 8 Claims. (Cl. 5—235.)

5. The method of making cushion structures which includes disposing upon one face of a fabric sheet a layer of padding material and disposing upon the other face thereof fabric means for engaging springs with said fabric sheet, then passing stitch-chains through said layer of padding material, said fabric sheet and said fabric means to simultaneously permanently assemble the same, and engaging springs with said fabric means.



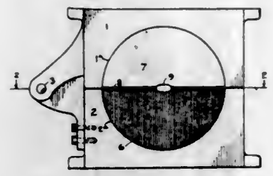
18,102. PACKING RING. THOMAS A. BOWERS, Boston, Mass., assignor to Pressed Piston Ring Company, a Corporation of Massachusetts. Original No. 1,796,882, dated Mar. 17, 1931, Serial No. 431,814, filed Feb. 27, 1930. Application for reissue filed Apr. 9, 1931. Serial No. 528,915. 40 Claims. (Cl. 74—109.)

1. A flexible packing ring for pistons and the like comprising a plurality of metal ribbons, said ribbons corrugated together in a unitary manner and in close formation, said corrugated formations being substantially perpendicularly disposed with respect to the side walls of a piston.



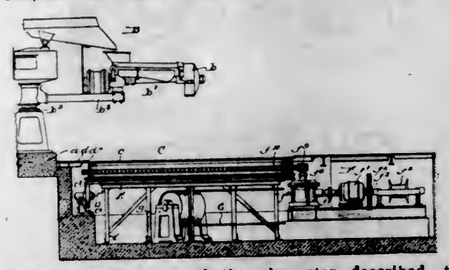
18,103. GRINDING. GEORGE W. BINNS, Cincinnati, Ohio, assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Original No. 1,709,818, dated Apr. 16, 1929, Serial No. 29,214, filed May 9, 1925. Application for reissue filed Jan. 28, 1930. Serial No. 424,040. 24 Claims. (Cl. 51—103.)

1. A centerless grinder including opposed grinding and regulating wheels, the grinding wheel having portions adapted to produce cylindrical and non-cylindrical portions on a work piece, and a regulating wheel having a work-controlling portion engaging and urging a cylindrically shaped portion of the work piece toward the grinding



wheel whereby the work is reduced to a contoured form contrageometric to that imposed on the surface of the grinding wheel and is controlled in its rotation by the engagement of the regulating wheel with the cylindrical portion thereof.

18,104. EXTERNALLY-REENFORCED CONSTRUCTION. JAMES HENRY LEVERING, Los Angeles, Calif. Original No. 1,643,275, dated Sept. 20, 1927, Serial No. 302,470, filed June 7, 1919. Application for reissue filed Sept. 19, 1929. Serial No. 393,784. 17 Claims. (Cl. 61—30.)

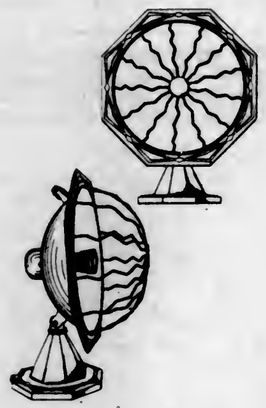


1. A structural unit having a face, cross sectional contours of which substantially conform, respectively, from abutment to mid-plane along the crest and also from base to crest of such unit, to a formula in which the abscisso is equal to the two-thirds power of the ordinate with the parts of greatest curvature at the base and at the abutments of said unit.

18,105. THERMOMETER TUBE AND METHOD OF MAKING THE SAME. MAX E. MOELLER, New York, N. Y., assignor, by mesne assignments, to Moeller Instrument Company, Inc., Brooklyn, N. Y., a Corporation of New York. Original No. 1,753,801, dated Apr. 8, 1930, Serial No. 290,565, filed July 5, 1928. Application for reissue filed Dec. 22, 1930. Serial No. 504,187. 20 Claims. (Cl. 49—81.)

1. A glass stem for thermometers or the like comprising a glass rod having a bore in the interior thereof and a non-transparent element therein extending from said bore toward the sides thereof.

18,106. APPARATUS FOR HANDLING SAND IN FOUNDRIES. WALTER E. NAYLOR, Chicago, Ill., assignor to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Original No. 1,759,625, dated May 20, 1930, Serial No. 166,342, filed Feb. 7, 1927. Application for reissue filed Apr. 27, 1931. Serial No. 533,318. 18 Claims. (Cl. 22—21.)

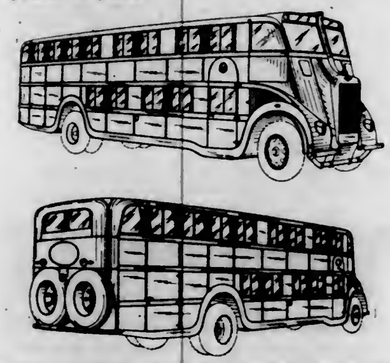


1. In an apparatus of the character described, the combination with a floor having an opening therein, of a turn-table positioned in said opening and having the top thereof exposed so that flasks may be placed thereon for filling purposes and removed, said turntable having openings through which the displaced flask-filling material will pass in lieu of cumulating thereon, mechanism for rotating the turn-table, and means under the table for catching the material that passes therethrough.

DESIGNS

JUNE 16, 1931

84,389. REFLECTOR HEATER. ERICK J. AJAX, Minneapolis, Minn., assignor to Dominion Electrical Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 27, 1931. Serial No. 39,267. Term of patent 7 years.



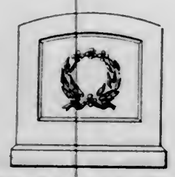
The ornamental design for a reflector heater, substantially as shown.

84,390. STOCKING. ROBERT N. APPAICH, Wyomissing, Pa., assignor to Berkshire Knitting Mills, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1931. Serial No. 39,591. Term of patent 14 years.

The ornamental design for a stocking, as shown and described.

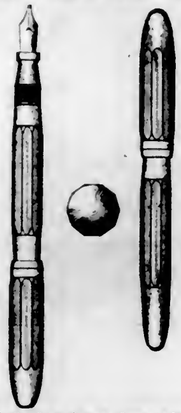
84,391. VEHICLE. DWIGHT E. AUSTIN, Los Angeles, Calif. Filed Apr. 1, 1931. Serial No. 39,314. Term of patent 14 years.

The ornamental design for a vehicle substantially as shown.

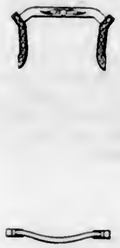


84,392. STOCKING. ROBERT N. APPRICH, Wyomissing, Pa., assignor to Berkshire Knitting Mills, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Apr. 24, 1931. Serial No. 39,616. Term of patent 14 years.

The ornamental design for a stocking, as shown and described.



84,393. BURIAL VAULT. CHRISTY L. BERG, St. Louis, Mo. Filed Apr. 24, 1931. Serial No. 39,609. Term of patent 14 years.

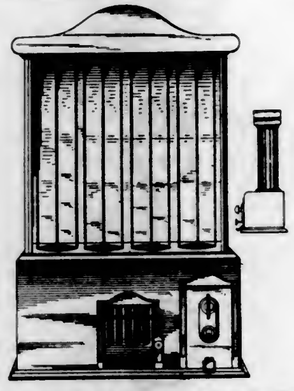


The ornamental design for a burial vault, as shown.

84,394. FOUNTAIN PEN. ANDREAS BIENENSTEIN, Toledo, Ohio, assignor to The Conklin Pen Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 16, 1931. Serial No. 38,323. Term of patent 14 years.

The ornamental design for a fountain pen substantially as shown and described.

84,395. BRIDGE MEMBER FOR AN OPHTHALMIC MOUNTING. JOHN D. BROCK, Kansas City, Mo. Filed Mar. 31, 1931. Serial No. 39,311. Term of patent 3½ years.



The ornamental design for a bridge member for an ophthalmic mounting, substantially as shown.

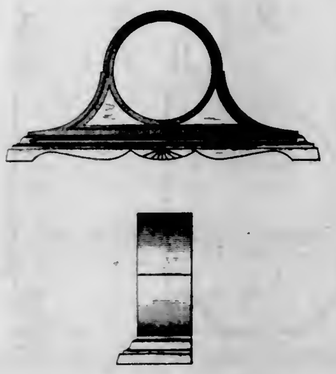
84,396. FENCE POST ANCHOR PLATE. FRANK G. CARREL, Western Springs, Ill., assignor to Calumet Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 20, 1931. Serial No. 39,560. Term of patent 14 years.

The ornamental design for a fence post anchor plate as shown.

84,397. CASING FOR FRUIT VENDING MACHINE. WELLS H. CLAUSSEN, Seattle, Wash., assignor to Apple Vender Co., Seattle, Wash., a Corporation of Washington. Filed Feb. 24, 1931. Serial No. 38,802. Term of patent 14 years.

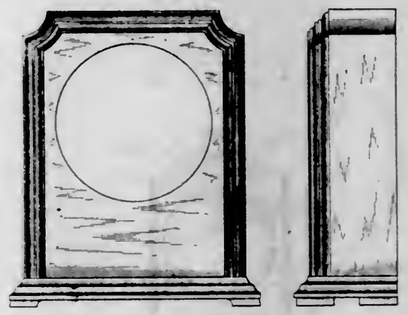
The ornamental design for a casing for fruit vending machine, as shown.

84,398. DOLL. IRWIN COHN, New York, N. Y. Filed Apr. 14, 1931. Serial No. 39,477. Term of patent 3½ years.



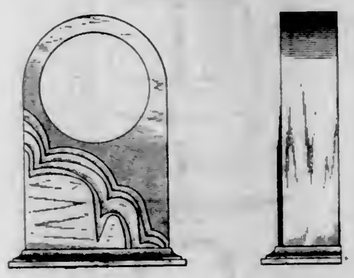
The ornamental design for a doll, as shown.

84,399. SPECTACLE FRAME. LAYTON EUGENE CROE, Kalamazoo, Mich. Filed Oct. 27, 1930. Serial No. 37,396. Term of patent 14 years.



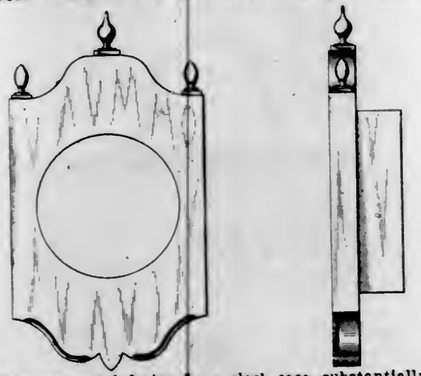
The ornamental design for a spectacle frame, as shown and described.

84,400. CLOCK CASE. FREDERIC J. DORNSEIF, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1931. Serial No. 39,436. Term of patent 7 years.



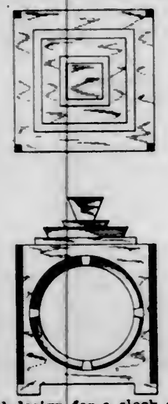
The ornamental design for a clock case, substantially as shown.

84,401. CLOCK CASE. FREDERIC J. DORNSEIF, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1931. Serial No. 39,437. Term of patent 7 years.



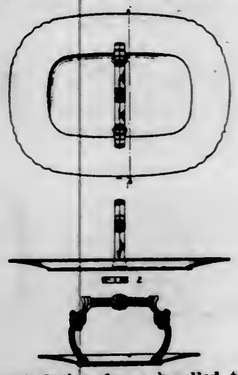
The ornamental design for a clock case, substantially as shown.

84,402. CLOCK CASE. FREDERIC J. DORNSEIF, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1931. Serial No. 39,438. Term of patent 7 years.



The ornamental design for a clock case, substantially as shown.

84,403. CLOCK CASE. FREDERIC J. DORNSEIF, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1931. Serial No. 39,439. Term of patent 7 years.

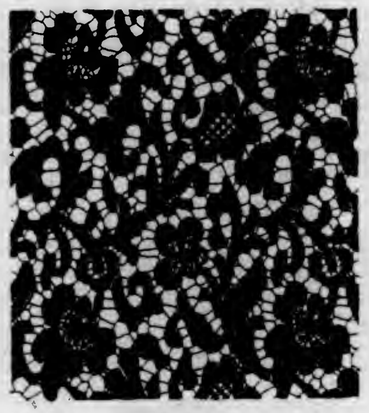


The ornamental design for a clock case, substantially as shown.

84,404. CLOCK CASE. FREDERIC J. DORNSEIF, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1931. Serial No. 39,440. Term of patent 7 years.

The ornamental design for a clock case, substantially as shown.

84,405. HANDLED TRAY OR SIMILAR ARTICLE. JOSEPH M. DU BOIS, Bellaire, Ohio. Filed Apr. 6, 1931. Serial No. 39,381. Term of patent 3½ years.

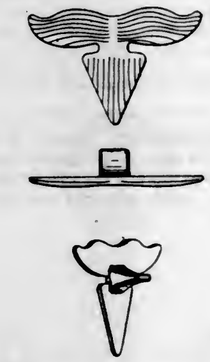


The ornamental design for a handled tray or similar article, as shown.

84,406. DISPLAY HEAD. RAY W. DUMONT, New York, N. Y., assignor to Best & Co. Inc., New York, N. Y. Filed Nov. 14, 1929. Serial No. 33,444. Term of patent 3½ years.

The ornamental design for a display head, as shown.

84,407. LACE. BERT EDSON, Pawtucket, R. I., assignor to New England Lace Mills, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 6, 1931. Serial No. 38,982. Term of patent 3½ years.



The ornamental design for lace, substantially as shown.

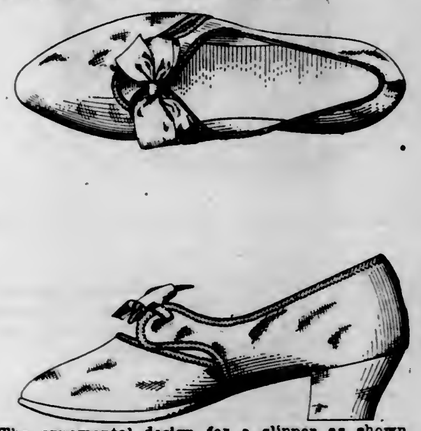
84,408. TABLE. ABRAHAM FRIEDMAN, Los Angeles, Calif. Filed Apr. 15, 1931. Serial No. 39,495. Term of patent 7 years.

The ornamental design for a table as shown.

84,409. CONFECTIONERY ARTICLE. ALBERT C. FRIEDLUND, Minneapolis, Minn. Filed Mar. 26, 1931. Serial No. 39,250. Term of patent 14 years.

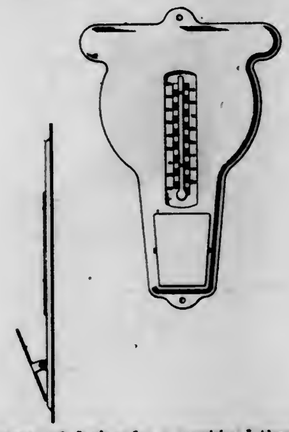
The ornamental design for a confectionery article, substantially as shown.

84,410. RING. JOSEPH GOLDMAN, New York, N. Y. Filed Apr. 7, 1931. Serial No. 39,394. Term of patent 7 years.



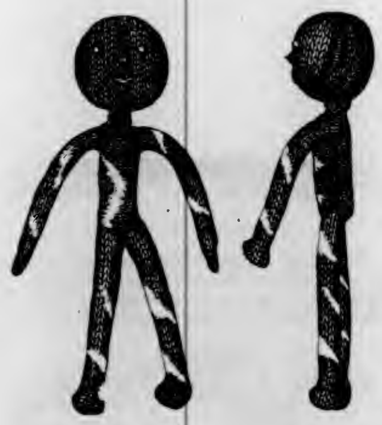
The ornamental design for a ring substantially as shown.

84,411. RING. JOSEPH GOLDMAN, New York, N. Y. Filed Apr. 7, 1931. Serial No. 39,395. Term of patent 7 years.



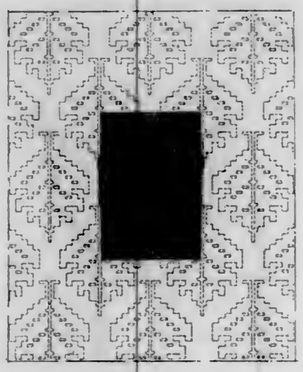
The ornamental design for a ring substantially as shown.

84,412. SLIPPER. LOUIS GOLDSTEIN, Brooklyn, N. Y., assignor to Knight Slipper Mfg. Corp., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 17, 1931. Serial No. 39,119. Term of patent 3½ years.



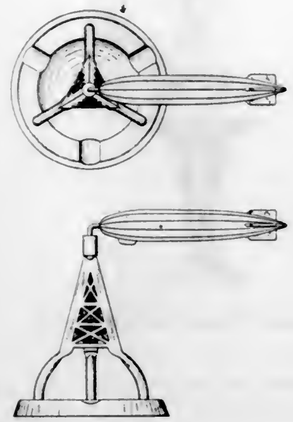
The ornamental design for a slipper as shown.

84,413. COMBINED THERMOMETER AND PAPER CLAMP. HUBERT E. GORSUCH, Springfield, Ohio. Filed Apr. 27, 1931. Serial No. 39,638. Term of patent 3½ years.



The ornamental design for a combined thermometer and paper clamp as shown.

84,414. DOLL. MARION GREENE, Montclair, N. J. Filed Aug. 30, 1930. Serial No. 36,828. Term of patent 14 years.

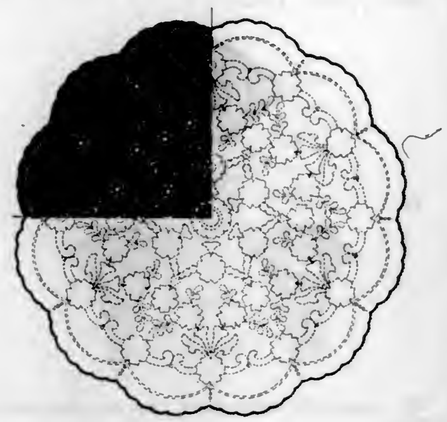


The ornamental design for a doll substantially as shown.

84,415. KNITTED FABRIC. MIRIAM GROSS, Milwaukee, Wis., assignor to Miriam Gross Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 28, 1931. Serial No. 38,881. Term of patent 7 years.

The ornamental design for knitted fabric as shown and described.

84,416. ASH TRAY. SILAS J. HUDSON and LAWRENCE M. GILLEY, Akron, Ohio. Filed Mar. 25, 1931. Serial No. 39,242. Term of patent 14 years.



The ornamental design for an ash tray as shown.

84,417. ASH RECEPTACLE. ERNEST W. HUTTIG, Denver, Colo., assignor to Coors Porcelain Company, Golden, Colorado, a Corporation of Colorado. Filed Mar. 7, 1931. Serial N. 38,990. Term of patent 3½ years.

The ornamental design for an ash receptacle as shown.

84,418. DOILY. EDWARD KARFIOL, Brooklyn, N. Y. Filed Apr. 3, 1931. Serial No. 39,355. Term of patent 14 years.

The ornamental design for a doily as shown and described.

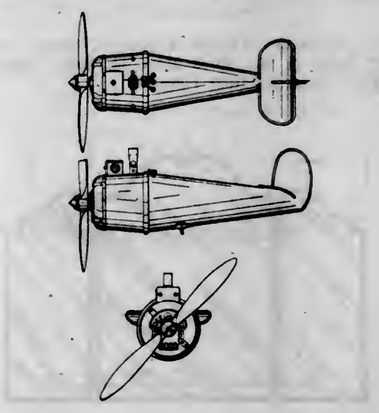
84,419. APPAREL BUCKLE. ALLEN H. KERNGOOD, Baltimore, Md., assignor to Alma Manufacturing Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed June 5, 1930. Serial No. 35,943. Term of patent 3½ years.

The ornamental design for an apparel buckle, as shown.

84,420. SHOE BUCKLE. CLIFFORD G. KING, Barrington, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Apr. 20, 1931. Serial No. 39,557. Term of patent 3½ years.

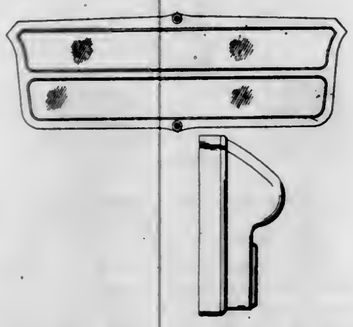
The ornamental design for a shoe buckle as shown.

84,421. SHOE BUCKLE. CLIFFORD G. KING, Barrington, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Apr. 20, 1931. Serial No. 39,558. Term of patent 3½ years.



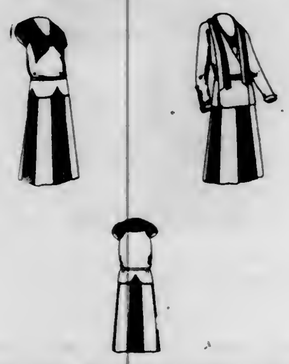
The ornamental design for a shoe buckle as shown.

84,422. LAMP BASE OR ARTICLE OF ANALOGOUS NATURE. MICHAEL KIWAD, New York, N. Y., assignor to La Belle Specialty Co., Inc., a Corporation of New York. Filed Apr. 14, 1931. Serial No. 39,475. Term of patent 3½ years.



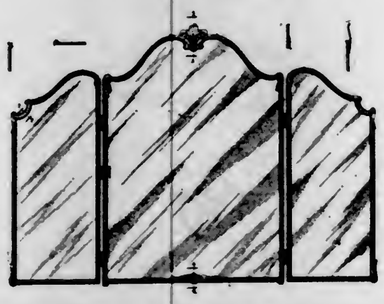
The ornamental design for a lamp base or article of analogous nature substantially as shown.

84,423. FAN. HARRY H. KNIGHT, Dallas, Tex., assignor to Dallas Engineering Corporation, Dallas, Tex., a Corporation of Texas. Filed Apr. 20, 1931. Serial No. 39,575. Term of patent 14 years.



The ornamental design for a fan, substantially as shown.

84,424. VEHICLE LAMP HOUSING. S H HUNTER KUENZEL, Kalamazoo, Mich., assignor to Checker Cab Manufacturing Corporation, Kalamazoo, Mich. Filed Jan. 15, 1931. Serial No. 38,314. Term of patent 7 years.

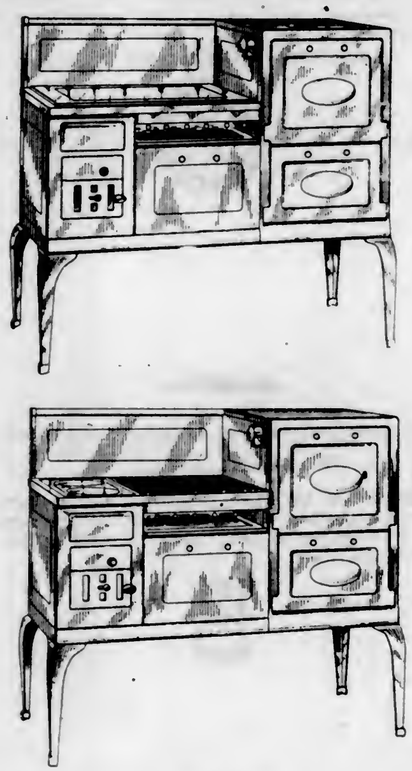


The ornamental design for a vehicle lamp housing as shown.

84,425. ENSEMBLE SUIT. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 2, 1931. Serial No. 38,903. Term of patent 3½ years.

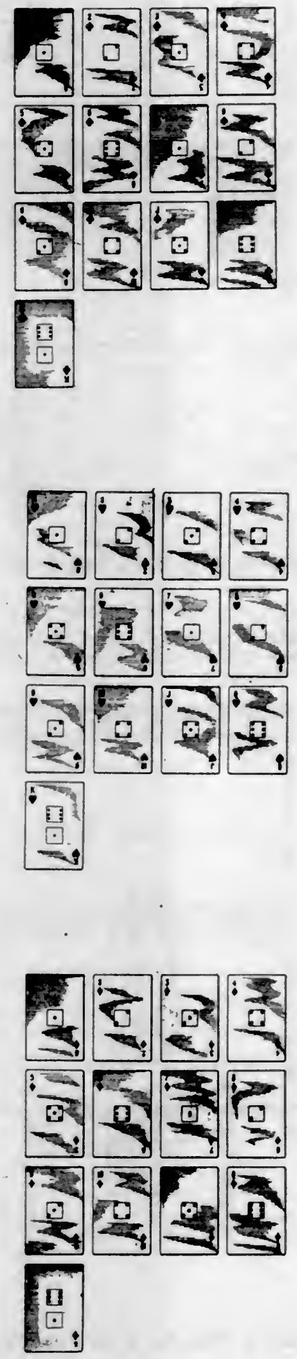
The ornamental design for an ensemble suit substantially as shown.

84,426. MIRROR. ADOLPH MARCHAND, Jackson Heights, New York, N. Y. Filed Mar. 30, 1931. Serial No. 39,298. Term of patent 7 years.



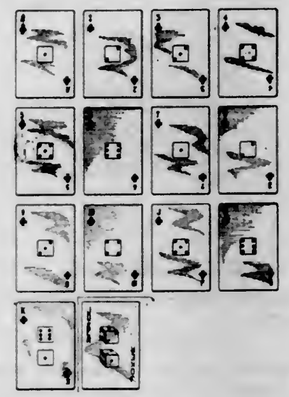
The ornamental design for a mirror, as shown.

84,427. RING. JOSEPH A. MEYERS and HENRY HEAD JOHNSON, Los Angeles, Calif., assignors to J. A. Meyers and Company, Inc., Los Angeles, Calif., a Corporation of California. Filed Mar. 1, 1930. Serial No. 34,711. Term of patent 14 years.



The ornamental design for a ring as shown and described.

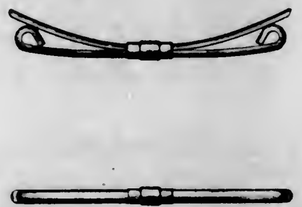
84,428. KITCHEN HEATER GAS RANGE. LEWIS MOORE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Mar. 23, 1931. Serial No. 39,206. Term of patent 8½ years.



The ornamental design for a kitchen heater gas range as shown.

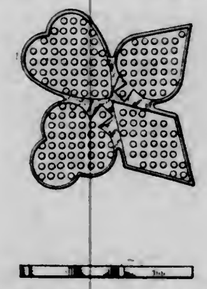
84,429. DECK OF PLAYING CARDS. WILLIAM L. MOORE, Jersey City, N. J. Filed Oct. 15, 1930. Serial No. 37,260. Term of patent 14 years.

84,429—Continued.



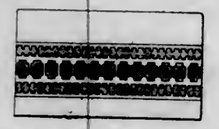
The ornamental design for a deck of playing cards as shown and described.

84,430. FRATERNAL BADGE. JAMES J. MURPHY, Washington, D. C. Filed Oct. 11, 1930. Serial No. 37,228. Term of patent 14 years.



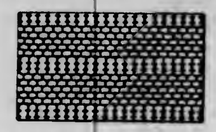
The ornamental design for a fraternal badge, as shown and described.

84,431. COLLAR FASTENER. MORRIS O. NOBBE, Newark, N. J., assignor to Krementz & Company, Newark, N. J. Filed Apr. 2, 1931. Serial No. 39,345. Term of patent 3½ years.



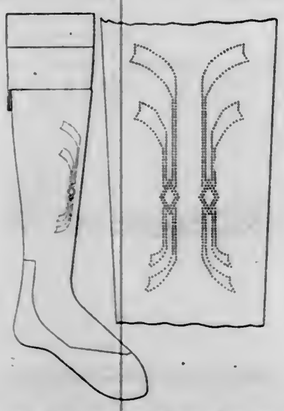
The ornamental design for a collar fastener, as shown.

84,432. BAKING UNIT OF A WAFFLE MOLD. KATHARINE H. OBER, Baltimore, Md. Filed May 16, 1930. Serial No. 35,673. Term of patent 14 years.



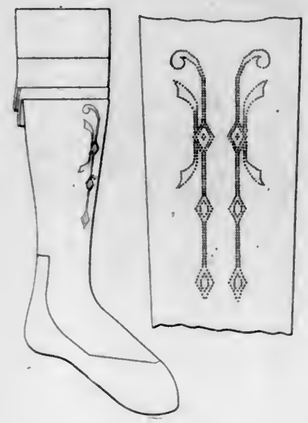
The ornamental design for a baking unit of a waffle mold, as shown.

84,433. KNITTED FABRIC. WILLIAM S. PARKER, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Feb. 13, 1930. Serial No. 34,526. Term of patent 3½ years.



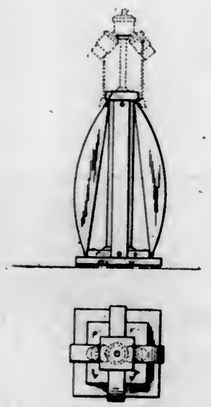
The ornamental design for a knitted fabric, as shown.

84,434. KNITTED FABRIC. WILLIAM S. PARKER, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Feb. 13, 1930. Serial No. 34,529. Term of patent 3½ years.



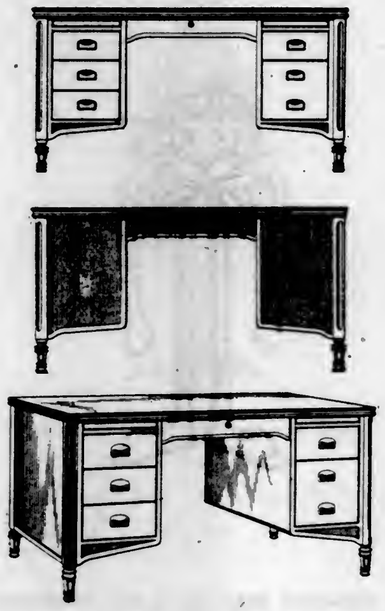
The ornamental design for a knitted fabric as shown.

84,435. STOCKING. HENRY PETERS, Clifton, N. J. Filed Mar. 13, 1931. Serial No. 39,065. Term of patent 14 years.



The ornamental design for a stocking as shown and described.

84,436. STOCKING. HENRY PETERS, Clifton, N. J. Filed Mar. 13, 1931. Serial No. 39,066. Term of patent 14 years.

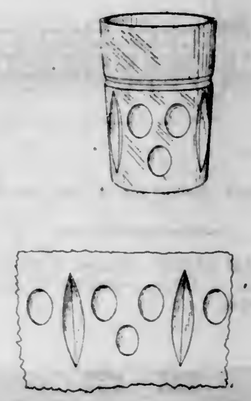


The ornamental design for a stocking as shown and described.

84,437. LAMP STAND. FRANKLIN B. PRICE, Newark, Ohio. Filed Mar. 19, 1931. Serial No. 39,162. Term of patent 3½ years.

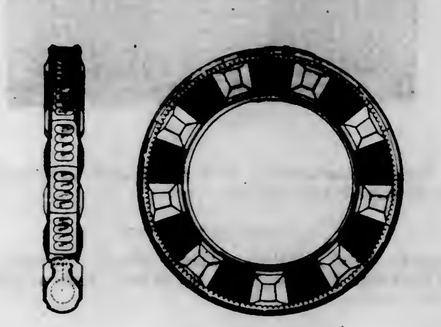
The ornamental design for a lamp stand as shown.

84,438. DESK. EDWARD A. PURNELL, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Mar. 19, 1931. Serial No. 39,163. Term of patent 14 years.



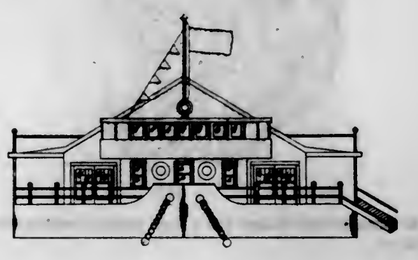
The ornamental design for a desk, as shown.

84,439. TABLE. EDWARD A. PURNELL, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Mar. 19, 1931. Serial No. 39,164. Term of patent 14 years.



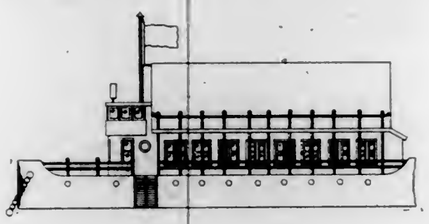
The ornamental design for a table, as shown.

84,440. GLASS TUMBLER OR SIMILAR ARTICLE. WILLIAM W. REESE, Washington, Pa., assignor to The Duncan & Miller Glass Company, Washington, Pa., a Corporation of Pennsylvania. Filed Apr. 3, 1931. Serial No. 39,356. Term of patent 7 years.



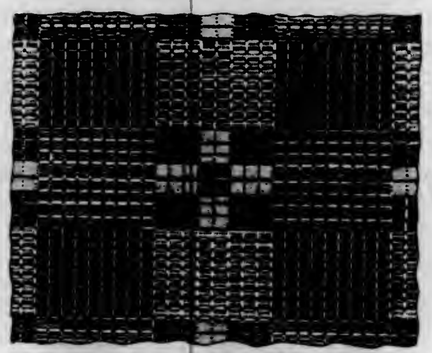
The ornamental design for a glass tumbler or similar article, as shown and described.

84,441. TIRE CASING. GEORGE REINHARDT, Pleasant Plains, Staten Island, N. Y. Filed Mar. 19, 1931. Serial No. 39,151. Term of patent 3½ years.



The ornamental design for a tire casing substantially as shown.

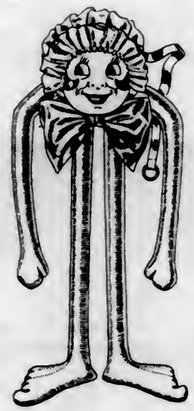
84,442. BOAT. EARL L. ROBERTS, Pittsfield, Mass. Filed Aug. 16, 1930. Serial No. 36,680. Term of patent 14 years.



84,442—Continued.

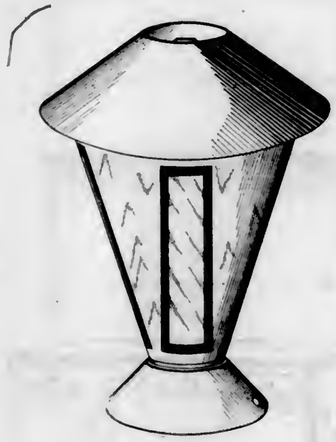
The ornamental design for a boat, as shown and described.

84,443. TEXTILE FABRIC. FRANK E. RUDD, Louisville, Ky. Filed Jan. 7, 1931. Serial No. 38,231. Term of patent 3½ years.



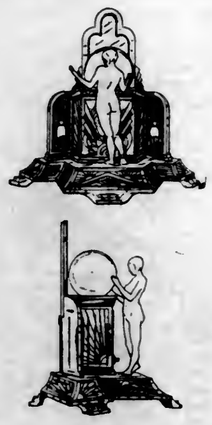
The ornamental design for a textile fabric substantially as illustrated and described.

84,444. TOY ANIMAL. ALBERT SÉROR, Chicago, Ill. Filed Mar. 5, 1931. Serial No. 38,935. Term of patent 3½ years.



The ornamental design for a toy animal, substantially as shown.

84,445. DOLL. ALBERT SÉROR, Chicago, Ill. Filed Mar. 5, 1931. Serial No. 38,936. Term of patent 3½ years.



The ornamental design for a doll, substantially as shown.

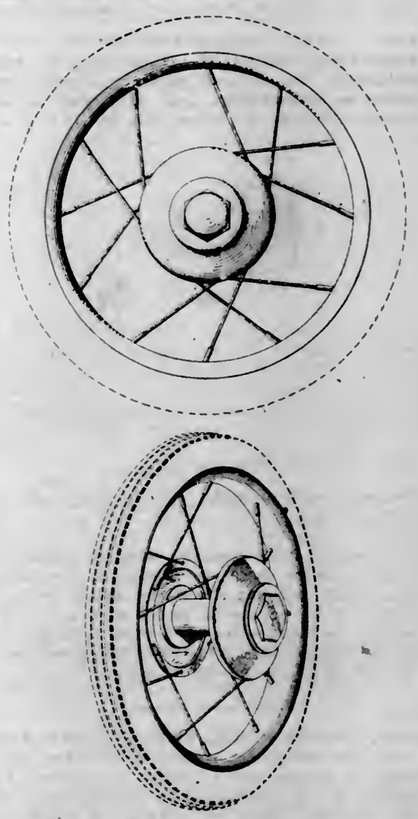
84,446. LAMP. FRANK K. SEYDLER, Urbana, Ill. Filed Nov. 21, 1930. Serial No. 37,740. Term of patent 3½ years.

The ornamental design for a lamp as shown and described.

84,447. LAMP. WILLIAM H. SHLESINGER, Brooklyn, N. Y. Filed Apr. 13, 1931. Serial No. 39,462. Term of patent 3½ years.

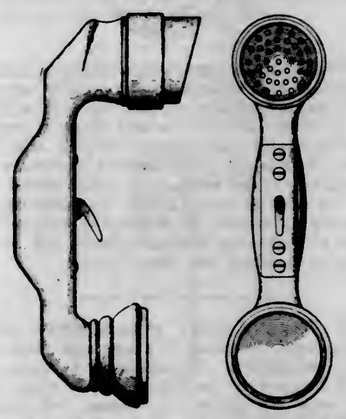
The ornamental design for a lamp as shown.

84,448. SHOE BUCKLE. WALTER EDWARD SMITH, Warwick Downs, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Mar. 11, 1931. Serial No. 39,035. Term of patent 7 years.



The ornamental design for a shoe buckle as shown.

84,449. ASH TRAY OR SIMILAR ARTICLE. ARTHUR VON FRANKENBERG, New York, N. Y., assignor to Frankart, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 9, 1930. Serial No. 37,207. Term of patent 7 years.

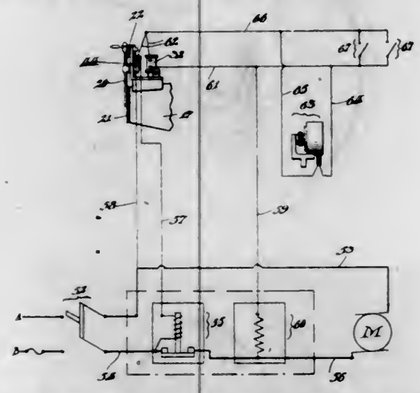


The ornamental design for an ash tray or similar article, substantially as shown and described.

84,450. WHEEL FOR JUVENILE VEHICLES. JOHN WEBER, Toledo, Ohio, assignor, by mesne assignments, to The American-National Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 20, 1930. Serial No. 34,187. Term of patent 14 years.

The ornamental design for a wheel for juvenile vehicles, substantially as shown and described.

84,451. CIGAR LIGHTER. WALTER M. WOLF, Chicago, Ill. Filed Feb. 20, 1931. Serial No. 38,749. Term of patent 14 years.



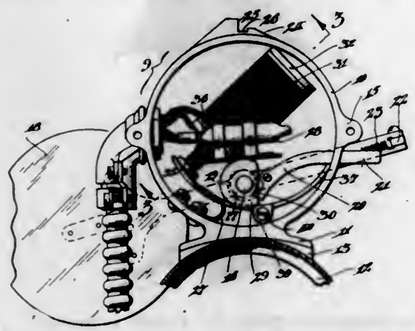
The ornamental design for cigar lighter, as shown.

PATENTS

GRANTED JUNE 16, 1931

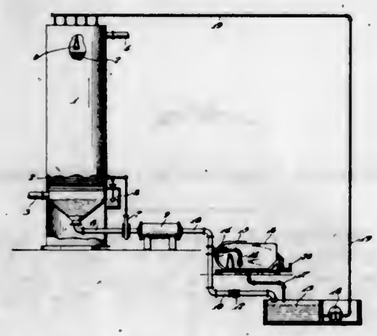
1,809,815. SAFETY DEVICE FOR MOTION PICTURE PROJECTING MACHINES. JOHN FRANCIS ADAMS, Philadelphia, Pa., assignor to Sentry Safety Control Corporation, Philadelphia, Pa. Filed Oct. 12, 1927. Serial No. 225,808. 6 Claims. (Cl. 88—17.)

3. In a device of the character described having a support and a dowser, means for making and breaking an electric circuit including a mercury switch having one end hinged to the support, a spring tending to hold the switch tilted in one direction at an angle to the horizontal, and means adapted to be actuated by the dowser for tilting the switch in the opposite direction.



1,809,816. CENTRIFUGAL SWITCH. JOHN FRANCIS ADAMS and THOMAS T. ALLEN, Philadelphia, Pa., assignors to Sentry Safety Control Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 13, 1927. Serial No. 239,622. 1 Claim. (Cl. 200—80.)

A centrifugal switch comprising a rotatable part, means for operatively connecting said part with a moving part of a machine, a rotatable contact ring, contacts having one end pivotally connected to said ring and electrically connected therewith, leaf springs engaging said contacts and urging the free end thereof inward, stationary contact plates adapted to be engaged by said pivotal contact through the urge of said springs, and eccentric means for adjusting the tension on said leaf springs to regulate the speed at which the pivotal contacts will be thrown outwardly to disengage the contact plates.

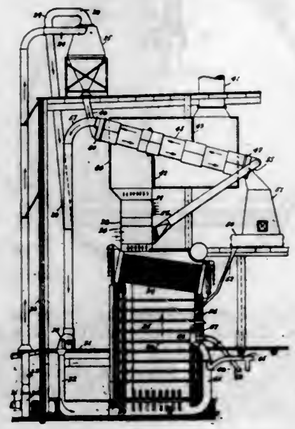


1,809,817. SAFETY UNIT FOR MOTION PICTURE PROJECTORS. THOMAS T. ALLEN and JOHN FRANCIS ADAMS, Philadelphia, Pa., assignors to Sentry Safety Control Corporation, Philadelphia, Pa. Filed Sept. 23, 1927. Serial No. 221,491. 6 Claims. (Cl. 88—17.)

1. In combination with a motion picture projecting machine and its motor, a control apparatus including a safety device having a dowser, a switch and an electro-magnet; a relay connected in series with the motor and having its winding connected in series with the switch

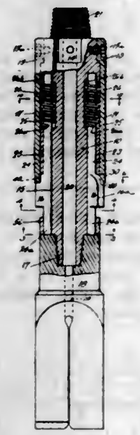
and in parallel with the motor; film actuated switches connected in parallel with the electro-magnet; and a centrifugal switch connected in parallel with the electro-magnet and film actuated switches.

1,809,818. GAS PURIFICATION PROCESS AND APPARATUS. GILBERT A. BRAGG, Pittsburgh, Pa., assignor to The Koppers Company, a Corporation of Delaware. Filed Dec. 31, 1927. Serial No. 243,856. 8 Claims. (Cl. 23—225.)



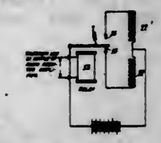
1. A process of purifying a gas from a sulphur impurity which comprises treating the flowing gas with a liquid capable of absorbing said impurity therefrom and of being actified with conversion of said impurity to free sulphur, removing the thereby fouled liquid, recirculating a portion of said liquid over the gas without actification, actifying the remaining portion and recirculating it over the gas.

1,809,819. WASTE FUEL-MAKING METHOD AND APPARATUS. RAYMOND B. CALLER, Scarsdale, N. Y. Filed Mar. 25, 1927. Serial No. 178,398. 11 Claims. (Cl. 110—7.)



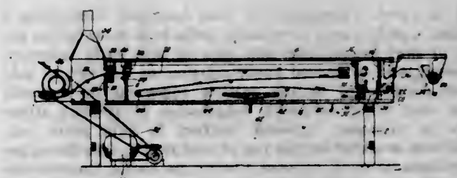
1. In combination, a disintegrator; a collector; a furnace having a draft pit; means for drawing fumes and material from the disintegrator and delivering them to the collector; means including a fan having cold fume and hot fume chambers drawing air and fumes from the collector and delivering them to the furnace through

said cold fume chamber of the fan; a flue extending upwardly from the furnace; a drier chamber receiving hot gases from the flue and provided with a stack; an inclined continuously rotary cylindrical drier passing through said chamber; a conveyor pipe from the collector to the upper end of the drier; a stoker receiving material from the lower end of the drier and delivering



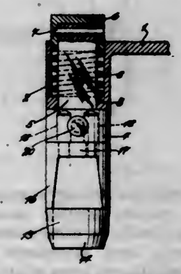
fuel to the furnace; an economizer conduit passing through the flue receiving and preheating exterior air, and extending to the lower end of the drier; a hot garbage fume pipe from the upper end of the drier to the intake of the hot fume chamber of the fan, said chamber discharging into said draft pit; and an emergency feeder for discharging pulverized coal into the furnace and air to the draft pit.

1,809,820. ROTARY UNDERREAMER. STEWART L. CAMPBELL, Berkeley, Calif., assignor to John Grant, Los Angeles, Calif. Filed Dec. 3, 1927. Serial No. 237,358. 6 Claims. (Cl. 255—76.)



1. In an expansive tool of the character described, the combination of a body adapted to be passed through a well pipe, a horizontally swinging cutter element mounted on a vertical axis eccentric of the body axis and adapted to swing outwardly to a position where its outer part is projected beyond the body and beyond the interior diameter of the well pipe through which the tool has passed, means limiting movement of the cutter element to a position where its projecting part is non-radial to the body axis, and the upper corner of the projected cutter part being beveled to a surface having, in a cylindric surface of a diameter substantially equal to the inner diameter of said well pipe, horizontal contours which are successively, in downward progression as the cutter swings inwardly, substantially concentric with the body axis.

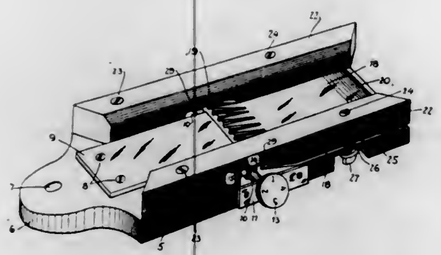
1,809,821. RECORDING APPARATUS FOR WIRE AND WIRELESS TELEGRAPHY. HENRI CHIRIX, Paris, France, assignor to Societe Francaise Radio Electrique, Paris, France, a Joint-Stock Company of France. Filed Apr. 12, 1928, Serial No. 269,339, and in France Apr. 14, 1927. 7 Claims. (Cl. 178—89.)



1. Recorder apparatus of the class described comprising a plunger electro-magnet adapted to directly push the paper tape against the inking means, and a pair of coil windings associated with said plunger, one of said windings being energized by the received signals, and the other of which being energized during the spacing or silent periods.

1,809,822. DEVELOPING APPARATUS. RICHARD FRED ALLIN, New York, N. Y., assignor to Eugene Dietzgen Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 26, 1927. Serial No. 228,719. 10 Claims. (Cl. 95—94.)

1. In a device of the class described, the combination of a cabinet having a developing chamber, means for providing said chamber with developing gas, an airing chamber located adjacent said developing chamber, said developing chamber and said airing chamber having communicating openings for the passage of light-sensitive sheet material therethrough, means for feeding said material uninterruptedly through said chambers in sequence, and means associated with the openings for said chambers for preventing the escape of gases therethrough while permitting the passage of the material.

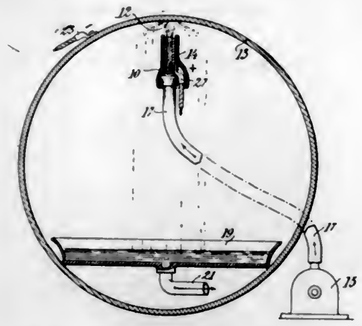


1,809,823. CUTTING OR ORNAMENTING DIE. ARTHUR W. ALTVATER, St. Louis County, Mo. Filed Jan. 30, 1929. Serial No. 336,122. 3 Claims. (Cl. 279—97.)

1. A device of the character described comprising a die holder having therein a socket extending transversely and

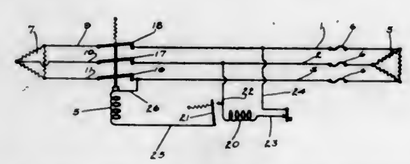
a pair of spaced sockets extending transversely of the plane of said first socket and opening into opposite sides of said first socket, a die, an abutment on the upper end of said die abutting rigidly against the lower end of said die holder, projections rigid with and extending beyond said abutment and into said second sockets and having notches in their adjacent sides matching the wall of said first socket, and a device mounted in said first socket and having a circumferential part engaged in said notches and thereby supporting said die in position in which said abutment bears against the lower end of said die holder.

1,809,824. POTATO-CHIPPER. JULIEN BADER, New York, N. Y. Filed Sept. 8, 1928. Serial No. 304,630. 4 Claims. (Cl. 146—171.)



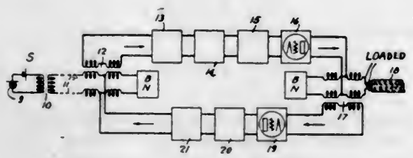
1. A potato chipper of the kind described, comprising a frame, a plate and a detachable knife both mounted on the top of said frame, with one edge of said knife adjacent, opposed, and in spaced apart relation to one end of said plate, said knife having cutting edges on its opposite ends and being reversible lengthwise to present either edge in adjacent, opposed relation to said plate end, side rails mounted on the top of said frame, near the opposite edges thereof, pivoted thereto to swing transversely thereover and over said knife in a plane parallel to the plane of the top of said frame, and means to clamp the swingable ends of said side rails upon said knife, to detachably and reversibly retain said knife in operative relation to said frame and said plate end.

1,809,825. SAFETY CRACKER. HAROLD S. BARNES, Allentown, Pa. Filed Dec. 6, 1930. Serial No. 500,589. 3 Claims. (Cl. 102—22.)



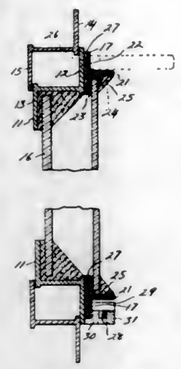
1. A safety cracker comprising a casing having compartments formed therein, sealing means intermediate said compartments normally to isolate the same from each other, and individually inert substances confined in said compartments, said substances being adapted, when allowed to commingle, to generate a gas which will burst said casing.

1,809,826. PROCESS OF ELECTRODEPOSITING CHROMIUM. WALTER S. BOHLMAN, Atlantic City, N. J., assignor to Chromium Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Sept. 6, 1927. Serial No. 217,597. 3 Claims. (Cl. 204—1.)



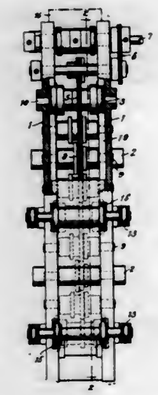
1. A method of electrodepositing chromium comprising projecting a chromic acid-acid radical plating solution against a surface in the form of a free jet, and passing a current through said jet largely in excess of the current required for normal depositions on an area corresponding to the cross-sectional area of said jet.

1,809,827. MOTOR PROTECTION DEVICE. GEORGE D. BOWER, Columbia Heights, Minn., assignor, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a Corporation of Delaware. Filed Oct. 15, 1927. Serial No. 226,403. 6 Claims. (Cl. 175—294.)



3. A three phase line, a main switch including an operating coil, a second coil connected across two of the phases, a second switch connecting the coil of the main line switch across the third phase, said second coil when energized controlling the second switch to connect the two coils in series with the remaining phase.

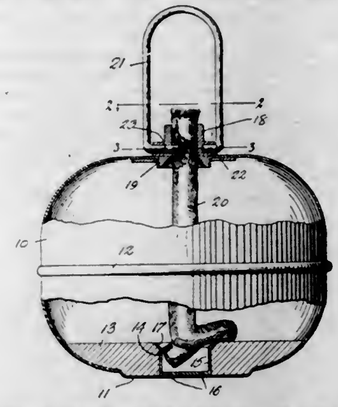
1,809,828. TELEPHONE TRANSMISSION. OLIVER E. BUCKLEY, Maplewood, and RALPH V. L. HARTLEY, South Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 21, 1929. Serial No. 341,623. 11 Claims. (Cl. 178—44.)



1. A method of telephone transmission over a system comprising a land line and a submarine cable characterized in this that the lower frequencies of the speech currents received from the land line are suppressed before transmission over the cable.

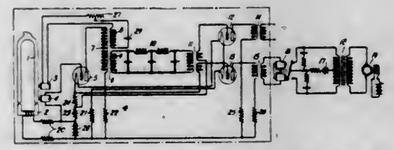
1,809,829. STORM SASH. CECIL F. CHARLTON, Birmingham, Mich. Filed Jan. 14, 1929. Serial No. 332,467. 2 Claims. (Cl. 189—64.)

1. The combination with a metal sash, of a storm sash having a frame formed of sheet metal shaped to provide in cross section an angular rib with inwardly and outwardly extending peripheral flanges, means for securing a glass sheet against said inwardly extending flange and means passing through said outwardly extending flange for securing said storm sash to said metal sash.



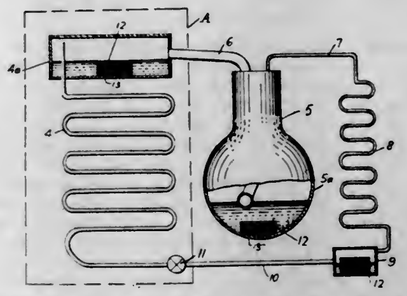
1,809,830. CONVEYER. HENRY Z. COBB, Providence, R. I., assignor to Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Filed May 1, 1929. Serial No. 359,444. 3 Claims. (Cl. 198—127.)

1. A conveyer for photographic films and the like comprising a frame, a series of driving members rotatably mounted in the frame, driven members mounted for rotation in the frame, there being driven members on opposite sides of each of the driving members, means on each of the members for gripping the margins of a film, and mechanism for operating the driving members.



1,809,831. LAMP. ROBERT A. CURRIE, Syracuse, N. Y., assignor to R. E. Dietz Company, New York, N. Y. Filed Mar. 12, 1929. Serial No. 346,429. 7 Claims. (Cl. 67—55.)

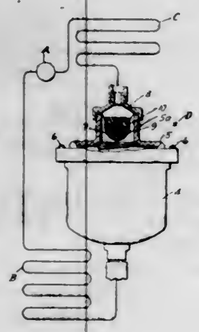
7. In a lamp, the combination of a body, a wick tube thereon, a wick passing through said tube, a bail having inwardly extending ends pivoted in holes in said wick tube, one of said ends being adapted to extend through the wall of the wick tube into engagement with the wick for holding the wick in place in the wick tube, and a part on said wick tube adapted when said bail is swung



on its pivot to engage the bail and shift said wick-holding pivot out of engagement with the wick to permit movement of the wick in the wick tube.

1,809,832. SYNCHRONOUS DRIVING SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1927. Serial No. 237,346. 9 Claims. (Cl. 178—44.)

4. A source of waves of unsymmetrical form, a relay operated by waves from said source and having contacts associated with a source of direct current, an inductive circuit comprising a magnetic core arranged to control the output current intensity to be supplied with current pulses of alternately opposite polarity from said source of current by said relay, and a selective circuit inserted between said source of waves and said relay whereby said waves are made symmetrical.

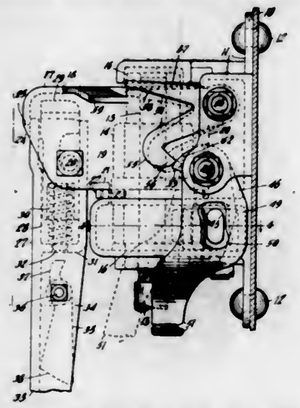


1,809,833. METHOD OF AND MEANS FOR STABILIZING REFRIGERANTS. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed June 17, 1926. Serial No. 116,512. 18 Claims. (Cl. 62—178.)

1. In a heat transforming system involving the change of state of a liquid capable of reacting with water, the

method of inhibiting said reaction which consists in repeatedly bringing said liquid into contact wth a substance adapted to supply hydroxyl ions thereto.

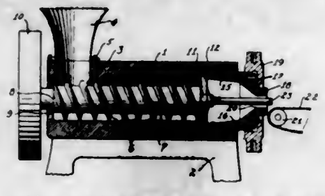
1,809,834. METHOD AND MEANS FOR STABILIZING THE ATMOSPHERE OF REFRIGERATING SYSTEMS. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Penumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 25, 1927. Serial No. 178,169. 5 Claims. (Cl. 62—115.)



1. The method of stabilizing the atmosphere contained in a refrigerating system of the closed cycle type which comprises continuously acting upon said atmosphere in the highest pressure lowest temperature part of the system to remove any active oxidizing components of said atmosphere.

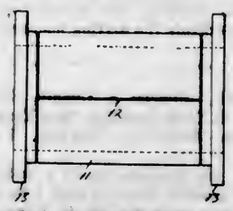
1,809,835. REFINING LEAD. PHILIP W. DAVIS, Cambridge, Mass. Filed Jan. 30, 1926, Serial No. 85,031. Renewed Oct. 30, 1930. 7 Claims. (Cl. 75—15.)

1. The method of refining scrap storage battery plates which consists in introducing the scrap material into a furnace, heating the material in the furnace whereby the lead alloy and the lead oxides contained in the battery plates are melted in intimate contact with each other in small masses, and flow downward into the bottom of the furnace, continuing this heating process until a body of refined lead containing but a small percentage of antimony is collected, drawing off such purified lead thus recovered, introducing reducing material into the furnace, heating the contents to smelt the lead and antimony content of the lead oxides into a lead-antimony alloy comparatively high in antimony, and in drawing off the lead-antimony alloy thus produced.



1,809,836. HAND BRAKE. GEORGE F. ENDICOTT, St. Paul, Minn., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 31, 1927. Serial No. 179,777. 7 Claims. (Cl. 74—116.)

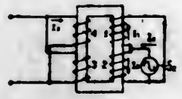
1. In a hand brake, the combination with a member adapted to be rotated to effect tightening of a brake chain; of a ratchet wheel connected thereto and rotatable therewith; operating mechanism having actuating means engageable with said member normally to effect movement of the member and the wheel in unison therewith when moved in one direction and permitting relative movement with reference to said member when moved in a reverse direction; a releasable locking element for preventing reverse rotation of said ratchet wheel; means for latching said element in disengaged position when moved in a releasing direction; means for locking the actuating means of said operating mechanism to effect movement of said member in unison therewith in said reverse direction to effect unwinding of the brake chain; and means operable



through movement of said operating mechanism in said first named direction for actuating said latching means to unlatch said locking element to render the same operative with respect to said ratchet wheel.

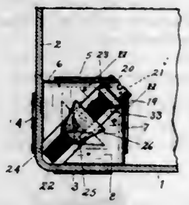
1,809,837. TUBING MACHINE. ELLIOTT S. EWART, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Oct. 8, 1926. Serial No. 140,350. 4 Claims. (Cl. 18—14.)

2. In a tubing machine, an elongated die chamber having at the outlet end a discharging orifice and at the inlet end a core supporting spider, the walls of the chamber tapering gradually from said chamber for a portion of the length of the chamber and then converging abruptly on said discharge orifice, and a core supported by said spider and extending therefrom axially through said chamber and said orifice, the arms of said spider being axially inclined and tangential to said core, in combination with means for continuously forcing plastic stock between the arms and through said orifice.



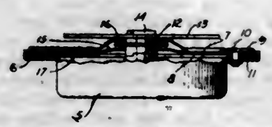
1,809,838. METHOD OF MANUFACTURING BEARINGS. WILLIAM J. FISORL and FREDERICK C. JONES, Detroit, Mich., assignors to Bohn Aluminum and Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 8, 1928. Serial No. 244,287. 5 Claims. (Cl. 29—149.5.)

1. In the method of manufacturing backs for flanged half bearings, those steps which consist in shaping a flat



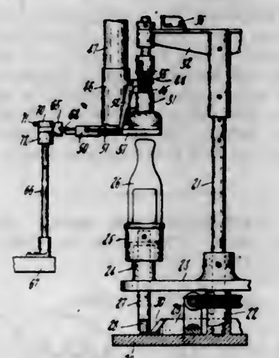
sheet by forming operations to produce a tubular body, preforming by suitable operations a flange member having a laterally extending base of a diameter substantially coincident with that of said tubular body, connecting said parts by means which results in a fusion or integration of the material thereof and longitudinally severing the structure into halves.

1,809,839. TRANSFORMER AND TRANSFORMER SYSTEM. FRANK E. FIELD, Somerville, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 19, 1925. Serial No. 38,124. 7 Claims. (Cl. 178—44.)



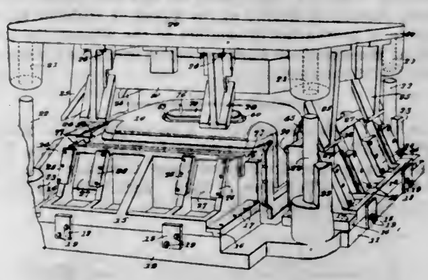
3. In a simplexed transmission system, a pair of line wires, a transformer having a pair of balanced windings connected in series, inductively aiding between said line wires, a tap at the common connection of said windings, a third path connected to said tap and constituting a return circuit for waves superimposed upon said line wires in parallel, and means for reducing the impedance of said transformer to superimposed currents, said means comprising a short-circuited path inductively coupled to said balanced windings.

1,809,840. OUTLET BOX CONNECTER. JAMES M. G FULLMAN, Sewickley, Pa., assignor to National Electric Products Corporation, a Corporation of Delaware. Filed Apr. 18, 1930. Serial No. 445,349. 4 Claims. (Cl. 247—25.)



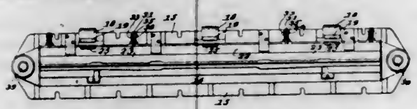
1. The combination of an outlet-box for electrical conductors having a bottom-wall and a side-wall, of a partition fixed to and projecting inwardly and upwardly from said walls, an opening through each wall located at one side of said partition, a screw rotatably retained within said outlet-box, said screw being inclined inwardly and upwardly from the line of intersection of said walls, and a clamping-member mounted upon and in threaded engagement with said screw, whereby by turning said screw the said clamping-member is caused to travel thereon and to engage a conductor inserted through either of said wall-openings and bind it laterally against said partition.

1,809,841. IMPULSE TRANSMITTER. HAROLD W. GOFF, Great Neck, and OSCAR F. FORSBERG, Yonkers, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 29, 1929. Serial No. 350,931. 4 Claims. (Cl. 179—90.)



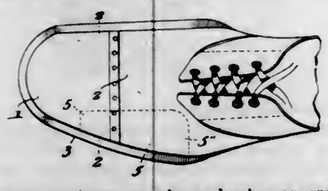
2. In combination with an impulse transmitting mechanism, a number plate, a receptacle for housing said mechanism and provided with a flange for mounting said number plate and a water shield comprising two discs interposed between said receptacle flange and said number plate and having skirted ends to form a reservoir, said discs cooperating to form a duct to permit water accumulated in said reservoir to flow therefrom.

1,809,842. BOTTLE CAPPING MECHANISM. CARL W. GOODWIN, Natick, Mass., assignor, by mesne assignments, to American Seal-Kap Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed May 29, 1928. Serial No. 281,505. 10 Claims. (Cl. 226—92.)



1. Mechanism of the class described, comprising a traveling support for a milk bottle, means traveling with said support for capping the bottle during its travel, spring actuated means secured to said capping means for feeding a cap to said capping means, a trigger normally holding said means ready for feeding motion, and a stationary tripping device engaged by said trigger at a predetermined point in the travel of said support to release said capping means for feeding motion.

1,809,843. APPARATUS FOR TRIMMING BODY PANELS. OTTO J. GROEHN, Grosse Pointe Park, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 16, 1928. Serial No. 319,987. 12 Claims. (Cl. 164—29.)

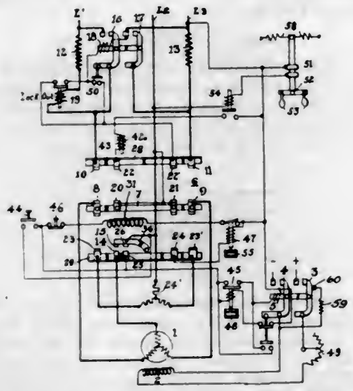


1. In a machine for trimming a back panel for an automobile body having back, top and quarter portions, the combination of a base having a die portion projecting upwardly therefrom adapted to receive said panel, an upper die member movable toward and away from the base, a presser foot yieldingly mounted upon said upper die member and arranged to engage and hold the panel positioned upon the die portion of said base, a plurality of slides movably mounted upon said base, a knife mounted on each slide, and a cam mounted on said upper die member adapted to engage and move said slides to trim the top and quarter portions of said panel along a substantially continuous line.

1,809,844. APPARATUS FOR SHAPING SHEET METAL. OTTO J. GROEHN, Grosse Pointe Park, and LAWRENCE S. LAMB, Grosse Pointe, Mich., assignors to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Dec. 28, 1927, Serial No. 243,030. Patent No. 1,708,615, dated Apr. 9, 1929. Divided and this application filed Feb. 8, 1929. Serial No. 338,467. 4 Claims. (Cl. 153—13.)

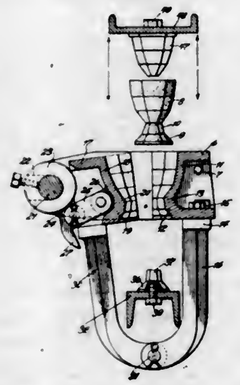
1. In an apparatus for shaping sheet metal previously folded with an offset flange, the combination of a member for supporting the body of the metal sheet with the flange overhanging and normally resting thereagainst, a lower die movable under a portion of the body of the metal sheet to bring one side thereof against said flange and hold it against said member, and an upper die movable to shape said portion over said lower die and against another side thereof.

1,809,845. SIDE GUARD FOR SHOES. EDWARD HAAS, Houghton, Mich. Filed Mar. 11, 1930. Serial No. 434,906. 1 Claim. (Cl. 36—77.)



A shoe for workmen or miners, having an ordinary cap or box which protects the larger toes and the great toe and provided, in addition thereto, with a separate guard or stiffener which is located beneath the ordinary toe cap and over the lining and which comprises a suitably thick, yet bendable piece of material affording requisite stiffness and protection, with flexibility, said separate guard or stiffener extending in the direction of the length of the shoe and over the region of the vamp occupied by the smaller toes of the wearer of the shoe and past and beyond the rear edges of the ordinary top cap and also extending into the general central or median region of the vamp, the forward and rearward edges of said guard or stiffener being free to permit rocking or flexing of the guard or stiffener for the purpose of preventing discomfort to the wearer, the lower edge of the guard or stiffener being located adjacent the sole part of the shoe.

1,809,846. AIR RECEIVING AND DIRECTING MEANS FOR ROTARY FANS. LUCIEN L. HAAS, Buffalo, N. Y., assignor to Buffalo Pressed Steel Company, Inc., Buffalo, N. Y. Filed June 7, 1926. Serial No. 114,272. 7 Claims. (Cl. 230—240.)

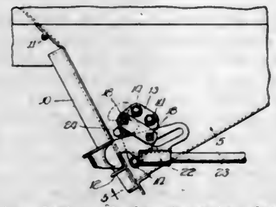


1. An air receiving device adapted for use in connection with a rotary fan having pitched blades, said device having an L-shaped flaring mouth, one arm of which extends partly in rear of a portion of the path of movement of the fan blades and the other arm beyond an arc of the path of movement of the peripheral portions of said blades, said device converging to a reduced neck portion so as to bring together various currents of air discharged by said fan.

1,809,847. CONTROL SYSTEM FOR ELECTRIC MOTORS. JAY H. HALL, Cleveland Heights, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 28, 1926. Serial No. 84,290. 11 Claims. (Cl. 172—179.)

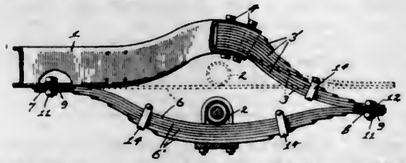
1. In a controller for synchronous motors, a source of alternating current supply, a source of direct current supply, a braking circuit, electro-responsive means for effecting the connection of the motor armature to the source of alternating current supply and for subsequently effecting the connection of the motor field to the source of direct current supply when the motor has accelerated to approximately synchronous speed, means operated by the said electro-responsive means for setting up a bias for disconnecting the armature from the alternating current source of supply and connecting it to the braking circuit, a safety switch, and means depending upon current flowing in the safety switch for preventing the bias from becoming effective for the purpose described.

1,809,848. MACHINE FOR FORMING PASTRY CUPS. ERNEST HAMWI, St. Louis, Mo. Filed Mar. 24, 1930. Serial No. 438,373. 19 Claims. (Cl. 107—66.)



1. A machine of the character described, comprising two side members having opposite recesses in their adjacent sides forming mold cavities, means for supporting one of said side members in a stationary position while the other side member is moved, a rock shaft, connections from said rock shaft for moving said other side member from sidewise abutting contact with the stationary side member to release the articles from the mold cavities, cores projecting upwardly into the lower ends of the mold cavities and spaced from the walls thereof, and cores projecting downwardly into the upper ends of the mold cavities and spaced from the walls thereof and having their lower ends spaced upwardly from said first named cores.

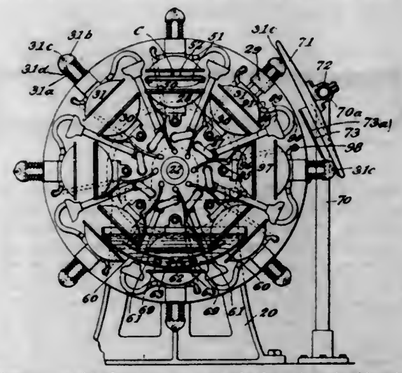
1,809,849. SHUTTLE TENSION. ALEXANDER HANNAH, Paterson, N. J. Filed June 6, 1930. Serial No. 459,517. 9 Claims. (Cl. 139—217.)



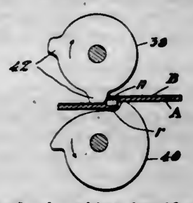
1. In combination, a shuttle having a filling guiding means, and a filling control device exerting a slip-grip on the filling and guided by the shuttle for back and forth movement in a substantially straight line and toward and from said means and normally urged from the same, said slip-grip representing a force against slippage of the filling relatively to said device exceeding that of the force urging said device from said means.

1,809,850. LATCH FOR DUMP CAR DOORS. WILLIAM J. HOSCEIT, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 8, 1930. Serial No. 480,401. 3 Claims. (Cl. 105—308.)

1. A latching device of the character described comprising a pivot, a latching dog, having a door engaging portion, and an angular slot therethrough, said pivot being positioned through said slot for mounting said latching dog and forming a pivot therefor in either end of said angular slot, and means for manipulating said latching dog in either clockwise or counter clockwise directions.



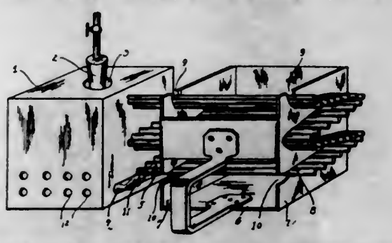
1,809,851. AUTOMOBILE SPRING. ULYSSES A. INMAN, Long Beach, Calif. Filed May 26, 1928. Serial No. 280,866. 10 Claims. (Cl. 267—45.)



1. A spring suspension for automobiles comprising a quarter spring rigidly secured to the frame of an automobile and extending longitudinally therefrom; and a main spring rigidly secured at one end to the frame and rigidly secured at the opposite end to the outwardly extending end of the quarter spring, the flexing of the main spring being controlled at both ends by positive contacting engagement with the adjacent surfaces of the frame and quarter spring.

1,809,852. SUCTION PLATE MACHINE. WILLIAM C. JAY, Philadelphia, Pa., assignor to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed May 29, 1930. Serial No. 456,846. 20 Claims. (Cl. 92—56.)

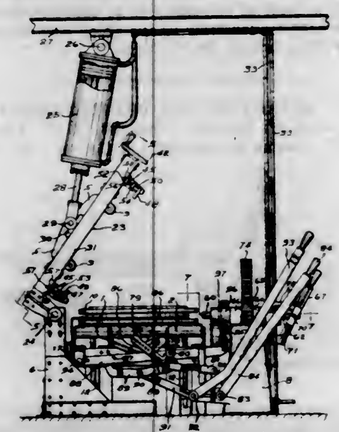
1. In a machine for forming articles from pulp, in combination, a pair of complementary foraminous formers, means for supplying pulp to said formers, means for causing said formers to travel as a unit toward and away from said pulp supplying means, means for moving said formers toward and away from one another during their travel as a unit, means for applying suction and compression to said formers respectively at suitably timed intervals during their travel, and a conveyor located adjacent the path of travel of said formers and between the same when separated to receive the completed articles therefrom.



1,809,853. ART OF BOX MAKING. CUTLER D. KNOWLTON, Beverly, Mass., assignor to Hoague-Sprague Corporation, Lynn, Mass., a Corporation of Massachusetts. Filed Aug. 29, 1927. Serial No. 216,220. 26 Claims. (Cl. 93—36.)

16. The method of making box-blanks which consists in cutting a sheet of box-material at opposite sides along lines separated transversely of the sheet, and dividing the sheet in a plane joining the cut lines.

1,809,854. APPARATUS FOR SHAPING GLASS RODS. EUSTACHIUS W. KOERING, Vineland, N. J. Filed June 14, 1927. Serial No. 198,727. 5 Claims. (Cl. 49—7.)



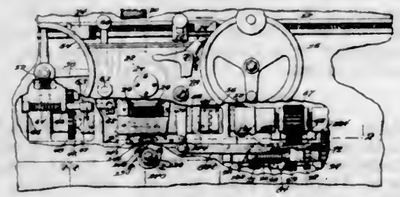
4. Apparatus for heating glass rods of large diameter without setting up disruptive strains therein, comprising a furnace having an opening in one side thereof for the exit of heat, and a rack for supporting said rods with the portion thereof to be heated adjacent the furnace, said rack having a guideway therein for permitting the rods to pass by gravity from a position remote from the furnace opening to a position opposite thereto and means associated with said furnace for directing the heat on desired portions of said rods.

1,809,855. LEVELING INSTRUMENT. ADOLPH LANGSNER, Chicago, Ill., assignor to Eugene Dietzen Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 20, 1928. Serial No. 255,635. 1 Claim. (Cl. 88—2.4.)

A hand level of the class described including a tubular casing, a second casing telescopically arranged within the first casing, manually operable means for pressing the first casing into engagement with the peripheral surface of the second casing for securing said parts in various positions of adjustment, a lens mounted at one extremity of the first mentioned casing, a second lens spaced from the first mentioned lens and movable with the second casing, an angularly disposed reflector positioned between said lenses, said first mentioned casing having an aperture positioned immediately above said reflector, an apertured frame positioned above said aperture, a plurality of stadia wires arranged in predetermined spaced relation and extending across the aperture of said frame, a housing detachably mounted upon the upper surface of said first tubular casing, a single screw extending through one extremity of said housing and providing the sole adjustable support for said apertured frame, a spirit level vial mounted in a fixed position within said housing immediately above the aperture of the frame, said spirit level vial having an indicator line provided thereon which is cooperatively positioned with respect to the stadia wires carried by the frame, and means within said first tubular casing for supporting the reflector in proper reflecting position.

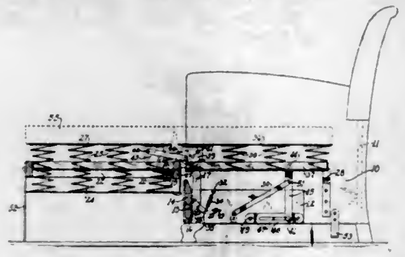
1,809,856. TIRE MOLD SERVICING MACHINE. PAUL W. LEHMAN, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1929. Serial No. 383,969. 9 Claims. (Cl. 18—2.)

9. A tire mold servicing machine which comprises a support adapted to receive a tire mold, a plurality of wedge shaped centering members movable upwardly through the support to engage the lower half of the mold and hold it in predetermined position, a bridge member pivoted at one side of the support, means to raise and lower the bridge member, the bridge member when in lowered position extending diametrically across the top of a mold positioned on the support, adjustable fingers carried by the bridge member and movable into gripping position beneath the flange of the upper mold half, a wedge cam carried on the end of a shaft mounted at one side of the support, said shaft being horizontally movable to position the wedge cam between the flanges of the mold, means to rotate said shaft and wedge cam to separate the mold halves, means engaging the upper side of the bead ring of the tire to retain the tire in the lower half of the mold as the mold halves are separated and a pair of members engaging the lower side of the bead ring at substantially diametrically opposite points to strip the tire from the mold after the upper mold half has been raised by the bridge member.



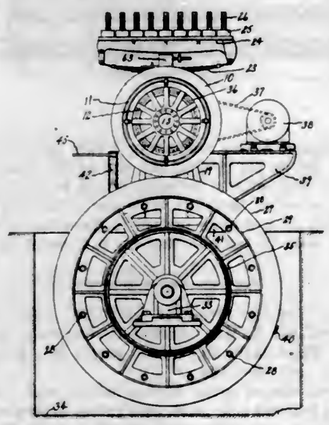
1,809,857. DOOR CONSTRUCTION. HARVEY J. LOUNSBURY, Glenn Ellyn, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 10, 1928. Serial No. 311,521. 2 Claims. (Cl. 189—46.)

1. In a door for railway cars, the combination with top and bottom channel-shaped beam members; of a beam of H-shape cross section forming one of the side edges of the door, the web of said H-beam being disposed at right angles to the plane of the door, one of the flanges of each of said channel beams at the same side of the door being secured to the flange of the H-beam at the corresponding side of the door; and sheet metal panel means forming the main body portion of the door, the top and bottom edges of said panel being secured to the remaining flanges of said channel members, and the edge section of said sheet metal panel means at said H-beam being turned inwardly at an angle to the main body of the panel and secured to the web of the H-beam.



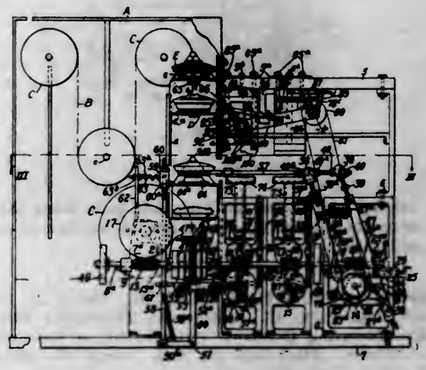
2. A door construction for railway cars including: a pair of doors hinged at their outer edges, the inner edge of each door being reinforced by a vertically disposed H-beam having the web thereof disposed at right angles to the plane of the door and the flanges thereof disposed in planes parallel to the plane of said door, said H-beam being fixed to the door proper, the H-beam of each door having a combined stop and sealing strip secured thereto, said sealing strips being disposed respectively on the inner and outer sides of the doors, the strip of each door being secured to the inner face of the flange of the H-beam at the corresponding side of the door and having an offset portion overlapping the outer face of the flange at the same side of the other door.

1,809,858. MACHINE TOOL. HAROLD E. MARTIN, North Providence, R. I., assignor to Brown and Sharpe Manufacturing Company, a Corporation of Rhode Island. Filed June 21, 1928. Serial No. 287,135. 14 Claims. (Cl. 74—98.)



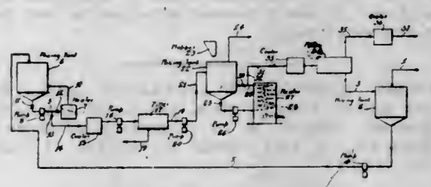
1. In a machine tool the combination with a stationary bed and a movable table of means including driving connections for driving the table, a reversing mechanism for automatically reversing the direction of the table drive, and a checking mechanism rendered operative by the reversing mechanism and acting independently of the said driving connections to cushion the stopping of the table.

1,809,859. BED DAVENPORT. CHARLES W. MEVES, Sheboygan, Wis., assignor to Sheboygan Couch Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Feb. 27, 1928. Serial No. 257,241. 2 Claims. (Cl. 5—31.)



2. In a bed davenport, the combination of a seat member invertible to bed-forming position, supporting means for said seat member including supporting plates and swinging arms pivotally mounted on said plates and on said seat member, a bed member having an articulated connection with said seat member to lie below said seat member when the latter is in seat-forming position and to be lifted by said connection into elevated bed-forming position upon the inversion of said seat member to bed-forming position, a bracket secured to each of said supporting plates and having a substantially horizontal slot, a link member pivotally secured to said bed member to extend therebelow in substantially upright position in the elevated bed-forming position of said bed member and said link member being connected to said bracket for sliding travel in said slot, and a strut member pivotally mounted on said supporting plate forwardly of said slot and having a pivotal connection with an intermediate portion of said link member whereby to brace said link member in its bed-supporting position.

1,809,860. TIRE TESTING MACHINE. THOMAS MIDGLEY, Hampden, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 11, 1925. Serial No. 14,607. 8 Claims. (Cl. 73—51.)

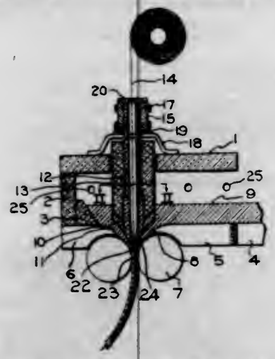


1. A tire testing device comprising a drum against which a tire may be run, a support and a rotating means for a tire and means to move said support and said rotating means so that the plane of rotation of the tire is at an angle to the plane of rotation of the drum.

1,809,861. AUTOMATIC MANUFACTURE OF POTTERY WARE. WILLIAM J. MILLER, Swissvale, Pa. Filed Jan. 19, 1928. Serial No. 247,957. 26 Claims. (Cl. 25—2.)

1. In apparatus of the class specified, the combination of a conveyor for molds and feeding and jiggering mechanism, means for driving said conveyor and mechanism, and mechanism operating in synchronism with said driving means for removing said molds from and replacing them on said conveyor.

1,809,862. PROCESS OF REFINING OILS. ARTHUR R. MOORMAN, Wood River, Ill., and IRVING C. CARPENTER, New Rochelle, N. Y., assignors to Contact Filtration Company, San Francisco, Calif., a Corporation of Delaware. Filed Jan. 4, 1929. Serial No. 330,809. 8 Claims. (Cl. 196—147.)

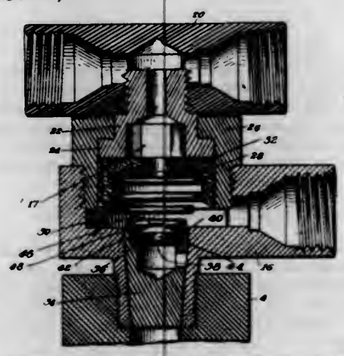


1. The process of refining acid treated oils which comprises heating the acid oil with a comminuted solid adsorbnt previously used for decolorizing neutralized oil, separating the adsorbent from the oil, adding fresh adsorbent to the oil, heating the mixture to above 212° F. to decolorize the oil, and finally separating the decolorized oil from the adsorbent.

1,809,863. APPARATUS FOR AND METHOD OF MAKING WIRE GLASS. ELISHA W. PAXTON, Washington, Pa., assignor to Highland Western Glass Company, Washington, Pa., a Corporation of Delaware. Filed Feb. 7, 1930. Serial No. 426,584. 8 Claims. (Cl. 49—32.)

1. Apparatus for making wire glass comprising an enclosure for supporting a glass pool having an opening

for the escape of the glass, a pair of rolls cooperating with said opening to form sheet glass and a wire guide

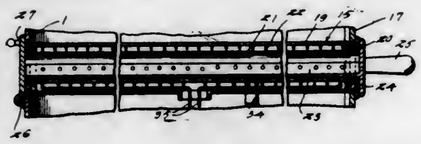


for feeding wire to the roll pass, said guide being shaped to cooperate with said rolls to control the flow of glass to said pass.

1,809,864. INSULATING BUSHING. OSCAR A. PEARSON, Oak Park, Ill., assignor to Thordarson Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1928. Serial No. 296,253. 4 Claims. (Cl. 247—43.)

1. The combination with a metal wall having an opening therein, of a bushing of insulating material fitting through said opening and provided with projections having notches on its inner face and at its outer face engaging said wall to prevent complete passage of said bushing; and one or more pliable tangs struck from and integral with said wall and bendable to engage said bushing at said notches to prevent withdrawal of said bushing from said opening.

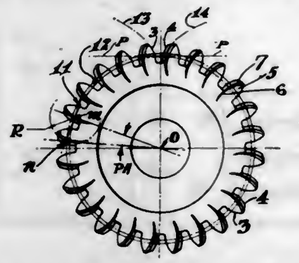
1,809,865. LUBRICATING APPARATUS. ALBAN WARREN READER, Ferndale, Mich., assignor to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 25, 1927. Serial No. 170,799. 7 Claims. (Cl. 184—7.)



1. In a lubricating conduit system for the bearings adjacent the steering knuckle of an automotive vehicle, the combination of a chambered body adapted to be secured to the king bolt bearing and having a lateral inlet, a head having a plurality of lateral outlets and a downwardly extending flanged projection said projection having a passageway communicating with said outlets, a collar fitting over the flange of said projection and threaded within said body, a cup leather engaging the end of said projection and the side walls of said collar, and means for resiliently pressing said cup leather against the end of said projection.

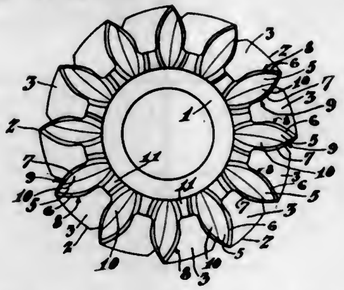
1,809,866. COLLAPSIBLE TABLE. LOUIS H. RIESCHE, Chicago, Ill. Filed Oct. 10, 1929. Serial No. 398,605. 3 Claims. (Cl. 45—51.)

1. A collapsible table comprising a frame provided with vertically extending slots, an extensible table member, spring pressed rods mounted upon the inner edge of said table member and adapted to be slidably engaged in said slots, said frame also provided with sockets in said slots within which said rods are adapted to extend when said table is in elevated position, link members connecting the outer edge of said table member and the upper portion of said frame, and means for varying the link connection upon said table, substantially as described.



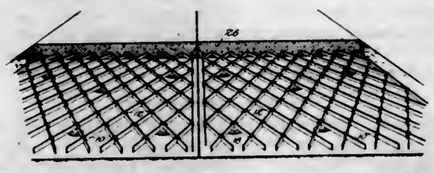
1,809,867. SAUSAGE AND ROLL HEATER. WILLIAM H. RITTBERGER, Granite City, Ill. Filed Jan. 2, 1930. Serial No. 418,142. 9 Claims. (Cl. 126—41.)

1. A sausage heater comprising a tube open at each end, shiftable means for closing one end of the tube, an open carrier of substantially the same length as the tube adapted to be extended thereinto from the other end, said carrier having an end plate formed to close the other end of the tube when in position therein, and means for heating the tube.



1,809,868. GEAR SHAPED CUTTER AND METHOD OF MAKING SAME. OLIVER G. SIMMONS, Lakewood, Ohio. Filed Mar. 15, 1928. Serial No. 261,813. 12 Claims. (Cl. 29—103.)

1. A gear shaped cutter having helical teeth which have generated helicoid side faces, said cutter having at one end spaced generated surfaces intersecting said helicoid faces to form cutting edges, the angle of intersection of said end surfaces which said helicoid faces, measured in any plane intersecting a cutting edge, being acute, all of said cutting edges lying substantially in a re-entrant conical surface of revolution coaxial with the cutter.

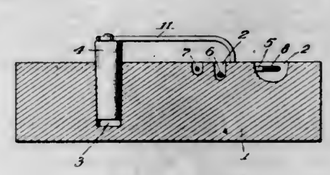


12. The herein described method of forming the cutting edges on teeth of a helical gear shaped cutter comprising generating a reentrant conical surface of revolution on an end face of the cutter and intersecting one helicoid side face of each tooth at acute angles and the remaining helicoid side faces at obtuse angles, and generating along each obtuse edge by means of a grinding wheel rotating in engagement with the cutter and on an axis lying in a plane substantially tangent to the base cylinder of the cutter an arcuate conical surface intersecting the first mentioned conical surface along a line substantially coinciding with the intersection of the adjacent helical face therewith.

1,809,869. GEAR SHAPER CUTTER AND METHOD OF MAKING SAME. OLIVER G. SIMMONS, Lakewood, Ohio. Filed Feb. 15, 1930. Serial No. 428,846. 17 Claims. (Cl. 29—103.)

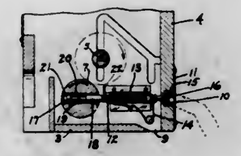
5. A gear shaped cutter having an end face and teeth provided with involute helicoid side faces, each tooth having an end face provided with involute helicoid surfaces intersecting the side faces at substantially right angles to form involute cutting edges.

1,809,870. CONCRETE REENFORCEMENT. HARRY M. SMITH, Elkhart, Ind., assignor to Walter F. Bossert, Liberty, Ind. Filed Nov. 16, 1927. Serial No. 233,580. 5 Claims. (Cl. 72—122.)



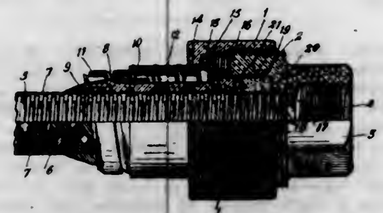
3. Means for reinforcing concrete consisting of a plurality of reinforcing units, each of said units consisting of a plurality of bars rigidly secured together, the bars of said units being bent into a continuous series of substantially V shaped formations, the end portions of the bars of one unit being bent to form an open V on one unit and a substantially closed V on the adjacent unit, and clips for securing said open and closed V bar sections together.

1,809,871. PRODUCTION OF BISMUTH. WALTER C. SMITH, Moylan, Pa., assignor to Cerro De Pasco Copper Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1928. Serial No. 329,678. 19 Claims. (Cl. 75—17.)



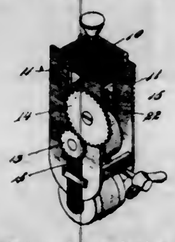
1. A process for producing bismuth from a molten bismuth-lead alloy which comprises adding sulfur and a metallic ingredient adapted to unite with the sulphur to form a matte capable of absorbing lead, and separating said matte from the purified bismuth thus produced.

1,809,872. DIE FOR DIE CASTING AND METHOD OF MAKING THE SAME. VICTOR L. SODERBERG, Detroit, Mich. Filed May 26, 1927. Serial No. 194,519. 2 Claims. (Cl. 204—1.)



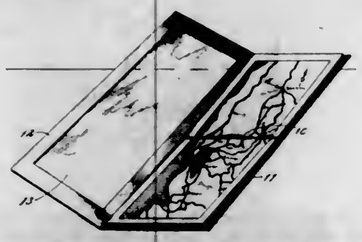
1. The method of making a die for die casting which consists in fashioning a die cavity in a block of metal easily cut but unsuitable for exposure as a face for a die cavity, supporting on and insulating from the block a conductor having elements of various sizes, shapes and locations depending on the nature of the portions of the cavities in which they are located, placing the block and anode in an electrolyte suitable for depositing chromium, and connecting the block as a cathode in a plating circuit in which said conductor is the anode.

1,809,873. TOWEL CABINET. GEORGE ADOLPH STEINER, Salt Lake City, Utah, and GEORGE WASILESKI and WILLIAM MURDO, Chicago, Ill., assignors to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 16, 1925, Serial No. 15,881. 5 Claims. (Cl. 312—38.)



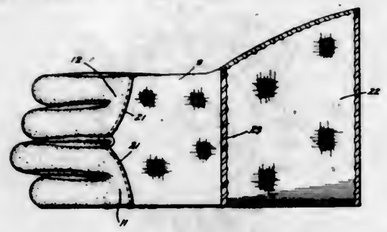
5. In a towel cabinet, the combination of a roller and a locking device therefor, said locking device comprising a stop member and a freely slidable, gravity actuated bolt carried by said roller and extending diametrically thereof, the said stop being so positioned with respect to the path of the projected bolt that when the said bolt contacts with the same the said bolt will be in a substantially horizontal position, and means to retract the said bolt out of contact with the said stop, the substantially horizontal position of the bolt when the roller is in stopped position insuring a retracted condition of the bolt when said bolt retracting means is released.

1,809,874. HOSE COUPLING. R. HARRY STONE, Irvington, N. J., assignor to Titeflex Metal Hose Co., a Corporation of New Jersey. Filed Jan. 12, 1925. Serial No. 1,735. 9 Claims. (Cl. 285—72.)



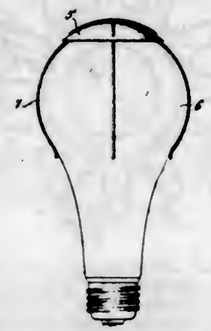
1. The combination with a corrugated tube having a section solid for substantially the depth of the corrugations, of a coupling within which said tube enters and packing bearing upon the said section.

1,809,875. METALLIC LEAF APPLYING DEVICE. STUART H. SWALLOW, Providence, R. I., assignor to W. H. Coe Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 7, 1928. Serial No. 317,843. 1 Claim. (Cl. 41—7.)



In a metallic leaf applying device, a pair of separable spaced support plates, spring pressed slide members movably mounted in said plates, a package roll shaft mounted in said slide members, a driving element on said package roll shaft, a friction roll mounted in said slide members, a package roll of metallic leaf rotatably mounted on said package roll shaft and having a recess receiving said driving element, whereby said roll is positively driven by said driving element and manually operable mechanism operatively connected to said package roll shaft.

1,809,876. MAP FOLDER. FRANK J. TAYLOR, San Francisco, Calif. Filed Nov. 28, 1927. Serial No. 236,132. 5 Claims. (Cl. 281—15.)

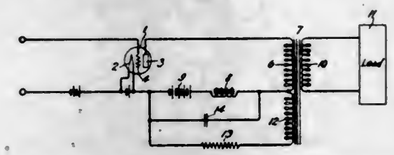


1. A map folder comprising a plurality of pages secured together in booklet form, having map data printed on each side thereof, and arranged so that a complete map, extending across said booklet, will be exposed to view when said booklet is opened, and a folder for said booklet having a cover hinged at right angles to said booklet binding, so that it can fold over said booklet in its open position and thereby protect the booklet and retain it open for ready reference, said cover having a cut out portion through which the map may be observed.

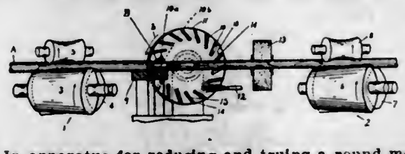
1,809,877. GLOVE. WILLIAM O. WELLS, Minneapolis, Minn., assignor to Wells-Lamont Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Apr. 26, 1930. Serial No. 447,566. 2 Claims. (Cl. 2—161.)

1. A glove including a portion adapted to cover the palm of the hand, portions forming the fronts of the fingers, another portion forming the back of the glove and stitched at its sides to said palm portion, the forward edge of said back portion being curved inwardly and forwardly from both sides and terminating in a point situated substantially between the two middle fingers, a portion shaped to form the backs of the first and second fingers and another portion forming the backs of the third and fourth fingers, said back finger portions being suitably stitched to the front finger portions, and said back finger portions having their rear edges shaped to correspond to the curved edge portions of said back portion and suitably stitched thereto.

1,809,878. PROTECTIVE SHIELD FOR INCANDESCENT LAMPS. CHANNING WHITMAN, Buffalo, N. Y., assignor to Flexlume Corporation, Tonawanda, N. Y., a Corporation of New York. Filed July 17, 1929. Serial No. 378,908. 2 Claims. (Cl. 240—138.)



1. A shield adapted to protect an incandescent lamp consisting of a disc having a degree of concavity such that it may be fitted substantially conformably upon said lamp so as to overlie a part of the area thereof subtended by a chord of less extent than the diameter of the lamp, two pairs of apertures formed in said shield and a resilient wire passing through each of said pairs of apertures and adapted to conformably engage said lamp to permit adjustment of the shield about the lamp to cover a portion of the upper exposed surface thereof regardless of the angle at which the lamp is mounted, said wires crossing at a point over said cap.



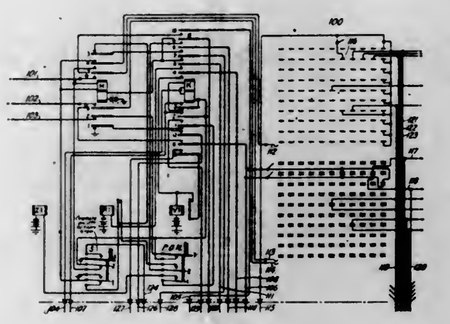
1,809,879. CIRCUITS FOR ELECTROMAGNETIC DEVICES. HORACE WHITTLE, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1927. Serial No. 177,818. 9 Claims. (Cl. 179—171.)

3. In combination, an electron discharge device having an anode, a cathode and a control electrode, a transformer,

a source of direct current connected between said cathode and anode through one winding of said transformer, means for impressing signals on said winding, a second winding on said transformer having substantially fewer turns than said one winding and connected to a direct current source such that the magnetomotive force set up in the core of said transformer by said second mentioned winding is substantially equal and opposite to the magnetomotive force set up by the direct current flowing through said first mentioned winding, thereby reducing the direct current flux in said core substantially to zero, said second mentioned winding being included in a circuit containing only impedance which remains constant as regards signal variations and a direct current source as the only source of voltage external to said winding.

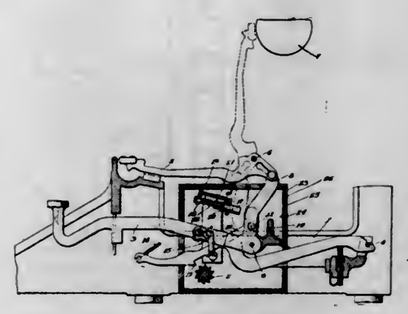
1,809,880. METHOD AND APPARATUS FOR FINISHING ROUND BARS. GEORGE A. WISE, Pittsburgh, Pa., assignor to Sutton Engineering Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 4, 1929. Serial No. 360,449. 4 Claims. (Cl. 29—83.)

4. In apparatus for reducing and truing a round metallic section, the combination of means for straightening such metallic section, which means are adapted to effect a helical movement of the section in the general direction of its longitudinal axis, a surface-removing cutter adjacent the path of travel of said section as it leaves such straightening means, which cutter includes a blade and is rotatable to move the blade against said helically moving section, and rolls for the polishing of said section when it has passed said cutter, which polishing rolls are adapted to continue the helical movement of said stock.



1,809,881. TOY TELEPHONE. WILLIAM C. WOOD, East Hampton, Conn., assignor to The N. N. Hill Brass Company, East Hampton, Conn., a Corporation. Filed Mar. 14, 1931. Serial No. 522,648. 4 Claims. (Cl. 46—46.)

1. A toy telephone, comprising a base, a yoke connected with the base, a longitudinally-movable hammer supported by the said yoke, and a gong pivotally connected with the top of the yoke.

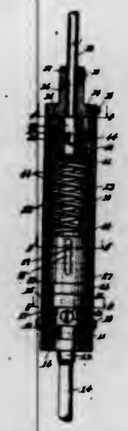


1,809,882. TELEPHONE EXCHANGE SYSTEM. ESMOND P. G. WRIGHT, Aldwych, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 10, 1929, Serial No. 361,912, and in Great Britain Sept. 5, 1928. 15 Claims. (Cl. 179—18.)

1. In a telephone system, two switches, each having operating magnets individual thereto, means actuated in accordance with part of the designation of a desired line to cause both switches to hunt simultaneously for a free

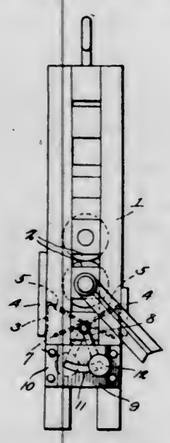
line within different portions of the same group of lines and means for extending the connection over brushes of either of said switches.

1,809,883. TYPEWRITER. CONRAD D. YOUNGBERG, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Jan. 2, 1925. Serial No. 29. 3 Claims. (Cl. 197—183.)



1. In a typewriter, the combination with a type bar, of actuating means therefor, comprising a pivoted sub-lever, a power roller, an actuator connected to said sub-lever, a key lever, means for connecting said actuator to said power roller to secure operation of said actuating means, and a spring-pressed plunger mounted in position to be engaged by said sub-lever when said type bar approaches its platen striking position.

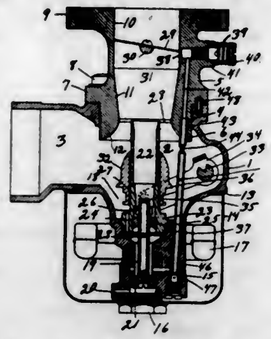
1,809,884. POWER CONVERTING DEVICE. ELLIOTT E. ANTHONY, Chicago, Ill. Filed Feb. 20, 1929. Serial No. 341,378. 5 Claims. (Cl. 125—33.)



1. In a device of the character described, a tubular body casing, an element constituting an anvil and tool holder supported in the end portion of said tubular casing and having limited endwise movement, a spring-pressed impact element mounted to reciprocate longitudinally in said tubular casing and normally in contact with said anvil and tool holder element, and an axially rotatable power element in said tubular casing, said power element having a spiral cam and said impact element having a cooperat-

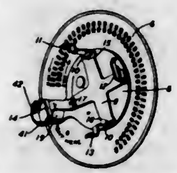
ing portion for engagement with said cam whereby said impact element is positively moved in one direction, said

impact element moving in the opposite direction by the reaction of its spring upon its disengagement from said cam.



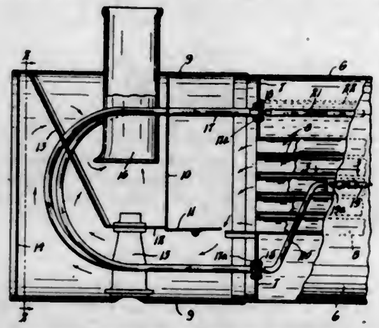
1,809,885. DRAIN BOARD FOR WRINGERS. OTTO BANKER, Mankato, Minn. Filed Mar. 25, 1930. Serial No. 438,824. 2 Claims. (Cl. 68—32.)

1. The combination with a wringer frame and rolls therein, of oppositely disposed downwardly converging water-deflecting members beneath the rolls, cross strips, a drain board tiltably mounted beneath said members and substantially concealed at all times between the cross strips, and means for tilting the drain board into contact with the bottom surface of either of said members, the distance between the upper and lower edges of the drain board being less than the distance between the cross strips, the lower portion of each of said cross strips constituting water deflecting means.



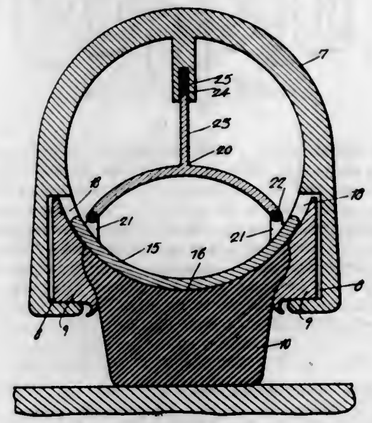
1,809,886. CARBURETOR. GEORGE M. BICKNELL and ARTHUR A. HAYDEN, St. Louis, Mo., assignors to Carter Carburetor Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Feb. 23, 1929. Serial No. 342,080. 7 Claims. (Cl. 261—41.)

1. In a carburetor, a body member having an air chamber therein, a stand pipe mounted in a wall thereof, said chamber having a circular opening in an opposite wall of said chamber, a member having an integral annular skirt extending into said opening, and projecting into the air chamber and a passageway terminating in said skirt, said



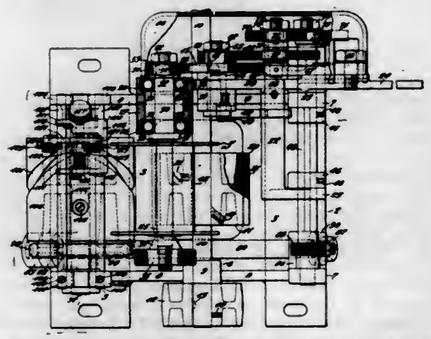
member having a Venturi portion forming a restriction of said passageway, and a choke valve slidably mounted on said stand pipe and adapted to be moved into the restricted portion of said passageway to close the same.

1,809,887. ADAPTER. HOWARD BROADWELL, Ridgewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 28, 1930. Serial No. 464,505. 7 Claims. (Cl. 179—90.)



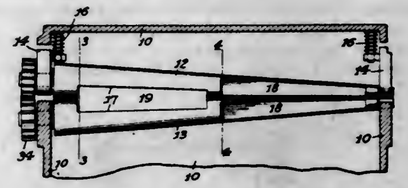
1. In combination, a telephone dial having a finger wheel, a disc, means for securing said disc to the finger wheel of said dial comprising a plurality of prongs adapted to engage the inner periphery of the holes in said finger wheel and means for distending said prongs to permit a non-rubbing engagement thereof with said finger wheel.

1,809,888. POSITIVE WATER CIRCULATOR. CLIFFORD M. CRANE, St. Paul, Minn., assignor to Lucius Winchester, Chicago, Ill. Filed Apr. 10, 1926. Serial No. 101,120. Renewed Apr. 27, 1931. 8 Claims. (Cl. 122—407.)



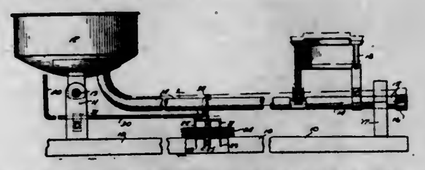
1. A water circulating means for a boiler, having a front flue sheet and a hot gas chamber at the front of the same, comprising one or more open ended conduits extending from the lower front portion of the boiler and flue sheet forwardly into said chamber then upwardly and rearwardly to the flue sheet and boiler adjacent the water level thereof, and a conduit in the lower portion of said boiler for each of said first mentioned conduits, each of said last mentioned conduits having its front end spaced a short distance from and substantially alined with the lower end of its respective first mentioned conduit and means for directing water through said last mentioned conduits to assist the heat in said gas chamber in causing a circulation of water from the lower portion of the boiler to the top thereof.

1,809,889. RESILIENT TIRE FOR WHEELS. JOSEPH DAVEY, Belle Harbor, N. Y. Filed Apr. 15, 1930. Serial No. 444,475. 6 Claims. (Cl. 152—8.)



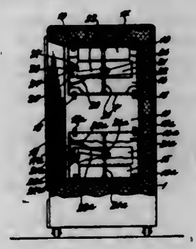
1. A resilient wheel comprising a channeled felloe member, a resilient tire mounted in said channeled felloe member, guide recesses formed in the side walls of said channeled felloe member, and a plurality of tire supporting blocks carried by said channeled felloe member, said blocks being mounted in the recesses and having sliding movements laterally of the channeled member.

1,809,890. WINDING MACHINE. ERNEST A. DE WOLF, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed May 17, 1929. Serial No. 363,918. 17 Claims. (Cl. 242—25.)



1. In a winding machine, the combination of a rotatable drive-roll, a winding-spindle for supporting a spool or other receiver to adapt it to be rotated from the drive-roll, means for mounting the winding-spindle to adapt it to move away from the drive-roll during the growth in the winding on the spool or receiver, a train of gearing driven directly from the winding-spindle, means for traversing the strand material back and forth axially of the spool or receiver, and gearing for operating the traversing-means from the train of gearing driven from the winding-spindle.

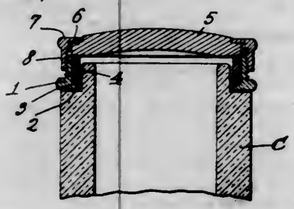
1,809,891. STAGGERED CHANNELED ROLLER FEATHER PLUCKING DEVICE. JULIUS DUNNER, New York, N. Y. Filed Oct. 30, 1929. Serial No. 403,589. 11 Claims. (Cl. 17—11.)



1. In a de-feathering machine, a pair of tapered contacting rollers each having a plurality of longitudinal channels at an angle to each other and arranged in opposite pairs, each pair at some time during a revolution of the rollers being in registration to provide successively formed air passages, for the purpose set forth.

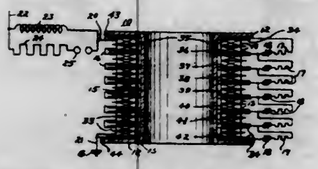
1,809,892. BROODER HEATER. HAROLD E. ELLIS and FRANK THEODORE WILLIAMS, Meriden, Conn., assignors to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Aug. 21, 1929. Serial No. 387,822. 8 Claims. (Cl. 236—6.)

1. A burner regulator for brooders and the like, comprising, a supporting base, a fuel tank pivotally supported above the base and connected to a fuel pipe, a fuel burner carried by the free end of the fuel pipe, a vertically movable pipe carrier and a thermostat between the base and pipe carrier for controlling the height of the pipe and burner, the carrier having a manually movable wedge-shaped member for varying the height of the pipe and burner independently of the thermostat.



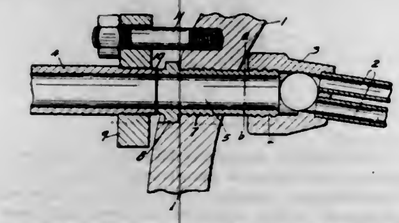
1,809,893. REFRIGERATOR. JEREMIAH FLYNN, St. Louis, Mo., assignor of one-fourth to Frank Tirreli and one-fourth to Jerome Flynn, St. Louis, Mo. Filed June 26, 1929. Serial No. 373,823. 4 Claims. (Cl. 62—48.)

1. A refrigerator, partitions dividing the inside of said refrigerator into separate compartments and having openings therethrough forming communications between said compartments, slides operative to open and close said openings to open and close communication between said compartments, a rod extending across each of said open-



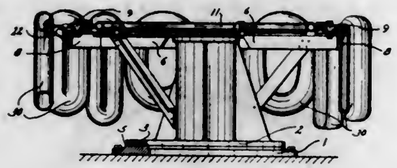
ings, a sleeve in connection with each of said slides mounted for sliding movements along the corresponding rod, a bell crank lever corresponding to each of said slides, a pivotal connection between one arm of each bell crank lever and the corresponding slide, a plunger engaging the other arm of each bell crank lever, and doors for the respective compartments for engaging said plungers and holding said bell crank levers in position to hold said slides in open positions when said doors are closed.

1,809,894. CLOSURE FOR BOTTLES, JARS, AND THE LIKE. CHARLES B. GARWOOD, Linthicum Heights, Md., assignor to Carr-Lowrey Glass Co., Baltimore, Md. Filed May 12, 1930. Serial No. 451,783. 2 Claims. (Cl. 215—43.)



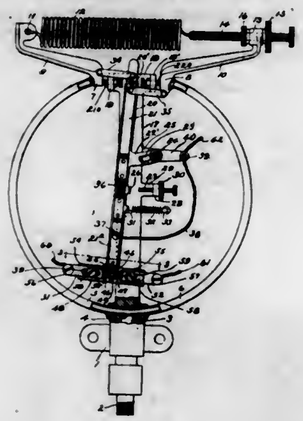
1. A closure of the class described including a ring having an internal inclined shoulder, a gasket fitted snugly in the ring and supported by the shoulder, a cap disk seated at its margin on the gasket, and a ring lapping the disk and in screw-threaded engagement with the first named ring.

1,809,895. PROTECTIVE SYSTEM FOR TRANSFORMERS. FRAZER W. GAY, Newark, N. J. Filed Oct. 8, 1928. Serial No. 311,112. 5 Claims. (Cl. 175—30.)



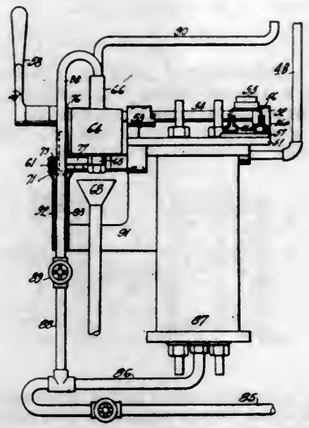
3. In combination with a transformer, a protective system therefor, said protective system comprising a choke coil in series relation with a winding of said transformer, a parallel circuit extending around said choke coil, said parallel circuit comprising a resistance and an electric valve and being adapted to pass surge currents past said choke coil, interconnected circuits shunted across said transformer winding, said interconnected circuits comprising resistances and condensers in series relation and being electrostatically coupled to said transformer winding at a plurality of points.

1,809,896. BOILER. OTTO H. HARTMANN, Cassel-Wilhelmshohe, Germany, assignor to The Superheater Company, New York, N. Y. Filed June 5, 1930, Serial No. 459,308, and in Germany June 21, 1929. 3 Claims. (Cl. 257—235.)



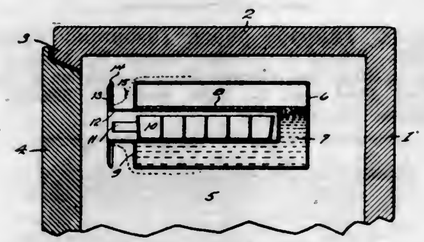
1. In apparatus comprising a drum, a manifold inside of the drum, a pipe outside of the drum, the combination with said parts of a connecting piece extending through the wall and into the manifold and expanded into each to form a tight joint, and means to secure the pipe to the exterior end of the connecting piece.

1,809,897. DEFLATING DEVICE. ROBERT P. HARVEY, Longmeadow, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 29, 1930. Serial No. 440,133. 3 Claims. (Cl. 154—9.)



1. A deflating device which comprises a support movable in a closed path, a plurality of vacuum nozzles carried by the support and each adapted to be telescoped on the end of the valve stem of an article to be deflated, resilient gaskets carried by the nozzles and adapted to seal the valve stems in the nozzles, means in the nozzles to hold open the valve of the stems, means to supply vacuum to the nozzles and a two-way valve associated with each nozzle operable to alternately vent its nozzle to the atmosphere and connect it to the vacuum supply.

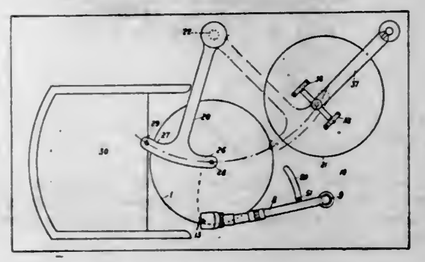
1,809,898. CONTROLLING APPARATUS. OTTO W. HEISE, Bridgeport, Conn., assignor, by mesne assignments, to Consolidated Ashcroft Hancock Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 26, 1925. Serial No. 52,703. 7 Claims. (Cl. 200—81.)



1. Apparatus of the class described comprising as externally loaded Bourdon tube, a pair of co-pivotal levers, one of said levers being connected to the Bourdon tube to be moved by the later, said lever carrying an electrically insulated contact support provided with oppositely directed contact elements, an insulating block mounted upon the other lever supporting a pair of spaced contacts adapted for engagement respectively by said oppositely directed contact elements, means tending to swing the later lever in the same direction that the first lever is moved by the Bourdon tube in response to increasing pressures, and a stop to limit movement of the second lever.

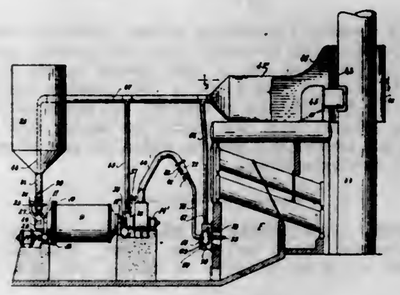
1,809,899. ELECTRICALLY OPERATED WATER HEATER. HERBERT HEROY, Belmar, N. J. Filed July 3, 1929. Serial No. 375,645. 11 Claims. (Cl. 219—38.)

1. In an electric water heater as described, the combination, a heating coil connected with an electric supply, a water supply for said coil, a float connected by an overflow to said water supply, a circuit controller controlling the circuit of said coil operated by said float and means for automatically disconnecting said circuit when the water ceases to flow in said overflow and for preventing said circuit being automatically restored after it is disconnected.



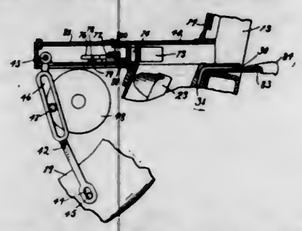
1,809,900. REFRIGERATOR. WILLIAM R. JEAVONS, Cleveland Heights, Ohio. Filed Nov. 8, 1930. Serial No. 494,343. 7 Claims. (Cl. 62—108.5.)

1. The combination, with a refrigerator having a space for the reception of food and a door, of a refrigerant container within said space and having a freezing chamber projecting thereinto from one of the walls thereof, and a shield for the mouth of said chamber, the said shield extending outwardly from said wall a distance sufficient to subject the outer end of said shield at least periodically to a temperature above the freezing point whereby the entrance to said chamber through said shield will not be detrimentally obstructed by an accumulation of ice.



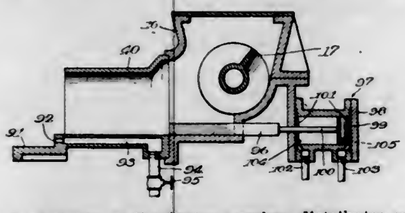
1,809,901. PHONOGRAPH AND THE LIKE. ALFRED DUKINFIELD JONES and STANLEY JAMES SMITH, Glasgow, Scotland. Filed Oct. 1, 1930, Serial No. 485,754, and in Great Britain Sept. 20, 1929. 4 Claims. (Cl. 274—10.)

1. An automatic phonograph comprising a turn-table, a tone arm having a vertical pillar, a record support or magazine, a record change-arm secured to swing over said turn-table and magazine, a pin carried by said arm and adapted to engage in the central hole of a record of said magazine, another pin carried by said arm and adapted to push a record off the turn-table, a motor driven spindle, two cams secured on said spindle, followers co-operative with said cams and yieldingly connected to the tone-arm



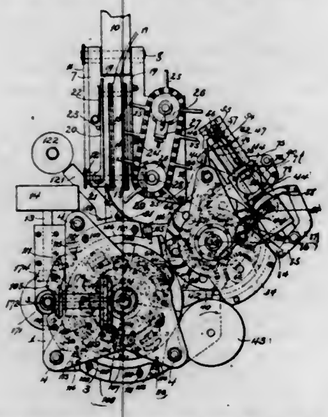
pillar, whereby said pillar is raised to lift the needle or other "pick-up" and is partially rotated to swing said "pick-up" from an inner to an outer position, a third cam secured on said driven spindle, a follower co-operative with said third cam and a brake device with which said follower is yieldingly connected and whereby the swinging movement of said tone-arm is limited.

1,809,902. SYSTEM OF AND MEANS FOR PREPARING FUEL AND DELIVERY THEREOF TO A PLACE OF COMBUSTION. JOSEPH E. KENNEDY, New York, N. Y. Filed Jan. 30, 1926. Serial No. 84,928. 13 Claims. (Cl. 110—104.)



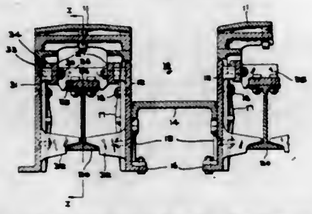
1. In a system for the preparation and delivery of coal to a furnace for combustion, a furnace, a burner mounted in an opening to the furnace, pulverizing means including a revoluble drum having means therein operative through the revolving of the drum to pulverize coal, means having a substantially air tight connection with the drum for charging coal to the drum to be pulverized and having an opening to the atmosphere to admit air to the drum, regulatable closure means for said opening for admitting air in variable volume to the drum, a fan rotatable independently of the drum of the pulverizing means having the intake connected with said drum and the outlet with the burner for drawing air into said drum for admixture with the coal as it is pulverized and to draw pulverized coal laden air from the drum and deliver the same to the burner and having an opening to the atmosphere in the connection thereof with the drum for admitting air to the intake of the fan from the exterior of the drum, and regulatable closure means for said opening for supplying air in variable volume to the pulverized coal laden air stream drawn from the drum for mixture and delivery with said stream to the burner.

1,809,903. LOCOMOTIVE STOKER. NATHAN M. LOWER, Pittsburgh, Pa., assignor, by mesne assignments, to The Standard Stoker Company Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 13, 1924. Serial No. 699,096. 10 Claims. (Cl. 110—101.)



3. A plunger for transferring fuel comprising a support, a head pivoted to said support and means for adjusting and securing said head in angularly adjusted position relatively to said support.

1,809,904. STOKER MECHANISM. NATHAN M. LOWER, Pittsburgh, Pa., assignor, by mesne assignments, to The Standard Stoker Company Inc., New York, N. Y., a Corporation of Delaware. Filed July 31, 1926. Serial No. 126,159. 2 Claims. (Cl. 110—101.)

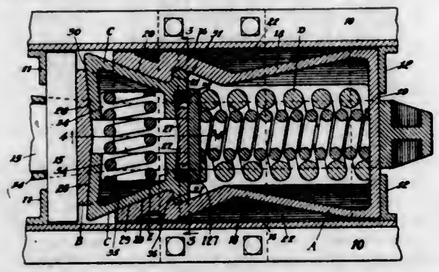


2. In a stoker, a distributor member, distributor means for projecting fuel forwardly from said member, mechanism for delivering fuel to said member outside of the zone of action of said means, a fluid pressure operated motor for operating said mechanism, and means operated by the exhaust from said motor for moving said fuel along said member to a position within the zone of action of said distributor means.

1,809,905. CAN SEALING MACHINE. ADOLPH K. MALMQUIST, South Bellingham, Wash. Filed Oct. 3, 1928. Serial No. 309,979. 19 Claims. (Cl. 113—24.)

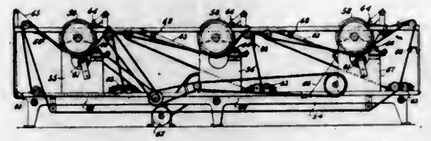
1. In an apparatus for the purpose set forth, the combination of a stationary casing, a continuously rotating can carrier therein, said casing and carrier forming a vacuum chamber, means for continuously supplying loosely assembled cans and caps to the can carrier, and means within the can carrier for seaming the caps onto the cans, the top and bottom of the can carrier constituting the top and bottom of the vacuum chamber.

1,809,906. UNDERFEED STOKER CONSTRUCTION. CHARLES F. MILLER, Moores, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 21, 1930. Serial No. 430,325. 5 Claims. (Cl. 110—44.)



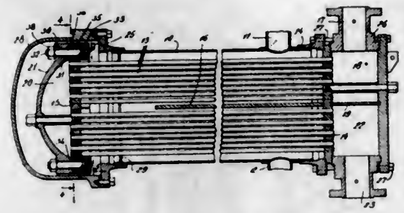
1. In an underfeed stoker having alternately-arranged retorts and tuyère rows, a supporting construction for the stoker including a beam arranged below each tuyère row and connected to adjoining side walls of adjacent retorts, and means connected to each beam for supporting the tuyères of the row thereabove independently of the retort side walls.

1,809,907. RUBBING OR SANDING PAD. FRANK E. NEWCOMB, East Cleveland, Ohio. Filed Jan. 31, 1930. Serial No. 424,852. 6 Claims. (Cl. 51—195.)



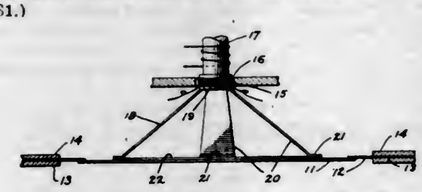
1. A rubbing or sanding pad comprising a hard rubber disk, and a soft rubber back extending over the edge of the disk.

1,809,908. FRICTION SHOCK ABSORBING MECHANISM. ROLAND J. OLANDER, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 12, 1929. Serial No. 392,055. 5 Claims. (Cl. 213—31.)



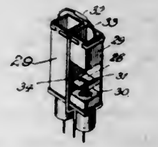
1. In a friction shock absorbing mechanism, the combination with a casing and a main follower, relatively movable toward and away from each other lengthwise of the mechanism, the casing having opposed interior, inwardly converging friction wedge faces; of a pair of friction wedge blocks having wedging engagement with the casing; spring means opposing lateral approach of the blocks; a carrier for the blocks, the carrier having a transverse front end wall interposed between the main follower and the front ends of the blocks, and having frictional engagement therewith; and spring resistance means within the casing opposing inward movement of the blocks.

1,809,909. FUR DYEING MACHINE. ERASMO PIERINI, Brooklyn, N. Y., assignor to Ideal Belgian Fur Dyeing Company, Inc., a Corporation of New Jersey. Filed Jan. 27, 1930. Serial No. 423,666. 3 Claims. (Cl. 8—19.)



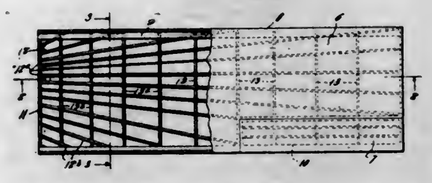
1. A fur dyeing machine including a plurality of units simultaneously driven, each unit including a plurality of spaced conveyor belts and means for applying material to fur carried by said belts, said means including rotary applying brushes mounted for movement of the bristles between the spaces of said belts whereby said belts will act to control the application of material to said fur by said brushes, the belts of one unit being out of different alignment to provide different longitudinal stripes in a fur treated by said machine.

1,809,910. HEAT EXCHANGER. JOSEPH PRICE, Stapleton, Staten Island, N. Y., assignor to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1929. Serial No. 413,491. 13 Claims. (Cl. 257—239.)



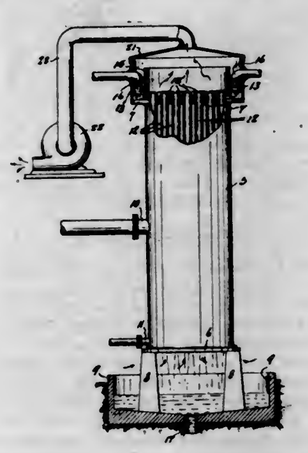
1. A heat exchanger of the class described comprising a shell, a tube bundle therein, a tube sheet for one end of the tube bundle sufficiently smaller than said shell to be easily removable therethrough, a cap for said tube sheet larger than the interior of the shell and having a rim engaging the outer face of the tube sheet, a sectional ring disposed inwardly of said tube sheet and engaging the inner face thereof, a continuous ring disposed in the plane of the tube sheet and serving to space the sectional ring from the rim of the cap, and a plurality of bolts for clamping said parts together.

1,809,911. SOUND DIAPHRAGM. EDWIN S. PRIDHAM, Oakland, Calif., assignor to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed May 15, 1929. Serial No. 363,312. 5 Claims. (Cl. 181—31.)



1. In an air actuating atructure, a substantially flat, thin vibratory diaphragm, means for flexibly supporting said diaphragm near its edge, and means for transmitting vibrations to said diaphragm in a direction transverse to its plane, and a reinforced surface disposed annularly around the center of the diaphragm upon which said last means acts.

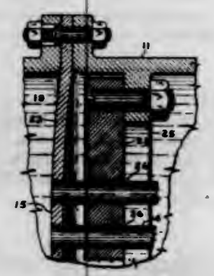
1,809,912. GASEOUS DISCHARGE DEVICE. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Patents Company, New York, N. Y., a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,095. 3 Claims. (Cl. 250—27.5.)



1. An ionic discharge rectifying device comprising two pairs of spaced asymmetrically conducting electrodes of opposite polarity, and an electron emissive filament in direct electrical contact with a cathode electrode and positioned in the leakage path of the device to be heated by the leakage current.

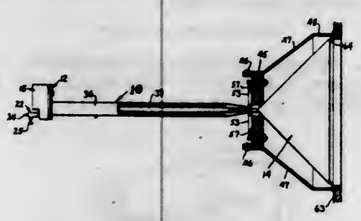
1,809,913. AIRFOIL. HARRY H. SEMMES, Chevy Chase, Md., assignor to Bendix Aviation Corporation of New York, N. Y., a Corporation of Delaware. Original application filed Nov. 19, 1929, Serial No. 408,375. Divided and this application filed Apr. 12, 1930. Serial No. 443,782. 9 Claims. (Cl. 244—3.)

1. An airplane wing construction having a plurality of spars arranged in a fan-like shape, the ends of said spars adjacent the root portion of the fan being positioned at varying distances from each other, the spars within the zone of center of preasure travel of the wing being in close proximity with each other.



1,809,914. VERTICAL TUBULAR CONDENSER. JAMES M. SEYMOUR, Newark, N. J. Filed May 2, 1927. Serial No. 188,177. 2 Claims. (Cl. 257—57.)

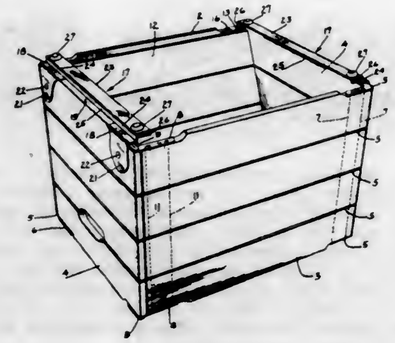
1. In a vertical tubular condenser, means to supply water for movement through the tubes thereof, said water



supply means having a baffle surrounding the intake ends of said tubes to assure even distribution of water to the latter, and means for also supplying air for movement through the tubes thereof in contact with said water comprising suction means at the upper ends of said tubes and an adit at the lower ends thereof, to cause said air to saturate and thereby absorb and carry away heat from said water which is transferred thereto through the tube walls, the air entering said tubes at atmospheric pressure and gradually falling in pressure as it rises in the tubes.

1,809,915. CONDENSER. JOHN H. SMITH, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 13, 1930. Serial No. 475,050. 8 Claims. (Cl. 257—43.)

1. In a surface condenser, in combination, a shell, a flexible tube sheet, a plurality of tubes each fixedly secured at one end in the flexible tube sheet, and tube-supporting means in slidable engagement with each of the tubes adjacent to the flexible tube sheet.



1,809,916. SOUND DEVICE. JESSE D. STAGGS, Los Angeles, Calif. Filed Dec. 23, 1929. Serial No. 415,903. 12 Claims. (Cl. 274—16.)

1. In a sound reproducer, an amplifier, a support, an anvil, tension members on said support and supporting said anvil, means to vibrate said anvil, and means to connect said anvil to said amplifier.

1,809,917. BOX. OWEN W. THOMAS, Minneapolis, Minn., assignor to Puffer-Hubbard Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 22, 1930. Serial No. 438,039. 7 Claims. (Cl. 217—46.)

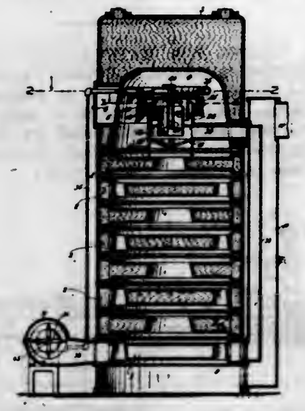
4. The combination with a foldable box comprising hinged together side and end walls and a hinged bottom, of metallic rails secured to the lower portions of the end walls, each of said rails having an upstanding ear at each end thereof adapted to engage outer surfaces of the end walls, horizontally disposed portions connected with said ears and adapted to be seated against the bottom edges of the walls, a vertical wall portion connected with the horizontally disposed portions of each rail and adapted to engage inner surfaces of said end walls, and a depending shelf-like portion connected with the horizontally

disposed and vertical portions of each rail, said shelf-like portion extending inwardly to provide supports for the box bottom when the box is open.

1,809,918. TOWEL HOLDER. CHARLES W. THOMPSON, Wollaston, Mass., assignor to Harvey C. Wheeler, Boston, Mass. Filed Mar. 13, 1928. Serial No. 261,230. 12 Claims. (Cl. 312—37.)

2. A towel holder comprising a case having a chamber for individual clean towels and another chamber for used towels, shelf means to support clean towels adapted to be automatically actuated by the act of the user in withdrawing a towel to thereby force clean towels upwardly in said case, and means to draw said towels downwardly, after being used, into said chamber for used towels.

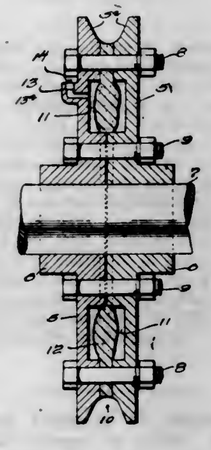
1,809,919. POWER WHEEL. ROBERT S. TURNER, Indianapolis, Ind. Filed July 31, 1930. Serial No. 472,065. 4 Claims. (Cl. 170—27.)



1. In a power wheel, a hub structure comprising a plurality of spaced discs, a cross arm hinged to each disc and with its ends extending a distance beyond the peripheral edge of the disc and adapted to swing to different positions, each cross arm having flat faces adapted to limit the hinging movement of said arm by contacting with the face of the disc, a blade at each end of each cross arm, the blade at one end of each cross arm being at

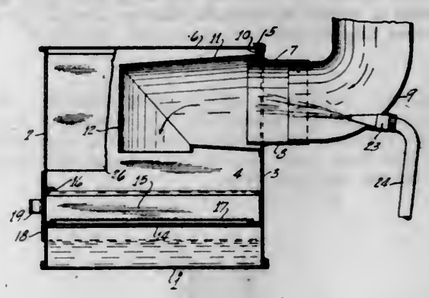
right angles to the blade at the opposite end thereof, whereby when one flat face of the cross arm is in engage-

ment with the face of the disc one of the blades of each cross arm will be faced flatwise to the propelling current and the other edgewise thereto.



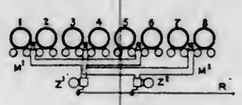
1,809,920. OIL BURNER BOILER. DANIEL C. WOODWARD, Lowell, Mass. Filed July 23, 1928. Serial No. 294,679. 6 Claims. (Cl. 122—210.)

1. An oil burner boiler comprising a number of superposed water sections having openings through them for the passage of hot gases, a water-containing dome surmounting the upper one of the water sections and cooperating therewith to form a combustion chamber between them, a burner for heating the dome from within the combustion chamber, means for supplying fuel to the burner, means for supplying heated air to the burner to mingle with the fuel including an air section associated with the water sections with opening through it for the passage of hot gases and through which air section air supplied to the burner is passed, and a flue passage for the escape of the gases after passage downward through the water sections and air section from out of the combustion chamber.



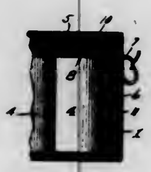
1,809,921. SHEAVE. MILES F. YOUNT, Beaumont, Tex. Filed May 16, 1929. Serial No. 363,696. 8 Claims. (Cl. 184—15.)

1. A guide sheave comprising beveled circular plates and opposed annular grooves providing an oil chamber and the beveled portions of the plates forming a line guide when the plates are assembled together, and having hubs for the passage of a shaft, inwardly projecting bosses extending from said plates outwardly of said oil chamber, a second series of bosses extending inwardly from said plates adjacent the hub portions thereof and adapted to be brought into flat contact with one another, bolts extending through said last mentioned bosses for fastening



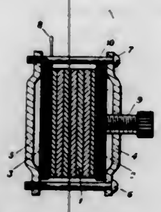
the plates together, there being spaces between opposed ones of each set of bosses, the first mentioned set of bosses being spaced from one another when the second mentioned set of bosses are contiguous, a disc-like wick member interposed between said plates and having recesses adapted to receive said second mentioned bosses, said wick extending to the shaft, bolts extending through said first mentioned bosses to compress said wick at spaced peripheral points.

1,809,922. DUST-COLLECTOR. JOSEPH ABRAMOWITZ, Madison, Ill., assignor of thirty-five per cent to Amanda E. King, Madison, Ill. Filed Aug. 20, 1928. Serial No. 300,731. 5 Claims. (Cl. 183—22.)



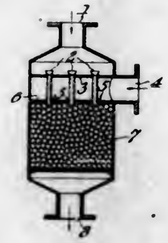
1. In combination, a dust-collecting shell having an opening in a wall thereof, a flue disposed and fixed at one end within the shell and at its inlet end surrounding said opening, a discharging extension disposed at an angle to and presented downwardly from the flue, a dust-conveying conduit having communication at its discharge end through said opening with the flue, means for spraying and wetting down the incoming dust, and a receptacle within the shell for receiving the matter discharging from said extension.

1,809,923. GAS DISTRIBUTION OF EIGHT CYLINDER MOTORS OF THE STRAIGHT TYPE. JEAN A. H. BARKEIJ, Los Angeles, Calif. Filed Nov. 16, 1925. Serial No. 69,431. 23 Claims. (Cl. 123—52.)



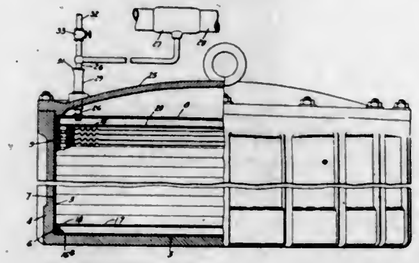
1. The combination of an internal combustion engine having eight cylinders operating on the fourstroke cycle, said cylinders arranged in a straight line and numbered successively from 1 to 8, said cylinders divided in two groups so that cylinders 1 and 2, and 5 and 6 are in one group, cylinders 3 and 4, 7 and 8 in another group; said first group having suction periods which overlap each other, said second group also having overlapping suction periods; the four cylinders of each group connected with a manifold having a single zone of distribution, one manifold having two branches from said zone, one to the left to cylinders 1 and 2, the other to the right to cylinders 5 and 6; the other manifold having two branches from said single zone, one to the left to cylinders 3 and 4, the other to the right to cylinders 7 and 8; the distances from each zone to the respective cylinders of each group being substantially equal.

1,809,924. METHOD OF MAKING DRY BATTERY STRUCTURES. CYRIL P. DEIBEL, Lakewood, Ohio. Filed Aug. 28, 1928. Serial No. 302,543. 12 Claims. (Cl. 136—175.)



1. The method of making dry battery structures, consisting in arranging a plurality of cells in a container, mounting a plurality of line attaching clips upon a supporting member, and interconnecting said cells by wires soldered thereto and soldering said clips while upon said member to certain of said cells, thereby permanently assembling said supporting member with said clips.

1,809,925. VARIABLE RESISTANCE DEVICE. WILLIAM H. EDWARDS, Great Neck, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 14, 1929. Serial No. 363,088. 3 Claims. (Cl. 175—366.)

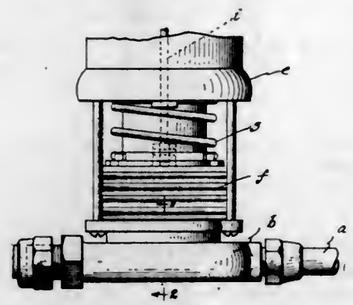


2. The combination of a plurality of thin film rectifier disks, a housing member for holding said disks, and an adjustable clamping screw for bending and superimposing stresses on said disks.

1,809,926. APPARATUS FOR CONDENSING CONDENSABLE VAPORS. OTTO EINSLER, Leverkusen/Rhine, and HANS TIETZ, Cologne-Mulheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 20, 1928, Serial No. 320,868, and in Germany Nov. 29, 1927. 2 Claims. (Cl. 261—95.)

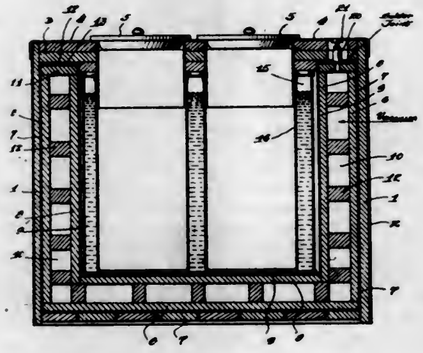
1. An apparatus for condensing condensable vapors by direct contact with liquids comprising a container, a horizontal partition in the upper part of said container provided with one or more holes, a vertical pipe passing through each hole and spaced from the sides thereof, said pipes communicating with a vapor supply at their upper ends and at their lower ends opening into the space beneath the said partition, means for feeding liquid into the space above said partition, means for withdrawing liquid from said container, a horizontal perforated partition in the lower part of said container and a bed of loosely packed solid material between said two partitions, said bed extending up to the lower ends of said vertical pipes.

1,809,927. MEANS FOR MAINTAINING OIL PRESSURE IN HIGH TENSION ELECTRIC CABLES. LUIGI EMANUELI, Milan, Italy, assignor to Societa Italiana Pirelli, Milan, Italy, a Corporation of Italy. Original application filed Sept. 1, 1925, Serial No. 53,930. Divided and this application filed Sept. 19, 1927. Serial No. 220,334. 12 Claims. (Cl. 137—71.)



1. A variable capacity reservoir comprising a sealed container means, a plurality of individual cellular means located in the container means, each of which cellular means comprises a pair of thin metal disks united at their peripheral edges to define an internal chamber, said means being assembled flatwise to form a stack, means for holding the cellular means from side-wise movements in the container, said container means and cellular means both containing fluids which are separately maintained under pressure above the atmosphere, and a conduit for admitting fluid to and receiving it from one of said means in varying amounts.

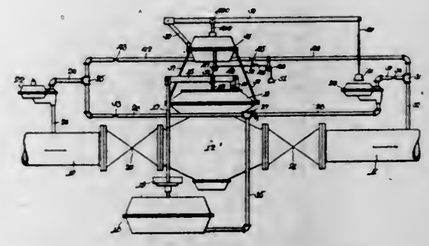
1,809,928. REFRIGERATOR CONTROL. PATTERSON FARMER, Detroit, Mich. Filed Nov. 27, 1925. Serial No. 71,850. 3 Claims. (Cl. 62—2.)



1. In a refrigerator control, the combination of a conduit bearing the expanded gases of the refrigerating

apparatus and including a fixture having a plurality of branches for dividing the gases and conveying the same through the fixture in a plurality of streams, a separate thin metal piece defining said branches and a fluid expansion type of thermostat provided with a depending

non-expansive chamber fitted snugly in said fixture and suspended beteen said branches to place the chamber in immediate heat conductive relation with said thin metal piece to prevent the entrance of convection currents between said chamber and fixture.

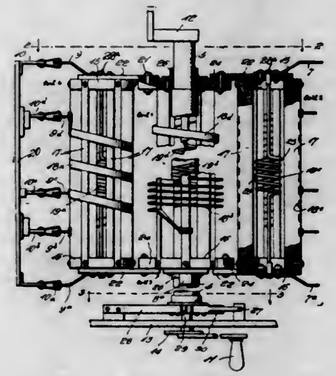


1,809,929. CABINET CONSTRUCTION. PATTERSON FARMER, Detroit, Mich. Filed Oct. 13, 1927. Serial No. 225,887. 1 Claim. (Cl. 220—9.)

A cabinet for containing food stuffs or the like, comprising in combination inner and outer substantially non-heat-conducting walls spaced to provide a vacuum space, valve means in the outer wall consisting of a port extending from the exterior side of the outer wall to the middle of said outer wall, a second port in the outer wall spaced from, and parallel to, the first mentioned port, and extending from the middle of the outer wall to the interior surface of the outer wall, said first and second ports being connected by a conduit, a valve member closing the second port and a closure for the first-named port, whereby the vacuum between the inner and outer walls may be tested without impairing said vacuum.

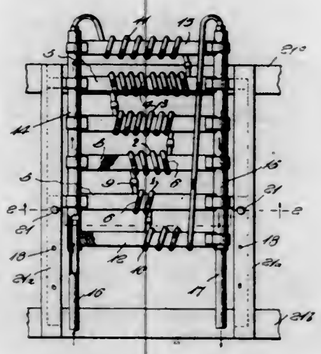
1,809,930. AUTOMATIC GAS GOVERNOR LOADER. ALBERT G. FORD, Aurora, Ill., assignor, by mesne assignments, to Reynolds Gas Regulator Co., Anderson, Ind., a Corporation of Indiana. Filed Dec. 16, 1926. Serial No. 155,325. 7 Claims. (Cl. 50—10.)

1. In a device of the character described, the combination with automatically operating governor means for a gas distributing system having low pressure on the delivery side and high pressure on the supply side, said means including therein a main governor and a low pressure auxiliary governor normally set for a predetermined pressure; of auxiliary pressure means responsive, auto-



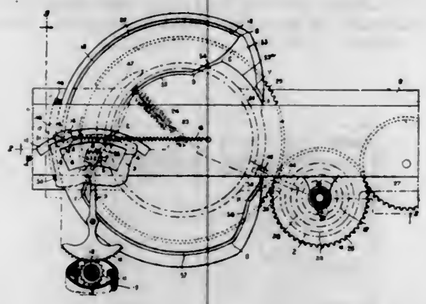
matically controlled by said governor means, when under load, for loading said low pressure auxiliary governor to effect a higher pressure setting thereof than that for which it is normally set.

1,809,931. SORGHUM CROPS TOPPING TOOL. MARK FARMER, Detroit, Mich. Filed Oct. 13, 1927. Serial No. 226,779. 2 Claims. (Cl. 30—9.)



1. A new article of manufacture, a knife comprising a blade, both ends of which are provided with a curved, tapered prong extending at right angles therefrom and perpendicular to the plane therewith.

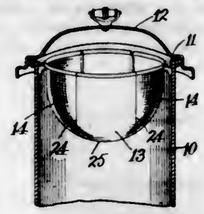
1,809,932. ADJUSTABLE INDUCTANCE AND COUPLING SYSTEM. LOUIS A. GEBHARD, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed June 5, 1929. Serial No. 368,690. 5 Claims. (Cl. 171—119.)



1. An adjustable inductance system comprising in combination a rotatable framework carrying a plurality of helical main inductance coils wound with spaced turns and adapted to carry currents of the magnitude used in radio transmitting sets, each of said coils having frame contact members therefor mounted on said rotatable frame, stationary contact members adapted to engage said frame contact members, and a plurality of auxiliary inductance coils each in individual electromagnetic relation with one of said main inductance coils.

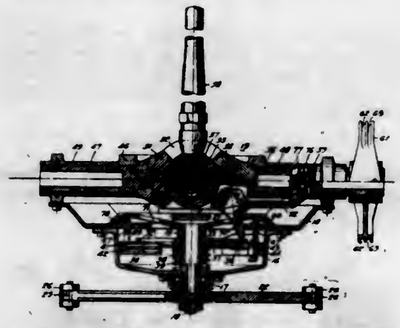
1,809,933. INDUCTANCE SYSTEM. LOUIS A. GEBHARD, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed June 5, 1929. Serial No. 368,691. 12 Claims. (Cl. 171—242.)

1. An adjustable inductance system comprising a fixed framework, a rack framework movable with respect to said fixed framework, a plurality of individual inductance coils positioned on said rack framework, fixed contact elements carried by said fixed framework, said coils comprising lengths of metallic tubing adapted to be cooled by a circulating fluid, each of said coils being provided with coil contact elements adapted to engage said fixed contact elements selectively, and said rack framework adapted to be adjusted to different positions whereby said coils are selectively connected with an external circuit



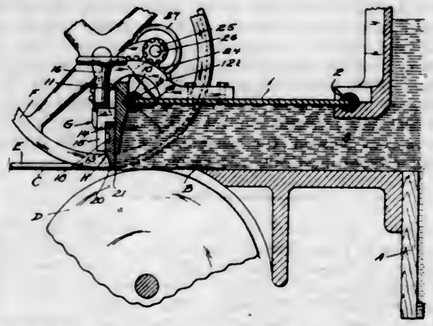
1,809,934. INDICATOR. JAMES B. GLENNON, Washington, D. C. Filed May 28, 1930. Serial No. 456,591. 12 Claims. (Cl. 116—31.)

1. In an indicator for a dirigible vehicle, the combination of an indicating medium operated by the means for steering the vehicle; and an indicating medium operated by a mechanical element of the vehicle in contact with the surface supporting the vehicle, the two indicating media being so related that by the operation of the means for steering the vehicle, the movements of the two media may be caused to co-incide.



1,809,935. COFFEE URN BAG. ABRAHAM M. HERZMARK, Kansas City, Mo. Filed July 30, 1928. Serial No. 296,275. 3 Claims. (Cl. 53—3.)

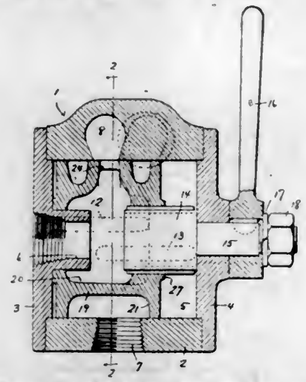
1. In a bag of the character described, a central section of substantially uniform width, a pair of similar uninterrupted side sections having curved edge portions engaging with the longitudinal edges of said central section, a pair of non-intersecting smooth continuous seams extending entirely across said bag and uniting the engaging edges of said sections to form a bag having a smooth



rounded concavo-convex outline when distended and having no pocket forming recesses therein, and a peripheral seam at the top thereof, said bag being otherwise seamless.

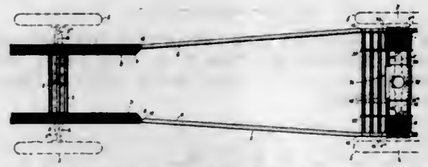
1,809,936. AIRPLANE CONTROL. EARL D. HILBURN Oakland, Calif. Filed Sept. 9, 1929. Serial No. 391,284. 9 Claims. (Cl. 244—29.)

1. A control for surfaces on an airplane comprising a first member movable to control a surface on the airplane, means for moving said member to control the surface, a second member movable to control another surface on the airplane, means for moving said second member to control the another surface, means for disabling the first member whereby the means for moving the first member is ineffective to control the surface, a second disabling means for rendering the second member disabled so that the means for moving the second member is ineffective to control the another surface, and a cam member rotatable to engage both the disabling means and to vary the disabling means whereby the moving means are enabled and disabled.



1,809,937. INLET FOR PAPER MAKING MACHINES. FORREST HILSHEIMER, Chillicothe, Ohio. Filed Apr. 20, 1929. Serial No. 356,804. 8 Claims. (Cl. 92—44.)

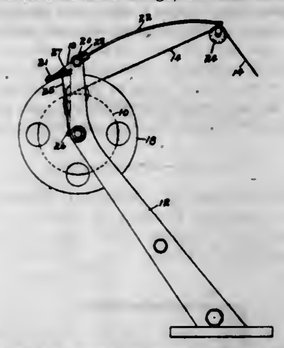
1. An inlet for paper making machines comprising a support, a slice formed to include a base member and a



flexible blade member, adjusting means between said base and blade members admitting of the flexing of the latter in a vertical plane, and means admitting of the swinging of said slice bodily about a horizontal axis carried in conjunction with said support.

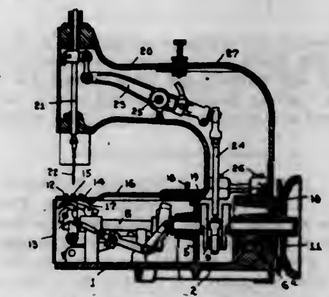
1,809,938. FLUID OPERATED REVERSING VALVE. WILHELM F. HOHULIN, Ottawa, Ill. Filed Apr. 25, 1930. Serial No. 447,255. 3 Claims. (Cl. 251—4.)

1. A valve of the character described comprising a casing having an inlet port and an outlet port and further having a pair of diagonally spaced ports, a shaft mounted for oscillatory movement in the casing, a valve core slidably keyed on the shaft for oscillatory movement therewith and being provided with means for establishing communication between the inlet port and one of the ports of the pair and between the outlet port and the other port of said pair upon rotary and sliding movement of the core in one direction and for establishing communication between the inlet port and the second named port of the pair and between the outlet port and the first named port of the pair upon rotary and sliding movement of the core in the opposite direction.



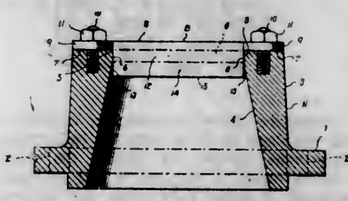
1,809,939. AUTOMOBILE LIFT. ERNEST W. HOLMES, Chattanooga, Tenn., assignor to Ernest Holmes Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Aug. 27, 1928. Serial No. 302,361. 8 Claims. (Cl. 254—89.)

1. An automobile lifting frame adapted to receive above it, the front and rear axles of an automobile, said frame having a relatively narrow portion of a width to engage the flat dropped portion of the automobile front axle, the sides of the frame diverging as they proceed rearwardly and having a rear portion of a width substantially equal to the length of the automobile rear axle, and axle supporting plates extending inwardly from the sides of the rear portion of the frame.



1,809,940. TAPE DISPENSING DEVICE. CARL G. KRONMILLER, Chicago, Ill., assignor, by mesne assignments, to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1926. Serial No. 156,428. 3 Claims. (Cl. 242—156.)

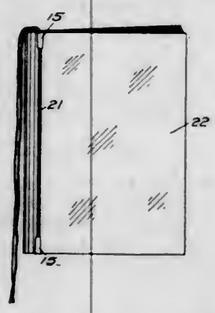
2. In a device for dispensing tape, a reel upon which tape may be wound, a flange affixed to the reel and extending outward beyond the periphery of the reel, a rock shaft mounted outside of said flange, an arm on the rock shaft



carrying a brake shoe in operative relation with said flange, a resilient arm extending from the rock shaft, and a tape guide on the outer end of the resilient arm.

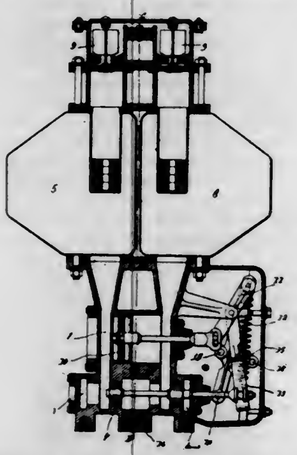
1,809,941. BED STRUCTURE FOR SEWING MACHINES. FRIEDRICH LUTZ, Stuttgart, Germany, assignor to Union Special Maschinenfabrik, G. m. b. H., Stuttgart, Germany. Filed June 28, 1928, Serial No. 288,830, and in Germany Nov. 22, 1927. 1 Claim. (Cl. 112—258.)

A sewing machine including a supporting bed structure having integral side walls with its ends substantially open, a throat plate mounted at one end of said bed structure, an overhanging arm mounted at the other end of said bed structure, a cover plate between the throat plate and the overhanging arm, a main actuating shaft located in said supporting bed and having an eccentric member mounted thereon, said opening in the bed structure adjacent the overhanging arm being of sufficient size to permit the shaft with the eccentric member thereon to be inserted therethrough, a sleeve for closing said opening and having a bearing for said shaft, and a cover plate for closing the other end of said supporting bed.



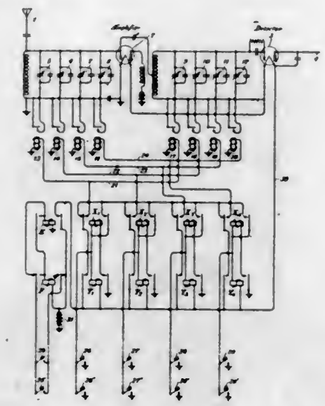
1,809,942. EXHAUST NOZZLE. BRADFORD L. MCLEOD, Frankfort, Ind. Filed Apr. 7, 1928. Serial No. 268,318. 1 Claim. (Cl. 230—100.)

In an exhaust nozzle, the combination of a pipe having an upwardly-convergent inner face and a constricted



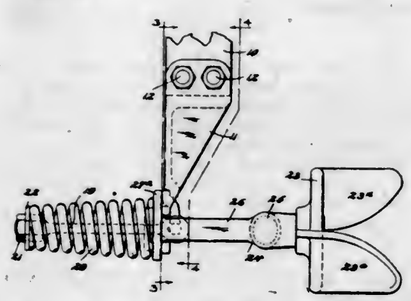
cylindrical throat with a rectilinear wall immediately above said face, and a plane-surfaced annular top immediately adjacent said throat; two bolts projecting from said top; a bridge having a wedge-shaped portion extending into said pipe beyond said throat so as to be disposed in the convergent portion of said pipe, said wedge-shaped portion having rectilinear ends in juxtaposition with the wall of said throat; and a circular wing at each end of said bridge received upon the top and about one of said bolts.

1,809,943. BOOKMARKER. PIERCE OCKENDEN, Edmonton, Alberta, Canada, assignor of one-half to William D. Lee, Edmonton, Canada. Filed Mar. 24, 1930. Serial No. 438,377. 1 Claim. (Cl. 116—119.)



A bookmarker comprising a resilient strip of material, a pair of flat hooks having clamp extensions secured to the ends of said material and holes through the bills and backs and a string threaded through one of said hooks and fastened and adapted to be tied to the other hook.

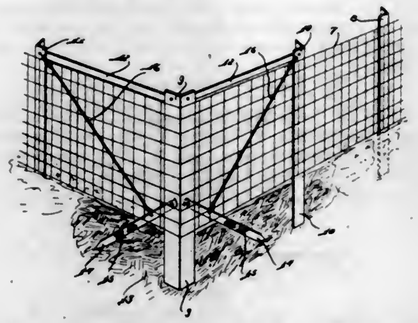
1,809,944. AUTOMATIC GASOLINE FEEDING APPARATUS. RENÉ PORTE, Levallois Perret, France, assignor to Societe Hardoll (Etablissements Hariveau & Dollmier, et Rene Porte & Cie., Reunis), Levallois Perret, France. Filed June 10, 1925, Serial No. 36,174, and in France Nov. 14, 1924. 5 Claims. (Cl. 73—28.)



1. A volumetric meter including in combination, two measuring chambers of given capacity, each chamber having an air vent, means for closing the vent, means through which liquid is supplied to and discharged from said chambers, a valve mechanism for controlling the supply to and the discharge from said chambers, actuating means normally inactive for operating said valve mechanism, and means controlled by the pressure developing on the liquid after the chamber is filled for positively starting the movement of the valve mechanism and initiating the movement of said actuating means for operating the valve mechanism.

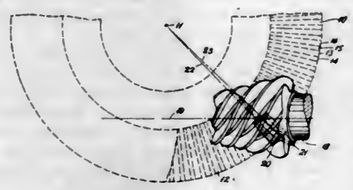
1,809,945. CONTROL ARRANGEMENT FOR CARRIER APPARATUS. WILTON T. REA, Flushing, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 2, 1929. Serial No. 375,552. 2 Claims. (Cl. 250—40.)

1. A translating device for a plurality of different carrier frequencies, an input circuit connected to said translating device, a plurality of selective circuits adapted to be connected to said input circuit for rendering it selective for the different carrier frequencies, a series of relays each of which controls the connection of one of said selective circuits to said input circuit, a second series of relays each of which is paired with one of the relays of said first series and operates to prepare an operating and locking circuit therefor, individual operating circuits for the relays of said second series, and means controlled by the operation of one of the relays of said second series subsequent to the prior operation of a pair of relays of both of said series for opening the locking circuits for said pair of relays.



1,809,946. SUPPORT FOR AUTOMATIC CONNECTERS. JOSEPH ROBINSON, New York, N. Y. Filed Feb. 9, 1921, Serial No. 443,692. Renewed Jan. 3, 1927. 19 Claims. (Cl. 285—58.)

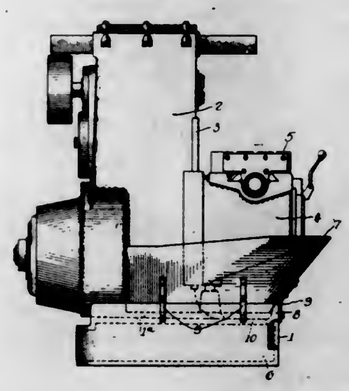
1. In a train pipe connecter, a bracket, an anchor device having one end thereof detachably hung on the bracket and the other end free from attachment to the bracket, said first mentioned end of said device being re-



movable from the bracket by swinging the free end of the device relative to the bracket, a coupling head, and means associated with said anchor device for movably supporting the head in front of the bracket, said means including a spring which exerts pressure against said device to hold the same against swinging movement relatively to said bracket.

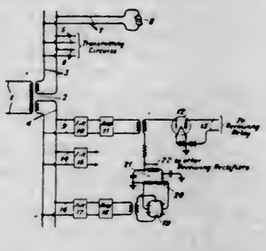
1,809,947. FENCE ANCHOR. PHIL SHEPARD, Owosso, Mich. Filed Sept. 1, 1928. Serial No. 303,520. 2 Claims. (Cl. 256—35.)

1. A fence anchor of the class described, comprising: a pair of vertically extended spaced posts; means for connecting said posts adjacent the upper ends thereof; a diagonally extended driven member driven at one end into the earth and attached at the opposite end to one of said posts adjacent the lower end thereof; and means attached to said diagonally extended member intermediate its ends and above their earth level and connected to the other of said posts.



1,809,948. METHOD OF PRODUCING GEARS. BERNARD EDWARD SHLESINGER, Irondequoit, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Dec. 15, 1927. Serial No. 240,226. 17 Claims. (Cl. 90—4.)

1. The method of generating a tapered gear conjugate to a straight tooth basic gear, which consists in employing as a tool, a worm hob capable of meshing with said basic gear along a line offset from the axis of said basic gear and extending diagonally of the face thereof, and positioning said hob with its axis extending diagonally of the face of a tapered gear blank, rotating said hob in engagement with the blank while rotating the blank on its axis continuously and simultaneously producing a relative generating movement between the hob and blank corresponding to that of a gear meshing with said basic gear.

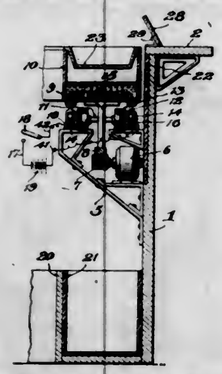


1,809,949. MACHINE TOOL. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a Corporation of Illinois. Filed Feb. 27, 1928. Serial No. 257,210. 2 Claims. (Cl. 90—11.)

1. In a machine tool, the combination of a base, box-like in character, provided with an upstanding wall along the front and side edges thereof, a work support above the front portion of said base, and a sheet metal shield extending along the front and the two sides of said base, said shield having inwardly and downwardly sloping sides

positioned with its lower edge within and attached to said wall so as to be supported thereby and arranged to catch cutter coolant which falls from the work support.

1,809,950. CARRIER TELEGRAPH SYSTEM. VAUGHN P. THORP, River Edge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 5, 1929. Serial No. 383,557. 7 Claims. (Cl. 178—51.)

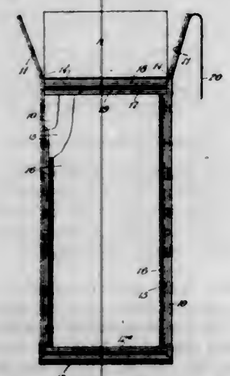


1. In a carrier telegraph system the method of signaling which comprises transmitting a plurality of different carrier frequency currents over the system, separately detecting said received carrier currents, simultaneously transmitting over the same system a separate carrier frequency current, and utilizing said separate carrier frequency current to control said detection.

1,809,951. TRAVELING HEATED AND COOLED FOOD CARRIER. GEORGE LUIGI VILFORDI, Dallas, Tex., assignor of twenty-five per cent to Metodi Petroff, and fifteen per cent to John Butera, Dallas, Tex. Filed Feb. 24, 1931. Serial No. 518,017. 7 Claims. (Cl. 186—1.)

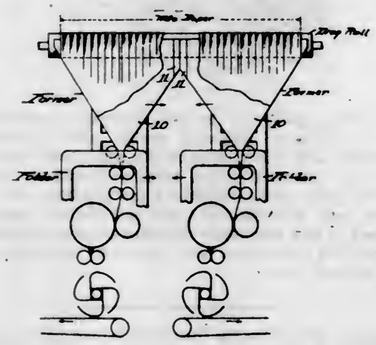
1. In a device of the type described, a frame, a pair of spaced tracks, water receptacles having open tops, food pans received in the receptacles, a heating coil in each receptacle, arms depending from the receptacles into the space between the tracks, transverse shafts carried by the arms and having rollers which ride on the tracks, a pair of horizontal contact plates on the frame disposed on the outer sides of the respective tracks, contact means

carried by the water receptacles and depending therefrom, and having connection with the respective ends of the heating coils and also having wiping engagement



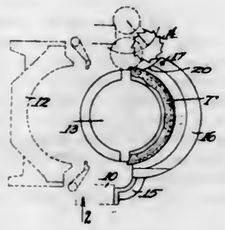
with the contact plates, means engaging the arms to effect travel of the water receptacles, and a circuit including said contact plates.

1,809,952. PERCUSSION TOOL. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Aug. 2, 1921. Serial No. 489,189. 16 Claims. (Cl. 121—15.)



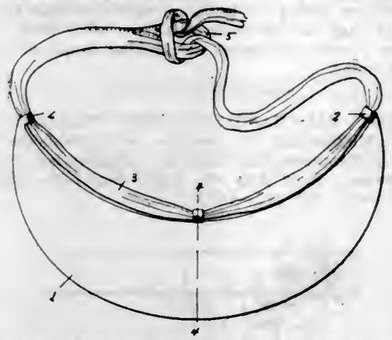
1. In combination in a fluid-driven impact tool, a cylinder, a piston operating therein, a valve mechanism comprising two independently movable sections, means for actuating one of said sections to admit motive fluid behind the piston and move it forwardly, means for actuating both sections conjointly for cutting off the supply of motive fluid during said forward stroke, and means for actuating the other of said sections to trap motive fluid in front of the piston and move it rearwardly.

1,809,953. SHIPPING CONTAINER. JAMES G. WITTE, Keokuk, Iowa, assignor of one-half to Iowa Fiber Box Company, Keokuk, Iowa, a Corporation of Delaware, and one-half to South West Box Company, Sand Springs, Okla., a Corporation of Delaware. Filed Apr. 18, 1929. Serial No. 356,070. 2 Claims. (Cl. 229—14.)



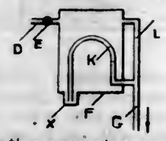
1. A shipping container comprising, in combination, an outside casing of corrugated fiber board of double thickness creased so as to be collapsible to be shipped flat and which may be expanded to form a rectangular body; foldable flaps integral with said casing and completely closing the two ends thereof; a corrugated fiber board liner which may be flattened out and which is creased to be folded and received within the rectangular casing and of such dimensions as to contact on all sides with the body which is to be shipped in the container; a second corrugated fiber board liner enclosing the first and interposed between and in contact with both the casing and the first liner; said second liner being creased so as to be capable of shipment in the flat and also foldable to fit in the casing; the inner liner having its corrugations extending transversely of the box and being smooth on its interior face; and means for closing the end flaps of the body.

1,809,954. SECTIONAL FORMER. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 18, 1927. Serial No. 213,848. Renewed June 20, 1929. 7 Claims. (Cl. 270—94.)



1. The combination with two formers arranged side by side and movable apart of two sections adapted to be located between them when they are moved apart to form continuations of the formers and support the web between them, and to be swung back beneath the formers to permit the formers to be moved nearer together.

1,809,955. TAIL SHELF FOR STEREOTYPE PLATE CASTING MACHINES. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 6, 1929. Serial No. 353,202. 8 Claims. (Cl. 22—3.)



1. The combination with a stereotype plate casting machine having means for delivering the united tail and plate on the side away from the casting back and in vertical position and a saw for cutting the tail from the plate as the plate is delivered, of a shelf located in a position to surround the outer side of the cylinder for receiving the tail when it is detached from the cylinder.

1,809,956. EYESHIELD. CHARLES N. WRENSHALL, Asheville, N. C. Filed May 29, 1930. Serial No. 457,187. 7 Claims. (Cl. 2—12.)

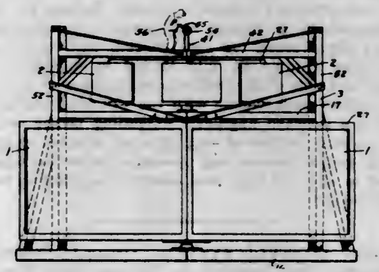
1. An eye shield of the character described comprising a visor, a series of eyes mounted on one marginal portion of said visor and projecting therefrom, and a strip of flexible, moisture absorbing material extending through the eyes and constituting means for supporting the visor on the head of a wearer.

1,809,957. COMPRESSION REFRIGERATING APPARATUS. LEONARD KAY WRIGHT, Astoria, Long Island City, N. Y. Filed Aug. 27, 1926. Serial No. 131,944. 7 Claims. (Cl. 62—116.)

1. In a refrigerating apparatus, an evaporator equipped with a supply line, a suction line, and a siphoning tube so arranged that in normal operation a portion of its length is above the surface of the liquid refrigerant; one end of the siphoning tube being in close proximity with the lowest portion of the inside of the evaporator the other end of said tube being connected to said suction line.

1,809,958. REFRIGERATION APPARATUS. LEONARD KAY WRIGHT, Jackson Heights, Long Island, N. Y. Filed Jan. 27, 1928. Serial No. 249,949. 8 Claims. (Cl. 62—118.)

1. A liquid cooler comprising a cabinet, an elongated compartment in the cabinet open at each end, a generator positioned in the upper portion of the compartment and a condenser subjacent generator.

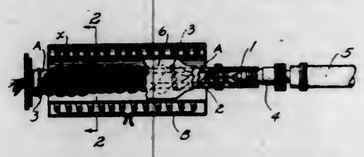


4. A liquid cooling device comprising a two compartment cabinet, a well within one of the compartments surrounded with insulating material, an expansion coil and a receiver within said compartment, a generator and condenser within the other compartment so arranged as to induce the flow of a cooling air through the compartment.

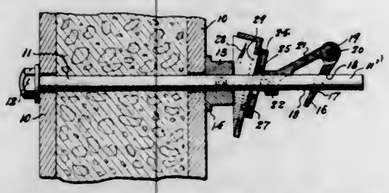
1,809,959. SPRING. GEORGE H. BEAUMONT, Cleveland, Ohio, assignor to Sterling Spring Company, Cleveland, Ohio, a Corporation of Delaware. Filed June 26, 1928. Serial No. 288,313. 5 Claims. (Cl. 267—45.)

1. In a vehicle chassis spring, a main load carrying spring, an auxiliary spring associated therewith, knuckles formed on selected leaves on each of said springs, link mechanism pivotally interconnecting said knuckles and normally securing said springs in mutually opposed relationship and means associated with said link mechanism for transferring stresses to the entire load carrying spring.

1,809,960. ROTARY SIGNBOARD. LOUIS A. BURCH, Seattle, Wash. Filed Oct. 27, 1928. Serial No. 315,401. 3 Claims. (Cl. 40—39.)



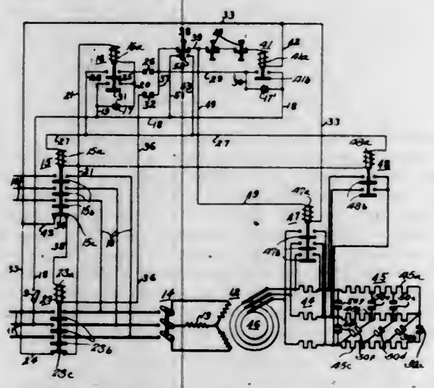
1. In a wind operated rotary sign board of the class described, a comparatively large rectangular shaped frame having a lower horizontal member, an upper horizontal member, and vertical struts connecting the said members; sign boards on the flat vertical sides of the said frame, a supporting frame, a downwardly extending pin in the center of the said lower horizontal member, a cup in the said supporting frame into which the said pin extends forming an exposed grease retaining bearing, a similar bearing at the top with the cup in the said upper horizontal member and the pin in the supporting member, a superimposed frame somewhat smaller and of similar construction, similar bearings rotatably mounting said superimposed frame in said supporting frame, a flat rectangular shaped sail at each corner of the said superimposed frame, means for pivotally mounting the said sails at both the upper and lower edges with the leading portion somewhat longer than the trailing portion, rigid vertical bars on the frame positioned to be engaged by and to form stops for the said sails, and suitable gears for operating the large frame by the superimposed frame.



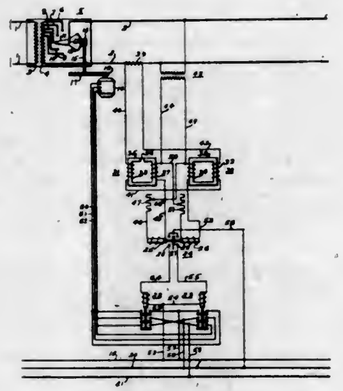
1,809,961. HAIR CURLING MACHINE. LIONEL A. CARTER, Webster Groves, Mo., assignor to Koken Companies, St. Louis, Mo., a Corporation of Delaware. Filed June 24, 1929. Serial No. 373,316. 6 Claims. (Cl. 132—33.)

6. A hair curling or waving apparatus, comprising a hollow expansible member around which a strand of

hair is adapted to be wrapped or coiled, said member being constructed of elastic material, and a device adapted to be detachably connected with said member for introducing a medium under pressure into same so as to inflate said member and thus distend the portions of said member surrounded by the coils of the strand.

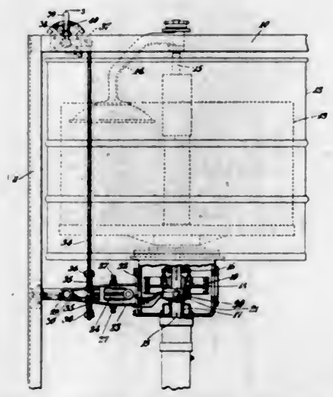


1,809,962. PRESSURE EXERTING DEVICE. SAMUEL S. COLT, Orange, N. J. Filed Oct. 8, 1927. Serial No. 224,918. 5 Claims. (Cl. 254—29.)



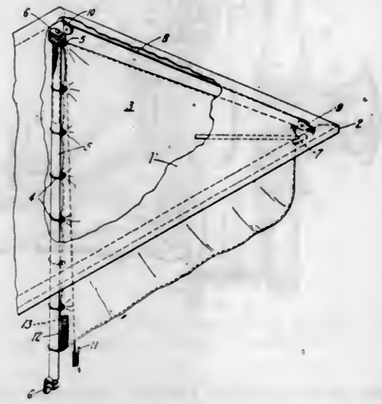
1. A pressure exerting device of the kind described engageable with tie-rods of concrete forms or other structures, comprising a gripping element having an opening through which a tie-rod may extend, to dispose said element transversely of said tie-rod, said gripping element being tiltable on said tie-rod in direction of the longitudinal axis of the latter to bring edges of its opening into gripping engagement with the tie-rod, a wedge member, and a forward angularly extending means connected with one end portion of said gripping element engageable by said wedge member and operative under back-pressure thereof to tilt and hold said element in gripping relation to said tie-rod.

1,809,963. CONTROL SYSTEM. OSCAR C. CORDES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 19, 1928. Serial No. 279,078. 9 Claims. (Cl. 172—179.)



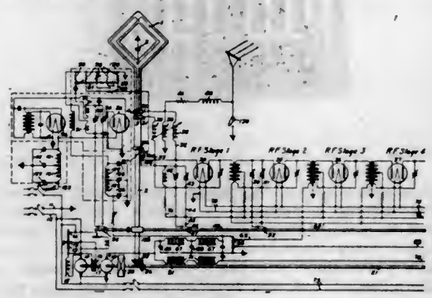
1. In a control system for an alternating-current motor having a primary and a secondary winding, a plurality of power sources having different frequencies, a plurality of resistor banks connected to the secondary winding, one of said resistor banks being bridged during normal operation of the motor, and means operable to institute a braking operation comprising means for transferring the connection of the primary winding from one power source to another power source of lower frequency and simultaneously removing the bridging connection from the one resistor bank and short-circuiting the other bank of resistors, thereby to control the braking torque developed by the motor.

1,809,964. TAP-CHANGING SYSTEM. WILLIAM R. FARLEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 31, 1929. Serial No. 382,460. 9 Claims. (Cl. 171—119.)



1. An automatic tap-changing system for transformers comprising, in combination, a plurality of power lines, a transformer connecting said power lines, said transformer being provided with motor-operated tap-changing equipment, and means associated with one of said power lines and responsive to the reactive component of current in said power line for so controlling the operation of said equipment as to maintain the ratio of transformation substantially equal to the ratio of the voltages of the respective power lines.

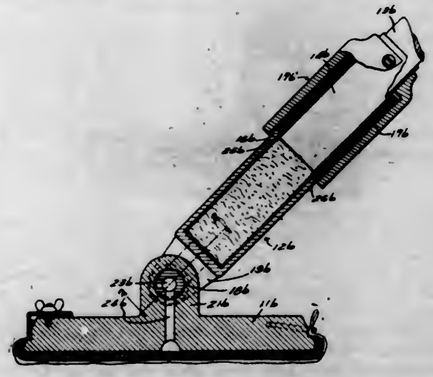
1,809,965. CLUTCH OPERATING MECHANISM. GEORGE W. FELTON, Hamilton, N. Y., assignor to Utica Products, Inc., Utica, N. Y., a Corporation of New York. Filed Feb. 10, 1928. Serial No. 253,272. 7 Claims. (Cl. 74—39.)



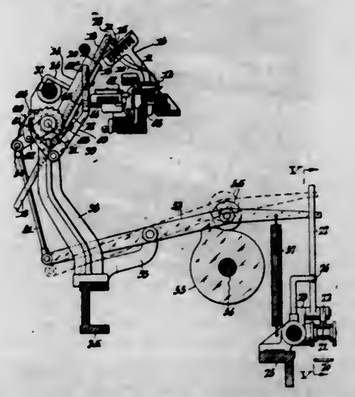
1. A clutch operating mechanism comprising a pivoted lever, a rotatable member operatively connected with one end of said lever, impositive means for holding said lever in one position, a second rotatable member, a flexible shaft connecting said rotatable members, and means for applying progressively increasing torque to said second rotatable member.

1,809,966. AWNING. CHRISTIAN P. FOGH, Oakland, Calif. Filed Apr. 16, 1929. Serial No. 355,504. 6 Claims. (Cl. 156—44.)

4. A side wing for awnings comprising a sheet of flexible material, a spring actuated roller on which said sheet is rolled, said sheet being fixed at one end to said roller and loosely connected at its opposite end with said roller to cause one end to wrap around the roller ahead of the other, and means including a flexible element attached to said sheet and for controlling the winding and unwinding operation of said sheet, and a flexible weight member disposed at the loosely mounted end of said sheet which weight member is adapted to wind around the roller.



1,809,967. RADIANT ENERGY RECEIVING SYSTEM. HENRY C. FORBES, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1929. Serial No. 340,256. 9 Claims. (Cl. 250—20.)

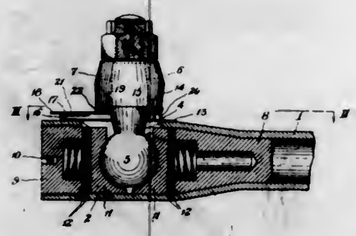


1. In combination, a directional energy-receiving device, and means for continuously indicating the direction from which energy is being received and the average amplitude of said energy.

1,809,968. CARTRIDGE-HOLDING FLOOR POLISHER. EDNA R. GEDGE, Los Angeles, Calif., assignor to Peerless Products Co., a Corporation of California. Filed Jan. 21, 1926. Serial No. 82,735. 3 Claims. (Cl. 91—39.)

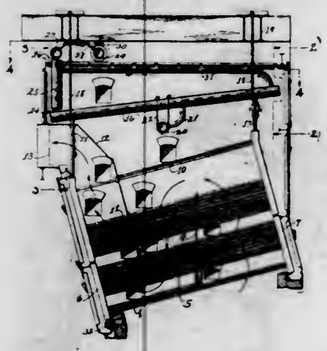
1. In means of the general character described; a waxer body having a wax delivery passage; a handle for manipulation of said body; a wax container mounted on the lower end of said handle and provided with an interiorly threaded cap adapted to cooperate therewith; an apertured ear integrally formed on the top of the body and having a wax passage extending between the aperture in the ear and the wax delivery passage; said ear and container being pivotally joined; the container having an extension fitting into the aperture in the ear and arranged with a passageway communicating with the passageway in the ear; a plunger movable in the container; and means whereby axial movement of the handle is effective to move said plunger.

1,809,969. YARN CARRIER CONTROL MECHANISM FOR FLAT KNITTING MACHINES. ALBERT GEE, Elkins Park, Pa. Filed May 20, 1929. Serial No. 364,366. 11 Claims. (Cl. 66—129.)



1. Yarn carrier control mechanism for flat knitting machines comprising a slidable stop bar under friction restraint and having a profile edge of serially-arranged studs to intercept the yarn carriers; and means to intermittently shift the stop bar transversely of the carriers for presentation of different portions of its profile edge in the path of said carriers, thereby to variously limit the throw of the latter as the knitting proceeds.

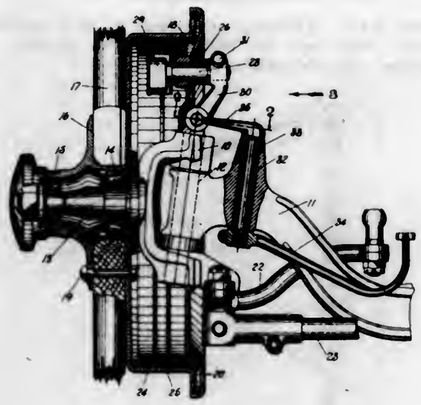
1,809,970. CLEANER. IRVING L. HOLLAND and ROY W. KLAUS, Chicago, Ill.; said Holland assignor to John A. Marzall. Filed Dec. 28, 1928. Serial No. 329,071. 4 Claims. (Cl. 87—5.)



2. A liquid cleaner composed of approximately 16.67% denatured alcohol, 4.16% of 36% glacial acetic acid, .55% oil of sassafras and 78.62% of water, by volume.

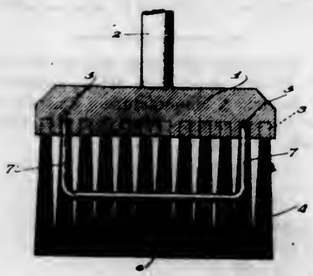
1,809,971. DUST COVER FOR TIE-RODS OR THE LIKE. GEORGE H. HUFFERD, Detroit, Mich., assignor to Thompson Products Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 19, 1925. Serial No. 76,454. 10 Claims. (Cl. 287—90.)

10. A dust cover and oiler for ball joints, comprising a cover plate provided with an opening and having a continuous rib around the margin of the opening except at one side where it is extended laterally to provide an oil conveying recess, in combination with a flexible plate superimposed upon said cover plate and having an opening therein aligned with the opening in said cover plate, an arcuate flange cooperating with said rib and an indented portion received in said recess.



1,809,972. STEAM BOILER. DAVID S. JACOBUS, Montclair, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 25, 1927. Serial No. 215,301. 4 Claims. (Cl. 122—265.)

1. In a water tube boiler, vertically disposed headers, inclined tubes connected to said headers, inclined headers, connections from said vertically disposed headers to said inclined headers, and vertically disposed headers located above said inclined headers and connected to the respective end portions of said inclined headers out of line with said first named connections.



1,809,973. BRAKE OPERATING MEANS. WILLIAM S. JAMES, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed June 17, 1929. Serial No. 371,473. 4 Claims. (Cl. 188—194.)

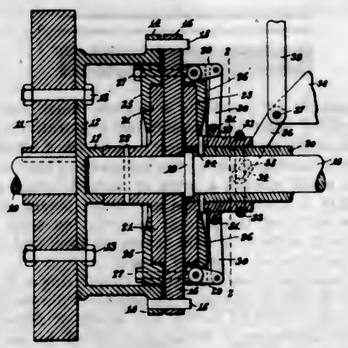
1. In a steering wheel brake mechanism, a rotatable drum, braking means engageable therewith, a shaft having means thereon operable to move said braking means into engagement with said drum, a lever secured to said shaft, a contact member having its longitudinal axis extending substantially perpendicular to the longitudinal axis of said shaft adjustably supported in said lever, a shaft journaled substantially parallel to the pivoted axis of said wheel

having an arm extending therefrom engageable with said contact member, and means for rotating said last named shaft to engage said braking means with said drum.

1,809,974. BRUSH. PAUL A. JONES, Jonesville, Mich. Filed June 13, 1929. Serial No. 370,588. 1 Claim. (Cl. 15—168.)

As an article of manufacture, a brush including a head member having a plurality of pockets therein, bristles secured in some of said pockets, a plurality of elongated U-shaped wires concealably disposed among said bristles of less width than said head and arranged tending to maintain certain of said bristles in substantially their initial position, said wires having their end portions embedded in other of said pockets.

1,809,975. HELICAL BLADED REAMER. WILLIAM J. KATTREIN and FREDERICK W. BECKER, Albany, N. Y., assignors to Watervliet Tool Co., Inc., Albany, N. Y., a Corporation of New York. Filed May 13, 1926. Serial No. 108,857. 2 Claims. (Cl. 77—75.5.)



1. In combination, a body having a plurality of spirally arranged grooves of relatively narrow width having their bottoms lying in an imaginary cone; twisted blades fitted in said grooves respectively and tapered reversely to the cone; said blades being to a substantial degree flexible to

permit flexure when in the grooves, whereby they may be sprung to rest on the bottom of the grooves; means to

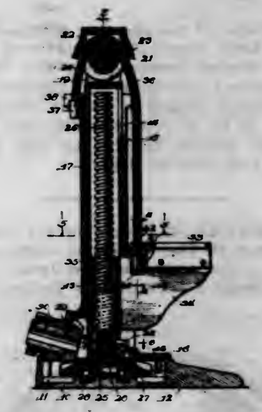
hold the ends of the blades against the bottoms of the grooves and to shift the blades longitudinally in the grooves.

1,809,976. CLUTCH. JUSTUS R. KINNEY, Jamaica Plain, Mass. Filed Apr. 12, 1928, Serial No. 269,422. Renewed Oct. 2, 1930. 7 Claims. (Cl. 192—48.)

7. The combination of a rotatable friction disk; two revoluble members having flanges adapted to contact with the opposite faces of said disk; two sets of toggle mechanisms adapted to operate simultaneously to force one flange into engagement with and at the same time force the other flange from engagement with said disk; and a slidable member for simultaneously actuating both toggle mechanisms.

1,809,977. HAIR WAVING APPARATUS. CHARLES KLEINE, Kingston, N. Y. Filed Nov. 8, 1929. Serial No. 405,559. 7 Claims. (Cl. 132—36.1.)

1. In a hair waving apparatus, a clamp comprising a pair of metal bars, a hinge connecting said bars at one end, a latch and pin connection at the other end, a block of pliable material fixed on one of said bars, a hollow metallic casing on the other bar, said casing having a perforate upper wall, and a strip of yieldable material set in said casing to contact said block, the adjacent faces of said block and casing being longitudinally undulated in complementary relation.



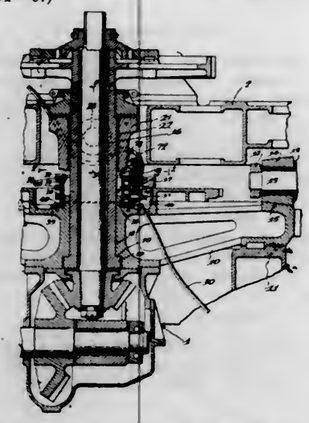
1,809,978. PROCESS OF PRODUCING HYDROGEN. ALFRED T. LARSON, Wilmington, Del., assignor to Du Pont Ammonia Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 21, 1928. Serial No. 294,596. 8 Claims. (Cl. 23—213.)

1. The process of producing hydrogen which comprises causing steam and carbon monoxide to react according to the equation

$$H_2O + CO = H_2 + CO_2$$

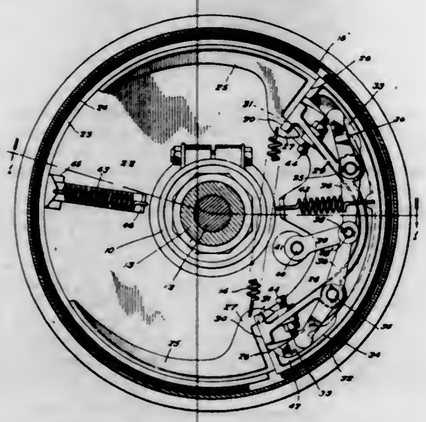
in the presence of a catalyst containing the elements copper, zinc and one of the elements selected from the group consisting of chromium, tungsten, silicon, vanadium and molybdenum.

1,809,979. LIFTING JACK. EDWARD L. LEINBACH, Chicago, Ill. Filed Sept. 12, 1927. Serial No. 218,881. 7 Claims. (Cl. 254—148.)



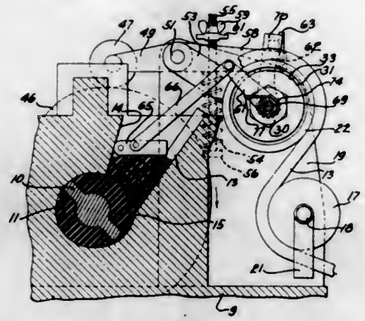
1. A lifting jack embodying telescoping standards, a lifting member having an active face adapted to assume a position adjacent the lower end of both of the standards, said member traversing said standards in directions lengthwise thereof during the telescoping movements of said standards, an upright screw for moving the standards relatively one with relation to the other, means for operating the screw, means responsive to the movement of one of said standards with respect to the other for causing the said lifting member to travel successively along the standards, and means on said lifting member co-operating with the screw for guiding and maintaining said lifting member in position during the entire movement of the standards out of telescoping relation, the said screw and lifting member being movable independently with respect to each other.

1,809,980. WOOD COLORING PROCESS. CHARLES E. LENTZ, South Bend, Ind., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 20, 1928. Serial No. 313,949. 8 Claims. (Cl. 99—12.)



1. The process of coloring wood, consisting in vacuating the pores and interstices of the wood thereby rendering the wood absorbent, introducing a measured quantity of anhydrous ammonia into a closed receptacle containing the wood, and then introducing steam into said receptacle to raise and maintain for a definite period a temperature of approximately 235° F.

1,809,981. ELECTRIC MOTOR DRIVEN EXCAVATING MACHINERY. GEORGE J. LEXA and ROLF LJUNGKULL, Wauwatosa, Wis., assignors to Harnischfeger Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 18, 1929. Serial No. 393,563. 8 Claims. (Cl. 191—9.)



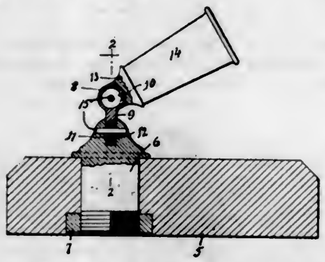
1. In a machine of the character described, a truck, a revolving platform supported on said truck for turning movement, a member interconnected with the revolving platform for rotary movement in a horizontal plane but constrained against tipping or rocking while leaving the platform free to tip or rock, collector rings mounted on the truck and brushes mounted on said member and coacting with said collector rings.

1,809,982. VEHICLE BRAKE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Jan. 10, 1927. Serial No. 160,118. 9 Claims. (Cl. 188—78.)

1. The combination with a stationary part and a rotatable member having a drum with a cylindrical surface thereon, of a noncontinuous friction member positioned adjacent to said cylindrical surface and normally out of contact therewith, a second friction member positioned between the free ends of the first-mentioned friction member, fixed stops normally engaging the ends of the first-mentioned friction member, and means slidably engaging said second friction member for moving it into contact with said cylindrical surface to be carried thereby into contact with said first-mentioned friction member and cause the same to engage said drum.

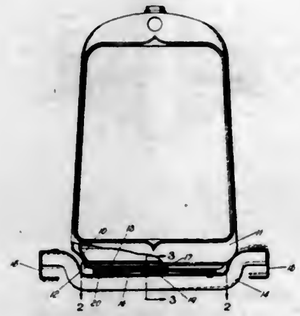
1,809,983. MATERIAL FEEDING DEVICE. JOSEPH EVERETT LODGE, Maywood, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 2, 1929. Serial No. 329,809. 10 Claims. (Cl. 18—21.)

2. In material feeding apparatus, means for retarding the material being fed, and means responsive to the amount of material fed for varying the effectiveness of the means for retarding the material.



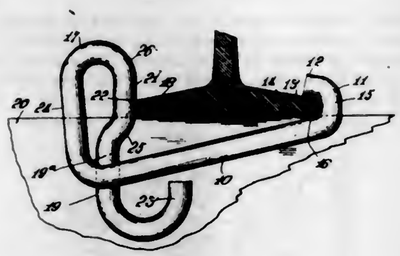
1,809,984. SURFACE FINISHING FOR MOLDED ARTICLES. GERALD H. MAINS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 28, 1925. Serial No. 71,941. 12 Claims. (Cl. 154—2.)

2. A method of providing a surface finish for molded articles which comprises assembling a plurality of layers of fibrous sheet material impregnated with a binder capable of being hardened under the influence of heat and pressure in a mold, placing a layer of metallic sheet material coated with a binder on said assembled layers, disposing a surface layer of translucent material on said metallic material and subjecting said layers to heat and pressure to form an integral hardened mass.



11. A composite molded article comprising a body portion composed of a plurality of layers of fibrous material and an outer layer of metal, the layers of fibrous material being impregnated with, and united to each other and to the metal layer into a composite unitary structure by means of, an infusible, heat-hardened binder.

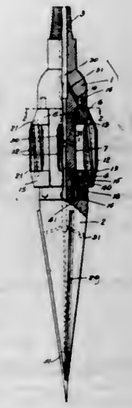
1,809,985. PEN DESK SET. LUCIFER J. MOST, New York, N. Y., assignor to Mable Todd & Co., New York County, N. Y. Filed Nov. 13, 1929. Serial No. 406,741. 6 Claims. (Cl. 120—108.)



1. A pen desk set, comprising a base, a pen carrier and means connecting the pen carrier to the base, on two pivots at right angles above the base in different horizontal planes in the normal position of the carrier.

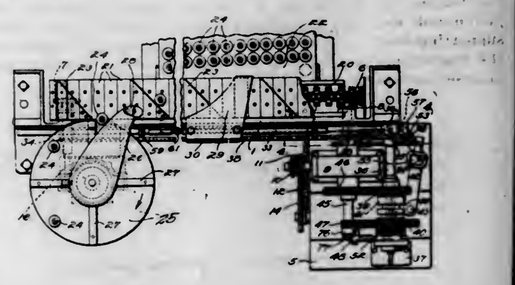
1,809,986. RADIATOR SUPPORT. CLYDE R. PATON, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Mar. 3, 1928. Serial No. 258,877. 4 Claims. (Cl. 180—68.)

1. The combination with a motor vehicle frame having a cross member extending transversely thereof, of a radiator shell having a horizontal lower flange, a radiator core within said shell, a strap secured intermediate its ends to said lower flange substantially at the central axis thereof and secured at its ends to said cross member, and a resilient block positioned between the central portion of said strap and said cross member to permit flexing of said strap upon twisting movement of said frame to eliminate the transfer of twisting stresses from said frame to said core.



1,809,987. RAIL ANCHOR. FREDERICK A. PRESTON, Lake Forest, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1929. Serial No. 372,338. 14 Claims. (Cl. 238—330.)

1. A rail anchor formed at one end with means for engagement with one flange of a rail base, an upstanding loop at the other end movable downwardly into gripping engagement with the other base flange of the rail, and angularly disposed means at the extremity of said loop for bearing against a stationary part of the road bed.

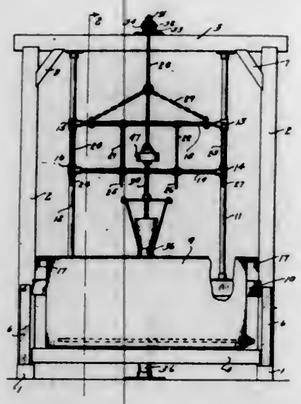


1,809,988. UNDERREAMER. EDWARD F. RAYMOND, Santa Fe Springs, Calif. Filed July 6, 1927. Serial No. 203,725. 7 Claims. (Cl. 255—76.)

3. A tool of the character described comprising a body having an axially elongated annular recess, a cutter roller in the recess, and distinctly separate bearing means for the respective ends of the cutter roller, said bearing means being mounted beyond the respective ends of the cutter roller with at least one of said bearing means eccentrically pivoted to the body at an end of the annular recess for retracting or expanding the cutter roller

relative to the body, the eccentrically pivoted bearing means being adapted for abutment against the body when the cutter roller is expanded.

1,809,989. LEER STACKER. GEORGE E. ROWE, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Feb. 14, 1929. Serial No. 339,851. 8 Claims. (Cl. 198—31.)



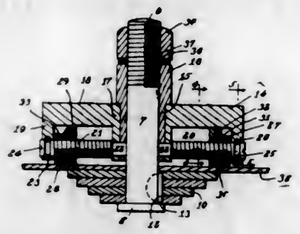
1. In a leer stacker, the combination of a stacker conveyer to be disposed in angular relation to the leer conveyer, a plow arranged for reciprocation above the working strand of the stacker conveyer, means for moving the plow in one direction for its working movements and in the other direction for its return movements, means for causing the plow to dwell at the completion of its return movements, and means whereby the movemnet of the stacker conveyer determines the start of the working movements of the plow.

1,809,990. METHOD OF MAKING MATERIAL FOR THE PURIFICATION OF GASEOUS MIXTURES. GILBERT EDWARD SEIL, Conshohocken, Pa., assignor to E. J. Lavino and Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 11, 1928. Serial No. 284,671. 5 Claims. (Cl. 252—25.)

4. The method of preparing from an iron bearing substance a material which is adapted for use in the purification of gas, which comprises the step of heating the said iron bearing substance in the presence of alkali to a temperature which may range from 200° C. to 400° C. and subsequently quenching the heated material in water.

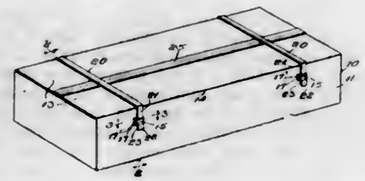
1,809,991. DEVICE FOR TIME DIPPING. EDWARD R. STEVENS and ARTHUR F. NICOLAI, Portland, Oreg. Filed Oct. 24, 1929. Serial No. 402,079½. 1 Claim. (Cl. 91—46.)

A device of the class described comprising a fabricated frame, guide bars vertically disposed in spaced relationship within the frame, an article supporting head slidably disposed upon the guide bars, a liquid holding cylinder vertically disposed between the guide bars, a piston reciprocably disposed within the cylinder, said piston having a plurality of valves disposed within its body, one of said valves being an adjustable needle valve, the other of said valves having a hollow valve stem and being adapted to be maintained in closed position, a piston rod secured to the piston, a counter balance secured to the piston rod, and a flexible support secured to the article supporting head and to the counter balance for connecting the supporting head to the piston and valve mechanism disposed within the cylinder.



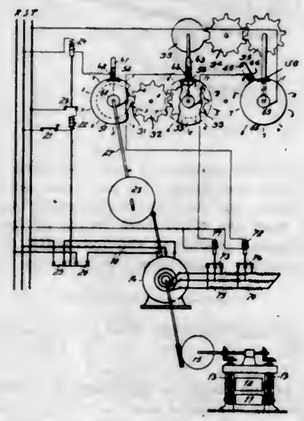
1,809,992. FOUNTAIN PEN. OSCAR J. SUNDSTRAND, Rockford, Ill. Filed Mar. 30, 1925. Serial No. 19,209. 9 Claims. (Cl. 120—48.)

1. A fountain pen having, in combination, an ink reservoir, a feed bar, a pen point, said feed bar having a longitudinal bore opening into said reservoir to provide an outlet therefrom, said feed bar also having an ink discharge duct leading from said bore to said pen point, a stem slidably mounted in said bar, said stem having thereon a collar forming a valve member to close said outlet, said stem also having a duct leading from the upper end of the stem to a point below said valve member and arranged to communicate with said ink discharge duct, the lower end of said stem being exposed upon the lower portion of the feed bar and said exposed portion being shaped for engagement by the finger of the operator whereby the stem may be slid to seat and unseat said valve member.



1,809,993. CIRCLE HOLE CUTTER. EDWIN C. SWANSON, Rockford, Ill., assignor to Greenlee Bros. & Co., Rockford, Ill., a Corporation of Illinois. Filed Mar. 1, 1929. Serial No. 343,593. 6 Claims. (Cl. 164—82.)

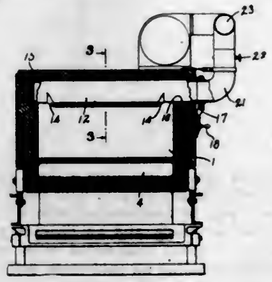
1. A circle cutter of the character described comprising a supporting member, a plurality of interchangeable circular discs of different diameters mounted thereon, and a cutter bar coaxial with said discs and rotatable about said supporting member, said cutter bar being equipped



with cutter wheels and screw adjusting means operable to support and position the cutter wheels in cutting relation with the periphery of any one of said circular discs.

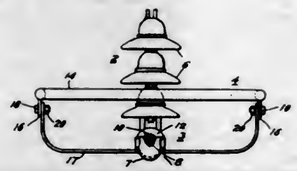
1,809,994. STORAGE CASE. KARL R. TEMPLETON, Chicago, Ill. Filed Oct. 6, 1928. Serial No. 310,773. 4 Claims. (Cl. 229—47.)

1. In a device of the class described, a container having a bottom wall, side walls and closure means, a resilient U-shaped clamp extending across said closure means and embracing opposed side walls, the legs of said clamp being resiliently urged away from said walls, a loop member attached to each of said walls, and means on said legs releasably engageable by said loop members.



1,809,995. MECHANISM FOR ADJUSTING MACHINE TOOLS. HERMANN UNVERDROSS, Frankfort-on-the-Main, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1927, Serial No. 190,700, and in Germany May 14, 1926. 4 Claims. (Cl. 172—239.)

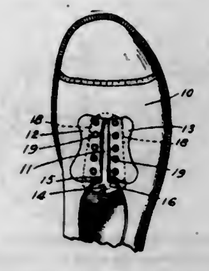
1. In combination, a member disposed to be set in different positions, an adjusting mechanism, a motor for actuating said mechanism, means for starting the motor,



means for varying the speed of the motor, and means actuated by the motor for stopping it in a predetermined position, said means comprising a train of rotatable members disposed to operate at different speeds, and a corresponding number of adjustable members disposed to be set in predetermined angular positions, co-operating contact members carried by the rotatable and adjustable members, said contact members being disposed to individually effect the operation of the speed varying means and to affect the motor stopping means only when said contact members are actuated into engagement simultaneously.

1,809,996. APPARATUS AND METHOD FOR ANNEALING GLASSWARE. HAROLD A. WADMAN, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 24, 1928. Serial No. 328,152. 11 Claims. (Cl. 49—47.)

1. In a continuous tunnel lehr for annealing glassware, a combined cooling and drift controlling means, comprising a nozzle mounted in said tunnel in the cooling portion thereof, means to cause a flow of cooling medium through said nozzle, and means to adjust the angular position of said nozzle so that said cooling medium flows in a direction at a selected angle with the longitudinal axis of said tunnel.

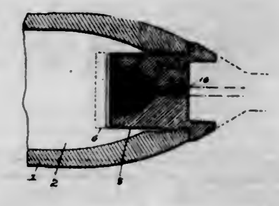


1,809,997. TRANSMISSION LINE DEVICE. NILS A. WAHLBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1927. Serial No. 209,440. 4 Claims. (Cl. 173—318.2.)

2. An electrostatic-field-control loop including separable end-to-end related portions, and supporting means therefor including elements of substantially less thickness than the maximum thickness of the perimetral portion of the loop measured perpendicular to the loop axis, and connected one adjacent to the end of each of said portions at positions substantially displaced from the plane of the loop nearest the field, said plane being at right angles to the loop axis, and a section of the length of each element extending away from the loop in the general direction of the axis.

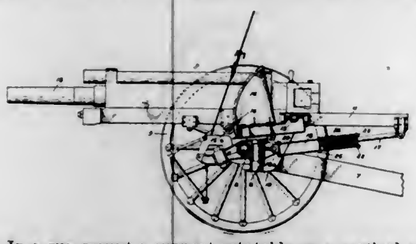
1,809,998. SHOE CONSTRUCTION. CARL G. WERNMARK, Los Angeles, Calif., assignor of one-half to Claus G. Peterson, Los Angeles, Calif. Filed Nov. 18, 1929. Serial No. 407,845. 2 Claims. (Cl. 36—50.)

1. In shoe construction, a pair of eyelet facings formed of pieces of material folded upon themselves, to embrace the raw edges of a shoe upper along its instep opening, a shoe tongue fastened to the underfolded portions of



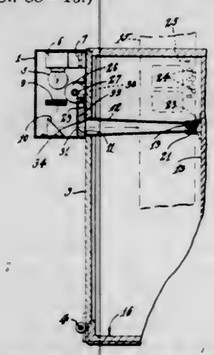
said facings, and eyelets, by which the facings may be secured to the shoe upper and the tongue will be held in position.

1,809,999. NOZZLE. STUART A. WIER, Dallas, Tex., assignor to Tridex Corporation, Dallas, Tex., a Corporation of Delaware. Filed Feb. 4, 1929. Serial No. 337,300. 2 Claims. (Cl. 299—153.)



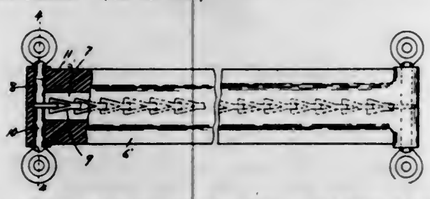
1. A nozzle having one end portion curved and provided with a curved bore and a head, said head having a reduced transverse discharge opening, the upper lip of the opening having a concaved notch and the lower lip of the opening having a concaved notch, the upper notch overhanging the lower notch and the lower concaved notch being deeper than the upper concaved notch, whereby the bore of the head overhangs the lower notch.

1,810,000. BOOSTER. JOHN H. WOODBERRY, U. S. Army, Frankford Arsenal, Bridesburg, Pa. Filed June 7, 1921. Serial No. 475,745. 10 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



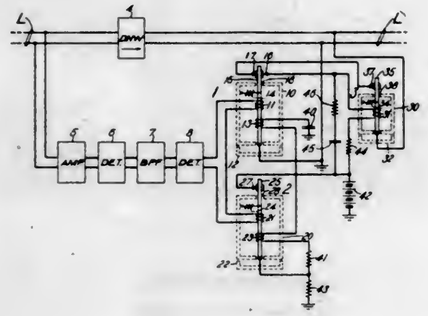
1. Means for increasing the effectiveness of booster charges embodying, a strong walled container having a cavity therein, the walls of which gradually converge toward the bottom, a detonator located in the strong walled container and remote from the booster cavity and a cord of explosive connecting the detonator and booster cavity.

1,810,001. GUN MOUNT. HARRY C. ZIMMERMAN, Washington, D. C. Filed Apr. 20, 1929. Serial No. 356,725. 2 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)



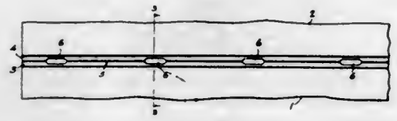
2. In a gun mount a support rotatable on a vertical axis, a cradle trunnioned therein in rear of its center of gravity, an equilibrator connected to the cradle in rear of the trunnions and to the support forwardly of and below the trunnions and the point of attachment to the support being in rear of the vertical axis of the support.

1,810,002. FILM MARKING DEVICE. JOHN ARNOLD, Los Angeles, Calif., assignor to Metro-Goldwyn-Mayer Corporation, Culver City, Calif., a Corporation of New York. Filed Mar. 11, 1930. Serial No. 434,916. 5 Claims. (Cl. 88—16.)



1. A film marking device comprising, in combination with a motion picture camera, a housing, a source of light within the housing, an opening from said housing into said camera, a shutter operably positioned with respect to said opening within the housing, electromagnetic means operably connected to said shutter, a light passage leading off from said opening into said camera and into operative relation with film in such camera, and means for selectively energizing the electromagnetic means to operate the shutter.

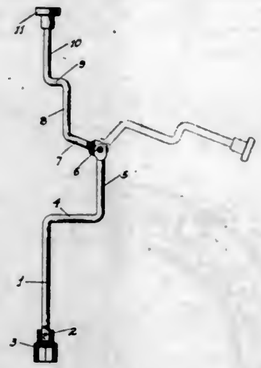
1,810,003. DOORCHECK. CHARLES W. BECK, Toledo, Ohio, assignor, by mesne assignments, to Alcet Electro Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 3, 1924. Serial No. 696,619. 13 Claims. (Cl. 16—86.)



1. A door check comprising a pair of brackets, a yieldable member connected thereto, and means extending between said brackets for limiting the yielding movement of the yieldable member.

1,810,004. VOICE OPERATED RELAY CIRCUITS. BJORN G. BJORNSON, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1929. Serial No. 368,985. 7 Claims. (Cl. 178—44.)

1. A vibrating system including a main polar relay and an auxiliary polar relay, each of said polar relays having an armature, a pair of contacts between which said armature is adapted to swing, and an operating winding and an accelerating winding associated with said armature, said accelerating winding on said main relay connected in series with said accelerating winding on said auxiliary relay across the armature and normally closed contact of said auxiliary relay to supplement the action of the operating windings on the respective relays when the normally closed contact on said auxiliary relay is opened, a third polar relay having a winding which is energized by a circuit including said last mentioned winding, a high resistance, the normally open contact and the armature of said main relay connected in series across a source of potential when the normally open contact on said main relay is closed, and a slow electrical circuit connected to said third relay to retard the release of said relay.



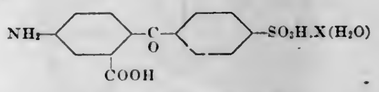
1,810,005. METHOD OF ARC WELDING. HOWARD J. BURNISH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Nov. 29, 1929. Serial No. 410,479. 5 Claims. (Cl. 219—10.)

1. In arc welding, the steps which comprise providing recesses in the metal to be welded at spaced intervals along the abutting edges of the seam and filling said recesses with welding metal to tack the metal to be welded in position for final welding.

1,810,006. WRENCH. ALBERT EDWARDS, Sacramento, Calif., assignor to J. W. Wooldridge, Sacramento, Calif. Filed Nov. 16, 1929. Serial No. 407,696. 1 Claim. (Cl. 81—73.)

A wrench comprising a tool tip and a main handle coaxial therewith, two eccentric handles connected to each other and to the tip and first handle by radius arms of different lengths, the radius arm between the eccentric handles extending at an obtuse angle thereto, and pivot connections between the outermost of said eccentric handles and said last named radius arm.

1,810,007. THREAD MOISTENING GUIDE. ERNST ERWIN FISCHER, Rockledge, Pa. Filed July 17, 1929. Serial No. 378,891. 2 Claims. (Cl. 91—46.)



1. A unitary detachable thread guide adapted for use with and supported by a water box having substantially parallel opposite walls, formed of molded vitreous material having a longitudinal body part provided with thread guiding portions spaced apart and an intermediate downwardly extending part having a thread guiding portion at its free end whereby the thread is caused to travel through a relatively lower path and in contact with the water within the box while passing between the spaced guiding portions, said body part having the underside of one end provided with a downwardly opening transverse grooved portion adapted to fit upon one edge of the box while permitting adjustment longitudinally of said edge thereof and having its other end extended so as to rest upon and be supported by the other edge of the water box.

1,810,008. 4'-SULPHO-2-BENZOYL-5-NITRO-BENZOIC ACID AND PROCESS FOR MAKING SAME. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors, by mesne assignments, to Newport Chemical Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,259. 7 Claims. (Cl. 260—64.)

1. The process for preparing 4'-sulpho-2-benzoyl-5-nitro-benzoic acid, which comprises reacting a solution of 4'-sulpho-o-benzoyl-benzoic acid in concentrated sulphuric acid with a nitrating agent.

1,810,009. 4'-SULPHO-2-BENZOYL-5-AMINO-BENZOIC ACID. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors, by mesne assignments, to Newport Chemical Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,260. 1 Claim. (Cl. 260—64.)

As a new article of manufacture, 4'-sulpho-2-benzoyl-5-amino benzoic acid, having most probably the following chemical constitution, in which X represents O or an integer:

1,810,010. 2-NITRO-ANTHRAQUINONE-7-SULPHO-ACID AND PROCESS FOR MAKING THE SAME. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors, by mesne assignments, to Newport Chemical Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,261. 4 Claims. (Cl. 260—57.)

1. The process of preparing 2-nitro-anthraquinone-7-sulpho-acid which comprises treating 4'-sulpho-2-benzoyl-5-nitro-benzoic acid with 25% oleum as dehydrating agent at an elevated temperature, diluting up the "ring-closing" mass with water and filtering off the product.

1,810,011. 2-NITRO-7-CHLORO-ANTHRAQUINONE AND PROCESS OF MAKING THE SAME. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors, by mesne assignments, to Newport Chemical Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,262. 2 Claims. (Cl. 260—57.)

1. The process which comprises heating 2-nitro-7-sulpho-anthraquinone in dilute hydrochloric acid solution with a solution of sodium chlorate to form 2-nitro-7-chloro-anthraquinone.

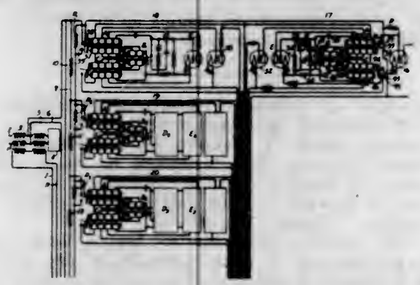
1,810,012. 2-AMINO-7-CHLORO-ANTHRAQUINONE AND PROCESS OF MAKING THE SAME. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors, by mesne assignments, to Newport Chemical Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,263. 2 Claims. (Cl. 260—60.)

1. The process of preparing 2-amino-7-chloro-anthraquinone, which comprises reducing 2-nitro-7-chloro-anthraquinone by means of sodium sulphide in the presence of caustic alkali at boiling temperature and filtering off the product.

1,810,013. PROCESS OF PREPARING 4'-SULPHO-O-BENZOYL-BENZOIC ACID. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors, by mesne assignments, to Newport Chemical Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 203,265. 5 Claims. (Cl. 260—64.)

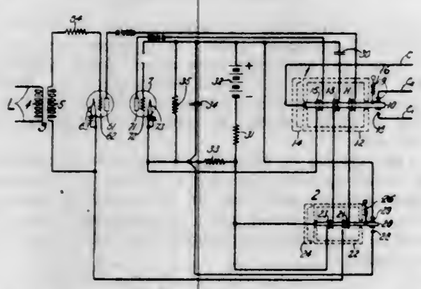
2. The process of preparing 4'-sulpho-o-benzoyl-benzoic acid, which comprises reacting a mixture of 4'-mercapto-o-benzoyl-benzoic acid and its corresponding disulphide with an oxidizing agent which is a member of the group consisting of alkaline hypohalites and halogens in alkaline solution.

1,810,014. LINGERIE HOLDER. CORA L. HILL, Los Angeles, Calif. Filed Mar. 2, 1931. Serial No. 519,359. 4 Claims. (Cl. 24—73.)



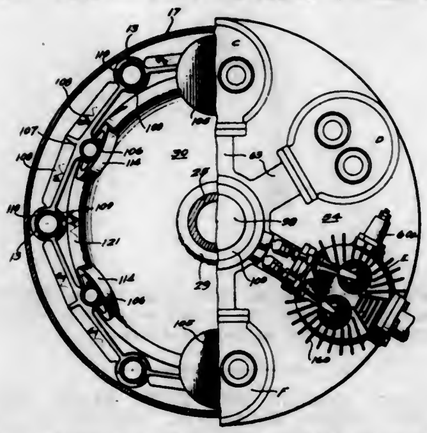
2. A lingerie holder comprising, in combination, a safety pin of a structure presenting end holes, a bight of chain whose ends are hitched to the pin at the end holes, a

snap fastener element attached to the loop of the bight and having a stretch of free chain provided at its end with a fastener element which is complementary to the



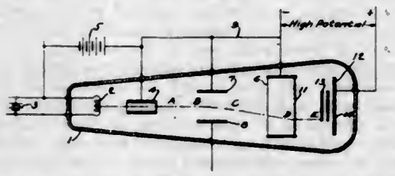
aforesaid bight-carried element; said bight loop being passed through respective apertures in the contiguous snap element.

1,810,015. TRANSMISSION SYSTEM. JOHN L. HOGG, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 3, 1929. Serial No. 375,629. 18 Claims. (Cl. 178—44.)



1. In a transmission system, impedance means for controlling the volume in a signal channel, means for automatically controlling said impedance means according to a characteristic of the signal channel to maintain the volume substantially constant at a point in said channel, and means operative upon starting the operation of said automatic means for accelerating the operation thereof.

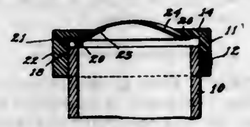
1,810,016. VOICE OPERATED RELAY CIRCUITS. JOHN L. HOGG, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1929. Serial No. 368,955. 6 Claims. (Cl. 178—44.)



1. In an electrical communication system over which signal current impulses are transmitted, a main relay and an auxiliary relay, means for initially energizing said main and auxiliary relays by said current impulses, means including a condenser for further energizing said main and auxiliary relays, means including a three-element thermionic discharge device for still further energizing said main relay, means for releasing said auxiliary relay at the cessation of said signal current impulses, and a slow electrical circuit comprising capacitance connected between the grid and filament of said thermionic discharge device and high resistances connected to said capacitance, to prevent the release of said main relay for a predetermined time after said signal current impulses have ceased.

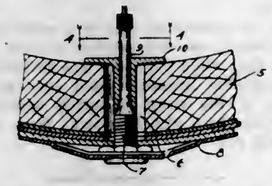
1,810,017. VARIABLE STROKE CAM-ENGINE. HERBERT W. HOUSTON, Los Angeles, Calif. Filed Nov. 20, 1928. Serial No. 320,579. 3 Claims. (Cl. 123—58.)

1. In a cam-engine, the combination of: primary and secondary supporting structures; a plurality of longitudinal cylindrical members holding said supporting structures in spaced relationship; a plurality of cylinders secured to said secondary supporting structure between said longitudinal members; a piston in each of said cylinders; a crosshead for each of said pistons disposed between two of said members and having opposed arcuate surfaces engaging said members, said cross-head being guided by said longitudinal members; and means for moving said cross-heads.



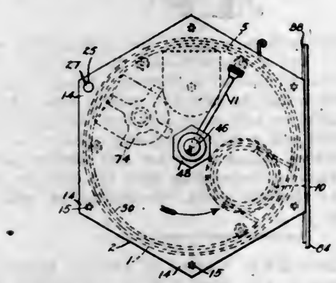
1,810,018. CATHODE RAY OSCILLOGRAPH. DOUGLAS E. HOWES, Northfield, Vt., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1924. Serial No. 716,294. 8 Claims. (Cl. 171—95.)

4. In a cathode-ray tube, a source of electrons, a tube confining the electrons into a stream, and a foraminate plate at the same potential as said tube, the axes of the foramina being parallel to said tube, means between said tube and said plate for deflecting the stream, and means for increasing the speed of said electrons after leaving said plate.



1,810,019. CLOSURE. MICHAEL JAWORSKY, Chicago, Ill. Filed Nov. 20, 1929. Serial No. 408,455. 4 Claims. (Cl. 220—35.)

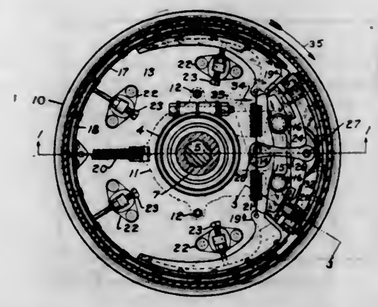
1. A closure comprising a cap, said cap having a central opening in its horizontal wall affecting an inner annular flange therein, the edge of said flange being upwardly tapered, and a closure plate of a substantially semi-spherical shape adapted to fit within said opening and



by its edge adapted to engage and closely fit the tapered edge of said flange, said closure plate having a depression for affecting an opening communicating within said cap.

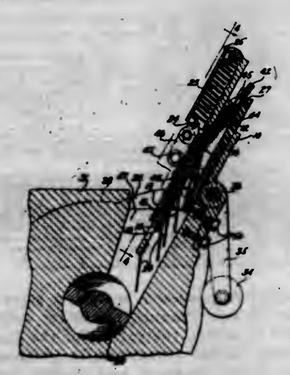
1,810,020. VALVE STEM. HAROLD A. KING, Birmingham, Mich. Filed Mar. 28, 1930. Serial No. 439,838. 2 Claims. (Cl. 152—12.)

2. The combination of a pneumatic tire stem having a reduced portion and a radially extending rubber disc having an axially extending hub vulcanized to such reduced portion for closing the valve stem in a wheel felloe.



1,810,021. OSCILLOGRAPH FILM HOLDER. JOSEPH W. LEGG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1923. Serial No. 610,953. 13 Claims. (Cl. 234—1.)

1. A graphic-recording device comprising a record-chart supporting drum rotatable relative to a record-receiving position, record-chart supply and take-up rollers mounted in the drum and means for extending the chart from the supply to the take-up roller over one of a selection of arcs on the perimeter of the drum.

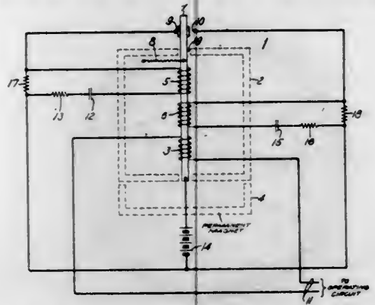


1,810,022. VEHICLE BRAKE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, Detroit, Mich., a Corporation of New Jersey. Filed Aug. 23, 1923. Serial No. 659,026. 16 Claims. (Cl. 188—78.)

1. The combination with a rotatable wheel having a brake drum with a cylindrical surface thereon and a part stationary in relation thereto, of a non-continuous brake band within said drum normally spaced from said cylindrical surface, brackets secured to said brake band adjacent its free ends, stops normally in engagement with both of said brackets, a friction shoe floating between said brackets and normally out of engagement with said cylindrical surface, an eccentric and a link pivotally connecting said shoe and said eccentric whereby movement of said eccentric causes said shoe to engage said cylin-

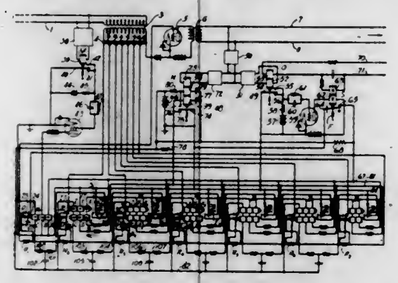
drical surface, said engagement causing said shoe to abut against one of said brackets and expand said brake band into engagement with said cylindrical surface upon rotation of said wheel.

1,810,023. FEEDING DEVICE. JOSEPH EVERETT LODGE, Maywood, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1927. Serial No. 205,822. 12 Claims. (Cl. 18—12.)



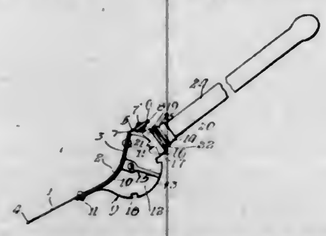
6. In material feeding apparatus, a material advancing screw, a cam attached thereto, a slide, a plurality of teeth carried thereby, a bell crank associated with the cam and adapted to actuate the slide, a bracket supporting the slide, a coiled spring for retracting the slide, means for actuating the screw, a plurality of stationary toothed elements attached to the bracket for maintaining a strip of material in advanced position, and means controlled by the screw for decreasing the feed when the force exerted by the movable teeth upon the material exceeds a predetermined amount.

1,810,024. RELAY CIRCUIT. ROBERT C. MATHES, Wyoming, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1929. Serial No. 368,895. 6 Claims. (Cl. 175—320.)



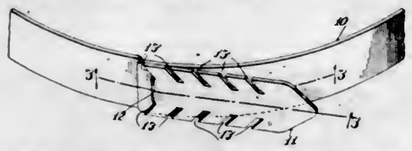
1. A polar relay circuit including a relay having a pair of contacts, an armature arranged to swing between said contacts, an operating winding and accelerating windings, a source of potential, a capacitance and a resistance connected in series across each of said accelerating windings, connections from said resistances to said contacts, other connections from said resistances to said source of poten-

tial, a connection from said armature to said source of potential, said connection arranged in a manner such that the charging and the discharging of said condensers ac-



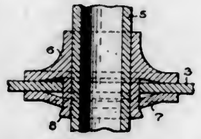
celerates the movement of said relay armature from either of said contacts to the other of said contacts and hold said armature against said other contact for a predetermined period of time.

1,810,025. TRANSMISSION SYSTEM. ROBERT C. MATHES, Wyoming, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 22, 1929. Serial No. 372,951. 17 Claims. (Cl. 178—44.)



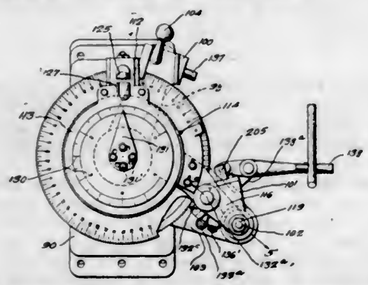
3. In a signal transmission system, a signal channel, a potentiometer in said channel, relays for controlling said potentiometer to govern the volume of the signals in said channel, control means automatically governed according to the volume of the signals on said channel for controlling said relays to maintain the volume of the signals substantially constant, and means comprising a condenser shunted by a resistance element for governing said control means to insure the holding of the potentiometer in any set position for a limited period.

1,810,026. SNOW HANDLING IMPLEMENT. EMIL R. MOLLER, Chicago, Ill., assignor of one-half to George A. Moller, Chicago, Ill. Filed July 12, 1929. Serial No. 377,813. 2 Claims. (Cl. 294—53.)



1. In a combined scoop and scraper, a scraper member formed of a flat plate curved up at one edge portion to form a scoop, a handle member pivotally mounted on the back of the scoop and means for retaining the handle at various angles to the scoop, the edge portion of the curved part of the scoop bent back into a plane nearly parallel with the front uncurved portion.

1,810,027. STRAP. JOHN L. MORAN and ALVIN J. LEE, Spokane, Wash., assignors of one-fourth to Robert Malcom, Chicago, Ill., and one-fourth to Francis E. P. Wilder, Spokane, Wash. Filed May 8, 1930. Serial No. 450,631. 1 Claim. (Cl. 24—17.)

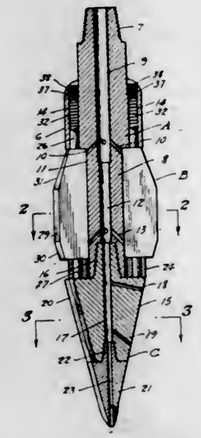


A strap of the character described comprising a strip of pliable material, one end portion whereof is provided with a closed slot, while the other end portion is provided with slits extending inwardly from the opposite longitudinal edges of the strap, arranged opposite to each other and sloping in a direction away from the end provided with said slot.

1,810,028. INDUCTION METER. PAUL PASZKOWSKI, Irvington, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 22, 1925. Serial No. 4,026. 5 Claims. (Cl. 287—52.07.)

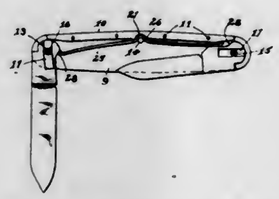
1. In an electrical instrument, the combination with a pivoted shaft and a single flexible disc having a hole therein, of means for mounting securely, without deformation, said shaft normal to said disc in said hole comprising a hub mounted on said shaft, said hub having a dished clamping portion and a dished clamping member secured thereto, said dished clamping portion and member having opposite flat surfaces cooperating with the opposite sides of said disc in a ring-like region surrounding, but removed from, said hole.

1,810,029. SETWORKS. GEORGE M. PELTON, Milwaukee, Wis., assignor to The Filer & Stowell Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed July 2, 1928, Serial No. 289,881. Divided and this application filed Feb. 5, 1930. Serial No. 425,933. 7 Claims. (Cl. 143—124.)



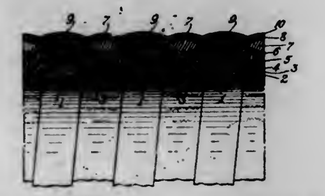
1. A setworks comprising a column, a shaft rotatably mounted thereon and adapted to be driven from a set

CARNEGIE LIBRARY OF ATLANTA



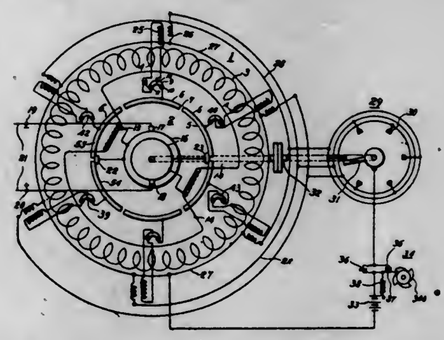
shaft, a rotatable ratchet drum fixed to the shaft, a setting arm mounted for rotation about the shaft and drum, a manually operable pawl carried by the setting arm and engageable with the ratchet, a clash block carried by the setting arm, a cooperable fixed clash block mounted on the column, an adjustable abutment facilitating setting of the setting arm, an index plate disposed substantially in a horizontal plane and carrying said abutment, a fixed ratchet plate underlying the index plate, a latch carried by the adjustable abutment and engageable with the fixed ratchet plate to hold the adjustable abutment in said position, said index plate having a scale therein indicating the thickness of boards to be cut, and a pointer carried by the ratchet plate and cooperable with the scale of the index plate.

1,810,030. UNDERREAMER. EDWARD F. RAYMOND, Santa Fe Springs, Calif., assignor to John W. MacClatchie, Compton, Calif. Filed May 5, 1926. Serial No. 106,814. 6 Claims. (Cl. 255—74.)



6. A tool of the character described comprising a body having an undercut shoulder and an axially projecting mandrel, an outstanding bearing means axially spaced from the shoulder, a pilot end projecting axially beyond the bearing means, a cutter having trunnions at its ends journalled respectively in the shoulder and in the bearing means and adapting the cutter for swinging to expanded or contracted position, and a torsion spring on one of the journaled trunnions tending to swing the cutter to expanded position.

1,810,031. POCKETKNIFE. GEORGE M. SCHRADE, Bridgeport, Conn. Filed Mar. 3, 1930. Serial No. 432,678. 2 Claims. (Cl. 30—10.)

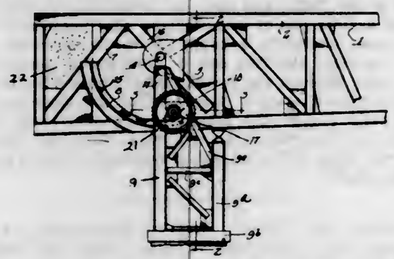


1. In a press-button, fly-open knife, the combination of a lining and a back, a blade having a back, a cutting edge, subatantially parallel straight edge portions, and a circular tang end pivoted in the lining and including a curved pocket therein adjacent the straight edge on the cutting edge side of the blade having a relatively higher circular edge portion adjacent said pocket, a spring secured to the lining and back and positioned to normally lie flat against one of said straight edge portions of the tang under tension in a manner to throw the blade open when released, the free end of said spring adapted to pass freely through the curved pocket of the tang during the preliminary opening movement of the blade and to frictionally engage the remaining higher circular edge portion of the blade after the blade has been thrown half way open, and press-button releasable locking means for the blade.

1,810,032. OIL HOSE. ERNEST SCHULTHESS, South Orange, N. J. Filed Apr. 16, 1931. Serial No. 530,593. 10 Claims. (Cl. 137—90.)

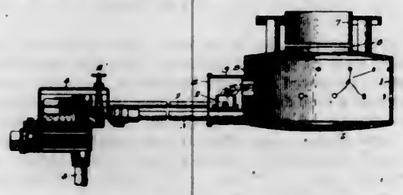
1. In a construction of oil hose, the combination with a helical liner of segment-sectional wire, the convolutions of which are spaced from one another, of successive layers of a closely woven duck, rubber, a plurality of plies of duck, a second layer of rubber, a helix of wire, of substantially oval cross-section, approximating in width the width of the spaces between the convolutions of the segment-sectioned wire, and a covering layer of heavy duck frictioned with an oil-resisting compound.

1,810,033. ELECTRIC APPARATUS. JOSEPH SLEPIAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 2, 1924, Serial No. 684,061. Renewed Apr. 12, 1930. 17 Claims. (Cl. 171—228.)



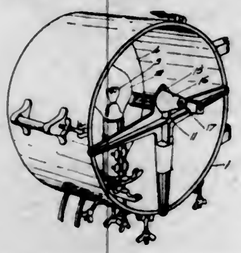
1. The combination of a dynamo-electric commutation circuit of which a portion is desired to carry current at times in one direction only and at other times in the other direction only, of a mercury-arc device having two mercury electrodes which are connected in series with said current.

1,810,034. BRIDGE. JOSEPH B. STRAUSS, Chicago, Ill. Filed Oct. 29, 1923. Serial No. 671,822. 6 Claims. (Cl. 14—35.)



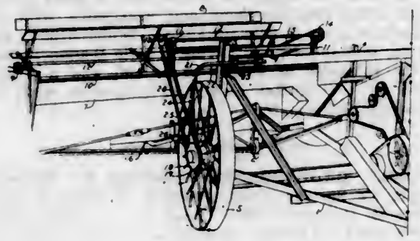
6. A bascule bridge comprising a truss, a trunnion therefor, a support for said trunnion, the truss members

of the truss adjacent the trunnion comprising four elements two of said elements meeting at the trunnion, two racks connected to one of said elements on opposite sides



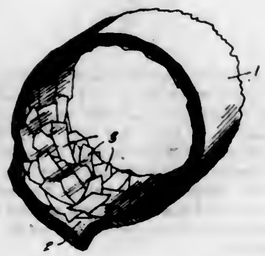
thereof, two pinions meshing with said racks, a shaft for said pinions passing through the truss members, said truss members clearing said shaft in all the various positions of the truss.

1,810,035. OIL BURNER PILOT. BEN VALJEAN, Lansing, Mich., assignor to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Sept. 19, 1929. Serial No. 393,629. 4 Claims. (Cl. 158—91.)



1. The combination with an oil burner comprising an oil pan and side walls forming a combustion chamber thereabove, and a fuel supply inlet, of a pilot therefor comprising a casing having a combustion chamber in communication by an outlet port through the side of the burner to its interior above the fuel pan, a pan in said pilot chamber, an oil supply to said pan, an air inlet to said pilot chamber adjacent the pan, whereby ignited oil in the pan will be supplied air for combustion from the air inlets and the resulting flame will be projected into the burner above the fuel pan to ignite fuel supplied to the latter.

1,810,036. LAMP SETTING DEVICE. OSCAR WERNER, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 30, 1928. Serial No. 316,054. 2 Claims. (Cl. 88—14.)



1. A lamp-setting device to aid in focusing the lamps of flood-lights and the like comprising a frame disposed to engage the projector housing and provided with peep holes in said frame for observing the location of the filament laterally, vertically and in-and-out with relation to said housing and a source of light associated with the frame to illuminate the lamp filament.

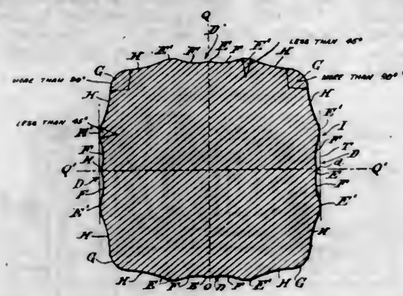
1,810,037. REEL DRIVING MECHANISM FOR HARVESTERS. ERNEST W. BALDWIN and GEORGE D. BALDWIN, Independence, Mo., assignors to The Gleaner Combine Harvester Corporation, Kansas City, Mo., a Corporation of Delaware. Filed Apr. 28, 1928. Serial No. 273,661. 5 Claims. (Cl. 56—123.)

1. In combination with the main frame and grain wheel of a harvesting machine, a cutting unit adjustable relative to the main frame, a reel rotatably mounted on the cutting unit, a counter-shaft on he cutting unit operatively connected with the reel, a flexible driving connector operably connecting the counter-shaft and the grain wheel, and means on the main frame, including a rolling fulcrum for said flexible connector, for maintaining driving relation of said connector with the grain wheel and countershaft at different elevations of the cutting unit.

1,810,038. SELF SEALING TIRE TUBE. JESSE R. CROSSAN, Wadsworth, Ohio, assignor to Seiberling Rubber Company, a Corporation of Delaware. Filed Dec. 10, 1927. Serial No. 239,029. 4 Claims. (Cl. 152—13.)

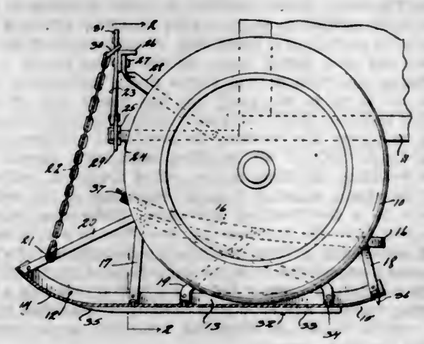
1. A tire tube composed of rubber and having on its inner surface, at least throughout its tread portion, a layer of soft plastic sealing composition, said composition layer being covered on its inner surface with a series of permanently overlapping broken up pieces of cellulose product.

1,810,039. PROCESS FOR OBTAINING IODINE AS IODIDE FROM IODINE-CONTAINING ADSORPTION CARBON. FRITS ELLINGER, The Hague, Netherlands, assignor to Mijnbouw en Handelsmaatschappij "Wonoh Gedeh", The Hague, Netherlands. Filed Mar. 7, 1929, Serial No. 345,230, and in the Netherlands June 12, 1928. 2 Claims. (Cl. 23—217.)



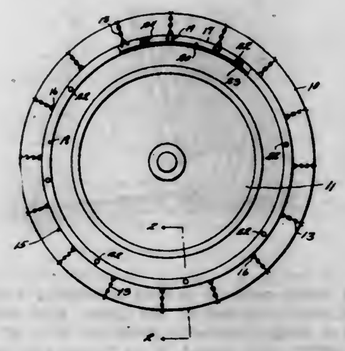
1. Process for obtaining iodine as iodide from iodine-containing carbon, which comprises extracting the iodine from the carbon at approximately 100° C. with an excess of a sodium carbonate solution, filtering the extract and washing the carbon with hot water.

1,810,040. ORNAMENTAL CHAIN. KARL FASSNACHT, Providence, R. I., assignor to Speidel Chain Co., Providence, R. I., a Firm composed of Frederic Speidel and Eugen Speidel, Pforzheim, Germany. Filed July 18, 1929. Serial No. 379,220. 6 Claims. (Cl. 59—80.)



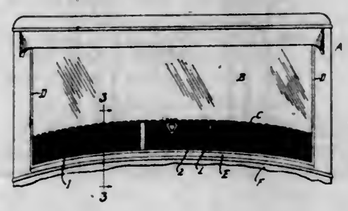
1. In a sheet metal chain band two spaced series of connected link members along opposite margins of the band and a series of spacing cross bars loosely connected at their ends to the links of each of said spaced series of links, said links extending along opposite surfaces of said cross bars.

1,810,041. METALLIC INGOT. EMIL GATHMANN, Baltimore, Md. Filed Nov. 7, 1930. Serial No. 494,108. 5 Claims. (Cl. 22—218.)



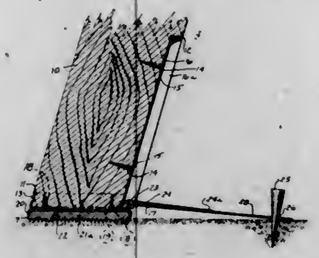
1. A metallic ingot having two oppositely disposed sides each of which includes more than two connected outwardly-arched portions, only two of which are initially roll-contacting.

1,810,042. SNOW RUNNER. AUGUST GERTH, Deuel County, S. Dak. Filed Apr. 19, 1930. Serial No. 445,689. 3 Claims. (Cl. 280—13.)



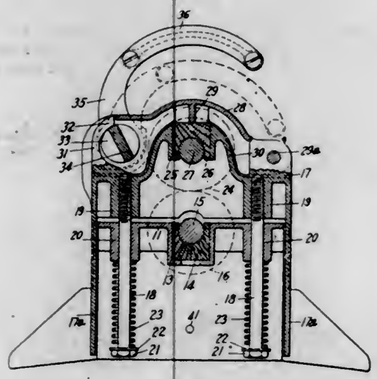
1. A snow runner of the character described comprising a shoe, a U-shaped tire engaging member, bracing means for mounting said tire engaging member on the shoe, anti-slipping means mounted on the lower surface of the shoe, and means carried by the shoe for facilitating placement or displacement of the shoe from the wheel, said latter means projecting downwardly from said shoe and being normally out of engagement with the ground.

1,810,043. TRACTION ATTACHMENT FOR VEHICLE WHEELS. AUGUST GERTH, Hidewood Township, Deuel County, S. Dak. Filed Apr. 19, 1930. Serial No. 445,690. 2 Claims. (Cl. 152—14.)



1. A traction device of the character described comprising in combination with an anti-skid chain, a cylindrical member, a pair of L shaped side members secured to the opposite ends of said cylindrical member, one of said side members having a plurality of spaced apertures therethrough adapted for engagement with the cross chains of the anti-skid chain, said cylindrical member having a plurality of raised portions in the periphery thereof and means extending transversely of said cylindrical member and engaging said side members for maintaining one leg of said side members in vertical position.

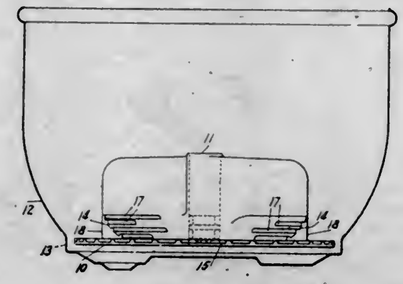
1,810,044. SCREEN FOR WINDSHIELDS. FRANK REID HARRIS, Jr., St. Louis, Mo. Filed June 11, 1930. Serial No. 460,401. 3 Claims. (Cl. 296—94.)



3. In combination with a motor vehicle body having a vertically slidable windshield and provided with a transversely arranged member at the lower portion of the windshield support and a dash board element spaced with respect to said transverse member to provide a ventilating space wherein members are arranged which support said dash board element, a screen, with respect to which said windshield is movable, for guarding the space beneath the windshield of the motor vehicle body when said windshield is elevated, the lower portion of said screen being located within said ventilating space and said screen being supported at all times by said supporting members within said ventilating space and having its upper edge in contact with the windshield, said motor vehicle body including a sealing member with respect to which the lower edge portion of the windshield is moved when same is moved to its closed position, and said dash board element having a screen contacting portion associated therewith, said sealing member and said screen contacting portion of said dash board element being arranged in contact with opposite sides of the screen at points above the lower edge thereof for siding in the rigid support thereof.

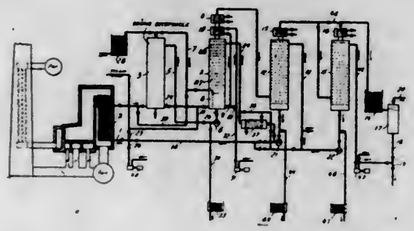
1,810,045. SAFETY SHOE FOR LADDERS. JOHN HEINIGER, Cleveland, Ohio. Filed July 18, 1930. Serial No. 468,782. 3 Claims. (Cl. 228—61.)

1. A safety shoe for ladders comprising a fixture attached under the foot of the ladder stile, said fixture having a flanged extension along one edge of the stile, and a safety plate hinged to the fixture and foldable between the flanges thereof.



1,810,046. CLOTHES WRINGER. LOVELL A. HERSH, Dayton, Ohio, assignor to Harry Bohn, Dayton, Ohio. Filed June 27, 1929. Serial No. 374,065. 20 Claims. (Cl. 68—32.)

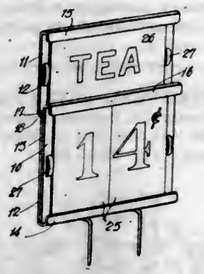
1. In a clothes wringer, a normally stationary support, a roller carried by said support, a second support mounted for movement toward and from said stationary support, means to yieldably resist the movement of said movable support from said stationary support, a roller mounted for bodily movement with relation to said movable support, a device to hold the last mentioned roller normally against bodily movement with relation to said movable support, and means operable with relation to said device to release said last mentioned roller for bodily movement with relation to said movable support.



1,810,047. AGITATOR FOR CLOTHES WASHING MACHINES AND THE LIKE. LOVELL A. HERSH, Dayton, Ohio, assignor to Harry Bohn, Dayton, Ohio. Filed Aug. 16, 1929. Serial No. 386,370. 8 Claims. (Cl. 259—101.)

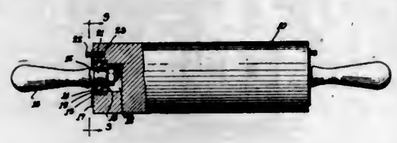
1. In an agitator, a base having a central hub rising above the same, and a plurality of blades extending from said hub toward the peripheral edge of said base, those parts of said base which lie between the adjacent sides of said blades each having a substantially flat central portion and having its end portions sloped gradually

upwardly from said central portion toward the respective blades to provide scrubbing surfaces on the adjacent sides of said blades.



1,810,048. ART OF CRACKING HYDROCARBONS. EUGENE C. HERTHEL, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Mar. 7, 1929. Serial No. 345,199. 11 Claims. (Cl. 196—61.)

1. In a combined vapor phase cracking and coking operation, the improvement which comprises subjecting oil stock having a carbon residue content as determined by the U. G. I. gas oil distillation test not exceeding about 0.3% to a vapor phase cracking operation, subjecting a liquid oil mixture to a coking operation in which said oil mixture is coked by direct heat exchange with the hot vapor mixture from the vapor phase cracking operation, discharging the hot vapor mixture from the coking operation into and beneath the surface of a liquid body of oil maintained in the lower end of a baffled tower subjecting the vapors to a refluxing operation in said baffled tower, introducing the raw oil stock to be coked into the lower end of the baffled tower to mingle with said liquid body of oil therein and supplying the resulting composite oil mixture from said liquid body of oil including condensate formed in said refluxing operation to the coking operation, subjecting the vapors escaping from the upper end of the baffled tower to a fractionating operation, discharging vapors escaping from the fractionating operation to a condenser and condensing a distillate product therein, introducing condensate separated from the vapors in the fractionating operation into the upper end of the baffled tower as a refluxing medium, and supplying condensate separated from the vapors in the fractionating operation to the vapor phase cracking operation.



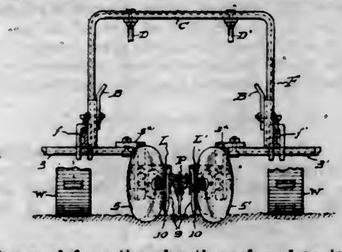
1,810,049. PRICE TICKET HOLDER. LEO HOPP, New York, N. Y., assignor of one-half to George Hopp and one-half to Harriet Gold, New York, N. Y. Filed Apr. 15, 1930. Serial No. 444,471. 6 Claims. (Cl. 40—5.)

1. A device of the character described comprising two members secured together in overlying relation, a plurality of ticket retaining flanges formed on one of said members, a single ticket retaining flange formed on the

other of said members and an off-set formed in one of said members coacting with a portion of the other member to form a space to receive an edge of a ticket.

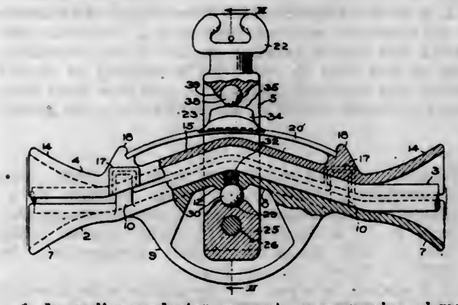
1,810,050. ROLLING PIN. GUSTAVE KLEMPP, Glenwood, Iowa. Filed Aug. 20, 1930. Serial No. 476,570. 3 Claims. (Cl. 7—50.)

3. A rolling-pin comprising a cylindrical roller having chambered ends, a housing for a roller bearing in each end chamber, handles, spindles formed with said handles in said roller bearings, extending into said chamber, nuts on the threaded ends of said spindles in said chamber engaging washers, flanged plates provided with arcuate slots closing the outer ends of said housings, screw bolts adjustable in said arcuate slots, threaded members formed in the roller into which the inner ends of said screw bolts engage, and outer heads on said bolts.



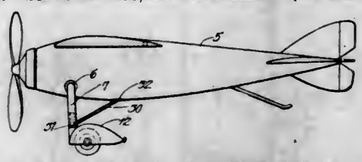
1,810,051. RAILROAD CROSSING GATE. OBED O. LEES and THOMAS J. FINN, Columbus, Ohio, said Lees assignor to said Finn; Ella S. Dailey executrix of said Thomas J. Finn, deceased. Filed July 14, 1930. Serial No. 467,915. 3 Claims. (Cl. 39—7.)

1. A grade crossing gate of the character described comprising a revolvable stand, a swingable gate bar mounted on the stand, a shaft mounted within the stand, a governor on the shaft, a connection between the governor and the gate bar, and a motor for operating the shaft.



1,810,052. LEAF GUARD FOR DISK CULTIVATORS. JOSEPH MADER, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1930. Serial No. 489,037. 5 Claims. (Cl. 97—192.)

1. In combination with a cultivator comprising a cultivating disk and a bracket operative to support said disk, a leaf guard carried by said bracket and having an arm extending horizontally adjacent one face of said disk to

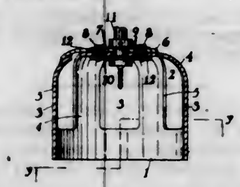


a point spaced from the edge thereof, and an integral depending leg disposed adjacent the opposite face of the disk in spaced relation thereto.

1,810,053. SUSPENSION CLAMP. FREDERIC H. MILLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1927. Serial No. 234,374. 8 Claims. (Cl. 248—31.)

1. In a line-conductor support, a suspension element having a portion of substantially loop-shape, an elongated conductor-receiving element extending through, and supported by, the loop portion in relatively movable relation thereto, adjacent to the bottom thereof, said conductor-receiving element being arched at its mid portion, and bearing means between said elements beneath, and adjacent to, the crown of said arched portion.

1,810,054. LANDING GEAR FOR AEROPLANES. WALDEMAR MILLER, New York, N. Y. Filed Jan. 6, 1931. Serial No. 506,998. 2 Claims. (Cl. 244—2.)



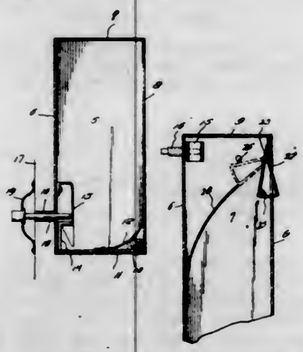
1. In a landing gear for aeroplanes, tubular members depending from the body of the plane, a plurality of landing wheels, a hood partially enclosing each of said wheels, means carried by each hood and projecting into said tubular members for pivotally mounting said hoods and wheels, and means connecting said hoods for causing said wheels to operate in unison.

1,810,055. METHOD OF RECIPROCAL ACTION BETWEEN GASES AND FINELY SUBDIVIDED MATERIALS. GEORG MÜLLER, Frankfort-on-the-Main, and JOHANNES JAENICKE, Cronberg, near Frankfort-on-the-Main, Germany. Filed Mar. 20, 1928, Serial No. 263,222, and in Germany Feb. 9, 1927. 6 Claims. (Cl. 183—4.)

1. Process of interacting a stream of gas and a finely divided substance suspended therein in a confined reaction

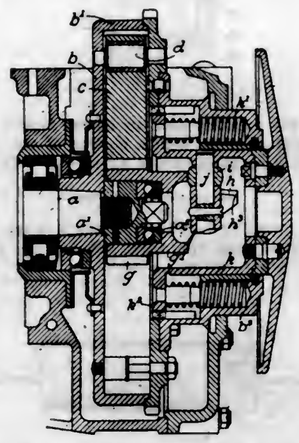
space by so adjusting the velocity of the gas stream that the relative position of the general mass of finely divided substance in the confined space does not substantially change either in the direction of flow of the gas stream or in the opposite direction wherein after completion of the reaction the finely divided substance is removed from the reaction space by increasing the velocity of the gas stream.

1,810,056. ROTOR FOR ASYNCHRONOUS ALTERNATING CURRENT MOTORS. HERMANN PAPST, St. Georgen, Schwarzwald, Germany. Filed Sept. 29, 1930, Serial No. 485,164, and in Germany Oct. 5, 1929. 4 Claims. (Cl. 172—120.)



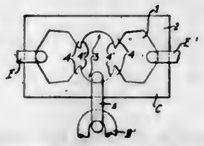
1. A rotor for asynchronous alternating current motors of the character described, comprising a cylindrical body having slits therein arranged parallel to the longitudinal axis of said body to constitute a plurality of equally spaced bars separated by the slits, said bars being alternately connected in parallel with each other in two groups.

1,810,057. SOLUBLE TUBE FOR DYEING AND BLEACHING. WILLIAM N. PHARR, Concord, N. C., assignor of two-thirds to Hartsell Mills Company, Concord, N. C., a Corporation of North Carolina. Filed Nov. 14, 1929, Serial No. 407,283. Renewed Apr. 24, 1931. 6 Claims. (Cl. 8—19.)



1. A support for a yarn package soluble in the bleaching and dyeing fluids to which the yarn is subjected, and comprised of an ingredient which will act as a retarder for the dye.

1,810,058. MAIL BOX. DAVID QUINN, Eau Claire, Wis. Filed July 14, 1928. Serial No. 292,822. 1 Claim. (Cl. 232—23.)

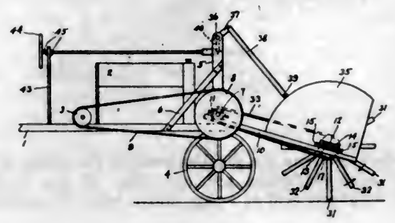


A mail box having a spring actuated door, an L-shaped extension disposed adjacent the free edge of the door, a spring catch having a lateral end portion anchored to one wall of the box and having a free and portion disposed in spaced parallelism to said one wall and provided with means engageable with said L-shaped extension for normally retaining the door in a closed position, a plunger slidable through said one wall of the box and having its inner end normally spaced from the last referred to end portion of said spring catch, a spring secured intermediate its ends to the outer end of said plunger, said spring having opposite end portions fixed to a suitable support remote from said one wall of the mail box, and having at its intermediate portion normally flexed outwardly from the support for normally urging said plunger in a direction away from said last mentioned end portion of said spring catch.

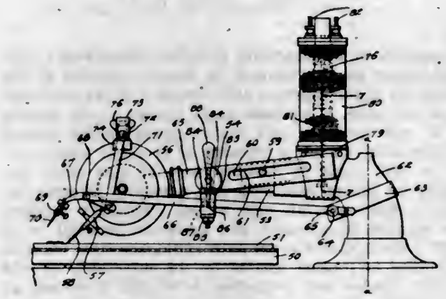
1,810,059. CENTRIFUGAL GOVERNOR MECHANISM. JOHN HOGG ROBERTSON, London, England. Filed Dec. 2, 1929, Serial No. 411,094, and in Great Britain Dec. 19, 1928. 6 Claims. (Cl. 264—16.)

1. A centrifugal governor mechanism, comprising a rotary shaft, a supporting member secured upon said shaft, a plurality of eccentrically weighted levers pivoted upon said supporting member, each of said levers including a toothed segment concentric with the respective pivot, a toothed pinion meshing with the toothed segments of said levers, a rotatable sleeve mounted coaxially of said shaft, said toothed pinion being fast with said sleeve, a member driven by said shaft and slidable axially in relation thereto, a helical cam device adapted to produce axial displacement of said slidable member, and an outer sleeve enclosing said helical member and carrying said slidable member, said outer sleeve including an externally toothed flange and said supporting member including a correspondingly toothed interior surface meshing with said flange for positive drive of said slidable member.

1,810,060. BRACELET AND LINKS THEREFOR. OLIVER SELLE, St. Louis, Mo. Filed Aug. 18, 1930. Serial No. 476,018. 4 Claims. (Cl. 63—4.)



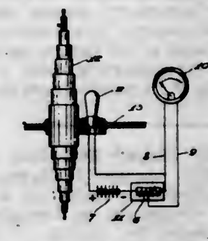
1. In combination, a link for a bracelet or the like comprising a member having a cut-out inner portion, an element associated with said link by being extended through said cut-out portion, and abutments for limiting movement of said element longitudinally of said link.



1,810,061. STALK AND WEED CUTTER. ANGUS D. SIMS and ARCH C. WRIGHT, Quitman, Miss. Filed Oct. 14, 1930. Serial No. 488,652. 5 Claims. (Cl. 55—61.)

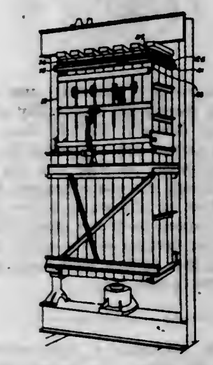
1. A stalk and weed cutter of the character described comprising a supporting structure, a transverse stationary

shaft mounted on the supporting structure, brackets fixed on the shaft, a rotary shaft journaled on each bracket, gears fixed on the end portions of each of the rotary shafts, annular internal gears rotatably mounted on the stationary shaft outwardly of each bracket, the annular gears being operatively engaged with one of the gears on the adjacent rotary shafts, sprocket gears fixed on the annular gears, disks rotatably mounted on the stationary shaft inwardly of the brackets, gears fixed on the disks and engaged with the other of the gears on the rotary shafts for actuation thereby in a direction opposite to the direction of rotation of the annular gears, a series of outer cutters rigidly secured, at their ends, to the annular gears and radiating therefrom, a series of inner cutters rigidly secured, at their opposite ends, to the disks, and means connected with the sprocket gears for rotating the annular gears.



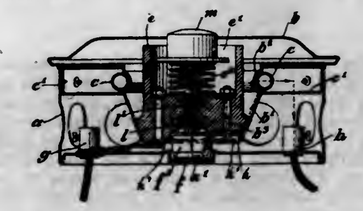
1,810,062. SYNCHRONIZING MECHANISM FOR COMBINED TALKING AND MOVING PICTURE MACHINES. ELMER R. TAYLOR, East Jordan, Mich.; Jerusha Ruth Taylor administratrix of said Elmer R. Taylor, deceased. Filed Jan. 7, 1928. Serial No. 245,194. 14 Claims. (Cl. 88—16.2.)

12. A mechanism for operating phonographs in synchronized relation to a moving picture film including electro-magnetically operated means for raising the stylus of a phonograph sound box from a sound record and holding it raised while the electro-magnetically operated means is energized, and means operating in correapondence with and controlled by the film operating mechanism acting to intermittently open and close the circuit of said means.



1,810,063. CONDENSER-BUSHING VOLTAGE CONTROL. PHILLIPS THOMAS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 13, 1929. Serial No. 370,689. 3 Claims. (Cl. 171—95.)

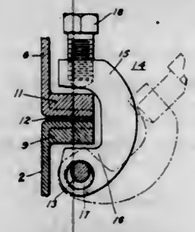
1. The combination with a condenser bushing, a conducting tank supporting said bushing, and a controlled device, of means for affecting said controlled device in accordance with the potential impressed on said bushing,



including a two-element electronic device disposed in the electrostatic field between said condenser bushing and said tank and in circuit relation with said controlled device.

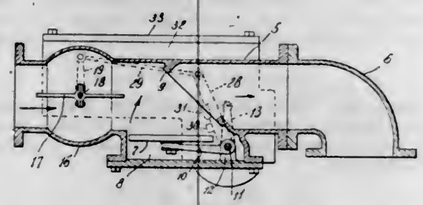
1,810,064. COTTON PRESS. JEFFREY JOHN WALLACE, Amite, La., assignor to Gullett Gin Company, Amite, La., a Corporation of Louisiana. Filed July 5, 1929. Serial No. 376,172. 4 Claims. (Cl. 100—19.)

1. In a press box for cotton having collapsible sides, means for retaining said sides in assembled position, supporting members secured to opposite sides of said box, a plate and rollers, slidably mounted in each of said supporting members, said plate having an inclined plane on one end to engage one of said rollers and a straight plane surface on the opposite end to engage another of said rollers.



1,810,065. ELECTRIC CIGAR-LIGHTER. HEINZ AGATZ, Berlin-Adlershof, Germany. Filed Oct. 17, 1927, Serial No. 226,742, and in Germany Oct. 19, 1926. 3 Claims. (Cl. 219—32.)

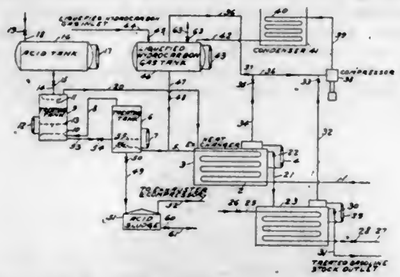
1. An electric cigar lighter including a hollow junction box open at the upper end, springs defining the open end of the box, an igniter carrier having a conical portion to project within the junction box, said carrier at the upper terminal of the conical portion being formed to interfit with the springs to hold the carrier within the box against casual displacement, a refractory body arranged in the carrier, a resistance element adapted to become in-



candescent under the passage of an electric current carried by and projecting beyond the refractory body, a push-button operative through the carrier, and a circuit for the resistance element including a member secured to the refractory body and normally in non-circuit closing position, said member being in the plane of movement of the push-button and being adapted to move to a circuiting position in operation of the button in one direction.

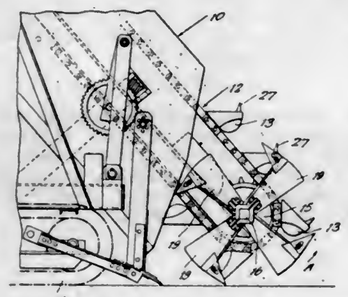
1,810,066. HINGED CLAMP FOR GAS OR LIQUID-PROOF HOUSINGS. ANDREW H. BAKKEN, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 6, 1928. Serial No. 317,623. 7 Claims. (Cl. 220—55.)

1. A housing comprising a receptacle and a cover, a rod associated with the receptacle, a plurality of clamps having holes of greater diameter therein than that of said rod by which said clamps are supported to permit angular and lateral movement on said rod, an extension on each end of each clamp, the one extension having an engaging face, the other an adjustable screw, said face and said screw being adapted to clamp said cover to said receptacle, whereby the turning of the screw is adapted to draw said engaging face against said housing without applying a lateral force to said rod.



1,810,067. VALVE. CHARLES F. BECKWITH, New York, N. Y., assignor, by direct and mesne assignments, to Aqua Systems Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1929. Serial No. 344,720. 11 Claims. (Cl. 137—68.)

1. Valve mechanism comprising the combination of a housing, a main valve mounted at one side of the housing normally lying out of the path of flow, a valve seat lying across the path of flow, means for swinging the valve into the path of flow whereupon the pressure of the fluid seats it, an auxiliary valve for checking the flow and thus reducing the valve-closing pressure, and means for moving the auxiliary valve across the path of flow before the main valve is seated.



1,810,068. PROCESS OF TREATING HYDROCARBON OILS. JOHN C. BLACK, Los Angeles, and MARVIN L. CHAPPELL, Watson, Calif. Filed Jan. 31, 1928. Serial No. 250,864. 17 Claims. (Cl. 196—31.)

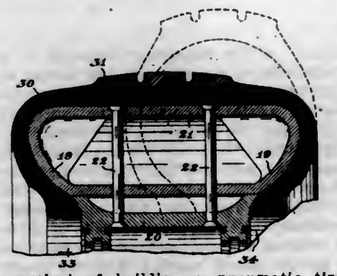
11. A method of separating unstable, unsaturated hydrocarbons from gasoline stock containing the same, comprising, subjecting the gasoline stock containing not less than 10 per cent liquefied hydrocarbon gases having boil-

ing points less than the gasoline stock to the action of sulphuric acid containing not less than 76 per cent by weight sulphuric acid at temperatures below 32 degrees F.

1,810,069. WAGON LOADER. WILLIAM H. BOSWORTH, Yonkers, N. Y., assignor to George Haiss Manufacturing Co. Inc., New York, N. Y., a Corporation of New York. Filed Oct. 24, 1929. Serial No. 402,166. 1 Claim. (Cl. 37—190.)

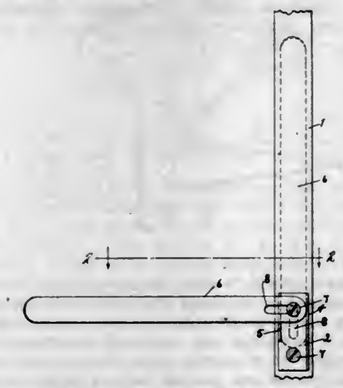
A machine of the character described comprising a conveyor having buckets adapted to receive material at the pick-up end of the conveyor and elevate it to the discharge end of the same, a rotatable shaft located at the pick-up end of said conveyor and projecting outwardly beyond opposite sides thereof, a plurality of propeller blades carried by said shaft at opposite ends of said shaft and adapted to impart forwardly and upwardly directed impacts to the material, and having oppositely inclined faces adapted to act upon and move the material to be loaded toward and into the path of the conveyor buckets, a plurality of tongues carried by the outer ends of said propeller blades and projecting forwardly therefrom at the forward edges thereof, and a plurality of digging elements associated with said tongues and projecting forwardly from said propeller blades, said digging elements being tapered forwardly and terminating in entering edges located in advance of the respective propeller blades.

1,810,070. PREPARATION OF COKED AGGLOMERATES. EARL HAMLIN BUNCE, Palmerton, Pa., assignor to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 15, 1928. Serial No. 319,735. 7 Claims. (Cl. 75—65.)



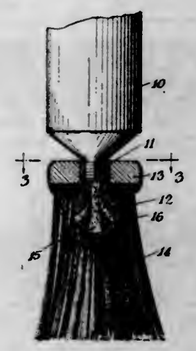
1. The method of preparing coke agglomerates of finely divided zinciferous material and carbonaceous material which comprises subjecting the zinciferous material to a sintering operation, intimately mixing the sintered zinciferous material with the carboneacous material, forming the resulting mixture into agglomerates, and subjecting the agglomerates to a coking operation.

1,810,071. FUSIBLE ELEMENT FOR ELECTRIC FIXTURE SOCKETS. JOHN CIOTTA, New York, N. Y. Filed Apr. 16, 1929. Serial No. 355,450. 2 Claims. (Cl. 200—113.)



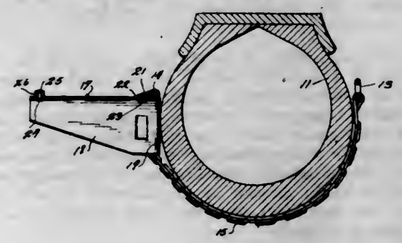
1. In a fusible element for electric fixture sockets, a disk of non-conducting material having a centrally disposed opening and a plurality of openings disposed between the central opening and the outer peripheral edge of the disk, said disk adapted for insertion in the fixture socket, metallic plates detachably secured on opposite sides of the disk over the central opening, angular tongues formed integrally on the peripheral edge of each plate and projecting into the second named openings and a fusible metallic strip extending through the central opening and having its opposite ends in contact with the plates, and fastening elements passing through the plates and ends of said fusible metallic strip and into said disk.

1,810,072. PNEUMATIC TIRE AND METHOD OF AND APPARATUS FOR BUILDING THE SAME. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 4, 1926. Serial No. 139,486. 6 Claims. (Cl. 154—14.)



1. The method of building a pneumatic tire casing that consists in building up the carcass with a flattened crown of materially reduced external diameter and with side walls in the reinforced zone of the bead of substantially normal size and shape, and subsequently placing the tire carcass in a mold and bringing the carcass to normal form by materially increasing the diameter of the crown portion of the carcass.

1,810,073. DRAPERY HOLDBACK. FRANK THURSTON EVANS, Cambridge, Mass. Filed Apr. 9, 1930. Serial No. 442,841. 1 Claim. (Cl. 156—33.)



The combination in a drapery holdback comprising a stationary supporting member, holes formed in the ends of said member, one of its edges being bent outwardly at right angle throughout its length, the other edge having a narrow portion bent outwardly at right angle and located half way between the holes, a movable member having a longitudinal slot in one of its ends, a pivot to rotatively secure the member to the stationary member in such manner that the movable member will be positively locked against lateral movement when in a vertical position and against lateral downward movement when in a horizontal position.

1,810,074. LATHERING BRUSH. HANS FRIEDLANDER, New York, N. Y. Filed Apr. 14, 1930. Serial No. 443,985. 1 Claim. (Cl. 15—135.)

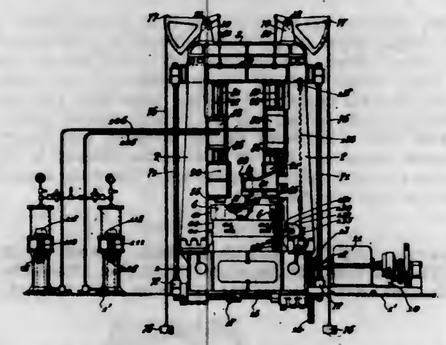
In a device of the character described, a brush head, a distributing nozzle formed with said head in substantially the center thereof, and provided with a neck part having an inner thread to allow the attachment of the brush to the threaded nipple of a shaving cream tube, said distributing nozzle having a larger central channel formed therein with a restricted central diameter, and branch channels branching off from said central channel to ensure an even and uniform distribution of the cream pressed from the tube into the brush.

1,810,075. LUG FOR WHEEL CHAINS. AUGUST GERTH, Hidewood Township, Deuel County, S. Dak. Filed Apr. 19, 1930. Serial No. 445,691. 5 Claims. (Cl. 152—14.)

3. In combination with an anti-skid chain having a plurality of spaced cross chains, a plurality of radially disposed outstanding traction lugs, means for securing said traction lugs to said cross chains, a bracing member integrally formed with said traction lug, means for securing said bracing member to a side chain, and a circumferentially disposed bracing member secured to each of said first bracing members.

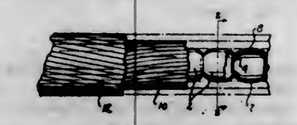
1,810,076. STIFFENING FABRIC FOR WEARING APPAREL. CURT HINSEL, Forst, Germany. Filed June 28, 1928, Serial No. 289,084, and in Germany Sept. 5, 1927. 3 Claims. (Cl. 139—427.)

1. For use in wearing apparel, a stiffening interlining comprising a ground fabric of hair yarn equally stiff and



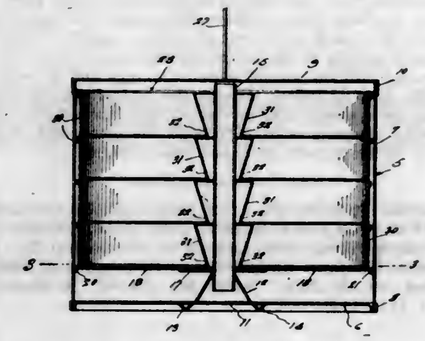
elastic in a warp as well as in weft, modified by a replacement of threads, in equal and definite spacing in warp as well as in weft, by threads of other kinds.

1,810,077. CLIP, CLASP, AND LIKE FASTENING FOR NECKTIES. HEINRICH HENGSTLER, Oberwinterthur, Switzerland. Filed Dec. 11, 1929, Serial No. 413,263, and in Germany Apr. 20, 1929. 1 Claim. (Cl. 24—49.)



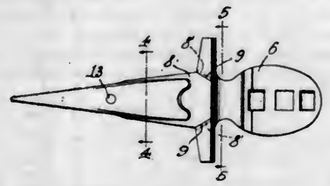
In a clip device for a necktie, of the kind set forth, the combination of: a longitudinally slitted sheath, and a resilient clamping member hinged to said sheath and curved inwardly towards the interior of the latter in such manner that when it is in the closed position the tie is clamped between the inner wall of said sheath and said clamping member, substantially as and for the purpose specified.

1,810,078. APPARATUS FOR AND METHOD OF MAKING BRICKS. GEORGE SCOTT HOUSMAN, Norristown, Pa., assignor to E. J. Lavino and Company, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 21, 1928. Serial No. 248,296. 28 Claims. (Cl. 25—66.)



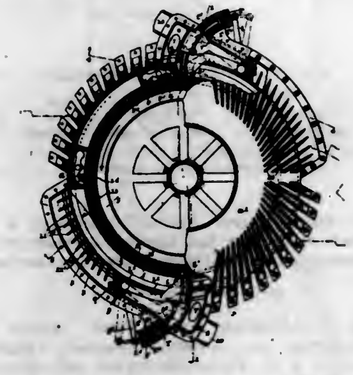
1. In an apparatus of the character described, the combination of a movable member having mold cavities located at intervals therein in which bricks are adapted to be molded, means for effecting movement of said member at intervals, a plunger for subjecting the material in a mold cavity to a preliminary pressure of predetermined amount, and means for thereafter applying final pressure of predetermined amount to the material in said mold cavity, the said final pressure being greater than the preliminary pressure.

1,810,079. ELECTRIC CONDUCTOR. HERBERT C. JENNISON, Bridgeport, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 1, 1924. Serial No. 740,922. 2 Claims. (Cl. 173—13.)



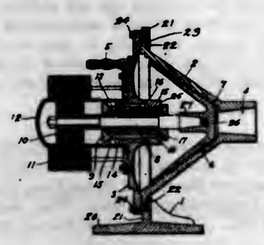
1. In a conducting cable, the combination of a series of cups constituting a supporting means comprising a plurality of diaphragms and round contacting conductors spirally wound about said supporting means, the several cups having on their sides longitudinally extending surfaces alining the cups within the spirally wound conductors, and adjacent end portions of adjacent cups being suitably nested so as to form ball and socket joints between them.

1,810,080. OYSTER RECEPTACLE. GEORGE A. KEGEL, Lancaster, Pa. Filed Aug. 31, 1929. Serial No. 389,753. 3 Claims. (Cl. 220—20.)



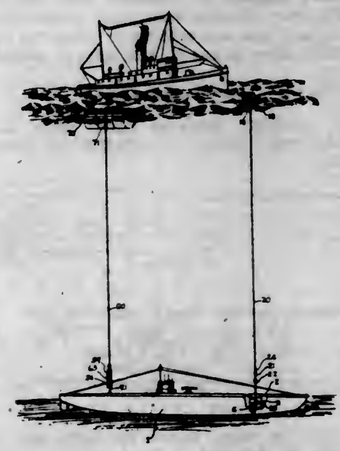
1. A device of the character described, a receptacle having a removable cover, and side and bottom walls, said bottom wall having an opening therein, a hollow upstanding supporting member secured to the inner face of the bottom wall about the opening, a tube secured within the hollow support member at its lower end and terminating at its upper end adjacent the upper edges of the side wall of the receptacle, a plurality of trays having central apertures disposed about the tube and stacked one on top of the other, means on the side walls of the receptacle in spaced relation thereto, each of said trays having upstanding hollow alined spacing members secured about the central aperture and circumposed about the tubes for providing support at the centers of the stacked trays, said spacing members having openings therein to carry off water from the superjacent tray, and a plurality of openings in the side wall of the receptacle below the lowermost tray to permit the water to escape from the receptacle, said bottom wall inset and having a pair of spacing ribs on the under side of the bottom wall adjacent the opening for resting upon the supporting surface to prevent the bottom wall from bulging under weight.

1,810,081. MOWER GUARD. CHARLES L. KUCHA, Artesian, S. Dak. Filed Oct. 11, 1927. Serial No. 225,558. 1 Claim. (Cl. 56—311.)



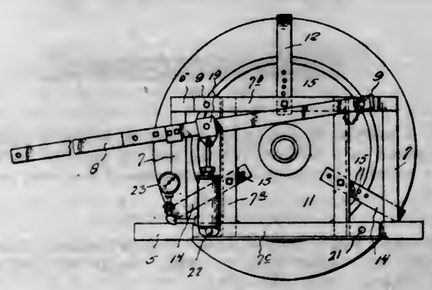
In a mower guard, a body portion having undercut shoulders formed adjacent to the inner end thereof, a ledger plate having beveled edges at the rear end thereof and adapted to engage the undercut shoulders to secure the ledger plate on the body portion, said ledger plate having a cut out portion formed in the forward edge thereof, said body portion having a tapered opening extending vertically therethrough and registering with the cut out portion of the ledger plate, and a tapered pin positioned in the opening and engaging within the cut out portion of the ledger plate for forcing the inclined edges of the ledger plate into close engagement with the undercut shoulders of the body portion.

1,810,082. ROTARY EXPLOSION ENGINE. FREDERICK B. MARVIN, Matamoras, Pa. Filed Dec. 19, 1925. Serial No. 76,385. 8 Claims. (Cl. 123—15.)



1. A rotary machine substantially as herein set forth including, in combination, rotor and stator elements forming one a piston and the other a circular cylinder and one having a head interrupting the continuity of the cylinder space, an abutment coactive with said head to confine the charge and pivoted in the other element to move into and out of the way of said head, and electromagnetic means to move the abutment back and forth including an electric circuit and a source of energy therein, oppositely acting solenoid coils in the circuit, cores operatively connected with the abutment and respectively arranged to be moved by the coils, said coils and cores being curved to arcs concentric with the path of movement of said abutment, and means, controlled by the rotor, to switch the current to said coils alternately.

1,810,083. HIGH VACUUM MOLECULAR PUMP. ERNST HARALD NORINDER, Uppsala, Sweden. Filed Nov. 24, 1928, Serial No. 321,586, and in Sweden Nov. 30, 1927. 2 Claims. (Cl. 230—118.)



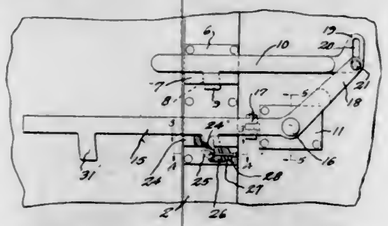
1. A vacuum pump of the molecular type comprising a support having floor-resting base and a ring portion disposed in a plane perpendicular thereto, said ring having a substantially rabbet groove at one side of its inner perimeter, a one-piece hollow substantially frusto-conical stator member having an outwardly-extending annular flange at its major-base end fitting said groove, the remainder of said member being at the side of said ring opposite said groove and including a hollow cylindrical inlet-port portion projecting from its minor-base end, a transverse wall member closing said major-base end and secured to said ring to hold said first member in position, said wall member having a central bearing opening and an outlet opening, a one-piece hollow substantially frusto-conical rotor member fitting said stator, said rotor having a closed minor-base end and a sleeve projecting inwardly therefrom, one of said frusto-conical members having a helical groove in a surface adjacent to the other of decreasing cross-sectional area from adjacent to its minor toward its major-base end, a shaft secured at one end in said sleeve and projecting through and beyond said central bearing opening, means supported by said wall member in its central opening for journalling and longitudinally adjusting said shaft, a rotatable electric motor armature at the other end of said shaft, a stator for the armature mounted on said support and an end-bell cover for sealing the armature from the atmosphere.

1,810,084. MARINE SALVAGE DEVICE. FRANK G. PRESTON, Tacoma, Wash., assignor of one-half to John N. Marker, Tacoma, Wash. Filed Apr. 22, 1929. Serial No. 357,065. 10 Claims. (Cl. 114—16.5.)

1. In a marine vessel, a housing, a buoy releasably and movably contained therein, means rendered active by inward depression of the buoy incident to external pressure thereagainst for ejecting the buoy from the housing, and a cable connection between the buoy and the housing.

1,810,085. BRAKE TESTING DEVICE. OSCAR F. RETTIG and CARL E. WEST, Watertown, Wis., assignors to Right-Way Brake Tester Company, Watertown, Wis., a Corporation of Wisconsin. Filed June 21, 1928. Serial No. 287,236. 4 Claims. (Cl. 265—1.)

1. In a brake testing device for vehicle wheels, an open frame, outwardly projecting hooks carried by the frame and adjustable radially of the wheel for gripping



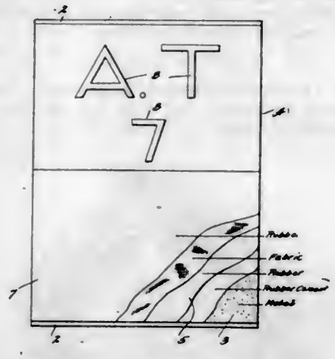
engagement with the wheel tire, a lever pivoted to the frame, a hydraulic compressor equipped with a pressure gage and connecting the lever and the frame, and means to pivotally connect the lever and the compressor to either end of the frame.

1,810,086. BALANCER. HARPER A. REYNOLDS, East Cleveland, Ohio, assignor to The H. N. White Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 10, 1929. Serial No. 361,989. 10 Claims. (Cl. 84—395.)

1. A balancer, as for use on trombones, and to be applied as to a brace connecting two tubes of said trombone, comprising: a base recessed to receive said brace; cover means adapted to cooperate with said base to clamp said brace therebetween; and cooperating screw-threads on said base and said cover means for releasably securing said cover means to said base in adjustable relation.

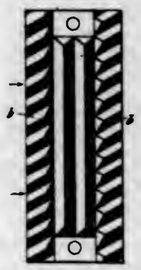
1,810,087. LATCH. BERNARD ROHE, Elgin, Ill. Filed July 22, 1930. Serial No. 469,736. 1 Claim. (Cl. 292—11.)

In a latch for doors, spaced apertured ears mounted at one side of the door, a lever pivoted to the door, having one end extending upwardly from the pivot point and provided with spaced ears, a second lever having a lateral extension at one end adapted to be arranged between the ears on the first lever, said extension having a slot, a pin carried by the first lever and movable in said slot, and downwardly projecting lugs on said levers adapted to be engaged with the spaced apertured ears for retaining said door in a closed position.



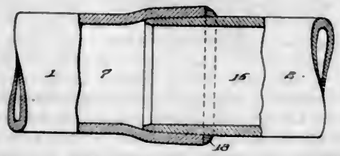
1,810,088. PRINTING PLATE MOLD. JULIUS SCHMUTZ, Louisville, Ky. Filed July 31, 1929. Serial No. 382,554. 13 Claims. (Cl. 101—401.1.)

1. A method consisting in the step of keying a plastic compound to a metallic backing and its opposite surface to a metallic border by the application of heat and pressure.



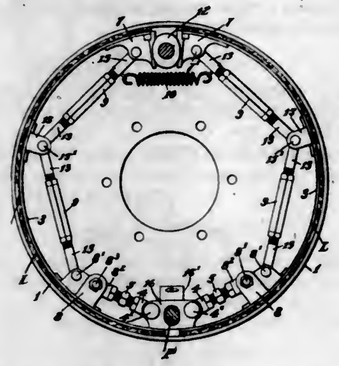
1,810,089. PRINTING PLATE. JULIUS SCHMUTZ, Louisville, Ky. Filed Sept. 3, 1929. Serial No. 390,087. 3 Claims. (Cl. 101—401.1.)

1. A method of producing a printing plate consisting in forming a resilient impression material with a design having a metallic backing formed with transverse lateral flanges treating the surface of said backing with a cleansing substance, applying a cementitious composition to said cleansed surface, covering the said cementitious



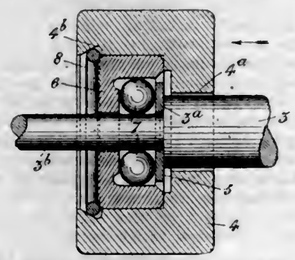
substance with a rubber material interposing a fabric intermediate the rubber and impression sheets and then homogeneously uniting the asembly by vulcanization.

1,810,090. FILTERING APPARATUS. WILLY SELL, Windelsbleiche, near Bielefeld, Germany, assignor to the Firm K. & Th. Möller Gesellschaft mit beschrankter Haftung, Brackwede, Westphalia, Germany. Filed May 23, 1929, Serial No. 365,464, and in Germany June 5, 1928. 9 Claims. (Cl. 183—8.)



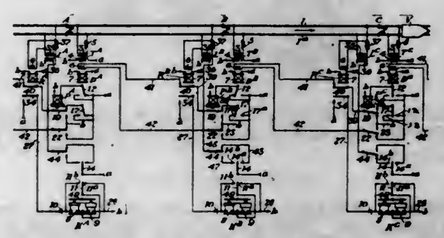
5. Air filtering apparatus of the type including baffles coated with a dust-collecting liquid, characted ized by the fact that said baffles include angularly-disposed portions constituting means for causing the air stream to take a zig zag course, and other portions constituting means for directing the air stream upwardly to separate from said air stream dust-collecting liquid entrained therein during the passage of said air stream along said zig-zag course.

1,810,091. JOINT FOR IRON AND STEEL PIPES AND TUBES. JACOB C. SIEGLE, Youngstown, Ohio, assignor to The Youngstown Sheet and Tube Company, Youngstown, Ohio, a Corporation of Ohio. Filed Sept. 5, 1928. Serial No. 304,095. 3 Claims. (Cl. 285—115.)



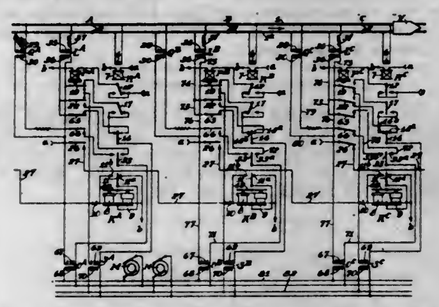
2. In a pipe joint, a pipe section having an exterior inwardly tapered zone of substantial width spaced from one of its ends and an inwardly curved and relatively shorter zone extending therefrom to the adjacent end of the section, a second pipe section having an integral bell at one end internally inwardly tapered from its extremity for a substantial distance and inwardly curved beyond said taper for a relatively shorter distance in correspondence with the taper and curvature of the first section and thus adapted to receive the end of the first section when the latter is inserted in the bell and form intimate contact therewith substantially throughout the tapered and curved zones thereof, and welding material disposed in the angle formed between the end of the bell and the peripheral surface of the first section and serving to permanently unite said sections.

1,810,092. INTERNAL EXPANSION BRAKE. GEORGE H. STONER, East Boston, Mass., assignor, by mesne assignments, to Stoner-Ames Brake Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 13, 1927. Serial No. 205,478. 8 Claims. (Cl. 188—78.)



1. In a brake, a pair of shoe members having free cam contacting ends, an anchor pin set opposite thereto, a slotted member mounted on said pin and overlying the adjacent ends of the shoes in bearing relation thereto and adjustably connected thereto within the ends and radially movable upon the expansion of the shoes to contact the adjacent shoe ends.

1,810,093. BALL BEARING MOUNTING. WILLIAM TIMSON, Birmingham, England, assignor to W. & T. Avery Limited, Soho Foundry, Birmingham, England. Filed Jan. 29, 1929, Serial No. 335,066, and in Great Britain Feb. 8, 1928. 3 Claims. (Cl. 308—189.)

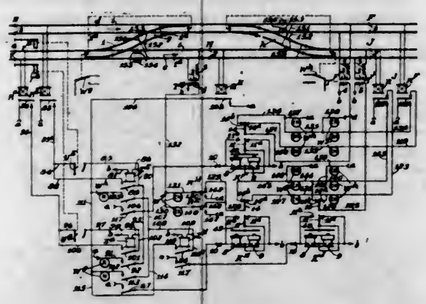


1. A ball bearing mounting for the shafts of weighing apparatus comprising a cup-shaped annular body member the open end whereof is outwardly disposed, an aperture in the closed end of the said member through which the shaft is adapted to pass, a cup-shaped bush member adapted to fit within the annular body member, the closed end of the said bush member being outwardly disposed, a hole in the closed end of the bush member permitting of the passage of the shaft therethrough, an abutment carried by the shaft and which is oppositely disposed relatively to the inner face of the bush member and a plurality of bearing balls adapted to be disposed concentrically about the shaft said balls being of a diameter such that the peripheries thereof contact simultaneously with the bush member, abutment and shaft at diametrically opposed points the lines joining which are either parallel to or at right angles to the axis of rotation of the shaft.

1,810,094. RAILWAY TRAFFIC CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 5, 1926, Serial No. 106,871. Renewed Aug. 3, 1929. 19 Claims. (Cl. 246—33.)

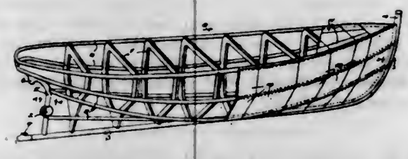
1. Railway traffic controlling apparatus comprising a stretch of railway track, a coding relay controlled by traffic conditions and comprising two normally open contacts arranged at times to be operated intermittently so that the contacts are closed for different intervals of time, and means controlled by said coding relay for supplying current to said stretch.

1,810,095. RAILWAY TRAFFIC CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed May 5, 1926, Serial No. 106,871. Divided and this application filed Aug. 5, 1929. Serial No. 383,731. 33 Claims. (Cl. 246—34.)



4. In combination, a stretch of railway track, means for normally supplying said stretch with one alternating current of one frequency, and means for at times periodically interrupting said one current and for supplying a second alternating current of a different frequency to said rails when said one current is interrupted.

1,810,096. RAILWAY TRAFFIC CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed May 5, 1926, Serial No. 106,871. Divided and this application filed Aug. 5, 1929. Serial No. 383,732. 15 Claims. (Cl. 246—34.)

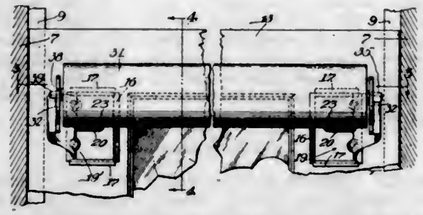


1. Railway traffic controlling apparatus comprising a stretch of railway track, a coding device controlled by

traffic conditions, and comprising two normally closed contacts arranged at times to be operated intermittently so that the contacts are open for different intervals of

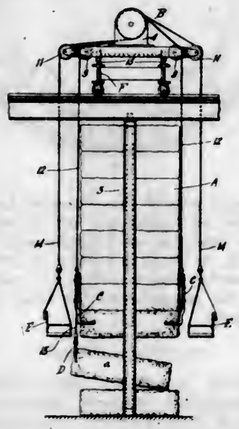
time, a source of energy, and means for connecting said source with the rails of the stretch over a selected one of said contacts.

1,810,097. WELDED SHIP. EDWIN B. WHEELER, New London, Conn. Filed Nov. 28, 1928. Serial No. 322,321. 4 Claims. (Cl. 114—79.)



1. In combination in a hull construction for ships, a keel of circular cross-section comprising the stem of the hull, a plurality of transverse belt frames welded to the keel, longitudinal frame members shaped about the frames and welded thereto, said members being of circular shape, and covering plates having their edge portions seating upon the frame members and the keel and stem, said plates being welded to the frames and to the frame members and the keel and stem.

1,810,098. SEAMLESS HOSIERY AND PROCESS OF MANUFACTURING SAME. JOHN M. ALLEN, Toronto, Ontario, Canada, assignor to Scott & Williams Incorporated, New York, N. Y. Filed Mar. 5, 1929. Serial No. 344,192. 11 Claims. (Cl. 66—187.)

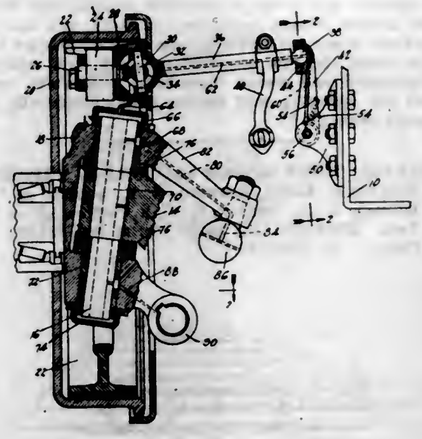


11. A knitted stocking having a narrowed and widened toe pocket and a gusset between the instep and the toe pocket having tapered ends, the shortest course of said gusset extending between the inner ends of the sutures of the toe pocket and the points of the gusset extending beyond the sutures, and a compensating segment of fabric interposed between and connecting the widened end of the toe pocket with the underside of the foot and being formed with tapered ends to meet the tapered ends of said gusset.

1,810,099. DETACHABLE VENTILATING SHADE BRACKET. GEORGE ANDERSON, Chicago, Ill. Filed May 29, 1924. Serial No. 716,722. 4 Claims. (Cl. 156—24.)

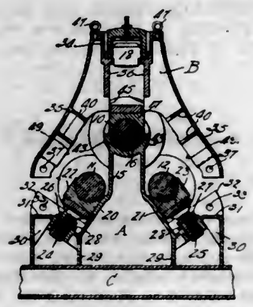
1. A support, a grooved slide fixed to said support and having stop projections extending from the face thereof, a shade supporting bracket slidable into said slide and having recesses formed therein to receive said projections and limit said sliding movement.

1,810,100. METHOD OF AND APPARATUS FOR STORING AND HANDLING COTTON BALES. CHARLES ALVIN BERTEL, New Orleans, La. Filed Jan. 6, 1928. Serial No. 244,800. 3 Claims. (Cl. 214—6.5.)



2. Apparatus for handling articles of like form and of considerable weight which are arranged in stacks each comprising a plurality of superimposed articles arranged in vertical alignment, including grippers adapted to be applied to the article above one selected for removal at opposite ends thereof, tongs adapted to be applied to the selected article at the end thereof which is adjacent the face of the stack across the plane of which the bale moves when it is removed from the stack, means for moving the grippers with the gripped article and the ones thereabove to a position clear of the article to be removed, and means for moving the tongs to a position which will remove the selected bale from its stack.

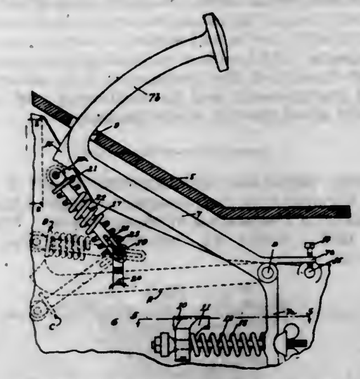
1,810,101. BRAKE MECHANISM. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Continuation in part of application Serial No. 43,953, filed July 16, 1925. This application filed Aug. 5, 1925. Serial No. 48,387. 7 Claims. (Cl. 188—194.)



1. A vehicle having a spring-supported chassis frame and a brake on an unsprung part, and comprising, in combination with said parts, a brake-operating substantially horizontal shaft terminating adjacent the frame

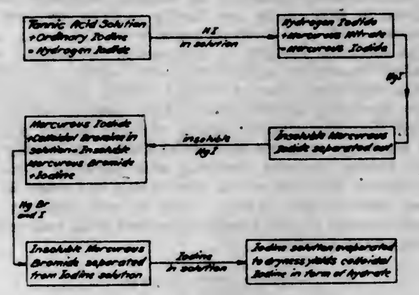
in a ball end, a lever pivoted on the frame and having a socket receiving the ball end to form a universal joint,

the lever having a lubricant conduit emptying into the socket, and means carried by the bracket for introducing lubricant into the conduit.



1,810,102. BEARING HOUSING FOR CANE MILLS OR THE LIKE. OTTO FABER, Kenmore, N. Y., assignor to The Geo. L. Squier Mfg. Co., Buffalo, N. Y. Filed Nov. 14, 1927. Serial No. 233,092. 14 Claims. (Cl. 100—47.)

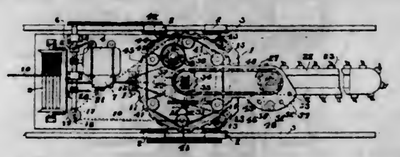
2. A bearing housing for a cane mill or the like, including a pair of lower rolls and an upper roll, said bearing housing including a lower portion adapted to support the roll shafts in operative relation to each other, and an upper member secured to said lower member and serving to cooperate with said lower member to hold said roll shafts in operative relation to each other and having legs cooperating with the lower member to form guides along which the lower rolls may move toward and from the upper roll, and means by which the lower rolls may be adjusted along said guides.



1,810,103. CLUTCH CONTROL DEVICE. CORNELL FLAGSTAD, Minneapolis, Minn. Filed Dec. 31, 1928. Serial No. 329,360. 6 Claims. (Cl. 192—99.)

1. In combination with a clutch lever, means associated therewith for alternately effecting retarding and assisting actions to the clutch engaging and disengaging movements thereof, said means comprising an oscillatable compression spring connected at one end to the lever and

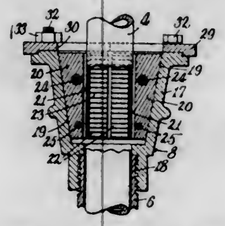
at its other end to a stationary support at a point between the fulcrum of the lever and the arc defined by the swingable end of the spring.



1,810,104. PREPARATION OF COLLOIDAL HALOGENS. ERNEST GOVETT, New York, N. Y., assignor to Govett, Ltd., New York, N. Y., a Corporation of New York. Filed Mar. 20, 1928. Serial No. 263,211. 14 Claims. (Cl. 23—216.)

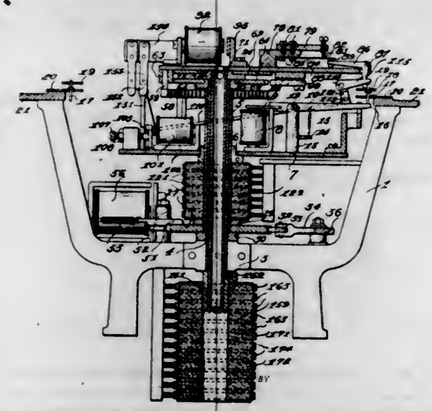
1. In the process of preparing colloidal halogen, the steps which comprise reacting the halogen with a soluble organic acid, whereby a hydrogen halide is produced, and then effecting a metathetical reaction by adding a compound adapted to react with the said hydrogen halide, whereby an insoluble halide is formed.

12. As a new product, a colloidal, non-toxic halogen hydrate.



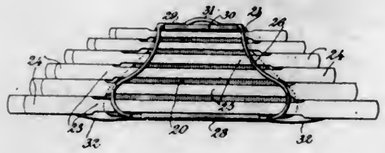
1,810,105. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 29, 1917. Serial No. 199,053. Renewed Oct. 10, 1929. 25 Claims. (Cl. 262—28.)

1. In a mining apparatus, wheeled truck adapted to run along a mine trackway, a support mounted on said truck for adjustment bodily vertically rectilinearly relative thereto and for rotative movement about a vertical axis, kerf cutting mechanism on said support including



a pivoted cutter bar swingable about a parallel vertical axis and provided with cutting elements moving in an orbit within whose limits the pivot of said bar is disposed, and means, including motor operated devices for adjusting and rotating said support relative to said truck, for disposing said bar in transverse planes beneath the level of the top of the trackway with its pivot at one side of the trackway, and for positioning said bar substantially above the top of the trackway.

1,810,106. DRILLING APPARATUS. HARRY C. JOHANSEN, Michigan City, Ind., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 31, 1927. Serial No. 243,907. 13 Claims. (Cl. 279—28.)



1. In a drilling apparatus, a chuck for locking a pair of telescopically arranged elements against relative rotative movement and against telescoping movement in one direction, said chuck comprising a casing having interior inclined surfaces, a plurality of gripping members loosely mounted in said casing and having inclined surfaces cooperating with said inclined surfaces in the casing, and means rotatable relative to said casing for locking said gripping members against removal while permitting limited movement thereof in said casing, said rotatable means including a rotatable locking member having a central irregular-shaped opening through which one of said telescopic elements extends and when in locking position having portions overlying said gripping members to maintain the same within said casing and when in released position said opening being of such shape as to permit removal of said gripping members from said casing through said opening.

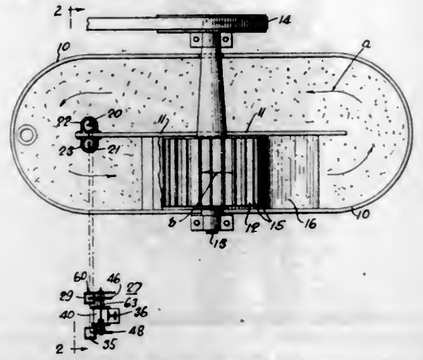
1,810,107. STORAGE TRANSMITTER. EDWARD E. KLEINSCHMIDT, Chicago, Ill., assignor to Teletype Corporation, Chicago, Ill., a Corporation of Delaware. Filed Jan. 5, 1929. Serial No. 330,540. 20 Claims. (Cl. 178—17.5.)

1. In a transmitter, a mechanical transmitting mechanism comprising a plurality of stationary mechanically operated members, arranged in groups, means for setting said mechanical members in each group in accordance with a code to the transmitter, means for moving said last mentioned means with respect to said mechanical members, to position said means in operative relation with successive groups of said mechanical members, and manually operated means for restoring any of said operated members before the code in accordance with their setting is transmitted and means comprising a separate remote unit for operating said setting means electrically connected thereto.

1,810,108. TOOLS IN SETS AND HOLDER THEREFOR. WILLARD C. KRESS, Kenmore, N. Y., assignor to J. H. Williams & Co., Buffalo, N. Y., a Corporation of New York. Filed Aug. 22, 1929. Serial No. 387,601. 10 Claims. (Cl. 206—16.)

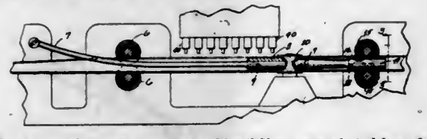
1. A holder for a set of tools, said holder having a yielding wall adapted to serve as a take-up device, a second wall spaced therefrom between which and the yielding wall sets of tools of variable thickness may be held in close mutual contact, a third wall permanently connecting said spaced walls, and a tool-retaining element hinged to one of said walls and detachably engageable with the other.

1,810,109. COMBINED PENCIL AND CLIP. JOSEPH P. MCENERY, Flushing, N. Y. Filed Aug. 14, 1930. Serial No. 475,178. 7 Claims. (Cl. 120—84.)



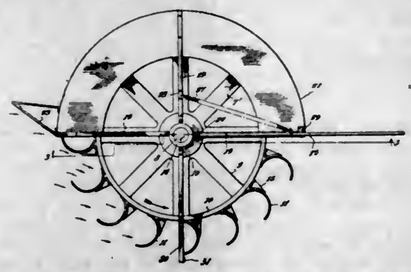
1. A device of the character described comprising a holder for a pencil or other article of similar shape, and a pair of clip members attached at their ends to said holder for movement relative to the holder, said clip members being adapted to clasp the plies of a folded article with a pencil interposed between the plies.

1,810,110. PENCIL HOLDER. JOSEPH P. MCENERY, Flushing, N. Y. Filed Dec. 30, 1930. Serial No. 505,539. 13 Claims. (Cl. 120—84.)



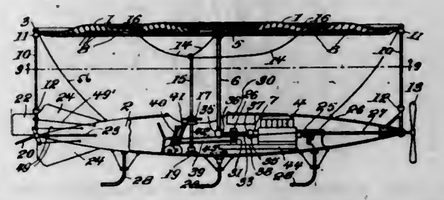
12. A device of the character described comprising a holder for a pencil or other implement of similar shape, a pair of clip arms pivotally attached thereto, a lug carried by each of said arms, and a pair of tongues struck out from said holder and extending into engagement with said lugs to maintain said arms under stress toward the axis of the holder.

1,810,111. CONSISTENCY RESPONSIVE DEVICE. SIDNEY E. MEYERS, Lockport, N. Y., assignor of one-half to Ericsson H. Merritt, Lockport, N. Y. Filed Nov. 12, 1928, Serial No. 318,676. Renewed July 15, 1930. 23 Claims. (Cl. 92—46.)



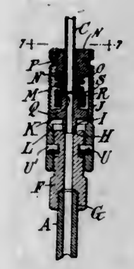
1. In condition-responsive devices, the combination comprising means adapted to indicate the hydraulic level in moving mediums at two successive points in the line of flow, and means responsive to the differential in said heights.

1,810,112. PROCESS FOR WELDING METAL TUBING. ERNEST RIEMENSCHNEIDER, Cleveland, Ohio, assignor to The Midland Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 6, 1930. Serial No. 473,484. 4 Claims. (Cl. 219—10.)



1. A continuous process of welding metal tubing from strip metal stock which consists of moving the strip along a given path, forming said strip into substantially tubular form with the original edges close to each other to form an open seam cleft while so moving and passing the edges of the seam of said strip through an elongated heating zone whereby the temperature of said edges is gradually increased to melting temperature and the edges melted for the full depth thereof and maintaining the molten metal of the edges in the molten condition and retaining it in the open seam cleft and supporting the under surface of the molten metal, to form a long narrow molten pool, whereby the metal is welded together along said seam.

1,810,113. WIND MOTOR. WALTER S. SCHLOTZHAUER, Douglas, Ariz. Filed Apr. 30, 1929. Serial No. 359,388. 3 Claims. (Cl. 170—15.)

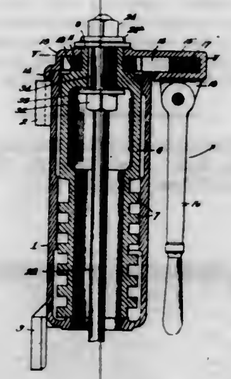


1. A wind motor including a vertical shaft, a horizontal wind wheel keyed to the shaft, a shield loose upon the shaft and enclosing a portion of the wind wheel, a vane mounted upon the shield and adapted to be acted upon by the wind to position the shield to hold the wind wheel in or out of the wind, and a manually controlled clutch having one member connected with the shield to rotate therewith and having the other member engaged with the shaft to turn therewith and movable toward and away from the companion member to effect clutched engagement of the wind wheel and shield.

1,810,114. FLYING MACHINE. RODRIGO M. SMYTH, San Jose, Costa Rica. Filed Feb. 24, 1928. Serial No. 256,735. 14 Claims. (Cl. 244—11.)

9. In a flying machine, a body, substantially inelastic pliable members mounted on said body, means for producing waves in said pliable members and means for communicating the motions of the pliable members to the surrounding air.

1,810,115. AIR BAG VALVE COUPLING. JOHN WAHL and OTTO MELZER, Queens, N. Y., assignors to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 30, 1927. Serial No. 179,583. 6 Claims. (Cl. 285—176.)

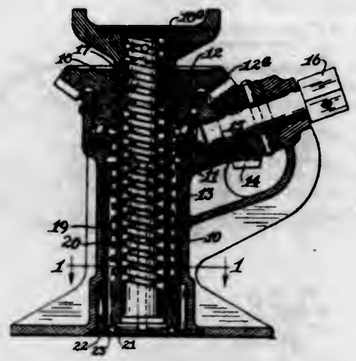


5. A coupling of the character described, comprising an entered member and an entering member, a spring-mounted seating member in one of the aforementioned members, a pipe in the same member as the seating member, said pipe having a tapered end and said seating member having a tapered surface for cooperative engagement with the end of the pipe.

1,810,116. RAILWAY CAR HAND BRAKE. HARLEY E. ANDERSON, Kansas City, Mo., assignor to Gustin-Bacon Manufacturing Company, Kansas, City, Mo., a Corporation of Missouri. Filed Mar. 22, 1928. Serial No. 263,710. 10 Claims. (Cl. 74—120.)

10. Brake operating mechanism comprising a support and a worm cooperating therewith, said support and worm being so mounted that one member remains station-

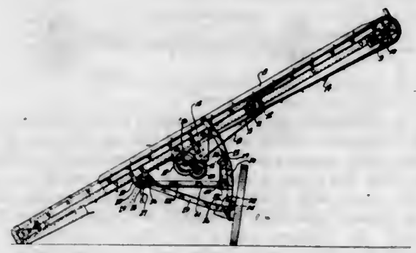
ary and the other member is adapted for rotation and longitudinal movement, threaded means carried by the sup-



port and movable into and out of enmeshment with the worm, and means for moving said threaded means into and out of enmeshment with said worm.

1,810,117. WINDOW CONSTRUCTION. MACIEJ BABIARZ and JOSEPH BABIARZ, Spotswood, N. J. Filed Mar. 3, 1930. Serial No. 432,763. 2 Claims. (Cl. 20—53.)

1. In a window of the class described, including tiltable sashes, an upper screen resting on the upper frame bar of the lower sash and engaging the lower frame bar of the upper sash, and a screen vertically disposed with its lower frame bar on the window sill and engaging with the cut-away edges of its upper frame bar the side bar of the lower window sash in its inclined position.

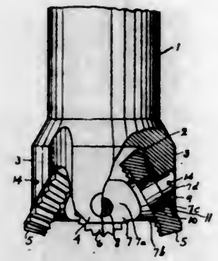


1,810,118. SCREW JACK. JOHN W. BATZ, Racine, Wis. assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 12, 1927. Serial No. 167,703. 6 Claims. (Cl. 254—102.)

1. In a double screw jack, a casing, a nut revolubly mounted thereon, means for turning said nut, a hollow outer screw member threaded in said nut and having internal threads, an inner screw member threaded into said internal threads, a sheet metal member extending into the space about one of said screws and having a friction bearing thereon to cause said screw to move longitudinally

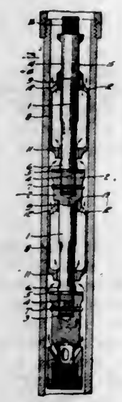
with respect to said nut as it is turned, and a cap for closing the bottom of said jack, said sheet metal member being secured to said cap.

1,810,119. MATERIAL HANDLING MACHINE. CHARLES H. BEBINGER, Janesville, Wis., assignor to Northern Conveyor & Mfg. Co., Janesville, Wis., a Corporation of Wisconsin. Filed Feb. 28, 1929. Serial No. 343,355. 2 Claims. (Cl. 198—233.)



1. A material handling machine comprising a conveyer, side members extending at an angle from and below said conveyer, arcuate members connecting the outer ends of said side members with the conveyer, a supporting truck to which the conveyer is pivoted, said truck consisting of side members pivoted at one end to opposite sides of the conveyer, a transverse member connecting the other ends of said truck side members, and arcuate members extending upwardly from said ends of the side members and slidably engaging the arcuate members connected with the conveyer, and means for causing slidable movement of the arcuate members with respect to one another to cause pivotal movement of the conveyer on the supporting truck.

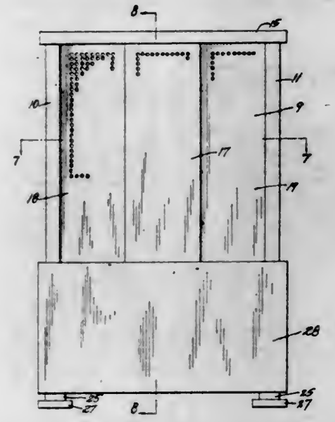
1,810,120. ROLLER BIT. GUY E. BEHNKE, Houston, Tex., assignor to Reed Roller Bit Company, Houston, Tex., a Corporation of Texas. Filed Apr. 6, 1928. Serial No. 267,877. 8 Claims. (Cl. 255—71.)



1. A roller bit having a head with a recess in the bottom thereof, and slots in the walls of said recess, the surfaces of said walls being inclined upwardly and inwardly toward the vertical axis of the head, a support extending across said recess and having a bridge portion and a pair of spindle portions, said spindle portions

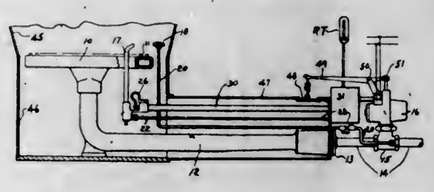
extending upwardly and outwardly at an angle to said bridge portion and having ends slidable in said slots, side roller cutters on said spindle portions and adjacent the

said surfaces of said walls, a pin carried by the head and extending across said recess and through said bridge portion, and cross roller cutters on said pin.



1,810,121. MULTISTAGE PUMP PLUNGER. LESTER C. BLACK, Los Angeles, Calif. Filed Jan. 24, 1928. Serial No. 248,997. 6 Claims. (Cl. 103—194.)

1. A multi-stage pump plunger comprising a plunger rod; a plurality of spaced enlarged portions provided on said rod; a valve seat on the upper end of each enlarged portion and an annular shoulder on the lower end of each enlarged portion; cylindrical plungers having ends of a reduced diameter loosely surrounding said rod and longitudinally slidable between adjacent enlarged portions, the reduced upper ends of said plungers having a plurality of ports, the cylindrical plungers being gradually merged into the ends of reduced diameter in the form of a continuously curved surface whereby to eliminate the formation of protuberant edges which would tend to catch on the joints of the pump tubing.

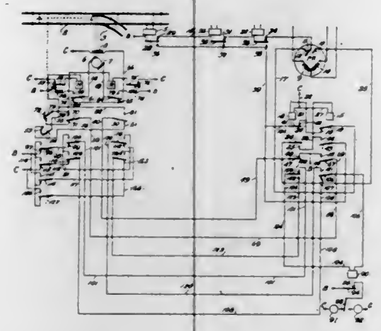


1,810,122. RADIATOR COVER. ALBERT EDGAR BLACKMAN, Mount Vernon, N. Y. Filed Aug. 23, 1927. Serial No. 214,910. 7 Claims. (Cl. 237—79.)

1. A box-like radiator cover, adapted to enclose a radiator, having a top, front, back and ends, an extension piece having a front and ends and an open top and bottom, and means for fastening said extension piece in various vertical positions on the lower portion of the cover, the front of said piece serving as a vertical extension of the front of the cover, and the ends of said piece

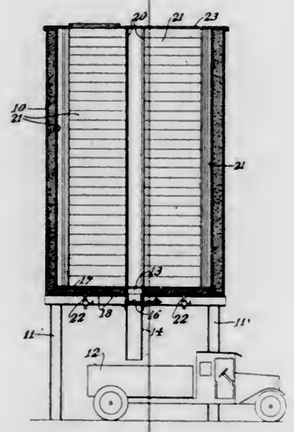
serving as vertical extensions of the ends of the cover, whereby said cover and extension piece can be fastened together to fit radiators of different heights.

1,810,123. FLUID-FUEL-BURNER CONTROL. NELSON T. BRANCHE and VILYNN O. BEAM, Toledo, Ohio, assignors to Surface Combustion Corporation, Toledo, Ohio, a Corporation of New York. Filed May 12, 1930. Serial No. 451,635. 9 Claims. (Cl. 236—1.)



1. The combination with a fluid fuel burner and a master thermostat for controlling the operation thereof, of a normally-out pilot, means for admitting fuel to the pilot when the thermostat calls for heat, a heat-controlled mechanism, means under the joint control of said thermostat and said mechanism and adapted when said mechanism permits to admit fuel to said burner, and means for lighting said pilot, the latter when lighted supplying the heat required by said mechanism to permit its cooperation with said thermostat for the said purpose, the pilot and lighting means therefor being positioned at opposite sides of said burner.

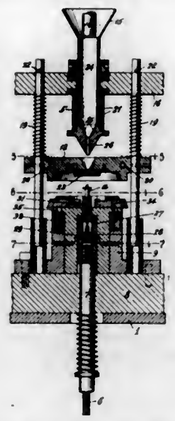
1,810,124. RAILWAY SWITCH CONTROLLING APPARATUS. CHARLES A. BROOKS, Swissvale, and HENRY S. YOUNG, Wilkinsburg, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 24, 1929. Serial No. 401,999. 5 Claims. (Cl. 246—160.)



1. In a switch control apparatus, a motor for operating the switch, a pair of relays for establishing circuits through said motor to cause the latter to move the switch to either normal or reverse position according as one relay or the other is energized and for preventing operation of said motor when said relays are concurrently energized, selective means and circuit connections controlled thereby for energizing either of said relays to

effect the desired setting of the switch, contacts controlled by said switch for breaking the circuit through the selected relay upon the arrival of the switch at its desired setting, and means comprising a front contact

of the non-selected relay for energizing the selected relay in response to energization of said non-selected relay when said selective means is in a condition for selecting the selected relay.

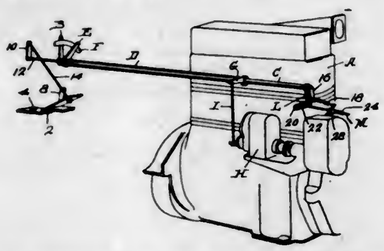


1,810,125. APPARATUS FOR AGING PLASTIC MIXTURES. WILLIAM H. BROOKS and FRANCIS M. TAYLOR, Birmingham, Ala. Filed Aug. 16, 1928. Serial No. 300,128. 4 Claims. (Cl. 23—285.)

1. In apparatus for aging lime putty and like plastic mixtures, the combination of an elevated water tight tank, permeable filter means extending throughout the depth and along the bottom in the tank, controllable means for removing excess water from the mixture by gravity, and separate means for removing the contents of the tank by gravity.

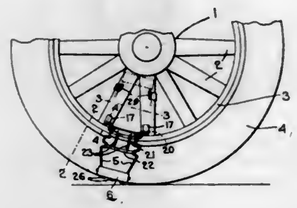
1,810,126. PROCESS OF MAKING MOLDED ARTICLES. HERMANN BUCHHOLZ, Berlin, Germany, assignor to W. D. Grote. Filed Nov. 14, 1923. Serial No. 674,630. 11 Claims. (Cl. 18—55.)

1. The process which comprises heating the material to be molded until the same acquires flowing characteristics, then forcing said material directly from the point of heating through a relatively constricted passage under pressure to increase its flowing characteristics and in



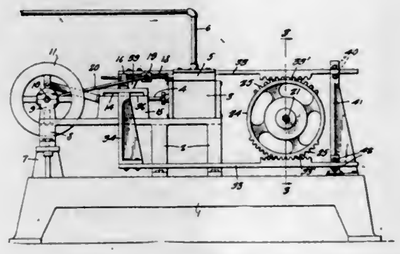
this condition forcing it into the mold and cooling the mold during the introduction thereto of the fluid material.

1,810,127. METHOD OF DECORATING GLASS. ALVA B. CARTER, Lincoln, Nebr. Filed Mar. 3, 1930. Serial No. 432,938. 1 Claim. (Cl. 41—22.)



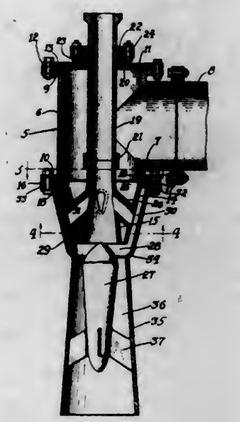
The method of ornamenting glass surfaces with pigments suspended in a slow flowing medium which adheres to glass, the said method consisting in applying the pigments in a plurality of colors and shades to a suitable support in designs such that the suspended pigments in their medium will slowly flow toward each other to blend at the edges, in then applying a piece of glass to the pigment treated support, in removing the glass with some of the pigment adhering thereto in the blended design, and in finally flooding the pigment treated surface of the glass with a white pigment in a similar medium to provide for a blending of the reflected light rays in addition to the blending of the pigments.

1,810,128. DECELERATOR. CHAUNCEY C. CHAPEL, Simpson, Kans. Filed May 28, 1930. Serial No. 456,462. 3 Claims. (Cl. 74—39.)



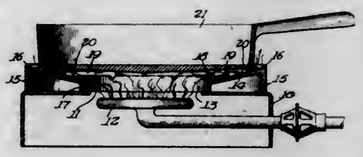
1. In combination with the throttle valve of an internal combustion engine, rod for controlling said valve, a hand controlled throttle shaft, and a suitable connection between said rod and said throttle shaft; a rock-shaft operably mounted in said throttle shaft, a resilient pedal adapted to return to normal position after being operated for the purpose of effecting closure of said valve to the desired extent, a crank fixed upon said rock-shaft, a rod connecting said crank and the pedal, a second crank fixed to said rock-shaft, and a suitable connection between said second crank and rod for controlling the valve.

1,810,129. NONSKID DEVICE FOR AUTOMOBILE WHEELS. CHARLES E. CLAPP, Hingham, Mass. Filed July 21, 1930. Serial No. 469,423. 6 Claims. (Cl. 301—50.)



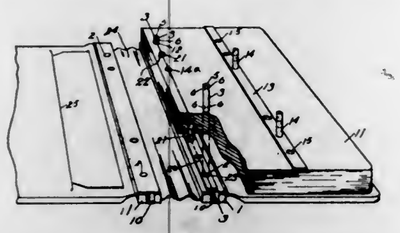
2. A non-skid device for an automobile wheel comprising a holder presenting two side members, each shaped to fit partially around a spoke of the wheel, means tying said side members together on both the inside and outside of the wheel, the outer ends of the side members being bent into loop formation, a spring within each loop, a cap enclosing each loop and spring, a non-skid member having trunnions extending through the loops and backed by said springs, said non-skid member being adapted to be swung from operative position alongside of the tire to inoperative position lying against the wheel and means for holding the non-skid member yieldingly in operative position.

1,810,130. ENGINE. EMERY J. COLLYER, Henryetta, Okla. Filed Mar. 11, 1930. Serial No. 434,933. 1 Claim. (Cl. 74—14.)



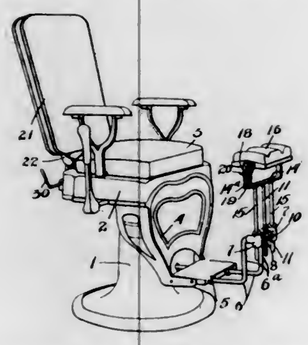
An engine including a base having a power take-off shaft journalled adjacent one end thereof and provided with a belt wheel, a frame mounted on the base and extending from the other end thereof to a point intermediate the ends of said base, a reciprocating engine carried by the frame, a head secured to the engine and reciprocated thereby, guide members on the frame for the head and having slots, laterally extending arms on the head and slidable in the slots, vertical standards on the base, rack bars slidable on the standards and arranged in a plane one above the other and laterally of each other, vertical brackets connecting the bars to the arms, segmental gears journalled on the shaft and in mesh with the rack bars, and pawl and ratchet means between the shaft and gears.

1,810,131. DEVICE FOR MIXING GASES AND LIQUIDS. JAMES MARLOWE DAILY, Chicago, Ill., assignor to American Ozone Company, Chicago, Ill., a Corporation of Illinois. Filed May 25, 1929. Serial No. 365,864. 8 Claims. (Cl. 261—76.)



1. In a mixer of the character described, the combination of a vertically extending casing member connected at the lower end thereof to receive liquid under pressure, a vertical pipe connected to a supply of gas and having its lower end projecting into the casing member and forming with the latter an annular liquid conduit which is restricted at its bottom end and serves to project the liquid downwardly in a thin annular stream, a hollow brace extending across the conduit and connecting the casing member and pipe, and means forming a gas chamber having a portion thereof opening onto and facing the outer peripheral portion of the annular stream of liquid so that the gas in the chamber may be drawn into contact with said outer peripheral portion of the stream, said chamber being connected to receive gas from the pipe through the hollow brace.

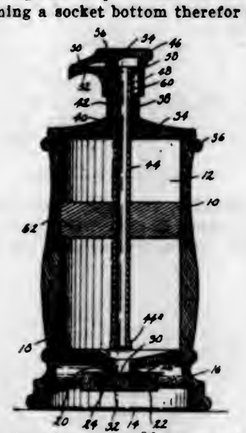
1,810,132. HEAT DISTRIBUTOR PLATE FOR COOK STOVES. FOREST V. DETWILER, Grand Rapids, Mich. Filed Sept. 30, 1929. Serial No. 396,099. 15 Claims. (Cl. 126—215.)



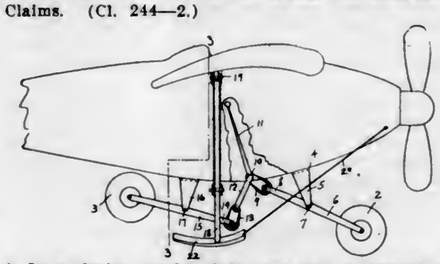
1. A heat distributor plate for cooking purposes, said plate having an opening of considerable size therethrough at the center thereof, a downwardly projecting imperforate flange encompassing said opening, and a downwardly projecting imperforate flange encompassing the periphery of the plate, the lower edges of said flanges being in substantially the same plane.

1,810,133. LOOSE LEAF BINDER. CHARLES J. DUNBAR, Kalamazoo, Mich., assignor to Le Febure Corporation, Cedar Rapids, Iowa, a Corporation of Iowa. Filed June 8, 1929. Serial No. 369,307. 8 Claims. (Cl. 129—8.)

1. In a loose-leaf binder, the combination of clamping bars; leaf-holding posts; means for detachably securing said leaf holding posts to the clamping bars to permit of post substitution for expansion; and a sheet-holding mechanism comprising a cross-bar at each side of the binder detachable with the leaf body from the binder, said bars having overlapping posts engaging the leaf body.



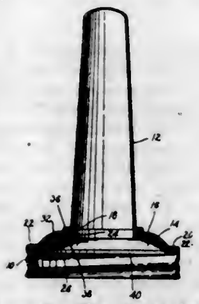
1,810,134. CHIROPODIST CHAIR. JOHN R. EMMERT, Chicago, Ill., assignor to Emil J. Paidar Co., Chicago, Ill., a Corporation of Illinois. Filed July 16, 1928. Serial No. 293,003. 1 Claim. (Cl. 155—172.)



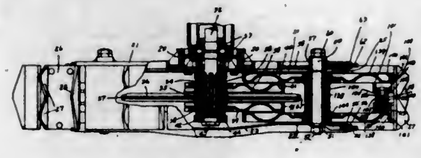
In a chiropodist chair having a foot board, a bracket comprising a bearing having a pair of rods slidably mounted in said foot board, said bearing having spaced apertures and an intermediate aperture, a foot rest having spaced rods extending through said spaced apertures and an intermediate rod extending through said intermediate aperture, said intermediate aperture having an enlarged portion, a spring mounted in said enlarged portion, a friction locking plate having an aperture for receiving said intermediate rod, said bearing having a slot for receiving an end of said plate and a shoulder adjacent said slot for supporting said plate, said spring normally engaging said plate and said plate projecting beyond said bearing for engagement by the knee of the operator.

1,810,135. CREAM DISPENSER. FRED W. FITCH, Des Moines, Iowa. Filed Feb. 4, 1929. Serial No. 337,345. 1 Claim. (Cl. 221—103.)

In a dispenser, a casing having a bottom provided with an interiorly smooth tubular passageway, a plunger tube slidably mounted with respect to said casing, the lower end of said plunger tube being adapted to enter said tubular passageway at the lower end of the casing when moved downwardly relative to the casing, an exteriorally smooth plug longitudinally movable in said tubular passageway, forming a socket bottom therefor and also forming a stop for the plunger tube and means for selectively locking said plug in any of its positions relative to said tubular passageway.

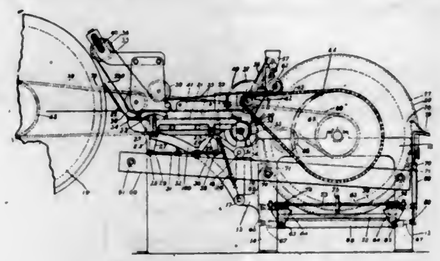


1,810,136. FLYING MACHINE. JOHN W. FRY, Struthers, Ohio. Filed Mar. 18, 1930. Serial No. 436,903. 2 Claims. (Cl. 244—2.)



1. In a device of the class described, a take-off and landing portion comprising two wheel positioned directly underneath a center portion of body of flying machine and one wheel directly behind a front wheel, two dependent pivot supports secured to body of said flying machine, a pivot-arm carried on each of said depended pivot-supports, outer ends of each pivot-arm carrying a wheel, inner ends of said pivot-arms functioning with a plurality of elastic bands of uneven lengths, means for raising and lowering rear wheel in relation to the flying machine.

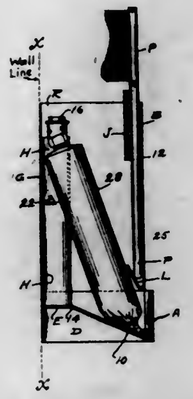
1,810,137. SPOUT CONSTRUCTION. WALTER R. HENION, Minneapolis, Minn., assignor to Boe Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 27, 1930. Serial No. 423,678. 7 Claims. (Cl. 221—28.)



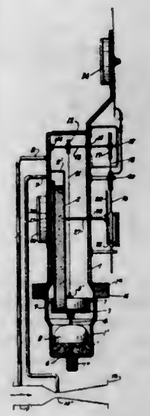
1. In a spout construction, a cap having a peripheral ledge, an inner wall in said cap and having its edge in contact with said ledge and a spout member having flanges above the cap and below the inner wall for holding the cap, inner wall and spout assembled together.

1,810,138. ARTICULATED TRACTOR TRACK. LEO T. KINCANNON, Scottdale, Pa., assignor to Marion Machine Foundry & Supply Company, Marion, Ind., a Corporation. Filed July 27, 1928. Serial No. 295,663. 2 Claims. (Cl. 305—3.)

2. A power operable load sustaining mechanism including an endless articulated tread, a plurality of front and rear wheel supports therefor, each including spaced portions, intermediate spaced wheel supports arranged in overlapping relation relative to the front and rear wheel supports, and a gear operatively engaging only the upper run of said tread for driving the same, each of said wheel supports being of substantially the same diameter and the gear being of greater diameter than and coaxial with the intermediate wheel supports and offset sufficiently from the plane including the front and rear wheel support axes whereby only the upper run of the tread is engaged by the gear.



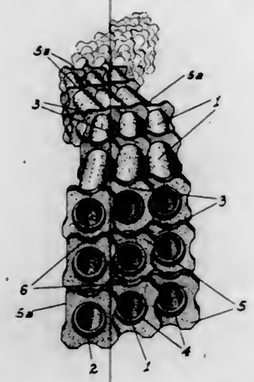
1,810,139. DOUGH MOLDER. WILLIAM G. KIRCHHOFF, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 31, 1925. Serial No. 47,215. 8 Claims. (Cl. 107—9.)



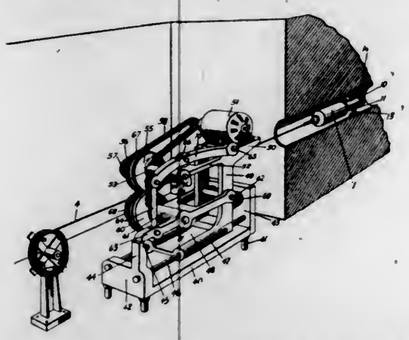
1. In a device of the class described the combination of a pressure board, a conveyor belt mounted for movement in substantial parallelism with the pressure board, cutter means disposed in alignment with the pressure board and extending into a space between the pressure board and conveyor belt, and a drum molder having a peripheral flange extending in alignment with the cutter means whereby a mass of dough severed by the cutting means may have its severed portions pass directly from the cutter means into abutment with the peripheral flange.

1,810,140. DENTAL CABINET. CLARENCE A. LAWSON, Sr., and CLARENCE A. LAWSON, Jr., Alhambra, Calif. Filed May 20, 1929. Serial No. 364,614. 15 Claims. (Cl. 132—84.)

5. A device of the character disclosed, including a casing provided with separate brush holders formed and arranged to maintain the brushes in upright position with the brush-heads above such holders, and means for supporting the lower ends of the brushes to retain same in alignment with the holders; said casing having a compartment for reception of a dentifrice container or the like; said casing having an inclined bottom portion for disposing said dentifrice holder in inclined position within the casing.

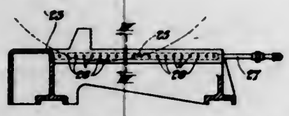


1,810,141. LIQUID METER. JOHN W. LEDOUX, Swarthmore, Pa., assignor, by mesne assignments, to Simplex Valve & Meter Company, Philadelphia, Pa., a Corporation of Delaware. Filed Aug. 4, 1921. Serial No. 489,757. 7 Claims. (Cl. 73—167.)



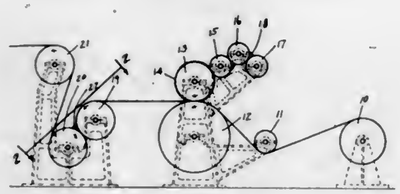
1. A meter comprising a casing, a buoyant member of gradually upwardly decreasing cross sectional area, a buoying liquid in said casing, supporting said buoyant member, a liquid container having a closed bottom and supported by said member, a liquid container communicating with said container first named through the top thereof and supported independently of said member and means for creating several differential pressures from a flowing liquid and communicating one of said pressures to a liquid in one of said containers and another of such differential pressures to liquid in the other of said containers, said buoyant member having a shape effecting movement thereof in simple functional relation to changes in the rate of flow of said flowing liquid.

1,810,142. CONDUIT COUPLING COLLAR. JOHN F. MAKOWSKI, Oakland, Calif., assignor to Fireproof Wall Company, Reno, Nev., a Corporation of Nevada. Filed July 20, 1929. Serial No. 379,812. 5 Claims. (Cl. 247—34.)



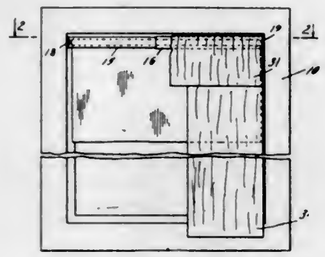
1. A conduit support comprising a collar having an orifice to receive one end of a conduit therein; the exterior periphery of the collar being shaped to engage the ground in non-tipping relationship, and also to form a cradle for an adjacent conduit.

1,810,143. APPARATUS FOR FEEDING LINES. PERRY OKEY, Columbus, Ohio. Filed July 22, 1929. Serial No. 380,226. 5 Claims. (Cl. 175—376.)



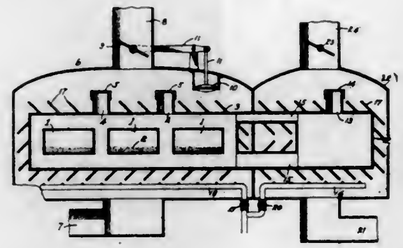
1. A combination of a projectile, a line attached to said projectile, power rotated rolls, means for automatically causing said rolls to exert successive pulls upon said line, means for causing said rolls to relieve the pull on said line intermittently, and means in said projectile for translating each pull into stored potential energy and rendering it effective as kinetic energy to advance said projectile when each pull is relieved.

1,810,144. SAWING APPARATUS. JOHN S. OURSLER, Munhall, Pa. Filed Apr. 27, 1928. Serial No. 278,272. 1 Claim. (Cl. 29—69.)



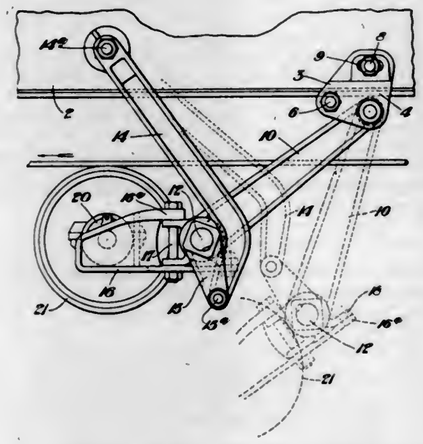
In a rotary saw for sawing rolled metal shapes the combination of a saw supporting structure having a rotary saw blade mounted thereon and a support for the shape to be cut, said support being provided with a slot in which the saw blade travels when cutting the shape, conduits formed in said support on both sides of and in horizontal alinement with said slot, openings forming passages extending transversely from said conduits through the walls of said slot, and water supply pipes connected to said conduits, said conduits and openings being adapted to direct water against both sides of the saw blade below the work-piece immediately after the blade has passed through the work-piece.

1,810,145. PROCESS OF DECORATING PAPER. HARRY M. ROSS, Indianapolis, Ind., assignor of one-half to Beveridge Paper Company, Indianapolis, Ind., a Corporation. Filed Aug. 3, 1928. Serial No. 297,234. 3 Claims. (Cl. 91—67.9.)



1. The process of decorating paper, consisting in passing a sheet of paper under an embossing roll for forming elevations and depressions therein, applying a coloring material to the protruding surface of the embossing roll so as to cause such coloring material to color the depressions formed thereby in the paper, passing the paper about a coloring roll bringing a second coloring material into direct contact with the paper and causing the paper to be passed by the coloring material at such speed that said material will contact only with the elevations thereof and shade off into the depressions.

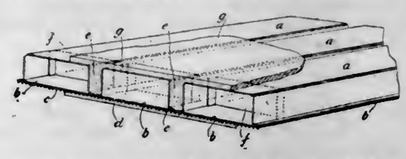
1,810,146. CURTAIN AND SHADE FIXTURE. WILLIAM A. SCHOLLMEYER, Yonkers, N. Y. Filed Aug. 1, 1929. Serial No. 382,657. 6 Claims. (Cl. 156—13.)



4. A fixture of the character described having end portions provided with sockets for supporting a shade roller, and having a central portion provided with an upwardly opening and a downwardly opening longitudinally extending channel adapted to receive the upper edges of curtains and to support the curtains.

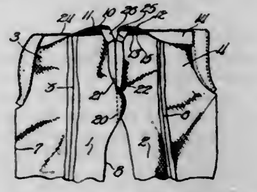
1,810,147. CATALYTIC APPARATUS. JAMES M. SELDEN, Pittsburgh, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Original application filed Jan. 2, 1920, Serial No. 348,871. Divided and this application filed Sept. 26, 1927. Serial No. 221,952. 8 Claims. (Cl. 23—288.)

1. In catalyzing apparatus, the combination with a catalyzing chamber, of a casing enclosing the same, a jacket in the casing enclosing the catalyzing chamber, a reservoir outside the casing having communication with the jacket, and a heater for the reservoir.



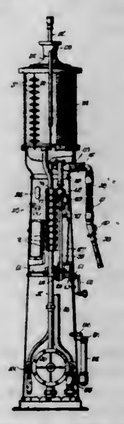
1,810,148. RETURN ROLLER SUPPORT. FRANK E. SMITH, Scottdale, Pa. Filed June 24, 1929. Serial No. 373,443. 5 Claims. (Cl. 308—20.)

1. A vertically adjustable roller mounting comprising in combination a fixed support, a pair of transversely spaced arms pivotally connected at one end to and depending from said support, a shaft journaled in said arms, a second pair of transversely spaced arms pivotally connected at one end to and depending from said support, said second pair of arms being spaced relative to said first pair of arms in a direction parallel with the longitudinal axis of said fixed support, a pair of crank-arms fixedly mounted on said shaft and pivotally connected to the lower free ends of said second pair of arms, and a roller carried by said first pair of arms.



1,810,149. FIREPROOF FLOOR. JOSEPH HEATON SOUTHERN, Redcar, England. Filed May 29, 1928, Serial No. 281,541, and in Great Britain Aug. 13, 1927. 10 Claims. (Cl. 72—66.)

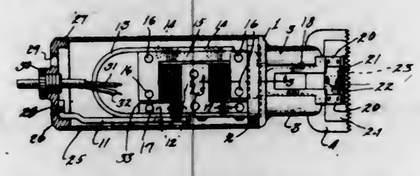
4. A hollow floor comprising a plurality of substantially rectangular steel box like beams closed by end plates at each end disposed in parallel relationship and encased and hermetically sealed on all external surfaces with a concrete heat insulating and rust resisting covering which



also forms a continuous floor surface the beams being of such cross section number and disposition as to be capable unaided of carrying at least the dead weight of construction of the completed floor.

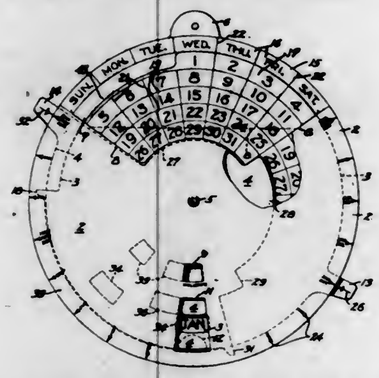
1,810,150. GARMENT. MOLLIE TODES, Milwaukee, Wis. Filed Dec. 12, 1930. Serial No. 501,838. 7 Claims. (Cl. 2—236.)

1. A pair of trousers the rear part of which comprises two separate body portions joined together along the median line of the garment to leave overlapping flaps, and a waistband liner comprising two strips on the inside of the garment, one strip extending along the edge of one of the body portions and the other strip extending along the edge of the other body portion, the overlapping flap of each of the body portions being folded back with the upper end thereof between the liner and the body portion and the edge of the liner being also folded back to extend between the liner and the folded flap of the corresponding body portion, machine stitching joining the corresponding folded back portions and being free of the body portion of the garment and concealed on one side by the body portion of the garment and on the other side by the exposed side of the liner strip.



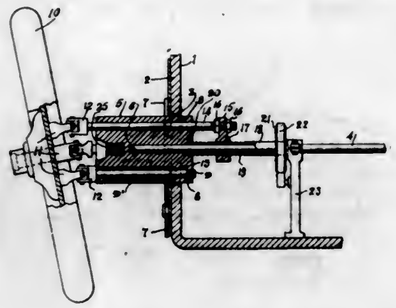
1,810,151. LIQUID DISPENSING APPARATUS. WILLIAM S. TOWNSEND, Rochester, Pa., assignor, by mesne assignments, to The Wayne Company, Baltimore, Md. a Corporation of Maryland. Filed Feb. 4, 1928. Serial No. 251,982. 15 Claims. (Cl. 221—100.)

1. In liquid dispensing apparatus, the combination of a measuring chamber, discharge means therefor movable



to predetermined positions for gravitationally discharging predetermined amounts of liquid, means in said chamber for controlling flow from said chamber to said discharge means, and revoluble and reciprocatory means associated with said discharge means for controlling operation of said second named means.

1,810,152. ELECTRIC HAIR CLIPPER. CHRIS L. VOLZ, Detroit, Mich. Filed Dec. 22, 1930. Serial No. 503,892. 5 Claims. (Cl. 30—1.)

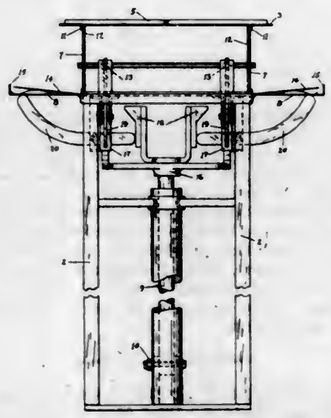


1. In an electric hair clipper, a tubular handle or casing, a cap mounted in one end thereof, a stationary member fitting in the opposite end thereof, a pair of arms extending from the stationary member, a stationary clipper blade mounted on the said arms, an electro-magnet mounted on the stationary member and extending within the tubular handle or casing, a U-shaped metal spring member secured at one end to the electro-magnet, an armature secured to the opposite end of the metal spring member, a bracket secured to the electro-magnet and terminating adjacent the cap, a screw extending through the cap and threaded into the bracket, a vibratable arm secured to the armature, the stationary member being provided with a slot through which the vibratable arm extends, a spring metal strip secured to the end of the vibratable arm and a movable clipper blade secured to the spring metal strip and riding in contact with the stationary clipper blade.

1,810,153. CALENDAR. LEONARD AKER, Atherton, Calif., assignor to The Recorder Printing and Publishing Co., San Francisco, Calif., a Corporation of California. Filed Jan. 27, 1930. Serial No. 423,690. 4 Claims. (Cl. 40—115.)

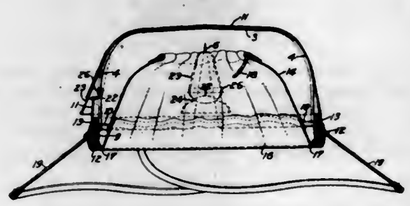
1. A calendar comprising a day scale, a date section adapted for coordination with the day scale, a month scale cooperating with the day scale and date section, a pair of month indexes each bearing a fixed relation to the day scale, means for registering the date section and a portion of the month scale with one of the month indexes to calendrically align the date section and day scale, and means for registering the remaining portion of the month scale with the other month index to indicate the month as determined by the calendric relation between the date section and day scale.

1,810,154. MECHANICAL MOVEMENT. LEO ALIO, Dayton, Ohio. Filed July 7, 1930. Serial No. 466,011. 18 Claims. (Cl. 115—1.)



1. In a mechanical movement for operating a disc as a boat propeller and vehicle wheel, means to support said disc for rotation, and means for holding said disc in a vertical plane and shifting the disc out of the vertical plane and holding it so.

1,810,155. RE-ACTIVATED ADSORBENT AND METHOD OF MAKING SAME. WALTER S. BAYLIS, Los Angeles, Calif., assignor, by mesne assignments, to Filtrol Company of California, Los Angeles, Calif., a Corporation of California. Filed Apr. 10, 1928. Serial No. 269,031. 4 Claims. (Cl. 252—2.)

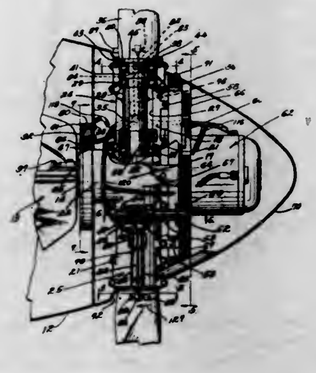


1. In the process of revivifying adsorbent clay of the bentonite type which has been treated with acid and subsequently washed and which has been used in the decolorizing of oils, the steps which comprise roasting the clay with access of air and with stirring until the carbonaceous matter is substantially eliminated, but the clay preserved unsintered, then making the clay into a mud containing water and 1% to 4% of the dry weight of the clay as sulphuric acid.

1,810,156. PACKAGE WRAPPING DEVICE. CLYDE S. BRANDENBURG, Chicago, Ill. Filed Mar. 26, 1930. Serial No. 438,982. 5 Claims. (Cl. 93—2.)

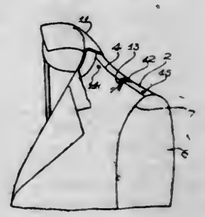
1. A device for wrapping packages with cellophane including a table, spaced apart wrapper supports thereabove, means between the supports to maintain the body of the wrapper when placed thereon in the same plane and allows the package to be wrapped to be depressed upon the wrapper between the supports to the table surface, and manually operated means adapted to be actuated after the operator has folded the sides of the wrapper about the top of the package to fold in the portions of the wrapper extending in prolongation of the sides of the package and then the portion extending in prolongation of the bottom of the package about the ends thereof to be manually secured by the operator.

1,810,157. SAFETY HAT. EDWARD W. BULLARD, San Francisco, Calif., assignor to Pacific Safety Equipment Company, San Francisco, Calif., a Corporation of California. Filed Aug. 14, 1928. Serial No. 299,542. 11 Claims. (Cl. 2—5.)



1. A safety headgear comprising a crown formed from a single sheet of hard compacted fibrous material having a plurality of notches in the periphery thereof to facilitate shaping the crown, a retaining ring secured adjacent the edge of the crown to hold the notches substantially closed, a water-proof cover over the crown, and means securing the cover to the ring.

1,810,158. WELDING TORCH CONSTRUCTION. LORN CAMPBELL, Jr., Cleveland, Ohio. Continuation of application Serial No. 1,847, filed Jan. 12, 1925. This application filed Apr. 18, 1929. Serial No. 356,270. 6 Claims. (Cl. 158—27.4.)

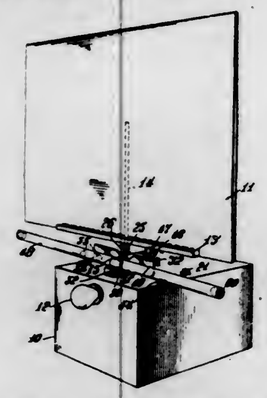


1. A torch member having in combination, a body or handle portion having front and rear ends, a mixing chamber in the front end of said body portion, a tip carrying member comprising a single conduit attached to the front end of said portion, an end casting attached to the rear end of said portion, a plurality of regulating valves carried by said casting having operating handles and constructed and arranged for fine and accurate adjustment and to maintain such adjustment, a plurality of control valves wholly disposed in said end casting between said body portion and said regulating valves, passages extending from said control valves to said mixing chamber, said casting having spaced members projecting therefrom adapted to receive flexible gas supplying conduits, means disposed in said body portion for operating said control valves, and a member operatively connected to said last mentioned means disposed at the side of said main body portion.

1,810,159. AUTOMATIC PROPELLER CONTROL. JAMES E. CAROL, Los Angeles, Calif., assignor of one-third to Byron D. Hammons and one-third to William W. Jones, Los Angeles, Calif. Filed Oct. 3, 1927. Serial No. 223,612. 18 Claims. (Cl. 170—163.)

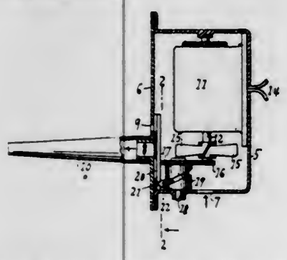
1. In an airplane, the combination of: an engine; a variable-pitch propeller operated by said engine; a joy stick adapted to operate certain controls on said airplane; and means on said joy stick operable to vary the pitch of said propeller.

1,810,160. METHOD OF MAKING COATS AND COAT PRODUCED BY SUCH METHOD. RUDOLPH COHEN, Rochester, N. Y. Filed Sept. 9, 1929. Serial No. 391,234. 4 Claims. (Cl. 2—93.)



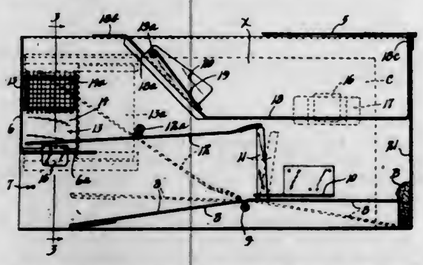
1. A method of making coats which comprises taking a temporary tuck in the outside goods at the shoulder seam, securing the outside goods to the canvas at two spaced points near the shoulder seam one adjacent the collar and the other adjacent the sleeve, while leaving the outside goods free of the canvas between said points, removing the tuck holding means, spreading the outside goods on the canvas by distributing the additional material rearwardly in the shoulder, securing to the canvas the outside goods in the distributed condition, and then finishing the operations on the coat.

1,810,161. ELECTRICALLY ILLUMINATED ADVERTISING DEVICE. ALONZO B. CONKLIN, Chicago, Ill. Filed Mar. 24, 1930. Serial No. 438,288. 7 Claims. (Cl. 40—33.)



1. In a device of the kind described, a rotatable member, spring means tending to rotate said member continuously, a latch member fixedly mounted upon the rotatable member and carried thereby in a circumferential path, a balanced stop member mounted to oscillate about a horizontal axis underneath the rotatable member, gravity

actuated means operable to alternately tilt the opposite ends of said stop member into the path of said latch

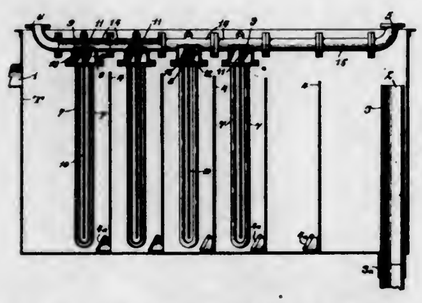


member thereby stopping the rotation of said rotatable member twice during a complete rotation and releasing said rotatable member after a predetermined interval.

1,810,162. ALARM SIGNAL. MICHAEL J. DAVIS, Brooklyn, N. Y. Filed Feb. 3, 1930. Serial No. 425,606. 3 Claims. (Cl. 116—112.)

1. An alarm signal comprising a casing having a fluid inlet and a fluid outlet, a motor secured in the casing provided with a rotor shaft, a fan mounted on the shaft, a signal communicating with the outlet, means actuated by the rotor shaft for increasing or decreasing and momentarily shutting off the volume of the fluid forced into the outlet by the fan, and a vent located in the casing brought into action when the outlet is closed to expel the fluid generated by the fan.

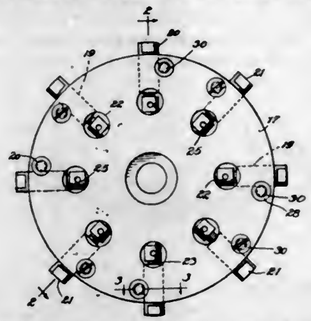
1,810,163. ANIMAL TRAP. THEODORE C. ENGLUND, Minneapolis, Minn. Filed June 9, 1930. Serial No. 459,906. 7 Claims. (Cl. 43—76.)



1. In an animal trap, an enclosure having an entrance, a tread-operated tripping device disposed inwardly of said entrance, a tilting platform pivoted above said tripping device and having a relatively heavy inner end adapted to swing downwardly to obstruct said entrance, means associated with said tripping device for normally holding said platform in raised position, a captive compartment having an entrance disposed above said tilting platform, said platform when swung downwardly constituting an approach to said last mentioned entrance.

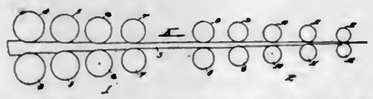
1,810,164. HEATING DEVICE. OWEN JAMES FAY, Chicago, HARRY TOBIAS HEIMBERGER, Riverside, and EMERSON PUGH, Downers Grove, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Dec. 23, 1927, Serial No. 242,046. Divided and this application filed Mar. 30, 1929. Serial No. 351,172. 6 Claims. (Cl. 219—26.)

1. In an electrical heating device, a heating device, a heating element wound in a helix, and a strand extending inside a convolution of the heating element and twisted with a connecting portion of the heating element for increasing the strength and conductivity of the portion.



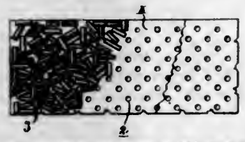
1,810,165. HEAT INTERCHANGER. OLIVE E. FRANK, Buffalo, and HERBERT P. WILDER, Kenmore, N. Y., assignors to O. E. Frank Heater & Engineering Co., Inc., Buffalo, N. Y., a Corporation of New York. Filed Sept. 24, 1928. Serial No. 307,931. 15 Claims. (Cl. 257—109.)

3. A heat interchanger comprising a tank, means arranged to divide said tank into a series of compartments and heat connected exchange elements located in and severally removable from said compartments, each element providing through the compartment in which it is located a substantially U-shaped path of flow for one of the heat exchanging fluids and having associated therewith means for cooperation with the walls of such compartment to delimit a substantially U-shaped path of flow for the other heat exchanging fluid, said fluids being arranged to flow in opposite directions.



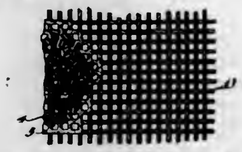
1,810,166. ADJUSTABLE GAUGE. KEITH F. GALLIMORE, Fond Du Lac, Wis., assignor, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 5, 1923. Serial No. 649,410. 8 Claims. (Cl. 33—178.)

8. In apparatus of the class described, a flat member, a set of gauge members projecting from the edge of said flat member and located close to one side face thereof, a set of gauge members projecting from the edge of said flat member and located close to the other side face thereof, and adjustment means for each gauge member whereby the two sets of gauge members may be adjusted to successively caliper an opening in a workpiece by the first set and then by the second set of gauge members, the



member requiring limited motion to introduce the first set of gauge members and but little more motion to introduce the second set of gauge members.

1,810,167. ART OF ROLLING METAL. JEROME R. GEORGE, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1929. Serial No. 353,970. 9 Claims. (Cl. 80—60.)

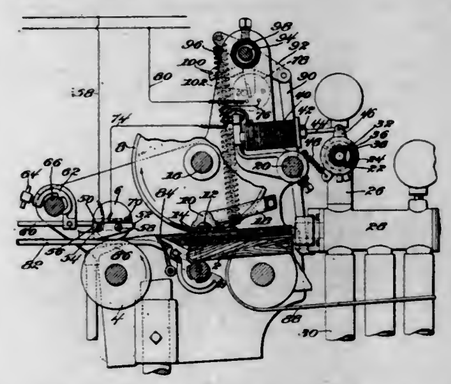


1. In the continuous rolling of hot metal, the improvement which consists in passing the stock through successive stands of rolls that decrease in diameter from the roughing to the finishing end of the mill, and causing the larger rolls to procure the bulk of the required reduction in thickness of said stock, thereby to heat up said stock sufficiently so that its temperature is substantially maintained during the finish rolling thereof.

1,810,168. MOTION PICTURE SCREEN. JAMES A. GRAY, St. Paul, Minn. Filed Aug. 2, 1929. Serial No. 383,079. 6 Claims. (Cl. 88—24.)

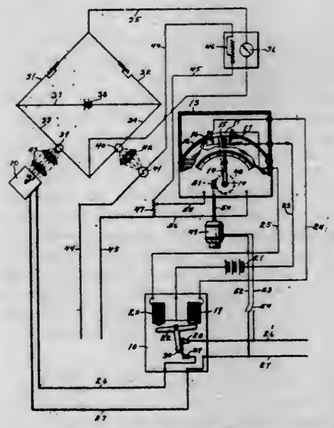
1. A motion picture screen, comprising a fabric backing, an adhesive dressing applied thereto, and a covering layer of solid glass cylinders imbedded in and applied to said adhesive coating and positioned thereon at varying angles.

1,810,169. MOVING PICTURE SCREEN. JAMES A. GRAY, St. Paul, Minn. Filed Feb. 12, 1930. Serial No. 427,760. 6 Claims. (Cl. 88—24.)



3. A projection screen having a backing of evenly woven mesh material, a pigmented coating over the strands of said mesh material, but not extending over the mesh openings, and a layer of small cylindrical glass particles partially embedded in said pigmented coating.

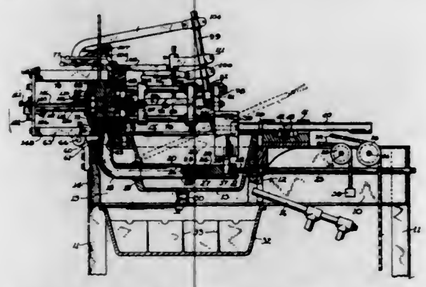
1,810,170. PROCESS OF PURIFYING AND DECOLORIZING ROSINS WITH RESORCINOL. IVAN GUBELMANN and CLYDE O. HENKE, South Milwaukee, Wis., assignors to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed July 25, 1927. Serial No. 208,407. 9 Claims. (Cl. 87—2.)



1. In the process of purifying and decolorizing rosins, the steps which comprise treating a rosin dissolved in a common rosin solvent with resorcinol at an elevated temperature, said solvent being relatively immiscible with resorcinol at low and ordinary temperatures, and cooling to precipitate the resorcinol containing dissolved impurities and coloring matter.

1,810,171. PAPER FEEDING MACHINE. HENNING HALLSTREAM, Brockton, Mass., assignor to Cross Paper Feeder Company, Boston, Mass., a Corporation of Massachusetts. Filed May 14, 1924. Serial No. 718,233. 4 Claims. (Cl. 271—28.)

1. A sheet feeding machine having, in combination, a suction feed wheel having a perforated rim, a suction nozzle within the rim over which it travels, a cut-out valve for reducing the suction through the nozzle, an electromagnet for operating the valve, and a switch in the magnet circuit operated by the sheet advanced by the wheel.



1,810,172. SYSTEM OF TEMPERATURE CONTROL. ANSON HAYES, Ames, Iowa. Filed Nov. 6, 1926. Serial No. 146,739. 5 Claims. (Cl. 236—15.)

1. A system for controlling the temperature of a hot body, comprising an electrical circuit arranged to control

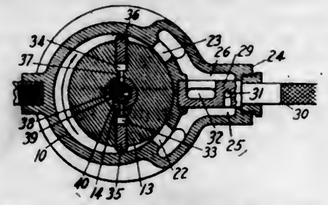
the supply of heat-producing energy thereto and normally in open circuit, a pyrometer which is responsive to the temperature of said hot body, including a Wheatstone bridge in said circuit, two arms of said bridge containing photoelectric cells, a standard light in said circuit, one of said cells arranged to receive radiations from said standard light and another arranged to receive radiations from the hot body, means for changing the resistance of the circuit through the standard light, and means for measuring the potential drop in the circuit through said standard light, an instrument for indicating the variations in temperature of the hot body, and including a movable member, connections between said pyrometer and said instrument for actuating said movable member in accordance with such temperature variations, a pair of spaced contact points associated with said instrument arranged for constant conjunctive travel and adapted for contact by said movable member, a relay device including a pair of electro-magnets and an armature selectively operable by said magnets for closing or opening the circuit above mentioned, and electrical connections between said magnets and the respective contact points.

1,810,173. CASTING MACHINE. MAX O. HELD, Milwaukee, Wis. Filed July 8, 1929. Serial No. 376,551. 19 Claims. (Cl. 22—68.)

1. In a casting machine, the combination of a container for holding molten metal therein and including a side wall having a transverse passage through which molten metal is forced, a cylinder removably mounted within said container and having an end portion in register with said passage, means engageable with the opposite end portion of said cylinder for removably retaining said cylinder in communication with said passage, and a piston movably mounted within said cylinder for forcing molten metal into said passage.

1,810,174. PROCESS FOR THE PRODUCTION OF CONDENSATION AND POLYMERIZATION PRODUCTS OF ACETYLENE. WILLY O. HERRMANN, HANS DEUTSCH, and WOLFRAM HAEHNEL, Munich, Germany, assignors to Consortium fur Elektrochemische Industrie, Munich, Germany. Filed Jan. 16, 1925. Serial No. 2,945, and in Germany Jan. 23, 1924. 7 Claims. (Cl. 260—2.)

1. Process for the production of water insoluble condensation and polymerization products which consists in causing acetylene to react in the absence of water and in the presence of a catalytically acting salt selected from the group consisting of the salts of mercury and aluminium, upon a compound selected from the group consisting of hydrocarbons, halogen substituted hydrocarbons and aliphatic alcohols and carrying the condensation beyond the stage of oily reaction products.

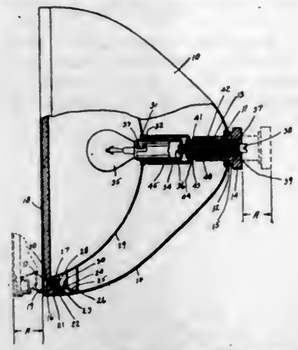


4. Process for the production of water insoluble condensation and polymerization products which consists in causing acetylene to react in the absence of water and in the presence of a catalytically acting salt selected from the group consisting of the salts of mercury and aluminium, and a strong acid upon a compound selected from the group consisting of hydrocarbons, halogen substituted hydrocarbons and aliphatic alcohols and carrying the condensation beyond the stage of oily reaction products.

1,810,175. LUBRICATING MEANS. WARD B. HILL and VIRGIL M. WATT, Indianapolis, Ind. Filed Mar. 2, 1929. Serial No. 344,033. 1 Claim. (Cl. 267—50.)

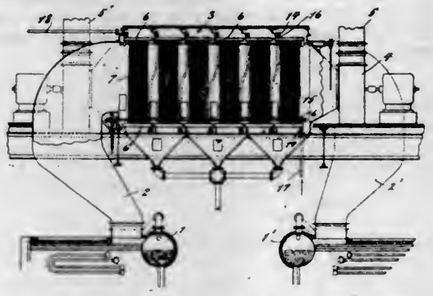
In a lubricating means for springs or the like, a main spring leaf, one or more spring leaves having slots extending longitudinally thereof from points adjacent their ends, the extreme end portions of said slots being part-way through said leaves and the remaining portion entirely therethrough, said slots forming a lubricant reservoir, additional spring leaves having channels extending longitudinally thereof from points adjacent their ends, said additional spring leaves having ports adjacent their ends for successively feeding the lubricant from the reservoir to the succeeding leaves, the ends of each succeeding slot extending a distance beneath the solid bottom portions of the preceding slot and the ends of each succeeding channel extending a distance beyond the opening through the preceding spring, and means for introducing lubricant into said reservoir adjacent the outer ends thereof.

1,810,176. AIR MOTOR. ION V. K. HOTT, Dayton, Ohio, assignor of one-third to William F. Bippus and one-third to Jesse M. Switzer, Dayton, Ohio. Filed Oct. 4, 1927. Serial No. 223,998. 10 Claims. (Cl. 121—87.)



1. In a portable air motor, a casing having a work chamber, a hollow shaft journaled in said casing and extending through said chamber, a piston carried by said shaft within said chamber and having radial guideways, blades mounted in said guideways for radial movement, said shaft having ports connecting said guideways with the interior thereof, a normally stationary member mounted in said hollow shaft and having a longitudinal bore and also having a circumferential groove connected with said bore and communicating with said ports to deliver air to said guideways at the inner edges of said blades, means for connecting said bore with a source of supply for air under pressure, and means for admitting air under pressure to and exhausting the same from said work chamber.

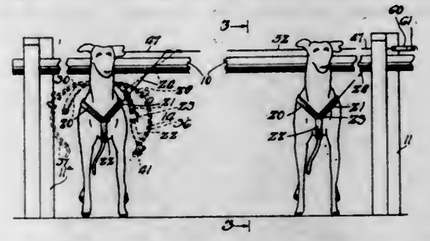
1,810,177. INTERIOR TELESCOPING RIM HEAD LAMP. SAMUEL W. HYATT, Connersville, Ind., assignor to Indiana Lamp Corporation, Connersville, Ind. Filed Jan. 24, 1930. Serial No. 422,983. 1 Claim. (Cl. 240—41.5.)



In a head lamp construction, the combination of a casing having an apertured rear end, a reflector nested therein, a lens closure for closing the reflector, a rim engaging the closure and including a casing receivable portion, co-operating wedge portions upon the adjacent ends

of the reflector and rim, a threaded sleeve slidable longitudinally in the casing aperture and having a registering aperture, a threaded member carried by the reflector and having threaded engagement with the sleeve for reciprocating the reflector relative to the casing for locking the casing, rim and reflector together and for unlocking the

same, said threaded member including an internally threaded portion, a bulb socket slidably supported by said reflector, and a focusing member rotatably supported at one end by said socket and having its other end exposed through the sleeve aperture, said focusing member including an intermediate threaded portion having threaded engagement with said reflector carried threaded member.

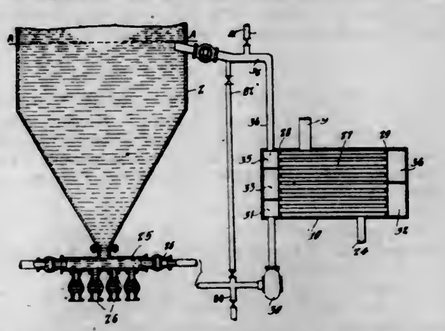


1,810,178. HEAT TRANSFER DEVICE. DAVID S. JACOBUS, Montclair, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Sept. 4, 1918, Serial No. 252,550. Divided and this application filed June 22, 1929. Serial No. 372,940. 10 Claims. (Cl. 257—251.)

1. In a heat transfer device, a plurality of sections arranged side by side, each section having a pair of headers with longitudinally extending flat wall portions provided with sets of holes, each arranged in a transversely extending band, tubes secured in said holes and connecting the two headers of each pair, at least some of said tubes being bent at their ends to enter said holes, the headers of adjacent sections being spaced apart and the tubes of the sections forming a bank, the tubes of the bank being spaced substantially uniformly across the bank in a direction transverse to the length of said headers, a compartment common to a group of headers at each end of the sections, and pipes connecting the end portions of said headers to said compartment.

1,810,179. STARTING APPARATUS. THOMAS A KEEN, St. Louis, Mo., assignor to Hannah M. Smith, Chicago, Ill. Filed Nov. 14, 1928. Serial No. 319,335. 12 Claims. (Cl. 119—15.5.)

1. In a device for use in maintaining a dog at the starting line of a race course, a member surrounding the dog's body and comprising a separable split ring member having strap members engaging the dog's shoulders, a

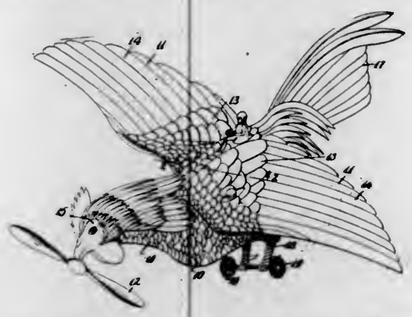


latch for said ring member, and a pin for securing said straps one to another, said latch and pin being releasable to free the dog from said device.

1,810,180. COLOR PHOTOGRAPHY. WILLIAM V. D. KELLEY, Jersey City, N. J., assignor, by mesne assignments, to Max B. Du Pont Vitacolor Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed Dec. 12, 1922, Serial No. 606,369, and in Great Britain Aug. 13, 1921. 19 Claims. (Cl. 95—2.)

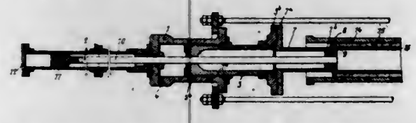
1. Process of producing two differently colored prints in a single silver halid emulsion consisting in printing a diapositive and a dianegative image of the same subject in registration in different strata of the emulsion, developing the respective prints, rendering the dianegative print invisible, and differently coloring the respective prints.

1,810,181. PROCESS AND APPARATUS FOR RECOVERING VALUES FROM BRINE. FRANCIS MACDONALD, WILLIAM H. ALLEN, CHARLES F. RITCHIE, and VINCENT T. MANCHEE, Trona, Calif., assignors to American Potash & Chemical Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept 29, 1928. Serial No. 309,279. 23 Claims. (Cl. 23—41.)



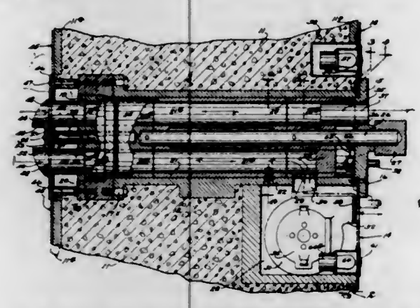
1. A process of evaporating brine while precipitating salt therefrom which comprises, circulating the brine from an evaporator to an external heater, back into the evaporator, and super-heating the brine in the heater to a high degree of super-heat.

1,810,182. AEROPLANE. ANGEL MATEO, Santiago, Dominican Republic. Filed June 28, 1930. Serial No. 464,532. 8 Claims. (Cl. 244—20.)



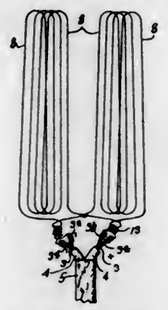
1. An aeroplane of rooster shape, comprising an aeroplane body simulating a rooster and having a pair of

pivotal wings, a motor-driven traction propeller mounted on the front of said body, each of said wings being composed of inner and outer sections telescopically and slidably arranged in edge contacting relation, means for re-



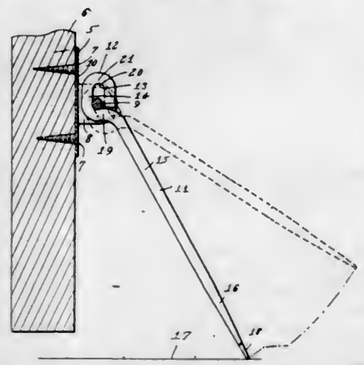
tracting the outer wing sections in lowered positions of the wings, means for projecting the outer wing sections in raised positions of the wings, and means for raising and lowering said wings so as to constitute flapping.

1,810,183. APPARATUS FOR EJECTING PIPES CAST IN FLASKS IN ONE PIECE. LÉON LOUIS MATHIEU, Rouen, France, assignor to Societe Anonyme des Hauts-Fourneaux et Fonderies de Pont-A-Mousson, Pont-A-Mousson, Meurthe-et Moselle, France. Filed Dec. 29, 1928, Serial No. 329,207, and in France Apr. 4, 1928. 15 Claims. (Cl. 22—94.)



1. An ejector device for pipe casting machines, comprising an ejecting head, a fluid pressure cylinder, a piston in said cylinder adapted to cooperate with the ejecting head, a second fluid pressure cylinder of smaller cross-section than the first cylinder and having a length which substantially corresponds to that of the pipe to be ejected from the mold, and a piston in said second cylinder, adapted to cooperate with the said ejecting head.

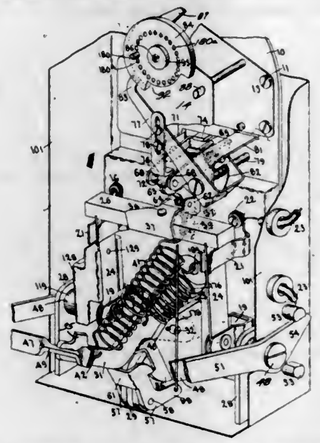
1,810,184. VAULT VENTILATOR. OLIVER B. MCCLINTOCK, SILVAN R. POPP, and EDWARD C. HANSON, Minneapolis, Minn., assignors to O. B. McClintock Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 13, 1929. Serial No. 413,824. 9 Claims. (Cl. 109—1.)



1. In a vault ventilator, an encasing cylinder and within said cylinder two sets of core sections provided with air conduits adapted to be moved into and out of registration by rotation of one set of said core sections in respect to the other, one set of core sections comprising inner, outer and intermediate members, the other set of core sections being positioned between the end and intermediate members of the first noted set of core sections, and means for rotating one set of core sections in respect to the other.

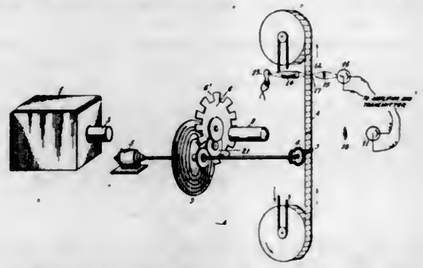
1,810,185. HEATING APPARATUS FOR LIQUIDS. DALTON U. POWELL, Woodsfield, Ohio, assignor of one-half to Orton C. Dunn, Marietta, Ohio. Filed May 1, 1929. Serial No. 359,435. 11 Claims. (Cl. 219—41.)

1. In an electrical resistance unit, positive and negative electrical supply cables having their ends divided in two spaced parts, a resistance ribbon connected to one of said parts on the positive side to a corresponding part on the negative side, a second resistance ribbon so connected, said respective ribbons being twisted together adjacent their points of connection to the supply cables.



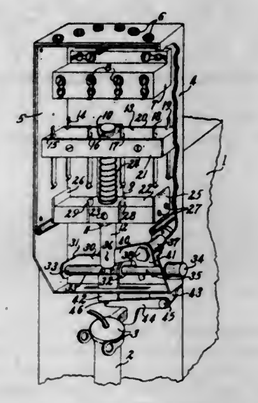
1,810,186. DOORSTOP. FREDERICK T. RICHARDS, Peoria, Ill., assignor to Stover Manufacturing & Engine Co., Freeport, Ill., a Corporation of Illinois. Filed Sept. 26, 1929. Serial No. 395,413. 1 Claim. (Cl. 292—338.)

A door prop of the character described comprising a prop arm arranged to move between an operative and an inoperative position including a lower end adapted to engage the floor at one side of the door when in the operative position and a bearing loop having substantially parallel sides positioned at an angle with respect to the remainder of said arm and defining an elongated opening having the same angular relation as said sides with respect to said arm, and a bracket adapted to be positioned upon a door, said bracket having a vertical wall at the face of the door and a bearing pin spaced therefrom to engage the elongated opening formed by said loop, whereby said prop arm may be turned thereon from said operative position to said inoperative position with said arm extending upward against the door, the parallel



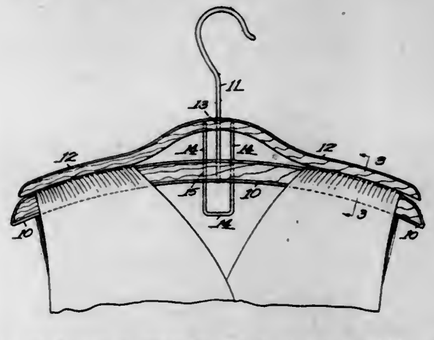
sides of said loop sliding over said pin to bring said prop arm inward against the door, and said prop arm in the operative position having thrust engagement at the lower end of its elongated opening upwardly against the bearing pin.

1,810,187. DOUBLE ACTING SWITCH TIMER. RAYMOND D. SMITH, Pleasantville, N. Y., assignor to Tremont Products Corporation, Boston, Mass., a Corporation of Massachusetts. Original application filed May 8, 1918, Serial No. 233,350, renewed Mar. 22, 1923, now Patent No. 1,521,841, issued Jan. 6, 1925. Divided and this application filed Nov. 12, 1924. Serial No. 749,479. 31 Claims. (Cl. 200—39.)



1. In combination, a time motor, a manually operable timer returnable to its starting position by said motor when manually displaced from said position, electric circuit control means operable by said timer to effect a circuit change when said timer is returning toward its starting position, and a second timer operatively adjustable relative to said first timer and likewise returnable to its starting position by said motor and when so returning operative upon said means to effect a different circuit to predeterminable time relation to the first said circuit change, one of said timers being so connected that the act of displacing same from its starting position winds the driving spring of said motor.

1,810,188. TELEVISION SYSTEM. THEODORE A. SMITH, Ridgewood, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed July 19, 1929. Serial No. 379,384. 21 Claims. (Cl. 178—6.)

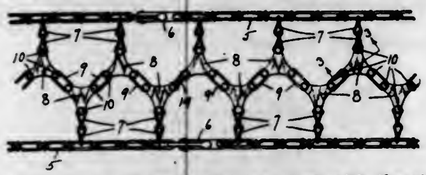


1. A system for the electrical transmission of motion picture film which includes in combination means for moving a motion picture film at a predetermined constant speed relative to a predetermined point, and means for scanning a lesser number of picture frames of the motion picture film than pass before said predetermined point during a unit time period.

1,810,189. PROTECTIVE DEVICE. WILLARD J. STANTON, Chicago, Ill., assignor, by mesne assignments, to American Electric Company, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 27, 1929. Serial No. 350,245. 9 Claims. (Cl. 179—78.)

1. In a telephone system having a line and arresters, the combination of a telephone, and means for preventing the mechanical operation of said telephone until after said line has been connected to said arresters.

1,810,190. GARMENT HANGER. CAROL L. STRAUSS, Bangor, Me. Filed Dec. 23, 1929. Serial No. 416,060. 2 Claims. (Cl. 223—64.)

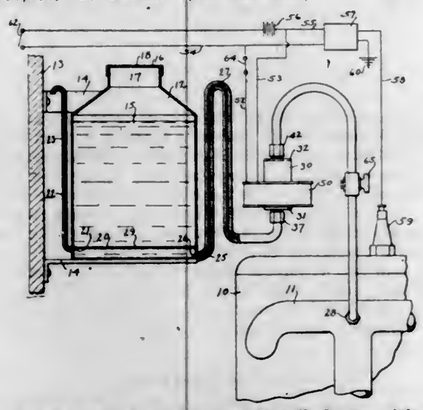


1. An article of manufacture, a garment hanger comprising a lower bar to receive a garment and an upper bar adapted to rest on the lower bar and retain the garment therebetween, a supporting hook having a straight vertical shank fixed to the lower bar, a plurality of guides fixed to the upper bar and effective to prevent twisting of one bar with respect to the other, said upper bar being vertically perforated at its center to slidably receive said hook, and said lower bar being perforated to slidably receive said guides, said guides being connected together below the lower bar, the connection of the bars together constituting a stop to limit the upward motion of the upper bar.

1,810,191. NONSKID TIRE CHAIN. JOHN A. STUECKLE, Spokane, Wash. Filed Mar. 28, 1930. Serial No. 439,639. 2 Claims. (Cl. 152—14.)

2. A non-skid tire chain having in combination a plurality of triangular plates, said plates disposed in zigzag arrangement with a side of each plate parallel with a side of the other plates, a traction calk on each corner of the plates, links connecting the plates disposed through

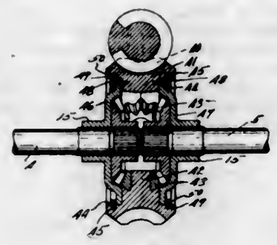
the calks of adjacent plates at points offset from the plates, side chains for the plates, and links connecting



the third corners of each adjoining plate with the side chains normal thereto and disposed in alternate counter directions from the plates.

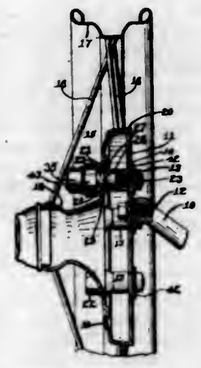
1,810,192. PROCESS OF PREPARING ALKYL SULPHATES. RENÉ DE M. TAVEAU, Elizabeth, N. J., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed June 11, 1921. Serial No. 476,699. 18 Claims. (Cl. 260—98.)

1. The process of making acid alkyl sulphates from gases containing butylenes, propylene and ethylene which comprises treating the gases in three successive stages or steps with sulphuric acid of progressively increasing concentrations, the first two stages being conducted at cool temperatures and the last stage at a hot temperature to separately absorb the several olefins substantially in the order of chemical affinity, whereby acid alkyl sulphates corresponding to the several olefins are separately produced.



18. In the process of treating gases derived from the pyrogenic decomposition of hydrocarbon oils and containing substantial amounts of olefines, the steps comprising absorbing the butylenes and the more easily polymerized products by treating the gases with a relatively weak acid maintained at a temperature not exceeding 30° C., and thereafter treating the gases with stronger acid under a temperature suitable for the absorption of propylene, whereby the corresponding acid alkyl sulphates are separately produced.

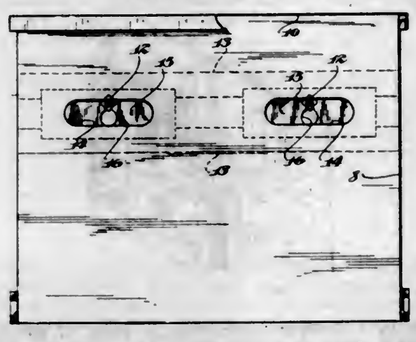
1,810,193. INTERNAL COMBUSTION ENGINE. CHARLES A. THOMAS, Dayton, Ohio, assignor to Thomas and Hochwalt Laboratories, Inc., Dayton, Ohio, a Corporation of Ohio. Filed Apr. 22, 1929. Serial No. 357,087. 16 Claims. (Cl. 123—198.)



1. Apparatus of the character described, comprising in combination, an internal combustion engine having a cylinder, an electrical circuit for said engine, a switch within said electrical circuit, and means operatively associated with said electrical circuit and switch for automatically introducing chemical into the cylinder of said engine upon the opening of said switch to break the electrical circuit.

1,810,194. DIFFERENTIAL MECHANISM. ELVERTON W. WEAVER, Cleveland Heights, Ohio, assignor to The Columbia Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 27, 1928. Serial No. 308,749. 5 Claims. (Cl. 74—99.)

1. In differential mechanism, the combination of a gear element having a hollow body portion provided with recesses on its opposed lateral faces and circumferential slots in the outer walls of said recesses, casings disposed in said recesses and resilient rings engaged in said slots and against said casings, whereby said casings are removably locked in engagement with said gear element.

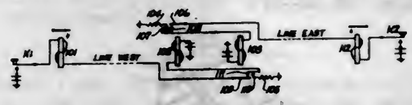


1,810,195. SPARE WHEEL LOCK. JOHN J. WHARAM, Detroit, Mich., assignor to Ford Motor Company, Fordson, Mich., a Corporation of Delaware. Filed Oct. 19, 1928. Serial No. 313,404. 7 Claim. (Cl. 70—122.)

1. In a device of the character described, a bolt having a recessed head, a sleeve rotatably and non-slidably mounted on said bolt adjacent to the head, a protective casing adapted to be rotatably mounted in said sleeve and to enclose the bolt head, and means for locking the protective casing into said recess to permit rotary movement of the casing relative to the bolt and to prevent axial movement of the casing relative to the bolt.

1,810,196. ADJUSTABLE HANGER FOR CABINET RADIATORS. JAY C. WILLCOX, Minneapolis, Minn., assignor to McQuay Radiator Corporation, Minneapolis, Minn., a Corporation of Delaware. Filed Aug. 7, 1929. Serial No. 384,192. 2 Claims. (Cl. 248—17.)

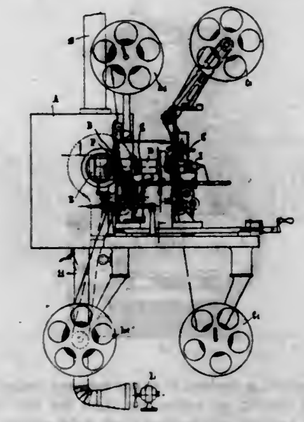
1. The combination with an upright support and an object to be mounted thereon, of a fixed anchor on the support, said object having an aperture through which the anchor projects with clearance to permit a limited horizontal adjustment of the object on the support, a slide mounted in a way on the object for horizontal sliding movement, covering the aperture and having a coincident keyhole slot through which the anchor projects and has interlocking engagement with the slide.



1,810,197. STOCKING. ARMIN H. WITTENBERG, Los Angeles, Calif. Filed Apr. 14, 1928. Serial No. 269,892. 2 Claims. (Cl. 66—182.)

2. A full fashioned stocking, comprising reinforced sole and heel portions integrally formed with the foot portion of said stocking, the threads forming said foot portion being knitted with the threads forming the instep portion of the stocking along a tortuous line, said tortuous line running in zig-zag fashion along the side of the sole and instep portion of the stocking at the sides of the foot portion thereof whereby pulling strains in said stocking are distributed over wide areas at the sides of the foot portion of the stocking.

1,810,198. TELEGRAPH SYSTEM. JOHN I. BELLAMY, Brookfield, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Nov. 30, 1928. Serial No. 322,631. 10 Claims. (Cl. 178—71.)

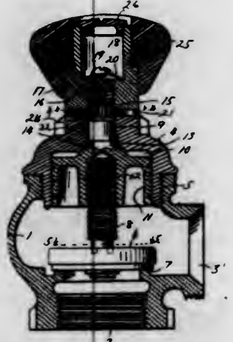


1. In a telegraph system, two lines, a repeating device having two coils connected in series with said lines, respectively, and arranged to be energized thereover, means responsive to a deenergization of either coil when the associated line is broken for breaking the other line, and additional means for energizing the coil of the other line in a local circuit while the other line is thus broken.

1,810,199. DISH HOLDING BASKET. GEORGE S. BLAKESLEE, deceased, Oak Park, Ill., by George R. Blakeslee, executor, Oak Park, Ill., and George P. Anstiss, Oak Park, Ill., assignors to G. S. Blakeslee & Co., Cicero, Ill., a Corporation of Illinois. Original application filed Aug. 2, 1928, Serial No. 655,241. Divided and this application filed Mar. 28, 1925. Serial No. 19,019. 5 Claims. (Cl. 141—9.)

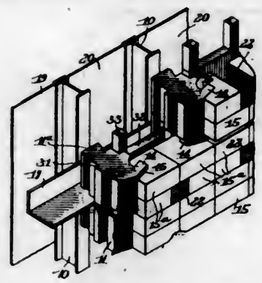
1. A dish holding rack for dish washing machines comprising parallel horizontal wooden bars provided with round holes therein at intervals and inclined to the vertical, the upper surfaces of said bars around said holes being at right angle to the axis of said holes, a series of fingers carried by said bars, said fingers having square tenons at their lower ends inserted in said holes, and having shoulders perpendicular to the bases of said tenons abutting against said inclined surfaces, and means for spacing said bars apart.

1,810,200. PRINTING MACHINE FOR COLORED FILMS. PAUL BROSSE, Neuilly, France, assignor, by mesne assignments, to Kislyn Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 28, 1928, Serial No. 322,504, and in France Dec. 3, 1927. 4 Claims. (Cl. 88—24.)



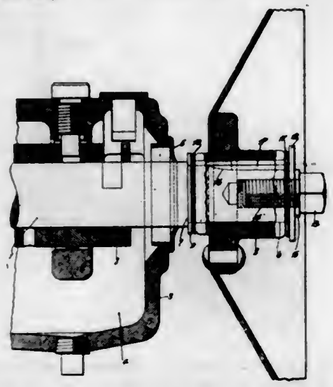
1. A projection printing machine for reproducing colour prints on goffered film, comprising a source of light; an oscillating mirror to intercept the light beam before it reaches the original film; an optical system between which and the mirror the original film passes, and through which the beam is projected by said mirror upon the copying film after having first passed through the original film; an oscillating diaphragm; a lens for regulating the angle of incidence of the projecting beam upon the copying film; a shutter and shutter shaft between the regulating lens and the optical system; and means for synchronising the movements of the shutter, diaphragm and mirror.

1,810,201. RENEWABLE REAMER. STEWART L. CAMPBELL, Berkeley, Calif., assignor to John Grant, Los Angeles, Calif. Filed Dec. 5, 1928. Serial No. 324,007. 18 Claims. (Cl. 255—76.)



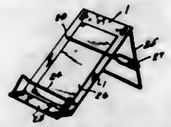
1. An expanding changeable cutter reamer, comprising a body, a cutter-carrier mounted on the body and adapted to be moved in a plane transverse of the body, a plurality of cutters mounted on the cutter-carrier and adapted to be selectively moved to expanding position by virtue of such movement of the cutter carrier, and means mounted on the body and movable longitudinally relative thereto and adapted to move the cutter-carrier step by step.

1,810,202. PACKLESS VALVE. JOSEPH H. CHEETHAM, Detroit, Mich. Filed Sept. 21, 1925, Serial No. 57,584. Renewed Nov. 19, 1930. 2 Claims. (Cl. 251—47.)



1. In a valve, a casing, a valve member adapted to seat within said casing, an actuating stem for said valve having an end portion projecting from said casing, a handle for actuating said stem, having a central opening between its top and bottom faces, a member carrying the handle entering said opening, and rigidly connected to the handle, said member having a driving engagement with said projecting portion of the stem and being slidable upon said portion, and said member being formed with a chamber opening in its outer end, means within said chamber securing said member upon the stem, and a closure for the chamber of said member carried by said member within said central opening of the handle and removable independently of any loosening of said handle on said member and removable independently of the handle securing means.

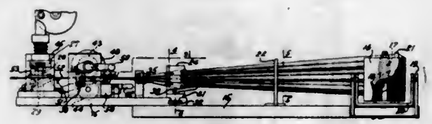
1,810,203. FURNACE AND THE LIKE. ROGER D. DE WOLF, Rochester, N. Y. Filed May 1, 1926. Serial No. 106,123. 24 Claims. (Cl. 72—102.)



23. In a furnace construction, a series of upwardly extending beams provided with abutments, hanger bricks supported by said abutments, and facing bricks having detachable interlocking engagement with said hanger bricks.

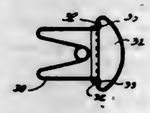
1,810,204. RESILIENT MOUNTING FOR DRIVEN ELEMENTS ON MOTOR SHAFTS. ALBERT C. DICKSON, St. Louis County, Mo., assignor to The Emerson Electric Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed May 31, 1927. Serial No. 195,263. 4 Claims. (Cl. 64—89.)

3. A device of the class described comprising, in combination, a motor shaft having a reduced portion; a driven element having a hub fitting over said reduced portion; resilient coupling means between said hub and the motor shaft, including a washer loose on the shaft and a spring disc washer between the loose washer and the face of the hub; a key of compressible material loosely fitted between the hub and the shaft; and locking means for locking the mounting including a bolt threaded into the end of the shaft and a lock washer beneath the head of said bolt.



1,810,205. BOOKREST. THEODORE GENSMER, Portland, Oreg. Filed Feb. 28, 1928. Serial No. 257,600. 1 Claim. (Cl. 45—57.)

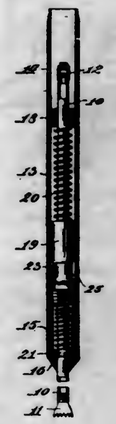
A book rest comprising a one-piece body element having one of its ends turned inwardly to form a ledge, openings



disposed on the oppositely disposed edges of the body element in spaced relation, a clamping element movably associated with the ledge comprising a resilient member having an inwardly turned back, and downwardly turned arms having inwardly turned terminals adapted to fit the openings disposed within the ledge, said terminals being so shaped as to create a tension between the back of the resilient member and the body element, and a U-shaped resilient member having upturned arms and inwardly turned terminals, said terminals being disposed within the openings disposed within the body member and being so constructed as to create a tension between the resilient member and the body member, substantially as shown and described.

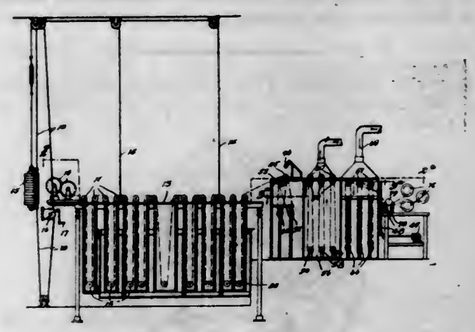
1,810,206. APPARATUS FOR PRODUCING ARTICLES FROM SHEET MATERIAL. AUGUSTUS WILKES GUDGE, Newark, N. J., and EARL WENSLEY, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed June 9, 1928, Serial No. 284,208. Divided and this application filed Mar. 6, 1929. Serial No. 344,854. 8 Claims. (Cl. 270—40.)

1. In an article forming apparatus, means for supporting a ribbon of paper, a plurality of blades positioned to alternately engage opposite sides of the paper to produce folds, a guide roller for engaging the paper as it leaves the blades, a second set of blades for resiliently pressing the folded paper, and a pair of rolls for creasing the paper.



1,810,207. CURTAIN ROD PILOT. EARL H. HART, Berkley, Mich. Filed Mar. 13, 1929. Serial No. 346,561. 3 Claims. (Cl. 223—38.)

3. A curtain rod pilot comprising a piece of wire bent to form a spring coil and having the extending ends thereof extending at an angle one to the other, each extending end being return bent and provided with an outwardly extending hook portion and a sheet metal head having an inturned flange behind which the hook portions are adapted to be engaged.

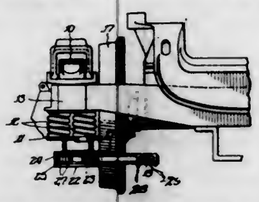


1,810,208. CORE DRILL. EARL S. HARTSON, Los Angeles, Calif. Filed May 25, 1928. Serial No. 280,515. 9 Claims. (Cl. 255—27.)

1. In a core drill, a tubular body adapted to be connected to a drill pipe, a core barrel axially arranged in said tubular body, a drill carried by the lower end of said core barrel, a spring pressed hammer arranged for sliding movement on said core barrel within said tubular body, an anvil block arranged in the lower portion of the

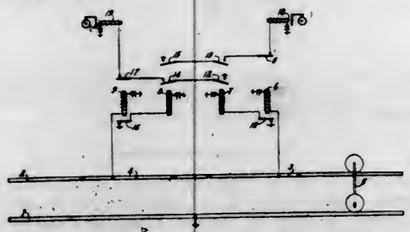
tubular body, a shoulder on the core barrel which is adapted to engage against the said anvil block, and means for latching the hammer to said core barrel.

1,810,209. FILM TREATING MACHINE. GEORGE HAYNES, Jersey City, N. J., assignor, by mesne assignments, to Max B. Dupont Vitacolor Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed Jan. 4, 1926. Serial No. 79,144. 9 Claims. (Cl. 95—94.)



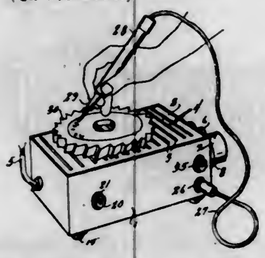
4. A machine for treating long films, comprising a series of tanks, a plurality of idler pulleys therein for guiding the film in its passage successively through said tanks, driving pulleys beyond the tanks engaging the film to pull the film through the tanks, a second set of driving pulleys beyond the first set frictionally engaging the film to pull it onward, and adjustable compensating pulleys engaging the film between the first and second sets of driving pulleys to maintain an even tension in the film and to allow for change in film length.

1,810,210. SUPPORTING MEANS FOR BRAKES. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 15, 1928. Serial No. 326,243. 3 Claims. (Cl. 188—210.)



1. In a railway car truck, the combination of a side frame having on its outer under side a depending L-shaped

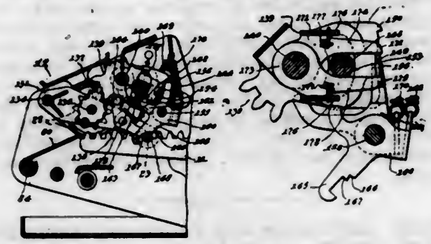
projection, an arm extending laterally from said side frame for carrying a brake beam engaging element and



having a portion seated in said L-shaped projection, and means extending through said projection and arm for securing together said parts.

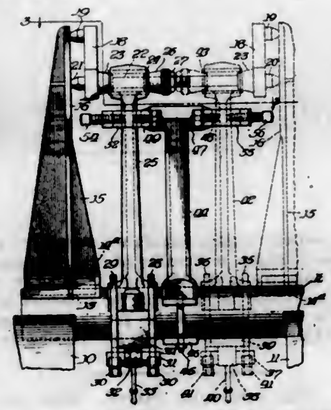
1,810,211. REGISTERING SYSTEM. HARRY E. HERSHEY, Oak Park, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Nov. 12, 1928. Serial No. 318,715. 7 Claims. (Cl. 235—92.)

1. In a metering system, a plurality of meters, a plurality of relays associated therewith, and means for operating said relays in a predetermined order to operate a certain one of said meters and to operate said relays in the reverse order to operate another one of said meters.



1,810,212. ELECTRIC TOOL. ROBERT L. HINDS, Toledo, Ohio. Filed Dec. 21, 1928. Serial No. 327,631. 4 Claims. (Cl. 175—356.)

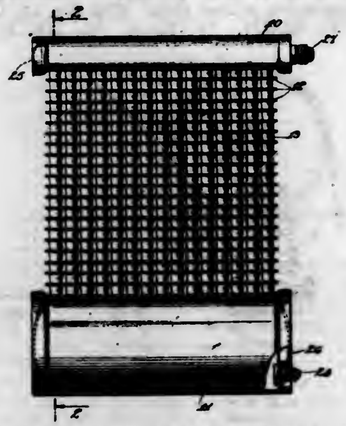
1. A transformer housing having a conductor face, a transformer therein having primary and secondary windings, electric current supply connections to the transformer, a branched connection at one side of the transformer from the secondary winding extending as to one branch thereof to the housing conductor face, and a flexible extension from the other branch thereof having a terminal for connection away from the housing.



1,810,213. CALCULATING MACHINE. OLIVER D. JOHANTGEN, Winnetka, Ill., assignor to Victor Adding Machine Co., Chicago, Ill., a Corporation of Illinois. Filed July 5, 1927. Serial No. 203,464. 18 Claims. (Cl. 235—137.)

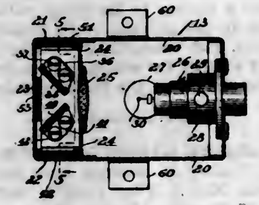
2. In an adding and subtracting mechanism, the combination with accumulator wheels, of a reciprocatory carrier adapted to move forward and backward to effect carrying from a wheel of lower order to a wheel of higher order either for addition or for subtraction according to the direction of movement of said carrier, spring con

trolled detents acting against said carrier to move it forward or backward, and means for setting said detents to determine the direction in which said carrier may move.



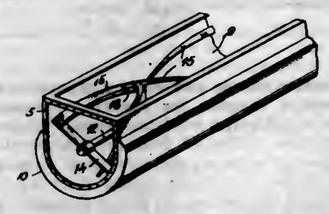
1,810,214. ALIGNING FIXTURE. LEONARD W. JOHNSON, Batavia, Ill. Filed Feb. 11, 1927. Serial No. 167,574. 1 Claim. (Cl. 77—62.)

A fixture for aligning a pair of engine-connecting-rods preparatory to reaming the wrist pin openings thereof, comprising in combination a base member having an intermediate portion shaped to be received in the terminal crank shaft bearings of the engine-connecting-rods to be reamed, means adjustably mounted upon the intermediate portion of said base member and provided at opposite sides with means for engagement with respective connecting-rods for adjustably clamping said rods on the base member at right angles thereto, a gauge member provided at one end with a clamping seat to selectively receive either end portion of the base member and provided at its other end with a gauge face disposed at right angles to the base member, and a second gauge member for interposition between the said gauge face and the adjacent connecting-rod, said second gauge member being provided upon one side with a set of gauge projections for engagement with said gauge face and on its opposite side with a gauge projection to enter the wrist pin opening of the adjacent connecting-rod and locate said wrist pin opening vertical to said gauge face portion.



1,810,215. HEADER CONSTRUCTION. JOHN KARMAZIN, Detroit, Mich. Filed Mar. 31, 1927. Serial No. 179,786. 12 Claims. (Cl. 257—154.)

2. A high pressure radiator comprising headers having arcuate walls, a cooling section comprising a plurality of conduits extending between the headers, the headers having flattened wall sections which are perforated in alignment with said conduits, a reinforcing plate within each header extending over the flattened wall and adjacent parts of the arcuate wall, said reinforcing plates having perforations registering with the perforations in

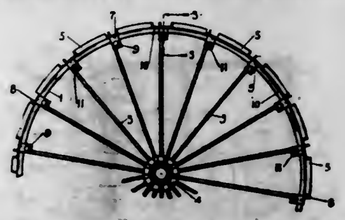


the header walls, and members having tube sections, adapted to engage and hold the water tubes of the cooling section, superposed on the reinforcing plates.

1,810,216. VEHICLE LIGHT. HENRY F. KURTZ, Rochester, N. Y., assignor to Benneville Lloyd Singley, Meadville, Pa. Filed Feb. 15, 1929. Serial No. 340,193. 10 Claims. (Cl. 240—8.2.)

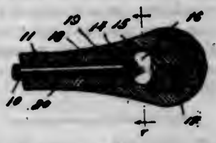
10. The combination with an automobile including front and rear fenders and a running board between said fenders, of a light source mounted on the top of said running board, and means including a lens and a reflecting element for projecting a relatively narrow beam of optically directed and controlled light from said source past the outer edge of one of said fenders substantially parallel to the center line of said automobile and at a slightly upward inclination.

1,810,217. CONTINUOUS CRYSTALLIZER. WILLIAM H. LOHMANN, Wilmington, Del., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Feb. 5, 1927. Serial No. 166,035. 10 Claims. (Cl. 23—273.)



1. A continuous crystallizer comprising a crystallizing chamber, inlet and discharge ports for said chamber, a helical conveyor rotatable in said chamber, and means cooperating with said helical conveyor for scooping up the crystals formed in said chamber and for conveying the crystals to the discharge port.

1,810,218. CHECKING RING. SETH R. MILBURY, Irvington, N. J. Filed Mar. 20, 1928. Serial No. 263,152. 1 Claim. (Cl. 40—21.)



A checking device adapted to be used for identifying a person with his effects deposited in a particular receptacle, consisting of a ring member adapted to be worn upon a limb of the person and having upon its surface characters identifying the receptacle in which the effects are deposited, said ring member having at its side an integrally joined lug extension adapted to retain an effect identifying check.

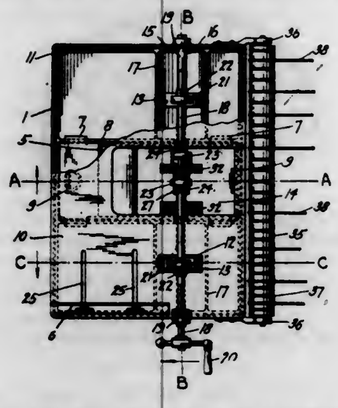
1,810,219. LUG FOR WHEELS. LEONARD B. NEIGHBOUR, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Jan. 21, 1929. Serial No. 334,079. 1 Claim. (Cl. 301—44.)

The combination with a wheel including a hub, spokes, and a tire having a plurality of lugs mounted permanently thereon and arranged alternately diagonally relatively to each other, of a supplemental lug mounted on the tire and in contact with one of the permanent lugs, and means operative to secure the supplemental lug to the tire, said means contacting with the adjacent spoke of the wheel.

1,810,220. SPECTACLE TEMPLE. JOHN N. NELSON, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 20, 1928. Serial No. 263,047. 2 Claims. (Cl. 88—52.)

1. A spectacle temple formed of a wire core covered with a non-metallic tube, means at the end of the tube for locking the tube to the wire, and an enlarged non-metallic cap having a bore to receive the end of the tube and the locking means to cover the same, the contacting surfaces of said end piece and tube being of non-metallic material and cemented together.

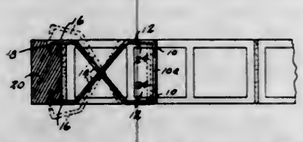
1,810,221. STRIPING TOOL. HERBERT O'CONNELL, Syracuse, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 14, 1926. Serial No. 154,752. Renewed Nov. 7, 1930. 6 Claims. (Cl. 101—127.)



1. A stenciling tool comprising a plate having a slot therein through which paint is projected to form a stripe,

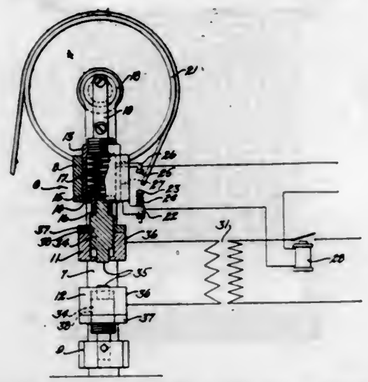
the plate being formed with depressions providing openings in the face of the plate, suction cups mounted in the depressions and having stems extending therefrom to the rear of the plate, the stems having shoulders at their outer ends and springs interposed between the shoulders and the tops of the depressions.

1,810,222. PROCESS OF PURIFYING AND DECOLORIZING ROSIN. ROBERT C. PALMER, Pensacola, Fla., assignor to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed Sept. 19, 1927. Serial No. 220,646. 6 Claims. (Cl. 87—2.)



1. The process of improving the quality of rosin, which comprises partially purifying the rosin with resorcinol and subsequently treating the partially purified rosin with an adsorptive material to remove remaining impurities.

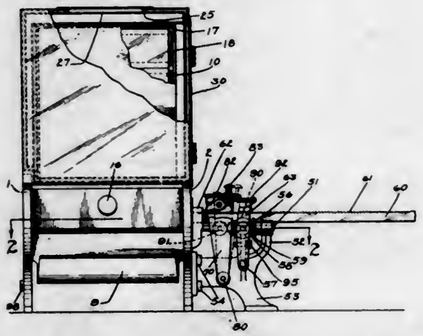
1,810,223. APPARATUS FOR GLUING BACKS ON TO BOOKS. ALFRED PETERSON, Denver, Colo. Filed Jan. 27, 1928. Serial No. 249,897. 1 Claim. (Cl. 91—51.)



In a machine for applying adhesive material to sheets, a shaft, a hub carried by and of greater diameter than the shaft and a gluing wheel, comprising sections adapted to be correlatively attached to form a wheel on said hub, of different widths predetermined according to the number of sections thus attached, said sections being relatively detachable and adapted to be removed from said hub and to hang upon said shaft and out of operative position when detached.

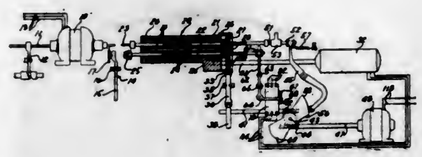
1,810,224. BUCK ANCHOR. CLYDE W. PRICKETT, Santa Monica, Calif. Filed Mar. 22, 1929. Serial No. 349,099. 3 Claims. (Cl. 72—101.)

1. A buck anchor, comprising an inner cross member, first portions inclined away from the ends thereof and away from each other, second portions inclined away from the ends of said first portions and toward each other, third portions inclined away from the ends of said second portions and from each other, and pointed members turned back from the ends of said third portions whereby said second portions may be sprung across each other and said pointed members may be caused to engage between them a buck, said anchor being or resilient material and constraining said pointed members to enter the buck.



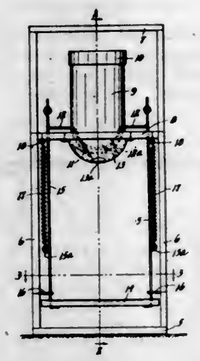
1,810,225. METHOD OF AND APPARATUS FOR WELDING. EMERSON PUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1927. Serial No. 225,591. 13 Claims. (Cl. 219—10.)

1. In a welding apparatus, a pair of electrodes, means for engaging the electrodes with the work, means for exerting a pressure on the electrodes, means for applying a current to the electrodes, means insulated from the work for decreasing the unit area pressure on the conducting surfaces of the electrodes, and independent means for controlling the application of the welding current.



7. A method of welding, which consists of applying and confining a current to an initial contacting area of constant size to the material to be welded to produce a welding action, and subsequently distributing a pressure over a larger area as the welding action progresses while confining the current to the initial contact area.

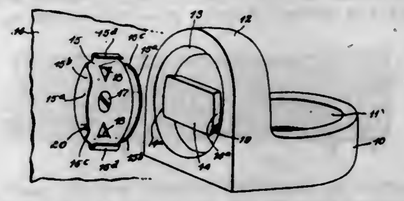
1,810,226. BUTTER HANDLING DEVICE. WILLIAM E. V. SHAW, DALLAS B. BENHAM, and ROY H. BENHAM, Minneapolis, Minn. Filed June 9, 1927. Serial No. 197,649. 15 Claims. (Cl. 31—20.)



15. A butter storing and cutting apparatus including a refrigeration chamber for receiving open-end butter containing cartridges, a receiving chamber adapted to receive cartridges discharged from the refrigeration chamber, and having walls adapted to prevent warming of the contents of the cartridges; means including a hollow walled plunger for feeding the butter through a cartridge when in the receiving chamber, said plunger having substantially a piston fit with the cartridge walls, and means for cutting the butter as it issues from said receiving chamber, said cutting means being adapted when inoperative to prevent warming of the receiving chamber, by substantial closure of one end of said chamber.

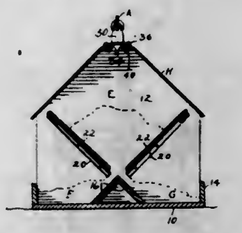
1,810,227. DRIVE FOR SCREW MACHINES AND THE LIKE. JOHN RICHARD SHEA, River Forest, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1928. Serial No. 329,032. 7 Claims. (Cl. 29—41.)

1. A drive mechanism for screw machines and the like, comprising means for rotating the work at a constant speed, means for advancing the tool relative to the work, a threading tool adapted to operate on the work, an electric motor adapted to rotate the tool, means supplying current to the motor to cause it to rotate the tool at a higher speed than the work, means supplying current to the motor to cause it to rotate the tool at a lower speed than the work, and a switch mechanism controlled by the operation of the advancing means rendering said two last mentioned means alternately inoperative.



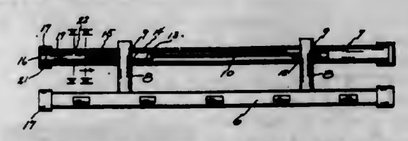
1,810,228. CHICKEN TREATER. JOE SNYDER, Iroquois, S. Dak. Filed Mar. 8, 1928. Serial No. 259,990. 3 Claims. (Cl. 119—157.)

1. A device for treating fowls with insecticide having in combination, a frame having spaced side members, a member extending between said side members some distance from the top thereof, a container for insecticide mounted on said last mentioned member, said container having a substantially semi-spherical screen bottom, a substantially semi-circular oscillating agitator movable over said bottom, a bar extending between said side members adjacent their lower ends and vertically movable therebetween, members connected to said bar and to said agitator, and springs connected to said last mentioned members and to said frame for raising said bar after the same has been depressed by a fowl.



1,810,229. COUPLING AND MOUNTING MEMBER FOR FIXTURES AND THE LIKE. FRANK A. STIRRUP, Westfield, N. J. Filed Apr. 7, 1928. Serial No. 268,317. 9 Claims. (Cl. 248—20.)

8. In a fixture of the class described, the back wall of which is provided with a comparatively large recess, the boundary wall of which is circular in form, a bar-like coupling member arranged centrally of and within the recessed portion of the fixture, the end walls of said coupling member being comparatively wide and terminating short of the boundary wall of said recess, and said end walls

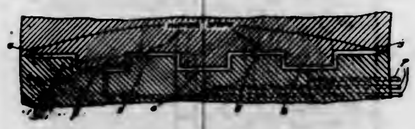


being eccentric with respect to the wall of said recess to form cam surfaces facilitating the coupling of the fixture with a suitable support.

1,810,230. POULTRY FEEDER. HENRY F. THUMANN, Redfield, Ark. Filed Jan. 21, 1929. Serial No. 333,920. 2 Claims. (Cl. 119—52.)

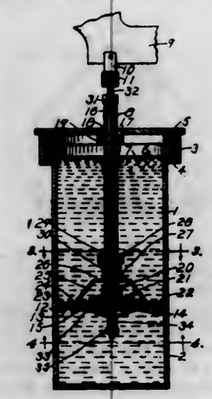
1. In a feeder of the class described, a bottom member having a longitudinal divider ridge, relatively shallow side walls for forming the outer portions of troughs, end members projecting upwardly from the bottom member and above the side members, inclined supports mounted on the inner surfaces of the end members for supporting hopper walls so as to form a hopper tapered toward said divider ridge, removable hopper walls detachably resting on said supports having shoulders at their upper edges for engaging the supports for limiting the downward movement of the hopper walls, and a cover member for the feeder.

1,810,231. LOOSE LEAF BINDER. RICHARD M. VAN VALKENBURGH and CLARENCE A. CEDERLEAF, Kansas City, Mo., assignors, by mesne assignments, to Wilson-Jones Company, Chicago, Ill., a Corporation of Massachusetts. Filed Jan. 24, 1927. Serial No. 163,078. 11 Claims. (Cl. 129—12.)



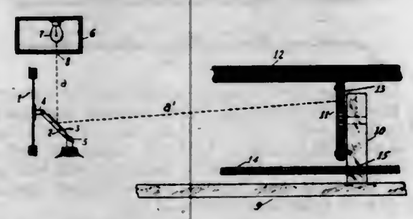
9. In a loose leaf binder, a sheet-engaging member, a post passing therethrough, a lock housing positioned in said member, and a double locking means in said housing, one of which is formed to lockingly engage the post and the other of which is formed to cooperate with said housing to lock said first locking means against operation when it is in engagement with said post.

1,810,232. ART OF EQUALIZING STRESSES IN STRUCTURAL ELEMENTS. FREDRIK VOGT, Trondhjem, Norway, assignor of one-half to E. C. La Rue and B. F. Jakobsen, Los Angeles, Calif., doing business as La Rue & Jakobsen. Filed Apr. 14, 1928. Serial No. 269,930. 10 Claims. (Cl. 61—30.)



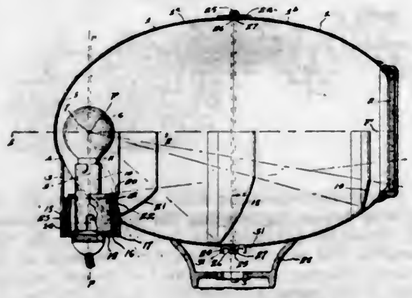
1. The method of equalising stresses in a load carrying structure which is subjected to a non-uniform distribu-

tion of stresses over a sectional area, that includes forming over such cross-sectional area a joint opening having sub-divisional enclosed pressure receiving spaces, and applying and holding different pressures respectively and



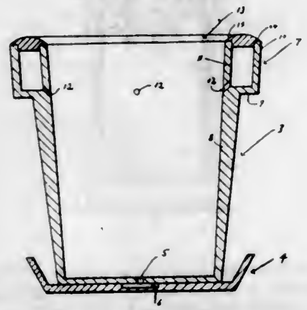
separately on the several pressure receiving spaces, the pressures being such that the stresses to which that portion of the structure is subjected will be subtantially uniformly distributed across the face of the cross-sectional joint area.

1,810,233. DASHPOT. LERNA D. WALDEN, Kansas City, Kans. Filed June 4, 1928. Serial No. 282,587. 20 Claims. (Cl. 188—96.)



1. A dashpot comprising a liquid-containing cylinder, a piston movable in the cylinder and provided with a plurality of ports, a sleeve extending in the cylinder, a piston rod in the sleeve and attached thereto, and spring-pressed means operable against opposite sides of the piston respectively controlling said ports.

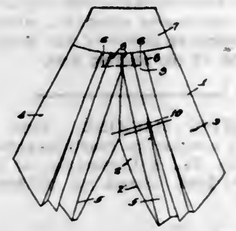
1,810,234. SYSTEM FOR OPTICALLY RECORDING PHONOGRAPH RECORDS. JULIUS WEINBERGER, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 27, 1925. Serial No. 65,134. 4 Claims. (Cl. 274—46.)



4. In combination, a point source of light; a mirror mounted so as to be vibrated, a diaphragm adapted to be vibrated by sound waves, linked to said mirror for the purpose of vibrating it, a circular plate having gear teeth on its periphery, a disc of sensitised material mounted on said plate, a carriage for said plate, a screw threaded rod for moving said carriage relative to said mirror, and an elongated gear meshing with the teeth on said plate, for rotating said plate.

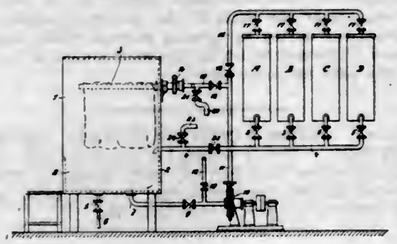
1,810,235. HEAD LAMP CONSTRUCTION. EDWARD J. WHALEN, Syracuse, N. Y., assignor to Redirected Light Corporation of America, Syracuse, N. Y., a Corporation of New York. Filed June 26, 1928. Serial No. 288,340. 2 Claims. (Cl. 240—41.35.)

1. A headlight comprising a concave reflector having a light opening at its front end and a passage at its rear end arranged at an angle to the axis of the reflector, a source of light, a lamp socket support mounted in said passage and removable with the source of light through the outer end of the passage, said passage having an internal inwardly presented shoulder and a rearwardly presented reflector located in front of the source of light and having a sleeve fitting said passage and abutting against said shoulder and surrounding the lamp socket support.



1,810,236. FLOWERPOT. ELIZABETH D. BENDER, Clearfield, Iowa, assignor of one-half to Beatrice Marie Bender, Clearfield, Iowa. Filed Aug. 18, 1930. Serial No. 476,210. 2 Claims. (Cl. 47—38.)

1. As a new product of manufacture, a watering flower pot comprising a pot proper having an upwardly thickened wall formed adjacent its top with an outstanding marginal ledge and an upstanding marginal rim integrally joining said ledge, the upper portion of said wall above said ledge being relatively thin and said rim and thin wall being spaced apart to form an intervening space constituting a water receiving trough, said thin wall being formed with circumferentially spaced diagonal water discharge ports, and a removable lid for said trough having thinned marginal edge portions resting on the upper edges of the trough walls and a relatively thick central portion depending into the water space.

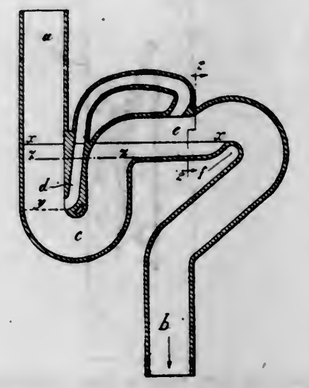


1,810,237. COMBINATION TROUSER SKIRT. MARCIA CAHN BOHR, San Francisco, Calif. Filed Apr. 29, 1930. Serial No. 448,310. 4 Claims. (Cl. 2—212.)

1. A combination trouser skirt having a crotch formed therein for providing leg portions, inverted pleats disposed adjacent to the crotch for hiding the crotch, said pleats being overlapped at their tops for causing their

lower portions to abut during walking and thus cover the crotch at all times, and a row of stitching connecting the pleats and holding the tops of said pleats in place.

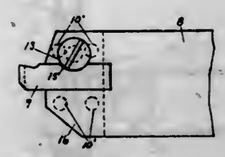
1,810,238. LOADING OF SILK, OR SILK-CONTAINING TEXTILE MATERIAL. RENÉ CLAVEL, Basel, Switzerland. Filed July 9, 1928, Serial No. 291,292, and in Switzerland Aug. 23, 1927. 5 Claims. (Cl. 8—19.)



1. An apparatus for loading silk or silk-containing textile materials comprising a tank forming a reservoir in the lower portion thereof; a plurality of liquid supply vessels; means for connecting said vessels with the tank to supply liquids thereto; means in the tank for supporting the textile materials to be loaded; means for circulating fluids through the materials; and means for extracting the fluid from the textile materials through the supporting means for the materials.

1,810,239. METHOD OF PRODUCING FERTILIZER. SAMUEL M. DOOLITTLE, Decker, Ind. Filed Nov. 11, 1929. Serial No. 406,538. 1 Claim. (Cl. 71—9.)

The method of producing simultaneously a fertilizer in both solid and liquid form which consists in gathering together a mass of cut weeds and other waste vegetation, placing thereover a covering of quicklime, applying a top covering of stable and chicken manure, tobacco waste, shredded corn fodder and bran mixed with ammonia, potash and phosphoric acid, directing water onto the entire bulk of material from time to time to facilitate disintegration of the mass, and trapping the liquid drained from the mass.



1,810,240. SANITARY LIQUID TRAP. ROBERT ARTHUR GREENWOOD, Chelsea, London, England. Filed Aug. 9, 1930, Serial No. 474,275, and in South Africa June 4, 1930. 1 Claim. (Cl. 182—12.)

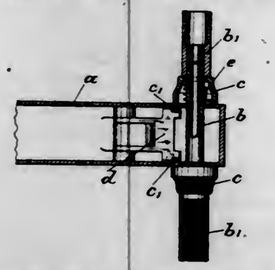
A sanitary liquid trap including a laterally offset liquid storage chamber communicating with and located wholly to one side of the outlet branch of the trap proper, and a by-pass communicating with the chamber adjacent the overflow end of such chamber, the exit end of the by-pass

inclining at an angle to the flow of the liquid, whereby the liquid flows from the by-pass into the chamber in a direction away from the overflow end of the chamber.

1,810,241. CHASER AND CHASER HOLDER. CHARLES P. HARRISON, Wesleyville, Pa., assignor to Jarechi Manufacturing Co., Erie, Pa., a Corporation of Pennsylvania. Filed Aug. 5, 1929. Serial No. 383,572. 6 Claims. (Cl. 10—120.)

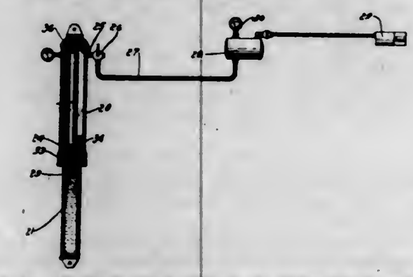
1. The combination of a cutting tool substantially in the form of a parallelopiped, a holder having a slot providing spaced jaws to receive the tool, said slot exposing a cutting face of the tool and an end thereof, a plate extending across the slot at the other end of the tool and secured to the holder in spaced relation to the bottom of the slot to leave to outlet for chips and the like, a clamping screw having a cylindrical head fitting in an arcuate opening at the exposed end of the tool and in a coacting elongated arcuate opening in the holder, the opening in the tool being struck on a radius longer than that of the head to permit the head to force the tool toward the bottom of the slot, said screw having a tapered body engaging a conical face of slightly larger radius on the tool whereby the body of the screw may also act to force the tool against the bottom of the slot in the holder, said screw having a reduced threaded end for engagement with a threaded hole in the head adjacent said plate to draw the tool against said plate, whereby the tool is clamped simultaneously against the bottom of the slot and a side thereof and against said plate by said screw, substantially as set forth.

1,810,242. ROPE ANCHOR. JESSE C. HAYES, Kittanning, Pa. Filed May 26, 1930. Serial No. 455,840. 3 Claims. (Cl. 24—131.)



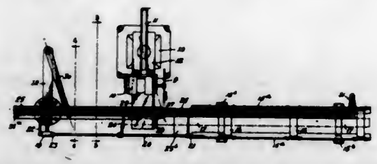
1. In a device of the character described, an anchoring member formed from a single strand of wire looped at its opposite ends to accommodate retaining elements whereby the device may be secured to a support, one

of said ends intermediate its end and the adjacent looped portion merging into a horizontally disposed open ended



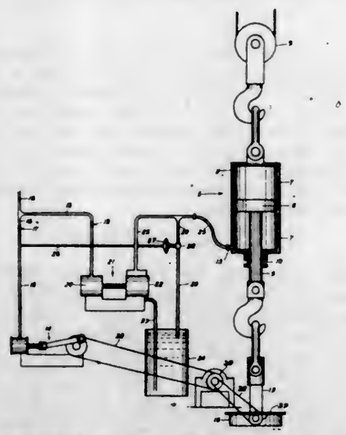
loop portion in turn merging into a vertically disposed rope receiving hook, and the other of said ends merging into an inverted V-shaped rope receiving hook portion.

1,810,243. TRIGGER MECHANISM FOR FIREARMS MOUNTED ON A CARRIAGE AND HAVING A POINTING HANDLE. FRITZ HERLACH, Dusseldorf, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf, Germany, a Corporation of Germany. Filed Nov. 24, 1930, Serial No. 497,930, and in Germany May 28, 1930. 3 Claims. (Cl. 89—27.)



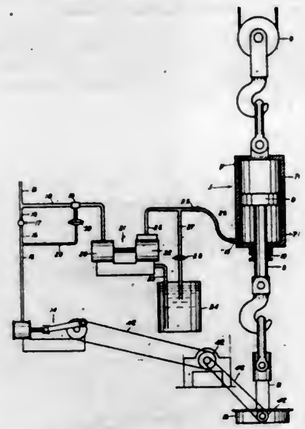
1. In a trigger mechanism for fire arms mounted on a carriage, a pointing handle and a member adapted to manipulate said trigger mechanism, said member being arranged in range of the firer's hand grasping said pointing handle and capable of being turned about the longitudinal axis of said pointing handle, thereby releasing the shot.

1,810,244. AIRPLANE. HAROLD A. HICKS, Detroit, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed May 6, 1930. Serial No. 450,148. 1 Claim. (Cl. 244—2.)



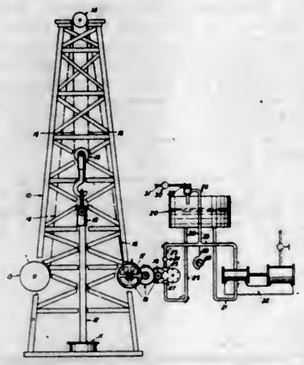
In an airplane construction, a fuselage, a landing gear, telescopic shock absorbers supporting said fuselage on the landing gear, said shock absorbers having hydraulic means for checking the rebound of the landing gear and pneumatic means resisting the compression thereof, and an auxiliary source of compressed air under the control of the pilot while operating the airplane for varying said pneumatic compression resistance, whereby the pilot may vary the operating stroke of the shock absorber to suit the character of the landing field.

1,810,245. SAWING MACHINE. JOHN O. HORTON, Montrose, Pa., assignor to Beach Manufacturing Company, Montrose, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1930. Serial No. 503,288. 9 Claims. (Cl. 143—6.)



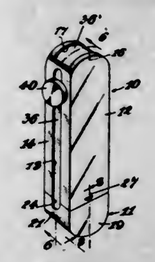
1. In a cutting apparatus, a cutter support comprising an angularly adjustable member upon which a cutter is reciprocated, a work-support traversed by the cutter in its travel and a guide-element for the work resting upon the work-support and movable longitudinally thereon and so engaged by said adjustable member as to travel on said support as the angle of the member changes; said guide-element having an opening through which the cutter may travel and which is thus kept always in registry with the path of cutter travel.

1,810,246. STEAM ACTUATED ROTARY DRILLING CONTROL. PHILIP JONES, Los Angeles, Calif. Original application filed Dec. 10, 1927, Serial No. 239,143. Divided and this application filed June 24, 1929. Serial No. 373,370. 4 Claims. (Cl. 255—19.)



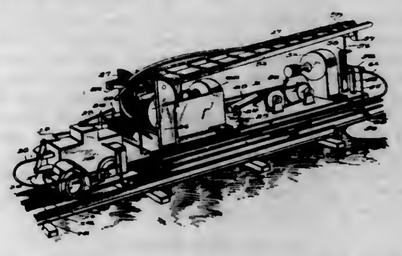
1. An apparatus for controlling the pressure exerted by a rotary well-drilling bit on the bottom of the hole being drilled, comprising: a steam-actuated engine adapted to rotate said bit; a hydraulic jack adapted to raise and lower said bit; means adapted to force fluid into said jack for raising said bit; an orifice communicating with said jack adapted to permit escape of fluid therefrom for lowering said bit; a steam-actuated means adapted to control the area of said orifice, and a means for admitting a flow of steam under pressure to a means of communication between said engine and said orifice-controlling means, whereby said engine is actuated and the area of said orifice is simultaneously controlled.

1,810,247. STEAM ACTUATED AUTOMATIC ROTARY DRILL. PHILIP JONES, Los Angeles, Calif. Original application filed Dec. 10, 1927, Serial No. 239,143. Divided and this application filed June 24, 1929. Serial No. 373,371. 6 Claims. (Cl. 255—19.)



1. An apparatus for controlling the pressure exerted by a rotary well-drilling bit on the bottom of the hole being drilled, comprising; a steam-actuated engine adapted to rotate said bit; a hydraulic jack adapted to raise and lower said bit; a steam-actuated pump adapted to force fluid into said jack for raising said bit; an orifice communicating with said jack adapted to permit escape of fluid therefrom for lowering said bit; means for admitting steam into said pump for actuating said pump; valve means for controlling the flow of steam into said pump; steam actuated means for controlling the opening of said valve means, and a means for admitting a flow of steam under pressure to a means of communication between said engine and said valve-controlling means.

1,810,248. POWER ACTUATED MEANS FOR FEEDING ROTARY DRILLS. PHILIP JONES and PAUL W. PRUTZMAN, Los Angeles, Calif. Filed June 24, 1929. Serial No. 373,372. 3 Claims. (Cl. 255—19.)

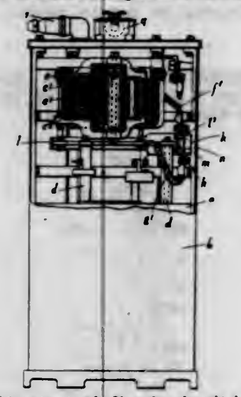


1. A secondary feeding means for rotary drills, comprising: a winding reel adapted to raise the drill by reeling-in a portion of the drilling line; a liquid-actuated motor connected to said reel and adapted to drive said reel in a forward or winding-in direction when supplied with liquid under pressure; means for supplying said motor with said liquid; means for maintaining said pressure substantially constant and for manually controlling said pressure, and means for permitting the reversal of the direction of said motor without substantial loss of forward torque when said winding reel is subjected to a weight overbalancing the forward torque of said motor.

1,810,249. COSMETIC CONTAINER. EDWIN H. KOEHLER, New York, N. Y. Filed Apr. 12, 1930. Serial No. 443,738. 10 Claims. (Cl. 206—56.)

1. In a device of the character described, in combination, a casing having an open end and a closed end, a flexible band within said casing capable of longitudinal movement across said casing opening closing said opening, a pencil-carrier carried by said band and capable of longitudinal movement within said casing, and exterior operating means capable of moving said band.

1,810,250. ELECTRICAL TOY. HARRY E. LOVINO, Baltimore, Md., assignor of one-half to Joseph Golomb, Baltimore, Md. Filed May 29, 1930. Serial No. 457,461. 19 Claims. (Cl. 46—48.)

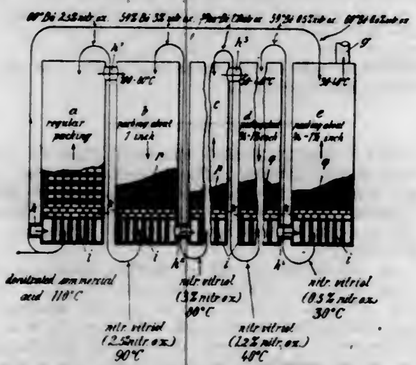


1. In an electrical toy railway comprising a pair of main rails and a third rail having an insulated section, a fourth rail adjacent said insulated section and electrically connected thereto, a motor toy adapted to be mounted on said main rails and having a collector adapted to engage said third rail, automatic circuit controlling means carried by said toy, and an auxiliary collector electrically connected to said circuit controlling means and adapted to engage said fourth rail.

1,810,251. ELECTRIC ARC WELDING PLANT. ROMEO JOSE MUSTO, London, England, assignor to The Quasi-Arc Company, Limited, London, England, a British Company. Filed July 25, 1929, Serial No. 381,042, and in Great Britain Sept. 20, 1928. 6 Claims. (Cl. 171—119.)

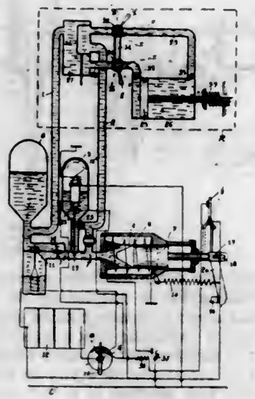
1. An alternating current arc welding plant comprising in combination, a welding transformer having a tapped output winding, a choke coil having its winding also tapped and having its magnetic field separate from and uninfluenced by the magnetic field of said transformer, a set of contact members connected to the taps of the output winding of said transformer, a second set of contact members connected to the taps of the winding of said choke coil, and a connector for joining at one time any one contact member of the first set to the corresponding con-

tact member of the second set, the connection of said taps to said contact members being such that when the number



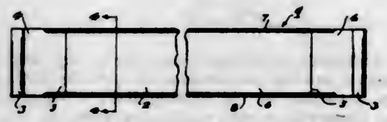
of turns of said output winding in circuit is increased the number of turns of the winding of said choke coil in circuit is also increased.

1,810,252. EXHAUST MUFFLER FOR INTERNAL COMBUSTION ENGINES. ALBERT S. NOONAN, Utica, N. Y. Filed Mar. 17, 1930. Serial No. 436,522. 1 Claim. (Cl. 137—160.)



An exhaust muffler comprising a tube, transverse partitions secured within the tube near both ends thereof and provided with openings therethrough, said tube being divided through one side and its meeting edges welded together, and reinforcing rings fitted in opposite ends of the tube to abut against the adjacent partitions, said rings being divided through one side and having their meeting ends registered with the meeting edges of the tube, said tube having its outer ends crimped inwardly across the outer ends and inner faces of the adjacent rings to hold the latter in operative position.

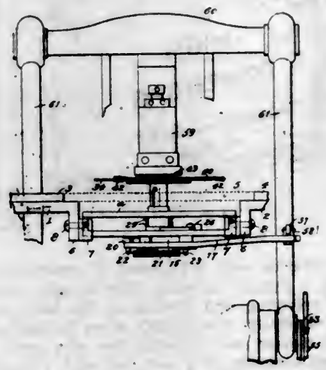
1,810,253. MANUFACTURE OF SULPHURIC ACID. HUGO PETERSEN, Berlin-Steglitz, Germany. Filed May 5, 1925, Serial No. 28,126, and in Germany Mar. 13, 1923. 4 Claims. (Cl. 23—168.)



1. In the manufacture of sulphuric acid by the chamber method, treating sulphur-dioxid gases with strong sulphuric acid liquors containing nitrogen oxids and in presence of finely granular packing bodies, substantially not exceeding four-tenths inch in diameter, denitrating a certain portion of the liquid produced in the presence of granular packing bodies, substantially not exceeding one inch in diameter, and producing a vigorous movement of the gases of reaction.

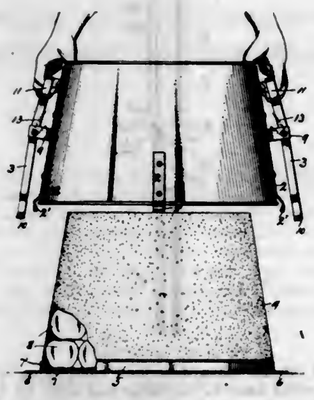
1,810,254. HYDRAULIC MOTOR INSTALLATION. HENRI PIEPER, Brussels, Belgium. Filed Mar. 30, 1927, Serial No. 179,699, and in Belgium June 17, 1926. 6 Claims. (Cl. 60—52.)

1. A hydraulic motor installation, comprising a power vessel containing liquid and gas under pressure; a storage vessel; a cylinder, and a piston movable therein; a duct between said cylinder and the storage vessel; a valve opening toward the cylinder and located in said duct; a spring acting to close said valve; a duct between the cylinder and the lower vessel; a valve opening toward the power vessel and located in the last-named duct; means for effecting the displacement of the piston in a given direction under the action of the liquid under pressure in the power vessel; external means of reduced power for effecting the displacement of the piston in the opposite direction during the first part of its stroke; means for keeping open the spring-closed valve during said displacement so as to force back into the storage vessel the liquid which has operated the piston; external means of greater power for effecting the movement of the piston for the remaining length of its stroke; and means for enabling closure of the spring-closed valve during the last-named displacement.



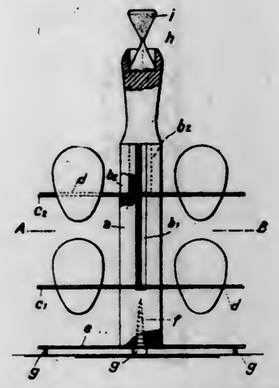
1,810,255. EXERCISER AND BODY BUILDER. FRANK POULOS, New York, N. Y. Filed Jan. 21, 1930. Serial No. 422,886. 1 Claim. (Cl. 272—79.)

In an exercising device of the class described, a wide and relatively thin elastic band having T-shaped knobs



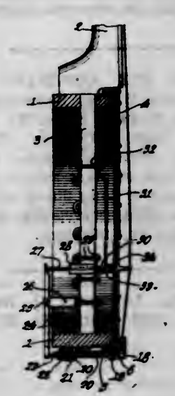
at the ends, said band being thickened near the said knobs, and a flange along both edges of the band on one face thereof, the opposite face being smooth.

1,810,256. PRINTING PRESS ATTACHMENT. WILLIAM EMMETT SHACKLETT, New Albany, Ind., assignor to Shacklett Automatic Card Feeder Company, Louisville, Ky., a Corporation of Kentucky. Filed May 9, 1924. Serial No. 712,020. 33 Claims. (Cl. 101—287.)



1. A rotatable carrier for feeding cards or the like to a printing press comprising a supporting plate for the cards, a pivoted lever carried by the plate and engageable with the cards, and means for adjusting the lever for positioning the cards relative to the plate.

1,810,257. COMBINED CLAMP AND LIFTER FOR FRUIT PACKING TUBS. SAMUEL H. SHELLER, Marion, Pa. Filed Sept. 16, 1929. Serial No. 392,886. 9 Claims. (Cl. 226—17.)

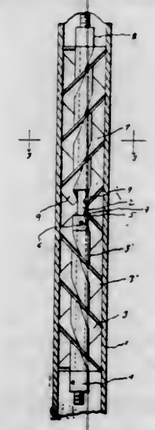


1. The combination with a tub or shell for use in packing fruit, and a fruit support, of combined clamps and lifters carried by the tub which clamp the fruit support to the tub while serving as sustaining and carrying devices by which the fruit and fruit support may be carried from place to place.

1,810,258. EGG-BOILING FRAME. BERNHARD SPERBER, Berlin, Germany. Filed July 23, 1930, Serial No. 470,148, and in Germany May 24, 1930. 7 Claims. (Cl. 53—1.)

1. An egg-boiling frame, comprising in substance a central column, platforms furnished with holding apertures for the eggs, abutments provided in oppositely disposed grooves in the said column, and projections in a recess of the said platforms adapted to engage with the said abutments.

1,810,259. BANJO MUTE. BARNEY A. STALLONE, Tacoma, Wash. Filed Jan. 23, 1930. Serial No. 422,821. 6 Claims. (Cl. 84—273.)



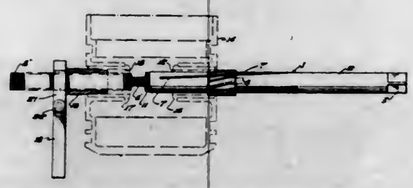
2. In a banjo comprising a rim, a head, brackets on the rim, and tension members for the head and mounted in the brackets; a mute co-operating with the head, actuating mechanism for the mute, said mechanism embodying an arm rest and a plunger operatively connected to the arm rest, means held on one of the brackets by one of the tension members for mounting the arm rest movable, and means held on another of the brackets by the corresponding tension member for guiding the plunger.

1,810,260. WELL TUBE CLEANER. LEVI SWINFORD, Comanche, Okla. Filed Jan. 15, 1931. Serial No. 509,021. 2 Claims. (Cl. 166—18.)

1. A well tube cleaning device comprising a rod, right and left spirals rotatably arranged on the rod, means whereby the upper spiral has limited sliding movement

on the rod and extensions of the spiral fins at the adjacent ends of the spirals which overlap each other when

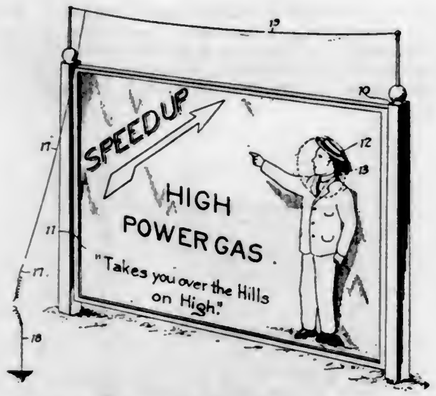
the upper spiral moves downwardly on the pulling of the device from the tubing for preventing the paraffin passing through the device.



1,810,261. QUINOLIN-BENZOIC-CARBOXYLIC ACID. WILLARD L. VOGEL, Los Angeles, Calif., assignor of one-tenth to Paul W. Prutzman. Filed May 22, 1928. Serial No. 279,853. 2 Claims. (Cl. 260—39.)

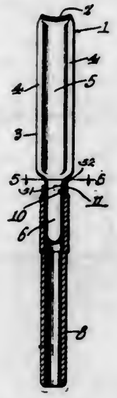
2. A method of manufacturing quinolin-2-benzoic-4-carboxylic acid, which comprises: combining in alcoholic solution unimolecular proportions of 2-phenyl-quinolin-4-carboxylic acid and sodium salicylate; heating to produce reaction, and separating the reaction product from the solution.

1,810,262. MEANS FOR COVERING CULTIVATED GROUND. OTTOMAR WEBER, Rathen-on-the-Elbe, Germany. Filed Aug. 9, 1929, Serial No. 384,781, and in Germany Aug. 18, 1928. 5 Claims. (Cl. 47—9.)



1. A covering for cultivated ground for the purpose of promoting the growth of plant life in the ground, consisting of a loose mass of long fibred vegetable material impregnated with a decay-preventing preservative and penetrable by air, light and moisture.

1,810,263. REAMER. LAWRENCE O. BEARD, Lancaster, Pa. Filed Feb. 9, 1929. Serial No. 338,806. 1 Claim. (Cl. 77—76.)



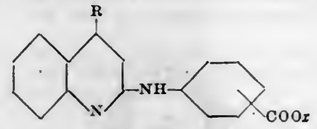
A reamer comprising a hollow expansible shank, cutting blades formed on said shank, a member having a reduced portion adapted for insertion within said shank for expanding the same, said member having an enlarged threaded portion, a centering sleeve slidably mounted on said enlarged threaded portion and a threaded feeding member for engagement with the said enlarged threaded portion adapted to engage and hold the centering sleeve in place and to feed the reamer and blades when said reamer is rotated.

1,810,264. APPARATUS FOR AUDIBLE SIGNBOARD ADVERTISING. FRED W. BONITZ, Charlotte, N. C. Filed Nov. 2, 1928. Serial No. 316,842. 1 Claim. (Cl. 40—125.)

The combination with a billboard of appreciable thickness having a suitable opening therethrough, sections of wire mesh overlying said opening at the front and rear thereof, a relatively thin display sheet having advertising matter thereon and covering the wire mesh at the front of said opening; of a radio set with a loudspeaker attached to the signboard behind said opening, a sound collector around the rear wire mesh covering the opening for the loudspeaker, a housing attached to the board and completely enclosing the radio set, loudspeaker and collector, and means for starting the radio set, said means including an antenna mounted on the billboard, and a circuit closer disposed in such position as to be actuated by nearby passing traffic.

1,810,265. RAZOR STROPPER. LUCIUS HOMER BROOKS, Atlanta, Ga. Filed Dec. 1, 1927. Serial No. 237,054. 1 Claim. (Cl. 30—25.)

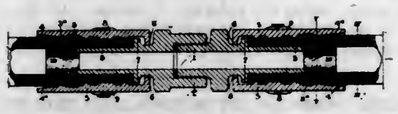
A device of the class described comprising a tubular handle provided near to its outer end with an inwardly-extended projection, and a blade-grip including long and short arms which are insertible into the handle, the difference in the length of the arms being greater than the distance between the projection and the outer end surface of the handle, whereby the projection will first ride along the inner edge of the long arm and then pass between the arms, thereby facilitating the insertion of the arms into the handle, the arms being inwardly beveled to engage



with the outer end surface of the handle, the difference in the length of the arms causing the said beveled portions to engage one at a time with the outer end surface of the handle, thereby facilitating the insertion of the arms into the handle.

1,810,266. COMPOSITION FOR DYEING LEATHER, SHOES, GLOVES AND HIDES. EMILE COMES, Les-Ponts-De-Martel, Switzerland. Filed Sept. 28, 1928, Serial No. 309,128, and in Switzerland Oct. 11, 1927. 2 Claims. (Cl. 8—5.)

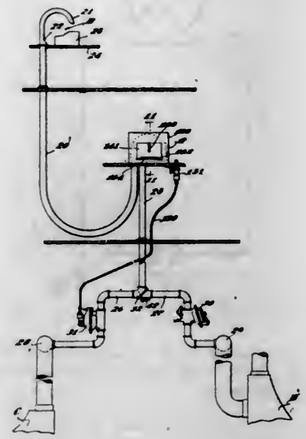
1. A composition for dyeing leather, shoes, gloves and hides, consisting of a fatty body, an oil soluble dye, turpentine oil and acetone.



1,810,267. ALKYL-QUINOLYL-AMINO-PHENYL CARBOXYLIC ACIDS. KURT DESAMARI, Leverkusen-on-the-Rhine, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 30, 1928, Serial No. 322,975, and in Germany Dec. 7, 1927. 2 Claims. (Cl. 260—39.)

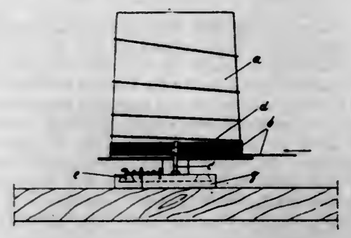
1. As new products the compounds of the probable general formula:

wherein R stand for an alkyl group and x stands for a hydrogen or an alkyl group, being generally substances soluble in organic solvents and being valuable therapeutical substances and starting materials in the manufacture of dyestuffs.



1,810,268. HOSE COUPLING. ALFRED L. DOLD, Drexel Hill, Pa. Filed Aug. 16, 1928. Serial No. 300,086. 1 Claim. (Cl. 285—84.)

The combination of a hose section, a coupling shank or stem inserted therein; said shank or stem having its free end reduced internally and externally, and a double-walled sheath of relatively soft material enclosing the reduced end of said shank or stem and having a portion interposed between the same and the inner wall of the hose; the bore of the inner portion of said sheath having the same diameter as the bore of the shank or stem.

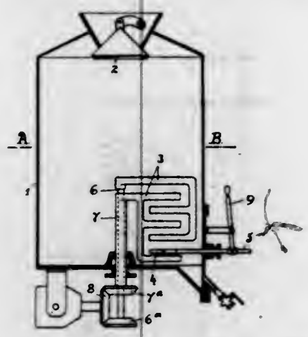


1,810,269. PNEUMATIC DISPATCH SYSTEM. MERTON L. EMERSON, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Aug. 2, 1929. Serial No. 382,876. 14 Claims. (Cl. 243—2.)

1. In a pneumatic dispatch system, two stations, a single transmission tube connecting said stations, means normally maintaining a minimum flow of air through the tube, and responsive to a reduction in such flow resulting from the insertion of a carrier in the tube, for initiating a carrier impelling flow through the tube in one direction

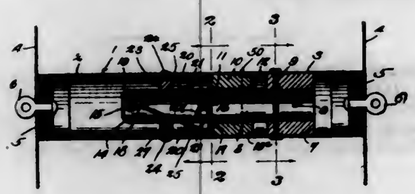
at least and means for terminating said minimum flow and initiating a carrier impelling flow through the tube in the opposite direction.

1,810,270. FRICTIONLESS AUTOMATIC DEVICE FOR RAISING WIRE WINDINGS ON VERTICAL CONICAL WINDING-UP DRUMS. ERICH ERDMANN, Ihmert, Germany. Filed Oct. 31, 1927, Serial No. 230,045, and in Germany Apr. 28, 1927. 3 Claims. (Cl. 242—78.)



1. An automatic device for raising wire windings, comprising in combination a conical vertical drum, a control element rotatably arranged at the side at the lower end of said drum shortly behind the point at which the wire is coming into contact with said drum, said control element being inclined towards the arriving wire and means for pressing said control element permanently against said drum so that it is rotated from said drum and uniformly pushes the wire windings upward on said drum.

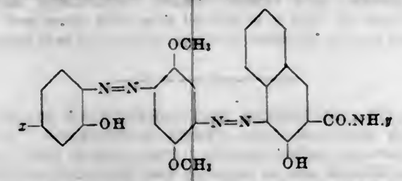
1,810,271. INJECTING AND DELIVERING MACHINE FOR MORTAR AND OTHER MATERIALS. ERNST FRAENKEL, Berlin, Germany. Filed June 8, 1929, Serial No. 369,485, and in Germany Feb. 29, 1928. 4 Claims. (Cl. 302—56.)



1. An injecting and delivering machine for mortar and other materials that are to be used in a fluid and moistened condition comprising, a vessel into which the material is charged, means for maintaining the material in said vessel in constant motion, a compressed air nozzle opening into

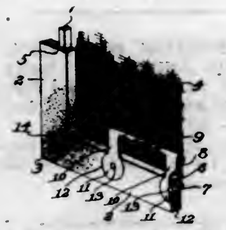
the mass of material in said vessel, a delivery pipe disposed in alignment with the discharge end of said nozzle

and means connected to the exterior of said vessel for adjusting the interior relation of said delivery pipe with respect to said nozzle.



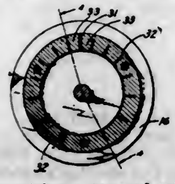
1,810,272. TOILET PAPER HOLDER. HERMAN LOUIS GOLDBECK, Adelaide, Australia. Filed Nov. 15, 1928. Serial No. 319,688. 2 Claims. (Cl. 242—55.2.)

1. In a device of the class described, a shaft comprising tubular members, a stem carried by one of the tubular members and of such length as to enter the other of the tubular members, said other of the tubular members having a keeper, a latch mounted on the stem and engageable with the keeper, a releaser slidable on the stem and cooperating with the latch to move it inwardly out of engagement with the keeper, the releaser being accessible from without the shaft but being so located that it will be covered by a roll on the shaft, and means for holding a roll on the shaft against removal from the shaft longitudinally of the shaft.



1,810,273. NEW AZO DYESTUFFS. JOSEF HALLER, Wiesdorf-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 2, 1928, Serial No. 266,875, and in Germany Apr. 16, 1927. 3 Claims. (Cl. 260—84.)

1. New dyestuffs of the probable general formula:

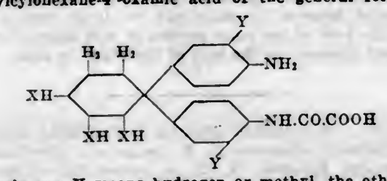


wherein x stands for hydrogen or the nitro-group and y for a naphthalene nucleus, said dyestuffs being dark powders, insoluble in water, sparingly soluble in the usual organic solvents, soluble in strong sulfuric acid with violet-blue to blue colorations, dyeing cotton blue-black to black shades.

1,810,274. METAL WINDOW SCREEN. FREDERICK F. HASKELL, Arlington, Mass., assignor to Apexeon Company, Jamaica Plain, Mass., a Corporation of Massachusetts. Filed Dec. 18, 1928. Serial No. 326,873. 3 Claims. (Cl. 156—14.)

3. A window screen comprising a frame of aluminum alloy, the four sides of which are welded together at the corners, the material of the frame at the corners where the sides are welded together being stiffer and more rigid than at other portions of the frame.

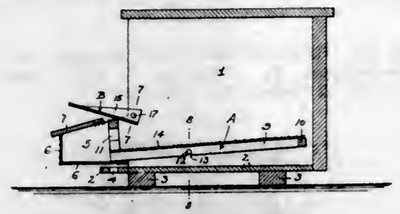
1,810,275. MANDREL. JAMES W. HOWELL, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 30, 1927. Serial No. 236,631. 6 Claims. (Cl. 29—89.)



1. A mandrel comprising a tapered arbor, a split sleeve mounted thereon, the said sleeve having a plurality of kerfs cut in its inner periphery and means for drawing the sleeve upon the tapered portion of the arbor.

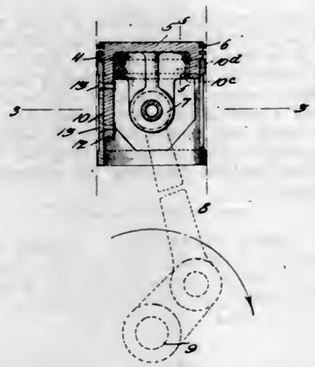
1,810,276. FOOD PRODUCT AND PROCESS OF MAKING THE SAME. ELOISE JAMESON and EARL D. STEWART, Corona, and CLARENCE P. WILSON, Pomona, Calif., assignors to California Fruit Growers Exchange, Los Angeles, Calif., a Corporation of California. Filed Jan. 15, 1927. Serial No. 161,462. 6 Claims. (Cl. 99—5.)

6. A dry relatively non-hygroscopic mixture of highly hygroscopic fruit juice solids and lactose.



1,810,277. NEW AZO DYESTUFFS AND PROCESS OF MAKING SAME. GEORG KALISCHER, Frankfort-on-the-Main, and RICHARD FLEISCHHAUER, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 22, 1929, Serial No. 387,802, and in Germany Aug. 28, 1928. 7 Claims. (Cl. 260—86.)

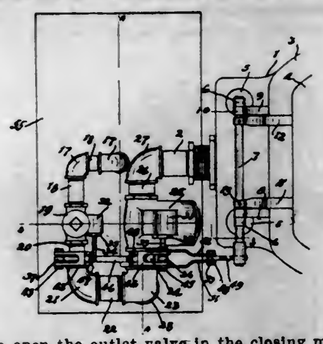
1. A process which comprises diazotizing a 4-aminodiarylcylohexane-4'-oxamic acid of the general formula:



wherein one X means hydrogen or methyl, the other X's hydrogen and the Y's means hydrogen, halogen, methyl or alkoxy-groups combining the diazo-compound with any azo-component, saponifying the azodyestuff thus formed, diazotizing the saponified dyestuff and combining this diazo-compound with any azocomponent.

1,810,278. CLEAN EGG NEST. EDWIN H. KIELSMEIER, Sunnyside, Wash. Filed Dec. 9, 1929. Serial No. 412,878. 2 Claims. (Cl. 119—47.)

1. A nest of the class described comprising a body open at its front, a tiltable platform in the lower part of the body having an upward extension at its front end, a pivoted door at the front of the body normally resting against the extension and raised when the platform is tilted by a hen entering the nest, an egg chamber at the front lower part of the body for receiving the eggs rolling down the platform when the same is in its normal position, a door forming the top of the egg chamber and a removable bottom for the body.

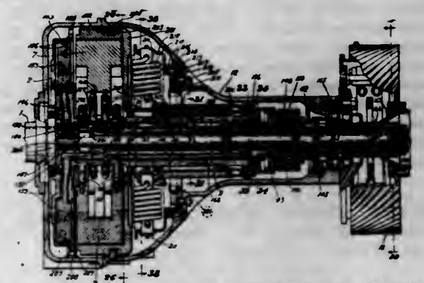


1,810,279. PISTON. CLARENCE C. KRAUSE, Chattanooga, Tenn. Filed Mar. 20, 1930. Serial No. 437,413. 3 Claims. (Cl. 74—108.)

1. In an anti-slap piston, a piston having a longitudinally extending anchorage, a skirt fastened thereto at its side, that portion of the skirt substantially opposite the side of the anchorage having free edges in spaced relation to each other and adapted to engage a cylinder wall.

1,810,280. LAVATORY CLOSET. JOSEPH LEWIS, Winnipeg, Manitoba, Canada. Filed Dec. 27, 1929, Serial No. 416,960, and in Canada Nov. 16, 1929. 2 Claims. (Cl. 4—21.)

1. The combination with a lavatory closet bowl, and the hinged seat lid thereof, of an air tight pressure tank located to the rear of the bowl, a pressure water service pipe passing first upwardly through the tank and then horizontally in the form of a loop above the tank and finally communicating with the back of the bowl, a branch pipe leading from the loop downwardly into the tank and opening to the tank adjacent the bottom thereof, an inlet valve in one of the legs of the loop controlling the passage of water to the branch pipe from the source of supply, an opposing outlet valve in the other leg of the loop controlling the passage of water from the tank to the bowl, a connection between the valves, said connection and valves being set so that the outlet valve is closed when the inlet valve is open and an operating connection between the seat lid and the outlet valve

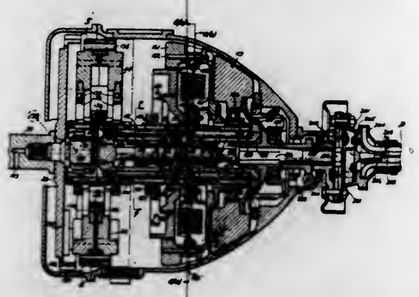


adapted to open the outlet valve in the closing movement of the lid and to close the outlet valve in the opening movement of the lid.

1,810,281. METHOD OF MANUFACTURING VENEERED METAL SURFACES. MAX LINSE, Berlin-Biesdorf-Sud, Germany, assignor to Erwin O. Haberfeld, Berlin, Germany. Filed Jan. 11, 1929, Serial No. 331,956, and in Germany Jan. 18, 1928. 7 Claims. (Cl. 154—2.)

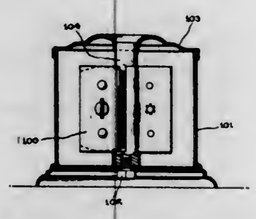
1. The method of applying wood veneer to metal surfaces, consisting in covering the metal surface with a composition of casein, talc, and slacked lime, letting said covering dry, and affixing the veneer thereon by means of glue.

1,810,282. POWER TRANSMISSION. FREDRIK LJUNGSTRÖM, Lidingo, Sweden, assignor, by mesne assignments, to Ped, Incorporated, a Corporation of Delaware. Continuation of application Serial No. 139,420, filed Oct. 4, 1926, and in Sweden Oct. 14, 1925. This application filed Nov. 14, 1929. Serial No. 407,236. 111 Claims. (Cl. 74—14.)



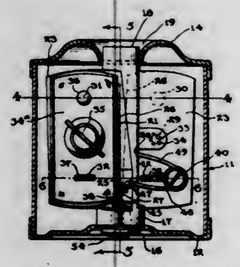
1. In a variable-speed power transmission, a driving shaft, a driven shaft, an abutment, means actuated by the driving shaft for alternately producing opposite turning moments, and a plurality of reversible one-way clutches for transmitting the produced opposite turning moments to the driven shaft and the abutment respectively.

1,810,283. POWER TRANSMISSION. FREDRIK LJUNGSTRÖM, Lidingo, Sweden, assignor, by mesne assignments, to Ped, Incorporated, a Corporation of Delaware. Continuation of application Serial No. 218,293, filed Sept. 8, 1927. This application filed Apr. 28, 1930, Serial No. 447,896, and in Sweden Feb. 16, 1927. 173 Claims. (Cl. 74—14.)



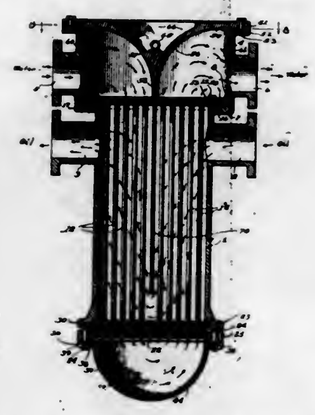
1. A variable-speed power transmission comprising a driving member, a driven member, an abutment, means

actuated by the driving member for alternately producing opposite turning moments, a one-way action clutch for transmitting turning moments of one sense to the driving member, a one-way reaction clutch for directing



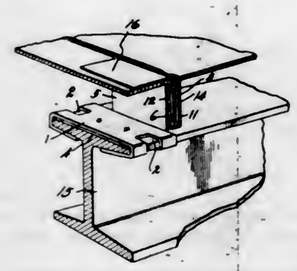
turning moments of the opposite sense toward the abutment, and an inertia mass between the reaction clutch and the abutment for altering the characteristics of the forces transmitted to the abutment from the reaction clutch.

1,810,284. PENCIL SHARPENER. VALENTINE C. LUPPERT, Williamsport, Pa. Filed Dec. 14, 1929. Serial No. 414,077. 3 Claims. (Cl. 120—91.)



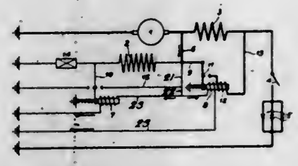
1. A pencil sharpener including a stationary casing, a stationary cutting head in the casing provided with a tubular portion having oppositely projecting wings and slots leading from the wings to the interior of the tubular portion, razor blades mounted on said wings and having cutting edges extending through said slots and converging toward the axis of the head, clamping plates bearing on said blades, and thumb screws securing the blades and plates to the wings, said wings being provided with means to prevent the blades from turning on the thumb screws.

1,810,285. PENCIL SHARPENER. VALENTINE C. LUPPERT, Williamsport, Pa. Filed Aug. 25, 1930. Serial No. 477,773. 18 Claims. (Cl. 120—9.)



1. A pencil sharpener including a stationary casing, a stationary cutter-head detachably mounted in the casing and provided with a cutter, a broken pencil point ejector supported by said head, and means projecting from the cutter-head to the exterior of the casing for operating said ejector.

1,810,286. HEAT EXCHANGER. ANDERSON MACPHEE, Meadowbrook, Pa. Filed Apr. 6, 1927. Serial No. 181,464. 2 Claims. (Cl. 257—222.)



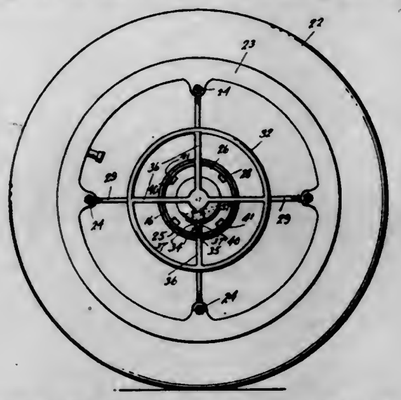
1. In a heat exchanger including a casing adapted to contain a nest of tubes for the cooling fluid about which the fluid to be cooled is circulated, a packed closure including a removable cover for one end of said casing, a gland member supporting said cover and secured to said casing, and a sealing ring between said gland member and said casing, said closure adapted to visibly indicate a leakage of either fluid as well as to permit free access to said tubes without disturbing the mounting thereof in said casing.

1,810,287. DECK PLATE CLIP. RUSSELL C. MAHON and WILLIAM G. MILLER, Detroit, Mich., assignors to The R. C. Mahon Company, Detroit, Mich., a Corporation of Michigan. Filed May 16, 1929. Serial No. 363,619. 6 Claims. (Cl. 189—35.)

1. In a deck plate clip for deck plates in which a depending flange at the edge of one deck plate engages in a return bent flange at the edge of another deck plate, a sheet metal base member having bifurcated ends adapted to be bent about a supporting beam, a sheet metal clip member extending from the base member and formed to engage over the return bent flange of one deck plate, the clip member extending into the channel formed by the said return bent flange and being adapted to receive the depending flange of the adjacent deck plate when inserted in the said channel, the clip member being also provided with an extending end adapted to be bent over the adjacent portion of the deck plate having the depending flange.

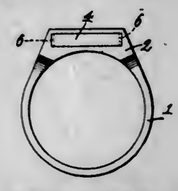
1,810,288. VOLTAGE REGULATION FOR ELECTRIC GENERATORS. ALFRED MATTES, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed June 20, 1927, Serial No. 200,166, and in Germany June 26, 1926. 4 Claims. (Cl. 171—223.)

1. The combination, with a generator having a series exciting winding, of a voltage regulating system comprising an automatic regulator arranged in circuit with the series exciting winding of the generator, said regulator comprising a make-and-break armature in combination with a tension coil and a current coil, the current-coil being arranged to be put into circuit with the series-winding through said armature to weaken the effect of said series winding.



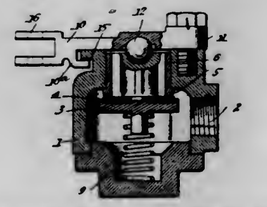
1,810,289. RADIATOR ORNAMENT. VIOLA MCPHILLIPS, Memphis, Tenn. Filed Aug. 19, 1929. Serial No. 386,983. 3 Claims. (Cl. 240—8.11.)

1. A radiator ornament comprising a hollow symbolical figure of translucent material, a bracket adapted to be supported on an automobile radiator, means for attaching the figure to the bracket, means on the bracket for supporting an electric lamp within said figure, and means for connecting the lamp to a source of current; substantially as set forth.



1,810,290. SUPPLEMENTAL WHEEL FOR MOTOR VEHICLES. JOHN PATRICK O'LEARY, Long Island City, N. Y. Filed Nov. 20, 1929. Serial No. 408,542. 8 Claims. (Cl. 301—38.)

6. A supplemental wheel for a motor vehicle comprising in combination a hub, means for securing said hub to the hub of a supporting wheel of the vehicle for rotation with the latter, a web member carried by the supplemental wheel in axial alinement with said hub member, a shaft rotatably supported in said web member, a hand wheel on one end of the shaft, a cap for said hub member, means operatively connecting said cap with said shaft for movement of the cap axially of said shaft upon rotation of said hand wheel, said cap being provided with a plurality of circumferentially spaced studs, and said hub member being provided with a plurality of circumferentially spaced lugs adapted to be engaged by said studs upon movement of said cap in one direction for retaining said cap in

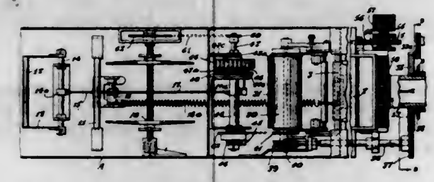


relatively fixed position with respect to said hub, and means for locking said hand wheel against casual rotative movement.

1,810,291. ARTICLE OF JEWELRY. HENRY W. PETERS, Boston, Mass., assignor to H. W. Peters Co. Inc., Boston, Mass. Filed Jan. 7, 1929. Serial No. 330,904. 2 Claims. (Cl. 63—15.)

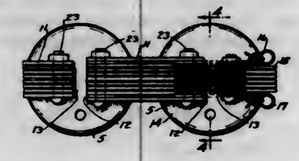
1. An article of jewelry including a box having two open faces and flat inner walls free from depressions, a setting insertible into the box through one open face for exposure of its outer surface through the other open face and for snug engagement with the flat inner surfaces of the box, said setting having a recess in one edge opening through one surface of the setting, that portion of the surface containing the recess being concealed by the box, and means integral with the box for displacement inwardly into engagement with the cut-away portion of the setting, thereby to hold the setting against withdrawal from the box.

1,810,292. QUICK RELEASE VALVE. BERT PRATT, Chicago, Ill. Filed Nov. 22, 1929. Serial No. 409,047. 8 Claims. (Cl. 251—132.)



2. A quick release valve for the purpose described comprising a casing provided with an inlet and an outlet, a valve within the casing adapted to close the outlet, an operating arm pivotally mounted on the casing to move across the outer end of the outlet, and means between the arm and valve whereby the latter will be moved to open the outlet as the arm is turned about its pivotal connection with the casing.

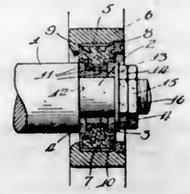
1,810,293. DOOR CLOSER. ALFRED REESE, Hamburg, Germany. Filed May 17, 1929, Serial No. 363,821, and in Germany Apr. 25, 1929. 2 Claims. (Cl. 16—76.)



1. A door closer consisting of a spirally wound spring slidable over the door hinge pintle with one end on the door frame and with the other end resiliently on the door, a pressure button of soft material preferably rubber loosely accommodating each of the ends of said spring parallel to the axis of said spring, said spring ends adapted at the swinging of the door to turn and slide in said buttons.

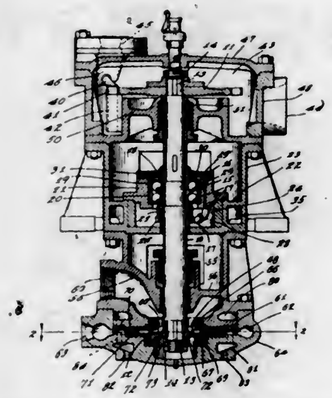
1,810,294. MACHINE FOR APPLYING TRANSFER STAMPS. CHARLES G. RICHARDSON, Springfield, Vt., assignor to Parks & Woolson Machine Company, Springfield, Vt., a Corporation of Vermont. Filed Mar. 15, 1929. Serial No. 347,293. 9 Claims. (Cl. 41—1.)

1. A machine for applying transfer stamps to fabric embracing a cloth engaging revoluble drum, coacting revoluble presser elements for impressing an interposed transfer stamp against an interposed piece of fabric, means coordinated with the drum to intermittently feed a stamp carrying tape over one of said presser elements, and means controlled by the operator while the drum is revolving to adjust the tape to cause the stamps thereon to be properly positioned with relation to the presser elements.



1,810,295. ELECTROCHEMICAL CONVERTER. JOHN H. RITTER and JOHN J. RITTER, Seattle, Wash. Filed Nov. 22, 1928. Serial No. 321,183. 1 Claim. (Cl. 175—315.)

In a device of the character described, a plurality of cells forming a battery, a plurality of electrodes arranged in sets in the said cells, with the electrodes of one set alternating with the electrodes of the other and insulated therefrom, ears of the plates extending upward through the battery top, and suitable connectors for connecting the ears of the electrodes of one cell with the ears of similar electrodes in an adjoining cell, said electrodes being so arranged that the connectors will mesh externally with the ears of the plates of the respective cells.

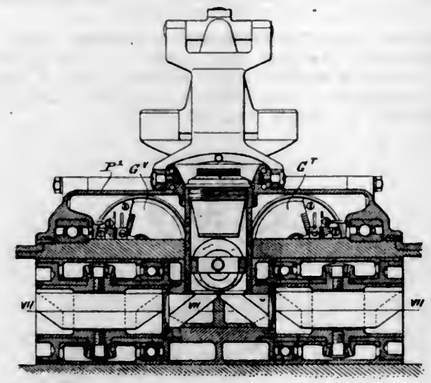


1,810,296. BEARING CONSTRUCTION. LOUIS J. SAUER, Oak Park, Ill., assignor to Charles H. Joy, sr., Chicago, Ill. Filed Jan. 17, 1929. Serial No. 333,120. 2 Claims. (Cl. 308—240.)

1. A bearing construction comprising an oil impregnated metal bearing ring in which the shaft turns, and means for supporting said ring and keeping it supplied with oil, comprising an annular metal housing and supporting ring to be fitted into a circular opening in a supporting member, said supporting ring being coaxial

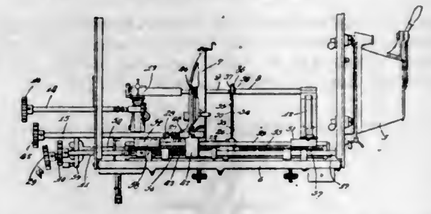
with said bearing ring and serving as a support against radial movement thereof, and lubricating material in said annular housing and supporting member from which oil is supplied to the bearing ring supported thereby to keep it impregnated with lubricating material.

1,810,297. TURBO-PUMP. VICTOR SCHLEYER, Anderson, Ind., assignor to Dean Hill Pump Company, Anderson, Ind., a Corporation of Indiana. Filed Oct. 31, 1925. Serial No. 66,080. 3 Claims. (Cl. 103—87.)



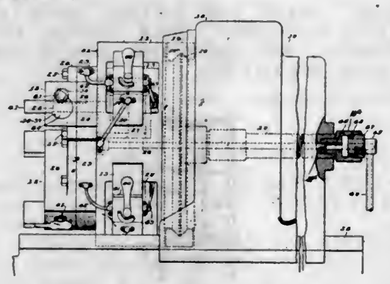
1. A turbine-pump unit, comprising a vertical shaft, a turbine having a rotor mounted on the upper end of said shaft, a centrifugal pump having a runner mounted on the lower end of said shaft, and bearing means for said shaft, said pump being provided with diffusers through which the pump runner discharges and also with steam-jacket chambers located above and below such pump runner and interconnected by passages extending through such diffusers.

1,810,298. APPLIANCE FOR THE AUTOMATIC DETERMINATION OF THE RANGE FACTORS FOR COMBATING AIRCRAFT WITH GUNS HAVING TWO OR THREE AXES AND MOUNTED ON MOVING PLATFORMS. LEOPOLD SCHMIDT, The Hague, Netherlands, assignor to Naamlooze Vennootschap Hollandsche Industrieen Handelmaatschappij, The Hague, Netherlands, a Corporation of the Netherlands. Filed Dec. 29, 1928, Serial No. 329,125, and in the Netherlands and Germany Dec. 31, 1927. 10 Claims. (Cl. 89—41.)



1. Space direction appliance, particularly for the automatic determination of the shooting data necessary for combating air targets with guns having two or three axes, mounted on moving platforms, comprising a foundation rigidly connected with the platform, a Cardan support carried on springs, a corrected reverse pendulum oscillating in the support, which pendulum provides the fixed reference plane

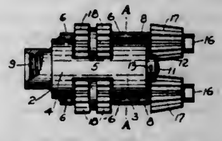
necessary for the determination of the target co-ordinates, lever arms arranged symmetrically around the vertical reverse pendulum axis, spring accumulators acting on said



lever arms and compensating the mass pressures of the pendulum, and means for coupling the spring accumulators elastically with the outer Cardan ring.

1,810,299. ARC LAMP. ORAL F. SPAHR, Chicago, Ill., assignor to Enterprise Optical Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed May 23, 1927. Serial No. 193,433. 11 Claims. (Cl. 176—51.)

10. In an arc lamp having longitudinally and vertically adjustable carbon pencils and a longitudinally and angularly adjustable reflector, the combination of a combined crater position indicator and arc striker mechanism, said mechanism being movable into an operative position in front of the reflector and adjustable in harmony with the adjustment of the carbon pencils.

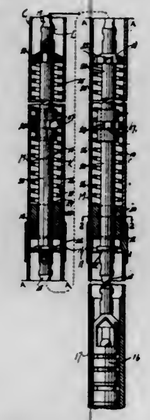


1,810,300. MULTIPLE SPINDLE CHUCKING MACHINE. JOSEPH JOHN SPRING, New Britain, Conn., assignor to The Goss and Delecuw Machine Company, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 4, 1926. Serial No. 152,526. 12 Claims. (Cl. 29—38.)

1. In a machine tool, a turret having a working face with an opening therethrough extending into said turret; a chucking unit, adapted to be mounted in said opening, said unit comprising chucking jaws and fluid pressure operating means therefor adapted to be mounted within said opening, said operating means comprising a cylinder, piston means therein, and operating connections from said piston means to said jaws, said opening being of sufficient depth whereby cylinders of various lengths may be used to allow various length piston strokes whereby the operating range of the jaws may be substantially varied.

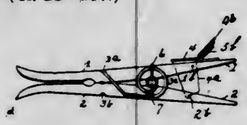
8. In a machine tool, a rotary turret comprising a cylindrically shaped substantially hollow member having a working face and an opening therethrough into said hollow member; a chucking unit adapted to be mounted in said opening, said unit comprising chucking jaws, means for mounting said jaws on said face, a cylinder connected to said means adapted to extend into said hollow member and piston means in said cylinder connected to operate said jaws; a central shaft extending from said cylindrical member having an axial passage for fluid pressure extending therethrough into said turret; a control valve for said unit mounted on said turret; and fluid connections from said axial passage to said valve and from the valve to said cylinder.

1,810,301. BOILER TUBE CLEANER. HARRISON L. STALEY, Martinsville, Ind. Filed Mar. 21, 1928. Serial No. 263,286. 9 Claims. (Cl. 15—104.14.)



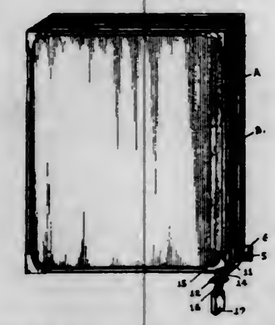
1. A tube cleaner comprising a body having a longitudinally extending transverse slot through the body thereof, a pair of overlapping frames slidably mounted in the transverse slot and toothed cutters rotatably secured in said frames substantially as described.

1,810,302. APPARATUS FOR PHOTOGRAPHING THE SEA BOTTOM. FRANK I. STILES, Miami, Fla. Filed Apr. 23, 1929. Serial No. 357,512. 1 Claim. (Cl. 61—69.)



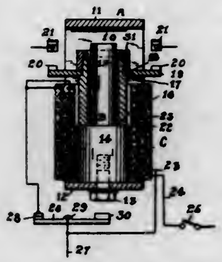
In a device of the class described, a hollow rectangular body closed at one end and open at its other end, a pane of transparent material mounted in the closed end of the body whereby a photographer entering the body may make photographic exposures through said pane when the body is immersed endwise in inclined position in a body of water, a cable connected to the body adjacent the upper rear corners thereof, another cable connected to the body adjacent the upper front corners thereof, the cables constituting means whereby the body may be maintained in a definite tilted position for endwise immersion in the water, a weight upon the top of the body at the forward end thereof and a weight within the body upon the bottom thereof and at the forward end of said bottom.

1,810,303. MEANS FOR SUPPORTING SUCKER ROD AND PUMP LINES. JOHN C. STOKES, Houston, Tex. Filed June 21, 1928. Serial No. 287,076. 9 Claims. (Cl. 103—202.)



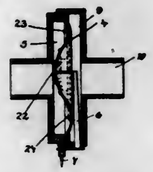
1. In well pumping equipment a string of tubing, a sucker rod line operable in the tubing, a spring device in the tubing, means to yieldably support the sucker rod line on the spring device, and means comprising a spring urged pawl on the spring device detachably engageable with the tubing to transmit the weight of the sucker rod line to the tubing through the spring device.

1,810,304. CLAMP OR CLOTHESPIN. LOUIS H. TANGEN, Duluth, Minn. Filed Oct. 12, 1929. Serial No. 399,275. 2 Claims. (Cl. 24—137.)



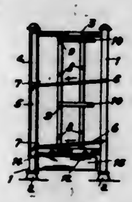
2. A clamp comprising rockable jaws, a resilient fulcrum for said jaws, and clips engaging said fulcrum and jaws for holding said jaws in rockable position against said fulcrum.

1,810,305. LOCKING DEVICE FOR BLACKBOARDS. JOHN M. TRACY and FRANCIS R. SCHERER, Rochester, N. Y., assignors to Prose-Maco Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed June 29, 1929. Serial No. 374,778. 3 Claims. (Cl. 35—15.)



1. The combination with a plurality of swinging exhibitors, of locking means therefor comprising a fixedly mounted socket piece, an arm rigidly mounted in the socket piece, and a plurality of links on said arm adapted to engage with said exhibitors, for the purpose set forth.

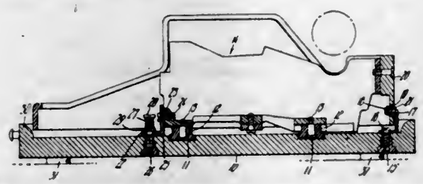
1,810,306. ELECTRORESPONSIVE DEVICE. LEV A. TROFIMOV, Cleveland, Ohio, assignor to The Electric Controller & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 19, 1928. Serial No. 271,163. 12 Claims. (Cl. 200—111.)



1. In an electro-responsive device, a winding, a movable member, means whereby a rising direct current in the winding induces in the movable member a current for operating the movable member, and means magnetized by a continuous flow of current in the winding for holding the movable member in its operated position.

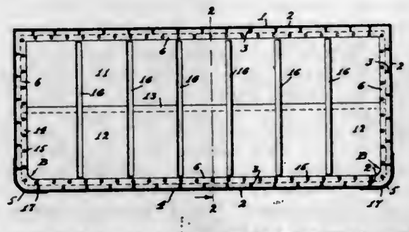
1,810,307. DIAPHRAGM FOR SOUND REPRODUCTION. ANTON VON SUCHORZYNSKI, Breslau-Bischofswalde, Germany. Filed Mar. 31, 1927, Serial No. 179,997, and in Germany Aug. 28, 1926. 1 Claim. (Cl. 181—32.)

A cup-shaped diaphragm for sound receiving or sound reproducing device, comprising in combination a cup shaped diaphragm, intersecting circular and radial ribs on the cup-shaped surface of said diaphragm subdividing said surface into small sections the vertex of the cup-shaped diaphragm being eccentric to the diaphragm edge, said intersecting circular and radial ribs subdividing the whole diaphragm surface into convex and concave shaped segments of different sizes.



1,810,308. FRAME FOR HOLDING BOOTS ESPECIALLY SNOWSHOES. JOSEF WANDELER, Lucerne, Switzerland. Filed June 10, 1929. Serial No. 369,826. 3 Claims. (Cl. 211—37.)

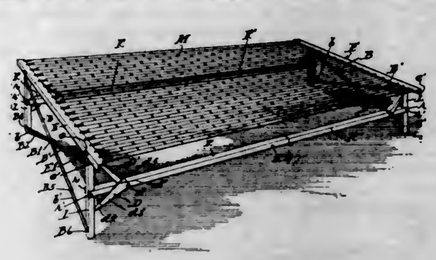
1. A frame for boots especially snow shoes with elements for supporting the shoes and means for receiving,



collecting and discharging the snow water therefrom, comprising a rear wall formed of a sheet metal box having longitudinal slots in its front wall, horizontal partitions, preferably of sheet metal fixed in said frame inclined towards the rear wall ending each in a horizontal slot, and supporting bars for the shoes above each horizontal partition.

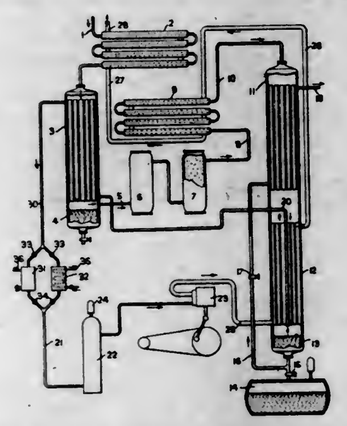
1,810,309. TYPEWRITING MACHINE. WILLIAM A. DOBSON, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 29, 1925. Serial No. 65,524. 13 Claims. (Cl. 248—16.5.)

1. The combination with a typewriter-frame having depending legs, and a baseboard for mounting the frame and receiving the depending legs, of a forwardly-extending hook mounted on the baseboard and engaging an opening in the back of the frame to provide a pivotal anchorage for the frame at its back, anchoring screws set in the baseboard and extending through brackets at the front of the frame, and coil springs directly held down by the screws against the brackets to absorb shocks by permitting the frame to swing out a distance from the board upon said hook as a pivot.



1,810,310. BULKHEAD FOR STEEL BARGES. WILLIAM G. ESMOND, Stratford, Conn., assignor to Edgar Ames, New York, N. Y. Filed Oct. 29, 1927. Serial No. 229,669. 16 Claims. (Cl. 114—79.)

1. A bulkhead for barges of the class described, comprising in combination with a flanged channel beamed hull, of a framing therefor, said framing having spaced notches to receive the flanges of said channels and being welded to said channel flanges at their points of notched contact therewith, and having bulkhead forming partitions affixed thereto, said bulkhead partitions being provided with vertical stiffening braces, bent channels forming bilge members between the sides and bottom of said hull, and outer bilge reinforcing plates riveted to channels on either side of said bent channels.

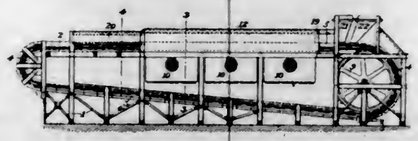


1,810,311. CAMPING BED. ELMER E. FREY, Los Angeles, Calif. Filed Oct. 4, 1927. Serial No. 223,963. 4 Claims. (Cl. 5—112.)

1. A folding bed comprising side rails, legs pivoted at points intermediate their ends to the side rails, means on the upper ends of the legs for supporting a mattress, levers having U shaped attaching portions pivoted to and inwardly of the ends of the side rails, channeled arms eccentrically pivoted to said levers, cooperating means on the upper ends of said legs and said arms whereby the same may be adjustably engaged, said levers being oper-

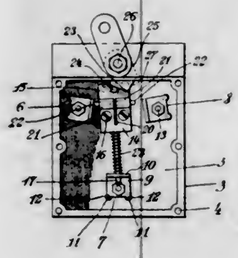
able for moving said arms in opposite directions over dead center position for supporting said arms in locked and unlocked position, the lower ends of said arms abutting said side rails when the arms and legs are in locked position.

1,810,312. PROCESS OF SEPARATING GASES. RUDOLPH LEONARD HASCHE, Elizabeth, N. J., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed May 5, 1928. Serial No. 275,391. 6 Claims. (Cl. 183—115.)



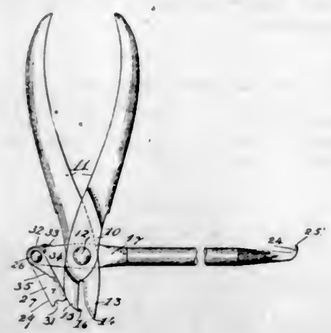
2. The process of recovering sulphur dioxide from gas mixtures such as gases from sulphur burners and by product furnaces which comprises compressing said gases to a pressure substantially above atmospheric, removing the moisture from the compressed gases and cooling the gases to substantially the melting point of sulphur dioxide at the pressure involved removing the liquid sulphur dioxide from contact with the stripped gases at said temperature, then removing the remaining traces of sulphur dioxide from the stripped gases whereby said traces are prevented from freezing when the gases are further cooled and expanding said gases with the production of external work to further cool the same whereby the expanded gases may be utilized as a refrigerant in the above cycle.

1,810,313. PROCESS OF AND APPARATUS FOR HEAT TREATING ALKALINE EARTH CARBONATE AND OTHER MATERIALS. REED W. HYDE, Summit, N. J., assignor to Dwight and Lloyd Metallurgical Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 16, 1926. Serial No. 102,593. 11 Claims. (Cl. 222—4.)



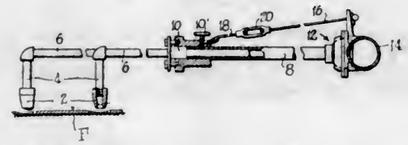
5. The process of calcining alkaline earth carbonate material which comprises forming a pervious layer of said

material, continuously feeding said layer through a calcining zone, passing gases heated to a calcining temperature through the entire layer of said material in said calcining zone, then passing said layer through a soaking zone whereby loss of heat by radiation and conduction is prevented and whereby the material is maintained at a calcining temperature for a further period of time.



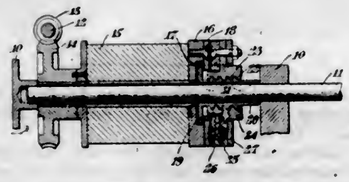
11. In apparatus for heat-treating material, a heating chamber in which material is heated, a suction box beneath said chamber, a series of receptacles having perforate bottoms for supporting the material in a pervious layer, said receptacles being movable successively through said heating chamber and over said suction box, means for producing a hot gaseous fluid, and means for introducing the same transversely of said heating chamber and throughout substantially the entire length thereof, and means for causing said fluid to pass through said material while in said heating chamber.

1,810,314. SNAP SWITCH. GUSTAV H. JOHANSON, Philadelphia, Pa., assignor to Christian Wilhjelm, Philadelphia, Pa., as Trustee. Filed Jan. 19, 1929. Serial No. 333,721. 1 Claim. (Cl. 200—68.)



1. In a snap switch of the character described, three fixed terminals, each of said terminals forming a base and an integral upright contact member, a movable switch member supported on one of said terminals and adapted to engage either of the two other terminals, said movable switch member comprising a contact piece bent to form two jaws, contact pins in said jaws, a non-conducting block, screws for securing said bent contact piece to the said block and for adjustably clamping the contact pins in the said jaws, a stem in said bent contact piece passing through a hole in the upright portion of the said one contact member in slidable and swingable relation thereto, a spring surrounding said stem between the bent contact piece and the said one terminal, a pin in said block and a lever adapted to engage said pin for operating the said movable contact member.

1,810,315. PLIER COVER REMOVER. WALTER I. KASER, Clark Township, Holmes County, Ohio, assignor of one-half to Joseph F. Glidden, Lakewood, Ohio. Filed May 2, 1929. Serial No. 359,780. 4 Claims. (Cl. 81—3.1.)

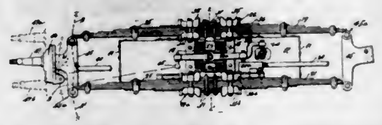


1. A can top removing device comprising a pair of pliers and a lever member pivoted between its ends upon the pivot of the said pliers and having a standard hinged at one of its ends to one end of the lever member and adapted to rest upon the rim of a can whose top is to be removed.

1,810,316. ART OF MAKING DECKLE EDGE PAPER. WILLIAM J. LAMORY, Holyoke, Mass., assignor to American Writing Paper Company, Holyoke, Mass., a Corporation of Delaware. Filed Dec. 21, 1928. Serial No. 327,624. 6 Claims. (Cl. 92—68.)

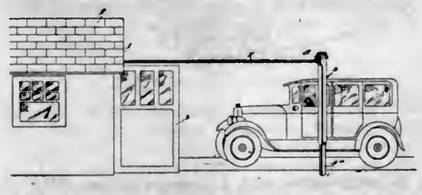
3. The method of producing deckle edge paper which consists in, flowing paper making fibrous stuff onto a movable web forming member to form a wet web, moving the web past the nozzle of a suction apparatus which has a relatively narrow orifice to remove fibers of the web entirely from the forming member along a longitudinal line to provide separate webs having adjacent deckle edges and then in moving adjacent webs in opposite directions opposed to the planes of their surfaces to separate said webs entirely from one another.

1,810,317. CLUTCH MECHANISM FOR CARD PUNCHES. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 13, 1927. Serial No. 183,388. 4 Claims. (Cl. 192—24.)



1. In a clutch mechanism, the combination of a driving ring, a driven shaft, a clutch element mounted on said shaft for rotating said shaft and slidable axially on said shaft, a flange on said element for engagement with one face of said ring, a second clutch element concentric with said first clutch element and connected thereto by a quick acting thread, a flange on said second clutch element, and a clutch face ring mounted on the flange of said second clutch element for engagement with the other face of said driving ring thereby producing a greater friction between the second clutch element and the driving ring than that produced between the first clutch element and driving ring to increase the gripping action between the clutch elements and driving ring.

1,810,318. PRODUCTION OF ESTERS OF GLYCOLS. OSKAR LOEHR, Uerdingen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Oct. 16, 1926, Serial No. 142,152, and in Germany Oct. 21, 1925. 6 Claims. (Cl. 260—106.)

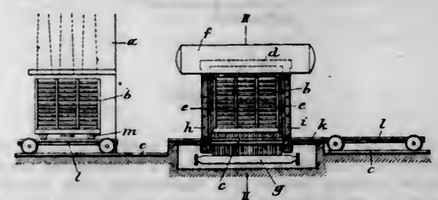


1. The process which comprises reacting at least two molecular proportions of a mono carboxylic acid with one molecular proportion of a mono olefine oxide at a temperature between about 50° C. and the boiling point of the reaction mixture and in the presence of an esterification catalyst.

1,810,319. SPRING MOUNTING. OSCAR F. LUNDELIUS and JOHN R. DILLON, Los Angeles, Calif., assignors to Lundelius & Eccleston Motors Corporation, Las Vegas, Nev., a Corporation of Delaware. Filed Jan. 9, 1929. Serial No. 331,230. 10 Claims. (Cl. 280—124.)

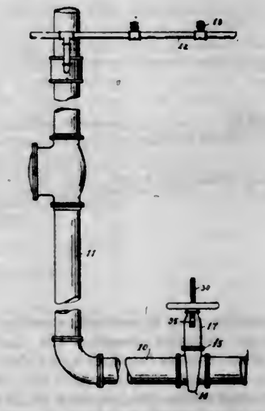
1. A mounting for connecting a horizontally extending spring to a spring supported frame, embodying a pair of spaced, axially alined perches adapted to take the spring at two longitudinally spaced points therealong, said perches each embodying a pair of vertically opposed interconnected blocks spaced respectively from the upper and lower surfaces of the spring, a pair of pads one between each of said blocks and the spring, the bearing surface of each pad being curved longitudinally of the spring and away from the spring on each side of its point of contact therewith, and the inner surfaces of the blocks engaging the pads being curved similarly to said bearing surfaces of the pads.

1,810,320. GARAGE DOOR OPERATOR. ANDREW EUGENE MICHAELSON, Portland, Oreg., assignor, by mesne assignments, of forty-nine per cent to Hilda Eschenfeld, Portland, Oreg. Filed July 18, 1928. Serial No. 293,521. 7 Claims. (Cl. 268—62.)



1. An operating mechanism for doors and the like comprising a power pulley, means for locking said pulley to hold the door in connection with which it is used in either open or closed or partially opened or closed position, and a cable wound on said pulley and operable by pull exerted thereon to simultaneously release said locking means and actuate the pulley to operate the door.

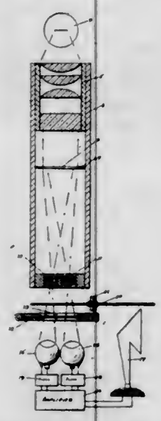
1,810,321. METAL DOOR. NATHAN MICHELMAN, Brooklyn, N. Y. Filed Dec. 24, 1927. Serial No. 242,414. 2 Claims. (Cl. 189—46.)



1. A metal door comprising front and back wall sections each section shaped with integral stiles and rails from a single sheet of steel, each section having a pair of integral side members which abut against the edges of the adjacent side members to create an air space between the walls of the sections with a packing material arranged therebetween, a top and bottom channel plate secured to the sections and a plurality of holes located in the plates, pairs of interlocking keepers welded to the inner portion of the sections adjacent the abutting edges, and a key passing through each hole made to engage the keepers so as to lock the sections together.

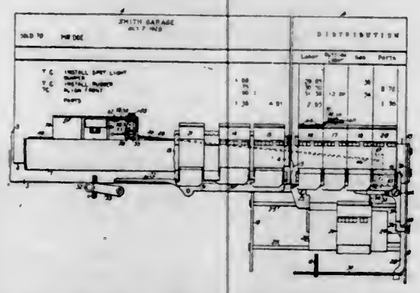
1,810,322. APPARATUS FOR THE DRY-COOLING OF COKE. ARNOLD MOETTELI, Oberwinterthur, Switzerland, assignor to the Firm: Dry Quenching Equipment Corporation, New York, N. Y. Filed Nov. 21, 1927, Serial No. 234,626, and in Switzerland Nov. 22, 1926. 3 Claims. (Cl. 202—227.)

1. An installation for the dry cooling of incandescent coke and the like comprising a chamber, a boiler comprising a lower header, an upper drum and rows of upright tubes communicably connecting said header and said drum, said tubes being arranged with one row lining one side wall of the chamber and another row lining the opposite side wall of the chamber, a hot coke container, and means for conveying said container into said chamber.



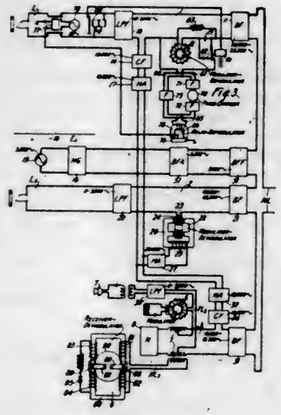
1,810,323. TRAPPED KEY SIGNAL TRANSMITTER AND VALVE CONTROL MEANS. JAMES G. NOLEN, New York, N. Y., assignor to Robert L. McElroy, Charlottesville, Va. Filed Nov. 11, 1925. Serial No. 68,435 14 Claims. (Cl. 177—360.)

1. In combination, a key-controlled means for releasing the key of said means when said means is locked in one



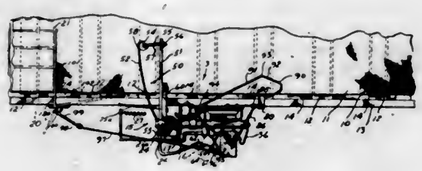
position and trapping the key when said means is not in said position; and signal means controlled by the key for trapping the key and giving one kind of signal when the key is trapped and another kind of signal when the key is released.

1,810,324. SOUND REPRODUCING APPARATUS. FREEMAN H. OWENS, New York, N. Y., assignor to Owens Development Corporation, New York, N. Y., a Corporation of New York. Filed June 18, 1929. Serial No. 371,811. 5 Claims. (Cl. 179—100.3.)



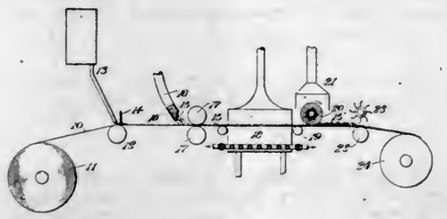
1. A sound reproducing apparatus comprising means for supporting a traveling film having a plurality of sound records thereon, means for illuminating said records, means for translating and rendering audible said records including light sensitive devices, an amplifier, loud speaker and frequency filters in the circuits between said light sensitive devices and said loud speaker, and rotatable means between said illuminating means and said light sensitive devices and having alternately disposed openings for selectively controlling the passage of light to said light sensitive elements.

1,810,325. COMBINED TYPEWRITING AND COMPUTING MACHINE. ROY PENNICOTT, Seattle, Wash., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Mar. 31, 1927. Serial No. 180,003. 7 Claims. (Cl. 235—59.)



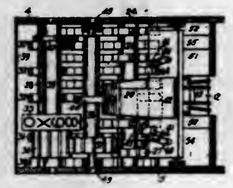
1. The combination with a carriage, a series of vertical totalizers and an actuator therefor the one traveling relative to the other, a cross totaliser and a device adapted to be tripped to test said cross totaliser for clearance, of trip mechanism comprising two coacting parts one associated with said series of vertical totalizers and one traveling relative to the other, one of said parts being constructed to yield in one direction such that said device will not be tripped during the step by step travel of the carriage and not to yield but to operate the trip mechanism during the return motion of the carriage.

1,810,326. WAVE MODULATION AND APPLICATION THEREOF. EUGENE PETERSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 30, 1926. Serial No. 145,113. 15 Claims. (Cl. 179—15.)



2. The method which comprises generating a flux by intermodulating magnetomotive forces, and controlling a flux responsive mechanical device in response to the generated flux.

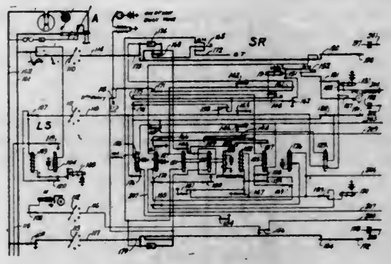
1,810,327. STAMPING MACHINE FOR CONVEYERS. JOHN S. PHELPS, Whittier, Calif. Filed Oct. 8, 1928, Serial No. 310,973. Renewed May 19, 1930. 27 Claims. (Cl. 101—35.)



1. In combination with a conveyer system along which an article moves: a stamping member movable into and from the path of travel of said article by motive power derived from the movement of said article; a reboundable stamping means carried by said stamping member and adapted to engage said article; and means for catching said stamping means on the rebound to prevent further contact thereof with said article.

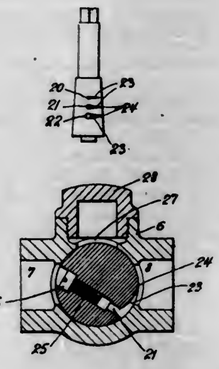
1,810,328. ART OF MAKING PILE FABRICS. NELSON SLATER, Webster, Mass., assignor to S. Slater & Sons, Inc., Webster, Mass., a Corporation of Massachusetts. Filed May 3, 1927. Serial No. 188,424. 2 Claims. (Cl. 154—1.)

1. The herein described apparatus for making pile fabric comprising means for feeding a web of stock, means for depositing an adhesive coating thereon, means for applying the pile material to said coating, a dryer through which the stock and deposited pile passes and means for raising the pile.



1,810,329. COMPUTING MACHINE. ROBERT H. STROTHER, Stamford, Conn., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 2, 1929. Serial No. 329,767. 17 Claims. (Cl. 235—59.)

6. In a computing machine in which the digits of a number are computed one after another, a symbol computer having in combination a part to be set in accordance with the symbol of a number, a series of denominational wheels, a shaft geared to the odd-numbered wheels, a shaft geared to the even-numbered wheels, and means for gearing said part to said odd and even-numbered wheels alternately in such wise that the odd-numbered wheels cause said part to turn in one direction and the even-numbered wheels cause said part to turn in the opposite direction.

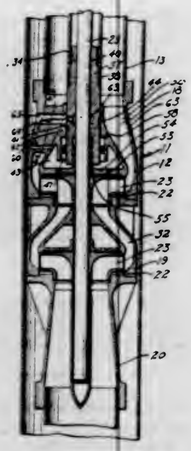


1,810,330. ZONE METERING SYSTEM. JOHN WICKS, Oak Park, Ill., assignor to Reserve Holding Company, Chicago, Ill., a Corporation of Delaware. Filed June 3, 1929. Serial No. 367,996. 19 Claims. (Cl. 179—9.)

1. In a telephone system, a calling line, switches available to said line for use in extending connections to called lines, a meter associated with the calling line, meter control equipment common to said switches, means responsive to the seizure of one of said switches for automatically associating said switch with said meter control equipment, means in said meter control equipment operable incidental to the establishment of a connection to determine the minimum charge to be made for the call, means also included in said equipment for making a corresponding charge at the termination of a predetermined time period after a

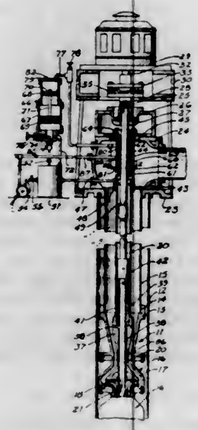
call has been answered and periodically thereafter, and means operative responsive to the termination of the call for causing said minimum charge to also be made.

1,810,331. OIL VALVE. CHRISTIAN WILHJELM, Philadelphia, Pa., assignor, by mesne assignments, to Christian Wilhjelm, Philadelphia, Pa., as trustee. Filed Jan. 19, 1929. Serial No. 333,782. 2 Claims. (Cl. 251—92.)



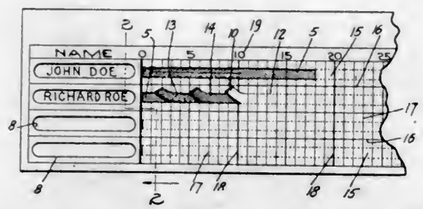
1. A valve mechanism comprising a valve chamber having an inlet and an outlet, a valve plug in said chamber provided with a plurality of passages leading from said inlet to the said outlet, each of said passages comprising an orifice leading from an eccentric tapered groove in the surface of said plug in its outlet side a distance into said plug and a threaded bore leading from the orifice to the inlet side of the plug, screws for closing said threaded bores, all of said orifices and grooves being graded in size and all of said bores being of the same size and means permitting access to the said plug from outside the valve.

1,810,332. MEANS FOR APPLYING TENSION ON SHAFT INCLOSING TUBING. JOHN A. WINTROATH, Los Angeles, Calif., assignor to Peerless Pump Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 30, 1926. Serial No. 132,387. 12 Claims. (Cl. 103—102.)



1. In a pump the combination of: a pump head; a pump section suitably supported in a well; an impeller in said pump section; a pump shaft operatively connecting said pump head and said impeller; a shaft tubing sur-

rounding said pump shaft; means for holding the upper end of said shaft tubing; and a plunger attached to the lower end of said shaft tubing, said plunger being slid-

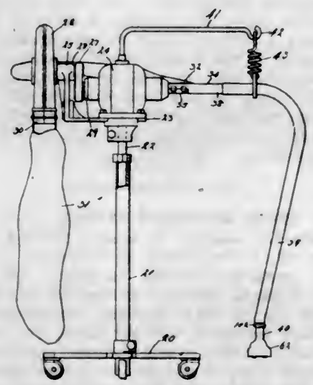


able in a chamber of said pump section, one face of said plunger communicating with a fluid passage of said pump section and the other face of said plunger communicating with the exterior of said pump section.

1,810,333. HIGH PRESSURE PUMP HEAD. JOHN A. WINTROATH, Los Angeles, Calif., assignor of one-half to Edward D. Smith, Chicago, Ill., and one-half to Wintroath Pumps, Ltd., Alhambra, Calif., a Corporation of California. Filed Sept. 7, 1926. Serial No. 133,878. 10 Claims. (Cl. 103—102.)

1. A turbine pump comprising: a pump unit adapted to be inserted in a well; a pump head situated near the top of said well; a pump shaft extending from said pump unit to said pump head, by means of which said pump unit is operated; a gas-filled tube enclosing said pump shaft; and means for maintaining in said tube a gas pressure which is higher than the pumped liquid.

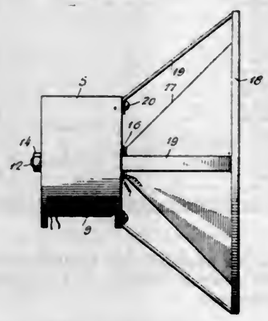
1,810,334. GRAPHIC CHART. EDWARD M. ANDRES, Phoenix, Ariz., assignor of one-half to Russel W. Tallman, Gunnison, Colo. Filed Nov. 26, 1928. Serial No. 321,931. 9 Claims. (Cl. 35—12.)



1. A chart comprising a plurality of sheets having markings and having superposed, removable strips between weakened lines, and means to fasten the sheets together at opposite sides of the removable strips.

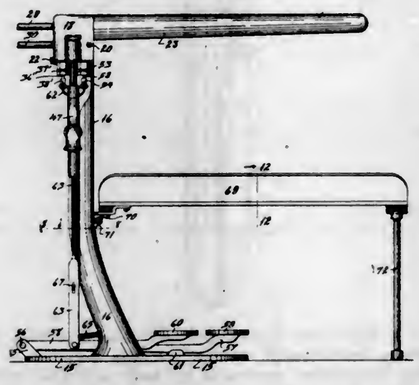
1,810,335. ARCHER'S BOW. GEORGE E. BARNHART, Pasadena, Calif. Filed Oct. 15, 1927. Serial No. 226,295. 12 Claims. (Cl. 273—106.5.)

1. In an archer's bow, the combination of: a bow member including a pair of tubes disposed end to end and connected by a tubular bushing extending into adjacent ends of said tubes; a handle surrounding the connected ends of said tube; and a string joining outer ends of said tubes.



1,810,336. PORTABLE BLACKBOARD RENOVATOR. ALBERT BENNINGTON, Ridley Park, Pa. Filed July 9, 1928. Serial No. 291,187. 4 Claims. (Cl. 51—170.)

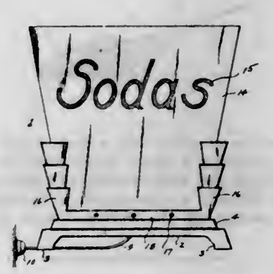
4. A device of the kind described including a head having two compartments, a neck formed with said head and



communicating with one of the compartments therein, means to provide an enclosed passage-way through the neck and the compartment with which said neck communicates to the other compartment in said head, a pair of rollers journalled in the compartment with which the neck communicates, a train of gears mounted in the other compartment for revolving said rollers in reverse directions, and mechanism in the enclosed passage-way for transmitting motion from a prime mover to the train of gears.

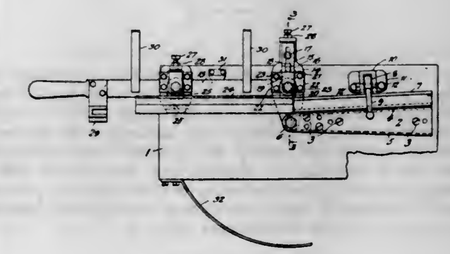
1,810,337. LOUD SPEAKER. CARL A. BERGMANN, Brooklyn, N. Y. Filed Mar. 8, 1930. Serial No. 434,196. 3 Claims. (Cl. 179—115.5.)

1. A speaker pot for dynamic loud speakers, comprising a hollow metallic body all parts of which are integral with each other and provided with an opening in its peripheral wall dimensioned to admit a magnet coil to the interior of said body.



1,810,338. STEAM BOARD. HERMAN BETKE, Denver, Colo. Filed Oct. 24, 1929. Serial No. 402,047. 11 Claims. (Cl. 68—9.)

1. A steam board comprising an operating head, a steaming chamber supported by and projecting laterally from said head, a heating unit within and sealed from said steaming chamber, a steam line communicating through said head with said heating unit, a steam passage within said head between said steam line and the interior of said steaming chamber and valve means in said head and intersecting said steam passage for selective control of the flow of steam therethrough.



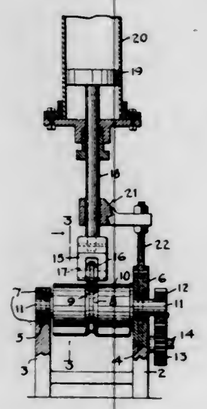
10. In a steam board having a pedestal base, an operating head supported on and by said base, a hollow heating unit supported by and projecting laterally from said head, a perforated steaming chamber adjacent and sealed from said heating unit and means including a steam line and a steam return line communicating through said head with said heating unit for the continuous circulation of steam therethrough, valve-controlled means in said head for the optional circulation of steam from said steam line within and through said steaming chamber and separate valve-controlled means in said head and operable from said steam line to withdraw steam and air from said steaming chamber.

1,810,339. ADVERTISING DISPLAY SIGN. WALTER H. BLACK, Cleveland, Ohio., assignor of one-tenth to Arthur J. Gilbert, Brooklyn, N. Y. Filed May 7, 1930. Serial No. 450,355. 4 Claims. (Cl. 40—130.)

1. An advertising display sign comprising in combination, a base, a translucent plate mounted upon the forward portion of said base and extending upwardly therefrom for receiving advertising matter to be illuminated, said plate having upwardly and outwardly inclined side edges, a source of light mounted upon said base rearwardly of said translucent plate for illuminating the advertising matter thereon, and a reflecting shield mounted upon said base in surrounding relation to said source of light, said reflecting shield having upwardly and outwardly inclined side and back walls, the top surface of said base and the inner surfaces of said reflecting shield being mirrored and cooperating with the rear surface of said translucent plate for reflecting and diffusing light from said source upwardly and rearwardly with respect to said display sign.

1,810,340. DEVICE FOR BENDING TUBES. GEORGE A. BRYAN, Peru, Ind., assignor to Bryan Steam Corporation, a Corporation of New Mexico. Filed Apr. 23, 1929. Serial No. 357,432. 4 Claims. (Cl. 153—46.)

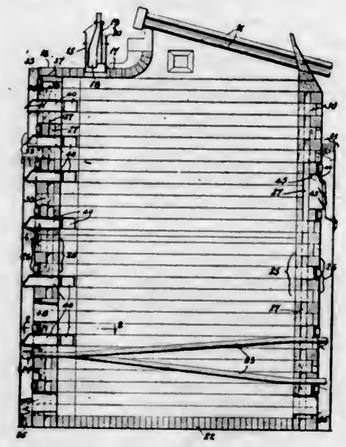
1. A machine for bending tubes comprising a bed-plate, a stationary arcuate swaging block secured to said bed-plate, a lever arm pivoted coaxial with said arcuate stationary swaging block, a movable swaging block carried by said lever arm and having a longitudinally slid-



able connection therewith, and means for moving said movable swaging block laterally to the lever arm and clamping said movable swaging block into frictional engagement with the surface of said arcuate stationary swaging block.

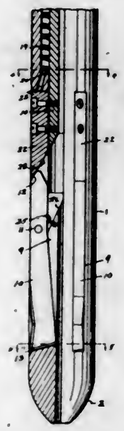
1,810,341. SHOE AND METHOD OF MAKING THE SAME. TYCHO BURK, Philadelphia, Pa. Filed Oct. 8, 1927, Serial No. 224,840. Renewed Dec. 15, 1930. 3 Claims. (Cl. 36—3.)

1. The method of producing a shoe upper part which consists in providing a blank of the desired shape, then forming slots and also slits between adjacent slots parallel therewith to produce a predetermined pattern, and then weaving strips through the slots and slits to complete a design.



1,810,342. MACHINE FOR CRIMPING PIPE SLEEVES. ARTHUR J. BULGER, Brooklyn, N. Y., assignor to Pierce Steel Pipe Corporation, New York, N. Y., a Corporation of New York. Filed July 24, 1930. Serial No. 470,879. 2 Claims. (Cl. 153—73.)

1. A machine for crimping pipe sleeves, comprising a frame, a mandrel roll having a groove intermediate its ends, said roll being mounted in the frame so that it can be raised to permit placement and removal of the sleeves over it, means for driving the mandrel roll, crimping rolls and a crimping roll carriage over the mandrel roll, means for pressing said crimping roll carriage downward and for raising it, and a connection whereby this means also serves to raise the mandrel roll.

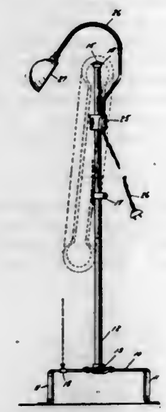


1,810,343. FURNACE. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., assignor to Locomotive Pulverized Fuel Company, a Corporation of Delaware. Filed Sept. 30, 1922. Serial No. 591,449. 3 Claims. (Cl. 110—75.)

1. In a furnace of the character described, an outer wall structure, an inner refractory wall structure, members bonding said structures together in spaced relation and being also spaced from each other to provide vertical

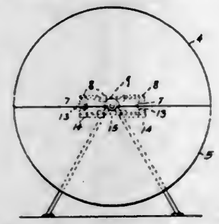
and horizontal air passages, and air-inlet conduits in the spaces between bonding members and extending through both wall structures.

1,810,344. PIPE CUTTER. WALTER L. CHURCH, Houston, Tex., assignor of one-half to W. L. Pearce, Harris County, Tex. Filed Apr. 29, 1929. Serial No. 359,093. 9 Claims. (Cl. 81—195.)



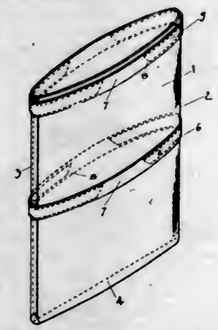
1. A pipe cutter including a body having a fluid passageway therethrough, cutters pivotally mounted in external longitudinal grooves in the body, a member having separate, detachable, blade expanders shaped to engage the upper ends of said cutters and effective to thereby move the lower ends of said cutters outwardly, and fluid pressure operated means on said member.

1,810,345. TIRE DISPLAY STAND. FRED. C. COLLINS, Akron, Ohio. Filed Mar. 15, 1929. Serial No. 347,307. 1 Claim. (Cl. 211—23.)



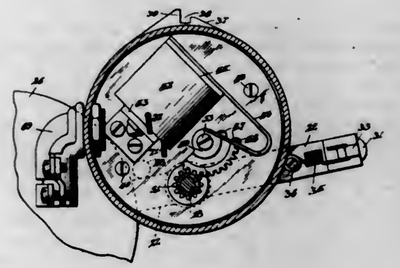
A tire display stand comprising a suitable base, an upright comprising a rod extending upwardly from said base, the upper end of said rod having an elongated head swiveled thereon adapted to receive a tire casing thereover with the interior of the casing under the tread resting

upon said head, with said head extending circumferentially of the inside of a tire casing supported thereon, and said stand suspending the tire with an outer side of the tire



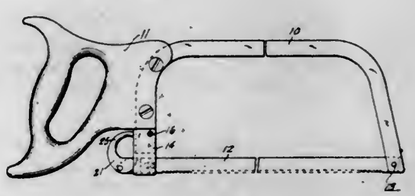
at the lower portion thereof resting by gravity against the rod whereby the tire may be easily rotated about the diameter along which it is supported to any desired angular position respecting the stand.

1,810,346. MOVING PICTURE SCREEN. EDWARD M. CRAWFORD, Houston, Tex. Filed June 17, 1929. Serial No. 371,666. 8 Claims. (Cl. 88—24.)



1. A rotatable screen formed of sections, said sections being adjustable along a transverse axis into different planes of rotation and means for rotating the screen.

1,810,347. SHOPPING BAG. EVA DAITCH, Brookline, Mass. Filed July 10, 1929. Serial No. 377,160. 2 Claims. (Cl. 150—1.7.)

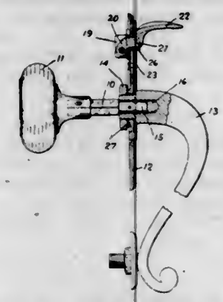


1. A shopping bag comprising a tubular body formed of a strip of integral, uniform, flexible, farbic material, and having an open and closed end, handle members adjacent said open end, a second pair of handle members midway between said open and closed ends, both of said handle members being mounted on the same side of said body, each of said handle members consisting of a fabric strap parallelly disposed to the other and to said open and closed ends of said body, and partially stitched along its length to said body, whereby the unstitched portions form grips.

1,810,348. DOWSER CONTROL MECHANISM FOR MOTION PICTURE PROJECTING MACHINES. JOSEPH T. FEWKES, Philadelphia, Pa., assignor to Sentry Safety Control Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed June 4, 1928. Serial No. 282,844. 6 Claims. (Cl. 145—53.)

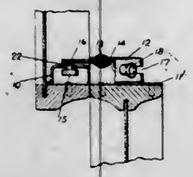
1. Dowser control mechanism comprising a casing, a shaft journaled in said casing, a dowser fixed on said shaft at right angles to the length of said shaft, a magnet, a keeper, and a gear segment on said keeper meshing with a gear on said shaft for holding said dowser out of light obstructing position when the said magnet is energized.

1,810,349. SAW STRETCHER. JAMES H. GREEN, Stratford, Conn. Filed July 10, 1929. Serial No. 377,208. 3 Claims. (Cl. 145—53.)



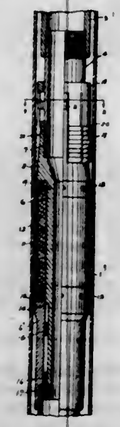
1. A saw stretcher and holder comprising a substantially U-shaped frame, a handle secured to said frame and so located that one end of the frame projects beyond the handle, a block secured to said projecting end of the frame and adapted to closely fit said end with the forward edge of the latter flush with the face of the block, the upper face of the block flatly abutting the handle so as to afford no crevices between the block, U-frame and handle, a blade secured to the other end of the frame, and means on the block for drawing the blade tight.

1,810,350. ACTUATOR. JOHN HINES, Astoria, N. Y., assignor to Segal Lock & Hardware Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 2, 1928. Serial No. 316,636. 12 Claims. (Cl. 292—348.)



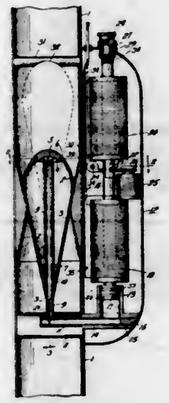
1. An actuating device including a plate, an operating member slidably mounted upon said plate, a lever rocking-

ly connected to said plate, a rotatable spindle also connected to said plate and means coupling said operating



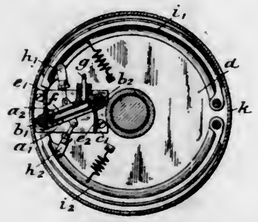
member to said lever and spindle to convert the rocking movements of the former into rotational movements on the part of the latter.

1,810,351. FASTENING DEVICE. JOHN HINES, Astoria, N. Y., assignor to Segal Lock & Hardware Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 2, 1928. Serial No. 316,637. 9 Claims. (Cl. 292—241.)



1. A fastening device including a pair of sheet metal members of substantially constant gauge, a lever pivotally carried by one of said members, the second of said members being formed with a slot eccentrically disposed with respect to the point of pivotal connection of said lever, and means carried by said lever to ride within said slot.

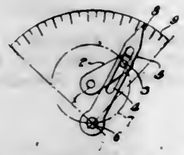
1,810,352. COMBINATION PACKER AND SETTING TOOL. GRANVILLE A. HUMASON, Houston, Tex., assignor of one-half to J. A. Logan, Harris County, Tex. Filed Oct. 14, 1929. Serial No. 399,664. 1 Claim. (Cl. 166—12.)



Apparatus of the character described for forming a fluid tight joint between an inner tubing and an outer casing and including a tubular packer support longitudinally movable with respect to said tubing, an expansible packer around the support and attached to the support and tubing, said support and tubing having means adjacent the ends of the packer effective to expand said packer when the support and tubing are relatively moved longitudinally in one direction, interengaging abutments carried by the support and tubing, respectively, arranged to limit such movement to limit the expansion of the packer, one of said abutments being adjustable and an abutment on the support with which the tubing abutment may engage to suspend the tubing from said support.

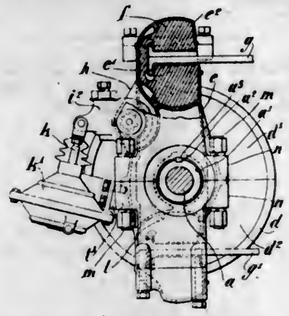
1,810,353. AUTOMATIC VALVE. RAYMOND P. JOHNSON, Lynbrook, N. Y., assignor to Standard Oil Company of New York, New York, N. Y., a Corporation of New York. Filed July 14, 1928. Serial No. 292,649. 12 Claims. (Cl. 137—139.)

1. A valve of the character described, including a fluid conduit, a valve seat member of double cone-shaped formation having a Venturi opening disposed within said conduit, a guide rod, a pear-shaped closure member telescoping over said guide rod and movable longitudinally thereon to open and close the valve the larger end of the closure member being presented against the direction of intended fluid flow through the valve, and in advance of the most restricted part of the opening in said valve seat member, and means for controlling the movement of said closure member.



1,810,354. WHEEL BRAKE. PETER KARSTEN, Dusseldorf, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik Sommerda Aktiengesellschaft, Sommerda, Germany, a Corporation of Germany. Filed Oct. 2, 1929, Serial No. 396,624, and in Germany Nov. 12, 1928. 2 Claims. (Cl. 60—54.6.)

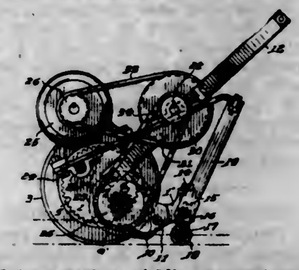
1. A fluid motor for compressed air brake systems, particularly for power driven vehicles, comprising two spaced



parallel fixed plates, two curved wall sections extending between said plates in transverse perpendicular relation thereto, two swinging pistons pivoted at diagonally opposed points of said wall sections and having their free ends movable along the same, an inflatable elastic member enclosed between said pistons and wall sections, and a compressed air conduit passing through one of said pistons for conducting air under pressure to said inflatable member whereby said pistons are pivotally actuated in opposite directions to develop a braking action.

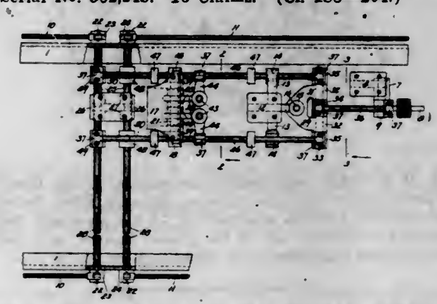
1,810,355. RADIO TUNING INDICATOR. RUSSELL T. KINGSFORD, Wyncote, and LEWIS H. DAVIS, Upper Darby, Pa., assignors to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 6, 1930. Serial No. 459,528. 15 Claims. (Cl. 74—7.)

1. In a tuning system utilizing a rotor of a tuning device and a pointer with its scale, a mechanical movement for determining the relative movements of the rotor and pointer comprising a member movable in fixed relation with respect to the rotor, and a pointer actuating member controlled by said member and pivoted upon a circle substantially in an arc of which said member moves.



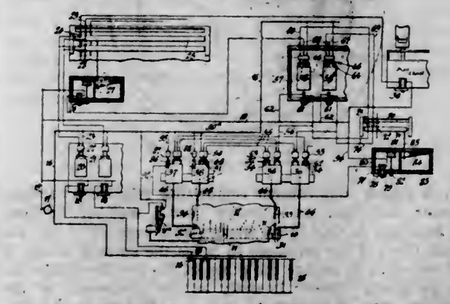
1,810,356. BRAKE SPIDER. AUGUST H. LEIPERT, College Point, Long Island, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 1, 1928. Serial No. 282,261. 4 Claims. (Cl. 188—206.)

1. In combination with vehicle springs and an axle housing, a brake spider comprising independent sections, means to secure the sections as a unit upon the axle housing, and means to secure one of the springs to each of the sections.



1,810,357. ELECTRICALLY DRIVEN LAWN MOWER. JOHN LENHART, Richboro, Pa. Filed Oct. 21, 1930. Serial No. 490,112. 3 Claims. (Cl. 56—26.)

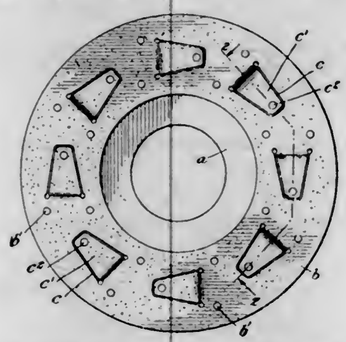
1. In a motor driven lawn mower, the combination with a mower frame, driving wheels therefor, a cutter blade shaft geared to one of said wheels, a spider, and cutter blades carried thereby, said spider being secured to said shaft near the ends of said cutter blades, of a sprocket wheel having an opening for the free passage of said shaft therethrough and terminating in a radially extending flange fitting against the outer side of said spider, an annular member insertable between said blades and adapted to lie flat against the inner side of said spider and bolts passing through said ring and freely through said spider and into said flange to clamp said sprocket rigidly to the outer side of said spider, a rigid framework secured to said mower frame and extending above said cutter blades, a motor mounted on said framework, a countershaft mount-



ed on said framework, a yielding power transmission between said motor and said countershaft and a positive power transmission between said countershaft and said sprocket wheel on said spider, whereby the power of the aforesaid motor is transmitted to the cutter shaft to rotate the same and the cutter shaft drives said wheel to propel the mower forwardly.

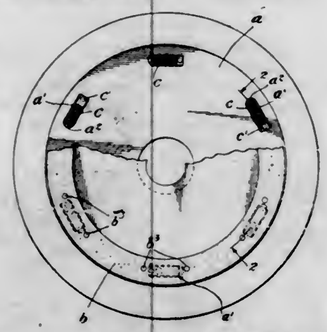
1,810,358. FOUR-WHEEL BRAKE EQUALIZER. LEROY N. LINSCOTT, Thompsonville, Conn. Filed May 11, 1929. Serial No. 362,245. 16 Claims. (Cl. 188—204.)

15. In an equalizer of the class described, mechanism connected with four brake-actuating elements, said mechanism including a series of rocker arms and operating rods therefor and swivels which carry certain of said arms which are operable in opposed planes.



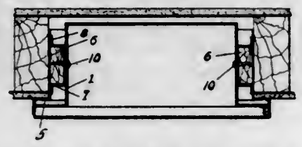
1,810,359. AUTOMATIC MUSICAL INSTRUMENT. LOUIS S. LOCKWOOD, North Tonawanda, N. Y., assignor to The Rudolph Wurlitzer Manufacturing Company, North Tonawanda, N. Y., a Corporation of New York. Filed Dec. 13, 1926. Serial No. 154,385. Renewed Apr. 9, 1931. 30 Claims. (Cl. 84—98.)

7. An automatic musical instrument, comprising a tracker having a pair of openings, an electro-pneumatic



device to be actuated, pneumatics connected with said tracker openings, an electric circuit including said electro-pneumatic device, switches in said circuit controlled by said pneumatics, the latter being actuated to close said switches when said pair of tracker-openings is uncovered to render said electro-pneumatic device operative, and to open said switches when the openings are covered, and a normally closed switch in said circuit controlled by one of said pneumatics and arranged to be momentarily opened before said first-named pneumatic switches are closed to render the device inoperative during the initial uncovering of the tracker openings, said switch being closed during and after the closing and opening of the pneumatic switches to retain the device operative when the tracker-openings are covered.

1,810,360. CLUTCH DISK CONSTRUCTION. BRUNO LOEFFLER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1929. Serial No. 392,077. 2 Claims. (Cl. 192—107.)

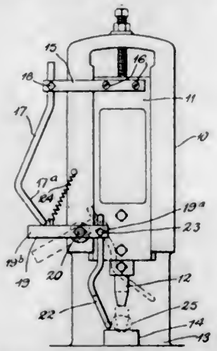


1. In a clutch construction, an annular plate, friction members secured to the plate at opposite sides thereof, and resilient portions stamped out of the plate and members and projecting out of the planes thereof, said resilient portions projecting upon opposite sides of the plate.

1,810,361. CLUTCH DISK CONSTRUCTION. BRUNO LOEFFLER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1929. Serial No. 392,078. 2 Claims. (Cl. 192—52.)

1. A clutch construction comprising relatively rotating annular members, an annular spring member between the members having faces sloping with respect to the adjacent faces of the members to cause the surface of one of said members to engage the other of the members adjacent one periphery thereof initially in the movement of the members into engagement, and a cylindrical extension on the annular member adjacent its inner periphery.

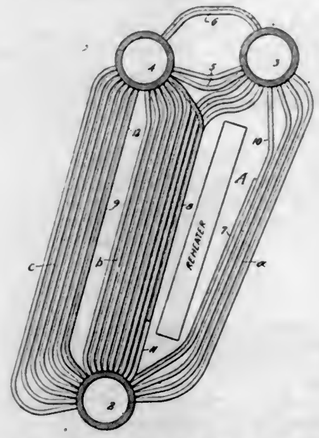
1,810,362. WALL CABINET. MAURICE LUMLEY, Cincinnati, Ohio, assignor to The F. H. Lawson Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 1, 1929. Serial No. 375,122. 1 Claim. (Cl. 20—1.11.)



A mounting for a metal wall cabinet, comprising a frame with side walls intermediate the width of which metal boxes are mounted, said metal boxes retaining wooden fillers and having holes through which screws, extended through said cabinet, may be seated in said filler members.

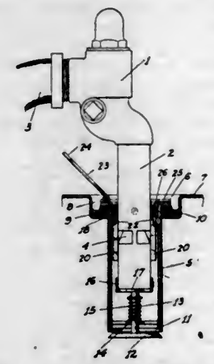
1,810,363. UNDERSHIRT PULLER. VASELE N. MALAPETA, Terminous, Calif. Filed Oct. 18, 1929. Serial No. 400,718. 3 Claims. (Cl. 223—20.2.)

1. A garment puller comprising an elongated shank formed at one end to serve as a handle, and a smooth-edged and non-pointed fabric engaging element projecting toward the handle from the opposite end of the shank and rigid therewith.



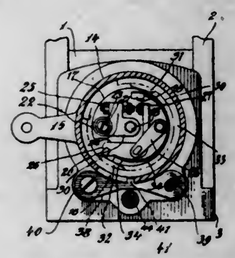
1,810,364. GUARD FOR PRESSES. CLINTON E. MARSHALL, Brooklyn, N. Y. Filed June 7, 1929. Serial No. 369,102. 4 Claims. (Cl. 74—105.)

1. A guard attachment for presses comprising a part adapted to be coupled with the plunger of the press, a lever pivoted to the lower end of the frame of the press above the bed plate thereof, a guard arm adjustably supported in connection with one end of said lever and having an offset portion arranged to move transversely with respect to and adjacent the front of the plunger die of the press, an operating rod adjustably coupled with said part and extending from said part to said lever and bearing upon the other end of said lever to transmit



movement to said guard arm in the descent of the plunger, and tensional means coupled with said frame and with the last named end of said lever for maintaining said end of the lever in constant engagement with said rod.

1,810,365. BENT TUBE BOILER. LEONARD J. MARSHALL, Westwood, N. J., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 4, 1929. Serial No. 352,369. 1 Claim. (Cl. 122—302.)



In combination, a bent tube boiler having a mud drum, upper steam and water drums and banks of tubes connecting said drums including a front bank, the tubes of which connect the mud drum and the front steam and water drum, and a second bank certain of the tubes of which connect the mud drum and a second steam and water drum and other tubes of which connect the mud drum and the front steam and water drum, said banks of tubes being so bent as to provide a substantial space therebetween for the major part of the longitudinal extent of the banks of tubes, a steam heater in said space, a rear baffle for the front bank terminating short of the front steam and water drum, and a front baffle for the second bank terminating short of the mud drum and shielding all of the tubes of said second bank.

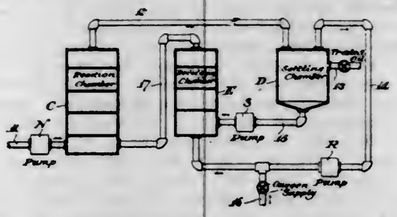
1,810,366. SELF-CLOSING DRUM FILLING VALVE. FELIPE MARTIN, Fairfield, Calif. Filed June 10, 1930. Serial No. 460,141. 1 Claim. (Cl. 284—14.)

. A self-closing filling valve structure for drums for use in connection with a cylindrical nozzle having discharge openings intermediate its ends, said structure comprising a barrel of greater diameter than the nozzle adapted to be removably secured on and depend into a drum, a downwardly opening valve for the bottom of the barrel mounted in connection with the barrel, means to yieldably hold the valve closed, means adapted to be mounted on the lower end of the nozzle to depress and open the valve after the nozzle has been inserted into the barrel a distance sufficient to dispose the intermediate openings of the nozzle below the top of the barrel, a sleeve to loosely fit inside the barrel adapted to be mounted on the nozzle with its upper end above the openings and with its lower end below said openings, and releasable catch means between the sleeve and barrel to hold the nozzle in a valve opening position; said sleeve having side ports in the zone of the nozzle openings.

1,810,367. ADJUSTING DEVICE FOR MAGNETOS. JOHN F. MARTIN, Springfield, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Jan. 24, 1930. Serial No. 423,228. 12 Claims. (Cl. 123—149.)

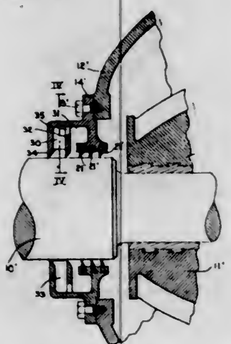
1. In a magneto, an interrupter, means for actuating the interrupter, and a plane member held against the end of the magneto and extending adjustably across said end, said member engaging said means to fix the edge distance of said magneto.

1,810,368. GEAR CONSTRUCTION. JULIAN L. PERKINS, West Springfield, and HIRAM D. CROFT, Springfield, Mass., assignors to Perkins Machine & Gear Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Jan. 13, 1930. Serial No. 420,521. 3 Claims. (Cl. 74—41.)



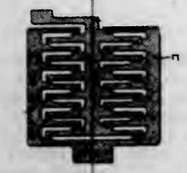
1. A gear assembly comprising in combination, a gear having peripheral teeth converging towards its axis at a side thereof, a hub disposed at said side concentrically thereof which is joined thereto by welding to provide a unified rigid structure, the said hub having a part which intersects the included angle of the root of the teeth of said gear.

1,810,369. REFINING HYDROCARBON OILS. ALBERT G. PETERKIN, Jr., Bryn Mawr, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 4, 1928. Serial No. 323,690. 9 Claims. (Cl. 196—30.)



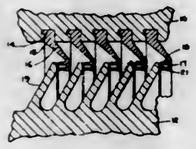
1. A continuous closed cyclic process for treating sour hydrocarbon oil, which comprises passing the oil in a continuous stream through a treating zone, during such passage subjecting the oil to the action of a confined quantity of sweetening agent capable of reactivation by

free oxygen, maintaining the sweetening agent active by contacting it with a confined quantity of gas containing



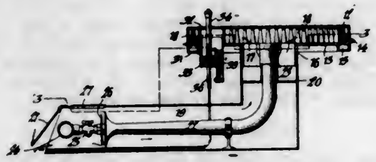
free oxygen, and replacing the oxygen consumed in maintaining the sweetening agent active by adding free oxygen to said gas.

1,810,370. BEARING HOUSING SEAL. JAMES L. RAY, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 1, 1927. Serial No. 171,823. 1 Claim. (Cl. 286—9.)



An oil vapor seal for the clearance space between a bearing housing and a shaft projecting through a wall thereof, comprising a member carried by the housing and providing outer and inner annular chambers having a partition therebetween and open sides facing the shaft, said partition having an opening therein spaced from the inner periphery thereof, and a deflector carried by said member and disposed in the outer chamber for deflecting the moving film of air surrounding the shaft when rotating and directing the same away from the shaft and through said opening to the inner chamber.

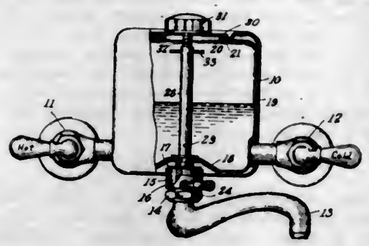
1,810,371. LABYRINTH GLAND PACKING. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation or Pennsylvania. Filed Apr. 13, 1928, Serial No. 269,816, and in Great Britain Apr. 28, 1927. 3 Claims. (Cl. 286—10.)



1. Labyrinth gland packing for two relatively rotatable members comprising a plurality of concentric substantially cylindrical packing strips carried by one member and a plurality of similar strips carried by the other member and interleaving with the first-mentioned strips, said strips being sufficiently thin and axially elongated to provide radial flexibility of the free ends, each of said strips, other than the outermost, being extended radially outwardly at its fixed end to cooperate with the integral free end of the adjacent outer strip to provide a fluid seal construction, there being sufficient clearance between the free end of each strip and the fixed end of the externally adjacent strip to avoid contact upon expansion of the free end.

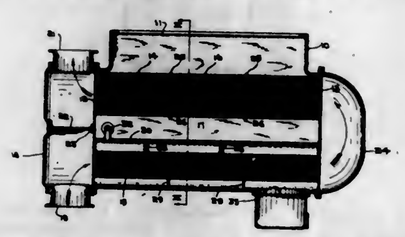
1,810,372. LABYRINTH PACKING. FRANCIS HODGKINSON, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 9, 1928. Serial No. 311,345. 8 Claims. (Cl. 286—10.)

1. In a labyrinth packing for sealing the space between two relatively rotatable members, an annular conical packing element carried by one of said members and having a free edge extending axially toward and packing against a part of the other member by axial clearance and so disposed as to move in the direction in which it increases said axial clearance in case of heating and expansion of the free edge.



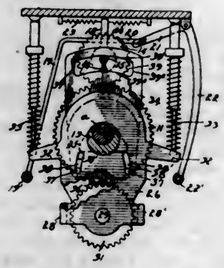
1,810,373. GAS BURNER. MILLARD J. ROBERTS, Buffalo, N. Y., assignor to Roberts-Gordon Appliance Corporation, Buffalo, N. Y. Filed Jan. 2, 1929. Serial No. 329,754. 11 Claims. (Cl. 158—99.)

1. A gas burner, comprising a body having a primary chamber for the gas, a secondary chamber for the air and outlets therein for the gaseous mixture, burner-tubes communicating at their lower ends with said primary chamber and discharging at their upper ends adjacent said outlets, an air duct leading to said secondary chamber, means for interrupting the supply of air to said duct, and a mixing tube for the gaseous mixture and receiving air from within said air duct and communicating at its inner end with said primary chamber.



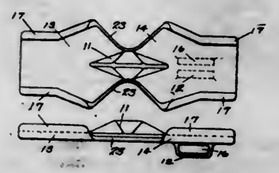
1,810,374. DISHWASHING MACHINE. RAYMOND B. SHOEMAKER and CHARLES L. LAWRENCE, New York, N. Y. Filed Aug. 30, 1927. Serial No. 216,409. 8 Claims. (Cl. 299—85.)

1. In an apparatus of the character described the combination with oppositely directed hot and cold liquid supply pipes, of a mixing chamber into which said supply pipes empty, means for controlling the supply of liquid from each pipe to temper a mixture of liquids from said pipes in said chamber, a container within said chamber and between said pipes constructed for supplying fluid material to the mixture in response to pressure on each side thereof from either the hot or cold liquid supply,



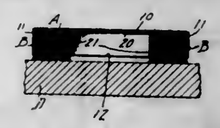
an outlet from said chamber comprising a regulating device for the liquid before it is mixed with the material from said container.

1,810,375. CONDENSER. JOHN H. SMITH, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 29, 1930. Serial No. 457,825. 17 Claims. (Cl. 257—43.)



1. In a condenser, the combination of a shell structure, a tube nest extending longitudinally through the shell structure and embodying first and second passes, water boxes associated with the ends of the tube nest and providing for the circulation of cooling water through the first pass of the tube nest and thence through the second pass of the tube nest, an inlet provided in the shell structure for distributing gaseous media to be condensed to one of the passes of the tube nest, longitudinally-extending passageway means of substantial flow area between the passes for distributing gaseous media to the other pass of the tube nest, and means communicating with the interior of the shell structure near the entrant end of that pass in which the cooling water is first circulated for removing non-condensable gaseous media from the shell structure.

1,810,376. CONTROLLING MEANS. HORACE F. STEVENS, Kenilworth, N. J. Filed July 3, 1930. Serial No. 465,490. 6 Claims. (Cl. 74—54.)



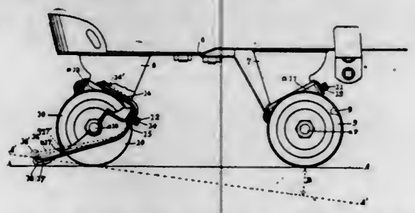
1. In an automatic control of the character described, the combination with a driven rotary element of an oscillatory toothed rotary element, a gear on and revolving with said driven element, at least one other gear loose on said driven element, said oscillatory element being adapted to engage both said gears, means influencing the rotation of said loose gear so as to cause said oscillatory element to oscillate and be retained out of its normal position while said driven element is rotating and including means cooperating with said oscillatory element for actuating said first named means, and means for automatically returning said oscillatory element to its initial position after the rotation of said driven element cases.

1,810,377. METHOD OF MAKING SEPARABLE FASTENER SLIDERS. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Original application filed Jan. 27, 1925, Serial No. 5,020. Divided and this application filed Mar. 29, 1927. Serial No. 179,233. 10 Claims. (Cl. 29—148.)

1. The method of making a separable fastener slider which comprises forming a thickened portion on a strip of sheet material, forming wings on either side of said thickened portion, and bending said wings toward each other to compress said thickened portion between them.

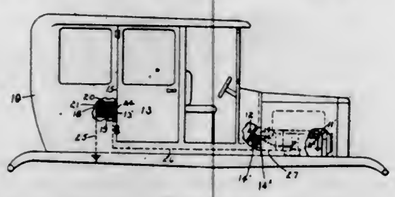
1,810,378. BASE FOR TYPEWRITERS AND OTHER ARTICLES. CHARLES B. ULRICH, Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y. Filed Mar. 14, 1928. Serial No. 261,655. 2 Claims. (Cl. 248—16.)

1. A vibration absorbing support for a typewriter or similar article, including a rigid frame member upon which the article is supported and having a plurality of relatively long and narrow recesses formed in the lower face thereof, a soft resilient cushion extending into certain of said recesses and having a relatively small portion thereof extending beyond the walls of said recesses, the walls of the recesses lightly engaging said cushion to avoid interfering with the vibration absorbing properties of the portion of the cushion within said recess.



1,810,379. CURRENT TRANSFORMER. MARIO URBINATI, Rome, Italy. Filed June 20, 1928, Serial No. 286,953, and in Italy June 23, 1927. 4 Claims. (Cl. 171—123.)

1. Apparatus for the transformation of electric alternating current into direct current and vice-versa, comprising a transformer inclusive of an iron core, a primary

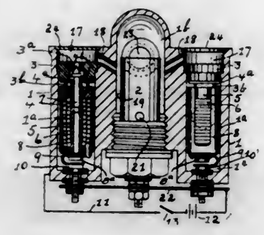


winding wound thereabout, a secondary winding wound thereabout, said secondary winding comprising a plurality of groups of turns, at least one turn of each group being of fractional length, the number of said groups and the values of the fractional turns thereof and of the iron surrounded by said fractional turns being such that the sum of the induced electromotive forces corresponding to the total of the fractional turns of all of the groups is equivalent to the electromotive force corresponding to a single turn around the entire section of the core.

1,810,380. ROLLER SKATE. WILLIAM V. VAN ETTEN, Bellingham, Wash. Filed May 20, 1930. Serial No. 454,070. 3 Claims. (Cl. 208—173.)

1. A roller skate including a foot plate, front wheels attached to and mounted beneath the front end of the foot plate for revolution, a bolster fastened beneath the rear end of the foot plate, a rear axle connected to the bolster, rear wheels mounted on the rear axle for revolution, a brake device attached to the front side of the bolster extended rearward between the rear wheels, and a T head on the rear end of the brake device disposed adjacent the rear wheels and adjacent the floor on which the skate may run to bear on the rear wheels and on the floor when the front wheels are above the floor.

1,810,381. LOCKING DEVICE FOR MOTOR VEHICLES. ABRAHAM WEISS, New York, N. Y. Filed Aug. 24, 1928. Serial No. 301,846. 5 Claims. (Cl. 180—82.)

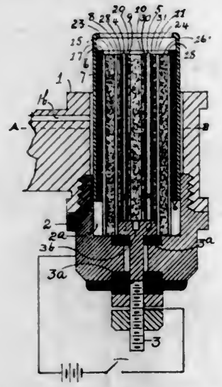


1. In a motor vehicle having driving control means, a door and an electrical fuel ignition system, a switch controlled through said door, a switch controlled through said driving control means and series electric connections between said switches across the ignition system such that when the door is open and the driving control is placed in operative position the ignition system will be short circuited.

1,810,382. MEANS FOR VAPORIZING HYDROCARBON FUEL. IRVING E. ASKE, Duluth, Minn. Filed May 2, 1922. Serial No. 557,832. 2 Claims. (Cl. 48—180.)

1. A fuel vaporizing and mixing device comprising an L-shaped gaseous fuel conduit having a discharge port and an intake port, an enlarged chamber located adjacent to the bend and formed on the upper wall of the conduit leading from the bend to the discharge port, said chamber having no part of the same projecting into the conduit, an electric heated element mounted wholly within the chamber, said element being spaced from the back wall and from the side wall of the chamber nearest the discharge port of the conduit, whereby the condensed particles of fuel in the fuel stream are thrown laterally against the electric heated element to be vaporized and be returned to the fuel stream.

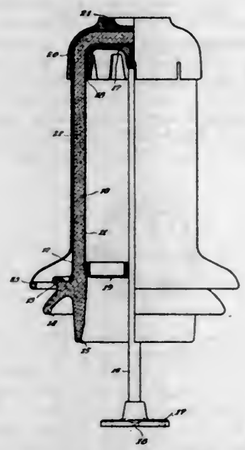
1,810,383. VAPORIZER. IRVING E. ASKE, WILLIAM F. ASKE, and LEONARD E. ASKE, Minneapolis, Minn. Filed Dec. 4, 1929. Serial No. 411,484. 1 Claim. (Cl. 261—12.)



In a vaporizer, the combination of a heater chamber containing an electric heater; a fuel oil valve chamber provided with an intake port adapted to communicate with a source of hydrocarbon fuel supply, said valve and heater chambers having a port in common through which said valve chamber may discharge hydrocarbon fuel into said heater chamber; an electro-magnetic valve positioned between the intake and discharge ports of said fuel oil chamber and adapted to govern the flow of hydrocarbon fuel to said heater chamber; an air valve chamber provided with an intake port communicating with the atmosphere, said air valve chamber and said heater chamber having a port in common through which said air valve chamber may discharge air into said heater chamber; an electro-magnetic valve positioned between the intake and discharge ports of said air valve chamber and adapted to govern the flow of air to said heater chamber, said heater chamber having a discharge port formed therein adapted to discharge heated and vaporized hydrocarbon fuel and fumes from said heater chamber, and electric means for energizing said valves and for independently energizing said heater and adapted to open said valves when said heater is in operation.

1,810,384. VAPORIZER. IRVING E. ASKE, Minneapolis, Minn. Filed Jan. 24, 1930. Serial No. 428,130. 5 Claims. (Cl. 219—38.)

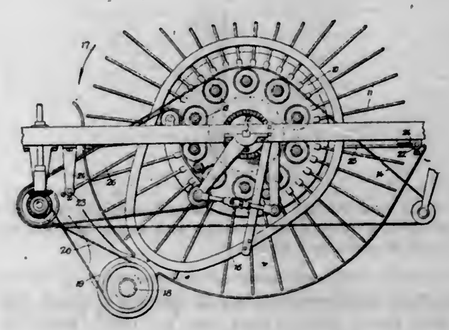
1. The combination of a cup open at one end and closed at the opposite end and provided with an intake port, an electricity conducting post extending into said cup through its closed end and insulated therefrom, a pair of non-absorbent refractory leaves extending into said cup, an electric resistance member electrically connected at one end to the inward said post and grounded at its opposite end and extending intermediate of its ends between said leaves and in contact with the inward faces thereof, absorbent members in contact with the outward faces of said non-absorbent leaves, a sheath of heat insulating material encircling said absorbent members leaves and resistance member and provided with a fuel intake port, a shell



CARNEGIE LIBRARY OF ATLANTA

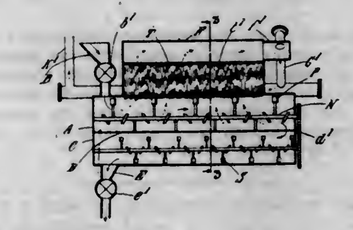
encircling said sheath and spaced for a part of its length from the side wall of said cup, and provided with an intake

port adapted to communicate with the intake port of said sheath and with the space between said shell and the side wall of said cup.



1,810,385. CONDENSER. ARTHUR O. AUSTIN, near Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed May 27, 1927. Serial No. 194,604. 13 Claims. (Cl. 175—41.)

1. A condenser comprising a tubular dielectric member having the upper end thereof closed, conductor coatings on the outer and inner surfaces of said member terminating back of the lower end of said member and an upwardly curved dielectric flange on the outer surface of said member between the termination of the outer coating and the open end of said member and a metallic weather shield on the outer surface of said member having an outwardly projecting flange overlying said dielectric flange.



1,810,386. COTTON PICKER. HIRAM N. BERRY, Greenville, Miss., assignor, by direct and mesne assignments, to Cotton Harvester Corporation of America, Greenville, Miss., a Corporation of Delaware. Filed Nov. 28, 1927. Serial No. 236,229. 5 Claims. (Cl. 56—44.)

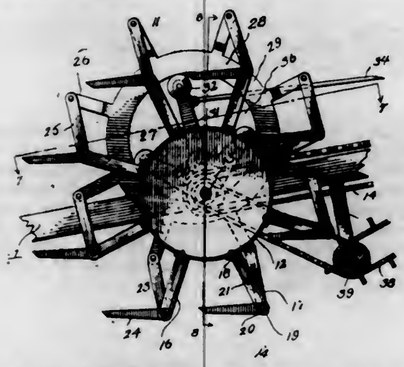
1. In a cotton picker, a revolving cylinder, rotating spindles radiating from said cylinder, stripper bars, means to move said bars inwardly and outwardly on the spindles with respect to the cylinder, a series of protecting bands

surrounding the stripper bars between the spindles, and supporting members extending from said bands to points beyond the ends of the spindles.

1,810,387. CRACKING, CATALYZING, AND HYDROGENATION OF CARBONACEOUS MATERIALS. ALBERTO EDOARDO BIANCHI, Milan, and GALILEO GUARDABASSI, Rho, near Milan, Italy, assignors, by mesne assignments, to "Intercarbo" Societe Anonyme pour la Carbonisation et la Traitement Catalytique des Combustibles, Paris, France. Filed Nov. 30, 1926, Serial No. 151,648, and in Great Britain May 27, 1926. 4 Claims. (Cl. 196—53.)

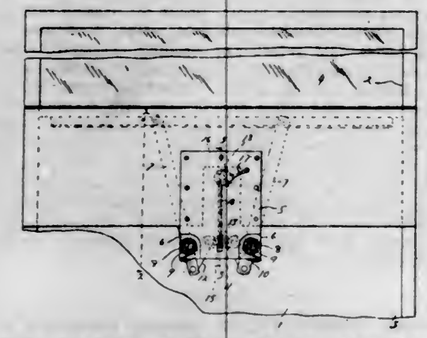
4. In apparatus for cracking and hydrogenating carbonaceous materials, a retort, means for passing said materials continuously through said retort, a chamber located above said retort and opening thereinto, chains suspended in said chamber and forming a thick foraminous mass having a large contact surface, agitators adapted to revolve in said retort and to keep said chains in continuous vibration, an outlet pipe for gases at the upper part of said chamber, two outlet pipes of less cross-sectional area communicating with said first named outlet pipe, two outlet pipes of greater cross-sectional area each communicating with one of said outlet pipes of lesser area, and two ascension pipes of less cross-sectional area each communicating with out of said outlet pipes of greater cross-sectional area.

1,810,388. FIRE KINDLER. CHARLES BLAMFIELD, Boston, Mass. Filed Mar. 10, 1930. Serial No. 434,683. 7 Claims. (Cl. 44—38.)



2. A fire kindler comprising a block of combustible material, a layer of porous material attached to one face of said block, said layer being saturated with suitable

readily combustible substance, means to attach said kindler to a piece of wood to be ignited thereby, and means

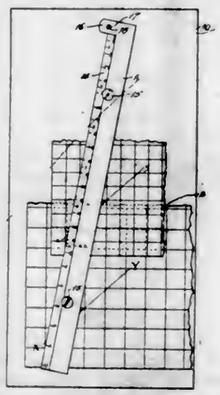


to space said kindler a predetermined distance from said wood, each kindler being provided with means whereby two or more kindlers may be united.

1,810,389. SCOOPING MACHINE. HERMAN H. BOETTCHER, Blue Earth, Minn. Filed Jan. 31, 1927. Serial No. 164,948. 13 Claims. (Cl. 55—59.)

1. A rotary scoop construction comprising a rotary support, a plurality of trays mounted on the support and projecting radially therefrom, a conveyor positioned to receive articles from the trays, and means for scooping up articles and depositing the same onto the trays, said means passing through the trays to facilitate the depositing of the articles on the trays.

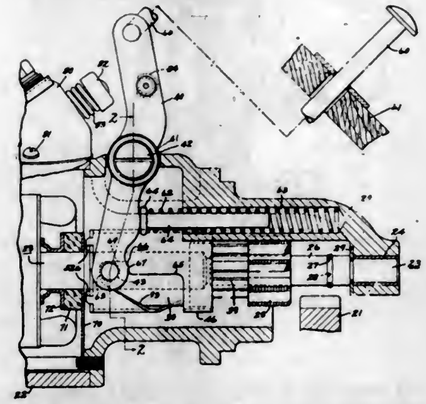
1,810,390. WINDOW REGULATOR. HOWARD C. BORTEL, Toledo, Ohio, assignor, by mesne assignments, to The Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 23, 1925. Serial No. 70,853. 7 Claims. (Cl. 268—126.)



1. In a window regulator, the combination with a closure, of a plurality of pivotal arms for operating said closure and actuating means for said arms including a pivotal equalizer and connections between said equalizer and arms.

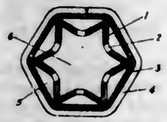
1,810,391. ROTARY ACTION BIT. EUGENE L. BOYNTON, Pasadena, Calif. Filed Oct. 24, 1927. Serial No. 228,271. 1 Claim. (Cl. 255—27.)

In the art described, a drill bit having a stem with helical splines, a block having a small lower bore and a larger upper bore defined from each other by a shoulder, the lower bore having threads complementary to the splines, an anvil attached to the top of the stem adapted to engage the shoulder, and a hammer extending downwardly from the top of the upper bore adapted to engage the anvil, there being a reduced portion formed in the stem at the bottoms of the splines as and for the purpose described.



1,810,392. PROPORTIONAL SCALE. ARTHUR M. CLARK, Seattle, Wash. Filed June 6, 1929. Serial No. 368,823. 2 Claims. (Cl. 33—111.)

1. An enlarging and reducing instrument including a straight-edge having an edge provided with a plurality of interchangeable scales having their zero points in common, said scales extending in the same direction from the zero point and having their scale divisions all extending to the same edge of the straight-edge.

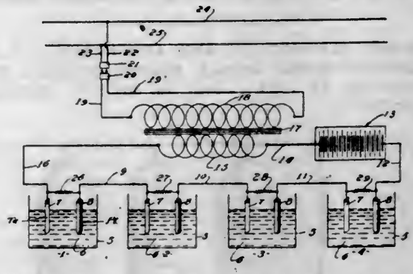


1,810,393. ENGINE STARTING APPARATUS. JOHN B. DYER, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 29, 1928. Serial No. 258,071. 19 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, a motor; a shaft operated thereby; means for connecting the shaft with the gear of an engine to be started and including a pinion meshing endwise with the gear and provisions whereby the pinion will be automatically demeshed when the engine starts; a device for moving the pinion endwise and operating in case of abutment with the engine gear for rotating the pinion while it is pressed against the engine gear; a manually operable actu-

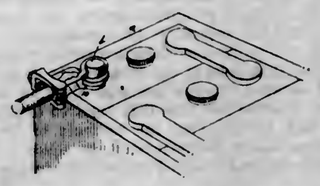
ator; disconnectible motion transmitting elements operatively connected respectively with the actuator and the shifting device; means for automatically moving the element connected with the shifting device away from the path of movement of the element connected with the actuator before the engine starts; and means for restoring the operative connection between these elements.

1,810,394. MEANS FOR THE PRODUCTION OF FOAM. JENS DYHR, Dresden, Germany, assignor to Schaumbad Gesellschaft mit beschrankter Haftung, Dresden, Germany. Filed Nov. 5, 1929, Serial No. 404,977, and in Germany Feb. 21, 1929. 3 Claims. (Cl. 261—100.)



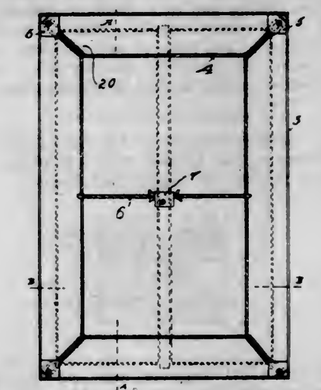
1. A device for introducing gas in a finely distributed condition into liquids for foam forming purposes, comprising a tube shaped to provide a plurality of grooves and ribs, said tube perforated between the ribs to form a fluid passageway, a porous medium enveloping said tube, a perforated metal wrapper surrounding said porous medium, and means associated with said tube for creating a fluid pressure therein, whereby the fluid is caused to pass through the porous medium in a finely distributed condition.

1,810,395. METHOD OF USING ELECTROLYTIC RECTIFIERS IN SERIES. EDGAR W. ENGLE, Lake Forest, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Jan. 7, 1927. Serial No. 159,522. 6 Claims. (Cl. 175—318.)



1. An electrolytic rectifier comprising a number of electrolytic cells in series, each cell having a filmed tantalum electrode and being provided with a high resistance connection across its terminals providing a shunt path for current flowing in a direction opposite to the normal flow through said cells to reform the film on the tantalum electrodes.

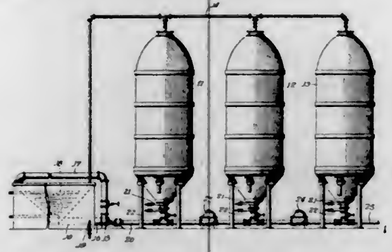
5. The method of preventing hydrogen absorption by the filmed electrode of one of a series of electrolytic rectifiers which comprises shunting a film forming current



across the terminals of the remaining cells, whereby the film is built up during the period when normally no current would flow.

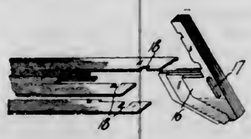
1,810,396. TERMINAL CLAMP FOR STORAGE BATTERIES. HENRY GILLAR, Milltown, N. J. Filed Nov. 28, 1927. Serial No. 236,078. 4 Claims. (Cl. 173—259.)

1. A terminal clamp for storage batteries or the like comprising two separable elements each formed with a hook shaped jaw and a semi-cylindrically curved jaw, the former serving to engage around the terminal post and the latter around a cable or wire and common means on one of said elements adjacent to the semi-cylindrically curved jaw capable of engaging the other element adjacent its semi-cylindrical curved jaw for clamping the said elements together in operative position.



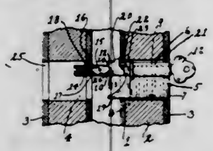
1,810,397. LIFE FLOAT. CARL L. HARKRADER, East Orange, N. J., assignor to Welin Davit & Boat Corporation, Long Island City, N. Y., a Corporation of New York. Filed May 10, 1930. Serial No. 451,277. 5 Claims. (Cl. 9—11.)

1. A life float comprising a buoyant body enclosed within a casing of balsa wood to form a raft-like structure with flat top and bottom surfaces, said top and bottom surfaces being equipped with life lines fastened at the



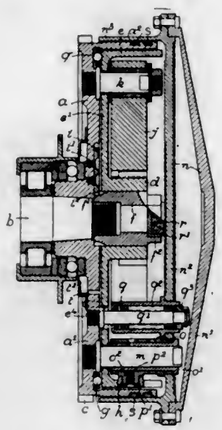
corners of said balsa wood casing, and means whereby the life lines may be made taut and positioned a few inches within the edges of the float and parallel to said edges.

1,810,398. METHOD OF AND APPARATUS FOR DIGESTING WOOD. PAUL E. HODGDON, Munising, Mich. Filed May 27, 1929. Serial No. 366,215. 22 Claims. (Cl. 92—7.)



1. The method of digesting wood which consists in charging the wood chips into a presaturating tank, supplying acid to the tank and maintaining the temperature of the contents of the tank at approximately 105 degrees Cent. until the chips are saturated, then pumping the contents of the tank into a digester without materially reducing the temperature, then raising the temperature in the digester to proper cooking temperature and allowing cooking to proceed for a period less than that required to complete the cooking, then withdrawing the contents of the first digester, mechanically disintegrating the solids and delivering the material into a second digester for further cooking.

1,810,399. INTERLOCKING KEY ASSEMBLY. PAUL P. HORNI, Newark, N. J. Filed Jan. 27, 1928. Serial No. 250,020. 4 Claims. (Cl. 74—83.)



1. An interlocking key assembly comprising a plurality of manually operatable members, each tending to assume the open position, an interlocking bar engaging a plurality of the members, means on each of said members for shifting the interlocking bar to a different position when a member is closed from the position that it would be placed by the operation of any other of said members, and means on each member for permitting the closure of only one of said members at a time by said interlocking bar.

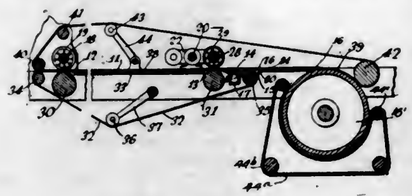
1,810,400. NONPICKABLE KEYHOLE LOCK. FREDERICK T. HUGHES, Los Angeles, Calif. Filed Apr. 4, 1927. Serial No. 180,789. 9 Claims. (Cl. 70—8.)

1. A non-pickable key-hole lock constructed to be slipped into the key hole from one side of the door and having a detent to engage a part within the door to prevent withdrawal of the lock, said detent having a contour operating to prevent the same from being disengaged by an instrument inserted from the other side of the door.

1,810,401. GOVERNOR. JOHN HOGG ROBERTSON, London, England. Filed Oct. 7, 1930, Serial No. 486,996, and in Great Britain Dec. 17, 1929. 8 Claims. (Cl. 264—16.)

1. A centrifugal governor, comprising a rotary support, a ring mounted on said support and rotatable in relation thereto, a pinion mounted at the center of said ring, a plurality of weighted levers pivoted upon said support, each of said levers being formed with a toothed sector, said central pinion meshing with the toothed sectors of said levers, a plurality of parallel pillars mounted in said support, a slidable member to be operated by the governor, said slidable member being engaged upon said pillars, and cam and roller connections between said rotatable ring and said slidable member.

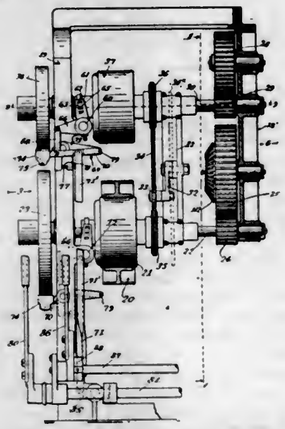
1,810,402. PROCESS FOR OBTAINING ALUMINA AND PHOSPHATES. FRITZ ROTHE and HANS BRENEK, Berlin, Germany, assignors to the Firm: Rhenania-Kunheim Verein Chemischer Fabriken Aktiengesellschaft, Berlin, Germany. Filed July 22, 1927, Serial No. 207,809, and in Germany July 30, 1926. 11 Claims. (Cl. 23—52.)



1. A process for obtaining alumina and phosphates which may be used as fertilizers, from aluminum phosphate comprising subjecting a mixture of aluminium phosphates and alkaline earth metal compounds and alkali metal compounds to a heating at sintering temperatures for said mixture in the presence of steam.

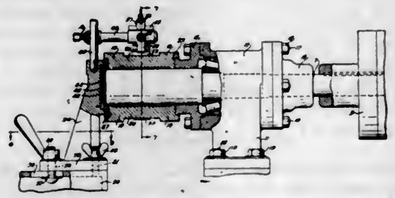
9. A process for obtaining alumina and phosphates which may be used as fertilizers, from aluminium phosphate comprising subjecting a mixture of aluminium phosphates and alkaline earth metal sulphates and alkali metal sulphates to a heating at sintering temperatures for said mixture in the presence of steam, said mixture containing for 1 molecule or phosphoric acid 2 molecules of alkaline earth metal sulphate and 1 molecule of alkali metal sulphate and for 1 molecule of alumina a further molecule of alkali metal sulphate and in addition thereto such quantities of alkaline earth metal sulphate that any silica present in the mixture can be bound as alkaline earth orthosilicate.

1,810,403. GRIPPER AND BREAKER WHEEL AND BRIDGING SPRING FOR WEB FEEDING AND SEVERING APPARATUS. CARL A. RUPP, Los Angeles, Calif., assignor to Commercial Iron Works of Los Angeles, Los Angeles, Calif., a Corporation of California. Filed Aug. 21, 1928. Serial No. 300,992. 20 Claims. (Cl. 164—34.)



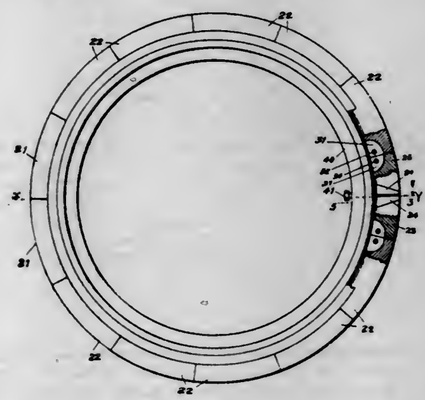
10. In a web feeding and severing apparatus, a sectional feeding table, certain sections being spaced, a

transverse bar between certain sections and in spaced relation thereto, there being a gap between the bar and a portion of the table for the passage of belts, means to feed



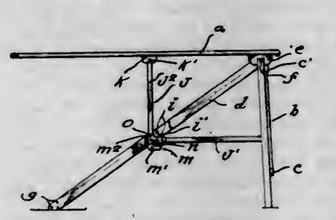
paper on the table across the gap, and a series of adjustable bridging springs fitting between the bar and the portion of such table across such gap.

1,810,404. DRIVE AND CONTROL FOR PRINTING PRESSES. CARL A. RUPP, Los Angeles, Calif., assignor to Commercial Iron Works of Los Angeles, Los Angeles, Calif., a Corporation of California. Filed Feb. 26, 1929. Serial No. 342,694. 13 Claims. (Cl. 101—220.)



1. A printing press having an upper and a lower deck, a main drive shaft operated through a clutch from a source of power, a main drive gear operated by said shaft, a gear train for each deck meshing with the main transmission gear, one of said trains being disconnectible therefrom and adapted to mesh with a secondary transmission gear, a secondary drive shaft to operate the secondary transmission gear, and means to drive the secondary power shaft from the source of power through the medium of a secondary clutch.

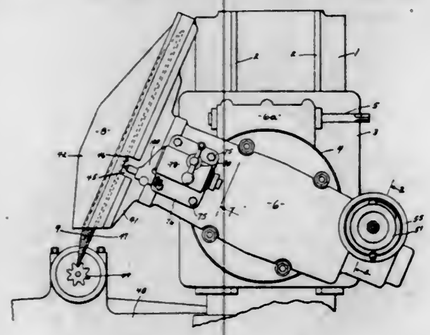
1,810,405. FRICTION TESTING MACHINE. ADOLPH ALOYSIUS SCHAEFER, North Tonawanda, N. Y. Filed July 5, 1928. Serial No. 290,606. 5 Claims. (Cl. 73—51.)



1. In a friction testing machine, the combination with a rotatable shaft and a plurality of blocks adapted to bear upon the shaft, of a strap surrounding the blocks for retaining them against the shaft, a cage in which the blocks are contained, a pivotal member mounted in the vicinity of the cage and to which one end of the strap is permanently secured and the other end adjustably secured, and adjustable means tending to swing the pivotal member away from the cage to exert a tension upon the strap.

1,810,406. PROCESS AND MEANS FOR MAKING CUSHION TIRES. ALBERT L. SCHOFF, Caldwell, and EDWARD NELSON and GEORGE J. NELSON, Belleville, N. J., assignors to Overman Cushion Tire Company, Inc., New York, N. Y., a Corporation of New York. Filed May 26, 1927. Serial No. 194,362. 29 Claims. (Cl. 18—45.)

14. Apparatus for making a hollow vulcanized-on cushion tire, comprising a metal base-band having an undercut circumferential groove in its outer periphery and a longitudinal slot registering with a part of said groove, an annular core consisting of arcuate core sections having lateral flanges fitting loosely in said groove under the over-hanging edges thereof and each of a length less than that of the slot, and means for expanding said core circumferentially to force said lateral flanges against the over-hanging edges of the groove.

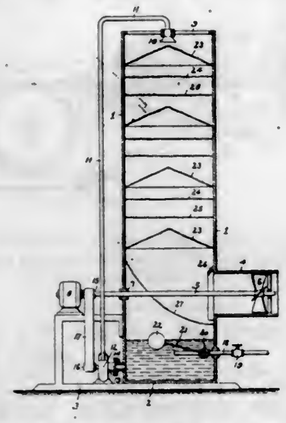


1,810,407. IRONING TABLE. RICHARD F. SCHULZKE, Portland, Oreg. Filed June 21, 1928. Serial No. 287,161. 3 Claims. (Cl. 68—10.)

1. In an ironing table, an ironing board and a collapsible supporting frame for the latter, said frame comprising a leg and a diagonal crutch, both pivotally connected to the board at one end of the latter, a jointed brace member pivotally connected at one end to the middle of said board and at the other to the leg, the crutch being provided with a laterally arranged member with which one element of said brace member slidingly engages, a channeled fitting straddling the brace member, constituting the joint therein, and provided with web portions extending along the sides thereof and over-

hanging the latter, a bayonet joint formed in said overhanging portions of said webs, adapted when such supporting frame is extended, to engage said laterally arranged member.

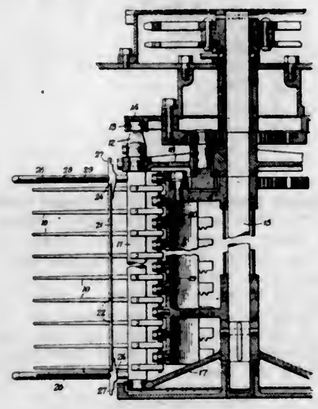
1,810,408. TRUING AND POSITIONING DEVICE FOR GRINDING WHEELS. CHARLES H. SCHURR, Cleveland, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed May 15, 1922, Serial No. 561,219, and in Germany May 2, 1923. Divided and this application filed Jan. 14, 1928. Serial No. 246,707. 13 Claims. (Cl. 125—11.)



1. In an apparatus for giving true shape and position to the planular face of the grinding wheel of a gear grinding machine, a main frame, means for moving the grinding wheel axially on the frame, a stop device for stopping the said axial movement of the wheel at a working position thereof, and means for dressing the planular face of the wheel into coincidence with a predetermined plane on the frame when in said stopped working position, said means including a dressing reference station on the frame, a dressing element mounted for movement into engagement with the reference station to position the element, and mounted for movement in said predetermind plane.

1,810,409. METHOD OF PLATING METALS. WILLIAM E. WATKINS, New York, N. Y., assignor to Copper Plate Sheet & Tube Company, New York, N. Y., a Corporation of New Jersey. Filed May 29, 1929. Serial No. 367,125. 4 Claims. (Cl. 91—70.2.)

1. The method of forming a plating of an alloy of two or more metals on a metal base which comprises passing the metal to be plated through a molten bath of one of the metals of the alloy to form a plating on the metal base, applying a plating mixture of the second metal to the plated metal, heating the coated metal to cause one of the metals of the alloy to diffuse into the other and form a coating of the desired alloy, and then subjecting the coated metal to a temperature sufficient to form a non-stripping plating of the alloy on the metal base.



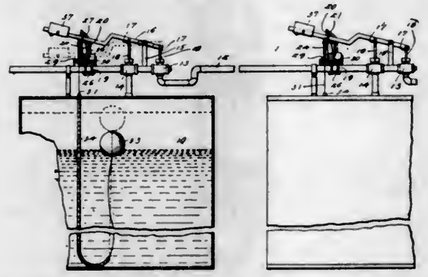
1,810,410. COOLING AND VENTILATING APPARATUS. ANDREW B. ALLDREDGE, Sweetwater, Tex. Filed May 31, 1930. Serial No. 458,795. 3 Claims. (Cl. 261—29.)

1. A cooling and ventilating apparatus comprising a casing, open at its top, an air intake spout extending laterally from the lower portion of the casing, a fan in said spout for delivering air into the casing, a water supply pipe communicating with the casing below the spout, means for conducting water from the casing and delivering the same into the casing at the top thereof, a foraminous baffle within the casing in the path of the delivered water, and a second foraminous baffle within

the casing curving upwardly from that side of the casing at which the spout is located, and at a point below the spout, and extending to the opposite side of the casing.

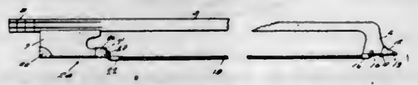
1,810,411. COTTON PICKER. CHARLES R. BERRY, Greenville, Miss., assignor of two-ninths to Edna Irene Berry, administratrix of the estate of Hiram N. Berry, deceased, two-ninths to Hugh A. Gamble, Greenville, Miss., and three-ninths to Albert M. Hanauver, Pittsburgh, Pa. Filed July 27, 1928. Serial No. 295,741. 7 Claims. (Cl. 56—47.)

1. In a cotton picker, a plurality of spindles in vertical series, a plurality of separate spindle supports revolving as a series and each rotatable on a vertical axis and supporting a single vertical series of spindles, a stripper bar adjacent each support shiftable lengthwise of the spindles thereof, a cam member for successively shifting the stripper bars outwardly along the spindles during a portion of the revolution of the supports, and means for returning each bar to the inner ends of its series of spindles upon release from said cam.



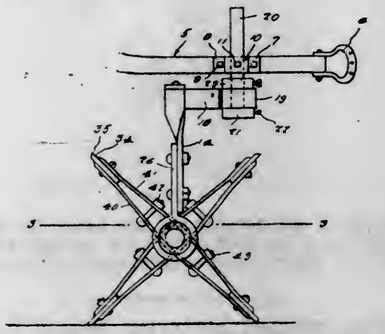
1,810,412. COUNTER TOP. CLAUDE A. CRIDER, Jefferson City, Mo. Filed June 20, 1929. Serial No. 372,453. 4 Claims. (Cl. 45—140.)

3. A counter top comprising a body member having a compartment positioned centrally of its upper face, said body member further having a pair of opposed compartments interposed between the rear walls of the central compartments and the rear side of said body member, a



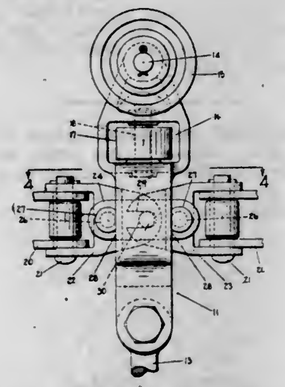
slab seated in said central compartment and rabbeted at its rear marginal portion, and transparent panels for closing said pair of compartments, said panels seating on said rabbets.

1,810,413. TANK FILLING APPARATUS. NEWTON M. DE ARMAN, Ventura, Calif. Filed Apr. 26, 1928. Serial No. 273,043. 1 Claim. (Cl. 137—68.)



In combination, a filling line, a series of tanks connected thereto, a valve at each tank adapted to be closed to cut off the flow line from succeeding tanks of a series, a second valve at each tank and adapted to be opened to permit delivery of fluid from the line to the tank, a lever pivoted between its ends and connected to the valves and adapted when raised to hold said first valve closed and said second valve opened, a bracket arm secured to the flow pipe, a standard secured to the bracket arm, a brace secured to the bracket arm and standard, a latch pivoted to the standard and engaging the lever whereby to hold the lever in upraised position, a spring connected to the brace and lever for holding the latch into engagement with the lever, a float within the tank, and a flexible connection between the float and latch said float upon filling of the tank pulling said flexible connection for release of the latch from the lever against the tension of said spring.

1,810,414. VIOLIN BOW. CLARENCE DILLON and DILLARD DAUGHHETER, Richland Center, Wis. Filed Sept. 21, 1929. Serial No. 394,200. 6 Claims. (Cl. 84—282.)

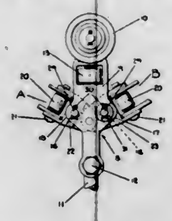


1. In combination, a violin bow, a shoe member embodying a base adapted to extend along the bottom edge of the frog of the bow, said base terminating at one end into a heel portion adapted for the reception of the rear end of said frog, and means at the other end of the base for securing the latter in the toe portion of the frog, said base at said last mentioned end having an aperture formed therein adapted to receive the knotted ends of a bow string, and a sleeve carried by said base and said last mentioned end, and through which the end portions of the bow strings is adapted to extend, and a slipper member having a toe portion adapted to receive the toe of the enlarged end of the violin bow, said slipper member further embodying a base having an aperture formed therein adapted to receive one knotted end of the bow string.

1,810,415. STALK CUTTER ATTACHMENT. ASA L. FORTSON, Melvin, Tex., assignor of one-fourth to S. W. Hughes, Brady, Tex. Filed Apr. 4, 1930. Serial No. 441,576. 2 Claims. (Cl. 55—61.)

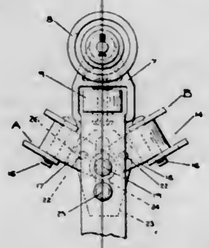
1. In a stalk cutter and in combination, spaced bearings, a shaft of angular cross section journaled in and arranged between said bearings, radially disposed blades spaced apart and grouped about said shaft, and pairs of connections between the shaft and blades, located between the bearings; the connections of each pair being disposed at right angles to each other, and each connection including two bars disposed against opposite flat sides of the shaft and receiving between their end portions blades, means extending through and connecting said end portions of the bars and the blades, and means connecting the bars together at points intermediate the shaft and the blades and holding the bars against said opposite flat sides of the shaft.

1,810,416. TROLLEY CONVEYER. EARLE V. FRANCIS, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 23, 1929. Serial No. 416,187. 17 Claims. (Cl. 105—155.)



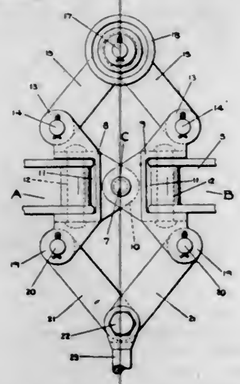
1. In a trolley conveyer, the combination of a load support having an opening therethrough between its upper and lower ends; of an independent and complete draft element extending through said opening for propelling the load support.

1,810,417. TROLLEY CONVEYER. EARLE V. FRANCIS, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 21, 1930. Serial No. 446,068. 14 Claims. (Cl. 198—189.)



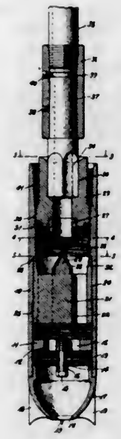
2. In a trolley conveyer, the combination with a trolley hanger; of a draft device having interconnected

portions connected to the hanger and extending from opposite sides of said hanger, and a sliding connection be-



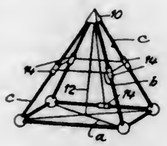
tween one of said portions and said hanger for causing the portions of the draft device to be arranged at equal angles with respect to said hanger at opposite sides thereof.

1,810,418. TROLLEY CONVEYER. EARLE V. FRANCIS, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio., a Corporation of Ohio. Filed Apr. 21, 1930. Serial No. 446,069. 10 Claims. (Cl. 198—189.)



1. The combination with a trolley hanger; of a draft device having portions connected with said hanger extending from opposite sides thereof to swing vertically, and a sliding element mounted in said hanger and having movement longitudinally of said hangers and connected with said portions of the draft device for causing equal angular movement thereof.

1,810,419. TROLLEY CONVEYER. EARLE V. FRANCIS, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 21, 1930. Serial No. 446,070. 14 Claims. (Cl. 105—155.)

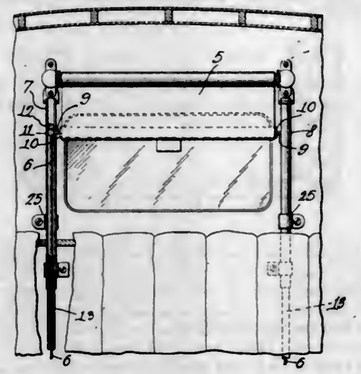


1. A conveyor chain comprising a series of links joined on axes, a pair of elements included therein and pivotally connected on an axis at right angles to said axes, and levers pivotally connected to said elements to produce equal and opposite pivotal movement thereof.

1,810,420. SEALABLE FOOT VALVE. FRED I. GETTY, Jennings, La. Filed Nov. 17, 1928. Serial No. 320,198. 11 Claims. (Cl. 166—20.)

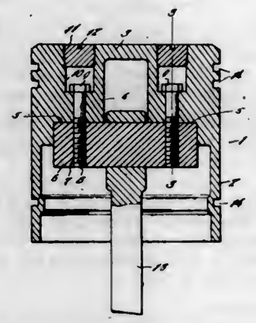
1. A seal for foot valves comprising, in combination, a central plug having a longitudinal passage past the same, a sealing surface carried by said plug, a ring having a passage therethrough and a cutting edge adapted to contact with said surface, one of said passages in communication with a wash pipe receiving socket and the other thereof with the outlet of the valve, and means to permit relative movement between said plug and ring whereby to close communication between said passages.

1,810,421. MODEL FOR GEOMETRY INSTRUCTION. JEAN GUYER, Zurich, Switzerland. Filed May 10, 1928, Serial No. 276,737, and in Germany June 11, 1927. 1 Claim. (Cl. 35—12.)



In apparatus of the class described, rods arranged at an angle to one another, sleeves slidable on the rods and an elastic cord connecting the sleeves together.

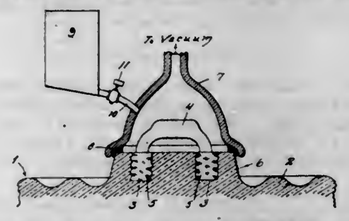
1,810,422. MOTOR VEHICLE REAR CURTAIN OPERATOR. EMIL EDWARD HALL, Groton, Conn. Filed July 23, 1930. Serial No. 470,156. 1 Claim. (Cl. 156—28.)



An operating mechanism for the rear curtain of a motor vehicle, comprising tubes extending from the driver's seat to points at the sides of the rear curtain of the vehicle, said tubes having slots formed in the inner sides thereof, near the curtain, said curtain including a curtain stick, shanks secured to the ends of the curtain stick and extending into the slots, balls on the ends of the shanks and fitted in the tubes, said balls having openings, controlling wires extending through the tubes and openings of the

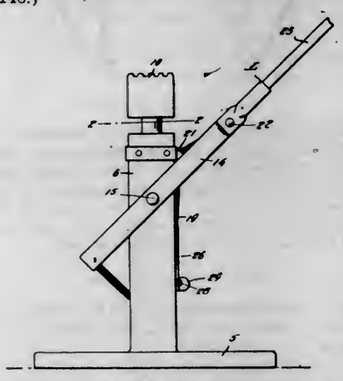
balls, balls on the free ends of the controlling wires and adapted to engage the first mentioned balls to draw the

curtain stick and curtain connected therewith, downwardly, and operating rods connected with the controlling wires.



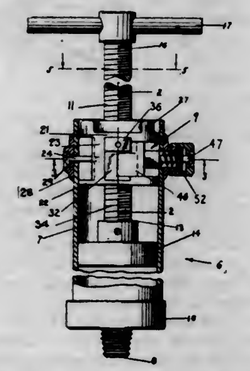
1,810,423. PISTON. ROSCOE J. HATCH, Macy, Ind. Filed Feb. 13, 1930. Serial No. 428,127. 1 Claim. (Cl. 74—108.)

A piston of the character described comprising an upper wall, a skirt depending therefrom, a pair of spaced, opposed wrist pin supporting blocks integrally formed on the upper wall and depending therefrom, and integrally connected to the skirt on diametrically opposite sides thereof, the upper wall and blocks being provided with threaded sockets, said blocks being further provided with substantially semi-circular complemental recesses in their lower end portions, said blocks being still further provided with bores communicating with the threaded sockets and the recesses therein, a wrist pin of circular cross section having its opposite end portions seated in the recesses, provided with transversely extending threaded bores for registry, with the bores in the blocks, headed bolts disposed in the threaded sockets and extending through the bores in the blocks for threaded engagement in the bores of the wrist pin in a manner to rigidly and detachably anchor said wrist pin in the recesses, closure plugs threadedly engaged in the threaded bores above the headed bolts, a connecting rod operatively connected to an intermediate portion of the wrist pin between the blocks.



1,810,424. MEANS FOR SEALING INSULATORS. KENT A. HAWLEY, Baltimore, Md., assignor to Lockne Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Apr. 12, 1926. Serial No. 101,602. 2 Claims. (Cl. 91—43.)

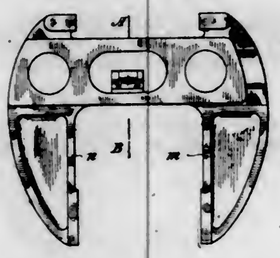
1. In an insulator treating system of the character described, means engageable upon a portion of an insulator of a type having an element secured thereto by metal cast thereabout and within a recess in the insulator, said means being adapted to have vacuum producing means connected therewith for withdrawing the air from the crevices about the cast metal mass, and means connected with said first



mentioned means for introducing fluent sealing compound whereby upon the restoration of atmospheric pressure conditions the sealing material will be caused to enter the crevices.

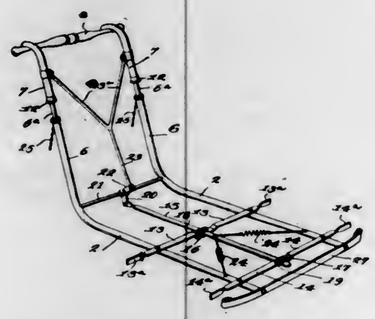
1,810,425. JACK. ANDREW V. JORDAN, Asher, Okla. Filed May 29, 1930. Serial No. 457,252. 5 Claims. (Cl. 254—148.)

1. A jack of the class described comprising a standard, a shank slidable longitudinally through the standard, a pulley on the inner end of the shank, a lever rockably mounted on the standard, a cable anchored to the lever at spaced points one to each side of the standard and trained under the pulley, a secondary pulley on the standard adjacent one end thereof over which said cable is trained.



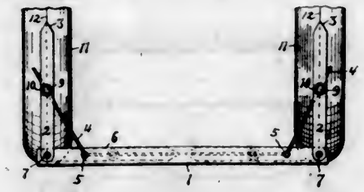
1,810,426. GREASE GUN. RENÉ RAPELLIN, Los Angeles, Calif. Filed Aug. 14, 1929. Serial No. 385,875. 12 Claims. (Cl. 74—40.)

1. A feeding mechanism comprising a feed screw, guiding means having said screw slidably extending there-



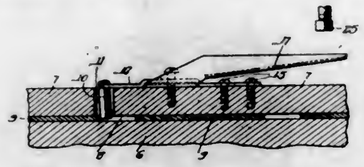
through, a split nut having its parts threaded complementarily to said screw, means slidable radially of said guiding means for moving said nut parts to bring the threads thereof optionally into or out of mesh with the threads of said screw, and means engageable with said nut parts for retaining them in selected position.

1,810,427. CALIPER. KARL KISSENDORFER, Oberndorf-on-the-Neckar, Germany, assignor to Mauser-Werke Aktiengesellschaft, Oberndorf-on-the-Neckar, Germany. Filed July 7, 1928, Serial No. 291,068, and in Germany July 30, 1927. 4 Claims. (Cl. 33—143.)



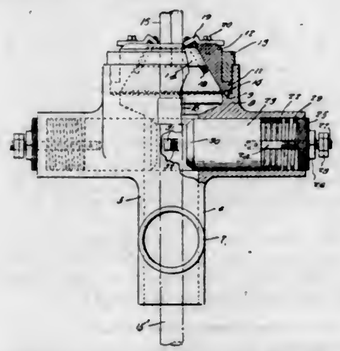
1. A caliper of the type referred to, comprising two laterally co-operating main bars having jaws at their outer ends and a longitudinal groove in each of the two co-operating surfaces of the bars, a guiding bar in the groove of one main bar, a brake bar in the groove of the other main bar, and means carried by the brake bar for releasably and adjustably interconnecting the bars.

1,810,428. BABY CARRIAGE. NELLO LAZZERI, Virginia City, Nev. Filed June 18, 1929. Serial No. 371,919. 9 Claims. (Cl. 188—20.)



1. In a baby carriage, the combination with the supporting frame, axles and wheels, of push bars each comprising a lower section fixed to the supporting frame and an upper section slidable on the lower section, a handle bar for propelling the vehicle rigidly connected with the upper slidable push bar sections, a brake mounted on the supporting frame for movement into and out of engagement with one of the wheels, a connection between said brake and the upper slidable push bar sections whereby when said handle bar is moved upwardly the brake will be moved into engagement with the wheel, and when pressed downwardly the brake will be moved out of engagement with the wheel, and spring means acting to normally maintain said handle bar in its elevated position.

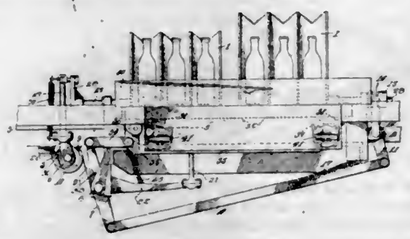
1,810,429. INSTRUMENT FOR ALIGNING AUTOMOBILE WHEELS. ARCHIE LIMPERT, Hicksville, Ohio. Filed Apr. 15, 1929. Serial No. 355,051. 3 Claims. (Cl. 33—203.)



2. An instrument for aligning automobile wheels comprising a base-bar; an index arm pivoted at one end thereof at each end of said base-bar and having folding relation therewith, each arm having an offset adjacent its pivoted end; a clamping means on each arm spaced from its pivoted end; and a brace-rod for each arm adjustably secured by said clamping means thereon and pivotally connected at one end with said bar and extending between said arm and the base-bar when the arm is folded.

1,810,430. WORK STOP. ALEXANDER M. MASZCZYK, Chicago, Ill. Filed Apr. 18, 1930. Serial No. 445,418. 10 Claims. (Cl. 104—59.)

1. A work stop comprising a resilient member attached at one end, a stop member at the other end, and operating means engaging the resilient member intermediate its ends and adapted to flex the free end of the resilient member to move the stop member.

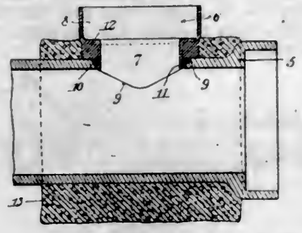


1,810,431. BLOW OUT PREVENTING DEVICE AND OIL SAVER FOR DRILLING RIGS. JOHN MCNEFF and SAMUEL HOGAN, Pyote, Tex. Filed Oct. 23, 1928. Serial No. 314,350. 4 Claims. (Cl. 24—263.)

1. A device of the class described comprising a casting forming a coupling for the open end of the well casing and having an opening extending vertically therethrough for receiving the well drilling rod, and clamping means for the rod mounted in the upper end of the casting and comprising a rotatable collar having its inner wall inclined

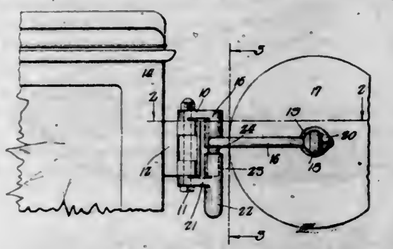
from a vertical plane, said collar being rotatable in the casting, a plurality of collet segments disposed in wedging position between the collar and the drilling rod, and adjusting means for the segments extending parallel with the inclined wall of the collar.

1,810,432. BOTTLE UNLOADER. ROBERT EUGENE MILLER, Bainbridge, Ga., assignor to The Miller Manufacturing Co., Bainbridge, Ga. Filed Aug. 16, 1926. Serial No. 129,503. 6 Claims. (Cl. 198—27.)



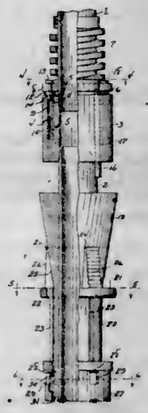
1. A bottle unloader, comprising a tiltable box; fingers slidably mounted under the box, adapted to be projected to engage the neck of an inverted bottle; and means for tilting the box, to cause the bottle to topple out of the fingers and right itself in the tilting box.

1,810,433. OPTICAL APPARATUS FOR DETERMINING FINISH ON PAPER. CHARLES H. MILLIGAN, Hamilton, Ohio, assignor to The Champion Coated Paper Company, Hamilton, Ohio, a Corporation of Ohio. Filed July 5, 1929. Serial No. 376,149. 10 Claims. (Cl. 88—23.)



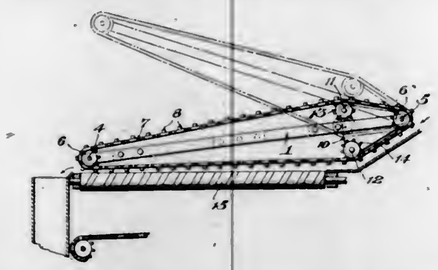
1. Apparatus for determining finish on paper comprising supporting means for a sheet of paper to be tested, means for directing a beam of light onto the paper at an angle of incidence less than 20° to illuminate an area less than one inch in longitudinal dimension, an eyepiece, means for imaging the beam of light reflected from the paper on said eyepiece, a photometer, means for directing a comparison beam of light through said photometer and means for imaging the comparison beam of light on said eyepiece.

1,810,434. PIPE CONNECTION. ROBERT B. MORSE, Hyattsville, and HOWARD R. DEVILBISS, Riverdale, Md. Filed Mar. 18, 1930. Serial No. 436,765. 5 Claims. (Cl. 285—106.)



1. The combination with a main pipe having an opening therein, of a union member, a neck on said member projecting in said opening, a bead on said neck disposed in close proximity to the edges of said opening, a stop on said member to engage the outer surface of said pipe, and packing surrounding said neck and resting upon said bead.

1,810,435. AUTOMOBILE MIRROR. HENRY C. PAULSON, Cleveland, Ohio, assignor to The Proof Machine and Brass Foundry Company, Cleveland, Ohio. Filed Feb. 25, 1929. Serial No. 342,496. 1 Claim. (Cl. 45—97.)

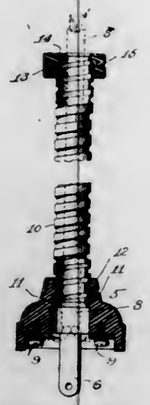


An attaching bracket for mirrors upon the door hinges of motor vehicles comprising complemental attaching ears receiving the terminal ends of the hinge pin therethrough, extensions carried by and depending from the outermost projecting ends of said ears, an attaching arm for the mirror carried by one of the extensions, a sleeve member mounted upon and upstanding from the remaining extension and spaced from the adjacent end of the first mentioned extension, and a pin member carried by and depending from the first mentioned extension projecting terminally thereof within the bore of said sleeve.

1,810,436. TUBING DRAIN. EZRA A. PHILLIPS, Smackover, Ark., assignor of one-half to Walter J. H. Lown, Smackover, Ark. Filed May 31, 1930. Serial No. 458,475. 4 Claims. (Cl. 103—221.)

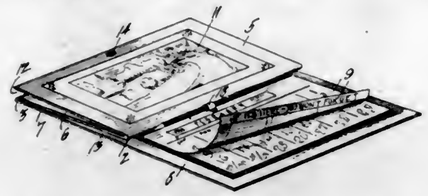
1. In a tubing drain of the class described, the combination with upper and lower sections of a well tube, of a cylindrical valve casing connecting the ends of said sections and provided with bores opening through its upper end, the said casing having ports communicating with the lower ends of the bores and with the interior of the casing, a tubular valve slidably mounted in each of said bores and open at its lower end, spaced heads upon the upper end of each valve, an annular head slidably fitting the upper tube section, means connecting the valves with the said annular head, a compression spring upon the said upper tube section bearing upon the said annular head and yieldably holding the same in lowered position and with the lower heads of the valves closing the upper ends of the respective bores, and the valves closing the ports, and an abutment movable with respect to the said valve casing and projecting below the same, the abutment being connected with the annular head and engageable by the swage upon upward movement of the same whereby to elevate the annular head and effect opening of the valves.

1,810,437. FEEDER CONVEYER FOR HUSKING UNITS. JOHN POWELL, Kokomo, Ind. Filed July 14, 1928. Serial No. 292,748. 3 Claims. (Cl. 130—5.)



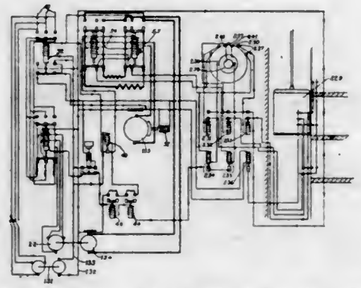
1. In a husking unit, the combination with husking rolls, of means for segregating and passing husk bearing ears of corn over said rolls comprising a conveyer including a frame pivoted at one end, shafts mounted at the ends of said frame, an endless conveyer mounted between said shaft and adapted to engage individual ears of corn and pass the same over the husking rolls and spreading means for holding the respective flights of said conveyer in predetermined spaced relation, said spreading means being pivoted to said frame.

1,810,438. METAL FABRIC AND PROCESS FOR MANUFACTURING THE SAME. LEOPOLD RADÓ, Halensee, Berlin, Germany. Filed Sept. 1, 1928, Serial No. 303,608, and in Germany Apr. 7, 1928. 4 Claims. (Cl. 154—2.)



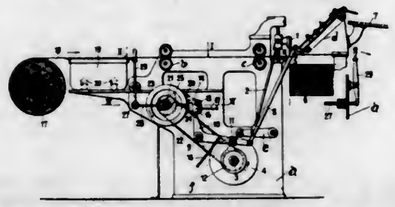
3. In the process of producing metal fabric the step which consists in coating metal foil on both sides with a cellulose hydrate, dividing said coated foil into narrow strips and then coating said strips over their faces and edges with a water resisting layer.

1,810,439. ELECTRIC PLUG. MICHAEL A. ROLLMAN, Mount Joy, Pa. Filed May 15, 1928. Serial No. 277,865. 3 Claims. (Cl. 173—322.)



1. In combination with a plug provided with a pair of terminals and having an internally-threaded bore, a spiral flexible tube threaded into said bore and secured therein by flanging over the end of the tube against an internal shoulder in the bore, and a binding- or set-screw carried by the plug and adapted to bear against the tube to thus assist in locking the tube in the plug.

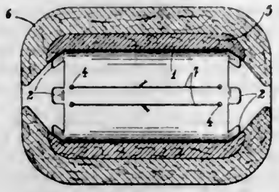
1,810,440. CALENDAR. HUGH FRANKLIN SHEDD, Minneapolis, Minn. Filed Feb. 6, 1930. Serial No. 426,404. 8 Claims. (Cl. 40—119.)



1. A calendar constructed of a backing sheet divided into sections, date sheets on the lower section, the remaining sections being folded to present oppositely opening front and rear pockets above the date sheets.

1,810,441. MOTOR CONTROL. OSCAR F. SHEPARD, Cincinnati, Ohio. Filed Sept. 26, 1923. Serial No. 664,822. 5 Claims. (Cl. 172—152.)

1. The combination of a source of power supply, a primary motor, a generator driven by the primary motor, a secondary motor, means for energizing and de-energizing the primary motor, means for varying the field strength of the generator for providing variable voltage for the secondary motor, and reversing switches for reversing the flow of current to the secondary motor armature, the reversing switches being simultaneously actuated with the means for energizing and de-energizing the primary motor.



1,810,442. SHEET CUTTING MACHINE. GEORG SPIESS, Leipzig-Plagwitz, Germany. Filed Apr. 14, 1927, Serial No. 183,746, and in Germany Apr. 24, 1926. 3 Claims. (Cl. 214—11.)

1. A sheet cutting machine comprising a driving shaft, means for conducting the sheets to separate piles according to their quality, mechanism for operating said conducting means, hand-operated means for placing said mechanism in condition to actuate said conducting means,

a cam plate on said driving shaft, a rocking lever operatively connected with said conducting means on the one hand, and with said cam plate on the other hand, means for locking said rocking lever against operation from said cam plate, a rotary disc operatively connected with said driving shaft, a pawl carried on said rotary disc and adapted to co-operate with said locking means, hand-operated means for placing said pawl into active position with respect to said locking means, and automatic means for returning it into its inactive position, the motion of said rotary disc being so timed with respect to that of said driving shaft, that the motion of said conductive means lags with respect to that of said driving means.

1,810,443. LUBRICATING PAD. JEAN MATHIEU MARIE ARTHUR STEURS, Vilvorde, Belgium, assignor to Société Anonyme Manufacture d'Appareils Graisseurs, Vilvorde, Belgium. Filed Jan. 30, 1929, Serial No. 336,297, and in Belgium Dec. 22, 1928. 1 Claim. (Cl. 308—243.)

A lubricating pad for wheel-axles, especially for railway vehicles, designed for being inserted into the axle-box, under the journal, comprising a cylindrical metallic frame made of a single thin sheet of steel, means for securing the two edges thereof, a supporting and stuffing layer of very soft textile material, means for securing said layer onto said metallic frame, small projecting parts made integral with said frame and slightly bent towards the inside thereof for preventing said layer from being cut by the edges of said metallic frame, a covering made of wool and means for securing said covering over said stuffing layer, substantially as set forth.

1,810,444. RAILWAY CAR. EARL R. SWANSON, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed July 31, 1930. Serial No. 472,165. 19 Claims. (Cl. 108—5.4.)

1. A roof for railway cars involving a plurality of carlines, a beam of inverted channel shape extending longitudinally of the car beneath the carlines, and a plurality of members extending transversely of and fixedly secured to the beam, each of said members forming with the beam a structure of box-like section and being adapted to serve as a support for a load lifting means.

1,810,445. RAILWAY CAR. EARL R. SWANSON, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed July 31, 1930. Serial No. 472,166. 10 Claims. (Cl. 108—5.4.)

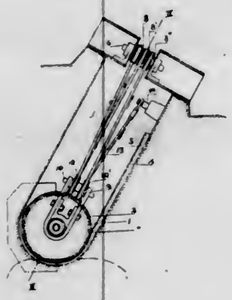
1. A roof for railway cars involving roof sheets, carlines disposed beneath said roof sheets and projecting downwardly therefrom, a beam extending longitudinally of the car between said carlines and above the lower edges of the latter, said beam being of inverted channel shape and being rigidly secured to said carlines, and a member extending transversely of and rigidly secured to said beam, said member forming with the beam a structure of box-like section and being adapted to serve as a support for a load lifting means.

1,810,446. RAILWAY CAR. EARL R. SWANSON, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed July 31, 1930. Serial No. 472,167. 9 Claims. (Cl. 108—5.4.)

1. A roof for railway cars involving a plurality of roof sheets having marginal flanges along their side edges, carlines respectively secured to adjacent flanges of neighboring roof sheets, members extending transversely of the car and respectively secured to said carlines, each of said members having a laterally projecting flange spaced beneath said roof sheets, a channel shaped beam extending longitudinally of the car between said members and rigidly secured to the flanges of said members, and means rigidly secured to said beam and forming therewith a structure of box-like section, said means being adapted to serve as a support for a load lifting device.

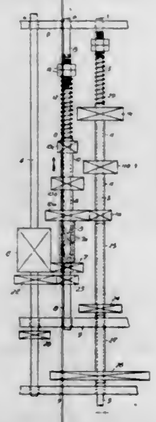
1,810,447. RAILWAY CAR. EARL R. SWANSON, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed July 31, 1930. Serial No. 472,168. 18 Claims. (Cl. 108—5.4.)

1. A roof for railway cars involving roof sheets, upstanding carline portions, a longitudinally disposed beam extending between said carline portions in overlapping relation to the outer face of an adjacent roof sheet, and a member extending transversely of the car beneath the roof sheets, said member being rigidly secured to said beam and constituting means for supporting a load lifting device.



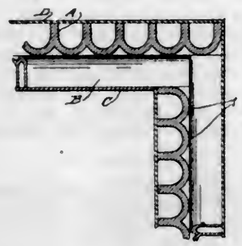
1,810,448. RAILWAY CAR. EARL R. SWANSON, Chicago, Ill., assignor to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed July 31, 1930. Serial No. 472,169. 15 Claims. (Cl. 108—5.4.)

1. A roof for railway cars involving roof sheets, carline means projecting below the roof sheets, a beam extending longitudinally of the car above the carlines and roof sheets, and a plurality of members extending trans-



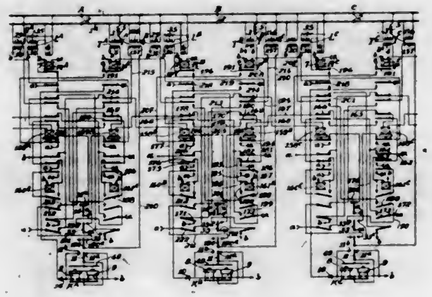
versely of the car beneath the roof sheets, each of said members being rigidly secured to said beam and constituting means for supporting a load lifting device.

1,810,449. MOVABLE DAM. HISAKICHI TAHARA, Tokyo, Japan. Filed June 30, 1928, Serial No. 289,565, and in Japan Feb. 8, 1928. 4 Claims. (Cl. 61—22.)



1. A movable dam, comprising axles and mounted at its ends in journals for rotatable movement; supports for the journals and pulleys operatively mounted in said supports; a separate set of pulleys operatively mounted in a bridge support and a gate to receive said support; a single suspension cable operative with both sets of pulleys, one end of said cable being connected to a fixed point and having operative connection to a hoisting means at its opposite end.

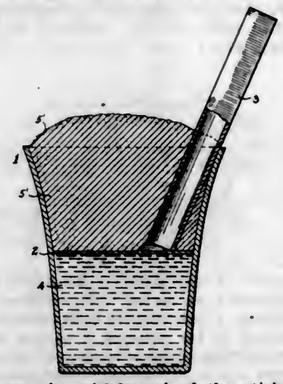
1,810,450. VARIABLE SPEED-GEAR MECHANISM. MAXWELL LOUIS FREDERICK VON BROEMBSEN, Pretoria, Transvaal, South Africa. Filed Jan. 6, 1930, Serial No. 418,911, and in South Africa Nov. 28, 1929. 4 Claims. (Cl. 74—58.)



1. An automatically variable speed-gear mechanism, comprising a driving-shaft, a driven-shaft, a lay-shaft, means for gearing the lay-shaft to the driven-shaft at a plurality of various gear ratios successively, a pinion splined helically upon the lay-shaft and geared to the driving-shaft, and gear-changing mechanism operable by the traversing movement of said pinion upon the lay-shaft under variations in the load applied to the driven-shaft.

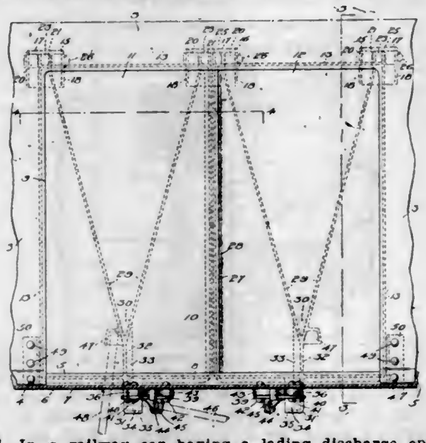
1,810,451. TRUNK AND BOX. FRED L. WAGAR, Wagar, Ala. Filed May 29, 1929. Serial No. 366,887. 7 Claims. (Cl. 220—1.)

1. A casing, such as a box, trunk or chest, having the main body part thereof comprised of two sheets of corrugated metal, the corrugations of one sheet disposed at angles to the corrugations of the other sheet and the said sheets united at their points or areas of contact.



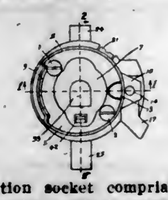
1,810,452. RAILWAY TRAFFIC CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed May 5, 1926, Serial No. 106,871. Divided and this application filed Aug. 5, 1929. Serial No. 383,733. 23 Claims. (Cl. 246—33.)

1. In combination, a stretch of railway track, means for normally supplying uninterrupted alternating current to the rails adjacent one end of the stretch, and means controlled by traffic conditions for at times periodically interrupting said current and for at other times supplying interrupted current to the rails adjacent the other end of the stretch.



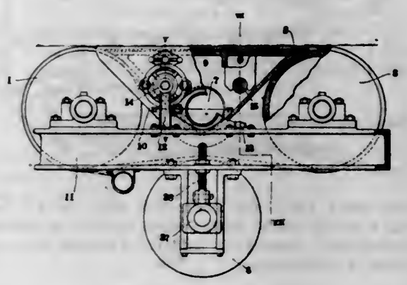
1,810,453. CHEWING GUM CONFECTION. RAYMOND B. WEBSTER, ALFRED I. FAGERLIE, and IRVING C. BARAGER, Eau Claire, Wis. Filed July 1, 1929. Serial No. 375,275. 2 Claims. (Cl. 99—16.)

2. As an improved article of manufacture, a chewing gum confection made in the form of a drinking glass or tumbler, open at the top and closed at its bottom, and provided with a thin imperforated horizontal partition, also made of chewing gum or wax, forming a lower sealed chamber and an upper open ended chamber; the lower chamber carrying a suitable flavoring syrup or juice and the upper chamber carrying a suitable confection filler made to represent ice cream, and a tube or straw inserted into and carried by the upper chamber and provided with a solid penetrating stick designed to pierce the partition to permit the syrup to be sucked through



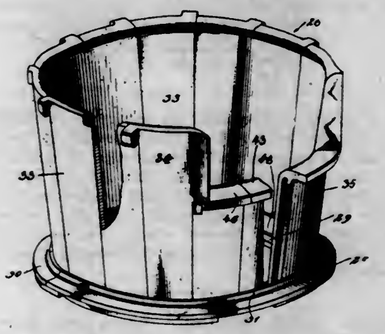
the tube upon the withdrawal of the stick; the whole representing a glass of soda water or an ice cream sundae substantially as described.

1,810,454. RAILWAY CAR. WILLIAM E. WINE, Toledo, Ohio, and GEORGE B. CHRISTIAN, Washington, D. C., assignors to Wine Railway Appliance Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 25, 1929. Serial No. 349,833. 20 Claims. (Cl. 105—280.)



1. In a railway car having a lading discharge opening, a hinged closure for said opening, said closure being integrally formed with reinforcing members which converge from adjacent the hinged edge of the closure and intersect at a point adjacent the opposite edge of the closure.

1,810,455. CAM LOCK CONTRACTION SOCKET. ARCHIE REXALD WOLFE, Summit, N. J. Filed Mar. 6, 1929. Serial No. 344,888. 6 Claims. (Cl. 173—355.) (Granted under the act of Mar. 3, 1883, as amended April 30, 1928; 370 O. G. 757.)

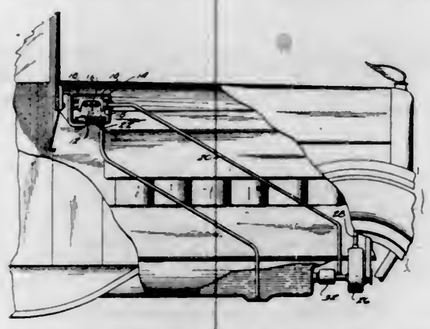


1. In a contraction socket comprising an insulation body, a movable center contact mounted on said body, an elevating and depressing means within said body for elevating and depressing said center contact, and a means on the outside of said body for operating said elevating and depressing means.

1,810,456. SUCTION DEVICE OF PAPER-MAKING MACHINES. TARIO YONEKURA, Takaoka, Japan. Filed July 26, 1928, Serial No. 295,563, and in Japan Aug. 18, 1927. 3 Claims. (Cl. 92—51.)

1. In a suction device for paper-making machines, the combination of a prime-mover roll at one end of the machine, a follower roll at the other end thereof, a suction pipe between said rolls, a flexible belt extending around said rolls and suction pipe to form a chamber having a suction surface, and side-walls for said chamber combining with said belt to make the chamber airtight.

1,810,457. FURNACE CONSTRUCTION. FRANK Z. AHL, Sacramento, Calif. Filed June 6, 1927. Serial No. 196,675. 1 Claim. (Cl. 126—151.)

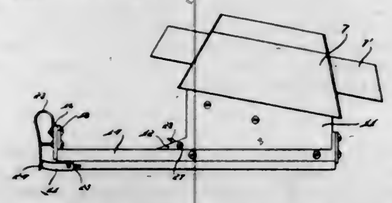


A fire-box of the character described comprising a plurality of vertically extending cooperating sections, flanges formed on the vertical edges of said sections, and locking lugs carried by the upper edges of said sections for maintaining the flanges of adjacent sections in cooperative relation with each other.

1,810,458. MOTOR CAR FILTER SYSTEM. RENÉ AUDUBERT, Paris, France, assignor to Societe Anonyme des Procedes R. Audubert, Paris, France, a Corporation of France. Filed May 4, 1928. Serial No. 275,140. 1 Claim. (Cl. 184—6.)

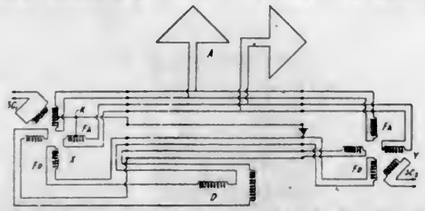
In combination with an internal combustion engine, an oil reservoir, a filter, a pump, an oil supply line for the filter running from the reservoir, an oil discharge line for the filter connected with the intake of the pump, and means for maintaining a substantially uniform de-

gree of sub-atmospheric pressure in said discharge line when the pump is operating, sufficinet to cause the oil to be sucked up said supply line to said filter, the intake



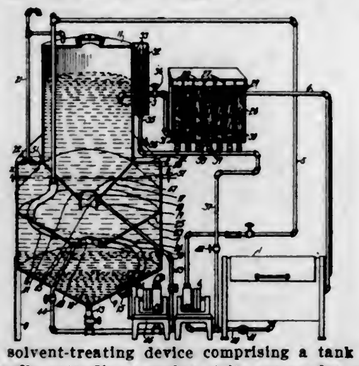
at said pump being also connected with the oil reservoir by a pipe provided with a valve adapted to maintain sub-atmospheric pressure in said oil discharge line when the pump is in operation.

1,810,459. POTATO CUTTING MACHINE. JOHN A. BERGREN and CHARLES G. BERGREN, Lake Park, Minn., assignors to Bergren Manufacturing Company, a Corporation. Filed July 11, 1927. Serial No. 204,716. 11 Claims. (Cl. 146—169.)



1. A potato cutting machine having in combination, a knife disposed in a vertical plane, means for supporting a potato for movement and presentation to said knife and a horizontal movable plunger for moving said potato along said means to said knife, said plunger having a slot therein for embracing said knife, said slot increasing in size toward the end thereof remote from said knife and also having its sides diverging downwardly from the upper side thereof.

1,810,460. NAIL HOLDER. OSCAR BREITHAUPT, Detroit, Mich. Filed May 28, 1928. Serial No. 281,252. 1 Claim. (Cl. 1—49.7.)

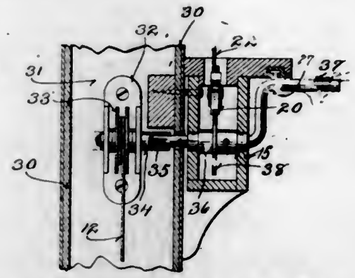


In a nail holder of the class described: a trough provided with a longitudinally extended slot; a pair of spaced extensions mounted on an open end of said trough and projecting beyond said end, the projecting ends of said extensions being angularly upwardly turned; and a J-shaped resilent closure for said end of said trough.

1,810,461. WIRELESS TELEGRAPH RECEIVING SYSTEM. JOHN BROWN, Chelmsford, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 19, 1925, Serial No. 38,138, and in Great Britain July 1, 1924. 11 Claims. (Cl. 250—11.)

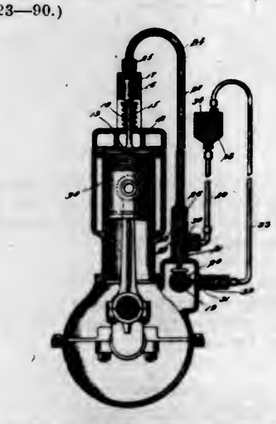
1. In a system of the character described a plurality of radiogoniometers connected to a common directional receiving antenna, a pair of field coils in each radiogoniometer connected to the antenna, a second pair of field coils in each radiogoniometer connected to an artificial aerial, a single search coil in each radiogoniometer, said field coils and search coils arranged so that flux from the pairs of field coils in each radiogoniometer links with its corresponding search coil, and so that the reactance of one search coil upon another is neutralized.

1,810,462. PURIFYING TANK. GEORGE M. BUCHY, Englewood, Mo., assignor of one-half to Joseph D. Chansler, Kansas City, Mo. Filed Sept. 24, 1928. Serial No. 308,115. 11 Claims. (Cl. 210—44.)



1. A solvent-treating device comprising a tank having an inwardly extending annulus at its upper edge provided with a vent, a tower of less diameter than the tank comprising an upward extension thereof supported by said annulus, a funnel-like member depending from the tower into the tank, and means for circulating solvent upwardly through the funnel-like member.

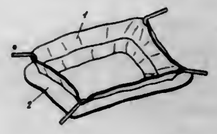
1,810,463. ANCHOR STAPLE FOR MULCHING PAPER. JAMES H. COOK, Tulsa, Okla. Filed June 17, 1929. Serial No. 371,445. 7 Claims. (Cl. 47—9.)



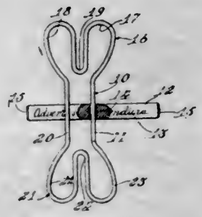
1. A staple of the character described comprising a single piece of corrugated wire having a flat body portion and leg portions extending at right angles to the body portion.

1,810,464. DAMPER CONTROL DEVICE. THEODORE B. COWLES, Madison, Wis., assignor of one-half to Charles M. Park, Madison, Wis. Filed Nov. 18, 1927. Serial No. 234,134. 1 Claim. (Cl. 74—39.)

A device of the class described including a supporting bracket, having spaced perforated ears, a shaft rotatably mounted in said ears, a drum on the shaft between said ears, a key at one end of said shaft, a housing supported adjacent the bracket having a horizontal shelf at its upper side, a crank having one end rotatably mounted in the housing with its terminal projecting beyond one wall thereof and having a keyway for the reception of the key on the shaft, a notched disc on the crank shaft within the housing and a movable stop carried by the shelf and adapted to be engaged by the crank handle for limiting the movement of the same.



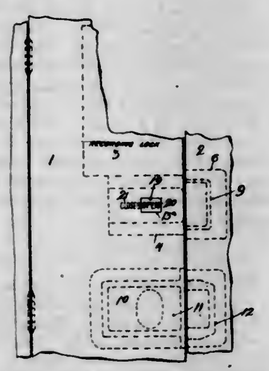
1,810,465. VALVE MOTION MECHANISM FOR INTERNAL COMBUSTION ENGINES. ARTHUR V. DA COSTA, Providence, R. I., assignor to Da Costa Engine Company, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 20, 1928. Serial No. 300,736. 7 Claims. (Cl. 123—90.)



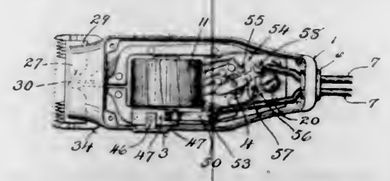
1. In an internal combustion engine, a valve, a cam, a motion transmitting hydraulic column operatively connecting the cam and valve, a reservoir communicating with said column, means actuated by said cam for supplying air under pressure to said reservoir, and means for controlling the flow from the reservoir to the column to compensate for expansion and contraction of the column and the adjacent parts to maintain the column intact.

1,810,466. DEVICE FOR GIVING ACCESS TO CAVITIES OF THE ANIMAL AND HUMAN BODY. JOSEF DEUTSCH, Vienna, Austria. Filed May 8, 1929, Serial No. 361,304, and in Austria May 25, 1928. 2 Claims. (Cl. 128—348.)

1. A temporary closure for surgical incisions comprising a flange of soft, impermeable, irresorbable material adapted to be secured adjacent to said incision and provided with a narrow slit in registry therewith, and a sleeve of soft, impermeable, yielding, irresorbable material projecting outwardly from said flange at said slit and normally held thereby in a collapsed, sealed condition, said sleeve being capable of being widened to present a much larger opening to render the interior of the incision accessible therethrough.

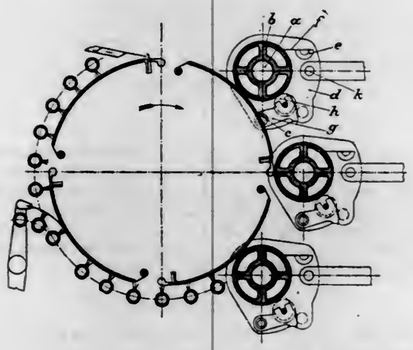


1,810,467. ADVERTISING AMUSEMENT DEVICE. CHARLES DOERING, Chicago, Ill. Filed July 1, 1929. Serial No. 375,175. 6 Claims. (Cl. 272—8.)



3. In a device of the character described, the combination with a resilient frame, of an elongated member pivotally associated with said frame, a barrier on said frame in the path of said member to limit the oscillatable movement thereof, said barrier serving to flip said member to reverse the movement thereof, thereby creating a visual illusion of its passage through said barrier.

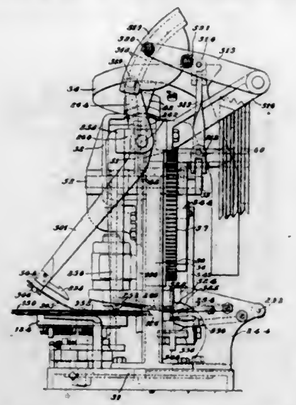
1,810,468. LOCK. CLARENCE V. DOYLE, New York, N. Y., assignor to Richard J. Sherwood, San Francisco, Calif. Filed Jan. 28, 1929. Serial No. 335,452. 12 Claims. (Cl. 40—66.)



1. The combination of a closure, a primary lock, a recording lock, both of said locks being adapted to fasten the closure in the same position, said recording lock having means for recording the time at which said closure is locked and unlocked by the recording lock, and means to automatically indicate to persons exterior of said closure when the recording lock is unlocked while the closure is in its closed position.

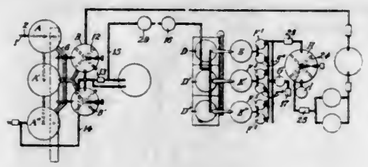
1,810,469. ELECTRIC HAIR CLIPPER. ALBERT J. DREMEL, Racine, Wis. Filed Aug. 22, 1927. Serial No. 214,750. 2 Claims. (Cl. 175—338.)

1. A device of the class described including a casing, a frame mounted therein and carrying an electro-magnet, a vibratory armature pivotally joined to said frame adjacent the rear end of said armature, and a laminated U-shaped spring surrounding the pivot point of said armature and fastened at its ends to said armature and said frame.



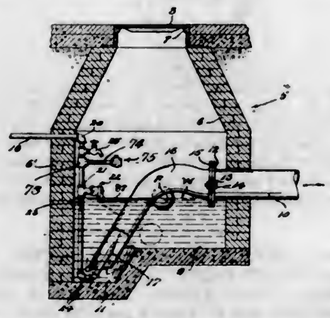
1,810,470. INTAGLIO PRINTING MACHINE. ARNOLD EGLI, Hamburg, Germany. Filed July 20, 1928, Serial No. 294,272, and in Germany July 28, 1927. 3 Claims. (Cl. 101—152.)

1. In an intaglio printing machine, in combination, an impression cylinder, a pair of carrier frames pivoted adjacent to said cylinder, a printing cylinder journalled in said carrier frames, and means for oscillating said frames on their pivots to move the printing cylinder alternately toward and away from the impression cylinder, the pivotal axis of said plates being in substantial vertical alignment with the center of gravity of the mass mounted on said pivots, whereby oscillation of the printing cylinder toward and away from the impression cylinder is effected without appreciably raising or lowering said center of gravity, and the power required to move said printing cylinder is reduced.



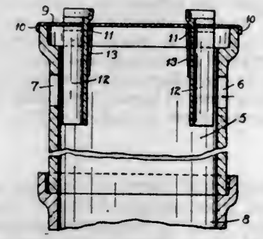
1,810,471. WRAPPING MACHINE. ANALDO M. ENGLISH, Brookline, Mass., assignor, by mesne assignments, to Pneumatic Scale Corporation, Limited, Quincy, Mass., a Corporation of Massachusetts. Original application filed June 20, 1923, Serial No. 646,574. Divided and this application filed Nov. 1, 1928. Serial No. 316,573. 3 Claims. (Cl. 271—2.5.)

1. A wrapping machine having, in combination, a movable wrapper feeding device having a pair of cloth gripper plates, a cam device between the plates adapted to open and close the plates for releasing and engaging the wrapper, a stationary wrapper guide for presenting wrapping material to the feeding device, means on the stationary guide for engaging the cam device to close the gripper plates when the feeding device is moved toward the stationary guide, a stationary pawl which is engaged by the feeding device at the limit of its feeding move-



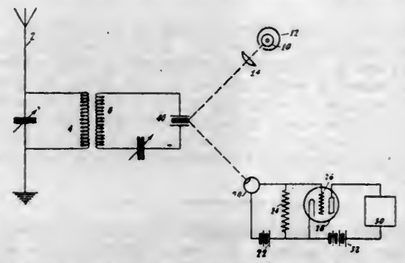
ment, and connections between the pawl and the cam device for actuating the latter to open the plates as the feeding device starts its movement in the reverse direction.

1,810,472. PROCESS OF RECOVERING RESINOUS BY-PRODUCTS IN THE MANUFACTURE OF WOOD PULP. EDWARD H. FRENCH, Columbus, Ohio. Original application filed Aug. 15, 1925, Serial No. 50,526. Divided and this application filed Oct. 29, 1928. Serial No. 315,784. 10 Claims. (Cl. 87—2.)



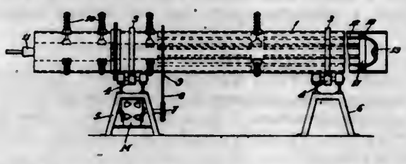
1. The process of recovering rosin from alkaline liquors containing resinates which comprises the step of passing an acid gas through the said liquors to liberate at least part of the rosin content thereof.

1,810,473. FLUSH TANK. ERNEST L. GAINES, Seattle, Wash. Filed Oct. 14, 1929. Serial No. 399,645. 20 Claims. (Cl. 182—3.)



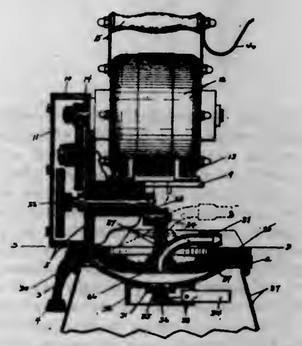
1. A flush tank for a sewer system comprising a reservoir having an outlet into the sewer positioned above the high level of the water within said reservoir, an elbow detachably secured to said outlet and having an open throat disposed adjacent the floor of the reservoir, a nozzle disposed within said throat, a service pipe connection to said reservoir and the nozzle, an adjustable leak valve on said pipe connection for supplying water to said reservoir, a control valve interposed in said service pipe between said leak valve and said nozzle, and float means responsive to the rise and fall of water within said reservoir for actuating said valve for intermittent flushing activity from said nozzle to the sewer.

1,810,474. SEPTIC TANK. IRWIN GUTMAN, Pittsburgh, Pa. Filed Mar. 7, 1930. Serial No. 433,922. 5 Claims. (Cl. 210—6.)



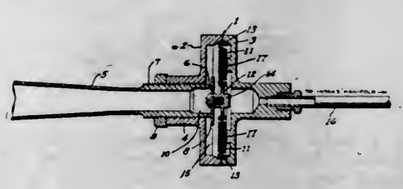
1. A cover for septic tanks and the like having a slot therein for permitting insertion of a baffle member, and means depending from said cover for supporting the baffle member against displacement in a direction transversely of said member.

1,810,475. RECEIVER. CLARENCE W. HANSELL, Rocky Point, Long Island, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed May 2, 1927. Serial No. 188,155. 12 Claims. (Cl. 250—31.)



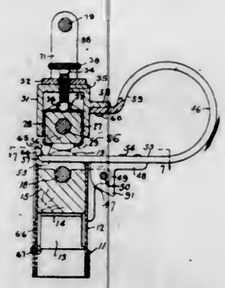
1. Means to detect signal energy comprising a photoelectric cell, a source of light, and a piezo-electric crystal responsive to the signal energy cooperating with the source and the cell to cause a change in the light energization of the cell which is dependent upon vibration of the crystal at its own natural frequency.

1,810,476. ROTARY DRIER. WILLIAM A. HARTY, Buffalo, N. Y., and FRANK W. MOORE, Thorold, Ontario, Canada, assignors to Harmor & Co. Inc., Buffalo, N. Y., a Corporation of New York. Filed Dec. 15, 1928. Serial No. 326,253. 6 Claims. (Cl 34—5.)



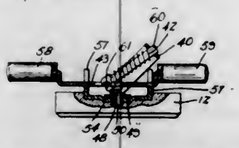
1. In a heat exchanger, a hot mandrel and a shell spaced therefrom and rotating therewith, having an external series of longitudinally extending return heat channels, and a return heat deflector mounted over the exhaust end of the mandrel in spaced relation thereto for returning a substantial portion of the hot gases discharging from the mandrel into and along said return heat channels.

1,810,477. MILKING MACHINE. RALPH L. HINMAN, Oneida, N. Y., assignor to Hinman Milking Machine Company, Incorporated, Oneida, N. Y., a Corporation of New York. Filed Apr. 27, 1928. Serial No. 273,385. 2 Claims. (Cl. 31—70.)



1. In a device of the class described, a frame having a central opening therethrough, a flexible diaphragm having an annular groove, a milk bowl having its periphery positioned in such annular groove, grooves in the frame for receiving the rim of the diaphragm whereby the diaphragm will be releasably held in position beneath the central opening of the frame, and means for moving the diaphragm in relation to the milk bowl.

1,810,478. HORN. HENRY HUEBER, Buffalo, and ERWIN C. HORTON, Hamburg, N. Y., assignors to Trico Products Corporation, Buffalo, N. Y. Filed Oct. 3, 1930. Serial No. 486,228. 12 Claims. (Cl. 116—142.)



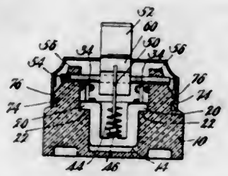
1. In combination with a source of reduced pressure, such as that which maintains in the intake manifold of an operating internal combustion engine, a hollow casing having a chamber provided with an exhaust opening connected to the source of reduced pressure by a conduit, a rigid annular seat in the chamber on the wall thereof, said casing having an inlet opening establishing communication between the outside atmosphere and the chamber through the annular seat, a sound wave generator normally engaging the seat to close the passage therethrough, said sound wave generator being of less diameter than the chamber, means separate from and resiliently supporting the sound wave generator against said seat whereby the sound wave generator will repeatedly unseat and seat to interrupt the air stream through the chamber and produce sound waves, and a trumpet connected to the chamber inlet opening acting in modification of the frequency of the pulsations set up.

1,810,479. WRINGER. GUSTAVE H. JANTZ, Wyoming, Ohio. Filed Aug. 7, 1929. Serial No. 384,145. 9 Claims. (Cl. 68—32.)

1. In a wringer, the combination of a breakdown frame for the wringer comprising a plurality of frame-parts each including bearing means for a wringer-roll, wringer rolls comprising shafts in said bearing means, pivot means between said frame-parts whose pivotal axes are substantially parallel with the axis of said bearing means, one of said frame-parts comprising bow-springs as part of its frame structure for exerting pressure between said wringer-rolls, said bow-springs located between said pivot means and said bearing means for said one of said frame-parts, said pivot means being at one side of said wringer-rolls, said second-named frame section provided with extensions reaching between and beyond the other side of said shafts where they are provided with catching means, latching means at said other side of said wringer-rolls coacting with said catching means for holding said frame-parts in operative relation, and quick releasing means for said latching means for quick release of said latching means from said catching means for quick separating movement between said wringer-rolls.

1,810,480. SWITCH FOR ELECTRIC LAMPS. FRANK E. JOHNSON, New Bedford, Mass., assignor to John I. Paulding, Inc., New Bedford, Mass., a Corporation of Massachusetts. Filed Aug. 24, 1928. Serial No. 301,715. 4 Claims. (Cl. 173—355.)

1. A switch having, in combination, a fixed contact, a U-shaped frame having its upwardly turned ends each provided with a right-angled recess opening out the top side thereof, a push-through member slidably mounted in said recesses and held against lateral movement by the sides thereof, said member having its ends offset to act as stops by engagement with the upwardly turned ends of said frame to limit the reciprocation of said member, the offset ends thereof being provided with push buttons, a movable contact and a spring actuated by said push-through member for throwing said movable contact into and out of engagement with said fixed contact.



1,810,481. ATTACHMENT PLUG RECEPTACLE. GUSTAF A. JOHNSON and ARTHUR A. JOHNSON, New Bedford, Mass., assignors to John I. Paulding, Inc., New Bedford, Mass., a Corporation of Massachusetts. Filed July 14, 1927. Serial No. 205,708. 5 Claims. (Cl. 173—330.)

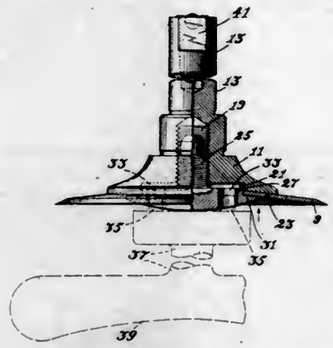
1. An attachment plug receptacle comprising a one-piece insulating body recessed in its inner face, a plurality of pairs of jack-blade slots entering said recess from the outer face of said body, a pair of contact plates mounted in said recess, each contact having each of its two ends provided with a pair of contacts projecting into two of said jack-blade slots, a pair of terminal plates, a pair of screws, each of said screws connecting one of said terminal plates with one of said contacts and serving to hold said

terminal plate and said contact in fastened position, a sheet of insulating material mounted within said recess and underlying said contacts, means for centrally fastening said insulating sheet to said body and means for mounting said receptacle in permanent position, said mounting means being adapted to serve as means for holding the two ends of said insulating sheet in locked position within said recess.

1,810,482. ELECTRIC SWITCH. GUSTAF A. JOHNSON, New Bedford, Mass., assignor to John I. Paulding, Inc., New Bedford, Mass., a Corporation of Massachusetts. Filed Apr. 30, 1929. Serial No. 359,259. 14 Claims. (Cl. 200—67.)

14. An electric switch having, in combination, a one-piece insulating body having a pair of projecting lug portions and a central recess therebetween, fixed contacts in said recess, a rocker member in said recess for bridging said contacts, an actuating spring, a toggle lever mounted in and between said lug portions for operating said spring and a cover, said cover and said lug portions having interlocked projections for detachably holding said cover in place.

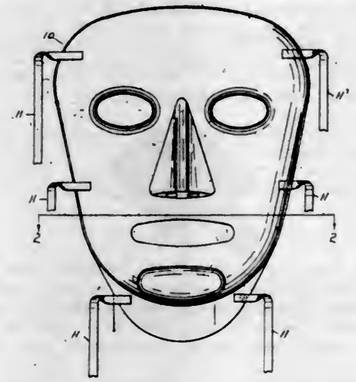
1,810,483. STENCIL SHEET. CHARLES F. KUMLI, Chicago, Ill., assignor, by mesne assignments, to Selectograph Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1928. Serial No. 327,481. 14 Claims. (Cl. 41—38.6.)



1. A stencil sheet comprising a porous base coated with a mixture of an organic colloid, a tempering agent and a water soluble permanganate.

1,810,484. STENCIL SHEET. CHARLES F. KUMLI, Chicago, Ill., assignor, by mesne assignments, to Selectograph Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1928. Serial No. 327,482. 15 Claims. (Cl. 41—38.6.)

14. A stencil sheet coated with a mixture of a protein, colloid, a tempering agent, and Schweitzer's reagent.

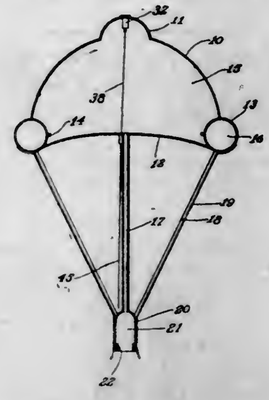


1,810,485. SKIVING MACHINE. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 15, 1929. Serial No. 407,344. 4 Claims. (Cl. 164—70.)

1. In a skiving machine, a shaft, a blade-supporting member rigid with the shaft, said member having a threaded hole therein and being recessed to provide an annular dished supporting surface, a normally flat flexible blade circular in outline and having an opening through its center, and a clamping member comprising a threaded stem

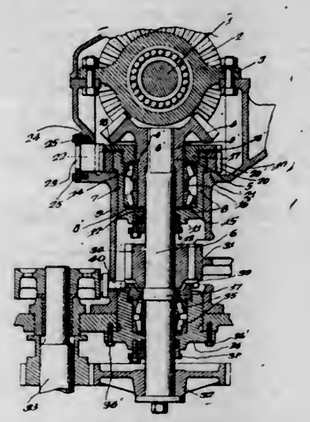
screwed into the hole in the supporting member, a head extending into the central opening in the blade, and a projecting flange engaging the blade only along a narrow annular area to force it against the supporting surface and thereby impart to it a dished shape.

1,810,486. RUBBER MASK. RAYMOND D. LANCASTER, Akron, Ohio. Filed June 30, 1928. Serial No. 289,369. 2 Claims. (Cl. 128—163.)



2. A mask for the purposes set forth, said mask being formed of flexible, elastic rubber, the normal curvature of the mask being of less radius than the general curvature of the face, the edge of the mask being formed with a bead normally turned inwardly but adapted to be turned outwardly when applied to the face whereby the mask will fit the face snugly over its whole area and the edge of the mask will seal itself by the action of the inherent, contractile forces therein.

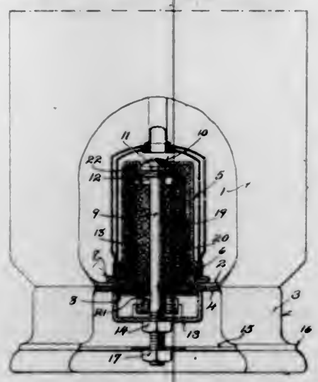
1,810,487. RECOVERY OF CYANID FROM ALKALIN LIQUORS. CLARENCE W. LAWE, Pachuca, Hidalgo, Mexico. Filed Dec. 14, 1928. Serial No. 326,159. 4 Claims. (Cl. 23—84.)



3. A method of recovering cyanogens from alkalin solutions of cyanides containing a soluble alkalin earth salt, which comprises neutralizing the solution with a material containing an acid ion capable of forming an insoluble precipitate of alkalin earth, removing the precipitate, adding an excess of acid ion containing material and blowing it with air to remove free cyanogens.

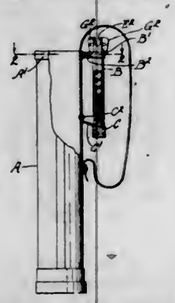
1,810,488. PARACHUTE. ALBERT LEHMANN, Brooklyn, N. Y. Filed Feb. 20, 1930. Serial No. 429,895. 5 Claims. (Cl. 244—21.)

1. In a parachute, a hemispherical head, a conduit encircling said head, a hemispherical roof closing said head, a gas container, a hose connecting with the chamber in said head, said hose being adapted to be connected to said container, and openings in said conduit entering into the chamber in said head and means for valving gas out of said head.



1,810,489. POWER TRANSMISSION MECHANISM. ROLF LJUNGKULL, Wauwatosa Wis., assignor to Harnischfeger Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 18, 1929. Serial No. 393,561. 5 Claims. (Cl. 74—7.)

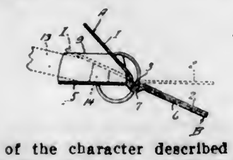
1. In a machine of the character described, a main frame, a horizontally disposed jack shaft rotatably mounted on the main frame, clutch controlled oppositely disposed driving bevel gears mounted on said jack shaft, a driven bevel gear meshed with said driving bevel gears, means on said frame providing a gear casing and a combined bearing support and guide, a bearing for said driven bevel gear including a bearing assembly coacting therewith, a casing for said bearing assembly, said bearing assembly being slidably fitted in said combined bearing support and guide, an adjusting collar threaded on said bearing casing, said gear casing having a seat on which said adjusting collar is supported, said gear casing also having an opening through which access is had to said adjusting collar, a vertical shaft having its



upper end slidably interfitted with the driven bevel gear to be constrained to rotate therewith and yet free to move axially relative thereto, and a separate bearing detachably connected to the gear casing and coacting with the shaft.

1,810,490. ELECTRIC PERCOLATOR. WALTER S. MARVIN, Two Rivers, Wis., assignor to Metal Ware Corporation, Two Rivers, Wis. Filed Sept. 4, 1928. Serial No. 303,892. 4 Claims. (Cl. 219—44.)

1. In an electric percolator, the combination of a pot having a bottom, a base having a transverse wall, said bottom and said wall having aligning apertures, an electric heating unit shell mounted on said bottom in said pot and having an extension projectng through the aligning apertures, an inverted cap bearing on the underside of said transverse wall, a shield plate carried by the base and spaced from the transverse wall of the base, a bolt carried by the upper end of the heating unit shell and extending downwardly through the cap and shell plate, a nut carried by the bolt adjacent its outer end and locking said cap in place, and a second nut on the outer end of said bolt engaging the outer face of the shield plate to retain the same in position in the base.

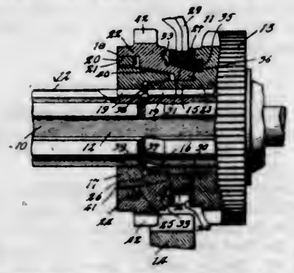


1,810,491. GOLF BALL CONTAINER. EARL N. MCCLURE, Chicago, Ill. Filed Nov. 8, 1928. Serial No. 317,914. 8 Claims. (Cl. 150—1.5.)

1. The combination with a golf bag of a combined handle and golf ball carrier, including a rigid tube secured to and spaced from the upper portion of the bag, said tube having a dispensing aperture and being adapted to contain golf balls.

5. As a new article of manufacture, a golf ball receptacle including a tubular member adapted to receive a series of golf balls stacked one upon the other and having a dispensing aperture for the balls, dispensing means mounted adjacent said aperture normally preventing the passage of golf balls from within the tube outwardly through the aperture while permitting balls to be passed inwardly through said aperture, said dispensing means including a movable stop member having a portion engaging the outermost ball of the series to prevent its escape from the tube, and a second portion movable across the path of movement of the remaining balls in the tube in response to thrust upon the first mentioned portion of the stop member incident to manual outward movement of the outermost ball, the tube adjacent said stop member being provided with ball exposing openings whereby the balls may be grasped for movement past the stop member.

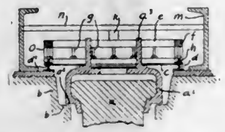
1,810,492. DEVICE FOR EXTINGUISHING AND HOLDING CIGARETTES. CHARLES W. MEARS and HERMAN EISELE, Cleveland, Ohio; said Eisele assignor to said Mears. Filed Feb. 28, 1929. Serial No. 343,268. 4 Claims. (Cl. 206—41.)



1. A device of the character described comprising in combination a pair of members each having a jaw and a handle projecting therefrom, the said members being mounted in rocking engagement intermediate their ends, and cylindrical springs each having a slit extending the full length thereof and adapted to receive the side portions of both jaws therein, each of said springs being received within slots provided in the sides of the rocking portions of said members, one of said members having side flanges thereon.

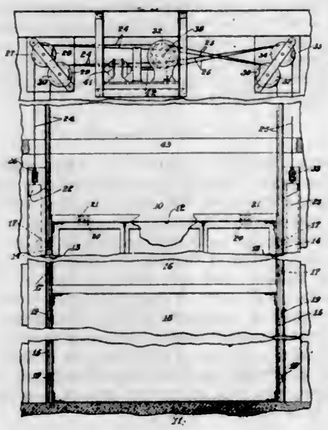
1,810,493. IDENTIFICATION SEAL. ABRAHAM MESSER, New York, N. Y., assignor, by direct and mesne assignments to Jacob Schierer, New York, N. Y. Filed June 7, 1929. Serial No. 369,023. 3 Claims. (Cl. 40—2.2.)

1. In a seal, a bendable strip, circular ridges pressed in the ends thereof for projecting the ends of identification eyelets, and identification eyelets engaged in the ends of the strip so as to have their ends protected by the ridges, said eyelets having identification cuts on their ends.



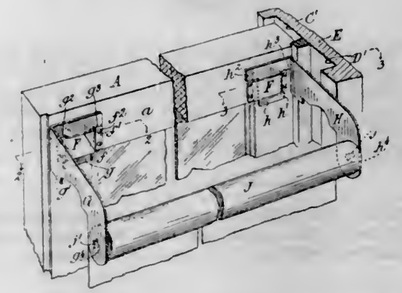
1,810,494. DOUBLE CONE CLUTCH SYNCHRONIZER. HOWARD J. MURRAY, Brooklyn, N. Y., assignor to Sure-Shift Transmission Corporation, East Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 30, 1926. Serial No. 158,125. 19 Claims. (Cl. 74—58.)

1. In a device of the class described, the combination of a spline shaft, a gear unit slidable thereon, resilient



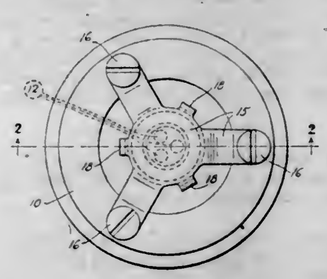
means tending to restrain its freedom of axial movement on the shaft, said unit provided with a peripheral groove, a synchronizer mounted in said groove and having a slight freedom of axial movement relative to the sides of the groove, the inner periphery of the synchronizer and the bottom of the groove coacting to form a conical type of friction clutch, a control ring mounted on the synchronizer and having a slight freedom of axial movement thereon, the outer surface of the synchronizer and the inner surface of the control ring coacting to form a conical type of friction clutch and means engaging the ring for shifting the same axially in one direction to cause said friction clutches to be moved into operative condition.

1,810,495. CLOSURE FOR COKE OVEN CHAMBERS. CARL OTTO, Essen-Ruhr, Germany. Filed Nov. 21, 1927, Serial No. 234,851, and in Germany Nov. 26, 1926. 9 Claims. (Cl. 202—248.)



1. In a coke oven, a stationary door frame, a door body, abutting sealing surfaces on said door frame and said door body, a stationary sealing frame mounted adjacent to the door frame and provided with an abutting sealing surface, an elastic sealing plate arranged on said door body and adapted to engage with said last-named sealing surface, clamping means adapted to close the door and to press said door body and said sealing plate against the respective abutting and sealing surfaces, and means for transmitting the pressure exerted by said clamping means to said sealing plate and to said door body.

1,810,496. ELEVATOR DOOR. ROBERT S. PEELLE, Hollis, New York, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 3, 1926. Serial No. 152,362. 8 Claims. (Cl. 268—59.)

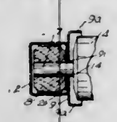


2. An elevator door embodying therein a plurality of panels vertically slidable in the same direction and in parallel planes, guides adjacent the opposite sides of the door opening, means upon said panels co-operating with said guides respectively, counterweighting means, means limiting the downward movement of said counterweighting means and said panels respectively, flexible connections between said counterweighting means and each of said panels, pinch groove pulleys operative upon different portions of said connections, said pulleys being of different diameters to impart simultaneous movement with a differential in speed, to said panels, guides for said connections between said pulleys and said panels respectively, and between said pulleys and said counterweighting means, a source of power, and operative connections between said source of power and said pulleys, whereby the load of the door and said counterweighting means upon opposite sides of said pulleys permits the application of power for either raising or lowering the door, and the relieving of said connections from the load of either said door or said counterweighting means will prevent a further application of power to the door.

1,810,497. SHADE ROLLER MOUNTING. ISRAEL PERPER, Bronx, N. Y. Filed Apr. 28, 1930. Serial No. 447,908. 3 Claims. (Cl. 156—24.)

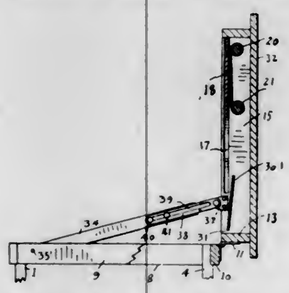
1. A shade roller mounting comprising a member adapted to be secured to the face of a window sash and to provide therewith a socket, an angular bracket having an arm adapted to support one end of a shade roller and an arm having a part insertable into the socket and a part adapted to seat against the top of the member, the part which is insertable into the socket being of less width than said socket and adapted for lateral movement therein and co-operating parts on said socket member and said insertable part for latching said members together when said insertable part is laterally moved within the socket member.

1,810,498. VALVE. CLYDE EDWARD PLOEGER, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 5, 1929. Serial No. 344,116. 12 Claims. (Cl. 251—119.)



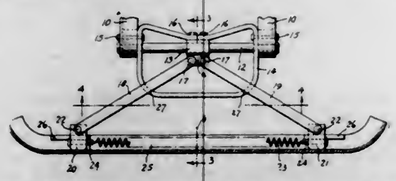
1. A valve comprising a port member having a port therein and a valve closure for covering said port comprising a plurality of flexible flat plates having securing portions secured to different parts of said port member and converging from the respective secured points toward the port and toward each other and having overlapping portions adjacent said port.

1,810,499. TRANSFORMER WINDING WIRE. JOHAN ROMP, Eindhoven, Netherlands, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 31, 1929, Serial No. 403,915, and in the Netherlands Dec. 4, 1928. 6 Claims. (Cl. 175—356.)



1. A high frequency transformer in which the wire of at least one of the windings consists of a metallic core of great tensile strength and low corrosion resistance surrounded by a metallic sheath which is highly resistant to corrosion.

1,810,500. WRINGER. ERNEST J. SCHUDA, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed May 31, 1930. Serial No. 458,575. 2 Claims. (Cl. 68—32.)



1. In a wringer, the combination of a side stile of box form having inturned lips along its inner face with a roll shaft receiving slot between the lips, said lips having guard plate ear-receiving notches; and a guard plate secured to the stile having ears extending into said notches and headed over on the inside of the stile.

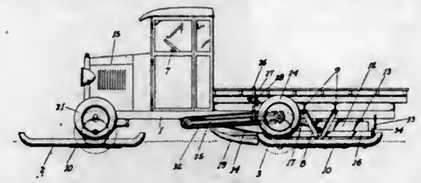
1,810,501. BLACKBOARD STAND AND WORK CASE. WILLIAM F. SPENCER, Muncie, Ind. Filed Feb. 18, 1929. Serial No. 340,774. 6 Claims. (Cl. 45—69.)

1. A blackboard stand and work case, comprising a support frame, a case hingedly connected to one side of said support frame and adapted to rest thereon, a blackboard disposed within said support frame and hingedly connected to the side thereof which is opposite to the hinge connection of the case, and connections between the case and the blackboard, operable when the case is swung to upright position, to raise the blackboard to inclined position, and to retain the case and the blackboard in their said upright and inclined positions respectively.

1,810,502. AUTOMOBILE BUMPER. ADOLPH A. THOMAS, New York, N. Y. Filed June 19, 1930. Serial No. 462,162. 15 Claims. (Cl. 293—55.)

1. An automobile bumper structure comprising a bumper bar, a pair of blocks slidably connected to said bar, an elastic element connected to said blocks and free to expand when the blocks are moved apart, and means for so supporting said blocks that they are forced apart when the bumper bar strikes an obstruction, the normal length of said elastic element being at least one-half the length of said bar.

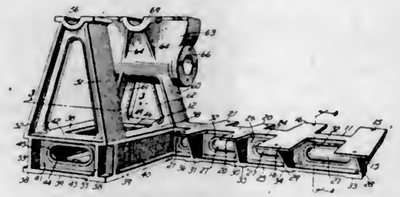
1,810,503. FLOATING REAMER HOLDER. GEORGE H. THOMAS, Erie, Pa., assignor to American Sterilizer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1926, Serial No. 139,448. Renewed Apr. 24, 1929. 7 Claims. (Cl. 279—16.)



1. A tool holder comprising a shank member; an intermediate member; a socket member; transverse shoulders forming a transversely sliding driving connection between the shank member and the intermediate member; and transverse shoulders forming a transversely sliding driving connection between the intermediate member and the socket member, said shoulders being alternately arranged, said shank member, intermediate member, and socket member having centrally engaging thrust surfaces, said surfaces gradually receding from each other from the center out and maintaining an approximately central thrust relation through the intermediate member.

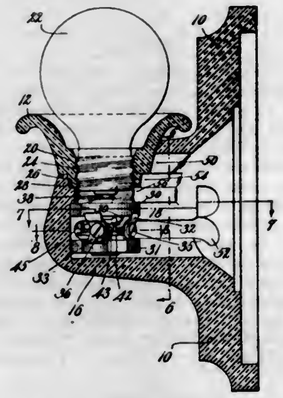
1,810,504. MANUFACTURE OF ARTICLES FROM AQUEOUS DISPERSIONS OF RUBBER AND SIMILAR VEGETABLE RESINS OR COMPOUNDS THEREOF. GEORGE GRAHAM THORNTON, Erdington, Birmingham, England, assignor to American Anode, Inc., Akron, Ohio, a Corporation of Delaware. Filed Mar. 22, 1928, Serial No. 263,980, and in Great Britain Mar. 29, 1927. Renewed Dec. 10, 1930. 5 Claims. (Cl. 18—58.)

1. The method of producing irregular markings on the surface of rubber articles which comprises forming a rubber deposit from an aqueous dispersion of rubber, drying the deposit, confining the dried deposit between suitably shaped plates, and immersing the deposit together with the plates in a heated liquid.



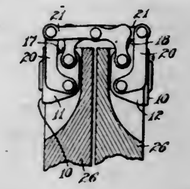
1,810,505. POWER DRIVEN SNOW VEHICLE. EMMITT M. TUCKER, Medford, Oreg. Filed Mar. 26, 1928. Serial No. 264,720. 2 Claims. (Cl. 180—8.)

2. A snow vehicle including a frame, runners for supporting the frame from the snow mounted in fixedly spaced relation thereto, rear wheels vertically adjustable relative to the frame for supporting the rear end of the same from the ground, front wheels for supporting the front end of the frame from the ground, transversely extending axle members on the outer ends of which the front wheels are mounted, pivotal supporting connections



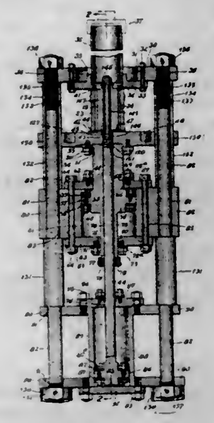
for the adjacent ends of the axles to permit the same to swing in a vertical plane transversely of the vehicle, and detachable link means for holding said axle members rigid with each other when fully raised or lowered.

1,810,506. BASE FRAME FOR ELEVATOR MACHINES. FREDERICK E. TURNER, Kansas City, Mo. Filed Oct. 30, 1926. Serial No. 145,217. 10 Claims. (Cl. 248—14.)



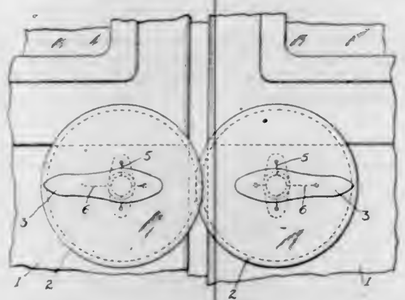
1. In combination with spaced beams, a base frame comprising a longitudinal body member supported wholly by one of the beams and having an integral, outriding, lateral extension at one end of the body member supported at its free end on the other beam.

1,810,507. ELECTRIC LIGHT FIXTURE. HENRY K. WACK, New Bedford, Mass., assignor to John I. Paulding, Inc., New Bedford, Mass., a Corporation of Massachusetts. Filed May 16, 1929. Serial No. 363,417. 12 Claims. (Cl. 240—73.)



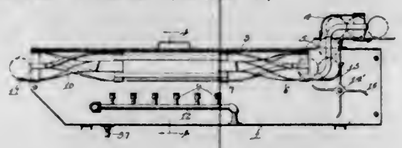
12. A wall fixture comprising a hollow wall member having a single lateral opening in its front face, a lamp socket comprising switch and shell portions mounted inside said hollow member with its shell portion in said lateral opening, the interior of said member being so formed as to require said socket to be inserted sidewise therein from the inner face thereof and to lock said socket against withdrawal through said lateral opening and an annular member threaded on said shell member for locking said socket in lamp receiving position.

1,810,508. HINGE. FREDERICK B. WALTER, Wabash, Ind., assignor to B. Walter & Company, Inc., Wabash, Ind., a Corporation of Indiana. Filed July 30, 1928. Serial No. 296,351. 3 Claims. (Cl. 16—163.)



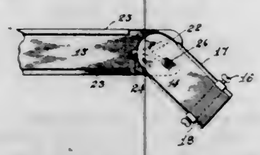
1. A hinge comprising two reversely arranged sheet metal strips of equal length, the ends of which are upturned and perforated, the metal around the perforations of only one upturned portion of each strip being extended laterally of the portion, two pairs of levers pivotally associated with the adjacent upturned portion at the perforations thereof and pivotally connected with companion levers, said levers having thickness substantially equal to said lateral extensions, the intermediate portions of each of said strips being provided with two perforations for the reception of fastening means, said perforations being symmetrically arranged relatively to the intermediate portion of the strip.

1,810,509. APPARATUS FOR MAKING CASTINGS. JAMES H. WILLIAMS, Providence, R. I., assignor to Detroit and Security Trust Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 11, 1929. Serial No. 391,783. 7 Claims. (Cl. 22—93.)



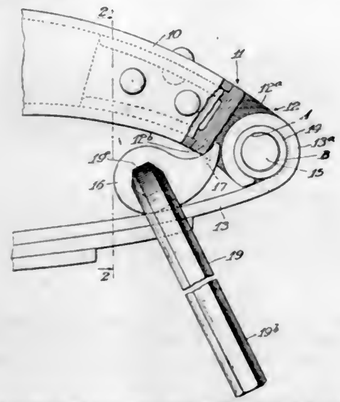
1. In an apparatus of the class referred to, means for supporting a casting and a metal mold section embraced by the walls of the said casting, said means comprising a pair of abutments spaced from each other to receive between them the casting and mold section and one of said abutments being movable toward and from the other; in combination with means for subjecting the joint between the mold section and casting to liquid under pressure so as to separate them, said last mentioned means comprising a passageway located in one of the said abutments and connected to a supply of liquid under pressure.

1,810,510. AUTOMOBILE DOOR PROTECTOR. LANSING F. WINNE, Nyack, N. Y. Filed July 24, 1929. Serial No. 380,494. 2 Claims. (Cl. 296—44.)



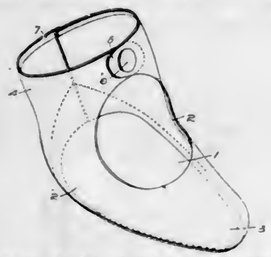
1. A motor car door protector comprising a felt pad and an ornamental cover stitched together around the margins thereof and provided with a centrally located circular opening, and slotted at intervals to provide flexible segmental portions adapted to conform to various sizes and shapes of door handle hubs.

1,810,511. CAN WASHING DEVICE. JOSEPH WOLFINGER, Dundas, Wis. Filed Oct. 7, 1929. Serial No. 397,933. 3 Claims. (Cl. 141—7.)



1. In a can washing device, an elongated housing, a guide extending into the housing at one end for receiving the cans in a horizontal position, a central rectangular guide with a spiral guide connecting the first guide and the central guide whereby to move the cans from a horizontal to an upended position, means for injecting fluid into the upended cans as they pass through the central guide, a feeding device including a rotor having radially disposed arms movable in the path of the cans in the first guide for engaging said cans and forcing them through the spiral guide and into the central guide, and means for simultaneously imparting movement to the rotor for moving the cans through the guides and turning on the fluid supply for cleansing the cans as they pass through the central guide.

1,810,512. CHUTE. GEORGE J. WORST, Philadelphia, Pa. Filed Nov. 26, 1929. Serial No. 409,795. 3 Claims. (Cl. 193—3.)

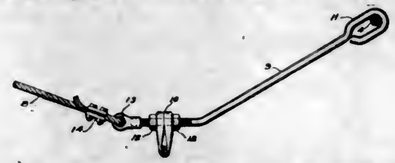


1. A chute comprising two sections one of which has divergent slots, pivotal connection for the sections employing said slot as a guide, rigid sidewalls on said sections, the sidewalls of one section being overlapped to form U-shaped slots, and resilient sidewalls extending out from the ends of the sidewalls of the other section and adapted to extend into the U-shaped slots of the first section.

1,810,513. SHACKLE JIMMY. HERMAN W. ZIMMERMAN, Chicago, Ill., assignor to Automotive Maintenance Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed June 21, 1928. Serial No. 287,337. 4 Claims. (Cl. 29—87.1.)

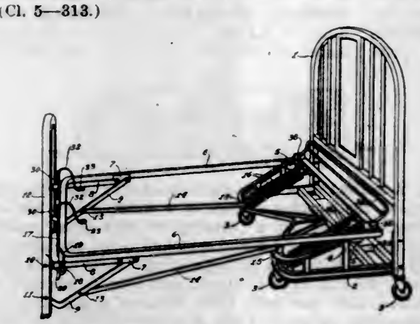
4. In a device of the character described, a body including an opening and a curved peripheral surface and having a hook-shaped tongue projecting therefrom, said body being shaped to seat and rock upon one of the parts to be adjusted, and said tongue being adapted to non-slip engage the other of the parts to be adjusted and an adjustable handle detachably mounted in said opening and arranged to effect a rotary-rock movement of said body.

1,810,514. UNIVERSAL SANDAL FOR FOOTWEAR. WALTER J. BENNETT, Hudson, Mass. Filed June 29, 1929. Serial No. 374,801. 1 Claim. (Cl. 36—6.)



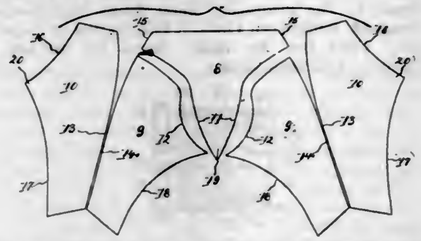
An all elastic sandal of the class described comprising two marginally secured blanks, one constituting a fore-sole member, and the second comprising a toe cap, shoe upper embracing side walls, an instep embracing body portion and elastic strap portions forming extensions of the side walls and instep embracing body, said second blank being intrajoined by a lap-seam at the under side of its instep embracing body portion, and said first blank being joined to said intra-lapped second blank by a continuous lap-seam thereof of greater overlap at the underside of said instep embracing body portion than around said shoe upper embracing side walls, said overlap at the underside of said instep embracing body portion being greatest at said intra-joined lap-seam, thus strengthening said sandal with assembly-produced reinforcing areas marginally of the sole and at the underside of the instep embracing portion thereof.

1,810,515. TROLLEY SYSTEM. LELAND W. BIRCH, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Nov. 14, 1929. Serial No. 407,141. 12 Claims. (Cl. 191—41.)



1. An overhead system comprising a pair of spaced upright poles, arms projecting from each pole, insulators

mounted upon the arms adjacent their ends, a messenger cable suspended between the insulators and continuing therebeyond and supported by the said insulators in a catenary curve and positioned in a vertical plane, a back-bone cable extending between the poles and assuming a curved condition positioned in an oblique plane to the said vertical plane, a trolley wire positioned in a horizontal

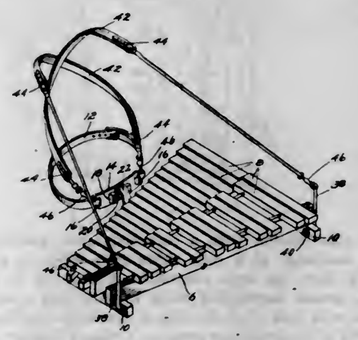


plane and curved in the direction of the poles, spaced pull-off wires extending between the trolley wire and back-bone cable and maintaining the curvature in the back-bone cable and the trolley wire and a rigid arm having one end rigidly secured to the trolley wire at the points of connection of the pull-off wires and having its other end supported by the messenger cable without bringing a sidewise thrust upon the messenger cable.

1,810,516. FOLDING BED. WILLIAM J. DUVALL, St. Louis, Mo., assignor to Smith & Davis Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 6, 1928. Serial No. 297,647. 1 Claim. (Cl. 5—313.)

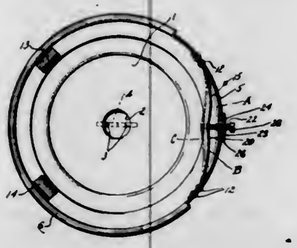
In a folding bed, a sub-frame, a bed frame, pivotally mounted on the sub-frame, a foot frame, a link connecting said foot frame to said bed frame, a latch on the link disposed to engage said bed frame, and maintain said foot frame in extended position, a second link connecting said bed frame and foot frame, said links cooperating to guide and brace the foot frame in its movements, and an operating member connecting said second link to said sub-frame.

1,810,517. METHOD OF CONSTRUCTING LEG COVERING GARMENTS. JACOB FINK, deceased, St. Paul, Minn., by Rose J. Fink, administratrix, St. Paul, Minn. Filed Nov. 6, 1929. Serial No. 405,107. 7 Claims. (Cl. 2—224.)



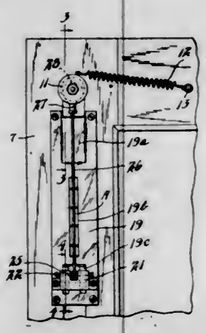
1. The method of constructing a leg covering garment, having leg covering and seat members, which comprises, laying out the pattern for the rear part of one of the leg members, said pattern having edges representing the waistline and center line of the back of the garment, laying out on the surface of the pattern so formed and extending along said said center line a pattern for a seat piece, the latter pattern having its lower end formed by a line extending obliquely upward from said center line, allowing material to project above the waistline for the upper part of the seat piece, forming a seat piece and a leg covering member from said patterns and moving said seat piece downward from its corresponding position in the pattern relative to said first mentioned pattern and joining the edges of the seat piece and leg member together in their new relative positions.

1,810,518. PROCESS OF MAKING LIQUID MALTED MILK. WILLIAM O. FROHRING, Cleveland, Ohio, assignor, by mesne assignments, to The Telling Belle Vernon Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 16, 1925. Serial No. 56,742. 2 Claims. (Cl. 99—11.)



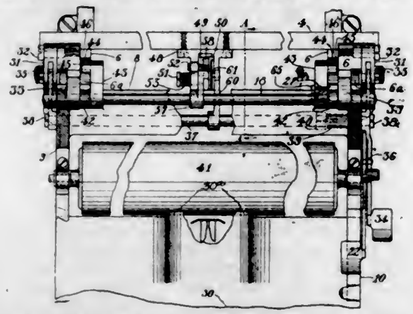
1. The process of making a non-perishable and palatable liquid malted milk, consisting in boiling a mixture of flour and water to swell the starch, adding an enzyme, heating until the starch is malted, condensing the malted flour solution to more concentrated liquid form, both the heating and condensing steps being performed at a temperature below boiling to avoid imparting a cooked flavor to the liquid material, adding milk, homogenizing the liquid mixture, hermetically sealing the mixture while still in liquid form in containers, and heating said containers and the liquid mixture therein to a temperature above boiling to sterilize the product and kill the enzyme, thereby producing a permanent, non-perishable liquid product having no cooked flavor and ready for immediate service upon opening the container.

1,810,519. COMBINED XYLOPHONE AND CARRYING APPARATUS. THOMAS R. GERHART, Lawrence, Kans. Filed Nov. 21, 1929. Serial No. 408,792. 3 Claims. (Cl. 84—327.)



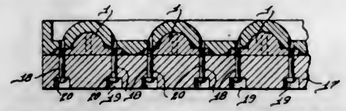
1. In a device of the character described, a xylophone frame, a body encircling belt, a plate carried by said belt, a bracket projecting from one side of said frame to join said plate, adjusting mechanism for the bracket for selectively maintaining said frame and plate in varying spaced relation, a pair of shoulder straps connecting the plate and xylophone frame and length adjusting devices for said shoulder straps, said straps being coupled to said xylophone frame at the side opposite from said projecting bracket, said releasable means for the bracket including a flanged channel secured to said frame and slidably supporting said bracket, a series of holes formed in said channel and a plunger carried by the bracket to selectively engage the said holes.

1,810,520. SHADE HOLDER. GEORGE E. GLATTHAR and FREDERICK WENING, Cleveland, Ohio, assignors to The Art Metal Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 29, 1930. Serial No. 478,574. 8 Claims. (Cl. 240—132.)



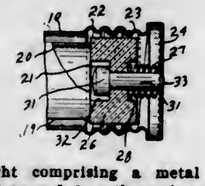
1. A shade or globe holder, comprising a canopy provided within the bottom portion thereof with a pair of opposed shade or globe supporting members adapted for supporting engagement with the rim or neck of the shade or globe, one of said members comprising a strip of flexibly resilient metal having its ends secured to the canopy bottom portion and also comprising an adjusting screw carried by said canopy bottom portion and having its inner end engaging the middle portion of said strip, so that by adjusting said screw, the middle portion of said strip is moved inwardly and outwardly to and from various shade or globe supporting positions.

1,810,521. COIN DETECTOR FOR COIN CONTROLLED MACHINES. OTTO R. HERMANEK, Minneapolis, Minn. Filed Mar. 28, 1930. Serial No. 439,670. 1 Claim. (Cl. 194—98.)



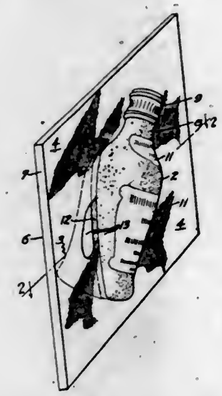
The combination with a coin controlled mechanism of a slot machine, of a coin chute into which a coin discharged from the coin controlled mechanism is adapted to fall, means permitting coins in said coin chute to be viewed, said coin chute having a discharge portion below the level of its receiving portion, a tipper member pivoted adjacent the discharge portion of the coin chute, said tipper member having a pair of spaced forked arms, the forked ends of which may be carried into said coin chute, resilient means normally holding the forked ends of one of said arms into said chute to support a plurality of coins therein with the forked ends of the other of said arms out of said chute, a cam adapted to be rocked when said coin controlled mechanism is operated, a rod connected at one end to said tipper member, a loop connected to the other end of said rod and within which said cam fits, said rod being adapted to tip said tipper member as said cam is rocked to carry the forked ends of the arm normally in said chute out of said chute and to carry the forked ends of the arm normally out of said chute into said chute.

1,810,522. TYPEWRITING MACHINE. FREDERIC W. HILLARD, Prince Bay, Staten Island, N. Y., assignor to Mary R. Hillard, Middlebury, Conn. Filed Mar. 14, 1929. Serial No. 346,898. 19 Claims. (Cl. 197—60.)



1. In a visible writing front strike typewriter the combination of an endwise movable truck, a platen carriage mounted forwardly of the truck and operatively connected therewith, means for mounting the carriage for movement out of the work field toward the truck and means for mounting the carriage to lift it to an elevated position on the truck at the end of said movement toward the truck.

1,810,523. METHOD OF MAKING MULTIPLE CORE BOXES. JOHN H. LAUKEL, Detroit, Mich. Filed Apr. 2, 1930. Serial No. 441,125. 4 Claims. (Cl. 204—6.)

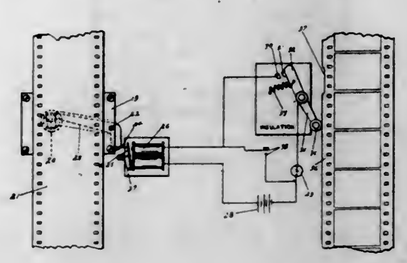


4. A method of preparing a cathode for the electro deposition of the working surface of a multiple core box consisting of laying out a plurality of split cores, molding a pattern of a core drier over said split cores, casting a core drier from said pattern, fitting said split cores in said drier, locating the counterparts of said split cores in matched registration upon said split cores, forming a cast over said counterparts, laying said cast with the counterparts therein upon a slab, securing said counterparts upon said slab in the position maintained by said cast, with the parting faces engaging said slab, removing said cast, and preparing said counterparts and slab for immersion in a plating bath for electro deposition on said counterparts, laying the core drier with the first named split cores therein upon another slab, and similarly securing said split cores upon said slab, removing the drier from said split cores, and preparing the slab and split cores for immersion in a plating bath and for electro deposition upon said split cores.

1,810,524. FLASH LIGHT. ANKER S. LYHNE, Bridgeport, Conn.; The Bridgeport-City Trust Co., Bridgeport, Conn., executor of said Anker S. Lyhne, deceased, assignor to The Bridgeport Metal Goods Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 30, 1929. Serial No. 403,436. 7 Claims. (Cl. 240—10.68.)

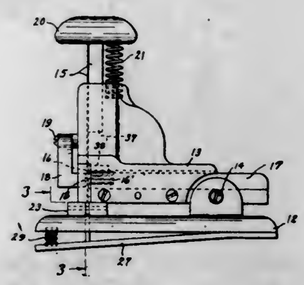
7. A flashlight comprising a metal casing, a lamp mounted in and grounded on the casing at one end, a battery in the casing and having one pole electrically connected with the lamp, a metal cap threaded on the other end of the casing, a contact carried by the cap and adapted to engage the other pole of the battery, an insulating block slidable on said contact toward and from the cap and engaging the end of the battery, said block having a recess in each of its ends, a spring extending into one of said recesses and tending to force the block away from the cap and against the battery, and said contact carried by the cap having an enlarged portion entering the other recess in the block.

1,810,525. ADVERTISING DEVICE. FOSTER MARTIN, Hayward, Calif., assignor to California Conserving Company, Incorporated, San Francisco, Calif., a Corporation of Nevada. Filed Aug. 13, 1929. Serial No. 385,541. 6 Claims. (Cl. 40—126.)



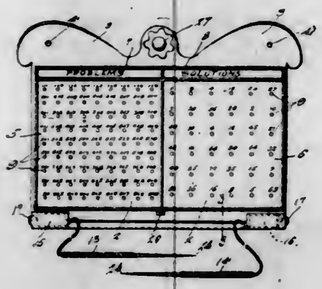
1. An advertising device comprising a transparent support, and portions of an article secured to the said support to simulate the appearance of the entire article projecting therethrough.

1,810,526. PROCESS FOR MAKING GLASS SIGNS. CARL J. OLSON, Minneapolis, Minn. Filed Apr. 16, 1930. Serial No. 444,701. 2 Claims. (Cl. 41—29.)



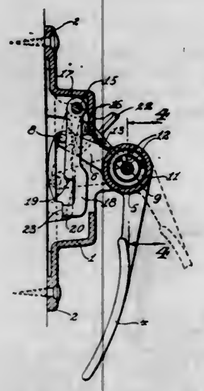
1. The process of making a shaded metal leaf design glass sign, which consists in applying metal foil to the back of the glass upon which the sign is to appear, cutting the outlines of both the shaded and unshaded portions of the design to be reproduced in metal leaf through the metal foil to the glass, removing, from the glass, strips of metal foil which cover portions of the glass to be filled in by the shaded portions of the metal leaf design, processing the glass in the spaces left therein by withdrawal of said strips to produce the desired shading effect when metal foil is applied over said open portions of the glass, removing, from the glass, strips of the metal foil covering those portions of the glass that are adapted to be filled in by the unshaded portions of the metal leaf, filling in the open portions of the glass produced by removal of said first mentioned and second mentioned metal foil strips with metal leaf and then removing the metal foil about the metal leaf design.

1,810,527. SOUND SHUTTER. FREEMAN H. OWENS, New York, N. Y. Filed Feb. 8, 1927. Serial No. 165,632. 9 Claims. (Cl. 179—100.3.)



1. In combination, a source of light, a film strip having a sound record thereon in the path of said light for varying the intensity of said light passing from said film in accordance with the sound record, an optical slit through which said light passes to said film, a splice connecting one film strip to a continuing film strip, one of said film strips being notched in advance of said splice, and shutter means operative by said notched film strip for interrupting the passage of said light to said film when said splice passes said optical slit.

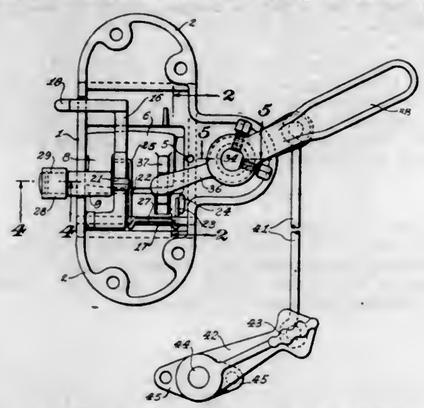
1,810,528. STAPLING MACHINE. ROY E. PETERSON, East Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed June 12, 1929. Serial No. 370,341. 9 Claims. (Cl. 1—8.)



1. In a stapling machine, a base, a housing pivoted to the base, a reciprocable plunger carried by the housing, an anvil carried by the base and slidable to force the free end of a staple toward the under side of the articles to be stapled, means below the base on which the base rests and movable toward the base, means carried by the latter means to slide said anvil laterally on depression of the plunger and spring means to normally hold the base above the carrier for the anvil operating means.

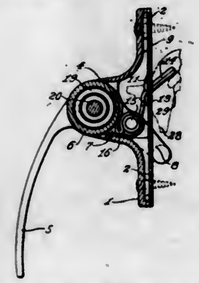
1,810,529. ELECTRIC APPARATUS FOR TEACHING MATHEMATICS. KIRK RICE, Oklahoma City, Okla., assignor to H. F. Allen, Oklahoma City, Okla. Filed Jan. 24, 1930. Serial No. 422,996. 2 Claims. (Cl. 35—12.)

1. A question and answer device characterized by a board having question and corresponding answer contacts electrically connected in circuit with a pair of pointers, a source of electric energy and signal means; said contacts comprising a shallow cup adapted to receive the tips of said pointers.



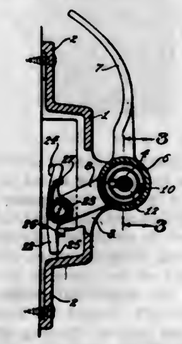
1,810,530. REFRIGERATOR LATCH. ADOLPH RUBIN, St. Louis, Mo. Filed Jan. 21, 1929. Serial No. 333,764. 9 Claims. (Cl. 292—332.)

1. A refrigerator door latch comprising, a base, a handle pivotally mounted on said base for rotation in a plane transverse of the door, a bolt integral with said handle adapted to cooperate with a keeper, a spring to actuate the bolt, and a trigger adapted to engage the bolt and hold it in an inoperative position after it has been disengaged from the keeper.



1,810,531. REFRIGERATOR LATCH. ADOLPH RUBIN, St. Louis, Mo. Filed Jan. 21, 1929. Serial No. 333,765. 8 Claims. (Cl. 292—332.)

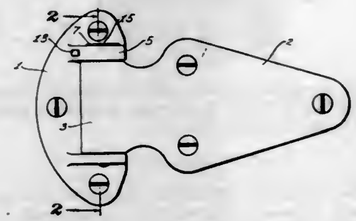
1. A refrigerator door latch comprising a casing having attached flanges, a handle and bolt pivotally mounted on said casing about the same axis for rotation in a plane transverse of the door, a spring to actuate such



latching member, a trigger adapted to engage and hold the latching member in inoperative position while the door is open, and a spring to actuate said trigger.

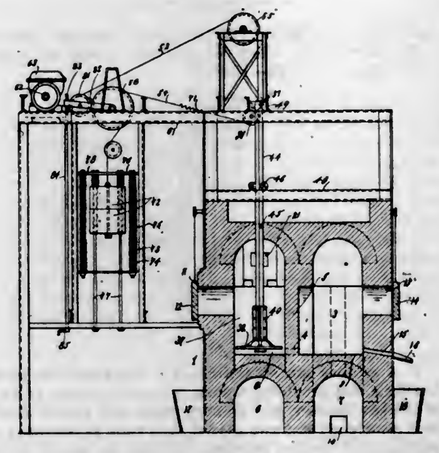
1,810,532. REFRIGERATOR LATCH. ADOLPH RUBIN, St. Louis, Mo. Filed Sept. 28, 1929. Serial No. 395,891. 10 Claims. (Cl. 292—336.)

1. A latch for refrigerator doors including a latching element having a bolt to engage a keeper, a trigger pivotally mounted on and supporter by said latching element and adapted to retain the bolt in withdrawn position when the door is open and a spring to actuate the trigger.



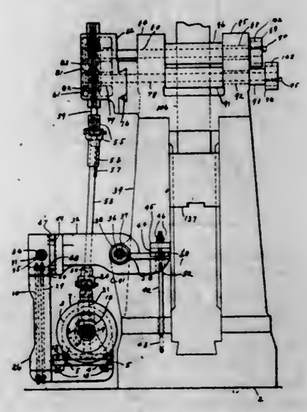
1,810,533. REFRIGERATOR LATCH. ADOLPH RUBIN, St. Louis, Mo. Filed Sept. 28, 1929. Serial No. 395,892. 3 Claims. (Cl. 292—336.)

1. A refrigerator door latch including a casing having attaching flanges, a bolt adapted to cooperate with a



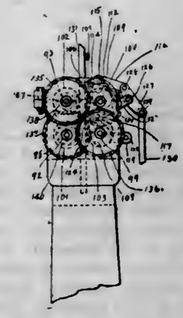
keeper and a trigger pivotally mounted on said bolt, said trigger comprising a lever of the first class, a projection from one end of said lever adapted to strike the keeper to release the trigger, the other end of said lever having a surface adapted to engage a shoulder on the casing to retain the bolt in withdrawn position when the door is open.

1,810,534. SPRING HINGE. ADOLPH RUBIN, St. Louis, Mo. Filed Sept. 30, 1929. Serial No. 396,318. 2 Claims. (Cl. 16—180.)



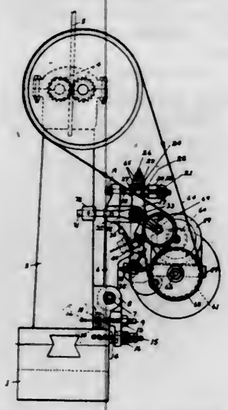
1. A spring hinge comprising, a butt having upstanding lugs, a leaf having a sleeve positioned between said lugs, a hinge pin through said sleeve and said lugs secured to one of said lugs, a spring within said sleeve and about said hinge pin having one end attached to said pin and the other end attached to said sleeve; said hinge pin having a cylindrical head with a hole in the periphery of said head adapted to register with a hole in one of said lugs radial to said hinge pin and to accommodate a key pin, a longitudinal slot in the head adapted to secure one end of the spring, and a shoulder on the lower end of the pin to abut a ring integral with and at one end of the sleeve; the spring being attached to the sleeve by having its end inserted in an orifice in the said ring.

1,810,535. METHOD OF REWORKING FINELY DIVIDED METAL PARTICLES. JOHN SCHMELLER, Sr., Lakewood, Ohio, assignor to Schmeller Holding Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Apr. 3, 1926, Serial No. 99,482. Divided and this application filed Feb. 8, 1928. Serial No. 252,738. 19 Claims. (Cl. 75—58.)



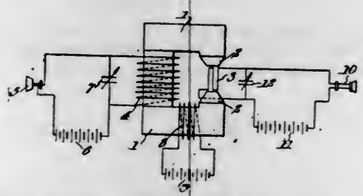
1. In a method of melting and refining metal, the steps which consist in applying heat to bring the metal to a molten condition, and thereafter maintaining the molten condition of said metal and refining and deoxidising the same by puddling the molten material from a position above the level thereof downwardly in a substantially vertical direction and setting up a plurality of substantially vertical current streams of molten metal to interact upon each other.

1,810,536. DROP HAMMER. JOHN NIVER SCISM, Hartford, Conn. Filed July 14, 1923. Serial No. 651,602. 4 Claims. (Cl. 248—16.)



1. A motor support comprising a supporting frame, lever arms pivotally mounted in said frame, cushioning means interposed between said arms and said frame, a motor supporting platform, supporting arms pivotally connecting said platform with the lever arms in said frame, and cushioning means interposed between said platform and supporting arms.

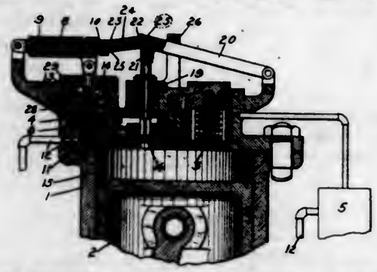
1,810,537. DROP HAMMER. JOHN NIVER SCISM, Hartford, Conn. Filed Oct. 5, 1923, Serial No. 666,730. Renewed Nov. 20, 1930. 8 Claims. (Cl. 78—29.)



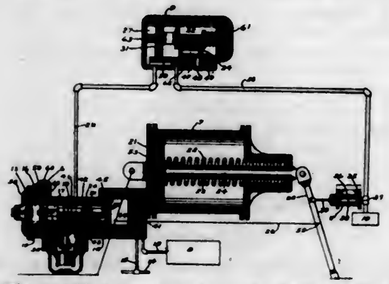
1. A drop hammer comprising a board, a pair of upper rolls, a pair of lower rolls, the front upper roll and the rear lower roll being mutually geared and the lower front roll and the upper rear roll being mutually geared, and eccentrically mounted shafts connected with both of the front rolls and so arranged that the centers of the front rolls are movable simultaneously and arcuately in opposite directions to engage and disengage the board and to maintain proper engagement of the gear teeth.

1,810,538. MOTOR MOUNTING. JOHN N. SCISM, Wilkinsburg, Pa. Filed June 14, 1928. Serial No. 285,808. 15 Claims. (Cl. 248—16.)

1. The combination of a drop hammer and a motor mounting therefor comprising a lever having a vertical component of extent pivoted to the drop hammer housing intermediate its length, stop means yieldingly interengaging said housing and the portion of said lever extending below the pivot point of said lever and arranged to definitely limit movement of rotation of the lever in either direction, and a motor platform suspended by pivotal connections from said lever arm upwardly of the plane of mounting of said lever in said housing.



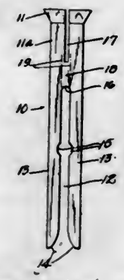
1,810,539. METHOD OF AND APPARATUS FOR AMPLIFYING WEAK ELECTRIC CURRENTS. BORIS N. SOKOLOFF, Rosendale, N. Y., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Aug. 16, 1926. Serial No. 129,546. 10 Claims. (Cl. 179—171.)



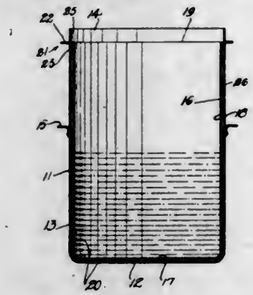
1. In an electric current amplifying device, a pair of pole members, a magnetic circuit including a constant flux extending between said pole members and including a variable resistance conductor disposed between said pole pieces and in alignment therewith, the longitudinally extending portions of said conductor being aligned with the direction of magnetic flux between said pole pieces, two electric circuits, means connected in one electric circuit to produce changes in the magnetic circuit, said variable resistance conductor being included in the second electric circuit, whereby current changes in the first circuit are translated into magnetic changes in the magnetic circuit and into amplified current changes in the second circuit.

1,810,540. VALVE CONTROLLING DEVICE. FRANK B. THOMAS, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1927. Serial No. 241,652. 24 Claims. (Cl. 230—30.)

1. The combination with a fluid pressure controlling valve, of a pressure sensitive element, a member operated by said pressure sensitive element, a member operative to control the operation of said valve, and means pivotally engaging both of said members adapted, upon a predetermined movement of the first mentioned member in one direction to cause the second mentioned member to operate in the opposite direction.

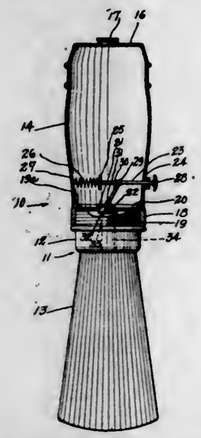


1,810,541. BRAKE RELEASE DEVICE. THOMAS H. THOMAS, deceased, Edgewood, Pa., by Mable M. Thomas, executrix, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 10, 1929. Serial No. 384,826. 8 Claims. (Cl. 303—68.)



1. The combination with a triple valve device having a quick service bulb, a brake lever and a brake cylinder controlled by said triple valve device and adapted to operate said lever only in one direction, of means actuated by fluid pressure from said quick service bulb for operating said lever in the opposite direction.

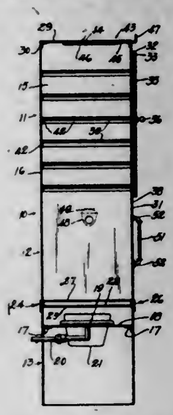
1,810,542. SAFETY CLOTHESPIN. GEROME TRUPIANO, Brooklyn, N. Y. Filed Oct. 4, 1930. Serial No. 486,324. 2 Claims. (Cl. 24—138.)



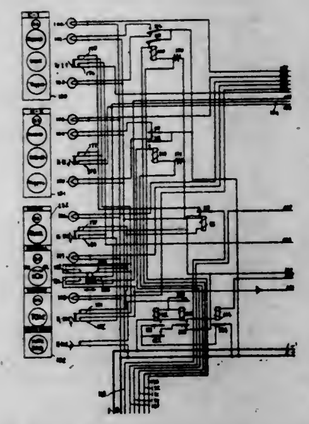
1. A clothes pin consisting of a one piece bar member having a slot providing a fork, a handle portion at an end of the bar member, and an open ended slot alined with the first mentioned slot and spaced therefrom to provide a connecting neck portion between the slots, the slot in the handle portion being narrower than the first mentioned slot and taking up compression created in the handle portion on springing the prongs of the fork apart.

1,810,543. PROTECTIVE STRAINER AND COOKING POT. GEROME TRUPIANO, Brooklyn, N. Y. Filed Oct. 4, 1930. Serial No. 486,325. 3 Claims. (Cl. 53—1.)

1. A device including a pot having recesses in the rim portion thereof, and a removable strainer in the pot having handle means secured thereto, said handle means extending laterally through said recesses to the outside of the pot for removal of the strainer from the pot.



1,810,544. FOUNTAIN SHAVING BRUSH. GEROME TRUPIANO, Brooklyn, N. Y. Filed Oct. 4, 1930. Serial No. 486,326. 2 Claims. (Cl. 15—138.)

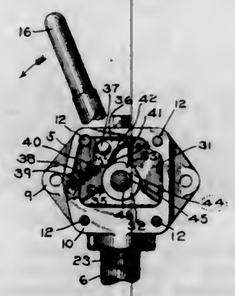


1. A fountain shaving brush, including a brush head, a reservoir detachably connected thereto, said reservoir and the brush head having communicating openings for supplying a lathering material to the bristles of the brush, a valve for said opening coaxial with the reservoir, a bar mounted in the reservoir for endwise movement transversely to the axis of the valve, a coil spring alined with said bar and acting between the same and the wall of the reservoir, said bar having a portion extending outside of the reservoir and a finger piece on said end portion, and a link connecting the valve and the bar at an acute angle with said valve axis, whereby the finger piece and the spring move said bar in opposite directions lengthwise of the bar for closing and opening the valve in the axial direction mentioned.

1,810,545. STERILIZER. GEROME TRUPIANO, Brooklyn, N. Y. Filed Oct. 4, 1930. Serial No. 486,327. 2 Claims. (Cl. 167—3.)

2. A sterilizer including an article containing cabinet and a water tank superimposed upon each other and having rear and side walls lying in the same upright planes, the rear side walls of the water tank and cabinet being respectively integral, the cabinet having a door constituting the front wall thereof, said door having closure coacting with the water tank, and heating means for said water tank, and a base enclosing said heating means and having walls lying in the planes of the walls of the water tank, the walls of said cabinet, water tank and base being made of sheet metal, and a strap extending around the joint between the water tank and the base and coacting to form a butt connection between the latter.

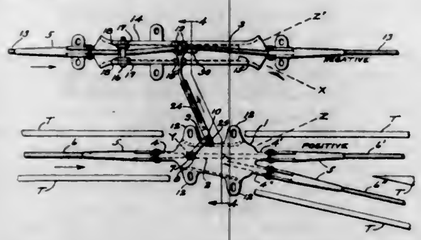
1,810,546. REMOTE SUPERVISORY CONTROL SYSTEM. THOMAS U. WHITE, Genoa, Ill., assignor to Leich Electric Co., Genoa, Ill., a Corporation of Illinois. Filed Jan. 28, 1927. Serial No. 164,247. 5 Claims. (Cl. 177—353.)



1. In a selective distant control and supervisory system, a means of presetting a plurality of control code sending operations, a code finder device to which said presetting means are connected in a definite order, means for indicating the position of said code finder device, a code transmitting device, and means including said pre-setting means operative to cause the transmission of said control code sending operations in an irregular order, and regardless of the order in which said control codes are preset on said control code sending device.

2. A distant control system for controlling a plurality of remote apparatus units from a station comprising means for selecting one of said units from said station and con-

necting it to a remote control device, indicating means becoming operative when the selection has been made for indicating at said station that a selection has been made and means operative from said station to indicate at said station the selection made and the position of the unit selected independently of said first named indicating means.

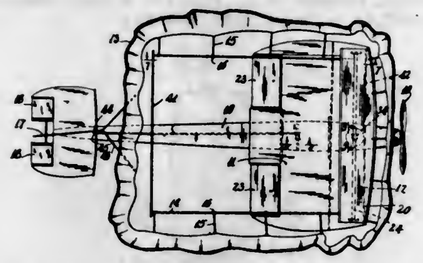


4. A distant control system for controlling a plurality of remote apparatus units from a single station including means for selecting any one of said units and connecting it to a remote control device, means for causing a change in the position of said selected unit by sending a code from said station, and means interrupting the sending of the code and sending a supervisory signal to said station when a change in position of any of said units occurs without releasing the unit selected from its remote control device.

1,810,547. BRAKE APPLICATION VALVE DEVICE. JOHN H. WOODS, Hamilton, Ontario, Canada, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 7, 1930. Serial No. 442,048. 16 Claims. (Cl. 303—51.)

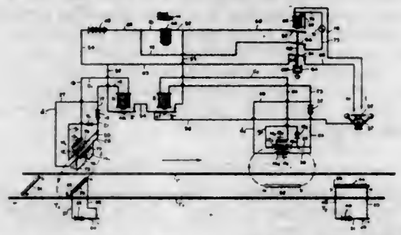
1. The combination with a fluid pressure brake application valve device having a lap position and an application zone, of means operative automatically upon the operation of said device from lap position to the beginning of said zone for locking said device against operation from the beginning of said zone to lap position.

1,810,548. TROLLEY SWITCH. JEDEDIAH F. WOOLLEY, Jr., and LAWRENCE J. LONG, Salt Lake City, Utah. Filed Jan. 20, 1930. Serial No. 421,908. 21 Claims. (Cl. 191—38.)



1. In an overhead system the combination of two overhead conductors of opposite polarity, a track and turnout having the same polarity as one of the overhead conductors, a switch in one of the overhead conductors corresponding to the track and turnout and having a pivotally mounted switching tongue, an operating mechanism positioned in the other overhead conductor and operable by a trolley head contacting therewith and moving in a predetermined direction and connecting means between the operating mechanism and the switch tongue to move the switch tongue to correspond to said predetermined direction.

1,810,549. AVIATOR'S HELMET. EDMUND T. ALLEN, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash. Filed Mar. 19, 1930. Serial No. 436,977. 3 Claims. (Cl. 179—156.)

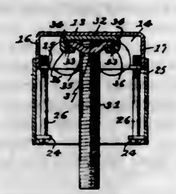


3. In a helmet, in combination with means to support telephone receivers therein, a telephone transmitter and a bail support therefor, the ends of which have circular holes, pivot bolts of a size to fill said holes, carried by said receiver supports thus providing a pivot for rotation of the bail thereabout, each pivot bolt being provided with a knurled head for fixing said transmitter support in any one of a plurality of adjusted positions against all except intentional movement.

1,810,550. AEROPLANE SAFETY LANDING DEVICE. ANDREW BOCHNAK, Bobtown, Pa. Filed Sept. 18, 1930. Serial No. 482,737. 11 Claims. (Cl. 244—21.)

1. In combination with an aeroplane having wings, a pocket on said wings and having its opening facing rearwards, means in said pocket for folding a parachute sail, a frame on said aeroplane and including side-forming elements extending from said pocket rearwards, a parachute sail with a plurality of support cords attached along its edges, rings on the free ends of said cords and slidably engaged on said side-forming elements, means for drawing said parachute from said pocket and into operative position, and means for clamping said rings in stationary positions along said side-forming elements for holding the parachute in the operative position.

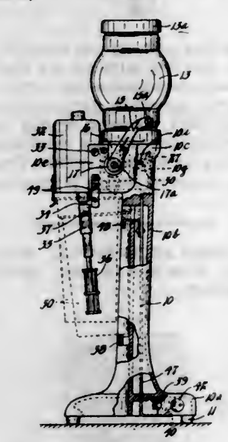
1,810,551. TRAIN CONTROL SYSTEM. THEODORE BODDE, Niagara Falls, N. Y., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 13, 1924. Serial No. 731,695. 19 Claims. (Cl. 246—63.)



1. In combination, a vehicle control mechanism including a plurality of relays combinedly controlling vehicle

circuits, a plurality of electron discharge devices of which magnetic fields form controlling components one electron discharge device for each relay and roadside mechanism including a plurality of control means, one individual to each of the devices for influencing the same in the movement of the vehicle over the roadway.

1,810,552. SECONDARY BUTYL XANTHATES. LUDWIG J. CHRISTMANN, Jersey City, and DAVID W. JAYNE, Jr., Elizabeth, N. J., assignors to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Apr. 14, 1930. Serial No. 444,345. 4 Claims. (Cl. 260—106.)

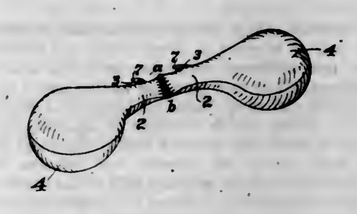


1. Alkali metal secondary-butyl xanthate.

1,810,553. OUTLET BOX FIXTURE SUPPORT. RUSSELL F. CLUNY, Stratford, Conn. Filed July 27, 1925. Serial No. 46,320. 4 Claims. (Cl. 247—20.)

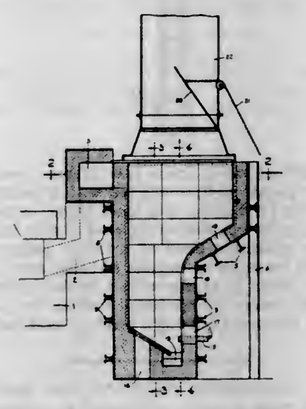
4. The combination with an outlet box, a supporting member carried thereby and longitudinally movable in said box, and a fixture supporting nipple carried by said member and movable therethrough at an angle to the direction of movement of the member to contact with the box to secure said fixture in the desired adjusted position.

1,810,554. DRINK MIXING DEVICE. THEODORE M. COSTAKOS, Minneapolis, Minn. Filed Nov. 11, 1929, Serial No. 406,377. Renewed Nov. 20, 1930. 8 Claims. (Cl. 259—108.)



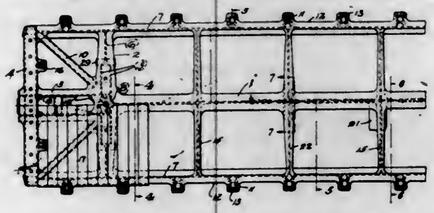
1. A drink making apparatus having in combination, a frame comprising a standard, a motor mounted on the upper end of said standard, said motor having a shaft projecting downwardly adjacent said frame carrying a mixing device, a catch depending from said motor, said frame having a surface opposite said catch and spaced therefrom so that the receptacle may be placed against said surface and held in place by said catch with said mixer disposed therein when the motor is not running.

1,810,555. LUBRICANT. MAURICE O. EDMISTON, St. Louis, Mo. Filed Mar. 30, 1927. Serial No. 179,716. 8 Claims. (Cl. 87—9.)



1. A liquid lubricant comprising a substantially water-free mixture of a major proportion of mineral oil and minor proportions of a fatty acid and an alkali metal hydroxide dissolved in glycerin, the hydroxide being in sufficient amount to neutralize the acid and the resultant neutral compound being dissolved in the mineral oil.

1,810,556. WATER WINGS. FRANK FENTON, Akron, Ohio, assignor, by mesne assignments, to The Miller Rubber Company Inc., Wilmington, Del., a Corporation of Delaware. Filed Sept. 5, 1929. Serial No. 390,546. 1 Claim. (Cl. 9—17.)



A device for assisting swimmers, said device comprising a pair of impervious inflatable rubber air chambers, and an inflatable pectoral yoke member integral therewith, said yoke member comprising non-communicating extensions of said air chambers joined by a die-cut seam.

1,810,557. CONDENSER AND METHOD OF OPERATING THE SAME. FRANCIS A. J. FITZGERALD, Niagara Falls, N. Y., and JAMES KELLEHER, Chippawa, Ontario, Canada, assignors to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Mar. 25, 1929. Serial No. 349,678. 15 Claims. (Cl. 75—28.)

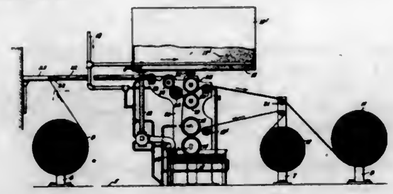
1. A method of condensing zinc vapors which consists in conducting vaporized zinc to the top of a vertical condenser flue, forcing the vapor to move downward through the condenser, conducting a cooling medium upwards on two sides of the condenser through two independent cooling flues, maintaining the temperature of the condenser below the zinc condensation temperature, and collecting the zinc thus condensed.

1,810,558. RAILWAY VEHICLE UNDERFRAME. CHARLES F. FREDE, St. Louis, Mo., and EINAR G. HALLQUIST, Edwardsville, Ill., assignors to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Filed Oct. 20, 1930. Serial No. 490,026. 20 Claims. (Cl. 105—416.)

1. A railway vehicle integral underframe including side sills, a pair of bolsters, a single center sill between said bolsters, and transoms connecting said sills intermediate said bolsters, all of said members having upper flanges in substantially the same plane for carrying a floor.

2. In a railway vehicle underframe, spaced bolsters, end sills, spaced draft sills between said bolsters and end sills, and a single center sill between said bolsters, diagonal struts from the ends of said end sills to the middle of the bolster, all of said parts forming an integral structure and having upper flanges in substantially the same horizontal plane.

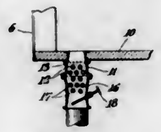
1,810,559. COMBINED SAFETY RAZOR AND STROPPER. PATRICK FRIEL, New York, N. Y. Filed Jan. 9, 1931. Serial No. 507,627. 12 Claims. (Cl. 30—12.)



1. A combined safety razor and stropper, comprising a razor blade guard rigidly connected with a handle, a blade holder, means for holding said blade holder on said guard, a frame pivotally mounted on the ends of said blade guards and having elongated arms of a length sufficiently long to allow the frame to be capable of being swung over one edge of the guard to engage with a lateral portion of the handle or to assume an operative position over said blade holder, and means for holding a blade on said frame.

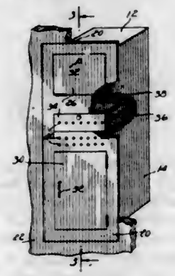
1,810,560. COMPOSITE PRODUCT AND METHOD OF MAKING THE SAME. BENJAMIN S. GARVEY, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1929. Serial No. 338,886. 16 Claims. (Cl. 91—68.)

1. The method of making a composite product which comprises halogenating a rubber surface, and applying a layer of halogenated rubber thereto.



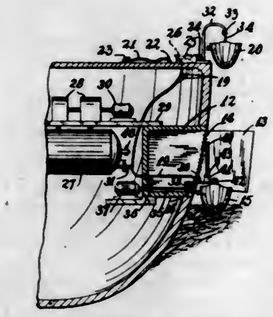
10. The method of making a composite product which comprises chlorinating a vulcanized soft rubber surface and applying thereto a solution comprising rubber chloride and o-nitro-diphenylether.

1,810,561. COMPOSITE SHEET FORMING MACHINE. HARRY GINSBERG, New York, N. Y., assignor, by mesne assignments, to National Container Corporation, Long Island City, N. Y., a Corporation of New York. Filed July 22, 1927. Serial No. 207,615. 2 Claims. (Cl. 154—37.)



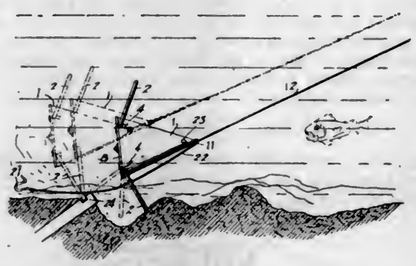
1. A sheet-forming machine, including means for uniting two strips of material, one of which comprises a fabric having longitudinally and transversely extending strands, and a pair of rollers arranged in advance of said uniting means and over the opposed peripheral areas of which said last-named strip passes in its travel towards said means, each of said rollers engaging and acting upon said strip to transversely stretch the same in its passage towards said uniting means, said rollers being arranged so that said strip traverses a substantial portion of the periphery of one of said rollers before it reaches the other and so that said strip traverses a substantial portion of the periphery of said other roller after it leaves the first roller.

1,810,562. ORE COOLING APPARATUS. HENRY J. HARTLEY, Hastings-on-Hudson, and FREDERICK B. SCHILLING, Flushing, N. Y., assignors to Nichols Copper Company, New York, N. Y., a Corporation of New York. Filed Dec. 2, 1929. Serial No. 410,970. 2 Claims. (Cl. 263—26.)



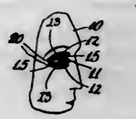
1. The combination with an ore roasting furnace comprising a hearth provided with an ore discharge orifice; of a cooling device secured below said orifice comprising a frame provided with outwardly flaring sides, cooling pipes supported in said sides, a second cooling device comprising a frame secured to said first mentioned frame and provided with sides converging inwardly from the ends of the frame, and a series of cooling pipes supported in said sides.

1,810,563. LAUNDRY RECEPTACLE. SAMUEL KATZMAN, Brooklyn, N. Y. Filed Apr. 14, 1927. Serial No. 183,642. 5 Claims. (Cl. 232—1.)



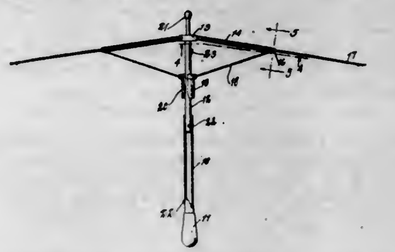
1. A laundry receptacle comprising a flat-sided container having an opening in the upper portion of its front wall for the deposit into said receptacle of large articles of laundry to be collected, a second opening in the lower portion of its front wall for the removal from said receptacle of said collected laundry, a drawer between said two openings for the deposit therein of small articles of laundry to be collected, and a baffle secured within the receptacle and extending from a point substantially above the forward end of said drawer thence rearwardly and downwardly to a point above the rear end of the drawer, said container from said upper opening past said baffle to said lower opening forming a continuously open passage of sufficient capacity to permit of the articles deposited into the receptacle through the upper opening falling to the bottom of the receptacle to be removed through the lower opening, and doors for controlling said openings mounted to be disposed in both the opened and closed positions thereof out of the path of travel through said passage.

1,810,564. SAFETY DEVICE FOR SHIPS. GEORGE KELEMEN, South Omaha, Nebr. Filed Dec. 19, 1930. Serial No. 503,369. 7 Claims. (Cl. 114—68.)



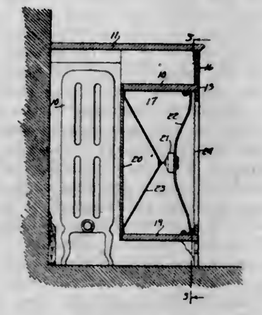
1. A safety device for sinking ships and the like, comprising a series of compartments along the side of a boat, an inflatable boat in each compartment, means for moving said boats from each compartment to the exterior, means for inflating said boats, and means for holding said inflated boats at various adjusted heights so as to hold the boats against the water line to support the sinking ship.

1,810,565. FISH LURE AND GRAPPLE. WILLIAM J. KENELY, Elizabeth, N. J. Filed Oct. 13, 1930. Serial No. 488,334. 4 Claims. (Cl. 43—4.)



1. A device of the character described comprising a body having means at one end for attachment to a line, and a plurality of arms pivotally mounted on said body to swing in the direction of and opposite to that of the pull upon the line into a position substantially parallel with the axis of said body, and spring means for yieldingly resisting movement of said arms in the direction opposite to that of the pull upon the line.

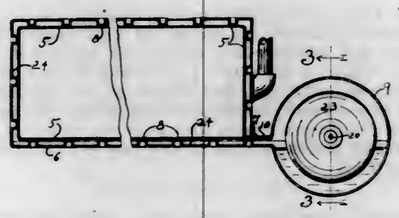
1,810,566. ARTIFICIAL EYELASH. VICTOR KENBY, New York, N. Y. Filed Mar. 3, 1930. Serial No. 432,700. 4 Claims. (Cl. 46—40.)



1. An eye lash member for dolls, comprising a rigid base member for supporting strands of hair simulating eye lashes and formed with a curved rear face for engaging flush against a doll's face and adapted to be supported upon said doll's face, and strands of hair attached on said base member, the opposite ends of said base member being parallel and formed with grooves to receive tongues from lugs projecting from a doll's face to accomplish the supporting.

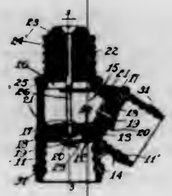
1,810,567. FOLDING UMBRELLA. HUGO KRÜGER, Hoboken, N. J. Filed Sept. 27, 1927. Serial No. 222,312. 1 Claim. (Cl. 135—46.)

In a folding and collapsible umbrella, a hollow stick, a rod adapted to telescope into said stick, said stick having a bayonet slot formed near its upper end, and a spring controlled dog on said rod adapted to pass through the bayonet slot when the umbrella is folded and collapsed to prevent separation of the parts and another dog on said rod to engage said bayonet slot when the umbrella is opened to limit the outward movement of said rod.



1,810,568. LOUD SPEAKER CABINET. OSCAR P. LIEBREICH, Jackson Heights, N. Y. Filed May 5, 1927. Serial No. 188,954. 2 Claims. (Cl. 312—7.)

1. A combined radiator cover and loud speaker cabinet having an open back comprising a frame work having a vertical longitudinally extending divider therein, the said divider terminating short of the top and bottom of said cabinet, horizontal partition members extending between the top and bottom edges of said divider and the front of said cabinet to form a compartment, the sides

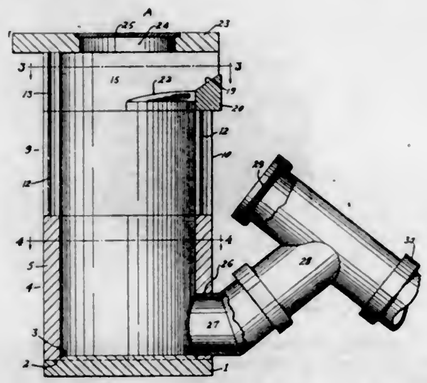


of said cabinet above and behind said compartment being enclosed by grilles and the front and sides of said compartment being enclosed by screens.

1,810,569. REFRIGERATION APPARATUS. GEORGE W. MASON, Detroit, Mich., assignor to Copeland Products, Inc., a Corporation of Michigan. Filed Mar. 26, 1930. Serial No. 439,014. 8 Claims. (Cl. 62—126.)

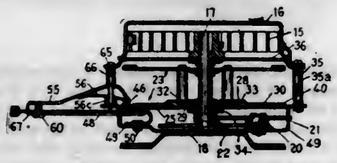
1. In combination, a freezer for refrigeration systems composed of superposed sheets of metal having refrigerant passages between them and a float controlled refrigerant tank integrally connected with the freezer, said tank being positioned substantially on the level of the lowermost of said passages.

1,810,570. COMBINED LAMP SOCKET CLUSTER AND CONNECTION PLUG. BENJAMIN P. MCKINLEY, Brooklyn, N. Y., assignor to The Bryant Electric Company, a Corporation of Connecticut. Filed Dec. 14, 1921. Serial No. 522,280. 9 Claims. (Cl. 173—335.)



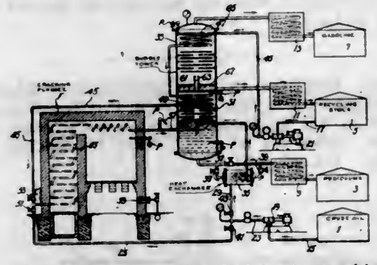
1. In a lamp socket cluster, electrically connected lamp receiving shells, a molded one piece body of insulated material with the shells encased by and in embedded relation thereto uniting the shells and insulator body in an integral rigid structure, said insulator body having a recess molded therein at the inner ends of the shells with a wall of the insulating material interposed between said recess and the inner ends of the shells and having perforations therethrough centrally of the shells, contact terminals carried in said perforations exposed centrally of and in insulated relation to the shells, a connection plug embodying a block of insulating material having a bore therethrough and a threaded shell contact terminal encircling the same, tie members of conducting material extended through the insulator block of the plug and the wall of the insulating material of the body between the recess and one lamp receiving socket to unite the plug with the insulator body and electrically connect the shell of said latter socket and the shell contact terminal of the plug, a plate of conducting material electrically connecting the central contact terminals of the socket shells within the recess in the insulator body, a headed bolt extended through the bore of the plug to constitute the center contact thereof and having threaded connection with said plate, and the insulator body at the outer end of the shells having external shade supporting threads molded therein.

1,810,571. SYSTEM AND METHOD OF HYDRAULIC MINING. HARRY L. MEAD, Brewster, Fla., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Sept. 15, 1924. Serial No. 737,721. 11 Claims. (Cl. 262—1.)



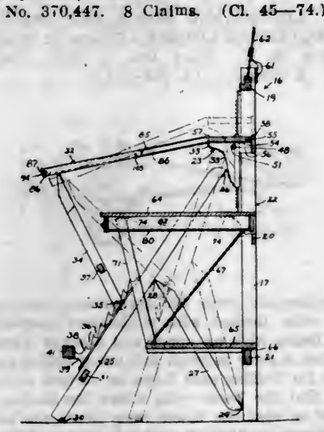
1. In a system of hydraulic mining, a sump, a high pressure nozzle for directing material to said sump, a pump system for removing material from said sump, a de-watering device in the pump system, and means for utilizing water from said pump system for directing material into said sump.

1,810,572. SEWER INLET. ERNEST H. PATTRATH, St. Louis, Mo. Filed Oct. 19, 1929. Serial No. 400,787. 2 Claims. (Cl. 182—6.)



1. A sewer inlet comprising a plurality of elements formed of concrete or similar material including a substantially cylindrical inlet portion arranged within the sewer opening longitudinally thereof, said cylindrical inlet portion being comprised of a bottom, a lower cylindrical section, and an intermediate cylindrical section, said lower cylindrical section and said intermediate cylindrical section being each formed of a plurality of semicylindrical elements secured to each other and to the elements of the associated cylindrical section to provide a unitary structure and a substantially U-shaped top member supported by said intermediate section at the top thereof, said top member being comprised of a plurality of elements secured together, and a sill which is in the form of a separate element secured in place in the structure of the top member and partially closes the open portion thereof.

1,810,573. AUTOMATIC FISHING REEL. EMMETT BURGESS PERRINE, Los Angeles, Calif. Filed Dec. 17, 1928. Ser. No. 326,490. 5 Claims. (Cl. 242—84.5.)

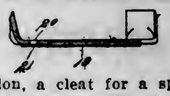


2. In an automatic fishing reel, the combination of a rotatable spool, a rotatable member, a ratchet device between said member and said spool which causes said member to rotate when said spool rotates in the direction to wind the fishline on said spool and which permits independent movement between said member and said spool when the latter rotates in the reverse direction, and a hand-operable brake associated with said rotatable member.

1,810,574. METHOD OF MANUFACTURING HIGH COMPRESSION AUTOMOTIVE DISTILLATE. CLIFTON JOHN PRATT, St. Louis, Mo., assignor to The Automotive Distillate Corporation, Independence, Kans., a Corporation of Kansas. Filed June 14, 1928. Serial No. 285,407. 2 Claims. (Cl. 196—61.)

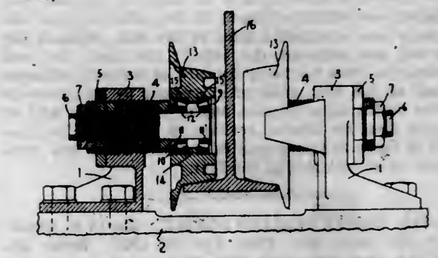
1. The process of treating hydrocarbons which comprises preheating said hydrocarbons, subjecting said preheated hydrocarbons to a preliminary cracking operation at substantially atmospheric pressure by establishing a liquid level of said preheated hydrocarbons and introducing cracked hydrocarbon vapors beneath said liquid level, whereby the preheated hydrocarbons are cracked and mixed vapors and liquid residuums are formed, removing said liuqid residuums, partially condensing said mixed vapors to form recycling hydrocarbons, separately removing and cooling said recycling hydrocarbons, maintaining an independent bulk supply of said cooled recycling hydrocarbons, whereby the optimum treating conditions for said recycling hydrocarbons may be continuously controlled, withdrawing recycled hydrocarbons from said bulk supply, and substantially completely cracking said recycled hydrocarbons without dilution in the vapor phase at a temperature of the order of 1250° F. at substantially no superimposed pressure, bringing the hot cracked vapors thus formed into contact with said preheated hydrocarbons, and removing light cracked hydrocarbon vapors and condensing the same.

1,810,575. COLLAPSIBLE DRAWING TABLE. KORNELIUS QUIAING, Oakland, Calif. Filed June 12, 1929. Serial No. 370,447. 8 Claims. (Cl. 45—74.)



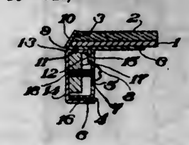
1. In a folding table, a back frame portion including upright side members, brackets adjustable on and along said side members, a top supported in part on the brackets, a leg pivoted to a said bracket, and a strut hinged to said top and adjustably engaged with said leg to support said top in position for use.

1,810,576. SNAP FASTENER ELEMENT. DANIEL I. REITER, New York, N. Y. Filed Aug. 14, 1930. Serial No. 475,170. 17 Claims. (Cl. 24—208.)



4. In a snap fastener element made of a single piece of sheet material, a continuous cylindrical outer wall, a longer continuous cylindrical inner wall joined at one end to the outer wall and arranged coaxially thereof and parallel thereto, and a slotted reentrant expansible portion at the other end of the inner wall, the outer wall terminating at a point between the ends of the inner wall.

1,810,577. CLEAT MOUNTING. EDWARD A. RICHARDSON, West Mansfield, Mass. Filed Jan. 15, 1930. Serial No. 420,916. 5 Claims. (Cl. 36—59.)



1. In combination, a cleat for a sport shoe having a central opening, and a cupped filler for said opening.

1,810,578. TROLLEY FOR HOISTS. CARL E. SCHIRMER, Springfield, Ohio, assignor to Robbins & Meyers, Inc., Springfield, Ohio, a Corporation of Ohio. Filed July 15, 1929. Serial No. 378,401. 6 Claims. (Cl. 105—154.)

1. In a device of the character described, a wheel, adjustable anti-friction bearings for said wheel, adjustable devices for supporting said bearings and wheel, one adjustment of said devices acting to adjust said wheel and its bearings in an axial direction and another adjustment of said devices serving to take up wear in said bearings.

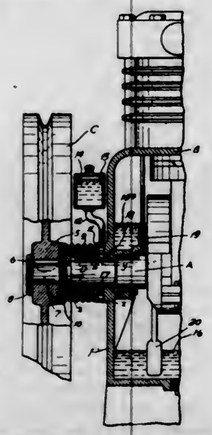
1,810,579. EDGE CONSTRUCTION FOR TABLE TOPS AND THE LIKE. FRED A. SCHMITZ, Canton, Ohio, assignor, by mesne assignments, to Republic Steel Corporation, Youngstown, Ohio, a Corporation of New Jersey. Filed June 18, 1928. Serial No. 286,094. 8 Claims. (Cl. 45—31.)

1. In an edge construction for table tops and the like, a top plate, a member secured to the lower surface of said plate, a binding strip abutting the edges of said plate, a retaining member of channel cross-section abut-

ting said binding strip, tapped plates secured to the web of said retaining member, and means extending through said first-named member and into said tapped plates, and serving to retain the binding strip in place.

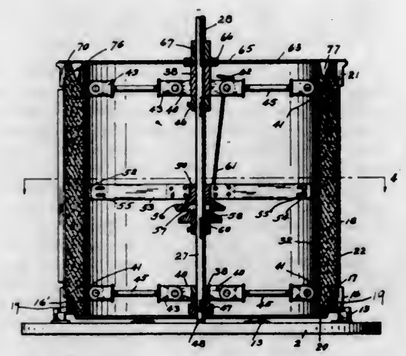
1,810,580. KNITTED FABRIC. WILLIAM J. SCHUBERT, Bethlehem, Pa., assignor to Standard-Trump Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Filed June 6, 1929. Serial No. 368,828. 24 Claims. (Cl. 66—201.)

	m	*n*	*o*	*p*
FACING	○*a*	●*c*	●*b*	●*c*
MIDDLE	●*b*	○*a*	●*c*	●*b*
BACKING	●*c*	●*b*	○*a*	○*a*



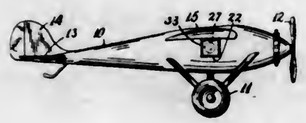
1. A single, flat, plain knitted fabric including at least two threads extending continuously along successive courses of the fabric, said fabric having a portion in which both threads are knit into loops with one of said threads overlying the second of said threads, another portion in which the first thread is knit into loops and overlies the second thread which floats behind such loops, and still another portion in which the second thread overlies the first thread.

1,810,581. SHOE. DAVID STARK, Arverne, N. Y. Filed Nov. 12, 1928. Serial No. 318,703. 4 Claims. (Cl. 36—76.)



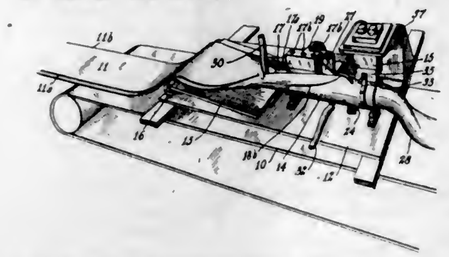
1. A shoe having a tripod metal reinforcement in the bottom thereof of substantially the width of the shoe sole extending less than the length of the sole and from the heel to points at opposite sides of the sole, adjacent the little toe and adjacent the ball of the foot, the part adjacent the little toe being forward of the part adjacent the ball of the foot, said reinforcement by torsional resistance acting to counteract displacement of the heel of the shoe from its normal position in the tripod relation which it bears to two points in the sole under the little toe and under the ball of the foot.

1,810,582. SHAFT SEALING DEVICE. EDWIN H. STEEDMAN, St. Louis, Mo. Filed Apr. 27, 1927. Serial No. 186,964. 2 Claims. (Cl. 288—11.)



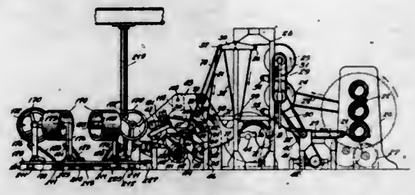
1. In a compressor or similar machine, the combination of a crank shaft, a crank case having an opening in one of its walls through which said crank shaft passes, a stationary rubbing surface on the outer side of said wall surrounding said crank shaft opening and provided with two concentric, annular grooves arranged intermediate the inner and outer edges of said rubbing surface, a bellows surrounding said shaft and attached at one end by a gas-tight joint to a fixed part on said shaft, a sealing member connected by a gas-tight joint to the opposite end of said bellows and having a rubbing surface that co-acts with said stationary rubbing surface, said co-acting rubbing surfaces constituting the only joint through which air or gases can enter or escape from the interior of said bellows, and means for keeping both of the grooves in the stationary rubbing surface filled with a medium that will effectively seal the joint between said rubbing surfaces.

1,810,583. METHOD AND APPARATUS FOR MAKING CONCRETE PIPE. OSCAR TUERCK, Portland, Oreg., assignor to The McKenzie Company, a Corporation of Oregon. Filed Oct. 2, 1928. Serial No. 309,736. 19 Claims. (Cl. 25—30.)



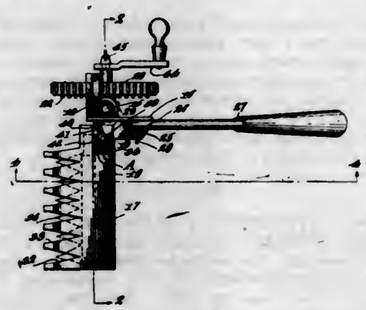
1. The method of making lined concrete pipe, consisting in mounting and securing lining plates upon the exterior of a mold-core, inserting said core and attached plates within the exterior mold-jacket, and feeding concrete pipe material within the mold-space between the core and jacket to embed said lining plates in the interior wall of the pipe.

1,810,584. ADJUSTABLE ROTOR FOR AEROPLANES AND HELICOPTER ROTORS. FREDERICK WANDER, Jr., New York, N. Y. Filed Jan. 7, 1931. Serial No. 507,049. 8 Claims. (Cl. 244—14.)



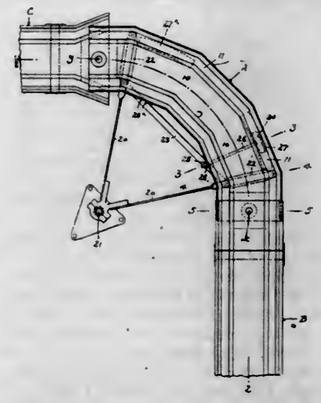
1. An adjustable rotor for aeroplanes, comprising an aeroplane wing formed with a chamber opened at the bottom, a frame with an upper and a lower wing within said chamber, a rotor between said upper and lower wings, and means for holding said frame in various adjusted positions so that the lower wing closes the bottom of said chamber or so that the upper wing closes the bottom of said chamber or so that the rotor is in any extended position out of said chamber.

1,810,585. TUBE-MAKING METHOD AND APPARATUS. HARVEY L. YOUNG, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 27, 1928. Serial No. 295,694. 17 Claims. (Cl. 154—5.)



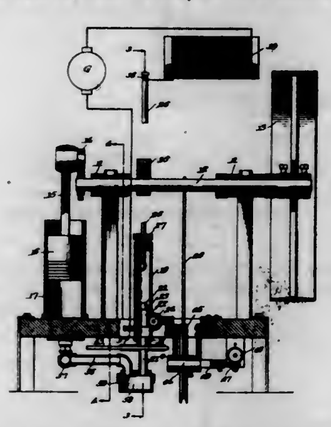
5. Tube-making apparatus comprising means for folding a strip of material into tubular form and means for directing pressure fluid between the strip and said folding means.

1,810,586. TUBE-MAKING METHOD AND APPARATUS. HARVEY L. YOUNG, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 1, 1928. Serial No. 303,417. 13 Claims. (Cl. 154—7.)



3. Tube-building apparatus comprising means for feeding successive tube-forming strips of material to a tube-building station, and means for presenting tube-building forms in succession at said station in position to receive the respective strips thereon and to be driven by said strip-feeding means, means for feeding a continuous strip onto the first-mentioned strip-feeding means and means for severing successive portions therefrom to provide the successive tube-forming strips.

1,810,587. GRASS TRIMMER. LUTHER D. ALBERTSON, Corydon, Ind., assignor of one-fourth to John W. Davidson, one-fourth to Emmett Beanblossom, one-fourth to Albert Stover, one-sixteenth to George C. Simler, three thirty-seconds to Oliver W. Hottel, and three thirty-seconds to Cecil W. Miles, Corydon, Ind. Filed Dec. 8, 1928. Serial No. 324,723. 2 Claims. (Cl. 56—264.)



1. A combined lawn border and hedge trimmer comprising a supporting frame, a cutter bar, a drive stub shaft rotatably carried by the frame, a ground traction wheel secured to said shaft, a crown gear formed on one face of said traction wheel, a vertical actuating shaft rotatably carried by said frame, a pinion keyed to said actuating shaft cooperating with the crown gear, and a crank and pitman connection between said actuating shaft and cutter bar.

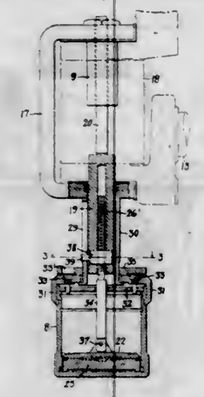
1,810,588. CONVEYER. EDWIN H. ALLFREE, Ironton, Ohio. Filed Apr. 16, 1930. Serial No. 444,723. 12 Claims. (Cl. 198—220.)

1. A corner pan for a horizontal reciprocable conveyer train, said pan being formed with an arcuate center line.

1,810,589. GERMICIDAL GAS AND METHOD OF AND APPARATUS FOR PRODUCING THE SAME. JAMES N. ALSOP, Cincinnati, Ohio, assignor to American Therapeutic Gas Company, Cincinnati, Ohio, a Corporation of Delaware. Filed Oct. 7, 1925, Serial No. 61,042. Renewed Dec. 15, 1928. 9 Claims. (Cl. 204—31.)

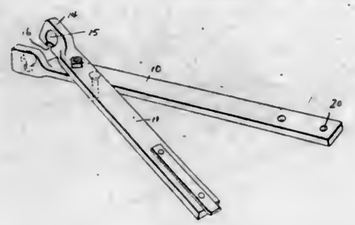
2. The new and improved method of producing a germicidal gas which consists in subjecting atmospheric air to the action of a flaming discharge of electricity and commingling with the air so heated the more volatile constituents of wood released by the action of heat of the resultant of the treated air and without combustion.

7. In apparatus of the class described, the combination of a closed chamber having an air inlet and an outlet, a pair of electrodes in said chamber, means for supplying an electric current to said electrodes to form an arc, means



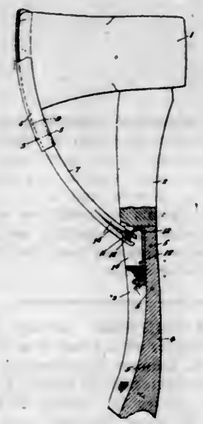
for withdrawing through the outlet of said chamber the resultant products of atmospheric air, and means for automatically feeding an organic substance through the stream of products withdrawn from said chamber to liberate the more volatile constituents thereof without combustion of such substance.

1,810,590. BRACELET CHAIN. MAURICE ANDERSON, Edgewood, R. I., assignor to Levy, Anderson Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Apr. 20, 1931. Serial No. 531,349. 4 Claims. (Cl. 59—80.)



1. In a bracelet chain, a plurality of interconnected links, each link being a generally thin unit of generally rectangular form, embodying a thin sheet metal top wall with an opening therethrough, the stock of the top wall between said opening and one end of the link being deflected downwardly substantially the thickness of the stock of the top wall, and the stock at the other end of the link extending beyond the end thereof and folded closely about the deflected portion of the next link to have its top surface lie flush with the top surface thereof, and the sides of each link being folded thereunder on an arc of short radius and continued to lie close to the under surface of said top wall and flush with the outer under surface of said end extension, whereby a compact and relatively thin stiffened unit link is formed and connected in a chain with a flush top surface and a smooth back.

1,810,591. TIME ELEMENT DEVICE. WINFIELD A. ATWOOD, Lansdowne, Pa., assignor to General Electric Company, a Corporation of New York. Filed July 24, 1929. Serial No. 380,723. 5 Claims. (Cl. 175—372.)

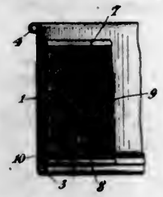


1. A time element electroresponsive device including a rotatable disk, an electromagnet having an armature adjustably mounted on said disk whereby on rotation of the disk to vary the pick-up point of the electromagnet, a pot within which said disk is longitudinally movable, said disk and pot having cooperative engaging surfaces, and supporting means for the pot including means for restraining the disk and pot against relative rotation adapted to be operated to permit rotation of the pot independently of the disk whereby to vary the extent of surface engagement between the disk and pot.

1,810,592. TRAILER HITCH. JOHN BILLSTEIN, Little Falls, Minn. Filed May 9, 1930. Serial No. 451,079. 1 Claim. (Cl. 280—33.44.)

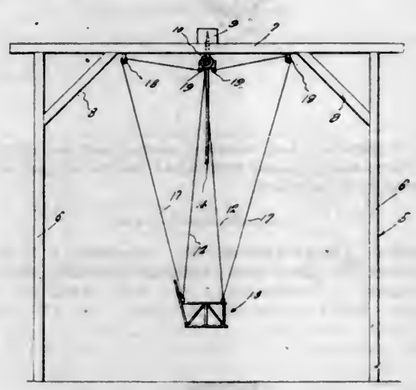
In a trailer hitch of the class described, a ball, means for attaching the ball to a towing vehicle, a pair of bars, means pivotally connecting the bars together in proximity to adjacent ends thereof, said adjacent ends being formed with plates adapted to abut each other when the bars are superimposed, the opposed faces of the plates being formed with recesses to receive the ball, one of said bars being provided with means whereby it may be attached on top of a draw bar of a towed vehicle.

1,810,593. AX GUARD. ROBERT E. BROWN, Olean, N. Y. Filed Nov. 5, 1930. Serial No. 493,643. 7 Claims. (Cl. 145—2.)



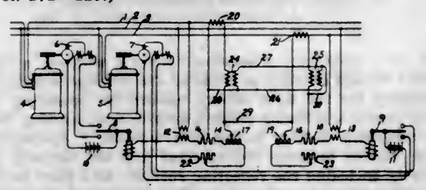
1. An ax comprising a head, a handle extending from said head and formed with a longitudinally extending pocket, and a guard for the cutting edge of the ax head movable from a folded position within the pocket to an extended position and consisting of an inner section movable into and out of the pocket, and an outer section slidably carried by the inner section and adapted to cover the cutting edge of the ax head when extended.

1,810,594. DUSTPROOF CASING FOR SPOOLS OR OTHER ARTICLES. ALFRED E. BRUNS, Huntington, N. Y., assignor, by mesne assignments, to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed June 29, 1928. Serial No. 289,140. 8 Claims. (Cl. 206—52.)



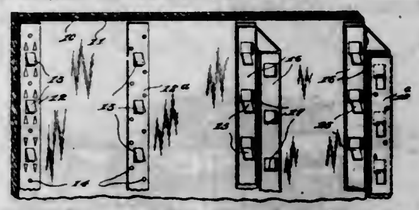
8. As a new article of manufacture, a spool holder consisting of a drum or hollow cylinder open at both ends and

provided with a bead adapted to be engaged by a head of the spool and limit the insertion of the spool axially there-



in and with means on its inner side adapted to automatically engage a head of the spool to hold the same in position when fully inserted.

1,810,595. SWING CONSTRUCTION. JARRETT C. CAMPBELL, Napfor, Ky. Filed Oct. 9, 1930. Serial No. 487,594. 1 Claim. (Cl. 230—245.)

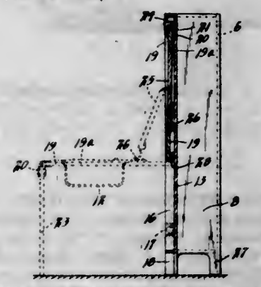


In a swing structure of the class described, a support, suspension eye bolts carried thereby and depending therefrom, a chair, suspension elements connected at their lower ends with the chair and rockably connected at their upper ends with the eye portions of said screws, a fan blade, a rocker block attached to the upper end thereof, said block being provided at its opposite ends with trunnions mounted for oscillation in the eye portions of said suspension screws, guide pulleys on said support, pull cables connected at their lower ends with said chair having their upper end portions trained inwardly toward each other over the pulleys, and said inner end portions being operatively connected with said rocker board.

1,810,596. ELECTRICAL REGULATING SYSTEM. FRANKLIN J. CHAMPLIN, Dalton, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 18, 1930. Serial No. 475,935. 19 Claims. (Cl. 171—119.)

1. In combination, a three phase alternating current circuit, a pair of control circuits, means respectively connecting said control circuits in different conductors of said three phase circuit and between different conductors of said three phase circuit, and interconnecting means between said first mentioned means for causing the respective current components in said control circuits which are due to the connections in and between the conductors of said three phase circuit to be in phase at unity power factor.

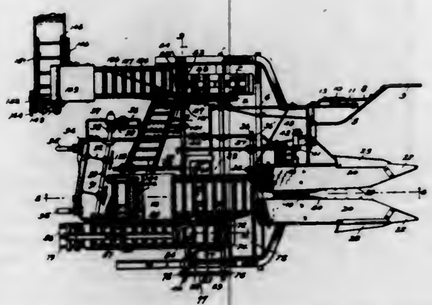
1,810,597. BUILDING CONSTRUCTION. DAVID STANLEY CORWIN, Greenport, N. Y. Filed Mar. 1, 1930. Serial No. 432,585. 17 Claims. (Cl. 72—1.)



1. A building construction comprising a frame member having spaced openings on opposite sides thereof, a strip of metal having a plurality of projections extending therefrom in the same general direction and at a distance apart equal to the distance apart of the openings in the frame member, the strip having means for attachment to a wall board said projections and openings interlocking when in operative position.

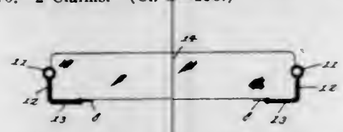
1,810,598. SCANNING DISK. BYRON R. CUMMINGS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 26, 1929. Serial No. 342,727. 2 Claims. (Cl. 178—6.)

1. A rotatable scanning member adapted for use in picture transmitting apparatus comprising a disk having mounting means at its center and having a series of lenses forming therewith a one-piece structure and arranged in a row adjacent the periphery of the disk.



1,810,599. CABINET. NETTIE B. FRENCH, Worthington, Minn. Filed Oct. 27, 1928. Serial No. 315,409. 3 Claims. (Cl. 45—38.)

1. In a cabinet, a hinged section, a panel pivoted at one edge to said section in spaced relation from the ground,



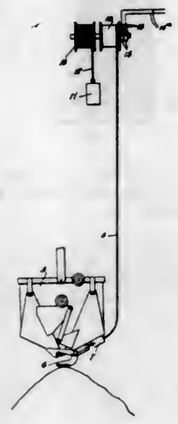
said panel having an opening therein within which a tub is adapted to be placed, a cover pivoted to said panel and adapted to fill said opening so that the cover lies flush with the upper side of said panel and a pair of legs pivoted to the free end of said panel, said legs being adapted to support said panel in substantially horizontal position when the panel is downwardly swung.

1,810,600. CORN HARVESTER. WILHELM A. GIERMANN, Onawa, Iowa. Filed Aug. 21, 1929. Serial No. 387,544. 12 Claims. (Cl. 56—66.)

1. In a corn harvester the combination with forwardly extending stalk-gathering and severing means, of an elevator for receiving the stalks from said means, and mechanism at the rear of the machine for gathering loose material from the ground over which the machine has passed and directing it to said conveyor.

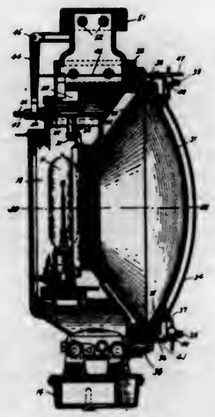
1,810,601. MATTRESS RETAINER. NATHANIEL GOLDBERG, Brooklyn, N. Y. Filed May 13, 1929. Serial No. 362,670. 2 Claims. (Cl. 5—193.)

1. A mattress retainer formed from a single piece of rigid material and including a tubular portion adapted to be embedded in the sides of a mattress, and having an upstanding flange and a horizontal flange the latter being adapted to support the longitudinal margin portion of the mattress.



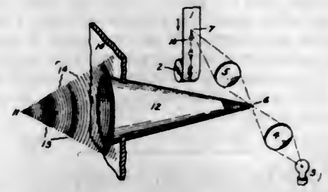
1,810,602. METALLIC SHOE LACE TIP. RAY F. GOOD, Lykens, Pa. Filed Mar. 4, 1930. Serial No. 433,127. 6 Claims. (Cl. 24—143.)

1. A device of the class described including, in combination with a lace, a skeleton anchored thereto, said skeleton comprising a plurality of strands, and a cover for said skeleton.



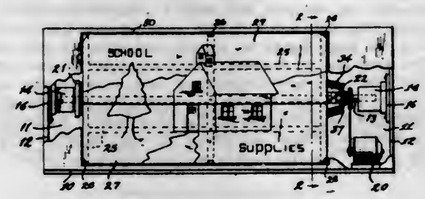
1,810,603. SELF-REVERSING TROLLEY BUCKET. HAROLD E. HALLENBECK, Hudson, N. Y., assignor to Gifford-Wood Company, Hudson, N. Y., a Corporation of New York. Filed Nov. 11, 1929. Serial No. 406,470. 6 Claims. (Cl. 214—128.)

2. An electrical trolley bucket installation comprising, in combination, a dumping bucket; a limit switch on the bucket; a reversible motor for hoisting and lowering the bucket; switch operating means on the bucket arranged to move the switch as the bucket comes in contact with the



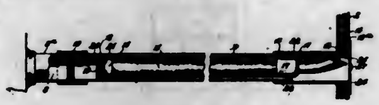
pile of material; and electrical connections for effecting automatic stoppage and reversal of the motor upon such movement of the switch.

1,810,604. LIGHT PROJECTOR. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 28, 1924. Serial No. 695,868. 9 Claims. (Cl. 177—329.)



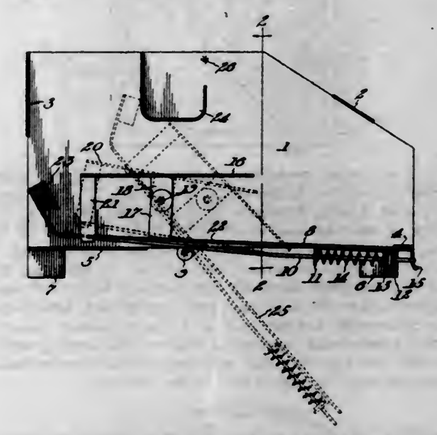
6. In a projector, a housing having a window, a light source in said housing in front of the window, a light interrupter for the light source, means for operating the interrupter, a reflector located outside said housing with its reflecting surface facing said window, a transparent hood located between the reflector and the housing and entirely enclosing the reflecting surface, said hood having a portion which covers said window, and means connecting the hood to the rim of the reflector and to the housing, said reflector and hood projecting beyond the casing to define an area for the passage of light from the reflecting surface.

1,810,605. SOUND RECORDING. HERBERT P. HOLLNAGEL, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 13, 1926. Serial No. 148,185. 8 Claims. (Cl. 274—5.)



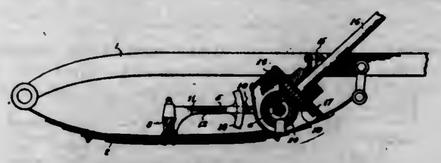
4. Apparatus for forming an image of sound waves comprising an image receiving member, a source of light, means for producing a point of concentration of the light directed on the receiving member and means for refracting the light at said point by directing a concentration of the sound waves on said point.

1,810,606. ADVERTISING DEVICE. JOSEPH C. HOUCK, Los Angeles, Calif. Filed Feb. 28, 1930. Serial No. 432,208. 7 Claims. (Cl. 40—35.)



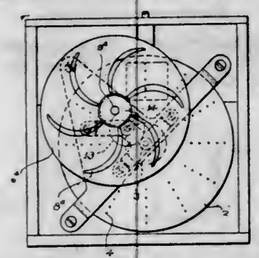
1. In an advertising device, the combination of a casing provided with a display opening, with a horizontal shaft journaled in the casing, opposite discs fixed on the shaft, a plurality of frames pivotally mounted between the discs with each frame carrying display cards on its opposite faces, means for rotating the shaft to turn the frames to register the cards successively with the display opening in the casing, a detent positioned in the upper part of the casing to engage the free ends of the frames turned to upright position to maintain temporarily the foremost upright frame in approximately the same plane as the preceding pendent frame before the casing opening, the pivotal mounting of the two frames on the discs providing an overlap of the inner edges of the frames so that the two cards presented by said frames complement each other to form an unbroken surface before the casing opening.

1,810,607. AIR EXHAUSTING APPARATUS. JOHN H. IRONS, Saratoga Springs, N. Y. Filed Apr. 3, 1929. Serial No. 352,311. 1 Claim. (Cl. 15—2.)



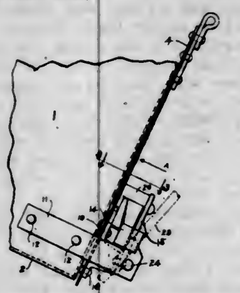
The combination with a support provided with an aperture; of an air exhausting apparatus including a casing having exhaust and intake openings; a tubular housing connected at its inner end to said casing to communicate with the intake opening, and provided at its outer end with an enlarged portion extending into said aperture and secured to said support; a flexible tube telescopically mounted within said housing in substantially fluid tight relation thereto and adapted to be extended through said aperture; and a suction nozzle on the outer end of the tube adapted to be positioned within the enlarged portion of said housing when the parts are in telescopic relation.

1,810,608. ANIMAL TRAP. ERNEST JACOBS, Milesville, S. Dak. Filed Apr. 19, 1928. Serial No. 271,342. 2 Claims. (Cl. 43—70.)



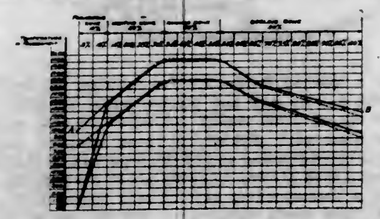
1. An animal trap, having suitable enclosing walls, a tiltable bottom pivotally mounted intermediate its front and rear ends and between said walls and having depending brackets on its lower forward portion, a rod extending lengthwise of the bottom and mounted in said brackets, a spring arranged on the rod and engaging one of the brackets and the forward portion of the rod, a keeper fixed on one of said walls and engaged by said rod, a counterweight mounted on the rear end of the tiltable bottom, said bottom provided with a longitudinal slot, a tiltable platform mounted upon the bottom at the rear of the pivotal axis of said bottom and having a depending arm rigid therewith, and extending through said slot and connected directly with the rear end of the rod, said platform having an initial tilting movement on said bottom to release the rod from said keeper, by the immediate action of said rigid depending arm on said rod, after which the bottom and tiltable platform tilt together to discharge the trapped animal, the counterweight and spring serving thereafter to restore the tiltable bottom and platform to normal position upon the discharge of the animal from the bottom.

1,810,609. STEERING GEAR. WALFRID JOHNSON, Summit, N. J. Filed May 6, 1930. Serial No. 450,253. 2 Claims. (Cl. 280—96.)



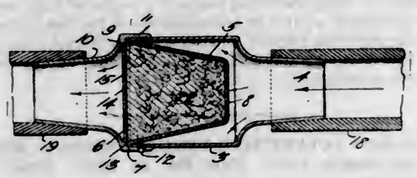
1. In a steering mechanism for vehicles, the combination with a drag link and pivoted wheel spindles, of a pair of spaced arms rigidly connected to each spindle, shackle arms each pivoted to swing about a vertical axis on a corresponding end of the drag link, said shackle arms being each pivoted to swing about a horizontal axis between a corresponding pair of said spaced arms, and arcuate cross heads disposed in vertical planes on the spaced arms for directing pivotal movement of the shackle arms between the spaced arms.

1,810,610. TELEVISION APPARATUS. WILLIAM MARTIN JONES, JR., Rochester, N. Y. Filed Apr. 26, 1930. Serial No. 447,713. 2 Claims. (Cl. 178—6.)



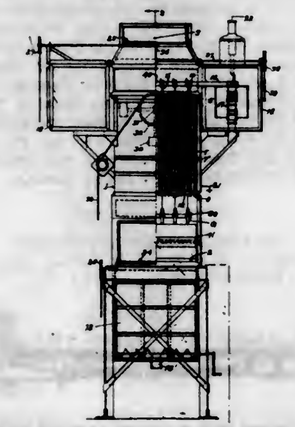
1. A scanning mechanism for the analyzing or composition of pictures in television comprising a rotary scanning disk having exposure openings arranged in a plurality of convolutions about the axis of rotation of the disk, and a rotary disk shutter arranged to turn about an axis eccentric to the axis of rotation of the scanning disk and provided with a curved exposure slot which will open the entire area of said openings successively, and means for connecting the shutter and the scanning disk for rotative movement together so that on the turning of the shutter, the scanning disk will carry the entire series of openings past the curved slot in the shutter.

1,810,611. RAILWAY CAR. BYERS W. KADEL, Baltimore, Md. Filed Mar. 21, 1924. Serial No. 700,752. 21 Claims. (Cl. 105—308.)



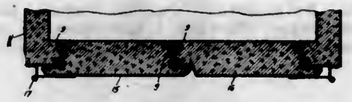
1. A railway car having a door, a fixed locking member and a latch member adapted for door supporting engagement therewith, one of said members carried by the car body and the other by the door, pivotal means for the latch member, and a movable locking member adapted to lock the two members in engaged positions, said locking member being also adapted to force the door from a preliminary position of closure to a more completely closed position by bodily moving the latch member longitudinally of its pivotal axis.

1,810,612. METHOD OF HEAT TREATING METAL. ARTHUR T. KATHNER, Pittsburgh, Pa. Filed Feb. 9, 1929. Serial No. 338,780. 3 Claims. (Cl. 148—21.5.)



1. The herein described method of heat treating steel which resides in passing low carbon steel continuously and in the presence of non-oxidising gases through communicating heating and cooling zones of a furnace, heating the steel in the heating zone to a temperature above the upper critical temperature range of the steel and between about 1600° F., and 1950° F., cooling the steel in the cooling zone to about a dull red heat, and discharging the steel from the furnace at such a temperature that the steel will have reached about a black heat when discharged into the open air, the time consumed by the steel in passing thru the cooling zone being not less than the time consumed in heating the steel to its maximum attained temperature.

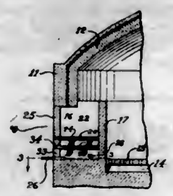
1,810,613. ACCESSORY FOR VACUUM CLEANERS. LEO P. KELLER, Columbus, Ohio. Filed Oct. 11, 1927. Serial No. 225,530. 1 Claim. (Cl. 167—3.)



An accessory for vacuum cleaners, including a cylindrical body open at one end and with a reduced extension at the opposite end, a foraminous cage of convergent form having an edge flange to overlie and bear on the edge of the open end of the body, a cap threaded on said open end of the body and bearing on and securing the cage in place, said cap having an extension corresponding in size and form to that of the body, and a foraminous plate secured in and carried by the cap, and forming a cover section for the cage when the cap is in place.

1,810,614. APPARATUS FOR ELECTRICAL SEPARATION OF SUSPENDED MATERIAL FROM GASES. ARTHUR P. KNIGHT, Glendale, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 11, 1929. Serial No. 391,871. 4 Claims. (Cl. 183—7.)

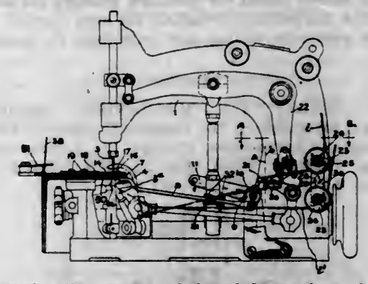
1. An electrical precipitator comprising a precipitating chamber, means for passing gas to be treated through said chamber, collecting electrode means mounted in said chamber and comprising two sets of rows of collecting electrode members, the rows of one set extending transversely to the rows of the other set so as to subdivide the space within the precipitating chamber into a plurality of compartments, there being a plurality of collecting electrode members at each side of such compartment, and discharge electrode members mounted and insulated within said chamber and extending within the respective compartments aforesaid.



1,810,615. REFRIGERATOR CABINET. JAMES L. KNIGHT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 12, 1927. Serial No. 183,205. 15 Claims. (Cl. 220—9.)

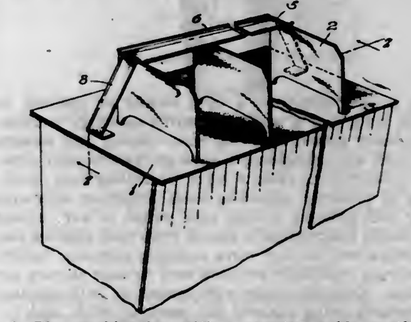
5. A refrigerator cabinet having spaced metallic inner and outer walls, a door comprising two cooperating door members hinged at their outer edges and adapted to engage each other at their adjacent edges, an opening frame for said doors and the edge portions of said door members being formed of thin strips of a resinous product.

6. A refrigerator cabinet having inner and outer metal walls spaced apart and provided with a door opening, a frame for the door opening consisting of a thin non-hydroscopic non-metallic material having low heat conductivity and being impervious to moisture, said frame extending through the door opening and connecting said inner and outer walls to form a closure between them.



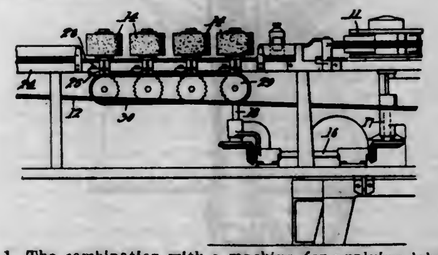
1,810,616. GAS FIRED KILN. PETER J. LENGSHOLZ, Massillon, Ohio. Filed Sept. 18, 1930. Serial No. 482,726. 4 Claims. (Cl. 25—149.)

3. Fire box construction for gas fired kilns, including a bottom wall, side walls and a bag wall; a perforate wall spaced from the bottom wall extending between the side walls terminating short of the bag wall and a front wall extending between the side, bottom and perforate walls forming a mixing chamber; gas and air supply lines leading to the mixing chamber; a second perforate wall spaced from the perforate wall extending between the side walls and a second front wall extending between the side and perforate walls forming a primary combustion chamber, and a third front wall extending between the side walls and above the second perforate wall forming with the bag wall, second perforate wall, and side walls a secondary combustion chamber.



1,810,617. OVEREDGE SEWING MACHINE. KARL MAIER, Stuttgart, Germany, assignor to Union Special Maschinenfabrik, G. m. b. H., Stuttgart, Germany. Filed Feb. 26, 1927, Serial No. 171,563, and in Germany Mar. 25, 1926. 11 Claims. (Cl. 112—162.)

1. The combination of cooperating stitch forming elements for forming overedge thread loops, means for holding said overedge thread loops when the stitches are set, means whereby said thread loop holding means can be shifted laterally for varying the position of the holding means during the running of the machine, means independent of the stitch forming elements for drawing thread from the supply for the overedge thread loops, and means

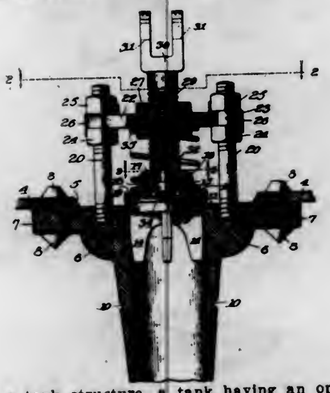


for varying the amount of thread drawn from the supply to correspond with the position of the means for varying the overedge thread loops.

1,810,618. SHIELD ATTACHMENT FOR EATING TABLES AND THE LIKE. AUGUST W. NELSON, Spokane, Wash., assignor of one-half to Victor Sjodin, Spokane, Wash. Filed Aug. 24, 1929. Serial No. 388,166. 3 Claims. (Cl. 45—141.)

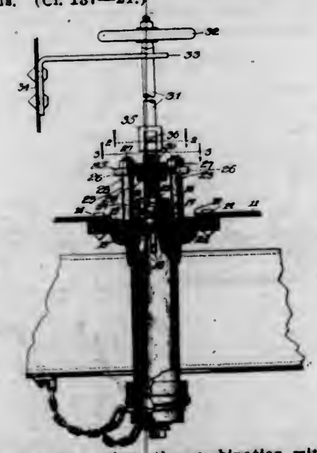
1. The combination with a counter, table or the like, of means mounted thereon for providing separate spaces for use by individual persons while eating, said means including partitions proportioned to shield from each other the faces of customers while eating, the lower portions of the partitions being cut away to provide spaces for the reception of articles while being transferred laterally from one compartment to another, there being recesses in the counter, table or the like and legs depending from the partitions and removably fitted in the recesses.

1,810,619. WIPING ROLLS FOR LABELING MACHINES. CHARLES H. OSLUND, Worcester, Mass., assignor to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed May 11, 1929. Serial No. 362,360. 2 Claims. (Cl. 216—58.)



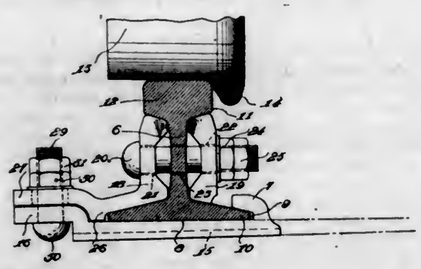
1. The combination with a machine for applying labels in the panels of paneled objects, of a conveyor comprising a horizontal strand for supporting and conveying the

labeled articles, a pair of rolls on vertical axes located on opposite sides of said strand and above it having thick surfaces of sponge rubber for yieldingly pressing the labels down within the panels throughout the area thereof, and means for positively driving said rolls from the labeling machine



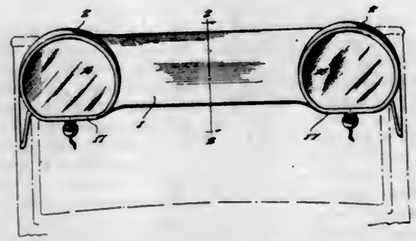
---

1,810,620. OUTLET VALVE MECHANISM. OSTRANDER J. PARKS, River Forest, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed May 21, 1927. Serial No. 193,313. 9 Claims. (Cl. 137—21.)



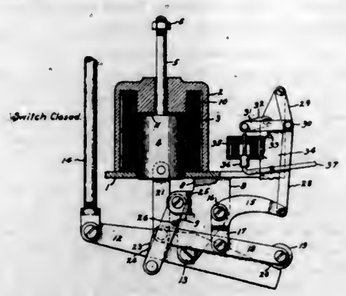
1. In a tank structure, a tank having an opening in its lower wall, and a valve and outlet-assembly comprising a member extending across said opening and secured to said wall and containing a passage therethrough forming an outlet for the tank, a valve controlling said outlet, a series of upwardly extending studs connected with said member and grouped around said outlet, a nut carried by said studs and vertically spaced from said member and an operating rod for said valve engaging said nut, fastening means on said studs securing said member thereto for adjustment along the studs with respect to said opening, said assembly being adapted for assembly with, and removable from, said tank, as a unit.

1,810,621. VALVE MECHANISM. OSTRANDER J. PARKS, River Forest, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed Dec. 19, 1927. Serial No. 241,084. 7 Claims. (Cl. 137—21.)



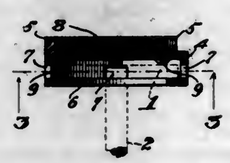
1. In valve mechanism, the combination with a valve-seat-equipped member, a valve proper for cooperation with said seat, a stem having a head at its inner end for engagement with said valve proper, said head engaging the center of said valve proper, means operating, when said stem is rotated, to move said stem lengthwise, and means for actuating said valve proper by said stem constructed and arranged to rotate said valve proper against said seat during a portion only of the movement of said stem in a direction toward said seat and thereafter discontinue said rotation and force said valve proper to said seat.

1,810,622. RAIL JOINT. CHARLES PASCAL, Montreal, Quebec, Canada. Filed Feb. 8, 1928, Serial No. 252,821. Renewed Nov. 21, 1930. 7 Claims. (Cl. 238—211.)



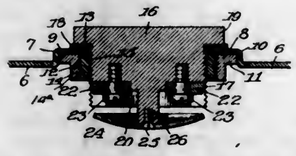
1. A rail joint comprising a base plate that is of substantially the same cross section at all points along the length thereof arranged beneath the adjacent ends of a pair of rails and having a recess to receive a portion of the base of the rails and an uninterrupted inclined rail supporting surface extending away from said recess, and rail joining means secured to said rails and extending across the joint therebetween, said rail joining means being provided with a longitudinal shoulder coextensive therewith and abutting a shoulder on the base plate and secured to said base plate.

1,810,623. NONGLARE HEADLIGHT. CHARLES ROY PLEDGER, Kearney, Nebr. Filed Nov. 18, 1929. Serial No. 408,132. 1 Claim. (Cl. 240—7.1.)



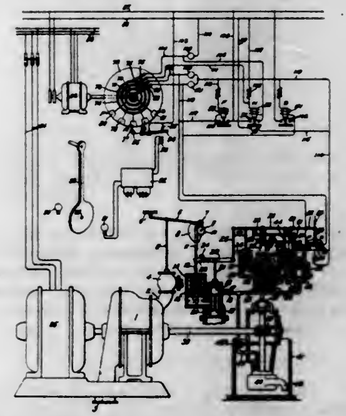
A combined visor and headlight for motor vehicles comprising a visor having lateral attaching brackets, the visor being shaped adjacent one of the brackets to bulge upwardly above the visor and downwardly below the visor to form a lamp casing integral with the visor, said casing having a marginal flange, a reflector in the casing having a cylindrical marginal extension the edge of which slopes downwardly and rearwardly from a point above the visor to a point below the visor, said extension having a marginal flange, a lens, a channeled clamp ring receiving the marginal flange of the casing and the marginal flange of the extension and also receiving the edge of the lens for clamping said parts together, and a lamp mounted in the casing.

1,810,624. SWITCH OPERATING AND CONTROLLING MECHANISM. WILLIAM K. RANKIN, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 15, 1925. Serial No. 62,642. 13 Claims. (Cl. 200—89.)



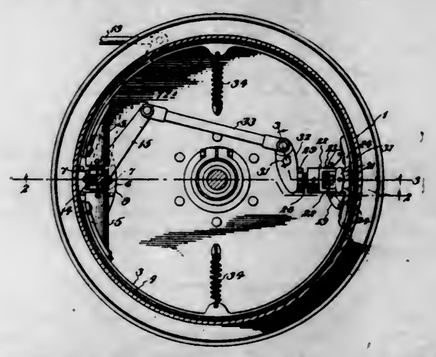
1. Switch operating and controlling mechanism comprising a switch operating member, a restraining device for holding the member in operated position, said restraining device being disengageably related to said switch operating member, a latching device for controlling said restraining device, and means operated by the reaction of the switch on the operating member for moving said restraining device from a restraining to a releasing position in response to actuation of said latching device.

1,810,625. ACCELERATOR HEAT PROTECTOR. JESSE BERNICE ROUSE, Dunn, N. C. Filed July 28, 1930. Serial No. 471,286. 1 Claim. (Cl. 74—81.)



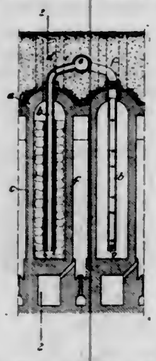
As a new article of manufacture, a pedal cap formed from a single piece of rubber and comprising a body having ribs on its upper face and hollowed out within and with an annularly inwardly extending flange on its bottom, said ribs forming spaces therebetween open at their ends, said body provided in its sides with ventilating openings opening upon the hollow interior of the body, and a central depending lug and depending tits within said hollow body, constituting spacing means, substantially as shown and described.

1,810,626. CONTAINER. HENRY SCHWARTZ, Chicago, Ill. Filed July 9, 1928. Serial No. 291,422. 8 Claims. (Cl. 220—39.)



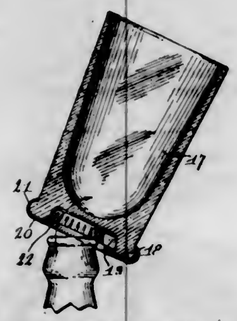
1. The combination with a container having a threaded opening, of a bushing having internal and external threads and screwed into said opening, the cooperating threads of said bushing and container being such that in screwing the bushing to place the bushing moves toward the outer end of said opening and becomes jammed in said opening, and a closure plug screwed into said bushing and provided with means operating upon the unscrewing of said plug from said bushing, to so mutilate the internal threads of said bushing as to render it unadapted for receiving a similar plug.

1,810,627. CONSTANT SPEED CONTROL FOR PRIME MOVERS. REGINALD G. STANDERWICK, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 19, 1929. Serial No. 400,985. 7 Claims. (Cl. 290—40.)



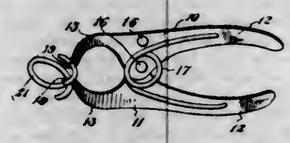
4. The combination with a prime mover having a governing means and correcting means for rendering said governing means substantially isochronous, of means for moving said correcting means to increase or decrease the speed of the prime mover wherever the prime mover loses or gains a predetermined number of revolutions and for restoring said correcting means to normal position when the predetermined number of revolutions has been gained or lost.

1,810,628. AUTOMOBILE WHEEL BRAKE. ROBERT W. STEVENS, Granite City, Ill. Filed May 24, 1929. Serial No. 365,717. 3 Claims. (Cl. 188—78.)



1. The combination with a brake drum, and a back plate, of a split brake band confined within the drum, a block anchored to the back plate, a frame slidable on the block and secured to the band between the ends thereof, a cam mounted between and bearing against the terminals of the band, a second cam pivotally supported by the back plate and bearing against the inner end of said slidable frame, yieldable means for holding said frame to said cam, and means for simultaneously rocking the cams for spreading the terminals of the band and sliding the frame upon the block to cause the band to frictionally engage the drum.

1,810,629. COKE OVEN. CARL STILL, Recklinghausen, Germany. Filed May 17, 1926, Serial No. 109,791, and in Germany May 18, 1925. 16 Claims. (Cl. 202—257.)

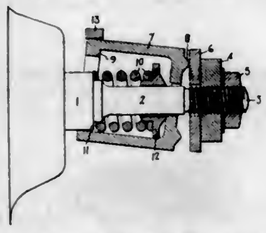


1. A coke oven comprising two spaced parallel heating walls partially defining a horizontally elongated coking chamber, a longitudinal row of vertical suction pipes located within said chamber between the heating walls communicating with said chamber and a common suction main connecting all of said pipes.

1,810,630. COMBINATION CONTAINER AND BOTTLE OPENER. CHARLES ERNEST TAPP, Barachois, Quebec, Canada, assignor to Antonio Paradis, Quebec, Canada. Filed Feb. 13, 1930. Serial No. 428,166. 5 Claims. (Cl. 65—46.)

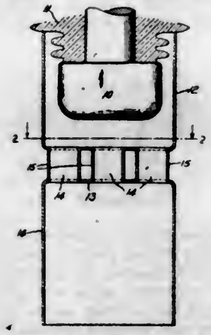
1. A device of the character described comprising a container having a recess formed in the under side of the bottom, a cap removing member rigidly fastened to the bottom of the container, and a cap engaging element formed on the said removing member in registration with the recess in the container bottom adapted to engage the edge of the cap and to remove the same by swinging the bottle in a fulcrum movement.

1,810,631. POULTRY LEG-BAND PLACER AND REMOVER. CHARLES A. TAUMP, Derry, Pa. Filed Dec. 30, 1929. Serial No. 417,509. 3 Claims. (Cl. 128—330.)



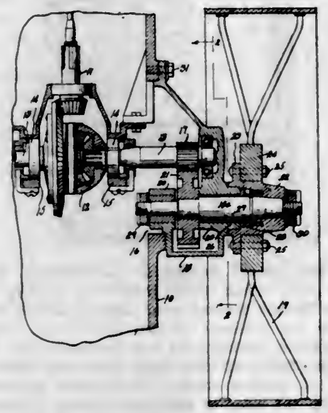
1. In a tool of the class described, handles pivotally connected together and terminating in jaws having curved inner faces adapted to encircle the leg of the fowl, a spring carried by said handles and normally holding said jaws closed, said jaws terminating in substantially straight prongs adapted to be passed between the terminals of a spiral leg ring marker for prying open the marker, said prongs contacting with each other whereby to limit closing movement of the jaws, said prongs being provided with notches opposite their contacting faces adapted to receive the terminals of a split ring leg marker.

1,810,632. IMPROVING PRESSURE DISTILLED OIL PRODUCTS. VANDERVEER VOORHEES and EDWARD J. SHAEFFER, Whiting, Ind., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Dec. 7, 1925. Serial No. 73,864. 6 Claims. (Cl. 196—40.)



3. The method of producing color stability in hydrocarbon oil pressure distillates of satisfactory initial color which consists in subjecting such distillates to the action of dilute sulfuric acid, of a concentration not exceeding 70% without substantially modifying the color thereof and adjusting the strength and quantity of such acid with respect to the distillate to prevent the production of an appreciable quantity of sludge and of a substantial impairment of color of the distillate.

1,810,633. EMERGENCY GOVERNOR. DONALD F. WARNER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 2, 1929. Serial No. 396,736. 4 Claims. (Cl. 264—15.)



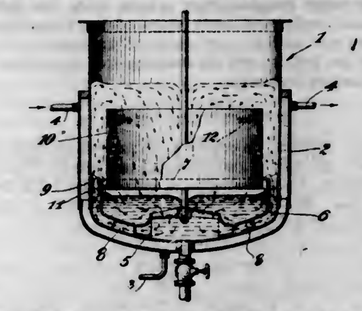
1. The combination with a shaft, of an emergency governor comprising a bearing plate on the shaft, a cylindrical weight member which extends parallel to, and encloses the shaft and at one end engages the bearing plate on opposite sides of the shaft, the material at the other end of the weight being so distributed that the weight is unbalanced, and a spring which surrounds the shaft and holds the weight member in engagement with the bearing plate.

1,810,634. MERCURY ARC RECTIFIER. FRANK P. WHITAKER, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed June 17, 1929, Serial No. 371,574, and in Great Britain June 20, 1928. 4 Claims. (Cl. 250—27.5.)

3. In a vapor discharge device, an anode, a cylindrical shield arranged to surround said anode and provided with a perforated wall arranged below said anode, and a plurality of tubes inserted in the perforations of said wall, the distance between said wall and said anode being substantially equal to the diameter of said tubes.

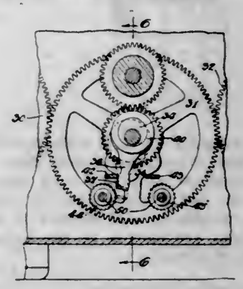
1,810,635. SUPPORTING AND DRIVING MEANS FOR TRACTORS. ROLLIN H. WHITE, Cleveland Heights, Ohio. Filed Sept. 27, 1928. Serial No. 308,772. 2 Claims. (Cl. 180—70.)

1. In a tractor having driven axles projecting from the sides thereof, traction means comprising a hub section fixed to each of said axles, and a wheel having a hub section detachably secured to each of said fixed hub sections, said wheels being reversible relative to said fixed hubs.



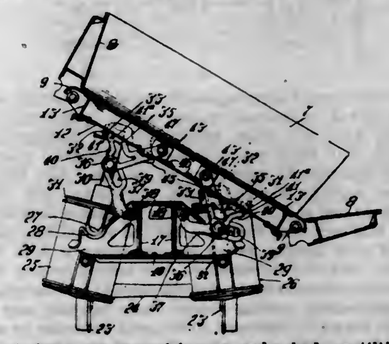
1,810,636. TEXTILE ROLL. JACOB ADLER and PAUL DOERSELN, Paterson, N. J., assignors to Silk City Metals Coating Company, Inc., Paterson, N. J., a Corporation of New Jersey. Filed Dec. 29, 1930. Serial No. 505,314. 3 Claims. (Cl. 139—307.)

1. A roll-like body having its periphery adapted to grip textile fibrous material and formed of metal and with numerous minute integral gripping nodules.



1,810,637. MIXING AND HEAT INTERCHANGE APPARATUS. HENRY SANFORD BEERS, Westport, Conn., assignor to The Turbo-Mixer Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 12, 1929. Serial No. 354,463. 11 Claims. (Cl. 257—108.)

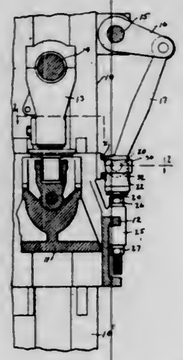
1. In combination with a tank having a thermal jacket and material-circulating means within the tank, means for confining and directing a major part of the circulated material to flow in close proximity to the jacketed tank surface, said means including a shield spaced from the tank wall, and terminating at a moderate distance above the tank bottom, and an upper, generally-cylindrical shield having its lower margin overlapping the upper margin of



the shield first named, and spaced therefrom, and extending to a plane substantially above the upper edge of the shield first named.

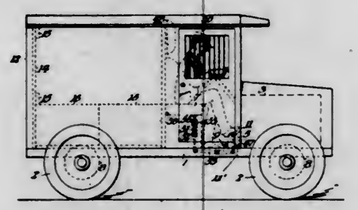
1,810,638. ATTACHMENT FOR CALCULATING MACHINES. LEE R. BROWN, East Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed Apr. 5, 1929. Serial No. 352,718. 1 Claim. (Cl. 235—91.)

The combination of a reversing cycle calculating mechanism including a gear rotatable in either direction, an element mounted eccentric to the axis of said gear and operable by said gear, an actuator on said element, means for clutching said actuator to said gear, cycle counters operable by said actuator, and means for limiting the amount of movement of said actuator effected by the action of the clutching means.



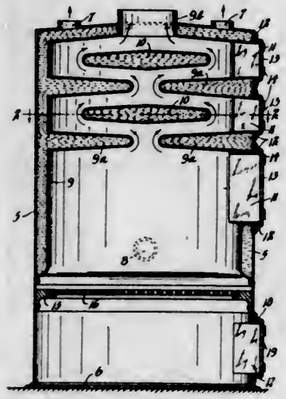
1,810,639. DUMP CAR. WILLIAM L. BURNER, Columbus, Ohio, assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Jan. 18, 1929. Serial No. 333,436. 26 Claims. (Cl. 105—261.)

1. A dump car comprising an under body, a tilting bed mounted thereon and adapted to tilt to either side thereof,



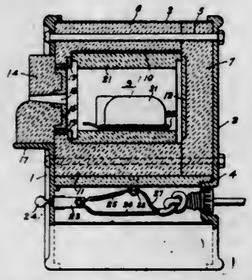
and power operated means for tilting the bed to dump the load, including means for applying upward thrust to the bed at a point comparatively remote from the dumping side thereof during an early stage of the dumping operation, and for shifting the point of application of such thrust to the bed toward its dumping side at a later stage of the dumping operation.

1,810,640. PRESS. ARTHUR A. BYERLEIN, Detroit, Mich., assignor, by mesne assignments, to General Machinery Corporation, Hamilton, Ohio, a Corporation of Delaware. Filed Mar. 27, 1929. Serial No. 350,310. 5 Claims. (Cl. 113—38.)



1. In a toggle press, a frame, a slide operable in said frame, a toggle link for operating said slide, a member adjustably supported on said slide and pivotally connected to said link, and a guide fixed to the slide and guiding an upper portion of said member to receive and withstand horizontal components of the thrust of said link when the link is inclined.

1,810,641. METHOD OF AND MEANS FOR TRANSPORTING VALUABLES. JOSEPH PARKER CAMP, Germantown, Pa. Filed Oct. 20, 1928. Serial No. 313,722. 5 Claims. (Cl. 180—82.)

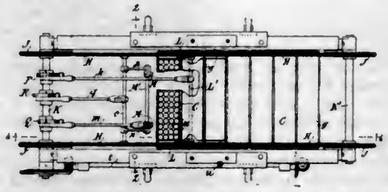


1. A motor truck carrying a safe inclosure provided with locking means; removable means rigidly connecting said inclosure with said truck, incased by said inclosure and accessible only when said inclosure is unlocked; wherein the safe inclosure is provided with an outer door formed in three sections having hinges connecting them with each other; one end of said door having hinges connecting it with said inclosure, and the other end of said door being provided with locking means for connecting it with said inclosure; and said intermediate door section having locking means for connecting it with the sides of said inclosure; said intermediate locking means being operable only by a handle normally concealed within said inclosure by said door and accessible only when the lock provided end of said door is opened.

1,810,642. WATER HEATER. CECIL G. CARLSON, Willmar, Minn. Substitute for application Serial No. 84,960, filed Jan. 30, 1926. This application filed Dec. 22, 1930. Serial No. 504,184. 3 Claims. (Cl. 122—165.)

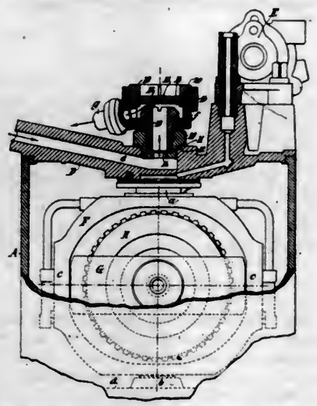
1. A water heater having in combination, an outer casing, an inner casing spaced therefrom, whereby a water chamber is formed between said casings, spaced comparatively wide flat conduits of less width than said inner casing extending horizontally and centrally therethrough and communicating at their ends with said water chamber, pairs of opposed spaced flat conduits extending inwardly from the sides of said inner casing having closed inner ends terminating short of the center of said inner casing providing a space between said closed inner ends, said last mentioned conduits communicating with said water chamber at their outer ends and disposed respectively between said first mentioned conduits so that said first mentioned and said pairs of last mentioned conduits extend in said inner casing at alternately different levels upwardly, said first mentioned conduits being so disposed as to bridge the space between said pairs of opposed conduits throughout their extent, a fuel burner adjacent the bottom of said inner casing, and an outlet conduit at the top of said casing communicating with said inner casing whereby a circuitous passage is formed for the products of combustion between the ends of said last mentioned conduits and around the sides of said first mentioned conduits.

1,810,643. DENTAL FURNACE. ORA A. COLBY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1928. Serial No. 254,208. 4 Claims. (Cl. 263—2.)



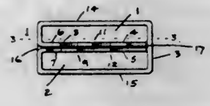
1. In a furnace, a furnace wall including a relatively thick body of heat-insulating ceramic material, and a relatively thin embedded plate of porcelain constituting a substantially non-spalling heat-resistant face for said wall and molded substantially integral therewith.

1,810,644. LOCK WASHER. WILLIAM DIETER, Newark, N. J., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Sept. 10, 1926. Serial No. 134,653. 5 Claims. (Cl. 151—33.)



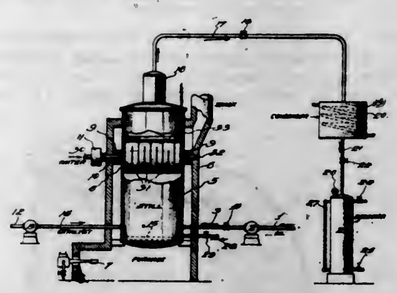
2. In combination with a member having a threaded neck and a nut engaged thereon having a peripheral flange and provided with a plurality of notches, a lock washer having an outer annular portion and a plurality of spring tongues extending radially from the annular portion having their free ends disposed normally in a plane parallel with that of the annular portion, certain of the tongues engaging against the flange to urge the annular portion of the washer to seat against the member, and one of the tongues being received through one of the notches to lock the nut against rotation on the threaded neck.

1,810,645. INTERMITTENT FEED MECHANISM. WILLIAM DIETER, Newark, N. J., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Oct. 15, 1927. Serial No. 226,416. 13 Claims. (Cl. 198—34.)



1. A feed mechanism applicable to control the movements of a series of objects having a tendency to forward movement, comprising two stops, the one adapted to initially stop the foremost object and to release it, and the other adapted to stop said object in a second stopping position, and one of said stops movable to another position to arrest the object at a third stopping position.

1,810,646. GYROSCOPIC STEERING MECHANISM. WILLIAM DIETER, Newark, N. J., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Original application filed Apr. 16, 1926, Serial No. 102,429. Divided and this application filed Feb. 1, 1928. Serial No. 251,186. 1 Claim. (Cl. 74—78.)

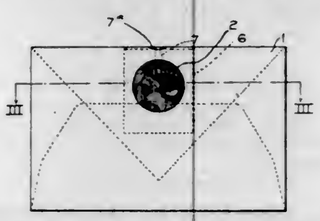


In an automobile torpedo, a gyroscopic steering mechanism comprising a gyroscope enclosed in a frame having means for rotating it to permit of angle-fire adjustment, a head which is stationary with relation to the torpedo, a spinning-up turbine, a high-pressure air duct leading to the spinning-up turbine, a swivel connection in said duct, the porton of said duct leading to such swivel connection having immovable relation to said head, and the portion of said duct leading from said swivel connection to the spinning-up turbine adapted for angular displacement with said frame, said swivel connection having a removable closure permitting access to its interior and a removable swivel member which may be taken out through said closure.

1,810,647. SLIDE BUCKLE. JOHN H. DOMKEE, West Haven, Conn., assignor to The Wire Novelty Manufacturing Company, West Haven, Conn., a Corporation of Connecticut. Filed Dec. 13, 1929. Serial No. 413,863. 2 Claims. (Cl. 24—200.)

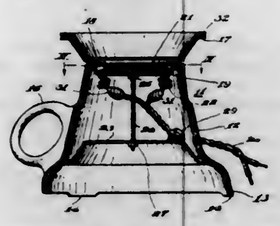
2. A slide buckle comprising a pair of wire loops arranged in a common plane and integrally connected at one side and the engaging metal surfaces of the loops, secured in permanent intimate union at the opposite side; and intermediate bars in planes relatively parallel and extending integrally from the secured side to the connected side and having angular formations projecting in plane perpendicular to and out of the plane of the loops, the metal surfaces of the bar extremities being secured within said plane in permanent intimate union with the metal surface of the connected side.

1,810,648. APPARATUS FOR CATALYTICALLY TREATING HYDROCARBON OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 16, 1922, Serial No. 582,296. Renewed Sept. 1, 1928. 1 Claim. (Cl. 196—54.)



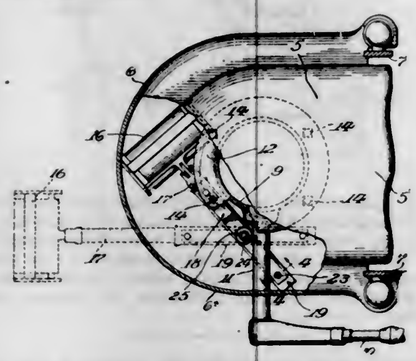
An apparatus for catalytically treating hydrocarbon oils in combination with a still, of cooling means positioned within the vapor space of the still, means for charging oil and means for chargng catalytic material to the still, means for removing precipitated catalyst from the cooling means, and means for condensing the vaporous constituent.

1,810,649. DISPLAY ENVELOPE. GEORGE S. ELLIOTT, Wilkinsburg, Pa. Filed Feb. 25, 1930. Serial No. 431,279. 3 Claims. (Cl. 229—71.)



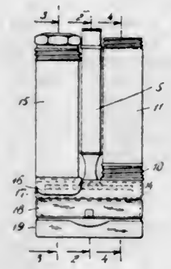
1. The combination with an envelope having a letter compartment provided with an opening at one side and

an auxiliary compartment adjacent said opening and constituting a display window, of an article for said auxiliary



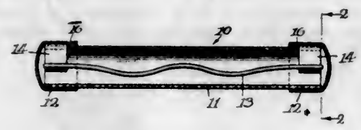
compartment, said article being provided with means for engaging the contents of said letter compartment to render said article removable therewith.

1,810,650. ELECTRIC VAPORIZER. CARL J. FAY, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 5, 1929. Serial No. 375,988. 5 Claims. (Cl. 219—43.)



1. In an electric vaporizer, in combination, a hollow refractory body member of substantially frusto-conical shape, a metal plate located at the top of the body member, a metal plate located within the body member, a single means extending through both plates to clamp them in proper operative positions relatively to the refractory body member and a heating element located below and closely adjacent to the upper metal plate.

1,810,651. ADJUSTABLE SUPPORT FOR HEADRESTS. CHARLES W. FISCHER, Chicago, Ill., assignor to Theo A. Kochs Company, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1929. Serial No. 381,422. 7 Claims. (Cl. 155—188.)

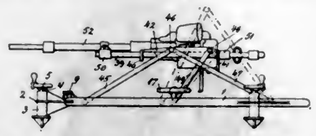


7. In combination with a barber chair seat and its pedestal, of a head rest support pivotally mounted to one side of said pedestal and in spaced relation with the underside of the chair seat, said head rest support having a receiving end adapted to normally occupy a position adjacent one edge of the chair seat and swingable abont the pivot to a position adjacent to the pedestal, whereby a head rest may be placed in said support from one side of the chair seat and swung to concealed position beneath the seat.

1,810,652. SHAVING KIT. GERHARD FLINTERMANN, West Orange, N. J. Filed Feb. 26, 1931. Serial No. 518,344. 11 Claims. (Cl. 132—80.)

11. In a toilet kit of the character described, in combination with a safety razor having a cutting head and an elongated handle extending substantially at right angles to said head, a shield having a transverse passage for the reception of said head and a transverse opening in said passage for said razor handle, an elongated container having at least a part thereof permanently secured to said shield across said opening on one side of said handle and extending from said shield in a position substantially parallel to said handle, a second elongated container hingedly secured to said shield on the other side of said handle and means for releasably securing said second container across said opening in a position substantially parallel to said handle.

1,810,653. ELECTRIC FUSE. WILLIAM G. HARTWIG, Chicago, Ill., assignor to Railway Utility Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1928. Serial No. 272,965. 3 Claims. (Cl. 200—131.)



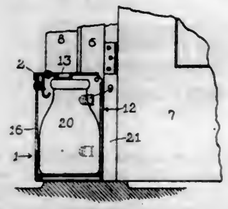
1. The combination in a fuse of an insulating tube having slots at the ends thereof, a clamping member detachably mounted in each of said slots, each clamping member comprising a reversely bent conducting member having a pair of parallel arms having side wings extending over the outer surface of said insulating tube, said arms of said clamping members engaging the ends of said fusible element, and cap members seated over the ends or said tube to contact with said clamping members and thereby establish electrical connection with said fusible element.

1,810,654. SUPPORT ESPECIALLY FOR HEAVY MACHINE GUNS OR THE LIKE. WERNER CHRISTIAN LASSEN HAUBROE, Copenhagen, Denmark. Filed Nov. 30, 1929, Serial No. 410,704, and in Denmark July 20, 1929. 1 Claim. (Cl. 89—40.)

Support especially for heavy machine guns or the like consisting of an annular circular base member fitted with

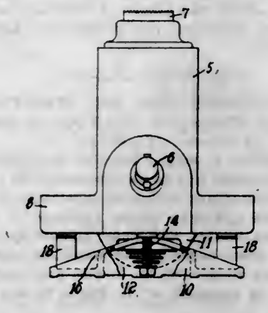
CARNEGIE LIBRARY OF ATLANTA

vertically adjustable feet and supporting a rotatable frame which carries a supporting frame proper for one or more machine guns the said rotary frame being of pentagonal shape and being fitted with a transverse brace and longitudinal braces and having at each corner a gusset plate with guiding rolls mounted for running along the ring.



one of the frame members being further fitted with a bracket with a driving pinion cooperating with a row of holes in the ring and being rotated by a driving gear operated by the handwheel and, maybe, fitted with a disengaging clutch or the like, so that the frame may be turned directly on the ring.

1,810,655. BATHING CAP. RICHARD T. HOSKING, Wilmette, Ill., assignor to H. R. Hough Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 26, 1929. Serial No. 395,426. 2 Claims. (Cl. 2—68.)



1. A bathing cap, an inverted pocket for said cap comprising a second cap nested therein, the lower marginal portions of said caps secured together by water-tight seams excepting a portion that defines the mouth of the pocket, the marginal edge of the pocket orifice being of elastic material for the purposes set forth.

1,810,656. AUTOMATICALLY LOCKED RECEPTACLE. ERIC W. JOHNSON, Newark, N. J. Filed Dec. 13, 1929. Serial No. 413,756. 1 Claim. (Cl. 232—42.)

In a receptacle of the character described, including a receptacle proper having an open rear side and an open top, there being means to removably retain said receptacle with the open rear side against a door, a cover hinged upon said receptacle and arranged to close down upon said open top, an interior latch means arranged within said receptacle and a corresponding latch member disposed upon the inside of said cover, and means for opening said cover from the exterior when said receptacle is empty including a perforate portion upon said cover through which a finger may be inserted to release said latch means and member from mutual engagement, but which perforate portion is arranged in such position over an object when the latter is deposited in said receptacle, that said object will directly block the path from said perforate portion to said latch means and member within said receptacle and thereby prevent opening said receptacle from without while said deposited object remains within the same.

1,810,657. JACK. JOHN H. KOHLER, Pittsburgh, Pa., assignor to Rees Manufacturing Corporation, a Corporation of Pennsylvania. Filed May 28, 1928. Serial No. 279,878. 7 Claims. (Cl. 254—101.)

7. A jack having a base, a lifting member, and a support for said lifting member, a universal connection between said base and said support, means for yieldingly maintaining said support and lifting member normal to the plane of said base, and means for limiting relative rotary movement between said support and base.

1,810,658. DECOLORIZING SUBSTANCE. WOLF KRITCHEVSKY, Chicago, Ill., assignor to Rit Products Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 7, 1928. Serial No. 324,581. 6 Claims. (Cl. 8—2.)

1. A composition of matter for stripping of color comprising a sulphonic acid salt of an alkylated polynuclear hydrocarbon, having a high wetting power, and a chemical of the hydrosulfite class that will act as a reducing agent.

6. The process of stripping fabrics which consists in treating the fabric in an aqueous medium to which is added a composition of matter comprising a sulphonic acid salt of an alkylated polynuclear hydrocarbon having great wetting power and a chemical of the hydrosulfite class, and then when the color is stripped removing the garment, washing it free from the chemicals, and drying.

1,810,659. PROCESS OF TREATING WOOD. WOLF KRITCHEVSKY and CARL J. BECKERT, Chicago, Ill. Filed Feb. 14, 1929. Serial No. 339,910. 4 Claims. (Cl. 99—12.)

2. A process for treating sap walnut which consists in placing the same in a closed vessel in the presence of an amount of water equal to from 10 to 60 percent of the weight of the wood and subjecting the contents to a steam pressure of between 35 and 50 pounds.

1,810,660. METHOD OF AND COMPOSITION FOR INCREASING THE CONDUCTIVITY OF HYDROCARBONS. WOLF KRITCHEVSKY and ELLIOTT MORRILL, Chicago, Ill., assignors, by mesne assignments, to Sparkless Cleaner Company, a Corporation of Illinois. Filed June 20, 1929. Serial No. 372,534. 8 Claims. (Cl. 87—5.)

2. A composition of matter that is a conductor of electricity consisting of a chemical of the general formula

in which R equals hydrogen, an alkyl group, hydroxy derivatives of any alkyl group, the substitution products of any alkyl group, N equals nitrogen, FA is any soap forming higher fatty acid, X equals an alkyl group, hydroxy de-

rivatives of any alkyl group, the substitution products of any alkyl group, and a solvent therefor, the finished product being soluble in light petroleum distillate.

6. A composition of matter for increasing the conductivity of light petroleum distillates, consisting of monoethanol amine oleate and a solvent therefor that is not a light petroleum distillate, the composition being soluble in said distillate.

1,810,661. COMBINED DYE AND STRIPPER. WOLF KRITCHEVSKY, Chicago, Ill. Filed Oct. 23, 1929. Serial No. 401,982. 2 Claims. (Cl. 8—6.)

1. A composition of matter in solid form adapted to be dispensed in packages and to be combined with a liquid for simultaneous dyeing and stripping consisting of chemicals that will evolve hydrogen in the presence of water, and strip color from fabrics, and water soluble dyes that will be reduced to leuco bases by the stripping chemicals and that will attach themselves to fabrics and oxidize to the original color on exposure of the fabric to the air.

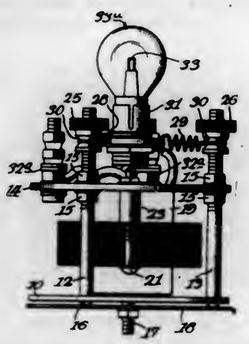
1,810,662. COMBINED DYE AND STRIPPER. WOLF KRITCHEVSKY, Chicago, Ill. Filed Oct. 23, 1929. Serial No. 401,983. 2 Claims. (Cl. 8—6.)

1. A composition of matter in solid form adapted to be dispensed in packages and to be combined with a liquid for simultaneous dyeing and stripping consisting of chemicals that will evolve hydrogen in the presence of water and strip color from fabrics, and water soluble dyes that will not be affected by the reducing agents and dye the fabric the color of the dye used.

1,810,663. STRIPPER FOR FABRICS. WOLF KRITCHEVSKY and HAROLD C. PRUTSMAN, Chicago, Ill., assignors to Rit Products Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 30, 1930. Serial No. 448,782. 6 Claims. (Cl. 8—2.)

6. A composition of matter consisting of a hydrosulphite, petrolatum in intimate mechanical mixture therewith in a sufficient quantity to form a film about substantially all the particles of the hydrosulphite, and isopropyl naphthalene sodium sulphonate in quantity sufficient to cause the petrolatum to form an emulsion in a water solution and thereby release the hydrosulphite from the film.

1,810,664. DYE REMOVER. WOLF KRITCHEVSKY and HAROLD C. PRUTSMAN, Chicago, Ill., assignors to Rit Products Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 30, 1930. Serial No. 448,783. 5 Claims. (Cl. 8—2.)



4. A composition of matter consisting of a solid mixture of hydrosulphite, a saponifiable oil that will envelop the particles of the hydrosulphite and exclude air and moisture, and soda ash.

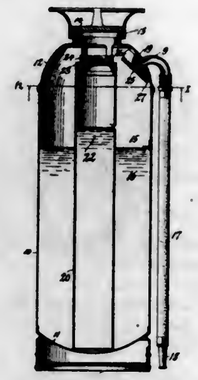
1,810,665. FABRIC STRIPPER. WOLF KRITCHEVSKY and HAROLD C. PRUTSMAN, Chicago, Ill., assignors to Rit Products Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 30, 1930. Serial No. 448,784. 8 Claims. (Cl. 8—2.)

8. A composition of matter consisting of sodium hydrosulphite, a substantially anhydrous salt of a sulfonated oil intimately mixed therewith and acting to envelope the particles of the chemical and exclude air and moisture therefrom, and anhydrous soda ash.

1,810,666. LAMP MOUNTING. CARL H. LARSON, Elkhart, Ind., assignor to The Adlake Company, a Corporation of Illinois. Filed Aug. 31, 1929. Serial No. 389,847. 5 Claims. (Cl. 240—44.2.)

5. In a lamp structure of the type including a lamp adapted to be positioned at the focus of a condensing lens or reflector, the combination of a base, a plurality of posts projecting from the base, a lamp socket between the posts, radial elastic members secured to the socket,

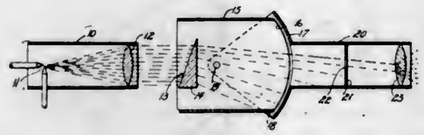
and means carried by the posts supporting the outer extremities of the elastic members and capable of independent graduated movement along the posts for effecting a universal adjustment of the lamp.



1,810,667. JACK. WALTER E. LARSON and ROY S. HARVEY, Pittsburgh, Pa., assignors, by mesne assignments, to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed May 10, 1928. Serial No. 276,620. 6 Claims. (Cl. 254—101.)

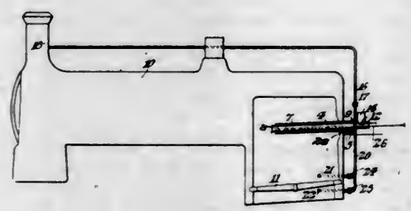
2. The combination in a jack of relatively movable base members, a universal joint between said base members to permit tilting of said jack during operation thereof, a fastening bolt in each corner of one of said members extending loosely through each of the corners of the other of said members and a flexible connection between said bolts and said other member.

1,810,668. FIRE EXTINGUISHER. HUGO LEIPOLD, Buffalo, N. Y., assignor to Buffalo Fire Appliance Corporation, Buffalo, N. Y., a Corporation of New York. Filed Apr. 5, 1928. Serial No. 267,542. 5 Claims. (Cl. 169—32.)



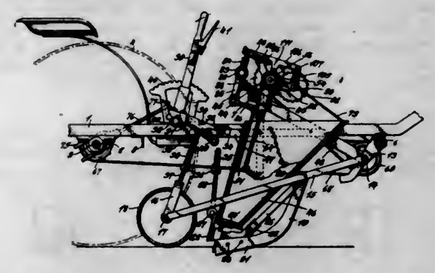
1. A fire extinguisher comprising a tank forming an outer chamber adapted to contain one liquid of an extinguishing fluid and having an outlet at its upper end, a tube arranged within the tank and forming an inner chamber adapted to contain another liquid of an extinguishing fluid and provided at its upper end with an outlet, a screen arranged over the inner side of the outlet of the tank, and a baffle arranged within the tank between

said screen and the outlet of said inner chamber, and having its horizontally opposite ends connected with the



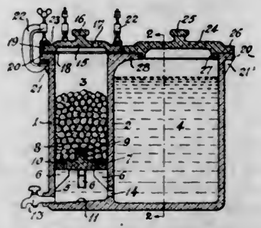
adjacent wall of the outer chamber and separated at its upper and lower ends from the adjacent wall of the outer chamber by upper and lower passages.

1,810,669. SPECTRUM LAMP. CARL LOEB, Chicago, Ill. Filed Oct. 18, 1929. Serial No. 400,630. 3 Claims. (Cl. 174—177.)



1. A spectrum lamp, including a casing, means for producing a complete spectrum in said casing, and a second casing pivotally connected to said first casing and having means for selecting a color band from said spectrum and projecting it onto an object.

1,810,670. FRACTIONAL COMBUSTION APPARATUS. PROSPER JEAN AUGUSTE MAIGNEN, Philadelphia, Pa. Filed July 18, 1925. Serial No. 44,430. 9 Claims. (Cl. 110—24.)

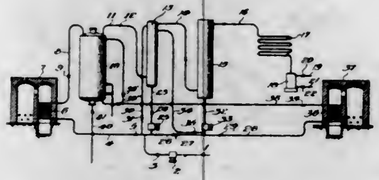


1. In fractional combustion apparatus, the combination with a furnace casing provided with a chimney vent; of means arranged to maintain a base fire in said casing; a hollow fuel container, constructed and arranged to be movable in and out of said casing to a variable extent; means, in said container, for the introduction of raw fuel and means for the discharge of carbonized matter into said furnace casing; and means controlling the escape of volatile matter released from fuel in said container.

1,810,671. PNEUMATIC PLANTER. ANDREW A. MATHESON, Denver, Colo., assignor to Matheson Pneumatic Planters Corporation, Lander, Wyo., a Corporation of Wyoming. Filed Sept. 23, 1929. Serial No. 394,488. 8 Claims. (Cl. 111—52.)

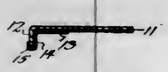
1. In a planter having a frame which is supported on wheels, and which has plows pivotally connected at their front ends therewith, a hopper for each plow, and a dropping mechanism associated with each hopper, a delivery pipe extending from the under side of the dropping mechanism to a point at the rear of the corresponding plow, said pipe terminating adjacent the bottom of the plow, means for operating the dropping mechanism so as to periodically bring seeds into position above the pipe, means for delivering a blast of air into the upper end of the pipe after the seeds have been deposited therein, whereby the seeds will be moved downwardly through the pipe at a high speed, and means for directing a stream of air into the lower end of each hopper for the purpose of stirring the seeds contained therein.

1,810,672. GAS GENERATOR. WILLIAM MINRATH, New York, N. Y. Filed Sept. 26, 1929. Serial No. 395,254. 10 Claims. (Cl. 23—282.)



1. A gas generator comprising a container having a rectangular shape, a partition wall dividing said container into a charge chamber and a liquid chamber, a plurality of ports provided in the lower part of said wall, a grid mounted in said charge chamber above the height of said ports, a cover making a gas tight joint with the top of said charge chamber, and a gas outlet provided in the upper part of said charge chamber for withdrawing gas therefrom.

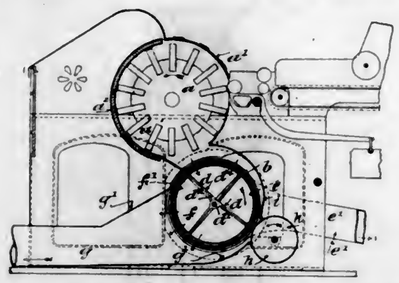
8. A gas generator comprising a container, a transverse partition extending from one wall of said container to another and dividing the same into a charge chamber for solid material and a liquid chamber having its top open to the atmosphere, communicating means provided at the lower portion of said wall for providing fluid communication for liquid to flow into said charge chamber and contact with solid material to generate gas and then to flow back into the liquid chamber upon an increase of gas pressure in excess of the static head of the liquid in said liquid chamber, a grid mounted in said charge chamber above the bottom thereof for supporting a charge of solid material, a removable cover making a gas-tight joint with the top of said charge chamber whereby a gas storage space is provided therein extending



higher than the level of liquid in said liquid chamber, and a gas outlet provided in the upper part of said charge chamber for withdrawing gas from said gas storage space.

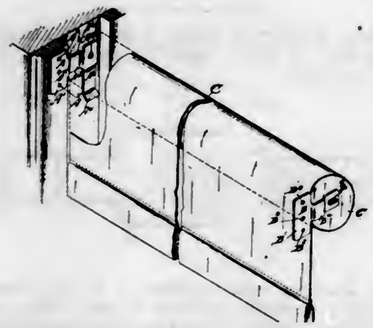
1,810,673. HYDROCARBON OIL CONVERSION. JACQUE C. MORRELL and WARREN P. FARAGHER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 1, 1929. Serial No. 336,858. 3 Claims. (Cl. 196—48.)

1. A hydrocarbon oil cracking process which comprises subjecting the oil to cracking conditions of temperature and super-atmospheric pressure in a heating zone subsequently reducing the pressure on the hot oil in a flashing zone to effect vaporization thereof, dephlegmating the evolved vapora thereby forming reflux condensate, combining a portion of said reflux condensate with the oil being subjected to cracking conditions in said heating zone, passing another portion of said reflux condensate to a second heating zone independent of the first mentioned heating zone and there subjecting the same to cracking conditions of temperature and pressure, and discharging the heated reflux condensate from said second heating zone directly into said flashing zone.



1,810,674. ROOF CONSTRUCTION. HENRY G. MUHR, Sioux City, Iowa. Filed July 21, 1930. Serial No. 469,385. 1 Claim. (Cl. 108—26.)

A composition shingle comprising a flat body portion, a flange bent at right angles thereto and a sheet metal reinforcing plate comprising a portion resting flatly against the under surface of the body portion of the shingle, a flange portion resting snugly against the inner side of the flange portion of the shingle and a channel portion formed as the termination of said flange portion receiving and clamped upon the flange portion of the reinforcing member.

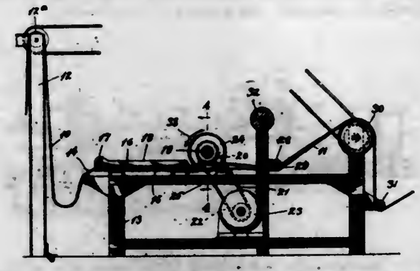


1,810,675. OPENING, MIXING, BLOWING ROOM, AND LIKE MACHINERY USED IN COTTON MILLS. TOM NUTTALL, Farnworth, near Bolton, and SYDNEY ALFRED SHORTER, Didsbury, Manchester, England, assignors of one-third to The British Cotton Industry Research Association, Manchester, England, a British Association. Filed June 11, 1929, Serial No. 370,077, and in Great Britain July 3, 1928. 5 Claims. (Cl. 19—75.)

1. Means for the opening and cleaning treatment of cotton comprising a beater device, a dust cage capable of being driven at a high speed, a casing between the beater device and the high speed dust cage, and enclosure for the said dust cage, a damper located in said dust cage, outlets for the dust and dirt in the dust cage enclosure to cause the dust and dirt to travel laterally along the interior of the cage, suction provision for extracting the dirty air which leaves the dust cage for good, a cotton receiving conduit outside the dust cage and below the dampered section of the cage, clean air inlet provision to the cotton receiving conduit and means to exert a suction on the cotton receiving conduit so as to continue the

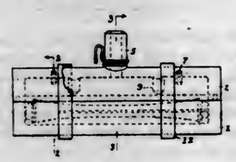
carriage of the cotton in clean air, the dirty air being conveyed out of the dust cage and the cotton liberated to the clean air conduit.

1,810,676. WINDOW SHADE BRACKET-FIXTURE. DUANE A. PARKES, Detroit, Mich. Filed Mar. 11, 1929. Serial No. 346,084. 1 Claim. (Cl. 156—24.)



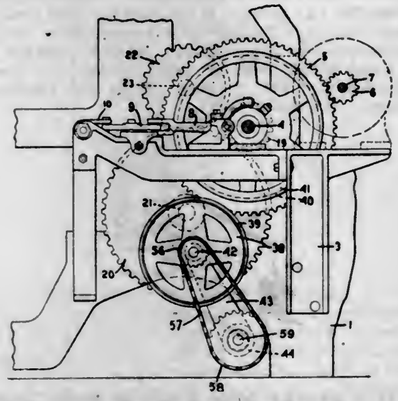
A window shade bracket consisting of an elongated base portion adapted to be secured to a window stop and an integral laterally extending web portion terminating in a gudgeon receiving portion adapted to overlie the path of the window sash and spaced therefrom and having a suitably shaped bearing hole to receive the gudgeon of a shade roller, said base portion having a plurality of holes to receive securing means, one of the holes lying in the same plane as said bearing hole, and the entire bracket lying in substantially the same vertical plane, whereby the bracket may be first oscillated on said securing means across the inner face of the window stop and thereby swing the shade roller and web portion and its gudgeon-receiving portion into and out of the path of movement of the window sash to align the shade roller and then fixedly secured in alignment by securing means passing through another hole of the base portion so as to support the shade roller in the path of movement of the sash and to suspend the shade with its side edges in close proximity to the window stop, leaving practically no space between the side edges of the shade and casing for the passage of light around the edges of the shade.

1,810,677. FABRIC SLITTING MACHINE. FRED B. PFEIFFER, Akron, Ohio, assignor to Seiberling Rubber Company, Barberton, Ohio, a Corporation of Delaware. Filed Apr. 2, 1929. Serial No. 351,912. 1 Claim. (Cl. 164—61.)



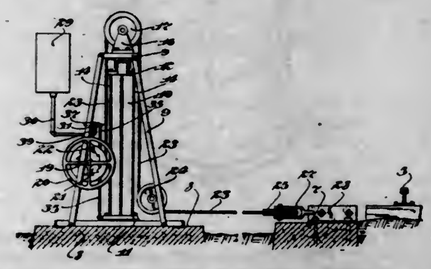
In a fabric-slitting machine, the combination of fabric-guiding means having a cutting slot, means for drawing

the fabric without substantial tensions over said slot, a rotary cutter having an interrupted cutting periphery disposed above said fabric guiding means and projecting



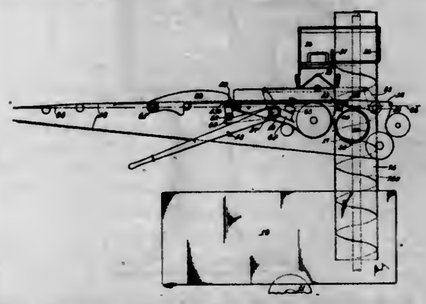
into said slot, and means for rapidly rotating said cutter in a direction that the active portion moves in the direction of the fabric feed.

1,810,678. HAIR CURLING DEVICE. NOËL PLATEL, Totowa, N. J. Filed Feb. 18, 1929. Serial No. 340,998. 7 Claims. (Cl. 132—36.)



1. A box to contain a wisp of hair to be treated comprising sections fitted together edge to edge to form an enclosed space for such wisp and having edge portions of such sections coactive to grip such wisp between them, the section including one such edge portion consisting of an integral mass of plastic material having low heat-conductivity and being formed as to such edge portion yielding and elastic and as to the remaining portion thereof appreciably less yielding, and means, holding said edge portions pressed together, for maintaining said sections in the edge to edge relation.

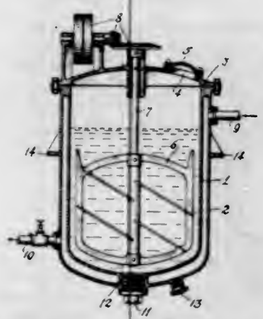
1,810,679. PROTECTIVE LOCK FOR LOOM REVERSING MECHANISM. LEONARD M. ROGERS, Mendon, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 10, 1930. Serial No. 419,968. 5 Claims. (Cl. 139—1.)



1. In a loom comprising a continuously rotating driving mechanism having an auxiliary frictional pulley, clutch mechanism for transmitting power from said driving mechanism to actuate the movable parts of the loom in a normal direction to weave fabric, manually controlled, alternately operable, auxiliary power-transmitting mechanism having a friction pulley movable into frictional engagement with the friction pulley of said driving mechanism operable to actuate the movable parts of the loom in a reverse direction, and means for preventing engagement of said friction pulleys during power-transmitting engagement of said clutch members.

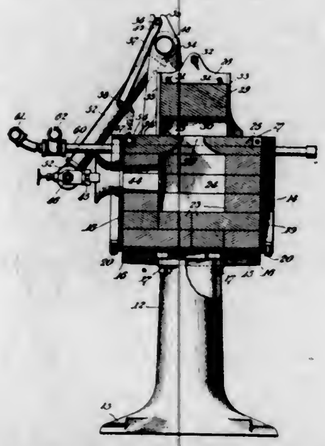
1,810,680. PNEUMATIC CAR PULLER. ANDREW E. ROTHGARN, Minneapolis, Minn., assignor to Samuel C. Clow, Minneapolis, Minn. Filed Feb. 10, 1930. Serial No. 427,284. 3 Claims. (Cl. 254—93.)

1. A car puller comprising an anchored frame, a cylinder anchored to said frame, a piston working in said cylinder and having a projecting stem, a cable-guiding sheave carried by the projecting end of the piston stem, a cable passed over the sheave carried by said piston stem, a windlass adjustably anchoring one end of said cable to said frame, said cable at its free end having means for attachment to a car body, and a cable guide intermediate of the sheave carried by the piston stem and the free end of said cable.



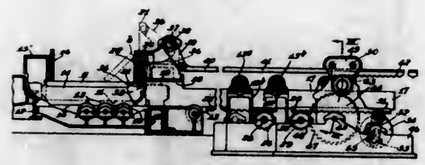
1,810,681. ENROBING OR CONFECTION-COATING APPARATUS. ROBERT SAVY and LOUIS LEBERT, Courbevoie-on-the-Seine, France, and MAX MARC GUGGENHEIM, Saginaw, Mich., assignors to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed July 2, 1930, Serial No. 465,284, and in Great Britain May 22, 1929. 4 Claims. (Cl. 91—3.)

3. In a river-flow producer comprising a cylindrical conduit having a longitudinal outlet adapted to produce an immersion bath of coating material upon a band or other surface adjacent said outlet, and an inlet at one end of said outlet for the admission of coating material, a valve for controlling said outlet comprising a rotatable cylindrical sleeve coaxial with said conduit having a longitudinal port, that edge of said port which is the lower when the port is in register with the outlet of the conduit forming a helix directed so that the end of said edge near the



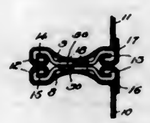
inlet to the conduit is the highest point of said edge, to produce a uniform flow along said outlet by compensating for the drop in pressure which exists along said conduit.

1,810,682. METHOD OF PREPARING LACTOSE. PAUL FRANCIS SHARP, Ithaca, N. Y., assignor to Cornell University, Ithaca, N. Y., an Educational Corporation of New York. Filed Dec. 4, 1929. Serial No. 411,465. 2 Claims. (Cl. 127—31.)



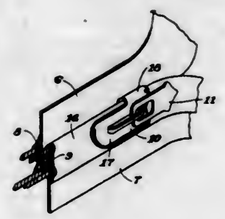
2. The process of producing beta lactose crystals substantially free from admixture with alpha lactose crystals, which comprises heating in a closed vessel a saturated solution of lactose above the transition point in the presence of undissolved alpha lactose, until all of the alpha lactose has gone into solution.

1,810,683. FURNACE FOR HEATING DRILL STEELS. BARTON R. SHEETS, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed Dec. 31, 1928. Serial No. 329,589. 13 Claims. (Cl. 263—9.)



1. In a furnace of the character set forth, the combination with a furnace body having a combustion chamber, and a heating chamber surmounting the same and having an open front side, of a shield supported in advance of and above the heating chamber and having its lower end spaced from the body to give access to the open side of the heating chamber, a burner for the combustion chamber, means for supplying fuel to the burner, and a tubular air heater interposed between the upper portion of the shield and the top of the heating chamber and located over said top of the latter.

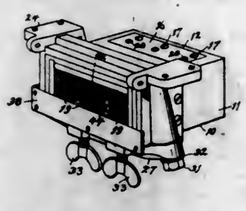
1,810,684. BILLET MANIPULATOR FOR ROLLING MILLS. JOHN A. SMITMANS, Pittsburgh, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 2, 1929. Serial No. 382,887. 14 Claims. (Cl. 80—48.)



1. A manipulator comprising a movable side guide, a device for moving the same, a tilting element associated with said side guide, and means for actuating said tilting element, said actuating means including a rotatable member cooperatively associated with said device so as to be rotated at a peripheral speed substantially the same as the speed of movement of said side guide, and means for operating said rotatable member to actuate said tilting element.

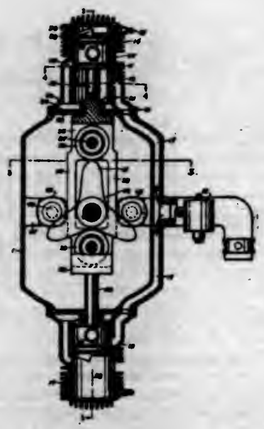
1,810,685. SEPARABLE FASTENER. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Original application filed Sept. 22, 1926, Serial No. 137,018, and in Great Britain Sept. 22, 1927. Divided and this application filed Nov. 11, 1929. Serial No. 406,280. 5 Claims. (Cl. 24—205.)

4. In a separable fastener, a pair of members of flexible material, cooperating fastener elements, attached to the adjacent edges of said members, and a separate flexible covering strip attached to each of said members adjacent said fastener elements, said covering strip extending over and at all times lying closely against said fastener elements.



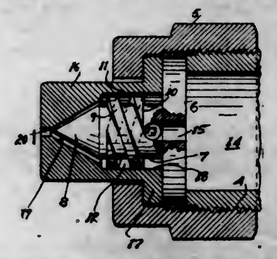
1,810,686. SEPARABLE FASTENER. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, Meadville, Pa., a Corporation of Pennsylvania. Original application filed Sept. 22, 1926, Serial No. 137,018, and in Great Britain Sept. 22, 1927. Divided and this application filed Feb. 5, 1930. Serial No. 426,014. 7 Claims. (Cl. 24—205.)

1. In a fastening device, a pair of flexible strips of material each having a beaded edge, said beaded edge comprising an enlargement disposed wholly on one side



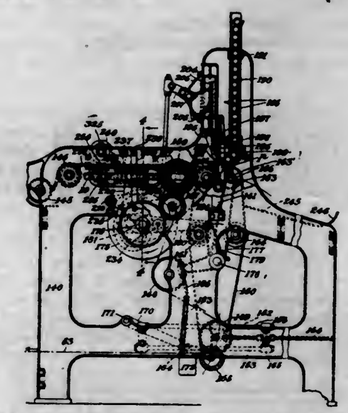
of and along the edge of each strip, and a series of fastener elements carried by each strip, each of said elements having an attaching portion engaging said enlargement.

1,810,687. ELECTRICAL CONNECTER RECEPTACLE. LOUIS ROBERTS TAYLOR, Milwaukee, Wis., assignor to Loeffelholz Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 20, 1927. Serial No. 227,511. 4 Claims. (Cl. 173—332.)



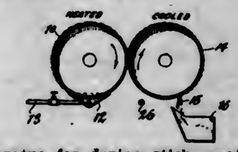
1. An electrical connecter receptacle, comprising a casing having an open end, fixed contacts therein, a yielding contact bridging member, a bracket frame mounted on said open end and having an easily removable clamping portion, a plug member for entering the casing to engage the contacts, the bridging member being beneath said contacts and automatically movable with respect thereto in a line perpendicular to the axis of insertion of the cooperating plug contacts, a follower member engaging said fixed contacts, and means associated with said bracket frame and engaging said follower for causing the fixed contacts to clampingly engage the plug contacts.

1,810,688. TRIPLE CAM INTERNAL COMBUSTION MOTOR. CHARLES A. TOCE and ALEXANDER CLARK, Houston, Tex. Filed Nov. 10, 1928. Serial No. 318,326. 2 Claims. (Cl. 123—56.)



1. A two-cycle motor comprising a housing, a cam shaft therein, a cam on said shaft, a tie bar straddling said cam and adapted to compel rotation thereof, a series of braces for said tie bar to prevent lateral motion thereor, a piston disposed on each end of said bar, each of said pistons adapted to reciprocate between two compression chambers, inlets and outlets for each of said chambers and means to explode the compressed fuel in one of said chambers.

1,810,689. OIL BURNER. KNOWLSON TOWNSEND, San Francisco, and ROBERT HILL, Oakland, Calif. Filed May 15, 1930. Serial No. 452,757. 2 Claims. (Cl. 299—137.)



2. An oil burner comprising a flanged atomizer, a flanged tip fitting over said atomizer, and both flanges one on the other being clamped to the end of an oil supply pipe.

1,810,690. WINDING MACHINE. WILLIAM W. TRINKS, deceased, Bridgeport, Conn., by Hannah Braman, administratrix, Stratford, Conn.; and BENJAMIN W. TUCKER, deceased, South Orange, N. J., by Halcyon L. Tucker, administratrix, South Orange, N. J.; said William W. Trinks and said Benjamin W. Tucker assignors to Pulilean Manufacturing Corporation, Bridgeport, Conn., a Corporation of Delaware. Original application filed Nov. 21, 1921, Serial No. 516,806, Patent No. 1,778,777, dated Oct. 21, 1930. Divided and this application filed Aug. 1, 1930. Serial No. 472,426. 17 Claims. (Cl. 242—55.)

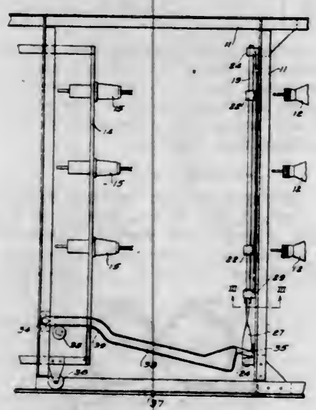
1. In a machine of the class described, the combination of a winding belt, means for feeding a mandrel to said belt and forming a loop in the latter to retain the mandrel, means for feeding a strip of material to said mandrel in the belt loop, and means for operating the belt to wind the strip around said mandrel.

1,810,691. APPARATUS FOR DRYING STICKY MATERIALS. DIRK J. VAN MARLE, Buffalo, N. Y., assignor to Buffalo Foundry and Machine Company, Buffalo, N. Y., a Corporation of New York. Filed Oct. 16, 1928. Serial No. 312,826. 5 Claims. (Cl. 159—11.)

1. An apparatus for drying sticky materials comprising a rotary heated drum having a drying surface upon

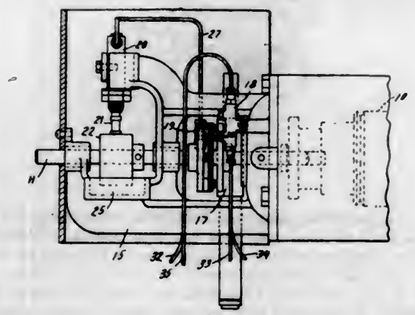
which the material to be dried is deposited and a rotary cooled drum having a cooling surface which receives the material from the heated drum and has its surface arranged in substantially contacting relation to the latter and moving in a direction opposite to that of the surface of the heated drum where these surfaces are substantially in contact.

1,810,692. RECEIVING APPARATUS FOR TELEVISION. GEORGE WALD, Belleville, Ill. Filed June 24, 1929. Serial No. 373,076. 4 Claims. (Cl. 176—122.)



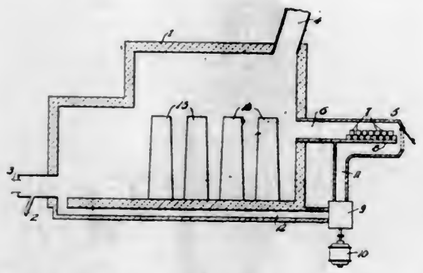
1. A receiving element for reproducing images comprising a sealed tube, a frame supported in said tube, a plurality of intersecting wires supported in said frame, one series of wires constituting anode elements and the other series constituting cathode elements, choke coils within the tube connected respectively with the said anode and cathode elements, terminals for said coils extending exteriorly of said tube, and means for connecting said terminals into an external energizing circuit.

1,810,693. AEROPLANE. HERACLIO ALFARO, East Cleveland, Ohio. Filed Mar. 7, 1928. Serial No. 259,811. 12 Claims. (Cl. 244—12.)



1. An airfoil having a flap adjacent its rear edge and adapted to be positioned at an angle to the airfoil, and means for transferring air from a point on the airfoil surface adjacent the vertex of the angle between said airfoil and flap to the forward part of the suction side of the airfoil.

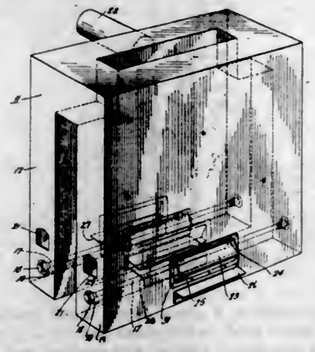
1,810,694. SWITCH MECHANISM. JAMES M. BROWN, deceased, Pittsburgh, Pa., by Jane D. Brown, administratrix, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 1, 1926. Serial No. 145,650. 3 Claims. (Cl. 175—298.)



1. The combination with a pair of relatively movable structures having cooperating contact members thereon, of a partition disposed between said structures and comprising a plurality of vertical, pivoted shutter members, each having a helical cam thereon and a lever pivoted to one of the structures and movable by the other structure for cooperating with the cam to impart a turning movement to the shutters when the lever is operated.

1,810,695. ELEVATOR GUIDE RAIL LUBRICATING MECHANISM. CLARENCE R. CALLAWAY, Long Beach, N. Y., assignor to Gurney Elevator Company, Inc., New York, N. Y., a Corporation of Pennsylvania. Filed May 22, 1929. Serial No. 364,978. 4 Claims. (Cl. 184—21.)

4. Lubricating mechanism for elevator guide rails comprising a car operating shaft, a shaft adapted to rotate therewith, an eccentric mounted on said last named shaft, a pump disposed above said eccentric and having a piston and a piston rod operatively driven by said eccentric, guide rails, and conduits for conducting oil from the pump to said rails.



1,810,696. PROCESS FOR THE HEAT TREATMENT OF STEEL. WALTER M. CROSS, Kansas City, Mo., assignor, by mesne assignments, to Lord Southborough, London, England. Filed Apr. 8, 1929. Serial No. 353,577. 3 Claims. (Cl. 148—16.)

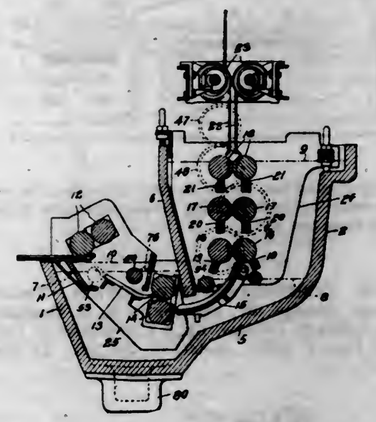
1. A process for the heat treatment of steel which comprises the steps of impregnating a treating furnace atmosphere with a gaseous material comprising lime and a substantially non-carburizing, carbon-carrying material and recirculating a portion of the atmosphere to obtain a uniform distribution of the treating materials throughout the furnace.

1,810,697. EXPLOSION RELIEF. CLAUDE M. DIBBLE, Joliet, Ill., assignor to Moore Brothers Company, Joliet, Ill., a Corporation of Illinois. Filed Feb. 8, 1928. Serial No. 252,900. 9 Claims. (Cl. 126—85.)

1. The combination with a plurality of spaced, vertically and horizontally elongated gaseous fuel burner chambers providing an intermediate air heating chamber, gaseous fuel burners respectively located in said chambers adjacent the bottom and extending substantially the horizontal length thereof, the vertical side walls of said chambers having explosion relief vents directly communicating with the locality of the gaseous fuel burners in said chambers and leading outwardly into the intermediate air heating chamber, doors respectively pivoted at the tops of said vents and movable by gravity to keep them normally

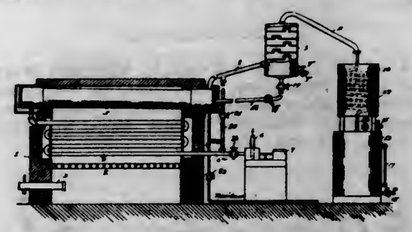
closed, and baffles respectively projecting horizontally from the side walls of the fuel burner chambers into the intermediate air heating chamber, said baffles being located below the vents but positioned at different levels to arrest the downward spread of flame discharged through the vents without obstructing the upward flow of air in the heating chamber during normal operation.

1,810,698. APPARATUS FOR MANUFACTURING SEAMLESS TUBING. SAMUEL E. DIESCHER, Pittsburgh, Pa., assignor to S. Diescher & Sons, Pittsburgh, Pa., a Partnership consisting of Samuel E. Diescher and August P. Diescher. Filed June 11, 1925. Serial No. 36,892. 2 Claims. (Cl. 80—14.)



1. A swedging mill for the manufacture of seamless tubing having external longitudinal vanes formed integrally with it, comprising a pair of swedging rolls having a tube-forming pass and vane-forming grooves adjacent to said pass, means for oscillating the rolls, feed mechanism for moving a billet into the bite of the rolls, means effective at the beginning of a swedging operation for rapidly rotating a billet on its longitudinal axis when the swedging rolls swing to a position remote from the feeding mechanism and means for rendering said rotating means inoperative while forming vanes on a route.

1,810,699. METHOD OF AND APPARATUS FOR THE MANUFACTURE OF TIN PLATE. SAMUEL E. DIESCHER, Pittsburgh, Pa., assignor to S. Diescher & Sons, Pittsburgh, Pa., a Co-partnership consisting of Samuel E. Diescher and August P. Diescher. Filed Dec. 5, 1925. Serial No. 73,379. 17 Claims. (Cl. 91—70.2.)

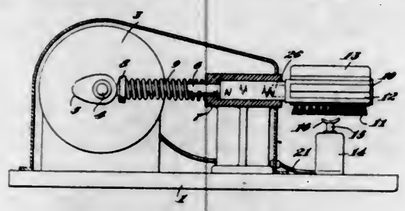


1. In the manufacture of tin plate in which plates to be coated are passed through a body of flux resting upon a bath of molten tin, the step consisting of causing the chilled tin and its content of impurities at the surface of the bath adjacent to the flux to continuously move laterally to present substantially unchilled clean molten tin to the centering plates.

3. In the manufacturing of tin plate in which plates are passed through a bath of molten tin, the method comprising causing the molten tin to continuously flow in a cycle in its container and segregating the impurities of the bath for removal from it at a point in the cycle of flow of the bath.

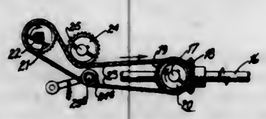
13. Tin plating apparatus comprising a pot having an entering and a discharge side, plate guiding and tinning apparatus mounted in the pot, a flux box at the entering side of the pot and through which plates are fed into molten tin contained in the pot, a roll in the flux box at a side of the path of entering plates and partially projecting above the metal line, and means for continuously rotating said roll for moving laterally the impurities at the surface of the molten tin.

1,810,700. APPARATUS AND PROCESS FOR TREATING HYDROCARBONS. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 4, 1919, Serial No. 342,405. Renewed May 12, 1927. 6 Claims. (Cl. 196—48.)



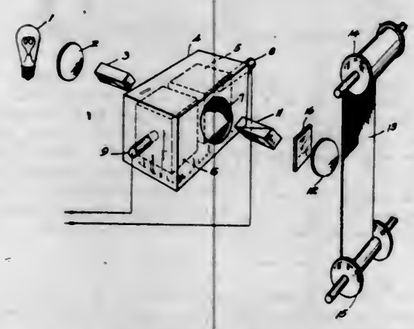
1. A process for treating hydrocarbons consisting in subjecting the oil in a tube and vapor chamber still to heat to crack the oil, passing the vapors into a dephlegmator, returning heavier reflux condensates to that part of the still where the highest temperature prevails, the lighter refluxes to the vapor chamber and passing the lighter vapors to a water condenser and receiver for condensation and collection, maintaining a vapor pressure upon the oil during distillation and condensation.

1,810,701. FINGER NAIL POLISHER. CHARLES J. FOERSTER, Newton, Mass. Filed Aug. 28, 1930. Serial No. 478,326. 2 Claims. (Cl. 132—74.)



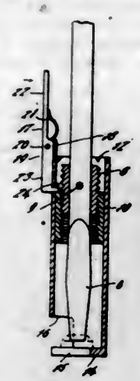
1. Apparatus of the class described comprising a reciprocable polishing tool, an electric motor operatively connected to the tool, means for reciprocating the tool upon operation of the motor, a finger rest mounted beneath the

tool, yielding means normally urging the rest toward the tool, and a switch connected in the circuit of the motor and actuable upon depression of the rest against said yielding



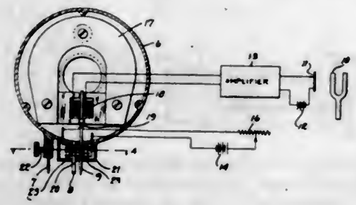
means for closing said circuit to start the motor, the switch being opened by said yielding means when the finger is removed from the rest.

1,810,702. IRREGULAR DRIVE MOTION. PHILIP A. FRAZIER, Chicago, Ill., assignor to R. R. Donnelley & Sons Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1928. Serial No. 282,786. 10 Claims. (Cl. 11—1.)



1. In a machine of the class described, a continuous chain conveyor, means thereon for conveying objects to be operated on, a sprocket for driving the chain conveyor and of such diameter and such few relatively widely spaced apart teeth that said sprocket advances said conveyor with an irregular motion, mechanism comprising an element moving generally in the direction of movement of said conveyor adapted to perform an operation on the object carried by the conveyor, a sprocket driven by the drive for the conveyor sprocket at a uniform rate, and an eccentric sprocket driven by a chain running over the secondmentioned sprocket for driving said element with substantially the same irregular motion as that of the chain conveyor.

1,810,703. SOUND RECORDING SYSTEM. WALTER GALLAHAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 3, 1928. Serial No. 274,732. 1 Claim. (Cl. 179—100.3.)



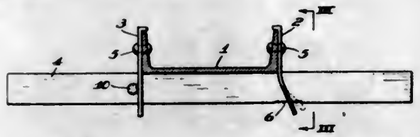
In a system of photographic recording, incorporating a Kerr cell of the type utilizing nitro-benzol for a dielectric, a color filter transparent to blue light adapted to compensate for the yellow color of said nitro-benzol.

1,810,704. SCREW DRIVER. HENRY THOMAS GENTRY, Kalispell, Mont. Filed Sept. 30, 1929. Serial No. 396,154. 2 Claims. (Cl. 145—52.)

1. In combination, a screw driver shank provided with a blade, a sleeve fixed on the shank and externally threaded, a sleeve internally threaded and engaged with the first mentioned sleeve, a barrel slidable over the second mentioned sleeve and having inturned lug stops to engage one edge of the internally threaded sleeve and formed with a bottom having a slot therein and said barrel having an opening merging into the slot, and latch means on the barrel for engagement with the said second-mentioned sleeve to prevent outward movement thereof with respect to the barrel during the operation of the screw driver, said means being releasable to permit such outward movement for disengaging the screw driver from the kerf of a screw.

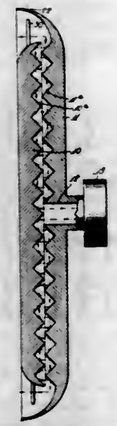
1,810,705. THERMAL SOUND RECORDING SYSTEM. EDMUND H. HANSEN, New York, N. Y. Filed Feb. 16, 1928. Serial No. 254,742. 5 Claims. (Cl. 179—100.4.)

1. In combination a spirally grooved heat plastic disc, an electromagnetic recording motor having a heated recording stylus, a cold guiding stylus mounted on the recording motor adapted to engage the spirally grooved disc, and a heated erasing stylus also mounted on said motor between the cold guiding stylus and the heated recording stylus whereby the grooving in the heat plastic disc is erased in the area preceding the recording stylus.



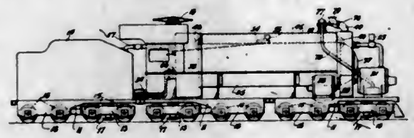
1,810,706. SCREW CAP. JAMES S. HARDIMAN, Ridgewood, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 11, 1926. Serial No. 147,625. 9 Claims. (Cl. 215—44.)

1. As an article of manufacture, a screw cap comprising a cover portion, a depending skirt, and a bead at the lower



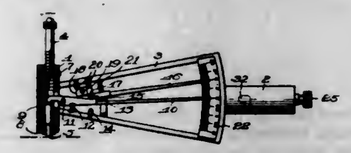
edge of said skirt, said bead being deformed to provide a plurality of locking projections from the normal portions thereof adapted to engage suitable threads on a container without interrupting the continuity of the bead.

1,810,707. BRAKE BEAM GUARD ARM. BRODERICK HASKELL, Franklin, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed Apr. 1, 1930. Serial No. 440,745. 5 Claims. (Cl. 188—210.)



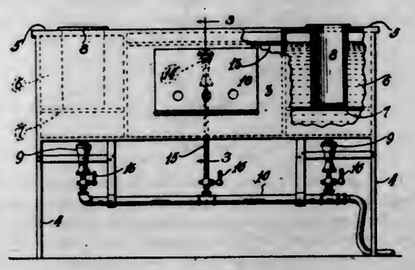
1. In a railway car truck, a spring plank, a brake beam guard bar below the spring plank, and a resilient bracket attached to said spring plank and provided with an opening for receiving and supporting said bar, said bracket yieldingly engaging said bar to normally lock it in operative position.

1,810,708. METHOD OF AND APPARATUS FOR AMPLIFYING AND PROJECTING SOUND WAVES. MILLER REESE HUTCHISON, Llewellyn Park, West Orange, N. J., assignor to Echodon, Inc., West Orange, N. J., a Corporation of Delaware. Filed Jan. 9, 1929. Serial No. 331,343. 12 Claims. (Cl. 181—27.)



1. A method of amplifying sound which consists in propagating sound waves from a center through a tortuous conduit, repeatedly right angularly reflecting the wave while circularly expanding it in one dimension, at intervals and preventing expansion thereof in the other dimension.

1,810,709. LOCOMOTIVE. HOWARD L. INGERSOLL, Stamford, Conn. Original application filed Nov. 23, 1923, Serial No. 676,497. Divided and this application filed Nov. 22, 1926. Serial No. 150,005. 4 Claims. (Cl. 105—36.)



1. In a locomotive, the combination of a plurality of driving axles with their wheels, electric motors therefor, an electric generator, a steam turbine for driving the generator, and a boiler for producing steam at a pressure upwards of 400 pounds whereby to run the turbine at an efficiency point which is high enough to overcome the necessity for using a condenser.

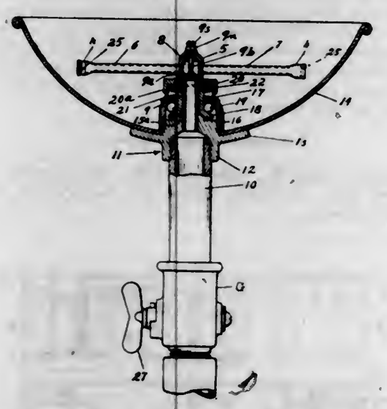
1,810,710. GAUGE. CARL EDVARD JOHANSSON, Detroit, Mich. Original application filed Apr. 12, 1923, Serial No. 631,499, and in Sweden Apr. 27, 1922. Divided and this application filed Feb. 8, 1928. Serial No. 252,700. 6 Claims. (Cl. 33—178.)

1. In a gauge the combination of a head, two measuring studs located in alignment in said head and adapted to engage walls on the object to be measured, one of said studs being adapted to slide in said head, a pointer actuated by said sliding stud, two locating studs located in said head on either side of and at equal distances from said sliding measuring stud and disposed in a plane common to said measuring studs, means for rigidly securing said locating studs to one another, said locating studs and connecting means being movable in said head in a direction parallel to the direction of movement of said sliding measuring stud, and means urging said locating studs in a direction outwardly of said head.

1,810,711. STOVE. GEORGE JONES, Waxahachie, Tex. Filed Dec. 13, 1929. Serial No. 413,807. 1 Claim. (Cl. 126—37.)

A stove of the character described, having front and rear walls and an open top, said top comprising two end portions and a central frying plate, all arranged on substantially the same level, said end portions being provided with openings to permit admission of suitable vessels, water chambers beneath said end portions, said central plate having a downwardly offset portion at the forward end thereof forming with the front wall of the stove a readily available warming recess extending lengthwise of the stove for keeping warm articles of food and cooking utensils, and burners beneath said end chambers and said central plate.

1,810,712. RADIATOR. WILLIAM J. KENNEY, Chicago, Ill. Filed Mar. 30, 1929. Serial No. 351,447. 6 Claims. (Cl. 257—141.)



2. In a radiator, two separated hollow heads, comparatively thin hollow walls extending between the heads

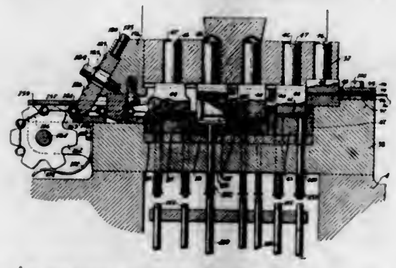
and connecting their interiors together, said walls rising from the bottom of the radiator and curving laterally to one of the sides, and the walls diverging from their lower

ends toward the top to produce between them open-ended air passages increasing gradually in cross-sectional area from their lower to their upper ends.

1,810,713. GAS BURNER. JOHN H. KINKAID and STANTON H. WESTON, Los Angeles, Calif., assignors of one-third to Robert D. Pearson, Los Angeles, Calif. Filed June 19, 1929. Serial No. 372,196. 3 Claims. (Cl. 158—99.)

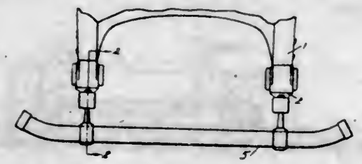
1. In a burner, a rotary burner head comprising a tubular body one end of which is closed and the other end of which is provided with an out-curved circumferential flange, means operatively to support said head and to feed fuel thereto under pressure, said means comprising a standard juxtaposed to the flanged end of said head and a pivot pipe over which said head is rotatably fitted, a dome shaped housing mounted upon said standard inclosing said flange in spaced relation thereto, and ball bearings contacting on one side with the interior of said housing and on the other side with the concave side of said outcurved flange, said housing and outward curved flange cooperating to form a cage for said ball bearings.

1,810,714. PROCESS OF MAKING ASBESTOS FRICTION ELEMENTS. LESTER KIRSCHBRAUN, Leonia, N. J., assignor, by mesne assignments, to Raybestos-Manhattan, Inc., a Corporation of New Jersey. Original application filed Sept. 10, 1920, Serial No. 409,388. Divided and this application filed Oct. 31, 1928. Serial No. 316,344. 1 Claim. (Cl. 91—70.)



A process which comprises saturating an unwoven felted asbestos mass in a bath of heated asphaltic base oil, then subjecting said saturated mass to a baking operation at an elevated temperature, thereafter resaturating said mass in a bath of similar saturant, and thereafter subjecting the mass to a final baking operation at an elevated temperature continued until the saturant is substantially insoluble in asphaltic solvents.

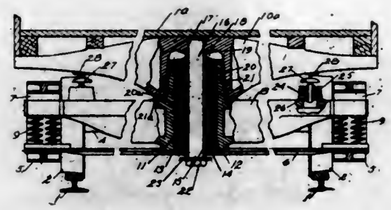
1,810,715. JACK HANDLE. WALTER E. LARSON and JOHN H. KOHLER, Pittsburgh, Pa., assignors, by mesne assignments, to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Aug. 8, 1927. Serial No. 211,415. 5 Claims. (Cl. 74—33.)



2. A joint for fastening a plurality of metal links together, comprising a flanged portion on the end of the one link having an off-center cylindrical opening and a groove therein, a flanged portion on a second link having an off-center cylindrical opening and a projection thereon adapted to cooperate with the opening and groove on the first link, and means extending through the corresponding cylindrical openings when the links are in aligned position to rigidly hold the said links in fixed relation to each other.

1,810,716. APPARATUS FOR MAKING CHAIN. SYLVANUS D. LOCKE, Bridgeport, Conn., assignor to The Locke Steel Chain Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 24, 1926. Serial No. 131,233. 17 Claims. (Cl. 53—6.)

1. In a machine for making chain links, means for removing sections of similar shape one by one from a strip of metal to provide blanks, a set of working elements adapted to successively engage each blank, means for delivering the blanks one at a time to said mentioned set of working elements, means for removing each blank from said mentioned set of working elements after an operation is performed, means for feeding the blanks one at a time to a different set of working elements, and means for assembling the blanks into a chain.

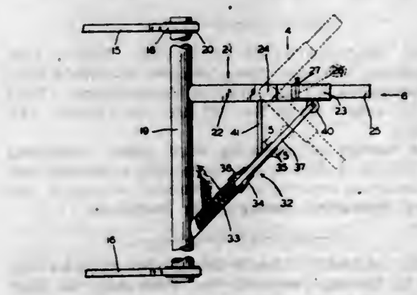


1,810,717. CUSHION MOUNTING. HUGH C. LORD, Erie, Pa. Filed Feb. 11, 1927, Serial No. 167,432. Renewed Oct. 21, 1929. 12 Claims. (Cl. 293—55.)

1. In a mounting, the combination with a supporting member and a supported member, one having a tubular

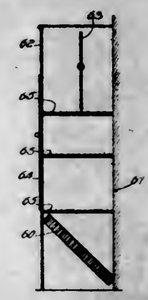
wall and the other a projection adapted to telescope the wall, a rubber bushing between and locked with the projection and the wall.

1,810,718. CAR. HUGH C. LORD, Erie, Pa. Filed Mar. 14, 1927, Serial No. 175,190. Renewed Mar. 2, 1929. 18 Claims. (Cl. 105—199.)



1. In a car, the combination of a truck; a body pivotally mounted on the truck; and rubber dampener means between the truck and body insulating the body from metallic contact with the truck.

1,810,719. MEAT TENDERER. MARK LOWENTHAL, Newark, N. J. Filed July 28, 1928. Serial No. 296,010. 1 Claim. (Cl. 17—30.)



A meat tenderer, comprising a handle provided with a centrally arranged, threaded recess, a plurality of apertured cutters, said cutters being provided with two oppositely arranged cutting edges, an inner clamping member provided with aligning pins adapted to pass through the cutters, an outer clamping member provided with a pin having an externally threaded end to threadedly engage the threaded recessed portion of the handle, and spacing blocks between each of the cutters adapted to maintain them in spaced relation, said blocks being of less width than the cutters whereby both cutting edges of the cuttera will be exposed.

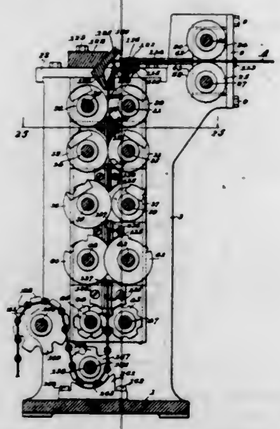
1,810,720. SAFETY SWINGING FINGER BOARD FOR WELL DRILLING DERRICKS. KENNETH ALBERT MCCOY, Fullerton, Calif., assignor of one-half to Estee T. Brown, Fullerton, Calif. Filed Jan. 2, 1930. Serial No. 418,100. 17 Claims. (Cl. 211—60.)

16. In combination with a well derrick, a pivotally mounted vertical post, a finger board connected thereto to swing in a horizontal plane, a finger tip mounted on the board to swing in a vertical plane, a brace fixedly connected to the post and having an engagement with the finger tip, said brace normally holding the tip in a horizontal position but permitting the tip to rise above the said brace, the said brace being depressible on depression of the tip, and having means to return the tip to the horizontal position.

1,810,721. HEATING APPARATUS. ARTHUR B. MODINE, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Apr. 25, 1923. Serial No. 634,492. 9 Claims. (Cl. 257—136.)

3. In a heating apparatus, an enclosure having an air outlet and having a front wall provided with an opening in the lower portion thereof, a radiator disposed at said lower opening, perforated shelves arranged above the radiator, said radiator having passage ways providing the only means whereby air may pass through said lower opening into said enclosure, and a damper mounted in the upper portion of said enclosure.

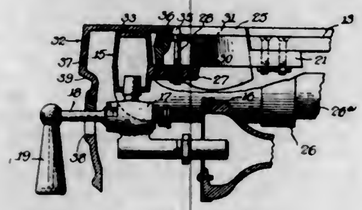
1,810,722. IRONING BOARD CONSTRUCTION. CLAYTON M. MORRIS, Los Angeles, Calif. Filed Jan. 15, 1930. Serial No. 420,893. 2 Claims. (Cl. 68—10.)



1. A separable ironing board construction comprising a base board, a board secured in an upright position to said base board to form a standard, there being a substantially horizontal rib projecting from each side of the upper portion of said standard, an ironing board proper having cooperating parallel spaced cleats secured to one face thereof, said cleats having grooves adapted to telescope over said ribs, and a catch device comprising two parts which are yieldingly engageable with each other to releasably hold said ironing board proper in its attached position upon said standard, one part of said catch being attached to said ironing board proper and the other part thereof being attached to said standard, one part of said catch being a metallic plate having two cooperating spring arms integral therewith, and the other part of said catch comprising a part positioned to be embraced by said arms.

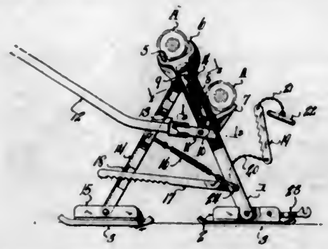
1,810,723. TRANSMISSION LINING. WILLIAM NANFELDT, Paterson, N. J., assignor to World Bestos Corporation, Paterson, N. J., a Corporation of Delaware. Filed Nov. 21, 1928. Serial No. 321,037. 12 Claims. (Cl. 91—70.)

1. As a new article of manufacture, a friction fabric adapted for transmission lining operated in oil which



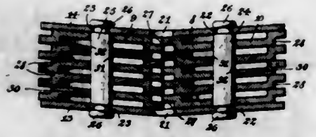
is composed of woven asbestos and cotton yarns and contains polymerized china wood oil together with an impregnated vegetable wax.

1,810,724. CHAIN MAKING MACHINE. CHARLES PARKER, Bridgeport, Conn., assignor to The Locke Steel Chain Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 23, 1926. Serial No. 150,312. 10 Claims. (Cl. 59—6.)



1. In a machine for transforming a strip of metal into a chain, means for severing link blanks from the strip, a plurality of sets of dies arranged vertically one below another, means for feeding a blank to the uppermost of said sets, means for discharging the blank from one set of dies to the next lower one, said means permitting the blank to pass by gravity to said lower set, the lowermost set of dies being adapted to assemble the links into a chain.

1,810,725. GAS RANGE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed Mar. 9, 1929. Serial No. 345,688. 5 Claims. (Cl. 126—39.)



5. A gas range having, in combination, a cooking top comprising a frame including side and rear members, a supporting member of inverted channel shaped cross section extending across the front of the stove top with its upper surface offset downwardly from the upper surfaces of the side members, a gas supply manifold having supporting arms detachably secured to the underside of said supporting member and having valve stems projecting forwardly therefrom, and an angular casting comprising a horizontal part of substantial width with its rear edge portion detachably secured on the upper side of said supporting member, said casting further having a substantially vertical part extending downwardly from the forward edge of the horizontal part and being apertured to permit said valve stems to extend therethrough.

1,810,726. VEHICLE SUPPORT. MAURICE CAMPBELL PIERCE, Madison, Wis. Filed Jan. 12, 1929. Serial No. 331,996. 4 Claims. (Cl. 248—41.)

1. A vehicle support comprising a pair of telescopic members, means for urging said members apart, a leg hinged to one of said members, a spring for retracting said leg, means for locking said telescopic members against retraction, and means for locking said leg against spreading.

1,810,727. KNIFE SHARPENER. WILLIAM F. POLSON, Buffalo, N. Y. Filed Apr. 5 1927. Serial No. 181,083. 5 Claims. (Cl. 76—87.)

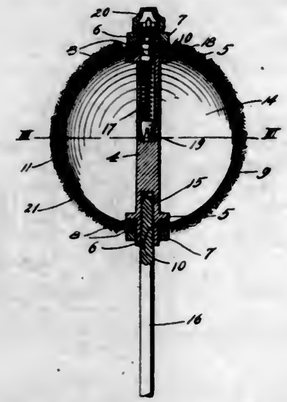
1. A knife sharpener, comprising a support, a pair of spaced parallel spindles carried by said support, a set of sharpening disks on each spindle marginally overlapping the set on the other spindle, and means embodied in the construction of the knife sharpener to permanently hold the set of disks on one spindle in angular relation to the set on the other, said disks being rotatable and non-tiltable on said spindles.

1,810,728. MANUFACTURE OF PAPER. HAROLD R. RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Nov. 27, 1928. Serial No. 322,291. 10 Claims. (Cl. 92—21.)

1. The method of producing filled paper, comprising adding a metallic salt to a mix comprising fibrous material and filler under conditions favoring the minimizing of time of contact, and thereafter making paper therefrom.

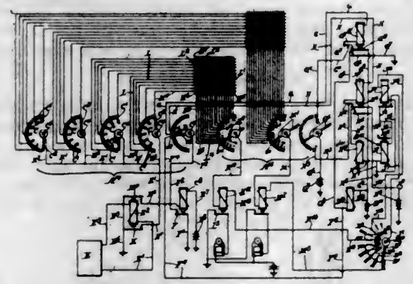
1,810,729. MANUFACTURE OF PAPER. HAROLD ROBERT RAFTON, Lawrence, Mass., assignor to Raffold Process Corporation, a Corporation of Massachusetts. Filed Nov. 27, 1928. Serial No. 322,292. 15 Claims. (Cl. 92—21.)

1. The method of producing filled paper, comprising adding filler to a fibrous mix containing a metallic salt under conditions favoring the minimizing of time of contact, and thereafter making paper therefrom.



1,810,730. GLASS FURNACE CHARGING APPARATUS. JOHN H. RITTER, Charlerol, Pa. Filed Aug. 23, 1929. Serial No. 387,916. 6 Claims. (Cl. 49—14.)

6. A glass-furnace charging apparatus adapted to prevent dusting, comprising a charge-carrying ladle having long and short side walls and a bottom forming an open-top charge-receiving chamber of J-like cross section, a shutter pivotally connected to the upper edge of said short side wall, and a shaft for supporting and rotating the ladle connected to an end thereof below the center of

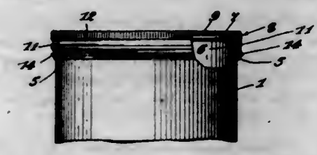


said end, said shutter being effective to retain the charge in the ladle until it is inverted and when inverted swinging downwardly and with said longer side wall cooperating with the surface of the molten glass to prevent spreading of dust in the furnace.

1,810,731. DRUM BEATER. ERNEST O. ROARK, Kansas City, Mo., assignor of one-fourth to Clara M. O'Shaughenessy, Kansas City, Mo. Filed Sept. 12, 1927. Serial No. 218,941. 10 Claims. (Cl. 84—422.)

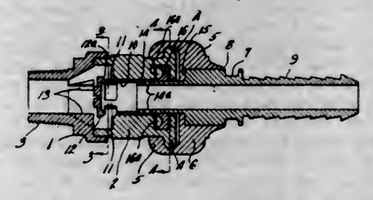
1. A substantially non-elastic hollow head for drum beaters.

1,810,732. PROGRAM MACHINE. HULBERT SANNER, Chicago, Ill., assignor to Lothar A. Ederer, Chicago, Ill. Filed Sept. 4, 1923. Serial No. 660,694. 17 Claims. (Cl. 161—4.)



1. In an electric program machine, a plurality of time switches, means for giving them a continuous forward step by step movement, a day switch and means for giving it a forward day by day movement and means for automatically reversing the direction of movement of the day switch for returning it to the starting position at the end of a predetermined number of days, the day switch being operated under the control of the time switch.

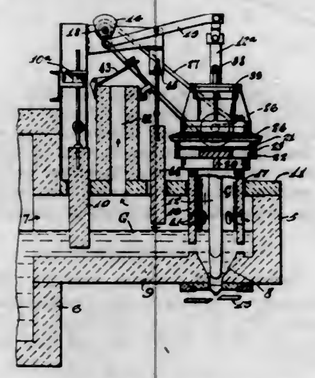
1,810,733. PULL-OFF YOKE. WILLIAM SCHAAKE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 20, 1930. Serial No. 453,929. 5 Claims. (Cl. 191—40.)



1. A pull-off yoke for a trolley conductor comprising, in combination, a section of metal tubing curved near one end, a section of metal tubing telescoped over the curved portion of the tubing to reinforce it, both of said sections being expanded vertically along the curved portion to increase the section modulus with respect to the horizontal axis, thereby increasing the mechanical strength of the pull-off yoke.

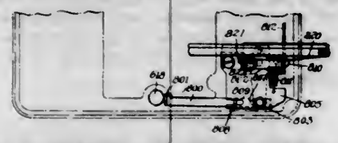
1,810,734. CONTAINER. EDGAR SCOFIELD, New York, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 30, 1927. Serial No. 236,603. 11 Claims. (Cl. 229—5.7.)

1. In a device of the class described, the combination of a paper carton, a threaded metal collar adapted to receive a screw cap telescoped about the upper end of said carton, said collar having a continuous upper edge secured in position by an interlocking inturned folding engagement of the upper edge of the collar with the upper periphery of the carton whereby only the upper peripheral edge of the carton is deformed in the application of the collar to the container and the raw edge of the metal collar is concealed.



1,810,735. HOSE COUPLING. CHARLES T. SMITH, Cleveland Heights, Ohio. Filed May 18, 1928. Serial No. 278,851. 1 Claim. (Cl. 284—18.)

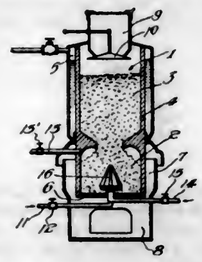
A hose coupling comprising two members adapted for interlocking connection for the passage of fluid therethrough, a valve in one of said members, the other of said members having a projecting portion adapted for insertion within said one member for opening engagement with said valve, said one member having an annular three wall groove in its inner surface in immediate proximity to the end thereof, and a readily accessible, expansible gasket arranged in said groove and around said projecting portion for sealing the connection, said gasket having an annular channel facing the incoming pressure so as to be exposed to the full and direct pressure of the fluid and being engaged only by said projecting portion and being subject to only radial expansion, whereby the inner



and outer walls of the gasket will be maintained in effective sealing engagement between the inner wall of said groove and said projecting portion, respectively.

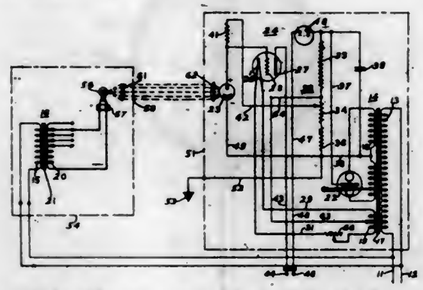
1,810,736. GLASS FEEDER. LEONARD D. SOUBIER, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 27, 1928. Serial No. 328,679. 19 Claims. (Cl. 49—55.)

12. The combination in a glass feeder of a container for molten glass having a bottom outlet opening, means to control issue of glass thru said opening including a tube projecting into the glass over the opening, and means to supply heat to the interior of the tube to reheat portions of the glass in the container.



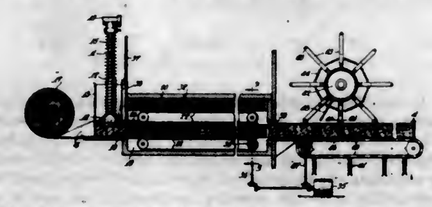
1,810,737. CASH REGISTER. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 28, 1929. Serial No. 374,596. 5 Claims. (Cl. 235—22.)

1. The combination of a computing machine having in its extreme rear portion a part movable up and down in each cycle of operations of the machine, a drawer-unlatching plunger below said part, an element adapted to be interposed between said part and said plunger to transmit movement from said part to said plunger, said element being movable transversely of the machine, a spring tending to interpose said element, settable means to control printing, said means being located at the front end of the machine, and connections between said means and said spring for restraining the spring when said settable means is in its initial position, said connections including a link extending along the side of the machine.



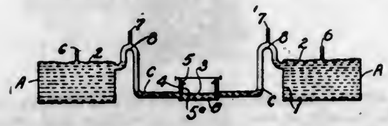
1,810,738. GAS PRODUCER. ARTHUR P. VAN HEEDEN, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 19, 1927. Serial No. 227,068. 3 Claims. (Cl. 48—63.)

1. In a gas producer, a gasifying chamber and means for supplying fuel thereto, an inverted metallic cap member disposed within said gasifying chamber, a steam inlet pipe extending through said gasifying chamber into said cap member and terminating adjacent the upper portion of the latter whereby steam introduced through said inlet pipe is caused to travel downwardly through said cap member in contact with the walls thereof, a steam outlet at the lower portion of said cap member whereby the steam is discharged from the cap member into said gasifying chamber, and an air inlet pipe terminating



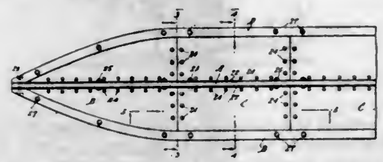
directly in said gasifying chamber outside of said cap member and independent thereof whereby air may be introduced directly into said gasifying chamber independently of the steam introduced to said cap member.

1,810,739. SMOKE INDICATOR SYSTEM. EDWIN H. VEDDER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 9, 1928. Serial No. 318,298. 5 Claims. (Cl. 250—1.)



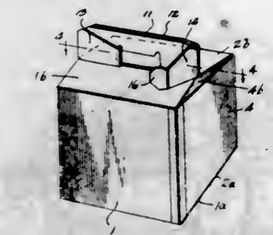
1. In an electric circuit, in combination, a primary source of supply of electric energy, a photoelectric cell having an anode and a cathode, a resistor connected in series circuit with the anode thereof and the source of energy for the cell, a plural electrode thermionic amplifier tube, means for connecting the filament to the source of energy to energize the filament, means for connecting the plate circuit to the source of energy, means connecting the control electrode of the tube to the anode of the photoelectric cell to be controlled thereby, a light source for energizing the photoelectric cell energized from the primary source of supply, and an indicating instrument in the plate circuit to incidate the degree of energization of the photoelectric cell by said light source.

1,810,740. APPARATUS FOR CONTINUOUS PRODUCTION OF BRICKS OF ICE CREAM OR ANALOGOUS MATERIAL. CLARENCE W. VOGT, Louisville, Ky., assignor to Vogt Instant Freezers Incorporated, Louisville, Ky., a Corporation of Delaware. Filed Oct. 25, 1929. Serial No. 402,339. 40 Claims. (Cl. 62—114.)



3. An apparatus for forming ice cream bricks, including means for delivering a strip of wrapping material in substantially channel form, means for delivering the partially frozen ice cream into said channel, conveying means for continuously advancing the wrapping material with the ice cream therein, means for further freezing the material during its advancing movement, and means for subdividing the hardened ice cream into successive separate sections.

1,810,741. APPPARATUS FOR STORING LIQUIDS. JOHN H. WIGGINS, Bartlesville, Okla. Filed May 2, 1927. Serial No. 188,387. 2 Claims. (Cl. 220—85.)

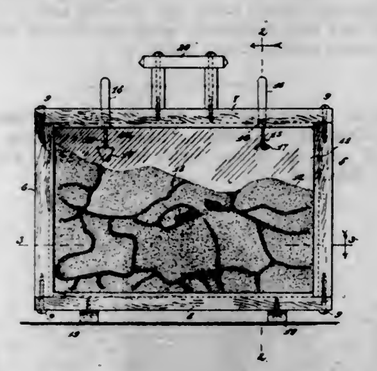


1. An apparatus for storing volatile liquids, comprising a main tank provided with a metallic top connected at its peripheral edge to the side wall of said tank and constructed so that it is capable of flexing to provide for the expansion and contraction of the liquid in said tank, an auxiliary storage tank, a conduit leading from said main tank to said auxiliary tank and provided with an overflow point located at a point higher than the top edge of the side wall of said main tank, a vent for said main tank, a vent for said overflow conduit, and means for returning liquid from the auxiliary tank to the main tank.

1,810,742. SECTIONAL HULL STRUCTURE FOR HOUSE-BOATS OR THE LIKE. WILLIAM WILSON, New York, N. Y. Filed Feb. 14, 1931. Serial No. 515,846. 11 Claims. (Cl. 114—77.)

7. In a hull construction, a continuous rigid keel member corresponding in height and length to the hull and hollow water-tight hull sections secured to opposite sides of said keel member.

1,810,743. BOX WITH HANDLE. HOWARD G. ALLEN, Niagara Falls, N. Y., assignor to H. R. Bliss Company, Inc., Niagara Falls, N. Y., a Corporation of New York. Filed July 20, 1929. Serial No. 379,666. 7 Claims. (Cl. 229—52.)

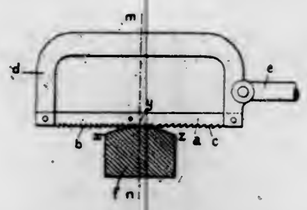


1. In a box of fibre board or the like, a blank having flaps adapted to be folded to form the cover of the box, an extension on a flap adapted to project from said cover and having an aperture therein to form a handle for the box, and an ear associated with said handle extension and adapted to engage said extension with a cover flap to hold said extension substantially flush with said cover, whereby said handle extension does not interfere with the stacking of a plurality of said boxes.

1,810,744. PRESS AND DISPLAY RACK. JOHN O. AMBLER AUBERT, New York, N. Y. Filed May 16, 1928. Serial No. 278,238. 6 Claims. (Cl. 100—57.)

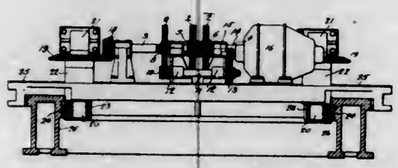
6. A device of the class described, comprising two outer and a plurality of intermediate panel units, arranged face to face, coil springs connecting the two outer units in proximity of one of their edges, said springs passing through the intermediate units inserted therebetween, and forming expansible hinge means for said units, means for adjustably fastening together the opposite edges of said two outer units, and a snap over spring connecting said two outer units to each other, said spring being adapted to retain the device in both its closed and its open position.

1,810,745. EDUCATIONAL APPARATUS. FRANK EUGENE AUSTIN, Hanover, N. H. Filed June 21, 1929. Serial No. 372,703. 1 Claim. (Cl. 119—1.)



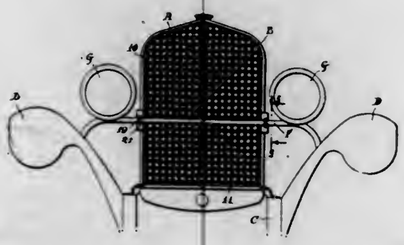
An apparatus of the class described comprising a case having a glass side and containing soil and ants, the tunnels and rooms made by the ants being exposed through the glass side, there being an aperture in the case, an elongated handle for closing the aperture, and a shank extending inwardly from the handle and providing means for supporting sustenance for the ants.

1,810,746. METAL SAWING MACHINE WITH ARCUATE CUT. JULES BABIN and ACHILLE PAYS, Paris, France; said Pays assignor to said Babin. Filed Oct. 6, 1925, Serial No. 60,892, and in France Oct. 15, 1924. 1 Claim. (Cl. 29—73.)



A reciprocating saw machine for the sawing of metals comprising a rectilinear saw blade having its two halves toothed in opposite directions, the arrangement of the cut-

ting faces of the teeth of the saw blade having, in relation to the straight edge of the blade, an inclination in-



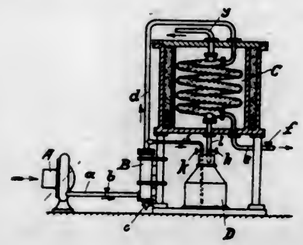
creasing from the middle of the saw up to its extremities, and means for moving said saw blade to produce an arcuate cut in a stationary workpiece.

1,810,747. DIFFERENTIAL GEAR. GEORGE H. BENZON, Jr., Jenkintown, Pa., assignor to William Sellers & Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1928. Serial No. 306,023. 6 Claims. (Cl. 74—7.)

1. A differential mechanism comprising independent right and left helical gears, and a double helical gear coactive with said first-named gears and free to move axially within predetermined limits.

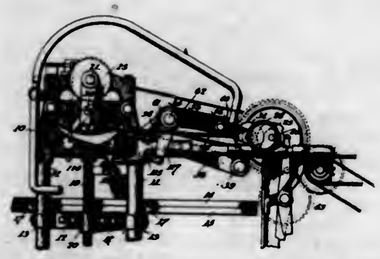
1,810,748. ORNAMENTAL GUARD FOR AUTOMOBILE RADIATORS. KORNEL C. BERGER, New York, N. Y. Filed Aug. 22, 1930. Serial No. 477,156. 8 Claims. (Cl. 293—54.)

1. An ornamental guard for automobile radiators, including a grill and a channeled frame fitted over the edges of the grill, said frame having a separate section applied thereto after the positioning of the grill within the remainder of the frame.



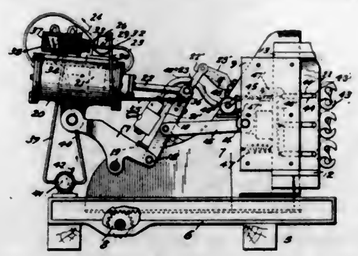
1,810,749. DOWEL. FREDERICK THOMAS BOWLER, Highland Park, Mich. Filed Feb. 19, 1929. Serial No. 341,099. 4 Claims. (Cl. 85—2.4.)

3. The combination of an expansible tubular dowel element of spring metal having a single longitudinal slot, and an expander turnable within said dowel element in contact therewith, said expander having a longitudinal contact



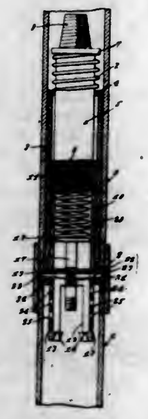
edge movable into and out of said slot by turning said expander, to expand said element or to allow said element to contract.

1,810,750. PROCESS FOR THE GENERATION OF A REFRIGERANT JET FOR DENTAL OPERATIONS. SCHULIM BRAUNSTEIN and SEMION MEERSON, Berlin, Germany. Filed Jan. 14, 1928, Serial No. 246,892, and in Germany Jan. 15, 1927. 11 Claims. (Cl. 62—170.)



1. A process for the generation of a refrigerant stream for dental purposes consisting in impelling a stream of air, subjecting said stream of air to the cooling influence of the vapor of a liquefied gas, and by-passing a part of the stream of air into the liquefied gas to vaporize the same.

1,810,751. SHEET FEEDING MECHANISM. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O. Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Original application filed Apr. 28, 1926, Serial No. 105,174. Divided and this application filed July 18, 1927. Serial No. 206,646. 11 Claims. (Cl. 271—62.)

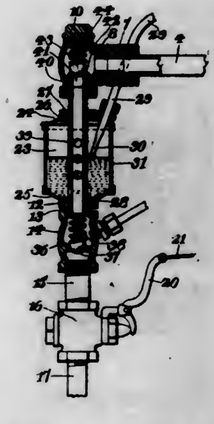


1. In sheet feeding apparatus, the combination with a pile support and mechanism for elevating it, of a device having an individual movement in a direction for delivering sheets edgewise from the pile, and means controlled by the sheet delivering device for controlling the operation of the pile support elevating mechanism.

1,810,752. COMBINATION GRAB DOG AND TAPER. JAMES M. BROPHY, Hattiesburg, Miss., assignor to Brophy Automatic Air Dog Corporation, Hattiesburg, Miss. Filed Jan. 22, 1927. Serial No. 162,830. 3 Claims. (Cl. 143—125.)

1. The combination with a saw mill carriage having movable knees, of a movable dog carrying member mounted for movement through each knee, dogs carried by each dog carrying member, and a valve actuated by the movement of the dog carrying member for controlling the operation of the dogs simultaneously with the movement of the dog carrying member to a position to taper a log.

1,810,753. DEVICE FOR REMOVING PARTS FROM WELLS. CORNELIUS BROWN, Beirut, Okla. Filed July 23, 1930. Serial No. 470,182. 4 Claims. (Cl. 294—100.)

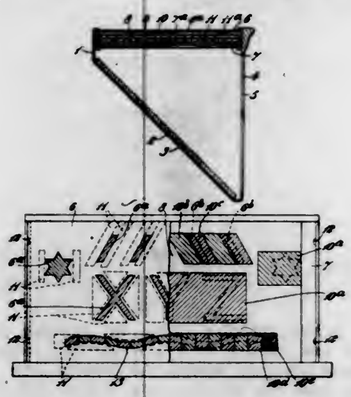


1. In a device for removing drilling tools and other parts from a well, a hollow tubular barrel, a stem having a threaded upper end to adapt it to be connected to a part working in the well for up and down movement, the said stem fitting slidably through the upper end of the barrel, and having an abutment near its upper end, a compression spring fitting the said stem and bearing between the abutment and the said end of the barrel, a sleeve fitted, at its upper end, to the lower end of the stem, clamping members extending downwardly from the lower end of the sleeve and having inwardly directed portions to engage beneath a head, or the like, upon the part to be removed, a stem having spaced heads slidably fitting in the sleeve, the sleeve being formed, in each of its clamping members with a series of openings, and fingers pivotally mounted, at their inner ends in the lower portion of the stem and engageable, at their outer ends in the said openings in the respective clamping members.

1,810,754. BOBBIN CHANGING DEVICE. HEINRICH BUDDECKE, Chemnitz, Germany. Filed Apr. 5, 1929, Serial No. 352,763, and in Germany Dec. 31, 1927. 5 Claims. (Cl. 118—18.5.)

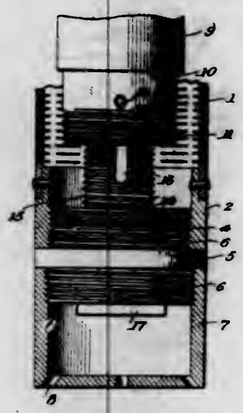
1. A bobbin changing device for spinning machines, winding and twisting frames, comprising vertically adjustable grippers for seizing the bobbins prior to their removal from the spindles; and rubber pads provided on the said grippers to insure uniform seizing of the bobbins.

1,810,755. POSITIVE REGULATED OILING APPARATUS FOR EDGER ARBORS. WILLIAM R. CARLSON, Prescott, Oreg. Filed Aug. 16, 1928. Serial No. 299,989. 6 Claims. (Cl. 184—56.)



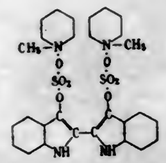
1. An oiling apparatus comprising an oil cup, means to automatically provide the oil cup with a supply of oil of predetermined quantity, a discharge pipe connected with the cup and having a spring controlled valve, a constantly charged compressed air line leading to the cup and having a normally closed manually controlled valve, and a second spring controlled valve positioned between the manually controlled valve and cup, said spring controlled valves being normally closed and adapted to open when the manually controlled valve is opened to permit the oil to be forced from the cup by the air from said air line.

1,810,756. SIGN. WILLIAM CARTER, Islington, London, England. Filed Apr. 25, 1930, Serial No. 447,305, and in Great Britain June 13, 1929. 6 Claims. (Cl. 40—130.)



1. An advertising sign comprising a casing having two open sides at an angle to each other, a reflector in the casing at an angle to the open sides thereof whereby to reflect through one side, a pair of duplicate stencils set

in the other open side of the casing, a transparent slide fitted between the stencils for limited reciprocation, and

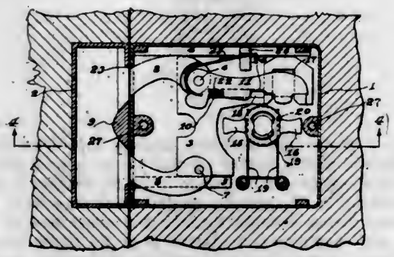


color plates on the slide located to cover the respective openings in the stencils in all positions of the slide, said plates being of various colors.

1,810,757. WELL STRAINER ATTACHMENT. ALFRED EUGENE CUNNINGHAM, Trenton, Tenn. Filed Mar. 11, 1929. Serial No. 346,164. 2 Claims. (Cl. 166—20.)

1. A well strainer having a band riveted to the bottom thereof and which band is provided with interior left hand pitch threads a body having a shouldered portion to rest on the band provided with an annular extension having inner and outer threads, the latter engaging with the threads of the band, a hollow bottom screwed on the body and having its base portion apertured, a nipple coupled to a wash pipe and having left hand pitch threads to engage with the inner threads of the body, a hollow plug having a closed bottom and provided its entire length with left hand pitch threads, the body having a threaded bore to engage with the threads of the plug, said plug having a series of annular apertures adjacent to its closed bottom and its upper open end provided with oppositely disposed notches, and a removable pin extending transversely through and secured to the nipple and designed to be received in said notches, when the plug is to be turned to bring its apertures into or below the bore of the body and to be removed when the nipple is screwed into the body to permit of the strainer being raised by the wash pipe out of the well hole.

1,810,758. PROCESS FOR THE MANUFACTURE OF DERIVATIVES OF VAT DYESTUFFS. HUGH ALBERT EDWARD DRESCHER, JOHN EDMUND GUY HARRIS, BIRKETT WYLAM, and JOHN THOMAS, Grangemouth, Scotland, assignors to Scottish Dyes, Limited, Grangemouth, Scotland. Filed Mar. 3, 1927, Serial No. 172,550, and in Great Britain Mar. 15, 1926. 12 Claims. (Cl. 260—53.)

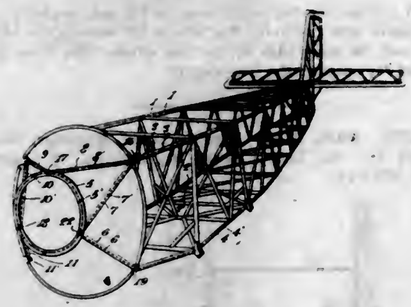


1. The process for the manufacture of derivatives of vat dyestuffs which consists in reacting on a vat dyestuff with a quaternary ammonium halide, a metal, a tertiary organic base and pyridine sulphur trioxide.

1,810,759. MANUFACTURE OF SOAP. ERNST FLAMMER and CHRISTIAN KELBER, Heilbronn, Germany. Filed Nov. 16, 1925, Serial No. 69,488, and in Germany Nov. 20, 1924. 9 Claims. (Cl. 87—16.)

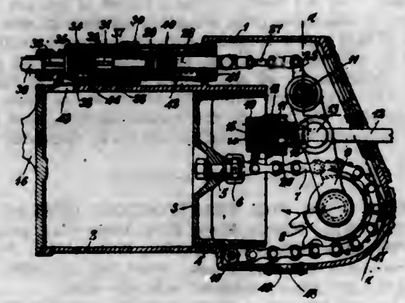
1. A process for the manufacture of soap flakes which comprises forming soap containing water but less than 15% thereof, incorporating with said soap a per-alkaline salt and forming said mixture into thin flakes.

1,810,760. LOCK. JACOB FRIEDMAN, New York, N. Y. Filed Sept. 26, 1929. Serial No. 395,389. 6 Claims. (Cl. 70—74.)



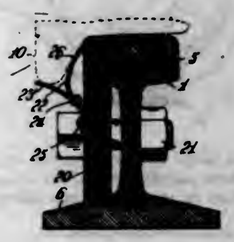
1. In a lock of the class described comprising a casing, a keeper, a bolt actuator slidably supported in said casing, a pair of pivots attached to the forward part of said bolt actuator, one of said pivots having attached thereto a hook shaped bolt, the other of said pivots having attached thereto a co-operating hook shaped bolt and a lever, said lever having a pair of notches which correspond to the locked and unlocked positions of the bolts, a locking lug which engages with said notches for preventing any accidental movement of the bolt actuator, and a pair of cams for moving said bolt actuator.

1,810,761. DIVIDING STRIPS FOR FLOORS. PASQUALE GALASSI, New York, N. Y. Filed July 24, 1929. Serial No. 380,669. 2 Claims. (Cl. 94—17.)



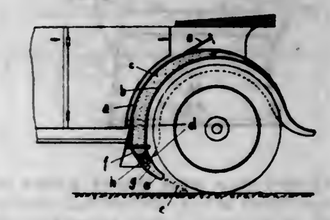
1. A dividing strip for floors comprising a relatively thick upper section and means forming a relatively thin lower section, said upper section having a longitudinal groove in its lower edge portion, said lower section having its upper edge portion secured within said groove, the height of said upper section being such that its lower surface will serve as positioning means for the strip.

1,810,762. AEROPLANE. DANIEL B. GISH, Worcester, Mass. Filed Aug. 15, 1930. Serial No. 475,477. 2 Claims. (Cl. 244—31.)



1. In an aeroplane, the framework of which consists essentially in a plurality of hollow tubes, each of those tubes, which extend longitudinally of the essential parts of an aeroplane and which constitute the main longitudinal support, having an individual cable extending therethrough and tied at each end, each of said cables being arranged so as to be taut but not under tension.

1,810,763. SERVO-BRAKE. PAUL HALLOT, Paris, France. Filed July 6, 1927, Serial No. 203,847, and in Belgium July 7, 1926. 13 Claims. (Cl. 188—152.)

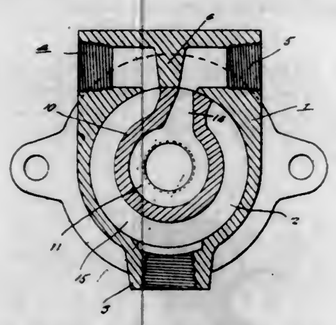


1. A servo-brake comprising the combination of a brake gear, a brake rod connected to said brake gear, a cylinder, a piston in said cylinder, a lever to which said brake rod is jointed, a pulley mounted on said lever, connective means passing round said pulley having one end connected to said piston and the other end connected to a fixed point, and means for creating a difference in fluid pressure in said cylinder on the two sides of said piston.

1,810,764. WHEEL FLANGE OILER. PERRY H. HAMILTON, Baltimore, Md., assignor to Maintenance Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1928. Serial No. 314,166. 16 Claims. (Cl. 184—3.)

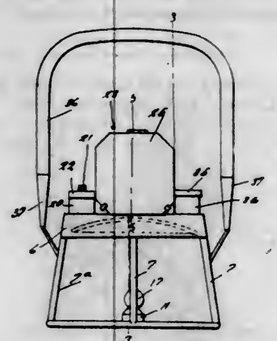
1. An oil spreader for wheel flange oilers, comprising a plate extending longitudinally of the rail and inclined to substantially fit against the inner surface of the wheel flange, and means for supporting the plate at the side of the railhead.

1,810,765. SAND SPRAYING DEVICE FOR MOTOR VEHICLES, ESPECIALLY MOTOR CARS. WILHELM HERDLING, Wehen, Germany. Filed May 13, 1930, Serial No. 452,035, and in Germany Mar. 29, 1930. 1 Claim. (Cl. 291—39.)



A sand spraying device for motor vehicles, especially for motor cars adapted to be operated from the driver's seat, comprising in combination the mudguards of the car wheels having a double wall adapted to form a chute for the spraying material, a charging flap on the upper part of the outer one of said walls, and a mouthpiece detachably flanged on the lower end of said chute adapted to regulate the discharge of the spraying material.

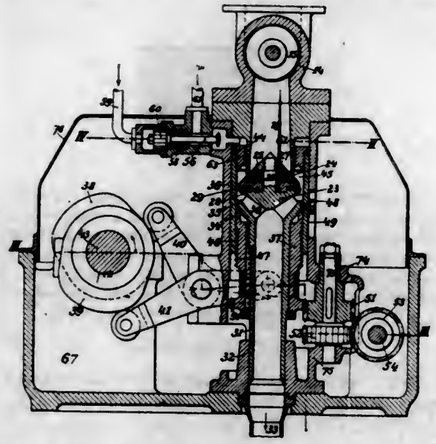
1,810,766. FLUID REVERSING VALVE. WILHELM FRIEDRICH HORULIN, Ottawa, Ill. Filed Mar. 4, 1930. Serial No. 433,104. 2 Claims. (Cl. 251—104.)



1. A fluid reversing valve of the character described comprising a casing having a circular chamber therein provided with a pair of ports on one side and an outlet port spaced from said pair of ports, said casing being further provided with a centrally disposed inlet port, and a core mounted for rotation in the chamber having an inner chamber constantly in communication with the inlet port of the casing and a circumferentially extending peripheral channel constantly in communication with the outlet port of the casing, said channel adapted to be selectively brought into communication with the first named ports, said inner core chamber having an outlet passage

for selective communication with the first named ports whereby communication between the inlet port and one

of the first named ports and between the outlet port and the other of said first named ports is simultaneously established upon rotation of the core in the casing.



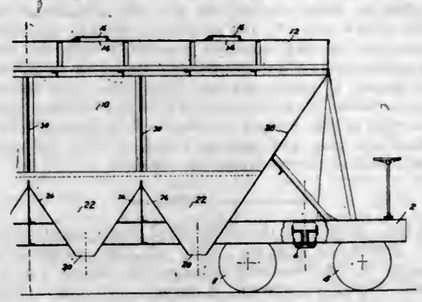
1,810,767. LANTERN. DAVID NATHANIEL HOLLAND, North Little Rock, Ark. Filed Sept. 16, 1929. Serial No. 392,873. 1 Claim. (Cl. 240—10.63.)

A lantern comprising a caged support, a plate mounted upon said support and having centered transversely of its upper surface an integrally formed horizontally disposed casing open at one end and integral receptacles on opposite sides of the casing and respectively open at their upper ends, one of said receptacles serving as a switch box and the other as a storage box, cover means for said casing and said receptacle, a bevelled edge lamp socket in the lower end of said caged support adapted to direct the light upwardly therefrom, a hollow conduit connecting said socket with said switch box, switch means in said switch box, a battery in said casing electrically connected with said switch means, a lamp in said socket, means extending within said hollow conduit and electrically connecting said socket with said switch means, and a concaved reflector means on the under side of said plate.

1,810,768. MEANS FOR PERIODICALLY INTRODUCING PULVERULENT FUELS INTO INTERNAL COMBUSTION ENGINES. HANS HOLZWARTH, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed June 12, 1929, Serial No. 370,312, and in Germany Apr. 3, 1928. 14 Claims. (Cl. 16—41.)

1. Apparatus for the periodical supply of pulverulent fuels in internal combustion engines comprising in combination a fuel supply pipe, means for supplying the hollow space of the fuel supply pipe with pulverulent fuel, an abutment located transversely to the fuel supply pipe and adapted to cover with its surface the inlet of the fuel supply pipe and to shut off the supply of fuel, the surface

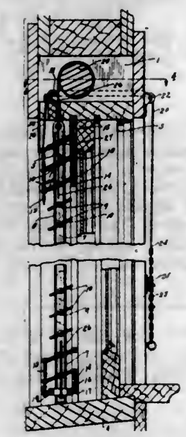
of said abutment being continuous on the side opposite the fuel supply pipe and actuating means for moving the abutment and the inlet edge of the fuel supply pipe from one another for opening the fuel supply.



1,810,769. MAIL BOX. FRED I. JADEN, Hastings, Nebr. Filed Jan. 30, 1929. Serial No. 336,164. 3 Claims. (Cl. 232—28.)

1. A mail box including a hollow section comprising top, back and end walls; a tray adapted to contain mail matter, a detachable pivot mounting the tray on said end walls of said hollow section for pivotal movement with respect to said hollow section, to opened and closed positions, an abutment on said hollow section, a stop lug on said tray engageable with said abutment, to limit the movement of the tray to the opened position, said tray being separable from said hollow section by detaching said pivot.

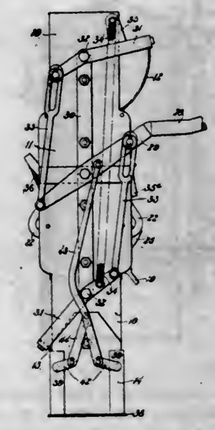
1,810,770. CAR FOR TRANSPORTING CEMENT OR THE LIKE. MORRIS KIND, Bryn Mawr, Pa., assignor to Hercules Cement Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1928. Serial No. 312,269. 3 Claims. (Cl. 105—248.)



1. A car comprising a frame including a longitudinally extending draft beam, a body mounted on said frame including side and end walls, and hoppers extending downwardly on opposite sides of the draft beam, said hoppers having bottom discharge openings with closure means therefor and having inner and outer walls, the inner walls

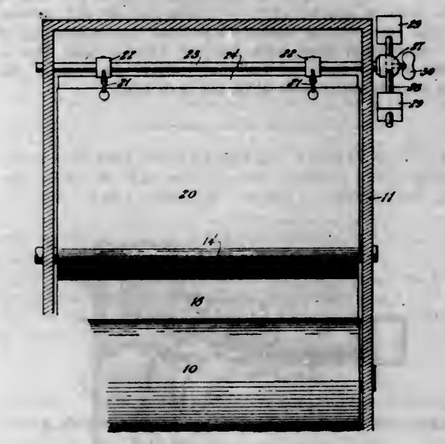
of adjacent hoppers meeting in a ridge extending longitudinally of the car above the draft beam and extending to said openings, and the outer walls extending from the

side walls of the body to the openings, the outer walls of the hoppers being inclined at larger angles to the horizontal than the inner walls of the hoppers whereby the openings are located adjacent the sides of the car body.



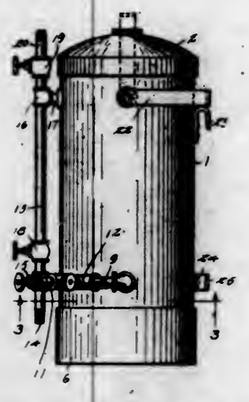
1,810,771. COMBINATION SHADE AND SHUTTER WITH AUTOMATIC LOCKING MEANS. HENRY KRUEGER, Spokane, Wash. Filed May 15, 1930. Serial No. 452,684. 3 Claims. (Cl. 20—62.)

2. In a device of the class described, the combination of a frame, a movable sill suspended within the frame by flexible elements, a plurality of shade forming elements, one side of each of which are secured to a depending flexible element from the frame, the oppositely disposed sides of each of the shade forming elements being secured to a movable flexible element, means for positioning the movable flexible element for predetermining the spaced relationship between the shade forming elements and for predetermining the angle of repose of each of the shade forming elements and means for raising the assembly of shade forming elements from the bot tom upward, said means consisting of a flexible band secured to the movable sill passing centrally through each of the shade forming elements and passing around a winding drum, and hand manipulative means for rotating the drum and for fixedly positioning the drum in placement.



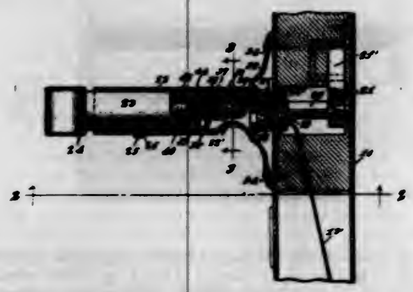
1,810,772. BAG FILLING DEVICE. PETER LASSEN, Roanoke, Tex. Filed June 2, 1928. Serial No. 282,484. 5 Claims. (Cl. 226—58.)

1. A measuring and sacking device comprising, in combination, a chute having a measuring compartment therein; inlet and outlet valves in said chute; a lever having links operatively connected to said valves; a plurality of springs associated with said valves and said lever and



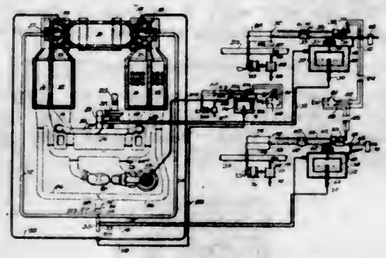
arranged normally to maintain the inlet valve open and the discharge valve closed, one of said springs acting to close both of said valves; and a discharge spout associated with the lower end of said chute.

1,810,773. GRAIN FEEDER. RALPH F. LINDERS, Baldwin, Ill. Filed Feb. 7, 1929. Serial No. 338,250. 3 Claims. (Cl. 83—44.)



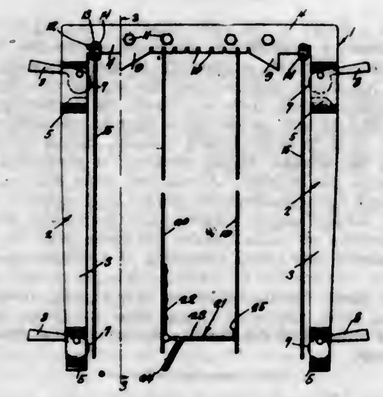
1. A grain feeder of the character described comprising, in combination, a hopper having an inlet opening at the top; a sheet metal bottom wall in the hopper; a beater within the hopper; a fixed screen constituting a front hopper wall adjacent to the beater and extending from the front edge of the bottom wall to permit grain to be discharged therethrough; a slidably mounted sheet metal control gate having a rearwardly bent lower edge contacting with the screen to control the discharge opening; a counterbalancing feed pan connected to the control gate and suspended within the hopper; and a curved portion on the bottom of the counterbalancing pan so arranged that incoming grain falls thereon whereby the rate of flow of the incoming grain controls said gate.

1,810,774. WATER HEATER. JAMES H. MACKLEY, Denver, Colo. Filed Sept. 13, 1928. Serial No. 305,666. 1 Claim. (Cl. 122—17.)



A water heater comprising a tank body having a head in the upper and lower end thereof, a coiled pipe extending through the body and opening through the upper and lower heads and constituting a heat flue, a heating element disposed beneath the lower head, an arcuate water pipe extending circumferentially about a portion of the tank adjacent the bottom thereof and opening at one end through the tank wall, an inlet coupling intermediate the ends of said arcuate pipe, a valve element disposed in the arcuate pipe on each side of the inlet coupling, a pipe extending longitudinally of the tank body and having communication adjacent its lower end with the other end of the arcuate pipe and having communication adjacent its other end with the interior of the tank adjacent the top thereof, said longitudinally extending pipe being open at its ends, a control valve in the longitudinally extending pipe between the arcuate pipe and the connection of the longitudinal pipe with the top of the tank, and a second control valve in the longitudinal pipe above the upper connection thereof with the tank body.

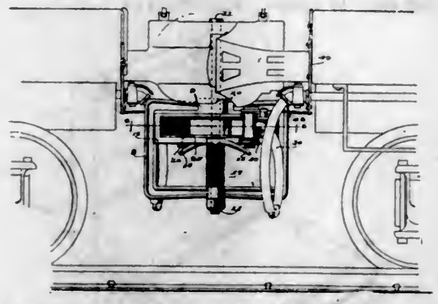
1,810,775. KEYHOLE ILLUMINATING MEANS. LOUIS MARTIN, New London, Conn. Filed Aug. 30, 1929. Serial No. 389,572. 1 Claim. (Cl. 240—2.13.)



A keyhole illuminating means including a door latch operating shank confined in a door, a tubular member having one end formed on the shank and extending outwardly of the door, said member provided with a reduced portion and an opening arranged over the keyhole of the door, a plate mounted on the reduced portion and secured to the door to limit the movement of the tubular member toward the door, a shoulder on the reduced portion, a spring between said shoulder and plate to maintain the tubular member and shank in proper position relative to the door and the latch thereof, a slidable shank in the tubular member, a handle on the slidable shank for permitting the rotation of the tubular member by a person for actuating the door latch and to move the slidable shank relative to the tubular member, an electric lamp carried by the slidable shank and positioned adjacent the opening, contacts associated with the lamp and tubular member and electrically connected to an electrical source to illuminate the lamp when the slidable shank is moved inwardly relative to the tubular member, a stop in the tubular member, and a tension means between said stop and slidable shank to urge the latter in one direction to disconnect the contacts.

1,810,776. METHOD OF CONTROLLING COMBUSTION IN METALLURGICAL AND GLASS FURNACES. GEORGE R. MCDERMOTT, Chicago, Ill. Filed July 24, 1925. Serial No. 45,824. 5 Claims. (Cl. 158—117.5.)

1. A method of controlling combustion in a reducing furnace which consists in conveying fuel to the furnace through a closed conduit, conveying air to the furnace through a second closed conduit, creating a differential in pressure in each of said air and fuel conduits, and independently controlling the volume of fuel and air supplied through said conduits by the variation in the differential in pressure created in each of said air and fuel conduits.



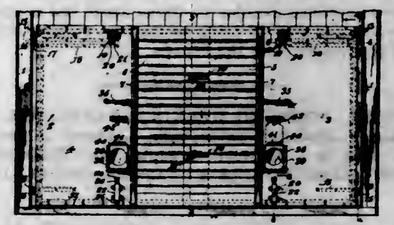
1,810,777. CLAMP. WILLIAM J. MCKEE, Los Angeles, Calif. Filed Feb. 18, 1828, Serial No. 255,303. Renewed Nov. 13, 1930. 5 Claims. (Cl. 25—131.)

1. A form clamp for hollow poured concrete walls employing the usual form boards for the outer faces of the wall, comprising a pair of elongated members designed

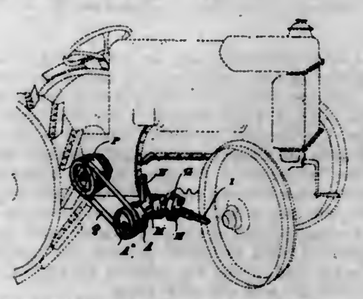
to extend substantially vertically over the outer mold boards, means for connecting said members at their upper ends, a pair of mold plates designed to be arranged in spaced relation to form the hollow center of the wall, means for adjustably connecting the top edges of said mold plates with said connecting means, a brace element carried by one of said plates designed to engage the adjacent plate to maintain the lower edges of the plates in spaced relation, a swinging guard strip carried by said connecting means and designed to be arranged between an elongated member and the adjacent outer mold board, means carried by said elongated members for exerting an inward pressure against the guard strips and the adjacent outer mold boards, and means associated with said connecting means for limiting the inward movement of the outer mold boards under the pressure exerted thereon by the said pressure exerting means.

1,810,778. AUTOMATIC AIR LINE CONNECTER. DANIEL B. MCTAGGART, Butte, Mont. Filed July 5, 1928. Serial No. 290,602. 8 Claims. (Cl. 285—58.)

1. In an air line connecter, a pair of like members for interfitting relation each having an air passageway having lateral branches which register when the members are in interfitting relation, and a hollow piston slidable in each lateral branch and held in abutting relation by air passing through the passageway to provide an air seal therebetween while air pressure is in the passageways.



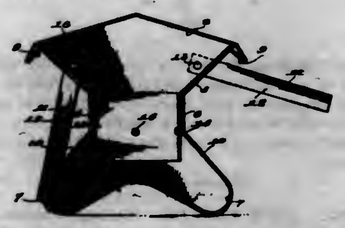
1,810,779. GUN CASTING ROD. WILLIAM A. MILAM, Austin, Tex. Filed June 20, 1929. Serial No. 372,393. 2 Claims. (Cl. 43—19.)



1. A device of the class described comprising a barrel, an ejector movable therein, means to operate the ejector, a holder extending from the barrel and having a portion overlapping the same, a floating body adapted for disposition in the holder and engagement by the ejector, said body having a hollow portion and a port leading thereto for coaction with a line as described, a ring secured to and surrounding the holder and barrel at said portion, said ring having an eyelet through which the line is adapted to extend.

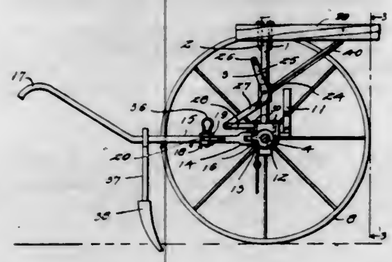
1,810,780. COMBINED DOOR AND PARTITION. ROBERT E. MOORE, St. Louis, Mo. Filed Oct. 27, 1930. Serial No. 491,579. 5 Claims. (Cl. 105—376.)

1. In a combined door and partition for a car, means for latching the combined door and partition in position with respect to the car, locking means for the latching means, and means for elevating the combined door and partition to unlatch the same when said locking means is unlocked, said elevated means including a housing secured to the combined door and partition, a sliding support carried by the housing, a roller mounted on the lower end of the support, and releasable means carried by the housing and support for latching the support in a position to project the roller below the combined door and partition.



1,810,781. MECHANICALLY DRIVEN MOWING MACHINE. MAURICE FRANÇOIS MOREAU, Epinouze, France. Filed Apr. 2, 1927, Serial No. 180,529, and in France Apr. 2, 1926. 1 Claim. (Cl. 56—25.)

A mowing machine attachment for a tractor, provided with a take-off pulley connected directly to the motor shaft, comprising in combination with cutting apparatus including a finger bar and a reciprocating cutter bar, means to attach the cutting apparatus to a tractor, a box having means whereby the same may be attached to the tractor, a pair of shafts arranged at right angles to each other and mounted in bearings with which said box is provided, said shafts being geared together and one of them being parallel with the axis of said take-off pulley and provided with a pulley, an endless band connecting said pulleys, a crank disc carried by the other shaft and a rod pivoted on the crank of said disc and pivotally connected to the cutter bar of the mowing mechanism.



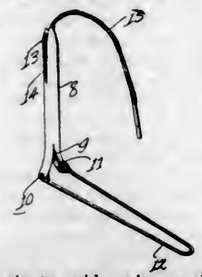
1,810,782. CHICK FEEDER. B FREDERICK C. MORRIS, El Reno, Okla. Filed Sept. 14, 1928. Serial No. 306,028. 1 Claim. (Cl. 119—63.)

In a chick feeder, a hopper, a laterally disposed longitudinally extending trough below the same, a plate arranged to one side of the hopper having parallel flanges

at its ends and projecting beyond the inner edge of the plate and overlying the hopper end walls, fixed laterally projecting threaded elements carried by the hopper end walls and pivotally receiving the flanges, and nuts coacting with the threaded elements in maintaining the plate in predetermined angular positions above the hopper, the plate being capable of being swung to a substantially vertical position to close the hopper.

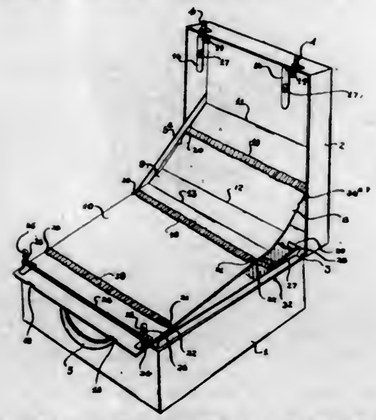
1,810,783. STEERING WALKING CULTIVATOR. WILLIAM H. NOBLE, Lepanto, Ark., assignor of forty-nine per cent to A. E. Noble, Lepanto, Ark. Filed Dec. 12, 1929. Serial No. 413,663. 7 Claims. (Cl. 97—155.)

1. A cultivator comprising an axle having a raised central portion, a fork carried at each end of the axle, a stub shaft carrying steering knuckle pivotally mounted in each of said forks, a wheel carried by the stub shaft of each knuckle, a plow beam pivotally attached to the axle adjacent each end thereof whereby both vertical and lateral swinging movement of the same may be accomplished, a link connection between each plow beam and an adjacent steering knuckle, a bell crank element pivotally mounted on the raised portion of the axle adjacent each plow beam and adapted when oscillated to effect the raising of the plow beam, and means for coupling an arm of each bell crank with the adjacent plow beam.



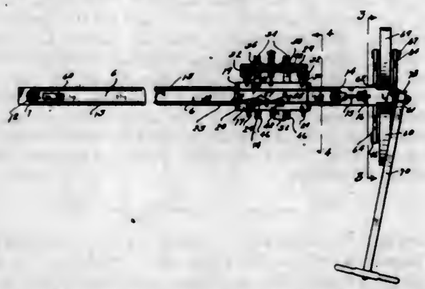
1,810,784. REFUSE RECEPTACLE. EDWARD JOSEPH PAVELKA, New York, N. Y. Filed Aug. 17, 1929. Serial No. 386,656. 7 Claims. (Cl. 220—18.)

1. The combination with a closure having an opening therein, of a removable receptacle, a support on said closure for supporting said receptacle below said opening, a cover for said receptacle, and means connecting said cover with said closure for movement to open and close said receptacle.



1,810,785. HAIR CURLER. GEORGE PONABOUSE, San Francisco, Calif. Filed Sept. 13, 1929. Serial No. 392,339. 5 Claims. (Cl. 132—42.)

1. A hair curler comprising a tubular casing, split at one end and bifurcated at its opposite end, an elongated frame hingedly connected to the split end and receivable over the bifurcated end of said casing for initially locking



the strands of hair to said casing, and a curl holding cord fixedly secured to the bifurcated end of said curl and detachably secured to the opposite end thereof.

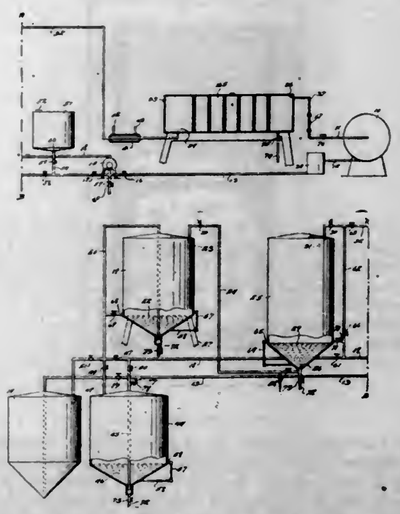
1,810,786. LUGGAGE CARRIER. RAYMOND POWNALL, Rochester, N. Y. Filed Jan. 21, 1928. Serial No. 248,494. 10 Claims. (Cl. 190—41.)

1. A luggage carrier comprising a chambered bottom member, a top member hinged to the rear wall of the bottom member and having an inwardly opening chamber, a closure for said chamber, a member hinged to the top member within the chamber at a point intermediate to the hinge and the swinging edge of the top member, and a flexible connection between said member and the closure through which said member may be swung outwardly when the top is in open position and the closure for the chamber top is pulled forwardly.

1,810,787. AGRICULTURAL IMPLEMENT. ANDREW RAAB, Portland, Oreg. Filed Jan. 12, 1929. Serial No. 332,019. 5 Claims. (Cl. 97—136.)

1. In a device of the class described, the combination of a structural body element, a fixed standard for supporting

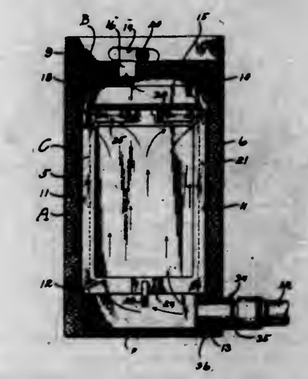
one end of the body element, a king bolt comprising a pin having a thread disposed on its one end and a cross bar secured on the pin a substantial distance from the other end connecting the body element with the fixed standard, said cross bar constituting means for maintaining the king bolt relatively fixed to the supporting standard, a tool holder head slidably positioned upon the body element, a sprocket threadably disposed upon the upper end of the king bolt, a chain passing about the sprocket, means for securing the tool holder head to the chain, to cause the head to travel longitudinally of the body element as the body element is rotated about the fixed supporting standard, tool holders depending from the tool holder head, and tools removably secured to the tool holders.



1,810,788. FOUNTAIN DRAWING PEN. JUAN RAMOS, Olongapo, P. I. Filed Nov. 11, 1929. Serial No. 406,388. 2 Claims. (Cl. 120—43.)

1. A fountain drawing pen including a hollow body having drawing blades extending from one end and the opposite end internally screw threaded, a reservoir having a reduced portion threaded in the body and extending through the latter and disposed between the blades, a second reduced portion of a diameter less than the diameter of the first reduced portion and formed integrally therewith and providing a valve seat between said portions, a combined cleaning and ink applying member extending into the free end of the second reduced portion, a barrel in the first reduced portion to engage the valve seat, a stem connecting the barrel to the combined cleaning and ink applying member and of a length to unseat the valve when the combined cleaning and ink applying member is positioned to close the end of the second reduced portion and to seat the valve prior to the combined cleaning and ink applying member fully disengaging from the end of the second reduced portion, and an operating means slidable on the exterior of the body and connected to the combined cleaning and ink applying member to move the latter into and out of engagement with the free ends of the blades.

1,810,789. LIQUID PURIFICATION SYSTEM. CARL C. REYNOLDS, Santa Fe, N. Mex. Filed Feb. 13, 1930. Serial No. 428,188. 3 Claims. (Cl. 210—44.)

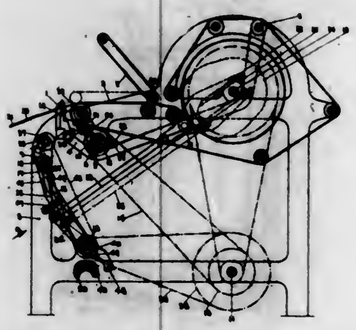


1. A purifying system of the character described comprising in combination with washing means, a reservoir, a relatively large cleaning tank, a rinsing tank substantially smaller but of greater height than said cleaning tank and positioned in a plane below said cleaning tank, a filter member substantially smaller than said rinsing tank and mounted in a plane below said rinsing tank, connecting means adapted to connect said cleaning tank with said rinsing tank, connecting means adapted to connect said reservoir, cleaning tank, rinsing tank and filtering member with said washer whereby to provide a passage permitting the liquid to gravitate toward said washer, draining means secured to each of said tanks whereby to permit the draining thereof to the reservoir, heating means engaging said connecting means and adapted to raise the temperature of the liquid within said connecting means, normally closed vents for each of said tanks and

a second connecting means connecting said washer and said cleaning tank whereby to provide a passageway for oppositely directed liquid, and a pump interposed in said latter connecting means, said pump being adapted to withdraw the liquid from said washer and coactively force the liquid into said cleaning tank

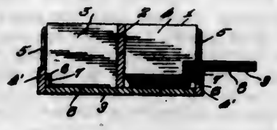
---

1,810,790. APPARATUS FOR DEVELOPING PHOTOGRAPHIC NEGATIVES. LEO JAMES RIGGLE, Monroe, Wis. Filed May 9, 1928. Serial No. 276,364. 5 Claims. (Cl. 95—90.)



1. In apparatus for developing photographic negatives, the combination of a tank having an opening at its lower end provided with a removable closure plug and having an internal shoulder provided adjacent the upper end of the tank, a cover plate having a flat upper side, removably fitting in the upper end of the tank above said shoulder and having an opening provided with a removable closure plug, and securing means for the cover plate embodying a cylindrical retaining rod having its ends movable with a cam action in the end walls of the tank and laterally across the cover plate into engagement with the upper flat face of the cover plate at one side of the opening provided therein.

1,819,791. SLIDING WINDOW SCREEN. JOSEPH F. ROESLER, Lufkin, Tex. Filed Aug. 21, 1930. Serial No. 476,918. 3 Claims. (Cl. 156—14.)

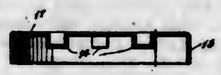


2. A bearing member for window screens comprising a rectangular supporting member, a bar slidably mounted by said member and having one end polygonal in cross section and the other end reduced and circular in cross section, the member provided with openings slidably receiving the bar and corresponding in shape to the respective ends of the bar, a roller journaled in the polygonal end of the bar, and spring means engaging the bar and normally projecting said roller.

1,810,792. MACHINE FOR STRIPPING TOBACCO LEAVES. CARL GEORG BERTIL ROTHELIUS, Stockholm, Sweden, assignor to Aktiebolaget Formator, Stockholm, Sweden. Filed Jan. 7, 1929, Serial No. 330,715, and in Sweden Dec. 8, 1928. 9 Claims. (Cl. 131—56.)

1. In a machine for stripping the stem from a tobacco leaf, the combination of a device for gripping the leaf and moving it into the machine, a gripper adapted to seize the stem of the leaf, means whereby the said device and said gripper are moved in relation to each other to cause the stem to be pulled from the leaf, a roller device for feeding the stem arranged beside the path of movement of the gripper, and means whereby said roller device is kept in an inoperative position when passed by the gripper, at the beginning of the stripping process, but immediately after this has happened assumes an operative position so as to grip the stem and co-operate in or effect the continued stripping of the stem from the leaf.

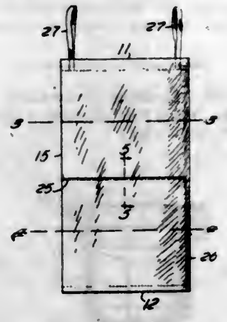
1,810,793. POSTING TRAY. GEORGE R. SCHROEDER, Beverly, Kans., assignor of one-half to Temple L. Campbell, Beverly, Kans. Filed July 17, 1929. Serial No. 379,040. 1 Claim. (Cl. 206—73.)



A posting tray for the purpose set forth, comprising a box-like member centrally divided by a partition into spaced compartments for the reception of checks and deposit slips for said checks, the deposit slip of each check being arranged directly below said check, the outer sides of the compartments being of a less height than the tray, arched wire members secured to the ends of the tray and to the upper edges of the sides, and terminating away from the center of said sides, a shelf having an angle end pivotally secured to each side, swingable against the bottom of each compartment and designed to have its flanged portion contact with the inner face of the outer side of the compartment and to rest and be supported on the outer edge of the said side when the said tray is swung outward of the compartment, each shelf having its outer edge notched and said shelves serving as supports for the tickets and deposit slips when the same are arranged thereover and positioned angularly with respect to the checks.

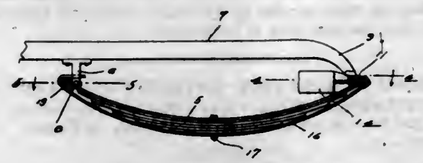
1,810,794. PROCESS FOR RECOVERY OF PHOSPHATE FINES. PHILIP MCG. SHUEY and ERWIN WOODWARD, Savannah, Ga. Filed Sept. 23, 1929. Serial No. 394,730. 4 Claims. (Cl. 209—2.)

1. A process of treating wet or moist phosphate fines having attached finer gangue that includes the drying and dry size separating of the mixture.



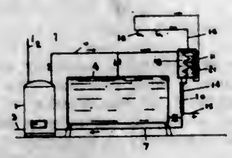
1,810,795. LOCKING KEY FOR CLOSURE PLUGS. ARTHUR R. SODERQUIST, Idaho Falls, Idaho. Original application filed Feb. 17, 1927, Serial No. 169,019. Patent No. 1,712,361, dated May 7, 1929. Divided and this application filed Jan. 24, 1929. Serial No. 334,756. 1 Claim. (Cl. 81—90.)

A locking key for closure plugs comprising an annular one-piece sheet metal body, said body being circular and having a marginal flange depending from the top thereof, stamped out lugs on the body extending in the same direction as said flange and being of less depth, said lugs being arranged at points of a circle substantially concentric with the center of the disk, the key being unobstructed at the top to facilitate grasping thereof in the hand.



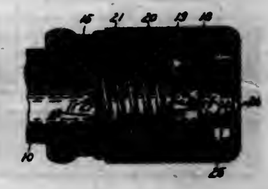
1,810,796. SLIP. ELIZABETH MCC. STONE, Rosslyn, Va. Filed July 31, 1928. Serial No. 296,482. 5 Claims. (Cl. 2—73.)

1. The method of making a slip which comprises folding a portion of a substantially rectangular piece of material upon itself to form a front and rear portion, cutting the material inwardly from one edge along the folded over free edge to a point midway between the top and bottom, folding the remaining free section of the material



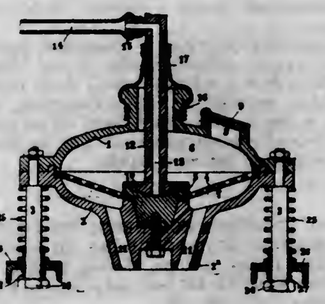
upon itself to provide a two ply panel, and folding over the two ply panel section upon the exterior of the infolded rear portion to form a slip.

1,810,797. SHOCK ABSORBER. JOHN HEINRICK SYMANK, Austin, Tex. Filed May 22, 1929. Serial No. 365,048. 3 Claims. (Cl. 267—47.)



1. In combination, a semi-elliptical spring, a leaf of semi-elliptical formation on the convexed side of the spring and having inwardly directed lip extensions over the ends of the spring, and a resilient cushioning element disposed between the leaf and one of the extensions and engaged with the spring.

1,810,798. HOT WATER SUPPLY SYSTEM. GUNNAR RICHARD TELLANDER, Gottenborg, Sweden. Filed Jan. 12, 1928, Serial No. 246,343, and in Sweden May 14, 1926. 1 Claim. (Cl. 122—32.)

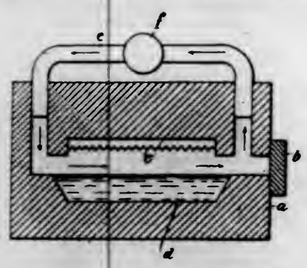


A system for heating service water intended to be drawn off, comprising in combination, a heater, a receptacle of comparatively small volume, a storage tank of a comparatively large volume entirely filled with a heating medium and communicating at its upper portion to the upper portion of the receptacle and with the upper portion of the heater, and at its lower portion with the lower portion of the receptacle and with the lower portion of the heater, whereby to form together with said heater and said receptacle a closed circulation system for the heating medium, a tube system for conveying the water to be heated arranged within the receptacle, means for preventing the interior of said tube system from communication with the heating medium, and said tube system being connected at one of its ends directly to a supply pipe for the cold water to be heated and at its other end directly to a pipe for the heated service water to be drawn off.

1,810,799. NOZZLE. PAUL C. TEMPLE, Decatur, Ill., assignor to A. W. Cash Company, Decatur, Ill., a Corporation of Delaware. Filed Dec. 3, 1928. Serial No. 323,358. 7 Claims. (Cl. 299—128.)

3. A nozzle comprising a pipe having an orifice in one end thereof arranged to discharge a concentrated jet of liquid, a cylindrical sleeve mounted on the discharge end of the pipe and provided with a slot at each side thereof inclined to the axis of the jet, a deflecting bar arranged with one end in each slot and slidable into and out of the path of the jet, and a member adjustable longitudinally of the sleeve which is arranged to slide the bar along the slots.

1,810,800. APPARATUS FOR REDUCING TO FINE POWDER VARIOUS MATERIALS AND PRODUCTS SUCH AS ENAMELS. JOSEPH LOUIS MARIE THOMAS, Morez Du Jura, France. Filed May 15, 1930, Serial No. 452,784, and in France May 18, 1929. 3 Claims. (Cl. 83—57.)



1. Apparatus for reducing to fine powder various products comprising, a closed chamber, springs for the suspension of this chamber, a conical sieve in the said chamber, dividing the latter in two superposed compartments, the upper compartment receiving the products to be pounded, and the lower compartment being provided with suitable channels adapted to ensure the evacuation of the pulverized products, an anvil secured in the center of the sieve, a hammer having a hollow stem and adapted to reciprocate in the upper compartment and to strike upon the anvil, means for actuating the said hammer, means for supplying, through the said hollow stem of the hammer compressed air on the anvil, for projecting on the sieve the materials in proportion as they are pulverized, and ensuring the evacuation of these materials as soon as they have reached the desired degree of fineness.

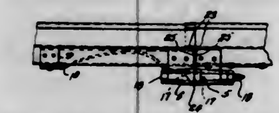
1,810,801. METHOD OF REMOVING GASES FROM MOLTEN LIGHT-METALS SUCH AS ALUMINUM AND ITS ALLOYS. WILHELM TODT, Lautawerk/Lausitz, Germany. Filed July 29, 1929, Serial No. 382,000, and in Germany June 12, 1928. 3 Claims. (Cl. 75—17.)

1. A method of freeing a bath of molten light-meals such as aluminum and aluminum alloys from gases oc-

cluded therein, which consists in circulating the gases located above the molten metal, without passing them

through the metal and without substantially changing their volume and the temperature of the molten metal, and preventing the admission of fresh air to the furnace.

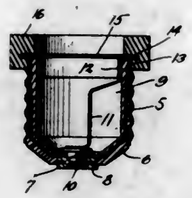
1,810,802. GRANULAR FERTILIZER AND PROCESS OF PRODUCING THE SAME. JOHN T. TRAVERS and OLIVER M. URBAIN, Columbus, Ohio, assignors, by direct and mesne assignments, to The Ohio Sanitary Engineering Corporation, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 29, 1929. Serial No. 359,188. 12 Claims. (Cl. 71—6.)



1. A granular fertilizer containing a substantial quantity of dispersible organic colloidal matter in the form of sludge precipitated from a polluted organic waste liquid, containing organic colloidal matter in dispersion, by the ionization in the organic waste liquid of an electrolyte to supply ions of opposite sign to that of the charge carried by the colloids in the waste liquid, said sludge having incorporated therein a colloidal binder in the form of stick.

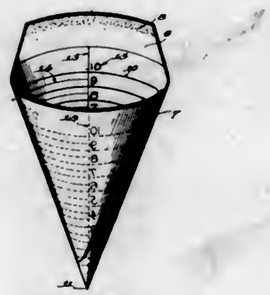
7. A fertilizer containing a substantial quantity of dispersible organic colloidal matter in the form of sludge precipitated from a polluted organic waste liquid, containing organic colloidal matter in dispersion, by the ionization in the organic waste liquid of an electrolyte to supply ions of opposite sign to that of the charge carried by the colloids in the waste liquid.

1,810,803. PROCESS FOR DESULPHURIZING LIQUID PETROLEUM HYDROCARBONS OR LIGHT DISTILLATES. HENRY ULRICH, Mexico, Mexico. Filed May 29, 1930, Serial No. 457,544, and in Mexico Mar. 14, 1930. 6 Claims. (Cl. 196—29.)



1. A process for desulphurizing liquid petroleum hydrocarbons or light distillates, which consists in contacting the said liquids in a dry state at temperatures below zero degrees Fahrenheit with dry ozonized air for the formation of new sulphur compounds, and removing said compounds.

1,810,804. TROUGH CONNECTION FOR RECIPROCATING CONVEYERS. RAYMOND A. WALTER, New York, N. Y., assignor to Conveyor Sales Company, New York, N. Y., a Corporation of New York. Filed June 22, 1926. Serial No. 117,827. 2 Claims. (Cl. 198—220.)



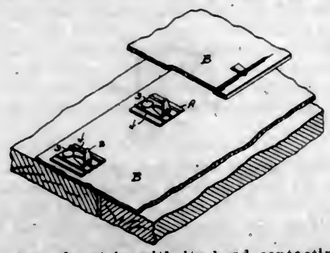
1. A connection for conveyer troughs comprising a plurality of bands attached to the troughs one band being attached flush with the end of one trough and the other band back from the end of the adjacent trough to allow overlapping thereof, the sides of the bands being formed to provide frusto conical apertures to receive bolts, the bolts having longitudinally extending feathers adapted to fit in the open portions of the bands on the peripheries of the apertures to prevent rotative movement of the bolts with respect thereto, the adjacent edges of the bands being cut away to allow relative pivotal movement between the troughs.

1,810,805. FUSE. CHARLES LLEWELLYN WILSON, Birmingham, Ala. Filed Feb. 15, 1930. Serial No. 428,811. 1 Claim. (Cl. 200—130.)

In a fuse plug, an outer shell, an inner removable shell, a contact ring positioned over the upper edge of the inner removable shell, a fuse wire within the inner removable shell, one end of the fuse wire being disposed under the contact ring, the opposite end of the fuse wire extending to the inner end of the inner removable shell, and a contact member carried by the inner removable shell and to which the fuse wire is connected.

1,810,806. GRADUATED ENVELOPE OR FLEXIBLE CONTAINER. MURRAY LANE WILSON, Shreveport, La. Filed May 24, 1930. Serial No. 455,385. 2 Claims. (Cl. 229—15.)

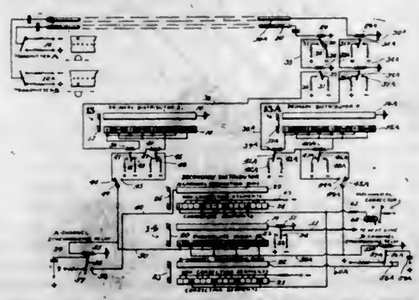
1. A package comprising a container made of opaque paper, said container being provided with sealing means and with graduations on the interior of the container arranged in such a way as to indicate different specific quantities of the commodity to be packaged therein.



1,810,807. SLIDING CLASP FASTENING. MARTIN WINTERHALTER, Halle-on-the-Saale, Germany. Filed Sept. 6, 1928, Serial No. 304,383, and in Germany Oct. 24, 1927. 3 Claims. (Cl. 139—384.)

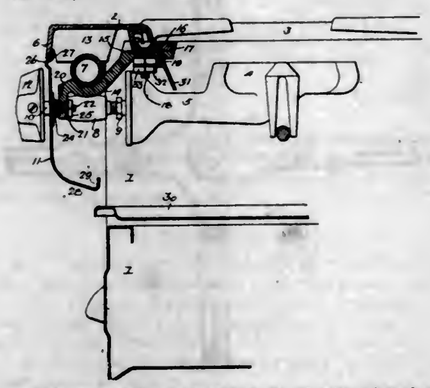
1. A method of manufacturing bands double corded at one of their edges for sliding clasp fastenings, consisting in weaving the bands and the cords together and stretching the cords alone during the weaving operation, as and for the purpose set forth.

1,810,808. ROOFING FASTENER. HENRY YOST, Kenton, Ohio. Filed July 5, 1929. Serial No. 376,125. 1 Claim. (Cl. 108—33.)



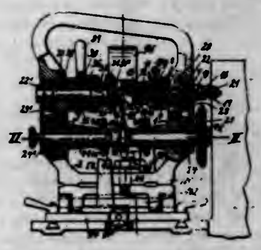
A fastener for the covering of roofs and the like comprising a small metal strip having an upstanding tongue punched therefrom, the tongue being arranged adjacent

one end of the strip, a large headed nail passing through the strip adjacent the other end, the nail being permanent-



ly fastened to the strip with its head contacting the upper face of the strip and strengthenning ribs formed on the strip, one rib extending over a part of the tongue.

1,810,809. SYNCHRONOUS TELEGRAPH SYSTEM. HERBERT ANGEL and JAMES W. ROBINSON, Brooklyn, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Nov. 5, 1929. Serial No. 405,040. 8 Claims. (Cl. 178—53.)

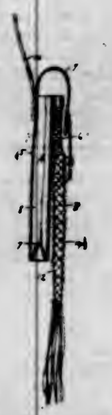


1. In a telegraph system, two cables over which impulses are transmitted, a primary distributor at the receiving end of each of said cables, and means for repeating impulses alternately from said distributors over a single line, said means embodying a single correcting element controlled by any phase shifts of the received impulses over both of said cables.

1,810,810. GAS RANGE. WILLIAM D. ANTRIM, Gloucester, N. J., assignor to Roberts & Mander Stove Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1930. Serial No. 420,716. 2 Claims. (Cl. 126—39.)

1. The combination in a gas range, of a top plate having a deep flange at its front edge; a manifold extending under the front edge of the top plate, back of the flange; valves connected to the manifold; two brackets secured to the top plate at a point back of the manifold, said brackets extending under the manifold and supporting the manifold; a separate front plate extending back of the flange of the top plate and extending inwardly at its lower edge, said front plate having openings for the stems of the valves, each bracket having a depending portion in which is a hole; bolts attached to the rear of the front plate and extending through the holes in the depending portions of the brackets; and a nut on each bolt, securing the front plate to the depending portions of the bracket.

1,810,811. MACHINE FOR MILLING AND PLANING PROFILED ELEMENTS OF WOOD, LEATHER, AND THE LIKE. PAUL BASTIAN, Jr., Stuttgart-Oberturkheim, Germany, assignor to The Firm Fortuna-Werke Spezial-Maschinenfabrik Aktiengesellschaft, Stuttgart-Cannstatt, Germany. Filed Dec. 20, 1927, Serial No. 241,408, and in Germany Mar. 10, 1926. 12 Claims. (Cl. 144—134.)



1. A machine for milling and planing profiled elements of any kind of wood and similar material, comprising in combination a stationary cutter, a horizontal axle, a bearing bracket, in which the article is rotatably mounted so that it can be easily interchanged, oscillatably mounted on said horizontal axle, eccentrics controlling the movements of said bearing bracket with regard to said stationary cutter, and an axle perpendicular to said horizontal axle around which said bearing bracket is adapted to rotate.

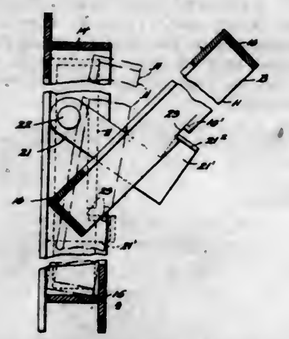
1,810,812. DISPLAY RACK. HARRY L. BEACH, Coshocton, Ohio. Filed May 9, 1930. Serial No. 451,048. 2 Claims. (Cl. 211—23.)

1. A tire display rack comprising, in combination, a frame having upright members; rack supporting legs pivotally connected at their upper ends to said upright members intermediate their ends; cross bars pivotally connected at intervals to said supporting legs; and U-shaped tire engaging rods adjustably secured to said cross bars.

1,810,813. SPORT BAG. ANTHONY BERTINI, Bridgeton, N. J. Filed Nov. 16, 1929. Serial No. 407,698. 1 Claim. (Cl. 150—28.)

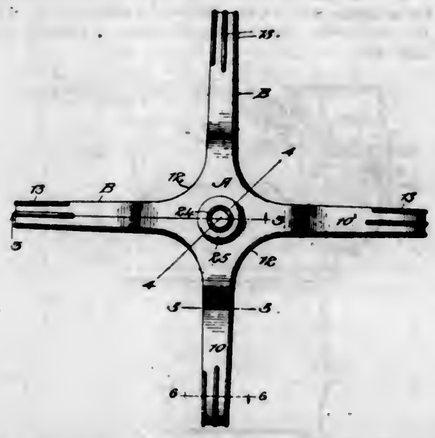
A device of the class described comprising a bag including front and rear walls and gussets connecting the side and bottom edges of the walls, another bag, including front and rear walls, disposed in opposed relation to the front wall of the first named bag, the rear wall of the second named bag abutting the front wall of the first named bag, said front wall of the first named bag having its upper portion folded over the upper portion of the rear wall of the second named bag and secured thereto, a binding enclosing the upper portion of the front wall of the second named bag and stitched thereto, bindings enclosing portions of the vertical edges of the side gussets, the front wall of the first named bag, the walls of the second named bag and the end portions of the first named binding for securing the bags together, said bags open at their tops, an integral flap on the rear wall of the first named bag, and coacting means on the flap and the front wall of the second named bag for detachably connecting the flap thereto, said flap constituting a closure common to the bags, the first named bag formed of waterproof material and the second named bag formed of open mesh material.

1,810,814. BACK FIRE ARRESTER FOR COMBUSTIBLE GAS CONDUITS. CHARLES HENRI BICHLER, Paris, France, assignor to The Firm Air-Securite, Paris, France. Filed Dec. 27, 1927, Serial No. 242,866, and in France Jan. 7, 1927. 1 Claim. (Cl. 48—192.)



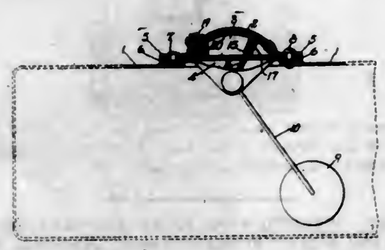
In a combustible gas conduit; a back fire arrester comprising an elongated bundle of spaced parallel strips inserted lengthwise in the conduit, the strips being provided with bolts passing through openings near their ends elongated spacing members bolted between the strips, and said spacing members having a rounded front end and a wedge-shaped rear end.

1,810,815. BOTTLE CRATE. WILLIAM W. BIENSTOCK, York, Pa. Filed Aug. 21, 1929. Serial No. 387,449. 6 Claims. (Cl. 217—65.)



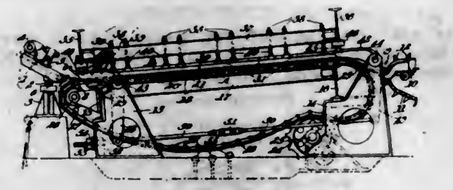
1. A crate having sides and ends composed of strips arranged one above another, angular corner members fitting the corners of the crate at the inner and outer sides of said strips, and tongues extending through the thickness of said strips and slidably connecting said members.

1,810,816. WINDOW. ROBERT H. BLISS, East Syracuse, N. Y. Filed May 6, 1929. Serial No. 360,790. 15 Claims. (Cl. 189—69.)



1. A window construction comprising in combination, a frame having a vertically disposed seating surface for a movable sash, a sash the margin of which is adapted to bear against said seating surface when in closed position, and means on the frame for supporting the sash when it is moved to open position, said means wholly disengaging the sash when the sash is in closed position.

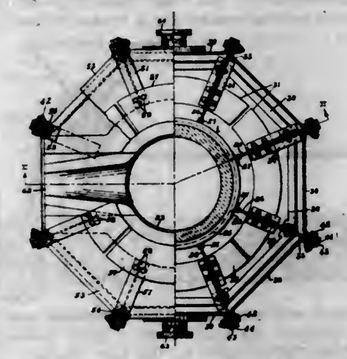
1,810,817. BASE FOR SWIVEL CHAIRS. GEORGE C. BRAINARD and JASON A. FITCH, Youngstown, Ohio, assignors to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Aug. 7, 1930. Serial No. 473,665. 7 Claims. (Cl. 155—138.)



1. A base for swivel chairs comprising a central portion and a plurality of legs formed in one piece with said central portion, the legs being of inverted U-shape in cross section and each comprising a top wall and a pair of side walls, the adjacent side walls of adjacent legs being connected with and forming integral continuations of one another, and a reinforcing plate structure secured at the bottom of said central portion, said plate structure having side portions disposed flush with the outer faces of the connecting portions of the side walls of said legs.

1,810,818. OIL LEVEL GAUGE. MOSES E. CHENEY, Flushing, N. Y., assignor to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Original application filed Dec. 18, 1928, Serial No. 326,775. Divided and this application filed Apr. 8, 1930. Serial No. 442,547. 2 Claims. (Cl. 201—48.)

1. A float operated rheostat comprising a casing composed of upper and lower stampings having flat marginal portions secured together and having upwardly and downwardly pressed central portions forming a chamber, an arcuate resistance coil mounted in the upwardly pressed portion of the upper stamping, a shaft journaled in the downwardly pressed portion of the lower stamping, and substantially coaxial with said coil, a contact arm within the chamber fixed to the shaft and engaging said arcuate resistance coil, and a float arm fixed to said shaft exteriorly of the casing.



1,810,819. METHOD OF AND APPARATUS FOR STRAIGHTENING PIPES, TUBES AND SIMILAR ARTICLES. WILLIAM F. CLARK, Baltimore, Md. Filed Nov. 28, 1928. Serial No. 322,434. 21 Claims. (Cl. 153—32.)
